Charles V. eldest Son to Arch-Duke *Philip*, and Grandson to *Maximilian*, who could not get him chosen King of the *Romans* during his Life, was chosen Emperor after his Death, and crown'd with great Pomp at *Aix la Chapelle*. He was at the same Time King of *Spain*, and Sovereign of the *Netherlands*; and Pope *Paul III.* gave him the Title of *Great*. He was chosen chiefly by the Interest of the Electors of *Ments* and *Saxony*. He quitted to Arch-Duke *Ferdinand* his Brother all his Dominions in *Germany*, reserving only those which came to him by the King of *Spain* and Duke of *Burgundy*. He added to the *Netherlands* the Lordships of *Utrecht* and *Overissel*, which *Henry* Bishop of *Utrecht* had given him. He afterwards acquir'd the Dutchy of *Gelderland*, the Country of *Groningen*, and the Towns of *Cambray* and *Lingen*; and to assure the *Netherlands* of a speedy Relief against any who should attack them, he incorporated them with the Empire by the Name of the Circle of *Burgundy*. He had several Wars, and was for most part successful. He made a League with Pope *Leo X.* in 1521, and speedily took *Parma*, *Placentia*, and *Milan*, and restor'd the latter to Duke *Francis Sforca*. He advanced *Adrian IV.* his Preceptor, to the Papacy; and the Constable of *Bourbon* having left the Service of *France* in Discontent, and join'd him;

him, he enter'd *Provence* with a great Army, took *Aix* and *Toulon*, and besieg'd *Marseilles*; but was obliged to raise it by the Valour of the Inhabitants, and repass'd the *Alps* in haste, before the Army of *Francis I.* of *France*, who thereupon enter'd the *Milanese*, and besieg'd *Parva*, which gave the *Germans* Time to augment their Army, and march to its Relief. *Francis* thought it would be disgraceful not to fight them, engaged contrary to the Mind of his Generals, was defeated, and taken. This Advantage made the Princes of *Italy* jealous of the Emperor, and particularly *Pope Clement VIII.* *Francis* was carried to *Spain*, and strictly kept in a Castle, and was set at Liberty after three Years on hard Conditions, that he could not fulfil, because against the Fundamental Laws of *France*. He left his Sons for Hostages, but in Revenge join'd with the *Pope* and *Venetians*. Upon this *Charles* enter'd *Italy*, and the Constable de *Bourbon* took *Rome*, and besieg'd the *Pope* in the Castle of *St. Angelo*, where he was reduc'd to great Want, while in the mean time Processions were made in *Spain* for his Deliverance. He was made Prisoner however, and obliged to ransom himself after 7 Months Confinement.

In 1529, *Charles* concluded a Peace with *France* at *Cambrai*, which did not last long; for *Sforza* Duke of *Milan* having caused the *French* Ambassador *Mirabeau* to be murder'd (going through *Italy* to the *Turks*) by Order of the Court of *Spain* as 'twas suppos'd, the *French* King, to revenge it, design'd to march into *Italy*; but being deny'd Passage by the Duke of *Savoy*, he made War upon him, and chas'd him out of his Dominions. *Sforza* dying without Issue, *Charles* seiz'd *Milan* as a Fief of the Empire, which re-kindled the War in *Italy* and the *Netherlands*, till a Truce of 10 Months was agreed on in 1537, which was afterwards prolong'd for 10 Years. During this Truce, *Charles* pass'd through *France* from *Spain*, to suppress those of *Ghent*, who had revolted. The *French* King receiv'd him with extraordinary Honour, and *Charles* pretended to desire a good Correspondence with him; but fearing to be detained, promis'd to restore *Milan*; which failing to perform, the War was again renewed. The *English* join'd with *Charles*; but that

League came to nothing. The *French* defeated the *Imperialists* at *Carignan* in *Italy*; and the Emperor being then embroil'd with the Protestants, made Peace with *France* in 1544. The Emperor being crown'd by the *Pope*, advis'd him to call a General Council, to settle the Affairs of Religion; but the *Pope* being unwilling to that, lest it should have turn'd to the Advantage of the Protestants, he put the Emperor upon reducing them by Force; but 'tis needless to repeat what we said of that War, in the Chapter of *The Religion of the Modern Germans*. The Protestants being in some measure supported by *France*, and having obliged the Emperor to Peace by the Treaty of *Passau*, and narrowly miss'd taking him at *Innsbruck*, he resolv'd to revenge it on *France*, and besieg'd *Metz* with 100000 Men; but the Duke of *Guise* defended it so well, that he was obliged to retire from before it in 1553; at which he was, so mortified, says the *Atlas Historique*, that 'twas probable he would then have retir'd to a private Way of Living, but for the Differences that happen'd betwixt the Electors of *Brandenburg* and *Saxony*, which gave him an Advantage over the Protestants. He afterwards came to the *Netherlands* against the *French*, took *Terouanne* and *Hesdin*, and design'd to have attack'd *Dourlans*, but the Defeat of his Cavalry prevented it, and made him retire to cover *Cambrai*, which the Constable of *France*, *Montmorency*, threatn'd to besiege. He join'd with the Duke of *Tuscany* to drive the *French* from *Sienna*, prevail'd with *Mary* Queen of *England* to marry his Son *Philip* Prince of *Spain*, and stopp'd Cardinal *Pool*, her Kinsman, in the Palatinate, lest he should have hinder'd it. The War betwixt him and *France* being renew'd in the *Netherlands*, the *French* took some Towns; and his Army having suffer'd much in a Battle there the 13th of *August*, 1554. the Queen of *England* mediated a Peace; but because the Emperor would not restore *Milan*, the Treaty broke off in 1556.

Guicciardin and *Thuanus* say, That in *October*, 1529, he drove *Soliman* the Grand Signior from before *Vienna*, which he besieg'd; and carried 50000 Men into *Africa*, where he took the Port of *Goulette*, and re-establish'd *Muley Hassan* in *Tunis*, after he subdued that Kingdom. In 1541, he went into *Africa* again.

against *Barberousse*; but return'd with great Loss into *Spain*.

After breaking off the Treaty with *France* in 1556, he grew weary of the Government, resign'd the Empire to his Brother *Ferdinand* King of the *Romans*; and the very Night he resign'd it, was so entirely abandon'd by his Court, that to shew the Instability of Humane Affairs, having no Servant near him, he would needs light a Person of Quality that was with him out of his own Chamber himself. He afterwards retir'd to the Monastery of *St. Just*, of the Order of *St. Jerome* in *Spain*, where he spent his Time in Devotion, and died *Sept. 21. 1558*. His Son *Philip II.* was so weak a Bigot, that he suffer'd the Inquisition to seize the Archbishop of *Toledo* his Confessor, and his Preacher, and to condemn his Will to be burnt, on Suspicion of his dying a Protestant; but it was afterwards pretended, that the Suspicion was groundless, and that secret Ways were taken to prevent the Effect of the Sentence, in order to save the Honour of the Inquisition: But some alledge, it was rather to prevent a dangerous Objection by the bigotted *Spaniards* against himself, as being the Son of a Heretic.

Charles V. say Thuanus and Guicciardin, was a Prince of great Parts and Courage, but a Dissembler, and one that sacrific'd all to his Ambition. He had the Pope and the King of *France* his Prisoners at one time, made 40 different Voyages and Journeys, 9 into *Germany*, 6 into *Spain*, 7 into *Italy*, 4 into *France*, 2 into *England*, 2 into *Africa*, 8 Voyages upon the *Mediterranean*, and two on the Ocean. Other Historians say, That he obtain'd 40 great Victories, came off Conqueror in 70 Battles, and was once 40 Hours altogether on Horseback. He left 3 Children by *Isabel of Portugal*, viz. *Philip II. of Spain*; *Mary*, Wife to the Emperor *Maximilian II.* and *Jean*, Wife to the Prince of *Portugal*. Before his Marriage, he had by a Concubine, *Margaret*, first married to *Alexander de Medicis* of *Florence*, and afterwards to *Ottavio Farnese* of *Parma*; and after the Empress's Death, he had *Don John of Austria* by a young Woman of *Ratisbon*, whose Name was never publick.

Puffendorf blames him for following the *Spanish* Maxims too far; for seeking to make

himself absolute, and neglecting to free the Empire from the Tyranny of the Popes, who had trampled upon it; and that he did not aggrandize his Family by the superfluous Church-Lands, which he might easily have done, by countenancing the Reformation, and suffering the Bishops to marry without quitting their Benefices; which, by the way, seems to contradict his having been a Protestant; or if he were, that he had not Courage enough to own it, or was not thoroughly convinc'd of the Falseness of Popery till after his Retirement.

Ferdinand I. youngest Son to *Philip*, was elected King of the *Romans* at *Cologne* in 1531, tho' the Elector of *Saxony* oppos'd him. *John* Count of *Scapno*, his Rival for the Kingdom of *Hungary*, dying in 1540; his Widow, that she might advance her Son, put her self and him under Protection of *Soliman II.* who entering *Hungary* with a great Army, took *Buda*, and most of the Kingdom, on Pretence of defending it against *Ferdinand*, and was successful in his War for some Years. *Ferdinand* invaded the Elector of *Saxony*, who had the chief Hand in the League of *Smalcald*. The *Bohemians* revolted; but he pardon'd them, and took away their Privileges; so that the Protestants went into *Poland* and *Prussia*, where they built new Churches. The Dukes of *Saxony* yielded him the Dutchy of *Sagan* in *Silesia*, which they had bought. *Charles V.* would have obliged *Ferdinand* in 1550 to quit the Dignity of the King of the *Romans* to *Philip II.* his Son, which he procured him with that View; but he would not, nor yet create that Prince, Perpetual Vicar of the Empire in *Italy* and the *Netherlands*. The War began again in *Hungary* in 1551; and after the concluding of the Peace at *Passau* in 1552, *Maurice* Elector of *Saxony* marched thither with an Army; and the Need that *Ferdinand* had of the Protestants, made him agree to a Peace about Religion at *Augsburg* in 1555. That same Year he succeeded to the Empire, by the Abdication of *Charles V.* and was crown'd; but the Pope refus'd to own him a long time, because 'twas done without his Consent; and that *Ferdinand* had granted a Toleration to the *Lutherans*. He was mild and temperate, was Master of the Latin, and heard the Complaints of his meanest Subjects.

jects, saying, *That he could not expect Favour at the Throne of God, if even Beggars were denied Access to him.* He died in 1564, in the 62d Year of his Age, and the 9th of his Reign.

Maximilian II. was Viceroy of Spain, when he heard that *Charles V.* endeavour'd to have his Son *Philip II.* chose King of the Romans. Upon this, *Maximilian* went to Germany with the Infanta *Mary* his Wife; and tho' mightily urg'd to agree to *Philip's* being chosen, he got himself elected in 1562, and that same Year was crown'd King of the Romans, *Bohemia*, and *Hungary*. He was made Emperor in 1564, and govern'd with much Wildom and Equity. He deprived the Elector of *Saxony* for protecting the Rebels, and invaded the Province of *Transilvania*, which brought the *Turks* upon him, who took *Zigeth*, after a brave Defence by Count *Nich. Serini*. *Maximilian* retook several other Towns, made a Truce with the *Turks*, and refus'd to join the *Venetians* against 'em in 1570 and 1571. He had a Difference with Pope *Pius* for conferring the Title of Grand Duke on the Count *de Medicis*, alleging, that it belong'd only to himself to confer Titles of Honour. He demanded of the Pope to allow Communion in both Kinds, and Priests Marriage; and allow'd the Nobility of *Austria* the free Exercise of the Protestant Religion. He was chosen King of *Poland*; but *Stephen Batori* prevented him. He demanded Assistance of several Princes to recover that Crown, but in vain. He died at *Ratubon* in 1576, in the 40th Year of his Age, and the 13th of his Reign. His natural Goodness, and his Favour to his Protestant Subjects, made several Protestant Authors say, he was of their Religion; and the Papists call'd him the *Lutheran Emperor*.

Rodolph II. his Son, succeeded, being chosen King of the Romans before. He was crown'd King of *Hungary* in 1572, and of *Bohemia* in 1575. He came to the Empire in a very difficult Time, because of the Differences about Religion. He forc'd *Gebhard Trusches*, Archbishop of *Cologne*, who turn'd Protestant, and married *Agnes* Countess of *Mansfield*, to quit his Dignity. By a Truce of 15 Years, he prevented the Consequences of the Quarrel betwixt the Cardinal of *Lorraine* and *John George Marquis*

of *Brandenburg*, who were both chosen Bishops of *Straßburg*, the former by the Popish Canons, and the latter by the Protestants, after the Death of Count *John Manderscheid*. To prevent the War that might have been occasion'd by the Succession of *Juliers*, he would have sequestred that Dutchy; but the Pretenders oppos'd it. The Protestants made a League, which they call'd the *Union*, in 1609, of which *Frederick V.* Elector *Palatine*, was Chief. The Papists made an Alliance of 9 Years among themselves at *Wurtzburg*, which they call'd the *League*. The Imperialists had War with the *Turks* from 1594 to 1606, when they took several Towns, and committed great Ravages. *Rodolph* demanded Assistance of the Princes, and made a League with the Prince of *Transilvania*, which had bad Consequences. This Army fought the *Turks*, who had taken *Agria*, and defeated them; but being too intent upon the Plunder, the *Turks* rallied, and cut many of them off. During this War, *Philip Emanuel* of *Lorrain*, Duke of *Mercuur*, General of the Imperial Army, made the famous Retreat of *Canisá*. Arch-Duke *Matthias* took from *Rodolph*, *Hungary*, *Bohemia*, and *Austria*, which he was obliged to quit to him in 1611, after having demanded from the Electors wherewith to maintain his Imperial Dignity. He died in 1612, without Issue. He was a Learned Prince, much given to Mathematicks, Painting, Chymistry, and Astrology; so that his Court was full of Men who profess'd those Sciences. He brought the *Gregorian Account* first into Germany.

In 1612, *Matthias* King of *Hungary* and *Bohemia* succeeded, but not without much Opposition. Cardinal *Klesel* was his chief Minister and Favourite. He disputed the Right of naming the Prince of *Transilvania* with *Amurat* the Great *Turk*; but at last made a 20 Years Peace with him. He prefer'd Arch-Duke *Ferdinand* his Cousin to *Philip III.* of Spain; his Nephew, to be his Heir, out of his natural Aversion to the *Spaniards*. He regulated the Succession at *Prague* in 1617, by the Advice of Arch-Duke *Maximilian* his Brother: And at the same Time a secret Treaty was made betwixt *Philip III.* of Spain and the Arch-Duke *Ferdinand*, by which *Philip* quitted to *Ferdinand*, and his Heirs-Male, the Heredi-

tary

tary Countries that should fall to him by the Emperor's Death, on Condition, That the Daughters of the Branch of *Spain* should be prefer'd to those of the Branch of *Germany*. At this Time happen'd the Revolt of *Bohemia*, because the Emperor's Ministers invaded their Laws and Privileges, granted them by *Rodolphus* the Second, for their Religion and Liberty. The Emperor assembled the States at *Prague*, where his Ministers did so provoke the People, that they threw them out at the Windows of the Castle, by which they receiv'd no great Hurt. After which, they chose new Magistrates, took Arms, and publish'd a Manifesto to justify their Proceedings. The Emperor publish'd another; and his Council, in order to accommodate Matters, were for turning out his Favourite *Klesel*, who was hated by the *Bohemians*; but the Emperor being against it, the Archdukes *Maximilian* and *Ferdinand* sent him Prisoner to *Tirol* of their own accord. The Emperor however went on with the War; but the *Bohemians* being more diligent, rais'd 30000 Men under Count *Mansfeld*, took several Towns. Upon which the Emperor's Troops enter'd the Country, and committed such Cruelties, as mov'd several neighbouring Princes and States to pity the *Bohemians*, and intercede for them in the Name of all the Protestants of the Empire; who also laid their Grievances before him, and complain'd, That he gave the Command of his Armies to Strangers, sworn Enemies to their Religion; which shew'd there was a Design rather to destroy them, than to redress their Complaints. They made Application to several of the Electors to endeavour an Accommodation; but the Duke of *Bavaria*, who lov'd to fish in troubled Waters, prevented it. The Emperor begun at last to grow weary of the War and Fatigue, and resign'd the Kingdoms of *Hungary* and *Bohemia* to his Brother *Ferdinand*: And by his Grief for the Death of Archduke *Maximilian* and the Empress, he fell into a Distemper, and died the 20th of *March* 1619. leaving his Successor embroil'd in a War of 30 Years continuance, which some thought was foretold by a terrible Comet, with a long Tail, in form of a crooked Sword, which appear'd in the End of 1618. to most Nations of *Europe*.

In 1619. *Ferdinand* II. King of *Bohemia*, succeeded, and was hated for his Severity by all his Subjects, especially the Protestants. The reformed Nobility of *Austria* protested against his Persecution, and threatened, if he did not forbear, to call in the *Turks* to their Assistance; yet he would not desist. He made War with the *Venetians* on account of the *Groats*, who invaded their Dominions, and was successful against them. The *Bohemians* perceiving him to be irreconcilable to their Religion, depos'd him, and offer'd their Crown to the King of *Denmark*, the Duke of *Savoy*, and the Elector of *Saxe*, one after another, who all refus'd it; but the Elector *Palatine* accepted it; the Issue of which, we gave an Account of in the Chapter of Religion. After that Prince was defeated, the Protestants made a League with the Kings of *France* and *Denmark*, the Duke of *Savoy*, the *Venetians* and *Dutch*; and afterwards another with the King of *Denmark*, and several Princes and States of the Empire, they forc'd Count *Tilly* the Imperial General, &c. to retire; but having also given an Account of the Issue of this War in the Chapter above-mention'd, we shall not repeat it. *Ferdinand* died the 5th of *February* 1637. in the 59th Year of his Age, and the 18th of his Reign.

Ferdinand III. his Son succeeded, being chosen King of the *Romans* 3 Years before. His Troops under *Gallas* had some Advantage over the *Swedes* at first, but were defeated near *Rhinfeld* by the Duke of *Sax Weimar*; and another of his Armies was defeated in *Misnia* by General *Bannier* and the *Swedes*, who laid Siege to *Ratisbon*, where the Emperor had called a Diet. After this, *Tortenson* the *Swedish* General defeated Archduke *Leopold* near *Leipsick*, and invaded the Hereditary Countries; while on the other hand the Duke of *Anguien* took *Philipsburg*, defeated the Imperialists near *Friburg*, and obtain'd a famous Victory at *Norlingen* over the *Bavarians*; which would have ruin'd the Emperor intirely, had not the King of *Denmark* declar'd War against the *Swedes*, whose Power he dreaded, which gave their Arms a Diversion, and the Emperor a time to breath: Yet *Tortenson* chas'd *Gallas* into *Bavaria*, and defeated *Hasfeld* in *Bohemia*. General *Wrangel*, who succeeded *Tortenson* in the

the Command of the Swedish Army, defeated the Imperialists in the bloody Battle of *Sigmershusen* in 1634. And both Branches of the House of *Austria* being worsted in *Germany*, *Spain*, and the *Netherlands*, it brought on the Treaty of *Munster*, which was concluded in 1648, as above-mention'd. *Ferdinand* got his Son of the same Name chosen King of the *Romans* in 1653; but he died the next Year, to the great Grief of his Father, for he was a Prince of mighty Expectation. The Emperor, after this, sent Assistance to *Casimir* King of *Poland* against the *Swedes*, who had seiz'd most of his Country; He likewise procur'd the *Danes* to give the *Swedes* a Diversion on that side, and died the second of April 1657, of the Grief he conceiv'd for the Loss of his Eldest Son.

Leopold his Second Son, succeeded, after 8 Months, and was crown'd at *Frankfort*. In the beginning of his Reign, the War betwixt the *Swedes* and *Brandenburgers* was concluded by the Treaty of *Oliva* in 1660. A War broke out betwixt the Emperor and the *Hungarians*, who complain'd that their Privileges were invaded; that the *German* Troops maintain'd there on Pretence of defending them, which they were able to do themselves, committed all Sorts of Violence and Cruelty; that the *Hungarians* in Offices were not suffer'd to discharge them; that the Liberty of Religion allow'd them by several Diets was denied, their Churches taken from them, and their Ministers banish'd, because they were not of the Religion of their Prince: That the Nobility, who ought to be tried by their own Judges, were tried by *Germans*; that tho' the Revenue was more than sufficient to maintain the Troops, yet they were not paid, but liv'd by Extortion, or invading the *Turks*, who made severe Reprisals on the Country. The Grand Seignior improv'd this Difference, and the Emperor's taking part with the Prince of *Transylvania*, set up without his Consent; therefore he gave that Title to Prince *Abassi*. The *Turks* defeated the Imperialists at *Clausenburg*, and took *Newhausen* in 1663; but were routed at *Leventis*, where they lost 6000 Men, 4000 Wagons of Ammunition, 1000 Horse, and 140 Camels: And afterwards at *St. Gotthard*, where they lost above 6000 Men, and many General

Officers, by the Assistance of the *French*; which brought on a Peace. The *Hungarians*, finding that their Privileges were not restor'd according to Promise, being oppress'd by *German* Troops, and the Office of their Palatine being abolish'd, which had continued some hundreds of Years, they join'd with the *Transylvanians* to obtain help from the *Turks*; the very Monks preach'd, That their Yoke was easier than that of the *Germans*; for which the Counts of *Serini*, *Frangipani* and *Nadasti*, were put to Death, which hinder'd Prince *Ragotzki's* taking Arms: And Count *Teckely* dying in his Castle, just as the Imperialists had invested it, they were left without a Head, till young Count *Teckely*, who was then but 15 Years of Age, and escap'd to *Transylvania*, came to Espouse their Cause. In 1672, the *French* invaded *Lower Germany*, and over-ran great Part of the *United Provinces*. The Elector of *Treves* having no Force to oppose the *French*, was obliged to allow them a Passage through his Dominions; and the Archbishop of *Cologne*, and the Bishop of *Munster*, join'd with them against their Country. The Elector of *Brandenburg* demanded Assistance of the Emperor to protect his Dutchy of *Cleves*, but the *French* over-ran it before he could have any. The *French*, in 1673, entred *Alsace*, where they took several Towns, and laid Part of the *Palatinate* under Contribution. The Duke of *Lorraine*, who commanded the Emperor's Army, would have join'd *Caprara*, but was prevented by *M. Turenne*, which occasion'd the Battle of *Sinsheim*. The Elector *Palatine* was so much provok'd at the ravaging of his Country, that he sent *M. de Turenne* a Challenge; which he would not accept, without Allowance from the *French* King. These Things, with the taking of *Treves*, oblig'd the Empire to declare War, and assemble more Troops; upon which, *M. Turenne* repass'd the *Rhine*, and entrench'd near *Philipsburg*. In 1674, the *Germans* fought *Turenne* near *Molsheim*, where both Sides claim'd the Victory. In 1675, the *French* defeated the *Germans* near *Colmar*; but *Mentacuculi* succeeding the Duke of *Bourbonville* in the Command of the *Germans*, he was a more equal Match for *Turenne*; who being encamp'd near him, and going to a Heights to view his Army, was kill'd by a Cannon

Ball, which put an End to his Glory, that was tarnish'd before by his turning Papist. After the Battle of *Altenheim*, the *French* repuls'd the *Rhine*, where the Duke *de Du-ras*, Nephew to *Turenne*, acquir'd much Reputation by retiring so bravely from a disadvantageous Camp. The Emperor about this time establish'd in *Hungary* a Viceroy and Sovereign Council, in order to extirpate the Protestant Religion, and the *Hungarian* Liberties: They forfeited the Protestants, and sent their Ministers, and others, to the Gallies, upon every frivolous Pretext. The *Hungarians* rais'd 12000 Men to defend themselves, and took some Towns. The Barbarity of the Imperial General *Kop* exasperated them so far, that Prisoners on both Sides were put to the most cruel Deaths. In 1675, the Imperialists propos'd an Amnesty and Redress of Grievances; but their Promises not being credited by the *Hungarians*, it did not take. Prince *Abassi* took Part with the Malecontents; and the *Turks*, who had assisted them underhand before, did then invade the Emperor's Dominions. Young *Teckely* began about this time to signalize his Courage and Conduct, which inclin'd him to Prince *Abassi*. In 1677, the Emperor's Affairs being on the Declension, a new Accommodation was propos'd to the Malecontents, to which some submitted, and others did not. In 1678, a Diet was held at *Odemburg*, where the Protestants were promis'd their Churches, the Papists complain'd of Abuses in the Civil Government, and demanded their Liberties to be restor'd; but the Court would not. Count *Wesselini*, Brother to the Palatine of *Hungary*, who commanded the Malecontents, died; and *Teckely*, tho' but 22 Years of Age, had acquir'd so much Reputation, that he carried the Post from *Wesselini's* Brother. Having reviewed his Troops, he approach'd the Castle of *Mongatz*, in order to confer with Count *Serini's* Widow, Daughter to Prince *Ragotzki*; but her Mother-in-Law hinder'd it, and sent some Troops to beat up Count *Teckely's* Quarters; where a Son of Count *Serini* being taken, he carried on a Correspondence betwixt Count *Teckely* and his Sister. The Count afterwards defeated the Imperialists under Count *Lesly*, took most of the Towns of *Hungary*, and those of the Mountains in *Transilvania*: The

Emperor's Army being in no Condition to resist him, the Court of *Vienna* propos'd an Accommodation; but the Malecontents, tho' they wanted both Discipline and Money, insisting on a full Redress of all Grievances, it came to nothing.

In 1679, the War betwixt the Empire, the *French*, and the *Dutch*, was concluded by the Treaty of *Nimeguen*, where the King of *Sweden* was Mediator; by which *France* got *Eriburg* and *Brisgau* in lieu of *Philipsburg*, and the *Swedes* recover'd the Provinces they had lost in the War. That Year the Plague hindred the Proceedings of the Armies in *Hungary*. *Tecke'y* being in *Transilvania*, *Wesselini*, who had got the Command of the *Hungarians* in his Absence, would not restore it upon his Return; so that they fought, wherein *Wesselini* was worsted, and taken. The Emperor offer'd an Accommodation again; but *Teckely* would do nothing without Consent of the *Turks*, who had promised to make him Sovereign of *Transilvania*. Princess *Ragotzki's* Mother-in-Law dying, the Princess married *Teckely*, by which he got all the Places which depended on that Family.

After the Peace of *Nimeguen*, the *French* began to erect Chambers of Reunion at *Metz* and *Brisack*; where, by the Sentence of his own Judges, several Princes were summoned to surrender those Provinces and Cities that were alledged to be Dependant on his new Acquisitions; and such as would not comply, were compell'd by force, particularly the Elector *Palatine*, and the Elector of *Treves*: The *French* still kept Possession of those Places they were obliged to surrender to the Empire by the Peace. The Emperor's Minister gave in a Memorial to the Diet at *Ratisbon*, of those Proceedings; and the States unanimously resolved, That they were contrary to the Treaties; but *Holland* and *Brandenburg* were not inclin'd to a Rupture with *France*. In 1680, the *French* surpris'd *Strasburg*, by the Treachery of some of their new Magistrates: The King of *France* did likewise Project to get the Dauphin elected King of the *Romans*, but miscarried in it. In 1681, he made a Treaty with Count *Teckely*, who had a strong Army of the Malecontents in *Hungary*, was in great Esteem with the Grand Signior, and engag'd the *Turks* to invade:

Hun.

Hungary before the Emperor was aware of it. In 1683, the Duke of *Lorraine* besieg'd *Newbenfel*; but was obliged to break up on the Grand Visier's marching against him. At the same Time 3000 *Tartars* harrafs'd the Country, and the *Germans* with great Difficulty retired towards *Vienna*; for 3000 *Turks* and *Tartars* fell upon their Baggage, took it, and kill'd most of the Convoy; but Prince *Lewis* of *Baden* rescued Part of the Baggage. The News of this occasion'd an incredible Consternation at *Vienna*; the Emperor removed to *Liniz*, and most of the Citizens were for leaving the City; but the Approach of the Duke of *Lorraine* next Day encourag'd them, so that they began to repair the Fortifications, and the Garison was reinforc'd, there not being above 200 regular Troops in the City before. The *Turks* open'd their Trenches the 15th of *July*: The Garison, under Count *Staremburg*, disputed every Inch of Ground, and by frequent Sallies cut off great Numbers of 'em. In the mean time the Duke of *Lorraine* defeated *Teckely*, took his Baggage, and relieved *Presburg*, that was ready to have fallen into his Hands. The Duke engaged him a second time on the Borders of *Moravia*, and forc'd him to retire. The Siege continued to the 12th of *September*, with all the Fury imaginable, and the Besieged behav'd themselves to Admiration, till they were reliev'd by the Christian Army of 80000 Men, consisting of *Imperialists* and *Poles*: The Right Wing was commanded by *John Sobieski*, King of *Poland*; the Left by the Elector of *Bavaria* and the Duke of *Lorraine*; and the Main by the Elector of *Saxony* and Prince *Waldeck*. They forc'd the Enemy's Intrenchments; and during the Engagement, the Duke of *Lorraine* detached Prince *Lewis* of *Baden* with a Body of Horse, Foot and Dragoons, to relieve the City, which he did, and killed all the *Turks* that were employ'd in the Assault. Upon this, the *Turkish* Horse fled, and left their Camp and Foot to the Mercy of the Christians, who gain'd a signal Victory, with the Loss only of 1000 Men. The *Turks* lost about 75000, with their Baggage, and 120 Cannon; and the Garison lost about 6000 Men during the Siege.

The Elector of *Saxony* return'd home with his Troops after the Relief of the

Town, because the Emperor disobligh'd him; but the *Imperial* and *Polish* Army march'd after the *Turks*, fell in with 14000 of them, routed them, took the Fort of *Barkan* by Storm, and soon after the Duke of *Lorraine* took *Gran*, after a Siege of 3 Days. 'Tis probable their whole Army must have been dispers'd, had not the King of *Poland* been likewise disgusted, which made him not so eager in the Pursuit as otherwise he would have been. He was not pleas'd with the Emperor's Coldness to him upon the Interview, after the considerable Service he had done him by raising the Siege. The *Atlas Historique* says, the Malecontents prevail'd twice with that King to mediate for a Redress of their Grievances; which being refus'd, he declar'd he would assist the Emperor no more. The Progress of the Emperor's Arms however made the *Turks* abandon *Essee*; and the Grand Visier being charged to have occasioned all those Misfortunes by his Imprudence, he was strangled at *Belgrade* by the Grand Signior's Orders.

In 1684, the *Imperialists* took *Pecgrade*, a strong Fortrefs on a Mountain near the *Danube*. The Duke of *Lorraine* defeated the *Turkish* Army near *Weissen*, took that Town, and worsted the *Turks* also near *Buda*. On the 18th of *July*, the Duke of *Lorraine* sat down before that Town. Twenty Thousand *Turks* came and encamped within 4 Miles of it: Upon which the Duke marched and routed them, took their General's rich Tent, and killed 4000 on the Spot, besides those slain in the Pursuit; yet the Besieged held out, and concerted with the *Seraski*, that on the 25th of *September* they should make a great Sally, and that he should send a strong Detachment to enter the Place, which he did; and tho' they met with great Opposition, yet 600 of 'em got in. The *Imperial* Army being much weakened, could not push on the Siege with Vigour; and on the 20th the *Turks* made three great Sallies, kill'd many of the *Imperialists*, and ruin'd most of their Works, which, together with the Approach of the *Seraski* with a great Army to the Relief of the Town, and the Badness of the Weather, obliged the Duke to raise the Siege.

Count *Lesly* besieged *Verovitzza*, the Capital of *Sclavonia*; and having sent a Detachment who defeated 2500 *Turks* near *Flatina*,

Verovitz surrender'd. He had like to have been surpris'd afterwards by 20000 *Turks*, commanded by the *Serafquier*; but he fortified his Camp, and obliged the *Turks* to retire with considerable Loss. In *Upper Hungary*, the *Imperialists* defeated *Teckely*, killed 4000 of his Men, and took two Towns.

In 1685, the Duke of *Lorrain* besieged *Newhausel*: The *Turks*, to give him a Diversion, besieged *Gran*; upon which he left Troops to carry on the Siege, marched against them with the Main of his Army, killed above 6000 of them, besides 3000 they lost in the Siege, took their Camp and Baggage, with the Loss only of 1000 Men, and relieved *Gran*, while his Troops before *Newhausel* took that Place by Storm.

Count *Lesly* took *Michalowitz* in *Croatia*, defeated 10000 *Turkish* Horse and Foot near *Essec*, scal'd the Town, put the Garison to the Sword, and burnt Part of the famous Bridge of that Place. About that same Time, General *Schultz* took *Especies* in *Upper Hungary*; upon which several other Places there surrender'd; and General *Caprara* took *Cashaw*.

About this Time, Count *Teckely* was seiz'd by Order of the Grand Signior, which was a Blunder in Politicks, and dishearten'd the Malecontents; so that the Port being sensible of their Error, set him at Liberty; upon which the *Imperialists* removed from before *Mongatz*, where they had block'd up his Lady Princess *Ragotiki*.

In 1686, the Duke of *Lorrain* laid Siege again to *Buda*, and open'd his Trenches the 21st of *June*. The Besieged made furious Sallies; in one they killed 1000 Men, and in another nail'd up a Battery of Cannon, and two Mortars; but their Magazine near the Castle was blown up, which demolish'd a great Part of the Wall. On the 12th of *August*, the Grand Visier came with 10000 chosen Men to force the *Imperial* Lines on the Right, and throw Supplies into the Town, and design'd with his whole Army of 70000 to attack the Main of the *Imperialists*; but the Duke of *Lorrain* sent 7 Regiments of Horse, and some *Hungarians*, who attacked the 10000 *Turks*, killed above 3000 *Janizaries*, took 8 Pieces of Cannon, and rejoin'd the Duke, who return'd to the Siege, and push'd it on with great Vigour.

Three Thousand *Janizaries* forc'd the Out-Guards, and threw 150 Men into the Town; but the rest were repulsed. The *Imperialists* took the Castle by Storm on the 29th of *August*, and 3000 *Janizaries*, who design'd to get into the Town, were repulsed, and 400 of them killed.

In the beginning of *September*, the Duke was reinforced by 10000 Men, under General *Seberffenberg*; the Assault was made, and the Town taken by Storm. The *Turks* fought with incredible Bravery, the *Basha* was killed in the Breach, 4000 *Turks* slain in the Assault, and the *Christians* got an incredible Booty. When the Grand Visier heard the Town was taken, he burnt his Camp, and retired to *Alba Regalis*.

Prince *Lewis* of *Baden* being join'd by a Body of *Groats*, besieg'd *Five Churches*, a strong Place, of difficult Access, where there were 2000 *Turks* in Garison. He made a Breach in three Days, and began to work on his Mines; upon which the Garison, who wanted Ammunition, surrender'd at Discretion; and *Syolos* did the like. Prince *Lewis* destroy'd the Bridge of *Essec* from *Darda* to the *Drave*, and likewise the Bridge of Boats which the *Turks* had laid over that River. Count *Caraffa* attack'd *Segedin*, and the Grand Visier sent 2000 *Turks* and 4000 *Tartars* to relieve it; but General *Veterani*, with 5000 Men, surpris'd the *Tartars*, and forc'd them to abandon their Camp with great Slaughter; but the Remainders of that Detachment joining with others, made up a Body of 10000 Men, and design'd to surprise *Veterani* in his March; but he forc'd them to retire with the Loss of 2000 Men, and their Baggage; upon which *Segedin* surrender'd the 23d of *October*.

In 1687, the Duke of *Lorrain* made a feign'd Retreat near *Mohatz*; upon which the Grand Visier order'd 15000 Men to attack his Left, commanded by the Elestor of *Bavaria* and Prince *Lewis* of *Baden*; but they stood their Ground till the Duke came up, when the *Turks* were put to flight, and many of them kill'd on the Spot, besides great Numbers drown'd in Morasses and in the River as they fled. General *Dunewald* pass'd the *Drave*, and took the Castle of *Burszew*, and design'd to attack the Castle of *Essec*; but the *Turks* abandon'd it, with *Posen* in *Sclavonia*, and other Places.

About

About this Time, the *Hungarians* finding themselves treated like a Conquer'd People, many of their Towns design'd a Revolt; but not being able to effect it, their Misery was heighten'd, abundance of Persons of Note executed on that Account, and multitudes of innocent People taken up, that were forced to redeem their Liberty.

After the taking of *Buda*, Prince *Abaffi* began to Temporize with the Emperor: But the Duke of *Lorraine* enter'd *Transilvania*, as Count *Tekely* foretold him would happen, and oblig'd that Prince and the States to a Submission, to surrender their Strengths, and conclude a Treaty very advantageous to the Emperor; upon which the Prince retired to *Fergatz*. About this Time, the strong Fortrefs of *Agria* surrender'd to the *Imperialists*, and *Mahomet IV.* Emperor of the *Turks*, was depos'd, and his Brother set up in his stead.

The Emperor's good Success put him upon getting his Son the Arch-Duke *Joseph* crown'd King of *Hungary*. He went himself to *Presburg*, where he assembled the States, and told 'em, He would have the Crown made Hereditary. The States took it into Consideration, represented their Grievances, as usual, and said, They were willing to elect the Arch-Duke; but desir'd their Freedom of Election might be continued, and that the Crown should not be Hereditary; That the *German* Troops might be recalled when Peace was made with the *Turks*; and all their Grievances redress'd before the Coronation. The Emperor allow'd them 14 Days to deliberate and draw up their Grievances; but told 'em, He had been at more Charge to defend that Kingdom against the *Turks*, than it was worth, and therefore had Right to look upon it as one of his Hereditary Countries. There were great Debates about this in the Diet; and the Count *de Drafcowitz*, the Chief Judge of the Kingdom, having represented the Consequences of it, they pray'd the Emperor not to make such an Alteration in their Constitution; but the Count being found dead a-Bed (says the *Atlas Historique*) some Days after, no body knows how, those of his Sentiments durst not after that talk any more of it. Some desir'd that they might be at Liberty to chuse any such Prince of the House of *Austria* as they thought fit; but

this was also rejected. There were Two other Things which retarded the Coronation; the First was, That according to an Article of King *Andreas's* Declaration, any of the three Estates had a Right to oppose the King, when he acted against the Laws of the Kingdom, without being guilty of Treason; but the Emperor would not allow of that. The Second was, That the Protestants, who had join'd with the Court to get the Crown made Hereditary, thought it a proper Season to demand, That they should be maintain'd in their ancient Privileges; That the Churches and Estates which had been taken from 'em since 1667, should be restored; That they should have Deputies in every Diet; That the Jesuits should not meddle in Affairs of State, or what related to the Protestant Religion; That they should not be allow'd to settle in any other Place than where they then were; And that Count *Caraffa*, who had got many innocent People cut off on Pretence of Plots, should be turn'd out: But the States did not think it a seasonable Time for the Protestants to insist on those Things; and thus, on the 29th of *December*, the Kingdom was made Hereditary, and the Power of the Prince in a manner absolute; so that the People could do nothing but groan and sigh for the Loss of their Liberty; for Count *Tekely*, who had acquir'd so much Glory, had fail'd of late in most of his Attempts, and was not able to keep up their Spirits.

In 1688, Princess *Ragotski*, who had been block'd up in *Münster* a long Time, being in want of Necessaries, and hearing that her Husband Count *Tekely* was sent for to *Constantinople*, where she was afraid he might be strangled, as he was every where given out to be, was forc'd to surrender. The Count being informed of this, as he was on his Journey to *Constantinople*, thought fit to return, lest his Friends should be quite dispirited. Some accus'd him for this to the Grand Signior; but it made no Impression to the Count's Prejudice.

Three thousand Five hundred Infidels attempted to surprise *Czernick*; but the Garrison sallied, killed 700 of them, and took most of the rest. The 27th of *May*, the *Imperialists* oblig'd *Alba Regalis*, where the Kings of *Hungary* were formerly crown'd, to surrender, and found 84 Pieces of Canon

non in it: They also took *Lippa* by Storm; and the *Turks* abandoned *Illock* and *Peter Waradin*.

In *August*, the *Elect* of *Bavaria* invested *Belgrade*, where the *Turks* made a brave Defence; yet he took it by Storm on the 6th of *September*, enter'd the Castle after the *Turks*, who fled thither, and kill'd 500 of them, with the Governor: The *Christians* lost 1250 Men; of whom there were 12 great Lords; but the *Turks* lost above 4000 Men in this Action.

Prince *Lewis* of *Baden*, with a flying Camp in *Bosnia*, was surrounded by 15000 *Turks*, but routed them, and took 1200 Prisoners, near *Brods*.

In 1689, the *Grand Signior* finding a Way open'd to *Constantinople* by the taking of *Belgrade*, offer'd Peace upon very advantageous Terms, which were rejected. The *Elect* of *Bavaria* and *Duke* of *Lorraine* went to Command the Army on the *Rhine* against *France*; and the *Prince* of *Baden* commanded in *Hungary*. The *Imperialists* block'd up *Canissa*, *Themiswaer* and *Waradin*; but having too few Troops, they could not hinder Convoys to enter those Places, which with some Losses by *Sallies*, oblig'd them to rise from before 'em. Prince *Lewis* of *Baden* having Advice, That the *Turkish Army* was above 50000; he reinforced his Army from the *Garisons*, and march'd towards the *Turks*, who were intrench'd before *Nissa*; but the badness of the Way, and want of Provisions, oblig'd him to march back to *Passerovitz*, to secure the Bridges over the *Morave*, and prevent the *Turks* from invading *Scavonia*. The *Turks* hearing of his Retreat, sent a strong Detachment to harra'ss him in his March, and to take the *Imperial Magazine* at *Semendria*; but he defeated this Detachment, and another that was sent to cut off his Retreat: After which, he march'd against their Army near *Patoschin*, defeated 'em, oblig'd 'em to retire to *Nissa*, took their Camp and Baggage, and 100 Pieces of Cannon. Some Days after he march'd to *Nissa*, forced their Camp, routed them, and took the Town. *Tekely* was on his Way to relieve it; but coming too late, he join'd the *Grand Signior* at *Sophia*, who entertain'd him with all possible Marks of Honour and Affection. The *Prince* of *Baden* march'd from *Nissa* to *Widdin*, a Place

of Importance on the *Danube*; defeated two *Bassa's* who lay near that Place, and took it in four Days; *Piccolomini* defeated the *Turks* also in several Skirmishes; But these continued Victories made the *Imperialists* too bold, which cost 'em some Regiments that attacked four times their Number of *Turks*. Upon this, *Veterani* was obliged to draw out his Troops from *Nissa*, and other Places, and march towards *Belgrade*. The *Prince* of *Baden* quartered part of his Army in *Wallachia* and *Transilvania*, fortified several Posts to secure them from the *Turks* and *Tartars*, and return'd to *Vienna*.

In 1689, the *French* invaded the *Palatinate*, committed great Barbarities there, took *Philipsburg* and other Places, having formerly burnt the Cities of *Spire*, *Oppenheim*, *Worms* and *Frankendale*. This Year they laid waste the Country about *Montroyal* and *Luxemburg*, to prevent the Confederates sitting down before these Places. The *Imperialists* under the *Duke* of *Lorraine* took *Keiserwaert* and *Ments*, after a brave Defence by the *French*; wherein the *German* lost above 6000 Men: And the *Elect* of *Brandenburg* being reinforced by Troops from the *Duke* of *Lorraine*, oblig'd *Bonne* to Surrender after a vigorous Resistance.

In 1690, the *Turks* desired a Peace; but the *Emperor's* Terms appearing too high, the War began again. *Abassi* *Prince* of *Transilvania* being dead, the *Emperor* made his eldest Son *Prince* of that Country, and the *Grand Signior* conferr'd that Honour on Count *Tekely*; who defeated and took General *Heuster* in *Transilvania*, which oblig'd Prince *Lewis* of *Baden* to pass the *Danube* at *Semendria*. The *Turks* also besieg'd *Nissa*: Count *Guido* of *Staremburg* wanting Provisions, was oblig'd to surrender it upon honourable Terms, after a brave Defence, but many of their *Garison* were perfidiously kill'd by the *Infidels*. The *Garison* of *Widdin* capitulated with the *Turks*, and were convoyed to *Orfiva*. Upon this, the *Turks* march'd towards *Belgrade*, the Breaches of which had not been sufficiently repaired; and General *Aspremont*, and the *Duke* of *Croy*, who had thrown himself into it, had not time to fortify it. The *Garison* made a brave Defence, but a Bomb blew up their great Magazine of Powder; it kill'd 1200 Men, wounded a greater Number, and threw

throw down part of the Walls. Several other Magazines were also set on fire, which occasion'd the burning down of a great part of the City: The *Turks* taking the Advantage of this Confusion, after several Repulses, carried it by Storm, and killed all those that oppos'd them; so that only 600 of the 6000 that were in Garrison escaped with the Duke of *Croy*, and the Counts of *Alpremont* and *Archinto*, over the *Danube* in Boats. The *Turks* after this march'd towards *Esse*, sat down before it; and would have taken it, if the Duke of *Croy* had not order'd 300 Men to Sally out in the Night, to sound a great many Trumpets, and beat Drums, first more faintly, and then more loud: Upon which, the *Turks* thinking it to be a strong Body of *Germans* come to the Relief of the Place, they broke up in Confusion, and left their Cannon and heavy Baggage. Count *Teckely* took *Lippa*, and put Garrisons into *Giula*, *Themiswar*, and *Great Waradin*, which harra's'd *Hungary*. Prince *Augustus* of *Hanover*, with 1000 Men, rashly attack'd 1500 *Turks* strongly intrench'd in *Transylvania*, was routed, and himself kill'd on the Spot. This Year the Emperor and the King of *Spain* made a new Alliance with the Duke of *Savoy*, who was threaten'd by the *French* King; and the Emperor got his Son Archduke *Joseph* King of *Hungary*, elected King of the *Romans*. *Canissa*, a strong Fortrefs in *Lower Hungary*, was surrendered to the *Imperialists*, while the *Turks* were busie with the Sieges of *Nissa*, *Widin*, *Esse*, and other Places. Prince *Lewis* of *Baden* march'd with so great Secrecy, that he surrounded *Teckely's* Army, forc'd him to retire into *Wallachia*, and to leave most of his Baggage, with 4 or 500 Men behind, by which *Transylvania* was clear'd of the *Turks*.

In the beginning of 1691, died the Duke of *Lorraine*, who had gain'd so much glory in the *Turkish War*, &c. a little time before; and design'd to have invaded *France* with 40000 Men, by the Way of *Lorraine*. The Command of the Army on the *Rhine* was given to the Electors of *Bavaria* and *Saxony*, but they did nothing memorable on that side. The Prince of *Baden*, about the middle of this Campaign, march'd with 40000 Men along the *Danube* to *Peter Waradin*, to oppose 60000 *Turks*, who design'd to pass the *Save*; but their Fleet on the *Danube* being

stronger than that of the *Imperialists*, hinder'd the Provisions to come any farther than *Salankemen*; and the *Turks* march'd thither to cut off their Communication with *Peter Waradin*, where their Provisions lay. This alarm'd Prince *Lewis* of *Baden*, who wanted both Provisions and Ammunition, and made him resolve to fight, tho' with great Disadvantage. He attack'd the *Turks* in their Trenches near *Salankemen*: His Right Wing was worsted; but the Left coming up, they routed the *Turks*, and gave Time to the Right to rally, by which they had a compleat Victory, with the Loss only of 2000 Men; and the *Turks* lost about 16000, with the Grand Visier *Cuperli*, the Aga of the *Janizaries*, and several great Bassas. After this they retok *Lippa*, pass'd the *Danube*, and took *Great Waradin*; but the Citadel held out, and was block'd up.

In 1692, General *Haußer* was exchange'd for Count *Teckely's* Wife. He besieged *Great Waradin* on the 28th of April, and took it the 2d of June, together with Store of Ammunition, 77 Pieces of Cannon, and 4 Mortars. This Year the Duke of *Hanover* was made an Elector of the Empire. The Prince of *Baden* having represented to the Emperor the Necessity of Naval Preparations on the *Danube*, because the *Turks* had a stronger Fleet, and frequently stop'd their Convoys: By Consent of the *Dutch*, many Seamen were list'd in their Country for that Service, and several Vessels fitted out. This little Fleet was commanded by the Marquis of *Fleuri*. The *French*, under the Mareschal de *Lorge*, committed some Barbarities on the *Rhine*; surpriz'd and took the Duke of *Wurtemberg*, and kill'd and took 2000 of the Detachment he commanded. The Landgrave of *Hesse Cassel* oblig'd the *French* to rise from before *Rhinfeld*.

In 1693, my Lord *Paget* Ambassador from *England*, and Monsieur *Hemskerque* Ambassador from the *States General*, came to *Constantinople*, to mediate a Peace betwixt the Emperor and the Grand Signior; but the *French* Ambassador dissuaded the Port from it. The Duke of *Croy* commanded in *Hungary*, and the Prince of *Baden* on the *Upper Rhine*. The *French* under the Mareschal de *Lorge* attempted twice to force the *German* Camp, but were repuls'd with Loss. Mareschal de *Lorge*, who commanded the

French

French under the Dauphin, put the Dutchy of *Wirttemberg* under Contribution, and took *Heidelberg*, by the Treachery or Cowardice of the Governr, where they committed great Barbarities, as in other Places of the *Palatinate*, burning wherever they came. The *Imperialists* besieg'd *Belgrade*; but the Grand Visier with an Army of 80000 Men obliged them to raise the Siege. General *Heidenstein* routed a strong Body of *Turks* and *Tartars* near *Giula*, and took that Town. In 1694, the *Turks* besieg'd *Titul*, without Success: The Garison intercepted 10 *Turkish* Vessels with Provisions, which occasion'd a great Scarcity in their Camp. They also besieged *Great Waradin*; but in vain. Two Thousand *Tartars* were detached over the *Danube*; but were cut off. Prince *Lewis* of *Baden* passed the *Rhine*, made *Mons Lorge* retire, laid the Country under Contribution, destroy'd several *French* Magazines, and carried off 14000 Head of Cattle.

In 1695, the Elector of *Saxony* commanded in *Hungary*, and the Grand Signior *Mahmud* headed his own Army, retook *Lippa* and *Titul* from the *Imperialists*, defeated a Body commanded by Count *Peterani*, who was killed, and 3000 of his Men, with the Loss of 6000 *Turks*. The Elector of *Saxony* hinder'd them from making any Advantage of this Victory in *Transylvania*.

In 1696, the Elector of *Saxony* besieg'd *Themiswar*, which brought the Grand Signior to a Battle. The *Turks* had the Advantage of Number and Ground, and the Loss on both Sides was near equal; so that both challeng'd the Victory; but the Elector lost 5 great Cannon, and 16 Field-Pieces; and the *Turks* retook many small Places on the *Sava*, which they demolished.

In 1697, Count *Tetshy*, who had lost his former Reputation with the *Turks* since the Battle of *Salankemen*, retir'd to *Constantinople*. One of his Followers, called *Tukani*, form'd a Conspiracy in *Hungary*, assembled a Body of Troops, seiz'd *Kallo* and *Poack*, cut off the *Imperial* Garisons, and publish'd a Manifesto, inviting the *Hungarians* to shake off the *German* Yoke; but this Conspiracy was soon crush'd. This Year the Elector of *Saxony* being Competitor for the Crown of *Poland*, after *John Sobieski's* Death, with the Prince of *Conti*, carried it, which was a great Mortification to the

French. Prince *Eugens* of *Savoy* commanded in Chief in *Hungary*; and the *Turks*, encourag'd by their former Advantages, resolv'd to hazard a Battle at *Zenta*, where that Prince obtain'd a compleat Victory: About 25000 *Turks* were kill'd in the Field or drown'd in the *Theisse*, 6000 were wounded, and they lost 83 Pieces of Cannon, 5000 Waggon with Provisions, 17000 Oxen, 6000 Horses, as many Camels, a vast Number of Sheep, the Grand Signior's Tent, 7 Standards, and 500 Colours. This Year a Peace betwixt the Emperor, the rest of the Allies, and *France*, was concluded at *Ryswick*, upon the Basis of those of *Westphalia* and *Nimeguen*. The *French* quitted all their Reunions in *Alsace*; but Popery was to remain where they had settled it; The Elector *Palatine* was restor'd to his Territories, on paying 200000 *Livres per Annum* to the Dutchess of *Orleans*, till her Pretensions were decided; *Dinant* was restor'd to *Liege*; *Strauburg* resign'd to *France*; and *Fort-Kiel*, *Friburg*, *Star-Port*, *Old Brisac*, and *Philippburg*, restor'd to the Empire; The *French* were to demolish the Fortifications over against *Hunningen* and *Fort-Lewis*; The Castles of *Traerbach*, *Ehrenburg*, *Kirnburg*, and the Fortress of *Mont-Royal*, were to be demolish'd, and restor'd to their right Owners; The Duke of *Lorraine* was restor'd to his own Country, and to *Nancy*; and the Castles of *Bischo* and *Homburg* were to be raz'd. The Protestant Princes of the Empire gave in a Memorial against establishing Popery in *Alsacia*, because contrary to the Fundamental Laws of the Empire; i. e. to the Peace of Religion made in 1588, and to that of *Westphalia* and *Nimeguen*, which were the Basis of this Treaty; and that this Article was likewise contrary to the Capitulations of the Emperor and the King of the *Romans*, by which the said Peace of Religion was secured. They declar'd, That this Clause would prove a great Hindrance to the Union of the Estates of the Empire, which happen'd accordingly; for after the Peace was concluded, many Violences were offer'd to the Protestants in the *Palatinate*, and other Places, upon the Account of Religion.

In 1698, the Defeat of the *Turks* at the Battle of *Zenta* terrified them so much, that publick Prayers and Acts of Devotion were com-

commanded throughout their Empire, in order to obtain a Peace by the Favour of God and their Prophet. The Emperor and the Grand Signior consented that his Majesty of Great Britain and the States General should be Mediators of the Peace. They were represented by my Lord Paget and Monsieur Coliere, who met at Carlowitz, betwixt Peter Waradin and Salankemen. Prince Eugene commanded this Year in Hungary; but the Expectation of a Peace made both Sides act only on the Defensive. The Regiments of Herbeville and Saxe-Gotha conspired to revolt from the Emperor; but the Formers of this Design being seiz'd and punish'd, the rest return'd to their Duty. There happen'd Differences this Year about the French King's delaying to restore Rhinsfeld, Philipsburg, and Brisas, according to the Peace at Ryswick. The Czar of Muscovy, after he had visited Holland, and King William in England, went to Vienna, where he was splendidly entertain'd by the Emperor, and from thence return'd home.

January the 26th, 1699. a Treaty was sign'd for 15 Years betwixt the Emperor and the Turks at Carlowitz: The chief Articles were, "That Transilvania should remain entire to the Emperor; but the Province of Themiswarer to the Turks: That the Emperor should demolish Caransebes, Lippa, Zerweck, Bershe, and Sabla, and never re-fortify them. The Islands of the Rivers Save and Marosch were to belong to the Emperor; but the Use of those Rivers to both. All Prisoners taken during the War to be exchanged or ransomed. No Protection on either Side to be given to Rebels and Malecontents. The Papists were to have the free Exercise of their Religion." The Czar, the King of Poland, and the Republick of Venice, were comprehended in this Treaty; but Count Tockely was excluded. The Grand Signior made him, by way of Compensation, Prince of Wedd'n, Caransebes, and Lugos, with their Dependencies. This Year Joseph King of the Romans was married to Wilhelmina Amelia, youngest Daughter of John Frederick Duke of Hanover.

In 1700, the Emperor disbanded some of his Troops, and offer'd his Mediation betwixt the K. of Sweden and the K. of Poland; but without Effect. M. Villars, the French

Ambassador, acquainted his Imperial Majesty with the Treaty of Partition agreed on betwixt England, Holland, and France, and desir'd the Emperor to accept it, since the Preservation of the Peace of Europe was the sole End of it; but his Imperial Majesty refus'd it, because it was contrary to his own Right and Interest.

The Death of King Charles II. of Spain, on Nov. 1. 1700. and his suppos'd Will, by which he made the Duke of Anjou his Successor, contrary to the Treaty of Partition, oblig'd most of the Princes of Europe to side with the Houses of Bourbon or Austria, according to their different Interests. The Emperor made a new Alliance with England, Holland, and the Princes of the Empire, and sent Prince Eugene of Savoy to Italy with 30 or 40000 Men, who, after a surprizing and unexpected March over the Rocks and Mountains of the Alps with his Artillery, let down from Precipices by Engines, publish'd a Manifesto there, asserting the Rights of the House of Austria to the Milanese, and the Monarchy of Spain. About this Time a new Conspiracy was form'd against the Emperor in Hungary; upon which Prince Ragotski and Count Schirmer were imprison'd: Ragotski escap'd, and the Emperor imprison'd his Lady. This Year the Elector of Brandenburg erected the Dutchy of Prussia into a Kingdom, with the Emperor's Consent; and he and his Wife were crown'd at Koningsberg, the Metropolis of that Country. On this Occasion he was congratulated by the Emperor, and most Princes of the Empire. The Duke of Mantua declar'd for the French King, and received a French Garison into that City. Prince Eugene began his glorious Actions in Italy, by forcing the Pass at Carpi, and passing the Mincio, notwithstanding the Vigilance of the French Generals, which occasion'd a Misunderstanding among them, and oblig'd the French King to recall M. Catinat, and send M. Villeroy in his stead, who being defeated by Prince Eugene at Chiari, had 4000 Men killed, by which the French lost all the Dutchy of Mantua, except the Capital, and Goito.

In 1702, the Elector of Cologne suffer'd French Troops to enter his Territories; but the Chapter declar'd for the Emperor, and received a Dutch Garison into Cologne: Prince

Eugene surpris'd *Cremona*, where *M. de Villeroi* had his Head Quarters, with 12 Battalions of Foot, and 5 Regiments of Horse. He made *Villeroi* Prisoner; but the Badness of the Ways having hinder'd Prince *Vaudemont* to come up in Time to his Assistance, he was oblig'd to retire, being out-number'd by the Garison; but carried off *M. Villeroi*. He block'd up *Mantua*; but the Place being naturally strong, and his Army not large, he was oblig'd to rise from before it. The Duke of *Anjou* commanding his own Army in *Italy*, marched to surprise an Imperial Magazine at *Luzara*, which occasion'd a Battle, where the Loss was great, and almost equal on both Sides: Yet Prince *Eugene*, tho' inferior in Number, made a further Progress in *Italy*. About this Time, the King of the *Romans* and Prince *Lewis* of *Baden* took *Landau*, after a vigorous Defence; and the Elector of *Bavaria* declar'd for *France*, and surpris'd *Ulm* by Treachery.

The Emperor and the States of *Swabia* and *Franconia* assembled Forces against the Elector of *Bavaria*, and took many Towns. *M. Villars* pass'd the *Rhine*, and attempted to force the Lines of *Stolhoffen*, and open a Passage that Way to join the Elector of *Bavaria*; but being repuls'd, he join'd him by Way of the *Black Forrest*; and they took *Ratisbon*, while the Imperial Diet was sitting there. After this, *M. Villars* march'd to *Tirol*, took many Places there, and design'd to force his Way from thence into *Italy*; but fail'd in the Attempt, and was forced to abandon all his Conquests there. The Confederates took *Bonn* on the *Lower Rhine*, and *Traerbach*; but were oblig'd to quit the latter on the Approach of Count *Tallard*, who took *Landau*, after he had defeated the Confederate Army that came to relieve it, under Count *Nassau-Weilbourg* and the Prince of *Hesse-Cassel*. On the *Upper Rhine*, the Duke of *Burgundy* took *Brisac*. The Duke of *Vendosme* mistrusting the Duke of *Savoy*, disarm'd all the *Savoyard* Auxiliaries in his Army, made them Prisoners of War, and sent a strong Detachment to the Frontiers of *Piedmont*, to force the Duke to a Neutrality, upon dishonourable Terms; which the Duke resented so much, that notwithstanding his two Daughters were married to the Duke of *Burgundy* and to the

Duke of *Anjou*, he declar'd for the Allies. The Arch-Duke *Charles* being acknowledg'd as King of *Spain* by the Allies, came from *Vienna* to *Holland*, and from thence into *England*, where he embarked for *Portugal*, the King of that Country having enter'd into the Grand Confederacy, and arriv'd safely there.

This Year Prince *Ragotski* was condemn'd by the *Aulick Council* at *Vienna*, and all his Possessions confiscated, (except an Yearly Allowance of 6000 Livres to his Wife, and 15000 to each of his two Daughters) for Rebellion and Treason against his Imperial Majesty and the King of the *Romans*, by endeavouring to subject *Hungary* to a Foreign Power, by alienating the Affections of the *Hungarians*, and by writing several Letters to *France*, to put *Hungary* under the Protection of that Crown; for which, and other Crimes, he was sentenc'd to lose his Head whenever he could be seized.

In 1704, the Malecontents invaded the Emperor's Hereditary Dominions. Prince *Eugene* was sent to *Presburg*, to endeavour an Accommodation; to which they would not agree, except on the Terms contain'd in their Manifesto, which was in Substance as follows: That they have no Design to throw off the Emperor their Sovereign; but shall always be ready to sacrifice their Fortunes for his Glory, if he treat them as a good Prince ought to do; and since they believ'd him to be naturally bountiful and merciful, they demanded, 1. To be allow'd their ancient Privileges, which they enjoy'd when they became his Subjects. 2. That the Blood of their Martyrs, whose Consciences had been oppress'd, cry'd so loud, that they could not but insist on demanding the Restitution of their Churches for Divine Worship. 3. That the Revenues of their Churches, possessed by the *Jesuits*, should be restored. 4. That their Records should likewise be returned. 5. That they be restor'd to their Offices and Dignities, as formerly. 6. That the *Jesuits* should be banish'd *Hungary* and *Transylvania*. 7. That their Colleges and Revenues should be likewise restored. 8. That those who had been forced to change their Religion, should be left at Liberty to return to it. 9. That the Books and other Papers concerning their Grievances, which were taken from them, should

should be restor'd. 10. That such Estates as Protestants had been forc'd by Persecution to grant to the Popish Clergy, should be restor'd to the Protestant Clergy for the Relief of their Poor. 11. That all the Popish Clergy, except Natives, be oblig'd to depart *Hungary* and *Transilvania*. 12. That if the Emperor will name Commissioners, to Treat of a firm and durable Peace, and agree to a Suspension of Arms, and Time and Place for a Treaty, they will do the like. 13. That some Potentates be made Guarantees of the Treaty. 14. That without Degradation to the Emperor's Sovereignty, they may have Leave to send Deputies to the Diet of the Empire, merely to take Care that they be not inroach'd upon in Matters of Religion. 15. That as a Compensation for the Cruelties committed upon their Families, and other Losses, they may be exempted from all Taxes for 15 Years. 16. That they may have Liberty to Trade every where but with the Emperor's Enemies. 17. That Princess *Ragotzki*, and her Family, be set at Liberty, and her Jewels restor'd, without any Default. 18. That the Castle of *Mongatz*, with all its Dependencies and Privileges belonging to it, be restor'd to her and her Heirs. 19. That the Sentence against Prince *Ragotzki* be ras'd out and annull'd, his Honour restor'd, and that he be own'd as a Prince of the Empire, and put in Possession of all his Rights. 20. That the Estates taken from that Prince, and given to the Jesuits, be restor'd, as at present, without any Allowance for Improvements made on them. 21. That there be a general Amnesty for all who have any way assisted that Prince. 22. That they be restor'd to their Employments, Offices and Dignities, and the Confiscation of their Estates and Goods be made void. 23. That Protestant Commissioners may have liberty to take out of the Nunneries all such Protestant Women as have been forc'd into them, whether Married or Unmarried. 24. That the Protestants shall be allow'd Schools every where as formerly. 25. That those of the *Augsburg* Confession may have Leave to settle in *Hungary* and *Transilvania*, to repeople the Country that has been laid waste by War and Persecution. 26. That half the Courts of Judicature may be compos'd of Protestants as formerly. 27. That

the like shall be allow'd in all Corporations. 28. That the Protestants of such Bodies or Corporations be not oblig'd to attend at any Functions contrary to their Consciences. 29. That they be not oblig'd to put any Ornaments before their Gates, or in their Windows, on that Holiday, call'd the *Fest of God*. 30. That when they meet the Host, they shall not be oblig'd to kneel or retire, but only to salute the Priest by taking off their Hat.

Her Majesty of *Great Britain*, and the *States General*, employed their Ministers to mediate a Peace betwix the Emperor and the *Hungarians*, but in vain; the Imperial Court being stiff. *Mareschal Villars* with the *French* made a great Progress upon the *Danube*; and General *Visconti* and Count *Staremberg* forc'd their Way with admirable Conduct to join the Duke of *Savoy* in *Piedmont*, where he was very much press'd by the *French*. Prince *Lewis* of *Baden* not being able to make Head against the *French* and *Bavarians* on the *Danube*, the Duke of *Marlborough*, with a great Body of *British* and *Dutch* Troops, march'd from *Boisleduc* in *Brabant* the 12th of *May* 1704, and join'd him in *Swabia* the 15th of *June*; when being inform'd, That the Elector of *Bavaria* had order'd his Troops to intrench the Hill of *Schellenburg* near *Donawert*, a very strong Post, to hinder the Allies from passing the *Danube*; the Duke and the Prince attack'd them on the 2d of *July*, forced their Intrenchments, which reach'd as far as *Donawert*, defeated 18000 *French* and *Bavarians*, commanded by the Count *d'Arco* the *Bavarian* Field-Marshal, a *Bavarian* Lieutenant General, and two *French* Lieutenant Generals; kill'd about 5000 on the Spot, took 15 Cannon, all their Baggage, Ammunition, and Tents, 13 Colours, and Count *d'Arco's* Plate. The Attack was begun by the *British* Troops; wherein the Regiments of *Orkney* and *Ingoldshy*, and Lord *John Hay's* Dragoons, did Wonders, and suffer'd most; so that the Loss on the Confederate Side was almost equal to that of the Enemy: But the former gain'd the Pass and the Town, with the Enemies Stores; entred the Elector's Country, forc'd him to retire under the Cannon of *Augsburg*, took several Garisons, and sent a strong Reinforcement to Prince *Eugene*, who observ'd the

R r r 2

French

French on the *Rhine*; but notwithstanding all his Precautions, they march'd thro' the *Black Forest*, and join'd the *Electors* near *Augsburg*. Prince *Eugene* followed 'em with his little Army as fast as was convenient; but the *French* and *Bavarians* having repass'd the *Danube*, in order to attack him, the Duke of *Marlborough* made haste to join him near *Münster* on the *Danube*. In the mean time the Enemy march'd to a rising Ground, betwixt *Hochstet* and *Lutzingen*, where the Duke design'd to have encamp'd: Upon which, his Grace and the Prince resolved to attack the Enemy, tho' strongly encamp'd. Accordingly they march'd towards them on the 2d of *August* in the morning; the *Imperialists* under Prince *Eugene* on the Right, and the *Britains* and *Dutch* on the Left. The Allies, tho' they had the Disadvantage of the Ground, and several Brooks to pass, march'd on boldly till they came within Cannon-shot; when the *French* play'd upon them from their Line for about 4 Hours, till the *Imperialists* came up, after many Difficulties in their March. The Allies in the mean time cannonaded the *French*, with considerable Damage on both Sides. When the *Imperialists* came up, the *French* sent a strong Body of Foot, and Dragoons dismounted, to the Village of *Blenheim*, which they fortified with a Trench and Barricades. The Lord *Cutts* being commanded to attack the Village with 20 Battalions, perform'd it with the utmost Bravery; but was beat off with great Loss, 15 Squadrons of Dragoons, who were order'd to sustain him, being at too great a Distance: Upon this, some Squadrons of *French* Gens d'Arms attack'd him, and put some of his Regiments into Disorder; but were oblig'd to retire by the coming up of some *Hessians*. The *British* Horse were sent from the first Column to sustain my Lord, and Colonel *Palms* with four Squadrons beat off the Gens d'Arms; but advancing too far, suffer'd by the fire of a *French* Battalion from the Hedges, which oblig'd 'em to wheel and form themselves. At the same time, the rest of the *English* Horse, with 10 Squadrons of Foreigners, advanced before the Foot, and pass'd the River, but were forced to repass it by the *French*. The Duke of *Marlborough* perceiving this, came up, and rallied them with great Presence of Mind;

upon which they pass'd the River again, join'd the other 4 Squadrons, and beat the *French* back a considerable Way. The rest of the Confederates Left pass'd the River, the Foot of the First Line under General *Churchill* and Lieutenant General *Ingoldsby*; and the Horse charg'd the *French* with Advantage, till a Brigade of their Foot oblig'd them to retire. The Earl of *Orkney* coming up with the rest of the Second Line of Foot, sustain'd the Confederate Horse, who were push'd by the Gens d'Arms, and interlin'd 'em with some Battalions; upon which, the Horse form'd themselves, charg'd the *French*, and beat them from the high Ground. The Duke of *Holstein Beck*, with 10 Battalions, attack'd the *French* in a Village, where he suffer'd much; and the *French* Fire from that Village gauling the Flank of our Horse, the Duke of *Marlborough* brought three Battalions to cover them. The Earl of *Orkney* ordered some Guns, with Cartouch-shot, to play on the *French* Battalions, interlin'd with their Horse, which did great Execution among 'em; and their Horse advancing, were beat off, by which eight of the Enemies Battalions were expos'd, and cut off almost in Rank and File. Upon this, the whole Wing of the *French* Horse retir'd a little; and *Marschal Tallard* form'd them in a Line to bring his Foot and Dragoons out of the Village of *Hochstet*: Upon which, the Confederate Horse charg'd them, put 'em in Confusion, and drove many of 'em into the *Danube*, while the rest retired towards *Hochstet*: And in the mean time, Count *Tallard* was taken in a Village, as endeavouring to get to *Blenheim*. Part of the Confederate Horse pursued the *French*, and the rest fronted to the Village of *Blenheim*, which was surrounded by the Confederate Foot under the Earl of *Orkney* and Lieutenant General *Ingoldsby*; and General *Churchill* having cut off the Communication betwixt two *French* Brigades, and the rest of their Troops in the Village, the Confederates followed them into the Village, where they suffer'd much by the Fire of the *French* from the Houses, as well as from that in the Streets; and having a great Body of Troops in the Church-yard, they rallied and beat out those commanded by the Earl of *Orkney* twice with considerable Loss.

The

The 10 Battalions commanded by the Lord *Custis*, had also sustained great Loss by their Attacks on the other Side of the Village. While the Earl of *Orkney* was rallying some of his Battalions on the Plain, a Body of *French* marched towards him from that Part of the Village which he had order'd to be set on Fire; upon which having put his Men in Order to receive them, with great Presence of Mind, he order'd a Parley to be beat, and sent his Aid de Camp, Captain *Abercromby*, to offer them Quarter, if they would surrender. They proved to be Part of the *French* Brigade Royal commanded by *M. de Denonville*, their Brigadier, who, after some Difficulty, accepted the Terms, and surrender'd to the Earl. Another *French* Battalion perceiving this, surrender'd to Lieutenant-General *Ingoltsby* at his Attack. It being near Night, and the Confederate Troops much fatigued, and not in a Condition to attack without a further Reinforcement, the Earl sent his Aid de Camp with *M. Denonville* into the Village, where there were still 20 Battalions of Foot, and 12 Squadrons of Dragoons, to inform 'em, That their Horse were routed, and Count *Tallard* taken; and to offer them the same Terms that had been given to the rest. *M. Blanzac*, who commanded in Chief, demanded Leave to march out, and join the rest of their Troops, which the Earl refused; so that 26 entire Battalions, and 12 Squadrons, surrender'd, with the General, and several other Chief Officers, to the Earl. On the Right, commanded by Prince *Eugene*, the Ways being bad, and the *French* superior in Number, the Confederate Horse and Foot were several times beat back, and suffered much; but at last the *Danish* and *Prussian* Foot charged the *French* with so much Fury, that they retir'd, and the Remainders of their scatter'd Army join'd with the *Bavarians* that Night at *Lawingen*. The Duke of *Marlborough* pursued them to *Hochstet*, where he lay that Night, as Prince *Eugene* did at *Moncheligen*. In this Battle the *French* and *Bavarians* had about 14000 Men killed in the Field, 4000 drown'd in the *Danube*; their Commander in Chief, with 40 General Officers, 1200 Inferior Officers, 12000 Common Soldiers, 49 Cannon, 163 Colours, Standards and Kettle-Drums, taken. The Confederates had 4485 killed,

and 7523 wounded. This Victory saved the Empire from imminent Ruine, restored the Affairs of the Confederates, and was such a Check to the growing Power of *France*, as she is not like to recover. It establish'd the Duke of *Marlborough's* Glory, who was thereupon made a Prince of the Empire, and allow'd a Vote in the Diet as Prince of *Mindelheim*, which was erected into a Principality to him and his Heirs. After this Victory, *Augsburg* and *Memmingen* were abandon'd by the *French* and *Bavarians*, *Ulm* surrender'd in September, and *Landau* in November; the *French* abandon'd *Triers*; and that same Month *Traerbach* surrender'd to the Hereditary Prince of *Hessi-Cassel*.

In 1705, Prince *Eugene* went to command the Imperial Army in *Italy*, where the *French* being Masters of the Passes of the *Mincio*, he embarked his Troops on the Lake de *Garda*, and landed in the *Brescian*, to stop the Progress of the *French* against the Duke of *Salvoey*. This occasioned the Battle of *Cassano* in August 1705, where the *French* were defeated, and many of them kill'd, besides what were drown'd in the *Adda*, and a great Number taken. Prince *Lewis* of *Baden* forc'd the Lines of *Haguensau*, and oblig'd *M. Villars* to retire under the Cannon of *Strasburg*. The Peasants of *Bavaria* took Arms; but were soon reduced. The Emperor *Leopold* died on the 5th of September. He was born the 14th of September, 1640. was three times married, but left no Children except by his last Empress *Magdalena Theresa*, Daughter to Prince *Philip William* of *Newbourg*, by whom he had the present Emperor *Joseph*, King *Charles III.* of *Spain*, and three Arch-Duchesses, *Mary Elizabeth*, *Mary Anna*, and *Mary Magdalen*. He was a good Prince, zealous in his Religion, regular in his Manners, charitable to the Poor, much addicted to raise the Grandeur of his Family, and a good Master. He spoke *Latin*, *Spanish*, *Italian*, and *German*, perfectly well; was well vers'd in Arts and Sciences, and particularly in Musick. His greatest Weakness was, his being too much influenc'd by the *Jesuits*, who rais'd a Persecution in *Hungary*, which laid the Foundation of the long and ruinous War, which still continues there.

His Son *Joseph* succeeded. This Year died the D. of *Zell*, by which that Dutchy, with

its Dependencies, fell to the Illustrious Family of *Hanover*.

In 1706, the Malecontents made Incursions to the Gates of *Vienna*, and the *Imperialists* reduc'd *Transilvania*. Count *Tzekely* died this Year at *Nicomedia* in the *Turkish* Dominions, and made Prince *Ragotski* his Heir. The *Bavarian* Peasants, who had again revolted, were defeated near *Munich*, and that Town was taken by the *Imperialists*. In *Italy*, the Duke of *Vendosme* defeated Part of the *Imperial* Army, from whence he went to command in *Flanders*. Prince *Eugene*, by his admirable Conduct, overcame all Difficulties in his March to join the Duke of *Savoy*, who was reduc'd to such Streights, that he was forc'd to send away his Court to *Genoa*, upon the Approach of a great *French* Army, which laid Siege to his Capital of *Turin*.

They open'd their Trenches before it the 3d of *June*, 1706. and continued the Siege till the 5th of *September*, when they were attacked by the D. of *Savoy* and Pr. *Eugene* with the *Imperialists*, who, after a bloody Battle, defeated the *French*, forc'd them to abandon their Approaches, Cannon, Mortars, and Ammunition; and in their flight, the *French* let Fire to several Magazines of Powder, Bombs, and Grenadoes. The Marshal *de Marfin* was taken, and died of his Wounds; besides whom, there were taken 2 Generals, 2 Marshals de Camp, a Brigadier, 8 Colonels, 12 Lieutenant-Colonels, 6 Majors, 98 Captains, 111 Lieutenants, 34 Cornets or Ensigns, 13 Engineers and Commissaries of the Artillery, 7640 private Soldiers, including those taken in *Ghivas*; which, together with 4706 killed in the Battle, made their Loss 12634, besides those lost in the Siege, and in their Retreat for want of Provisions and Medicines, and such as were killed by the *Vandois*; and there was found in their Works 225 Cannon, 108 Mortars, 7800 Bombs, 32000 Royal Grenadoes, 48000 Cannon-Ball, besides a great Number in the Ditches, 4000 Chests of Musket-shot, and 86 Barrels of Powder, containing 100 Weight each, all their Tents and Baggage, great Numbers of Standards, Colours, and Kettle-Drums, 5000 Horses, Mules, and Oxen, 27 large Boats with Ammunition, all their Pontons, 4 Pictures of the *French* King set with Diamonds, valued at 4000

Pistoles, 3000 Sacks of Corn and Meal, and 2000 of Bisket; and their Commissary-General was also taken with all his Mules, so richly laden, that it was valued at 3 Millions of Livres: To which must be added, 10000 Horses belonging to 13 Regiments of *French* Dragoons. The Allies had about 4000 Men killed and wounded; among the former, were the Prince of *Beveren*, a Colonel, and a Lieutenant-Colonel; among the latter, 2 Major-Generals, and 3 Colonels, besides many Inferior Officers. The *French*, according to their usual way, diminish'd their own Loss, and magnify'd that of the Confederates; but the Falshood of their Accounts appeared, by the Letters sent from the Duke of *Savoy* and Prince *Eugene* to the States General and others. Much about the same Time, the Prince of *Hesse* took *Göta* upon Terms; but had afterwards some Loss at the Battle of *Castiglione*. After the Battle of *Turin*, the *French* surrender'd *Ghivas* in the *Milanese*; the Garison of 1482 Men was made Prisoners of War; and the Allies found in it 12 Battering Cannon, 26000 Barrels of Powder, 7000 Casks of Bullets, &c. *Novara*, *Crescentino*, *Milan*, and *Como*, did also surrender; and in short, all *Lombardy* was reduced. The King of *Sweden*'s entering *Saxony* this Year with his Army, alarm'd all *Germany*; and the *French* gave out every where, that he would declare for them; but his Majesty assur'd the Allies, That he had no Intention to disturb the Peace of the Empire, but came only to have Satisfaction of *Augustus* King of *Poland*, Elector of *Saxony*, whom he afterwards obliged by Treaty to resign the Crown of *Poland*. This Year the Electors of *Bavaria* and *Cologne* were put into the Ban of the Empire, and proscribed. A Detachment from M. de *Villars* attacked *Haguenau*, which was surrender'd to the *French*, who made the Garison of 2200 Men Prisoners of War, and found in it 800 Barrels of Powder, 26000 Cannon-Ball, 8000 Sacks of Corn, 15000 of Meal, 60 Waggon with 6 Horses each, 80 Cannon, 4000 Bombs, and 16 Mortars.

In 1707, a Marriage was concluded betwixt King *Charles* III. of *Spain*, and the Princess of *Brunswick Wolfembüttel*. Count *Thaun*, with a Detachment of *Imperialists*, reduced the Kingdom of *Naples* without much

much Difficulty, most of the Inhabitants being for the House of *Austria*. However, the Absence of those Troops, with the other Deficiencies, occasioned the Miscarriage of the Siege of *Toulon*, which was carried on by the Duke of *Savoy* and Prince *Eugene*, with the Assistance of a Squadron of the Confederate Fleet.

M. de *Villars* forc'd the Lines of *Stolhoffen*, invaded the Empire, and laid the Duchy of *Wurtemberg*, &c. under Contribution as far almost as *Ulm*. The King of *Sweden* enter'd *Silesia*, and obliged the Emperor by a Treaty to restore to those of the *Augsburg* Confession their Churches, the free Exercise of their Religion, and other Privileges, according to the Treaty of *Westphalia*, which he reckon'd himself oblig'd in Point of Honour to see perform'd. He likewise insisted upon the same Liberty to the *Calvinists* in that Country, as being included in the above mention'd Treaty of *Westphalia*, wherein he was seconded by *Great Britain* and *Holland*; but that Matter is not yet determin'd. Count *Zohor*, one of the Imperial Court, having spoke disrespectfully of the King of *Sweden* to his own Ambassador, the King resented it so much, that the Emperor was obliged, after passing a Sentence of Banishment from Court upon the said Count, to send him to *Saxony* to beg the King of *Sweden*'s Pardon. After this, the King of *Sweden* having stay'd a Year in *Saxony*, which he obliged to furnish him with Money and Provisions for his Army, marched from thence into *Poland*.

In 1708, Prince *Eugene* went from *Italy* to *Vienna*, to concert Measures for the next Campaign. The Elector *Palatine* was invested in the *Upper Palatinate*, upon the Prescription of the Elector of *Bavaria*. Prince *Eugene*, with a Body of Imperial Troops, came to *Flanders*, where he join'd the Duke of *Marlborough*, who fought the Battle of *Audenard*, and defeated the *French*, when, according to the Accounts publish'd by Authority, there were taken between 7 and 8000 of the *French*, with 70 or 80 Colours and Standards; and amongst their Prisoners, there were 2 Lieutenant-Generals, 2 Major-Generals, 5 Brigadiers, 30 Colonels, 100 Field-Officers, and 400 other Officers; and

among their Slain, of whose Number we never had any certain Account, there were the Prince of *Egmont*, the Count de *Dreux*, and the Chevalier de *Luxemburg*. The Loss on the Confederate Side was very small in Proportion to the Victory, and they had no General Officer kill'd. In this Action, the Electoral Prince of *Hanover* signaliz'd himself at the Head of a Squadron of his Father's Dragoons, had a Horse shot under him, and the Colonel of Dragoons shot by his Side. We refer the further Particulars till we come to *Flanders*, as we do likewise the Battle of *Ramellies*, because it does not relate to the History of the Empire, the Imperialists having no Hand in it. After the Battle of *Audenard*, Prince *Eugene* was chiefly employ'd in reducing of *Lisfe*, after a long Siege, and assisted afterwards in reducing *Ghent* and *Bruges*: The Particulars of all which, we refer to the Account of *Flanders*. This Year the Prince of *Brunswick Wolfenbittel* went to *Spain*, where he was married to King *Charles III.* and the Arch-Duchess *Mary Anne* came from *Vienna* to *Holland*, from whence she was sent on board a Confederate Squadron to *Portugal*, and married to the King of that Country.

Their GOVERNMENT,

IS in General by the Emperor and Diet of the Empire.

The Emperor's TITLES at present.

Joseph, by the Grace of God, Emperor of the *Romans*, always *Augustus*, &c. King of *Germany*, *Hungary*, *Bohemia*, *Dalmatia*, *Croatia*, *Sclavonia*, *Bulgaria*, *Bosnia*, *Servia*, and *Ressia*, Arch-Duke of *Austria*, Duke of *Burgundy*, *Brabant*, *Stiria*, *Carinthia*, *Carniola*, *Luxemburg*, *Wittenberg*, together with the *Higher* and *Lower Silesia*, Marquis of the *Holy Empire*, *Burgaw*, *Moravia*, with the *Higher* and *Farther Lusatia*, Sovereign Count of *Habsburg*, *Tirol*, *Ferrette*, *Kiburg*, *Goritia*, &c. Landgrave of *Alsace*, Lord of *Windischmarch*, *Portnaw*, and *Salins*.

His A R M S.

HE bears Quarterly for Armorial Ensigns; 1. For Hungary, Bar-wise Argent, and Gules of 8 Pieces. 2. For Bohemia, Argent, a Lion-Gules, the Tail nov'd, and pass'd in Saltire, Crown'd, Langued, and Arm'd. 3. For Austria, Gules, a Fesse-Argent; and for Ancient Burgundy, Party and Bend-wise, Argent and Azure, a Border Gules. 4. For Castile, Quarterly, in the first and last Gules, a Castle triple tower'd Or, purpled Sable; and for Leon, in the 2d and 3d Argent, a Lion-Purple: The Shield crested with an Imperial Crown, clos'd and rais'd in Shape of a Mitre, having betwixt the two Points two Diadems, surmounted with a Globe and Cross Or: The Shield, environ'd with a Collar of the Order of the Golden Fleece, is plac'd on the Breast of an Eagle, display'd Sable in a Field-Or, Diadem'd, Member'd, and Beak'd Gules, holding a naked Sword in the Right Talon, and a Scepter in the Left: The two Heads signify the Eastern and Western Empire; and for the Motto are these Words; *Uno avulso, non deficit alter*; i. e. Tho' one be taken away, the other does not cease. But the Emperor's peculiar Device is, *Pax & Salus Europe*; i. e. The Peace and Safety of Europe.

EMPEROR: What it signifies.

Imperator, or Emperor, was first made use of by the Romans, as Selden in his Titles of Honour proves by unquestionable Authority, to denote only the General of their Army. But Julius Caesar, after he had bereft his Country of their Liberty, assum'd it, had it allow'd him as a perpetual Title, and it has been so continued to his Successors; yet so as not to be peculiar to them only, for Brutus and Cassius, who attempted the Recovery of the Roman Liberties, have it ascrib'd to them in their Coins. Here Selden corrects Suetonius's Mistake, in saying, That in and after Caesar's Time, it was always us'd as a *Prenomem* or Forename; for 'tis plain, that in his Time, Caesar was oft put before Imperator, as may be seen by some of his Coins; and in Augustus's Reign, it is us'd both ways: But Selden observes,

That the using of it as a subsequent Name, denoted only, or at least chiefly, some great Performance by Arms; and where 'tis us'd as a Forename by Caesar and other Emperors, it denotes their Supremacy.

Selden likewise observes, That some Time after, the Title of Emperor was thus settled at Rome; and tho' they had all that's comprehended in Royal Majesty, yet they abstained from the Name of Rex or King, because that Title was odious to the Romans, from the Time that Brutus had thrown out their Kings for invading their Liberty: And Cicero De Divinitate tells us, That tho' Caesar was really a King, yet neither the Gods nor Men would suffer that Title at Rome; and Caesar, to palliate his Ambition when the People saluted him by that Name, finding it distastful to the State by the Tribune's pulling off the white Fillet from his Laurel, answer'd, That he was Caesar, and not a King; but they made use of the Name *Princeps*, because *Princeps Senatus* was a familiar Title in Rome, and might be us'd without Envy. It was long after before any of the Emperors us'd the Title of King, tho' they wore Diadems, and other Regalia; but in their Letters, Commissions, and Embassies, call'd themselves Emperors. This appears by Synesius, in his Book *Περὶ Βασιλείας*, which was writ about 400 Years after Christ; when, tho' the Greeks wrote to them by that Name, yet they seem'd to dislike so swelling a Title; but in Time that Dislike grew out of Fashion; so that *Regnum* was made use of to signify the State of Rome; and *Sedile Regni*, the Emperor's Throne: And Ulpian, a great Lawyer in Severus's Time, calls that *Lex Regia*, which transfer'd the People's Power to the Emperor. The Constantinopolitan Emperors affected the Title of *Βασιλεύς*, as the loftiest Name they could take.

But after the Empires were divided, they affected Differences in the Use of those Names. The Western Emperors, because those Parts of the Empire which were overrun by the Goths, Lombards, and Franks, were called Kingdoms, and their Heads, Kings, affected the Title of Emperor, as importing a greater Majesty than that of King, which was not much disputed by the Eastern Emperors, as appears by their Embassies: But when Basilus Macedo, Emperor of

Constantinople

Constantinople, received Letters from Pope *Adrian II.* wherein *Lewis*, then Emperor of the West, was called *Basilides*, which then imported Emperor, he raz'd it out of the Letters, and challeng'd *Lewis* for using that Title, which he alledg'd was proper only to himself: To which *Lewis* answer'd, That the Title was peculiar to neither of them, but common to both; and in sacred and prophane Writings, given to the Princes of other Countries. He added, That the Empire was translated from the *Greeks* to the *Franks*, because the former were not able to defend the Church.

Tho' in later Times the Emperors of the East and West contended for this Title as peculiar to themselves, yet other Kings, and particularly those of *France*, *Spain*, *England*, *Scotland*, &c. made use of it.

Selden takes Notice, That the flattering Civilians of *Italy* and *Germany* do alledge, that the Emperor is Lord of the whole Earth, but unjustly; and shews from good Reason, that no such Title is due to them; and that several other Princes, as the Kings of *England*, *Scotland*, *France*, *Spain*, &c. acknowledge no Superior but God himself, and may every way as justly as the Emperor of *Rome* be stil'd Emperors, or by any other Name which expresses the Height of Honour and Dignity. This Pretension is also confuted by Sir *George Mackenzie*, in his Book of *Precedency*, Cap. 1. where he asserts, That *Scotland* was never conquer'd by the *Romans*, and by consequence not subject to their Empire.

Dr. *Nicholson* observes justly, That the Consent of Nations has for many Years distinguish'd between an Emperor and a King, and given the former the Pre-eminence; That all the Monarchs of *Europe* do readily give Place to the Emperor, and his Ambassadors are admitted to the first Audience in all Courts; and even in that of the Grand Signior, are allow'd the Precedency of the *Persian* Ambassadors. But as to his Precedency of Christian Princes, it seems to be allow'd him more out of Civility than Right; for according to Sir *George Mackenzie*, in his Book of *Precedency*, the Kings of *Great Britain* and *France* may debate it with

him, and particularly the former, as descended of the Kings of *Scotland*; it being (as he says) an uncontroverted Maxim in Law, That amongst those of equal Dignity, he who first attain'd to that Dignity, is to be preferr'd. The Curious may see more on this Head in his Cap. 1. and 2. Besides, he insists upon this Argument, That the Emperor is but Elective; whereas those Kings are Hereditary. The *German* Emperors, says Dr. *Nicholson*, founded their Claim on *Charlemaign's* being unexpectedly saluted in the Year 800, when he came to *Rome*, by Pope *Leo* and the Citizens, by the Title of, *Romanorum Imperator Augustus*; but what a sorry Empire the *Romans* could then pretend to, is well enough known, since *Germany*, *France*, and most of *Lombardy*, were in his Possession before: Whence it will appear, that some other Considerations, and particularly the vast Extent of the *German* Empire, mov'd the Western Monarchs to give Place to the Emperor, rather than any Claim he had to it by Right. To which we may add what Sir *George Mackenzie* says in his 2d Chapter of *Precedency*, That the Rule of Precedency in General Councils was according to the Time their Ancestors received the Christian Faith, as appears by *Gothofred de Jure Præced.* Cap. 3. N^o 23. and *Grotius de Jure Belli*, Lib. 2. Cap. 5. And if this Rule were observ'd, whatever become of the Story of *Lucius*, the Queen of *Great Britain* has an undoubted Claim to it from *Donald* King of *Scots*; but this Rule has not always been observ'd even by the Church of *Rome*, which usually preferr'd them who were most capable to do them Service. The *German* Emperors, besides the Title of *Cæsar*, us'd that of *Augustus*, which in their Language is *Mehrer des Reichs*; i. e. The Increaser of Kingdoms, because, as *Paulus Diaconus* informs us, *Octavius* had that Title on the Account of his enlarging the Commonwealth. They are also call'd Defenders of the Church, because formerly, when they were crown'd at *Rome*, they took an Oath to defend that Church; and *Charlemaign* was particularly dignified with that Title, because of his Bounty to the Church; and that he deliver'd the Pope and the *Romans* from the Oppression of the *Lombards*.

The Power of the Emperor.

DR. *Nicholson* says it surpasses that of all other Princes, because he challenges a Power to create Kings, which none else pretends to but the Pope, who claims a Power of creating and deposing the Emperor himself; but how unjustly, we have heard already in the History of the Emperors: For instead of that, the Bishops of *Rome* did Homage to *Pepin* and *Charles the Great*, for the Dominions they gave to the See of *Rome*; and the then Pope made over to *Charles the Great* for ever, the Right of choosing Popes; and when *Pius V.* attempted to create *Cosmo di Medicis*, Great Duke of *Tuscany*, the Emp. *Maximilian II.* oppos'd it, made *Cosmo* receive the Title from him, and oblig'd the Pope to confess, That he had exceeded his Bounds in pretending to it.

The Emperor at his Coronation is sworn not to violate the Privileges and Properties of any free Prince or State in the Empire, and cannot meddle with the Taxes they lay upon their own Subjects; nor can he punish any Criminal, raise Money in their Territories, or advance any of their Subjects to an Honour inconsistent with the Allegiance which they owe them. In Time of War, he cannot command any free Prince or State to assist him with Men or Money, without Consent of the Diet. If any Prince disturb the Peace of the Empire, he cannot Degrade or Banish him without Consent of the Electors, who are to judge of the Crime, and give their Opinions to the Imperial Chamber, where the States of the Empire determine it, and order Execution.

Of the ELECTION of the Emperor.

TIS now commonly known, that the Emperors are chosen by the Electors; but 'tis controverted among the Learned, Whether this Dignity was always Elective since *Charlemagne's* Time? A Resident of *Brandenburgh*, in a Treatise bound up with a Book, Intituled, *L'Ambassadeur & ses Fonctions*, writ by *M. de Wicquefort*, Privy Coun-

sellor to the late Duke of *Zell*, says, That the Dignity continu'd Hereditary in the Family of *Charlemagne*, who in 813, associated his Son *Lewis* into the Empire with him, by laying down the Imperial Crown upon the Altar, and ordering him to take it up, and put it on his own Head, as a Mark that he held the Empire only of God, and by Hereditary Right, and not by the Choice of the Princes, whose Dignities were not Hereditary at that time; and this Way of Succession continued in that Family till *Lewis III.* or as some call him the IV. died without Issue in 912, when the States were obliged to meet and chuse a Successor. The Reader may compare this with what has been said before in the History of the Emperors, and in the Account of Ancient *Germany*, and make his own Judgment. Our Author insists upon it, That this Election did not make the Empire absolutely Elective, because there was always great regard had to the Nomination of the deceased Emperor, and to Kindred. Upon which he asserts, That the Empire was not absolutely Elective till after the Death of the Emperor *Frederick II.* He quotes *Aimon*, the Annals of *Fulda*, the Annals of the *Franks*, *Lindenbravius*, *Jorden*, and *Spangenberg*, for what he says.

The ORIGIN of the Electors.

Authors are not agreed as to the Time when the Electors were first instituted: Some ascribe it to *Charlemagne*; but our Author brings many Reasons to disprove this. *Baronius*, *Bellarmin*, and others, say, they were appointed by *Otto III.* *Sleidan*, *Thuanus*, and the *Centuriators of Magdeburg*, think it was Pope *Sylvester II.* and *Goldastus* is of Opinion, That they were agreed on by a Diet at *Frankfort* in 1208; but our Author says, That *Martinus Polonus*, who wrote above 250 Years after the Death of *Otto III.* is the first who mentions any Elector; and that 'tis evident from History, that in *Otto III.*'s Time, of all the modern Secular Electors there was none known, but the Duke of *Saxony*; *Bohemia* was not then a Kingdom: Therefore *Dubravius*, who writes the History of it, and is of Opinion, That *Otto III.* instituted the Electors, says, He

He only named Six, and that *Rodolph I.* made the King of *Bohemia* an Elector 300 Years after. The Resident adds, There was at that Time no Count Palatine of the *Rhine*, nor Marquis of *Brandenburg*; and therefore he is of Opinion, That the Election in those Times was made by all the Princes, or rather, that they determin'd and confirm'd the Pretensions of those who laid Claim to it till after the Death of *Frederic II.* as appears by the Continuator of *Sigibert*, *Otto of Frisingen*, *Albert Crantzius*, and other Historians; and this *Dr. Nicholson* falls in with. Upon the whole, our Author concludes, That the Institution of Seven Electors was not till above 200 Years after *Gregory* and *Otto*; and that the Number was not fix'd to the Seven till the Reign of *Charles IV.* who establish'd them by the Golden Bull the 10th of *January* 1356; but that there were Electors before, is plain from the Bull it self, which was agreed on in a Diet at *Nuremberg*, where all the Electors Ecclesiastick and Secular, and many other Princes, Counts, Barons, Lords, Gentlemen, and Deputies of Free-Towns, gave their Consent, for preventing such Disorders in the Election as had formerly broke the Peace of the Empire, and order'd all Princes, Counts, free Cities, and other Subjects whatever, to grant them free Passage and safe Conduct, in going and coming to the Election, on pain of Rebellion; and that they should seal their Passports, and swear to act nothing contrary to them; and they were to furnish them, and their Retinues, with Provisions, and other Necessaries, at a reasonable Price; and this was not to be refus'd, tho' any Elector, Prince or State, should have any Quarrel with one another: The Bull likewise appoints by whom each of the Seven Electors shall be conducted to *Francfort* on the *Maine*, the Place of Election; And the Archbishop of *Ments* for the time being, was to send Letters to the rest of the Electors, to acquaint them with the Day, that they might come in Person, or send their Deputies with full Powers, sign'd and seal'd with their own Hand, for the Election of a King of the *Romans*; And in a Month after Notice of the Death of the Emperor, he should send to them in like manner to come to the Election within three Months; and no

Electer, or his Ambassador, was to enter *Francfort* with above 200 Horse in his Retinue, 50 of whom, and no more, might be Men at Arms; and those who fail'd to come or send, were to lose their Vote for that Time. It also orders the Magistrates and Inhabitants to take the Electors, and their Retinues into their Protection, and to prevent the ill Consequences of any Differences that might happen among them; and in case the Archbishop of *Ments* fail'd to give Notice, the Electors are to come or send notwithstanding.

Dr. Nicholson, and our Author, observes, That after the Death of *Frederick II.* there being a deplorable *Interregnum*, Seven of the chief Princes taking upon them the Administration, did probably lay the Foundation of the Electoral Dignity; and that they were made 7 in Number, that in case Six should be equally divided, the Seventh might have the casting Vote; and another thing which contributed towards it, was, That many great Families being ruin'd by the Wars, their Estates became united to the Families of those who were afterwards Electors; and that the falling off of *Lorraine*, *Gelderland*, *Brabant*, *Luxemburg*, *Poland*, and *Italy*, from the Empire, made those Princes the most considerable, among such as still adher'd to it. The Seven Electors appointed by this Bull, were; the Elector of *Mentz*, the King of *Bohemia*, the Elector of *Cologne*, the Elector of *Treves*, the Elector Palatine of the *Rhine*, the Elector of *Saxony*, and the Elector of *Brandenburg*.

The ELECTION of a King of the Romans.

AS soon as the Electors or their Deputies arrive at *Francfort*, they were according to the Bull to go next Morning to *St. Bartholomew's Church*; and after hearing the Mass of the Holy Ghost, that they might have his Assistance in chusing a just and good Prince, worthy to be King of the *Romans*, and future Emperor, for the good of all *Christendom*, they were to approach the Altar with their Retinues, but without Arms, and swear upon the Gospel of *St. John*, the Ecclesiasticks laying their Hands upon their Hearts, and the Seculars

Stt 2

touching

touching the Gospel, the following Oath, tender'd by the Archbishop of *Mentz*, or his Deputy: "I, &c. Prince Elector, swear upon the Holy Gospels now laid before me, That by the Faith which I owe to God, and by the Oath I have taken to the Holy Empire, that with the Assistance of God, to the best of my Judgment and Knowledge, I shall elect for a Temporal Head to *Christendom*, i. e. for King of the *Romans*, and future Emperor, he whom in my Conscience I shall judge to be most worthy of it; and promise by the same Faith, That I shall give my Suffrage and Vote in the said Election without any Hope of Profit, Pension, Promise, or particular Interest. So help me God, and all his Saints."

Since the Reformation, the Protestant Electors are not oblig'd to comply with what's Popish in this Ceremony. Any of the Secular Electors may set up for themselves, but the Ecclesiasticks are deny'd that Privilege; yet they are thought to be a good Balance upon any of the Seculars who should pretend to it without Merit. Tho' *Frankfort* be the Place appointed, Elections have been made elsewhere; which being objected against, as the want of a legal Formality, they generally made there. The Electors are not to leave the Town till they have made a Choice; and if they do it not in a Month after taking the Oath, they are to have nothing but Bread and Water till they make the Choice. 'Tis carried by the Plurality of the Votes of those present; and if any come after the Election begins, their Vote is not admitted. He that is chosen, is obliged to confirm to the Electors, as the principal Members of the Empire, all the Rights, Privileges, Dignities, &c. that they enjoy, and hold of the Empire, before he meddle with the Administration; and he is obliged to confirm the same to each of them by Letters-Patents after he is crown'd Emperor: And if any three of the Electors, or their Deputies, give the Right of Suffrage to one of the Electors present, or his Deputy, if absent, his Vote, with theirs, shall be reckoned a good Plurality.

The Archbishop of *Treves* is to sit over against the Emperor; the Archbishop of *Mentz* in his own Province, and likewise

through the whole Bounds of his Chancelorship, shall sit on the Emperor's Right Hand, except in the Province of *Cologne*, where the Archbishop of that Name is to sit on the Emperor's Right Hand; and likewise in *Italy* and *Gaul*, and on all other Occasions where they meet in those Places for the Affairs of the Empire.

The Precedency of the Secular Electors was thus; Whenever the Emperor or King of the *Romans* are present in an Assembly, Council, or at Table, the King of *Bohemia*, as a Crown'd Head, sits next the Archbishop of *Mentz*; behind him, on the same Side, is the Elector *Palatine*; on the Emperor's Left is the Elector of *Saxony*; and next to him the Elector of *Brandenburg*.

As the Elector of *Mentz* only has Power to summon the rest to the Election when the Empire is vacant, he is also to demand and collect their Votes thus: 1. Of the Archbishop of *Trier*. 2. Of the Archbishop of *Cologne*, who has also the Honour to crown the King of the *Romans*. 3. Of the King of *Bohemia*, who takes Place of all the Secular Electors. 4. Of the Elector *Palatine*. 5. Of the Elector of *Saxony*. 6. Of the Elector of *Brandenburg*: Then the other Electors in their Turns demand the Vote of the Archbishop of *Mentz*.

As to the Ceremonies of the Imperial Court, the Elector of *Brandenburg* gives Water to the Emperor or the King of the *Romans* to wash; the King of *Bohemia* gives him the first Cup, with his Royal Crown on if he pleases; the Elector *Palatine* sets the first Dish on the Table; and the Elector of *Saxony* acts as High-Marshal of the Empire.

The Elector *Palatine*, Great Master of the Empire, during the Vacancy of the Imperial Throne, is Vicar of the Empire: In *Swabia*, *Franconia*, and on the *Rhine*, may administer Justice, grant Benefices, receive the Revenues of the Empire, confer Fiefs, and receive Fealty and Homage in the Name of the Empire, except such as the Investiture of 'em is given with a Standard, which are reserv'd to the Emperor or King of the *Romans*, to whom the Fealty and Homage paid to the Vicar during the Vacancy must be renew'd. The Elector *Palatine* is not to alienate or mortgage any Thing belonging to the Empire while he is Vicar. The Elector

Elector of Saxony has the same Privileges in all Places where the *Saxon Law* is observ'd, on the like Conditions. And since by a very ancient Custom of the Empire, the Emperor or King of the *Romans* may be sued at Law, and are obliged to answer before the Count *Palatine*, 'tis only when the Emperor or King of the *Romans* are present in a Diet or Imperial Court.

The Succession of the Secular Electors is thus; The Lawful Sons, and their Heirs Male, if Laics, are to succeed according to Seniority; and if the Heir be Minor, during his Minority the eldest Brother of the deceas'd Father is to administer for him till he be of Age, and then to surrender to the Heir; but if any Electorate become vacant by want of Heirs, or otherwise, the Electorate is at the Disposal of the Emperor, as devolving to him and the Empire, without Prejudice to the Rights of the Subjects of *Bohemia*, who then had a Right to elect their own Kings. The Privileges of the Kings of *Bohemia*, and their Subjects, granted them by former Emperors, were also reserv'd, by which no Subject of *Bohemia* could be cited to be tried out of his own Country, or otherwise, than according to their own Laws, without any Appeal but to their own Government.

All Electors, Secular and Ecclesiastical, were to possess all Salt-Springs and Mines of whatever Sort, discover'd or to be discover'd in their Electorates, without paying any Tax for them; and had Power to receive *Jews* into their Dominions, and raise Taxes and Customs, as in Times past. They had also Power to coin Gold and Silver, to purchase Lands, Castles, and take Mortgages, &c. on Condition that the Tenure of those Lands be not alter'd, and pay the usual Duties to the Empire.

The Subjects of none of the other Electors were to be cited to any Court without the said Electorates; but in case of denial of Justice, the Subjects of any of the Electors, except the King of *Bohemia*, might appeal to the Imperial Court, and the Judge who presided in it; but no where else.

For the better Government of the Empire, all the Electors may meet once a Year in one of the Imperial Cities, about 30

Days after *Easter*, to reform Abuses and Disorders in their Dominions, or in their Neighbourhood, by common Consent, and appoint the Place for their next Year's Meeting. During the Time of their Deliberations, they were under the Emperor's Protection; but they were to make no publick Feasts, so as to hinder the Dispatch of Affairs: And all Privileges granted to any other Person or Community, inconsistent with these of the Electors, were revoked.

All Verbal Resignations by Vassals or Feudatories, made maliciously and unseasonably to deprive their Superiors of their Rights, or make War upon them, and possess their Fiefs, were to be void, and no Resignation to be good, except with the free Consent of their Superiors, on Pain of being put in the Ban of the Empire; and those who attack'd their Superiors, or maliciously deny'd them their Service, without a regular Defiance and Renunciation, were to incur the like Penalty.

All Leagues betwixt Towns, or betwixt Towns and private Persons, on Pretext of Kindred, or Protection of Burghers and Inhabitants, &c. or betwixt the Subjects of particular Princes or Lords, Town or Community, without the Consent of the Lords, were declared void, except such as were made betwixt Princes and Towns for preserving the publick Peace, on Pain of Infamy, and 23 Marks of Gold to every particular Person; and the Loss of Liberty, and 200 Marks of Gold to every Town, half to the Emperor, and half to the Lord.

The 17th Article of the *Golden Bull* orders, That no Man shall send a Defiance or Challenge to any Lord or other Person with whom he has liv'd in Amity, on any Pretence whatever, except to the Place of his Residence, and shall not commence Hostilities against him till 3 Days after the said Challenge or Defiance, on Pain of Infamy and Treason; and forbids all unjust Quarrels, Wars and Violence. The 18th contains the Form of summoning Electors to attend at Elections. The 19th contains the Form of the Proxy of any Elector who does not attend in Person. The 20th annexes the Right of Election to the several Electorates, and the peaceable Possession of them.

The 21st settles the Order and Rank the Archbishops are to observe in all publick Occasions, whenever the Emperor, as King of the *Romans*, walks in State, at Diets, &c. The Archbishop of *Triers* walks immediately before the Emperor, or the King of the *Romans*, none walking betwixt them but the Princes, who carry the Imperial Regalia; but when the Emperor walks without those Regalia, then the said Archbishop shall go immediately before the Emperor, or King of the *Romans*; and the other two Ecclesiastical Electors shall take Place as formerly, according to the Provinces in which they are at the Time.

The Secular Electors are to walk thus: The Duke of *Saxony*, carrying the Imperial Sword, walks immediately before the Emperor, or the King, betwixt him and the Archbishop of *Triers*; and on his Right Hand the Elector *Palatine* bearing the Globe; and on his Left the Elector of *Brandenburg* bearing the Scepter; all three in Front: The King of *Bohemia* walks immediately after the Emperor.

The 23d orders, That when the Archbishops of *Ments*, *Triers*, or *Cologne*, say Mass, or Grace, before the Emperor, or King of the *Romans*; he that was first Consecrated shall do it the first Day, the second the second Day, and the third the third Day; but whoever does it, must first make offer to the other Two.

The following Laws were publish'd in the Diet of *Ments* on *Christmas-Day* 1536, as an Appendix to the Golden Bull, by the Emperor *Charles IV.* with the Consent of the Electors and Princes of the Empire.

Those who conspire with Prince or People, against the Life of any of the Electors, shall be put to Death; and all his Goods forfeited, as being guilty of Treason: The Sons of such Traytor shall also lose their Maternal Inheritance, and what ever they may expect from other Relations, that being thus impoverish'd, they may always think on the Infamy of their Father; and such as intercede for them shall be infamous; And the Daughters of such Traitors are only to have a bare Maintenance out of their Mother's Estate; and all fraudulent Conveyances to prevent this are made void, only Wives may enjoy their Dowries: The Accomplices of such Traytor, and their Sons,

shall be liable to the same Punishment; but if they make a timely Discovery, they shall be rewarded, and tho late, shall be pardon'd. Enquiry shall be made if the Criminal die before the Discovery, and the Servants and Domesticks of such Traytors, alive or dead, may be examin'd by Torture. The Memory of the Deceas'd shall be condemn'd, and his Estate forfeited; and from the Time any one is found Guilty, he shall be incapable to buy, sell, or assign any Estate, or to demand any Debts.

The 25th forbids the dividing or dismembring the Principalities and Estates of any Elector; the Possession and Honour are to descend intire to the Eldest Son; but if he be a Fool, or incapable to Govern, the Second shall succeed, or the next Heir Male if there be no Sons.

The 26th is, That when the Emperor, or King of the *Romans*, designs to hold an Imperial Court, all the Electors must attend at the Palace; whence the Emperor and King ride on Horseback to the Court, in Order as above-mentioned: The Arch-Chancellor is to carry the Imperial Seals on the Top of his Silver Battoon; And the other Electors are to carry the Imperial Regalia in the same Order: The Emperor, according to Pleasure, names the Princes who shall carry the Crowns of *Aix la Chapelle* and *Milan*; and they must go immediately before the Archbishop of *Triers*. This Ceremony is only to be performed before the Emperor when he wears the Imperial Crown, and not to the King of the *Romans*. The Empress, attended by her Officers, and Maids of Honour, is to go after the Emperor, the King of the *Romans*, and the King of *Bohemia*.

The 27th appoints the Offices of the Electors, during their Attendance at the Imperial Court. When the Emperor holds a Solemn Court, and is upon his Throne, the Elector of *Saxony* comes on Horseback before the Palace-Gate, where a Heap of Oats shall be made as high as his Horses Breast, and the Elector, having a Silver Battoon, and a Measure of Silver, each weighing 12 Marks, shall fill the Measure with Oats, and give it to the next Groom of the Stables; and then planting his Staff in the Oats, retires; and Count *Pappenheim*, the Vice-Marshal, or the Marshal of the Court, approaching, they

they leave the Oats to any that can take them.

When the Emperor or King of the *Romans* sit at Table, the Ecclesiastical Electors, and other Prelates standing before it, shall say Grace, as above. One of the Archbishops bearing the Seals at the top of his Silver Staff, shall lay them on the Table before the Emperor, who gives them to the Archbishop in whose Diocese the Court is held, who hangs the broadest about his Neck during the Time of Dinner.

The Elector of *Brandenburg*, on Horseback, is to carry a Silver Basin and Ewer with Water, and a Napkin, must alight, and pour out Water to the Emperor. The Elector *Palatine*, on Horseback, brings in 4 Silver Dishes of Meat, and alighting, sets them on the Table. After them, the King of *Bohemia*, on Horseback, with a Silver Cup of Wine and Water cover'd, is to alight and kneel, and present it to the Emperor or King of the *Romans*.

The 28th Chapter orders, That the Imperial Table shall be 6 Foot higher than those of the Electors, and none to sit with him at any Solemnity but the King of the *Romans*. The Empress's Table is to be on one Side, and 3 Foot lower than that of the Emperor. The Tables of the Electors are to be of the same Height, 3 of them on the Right, and as many on the Left of the Emperor; and the 7th is to be over against the Emperor. No Elector is to sit down till they have all perform'd their Office, and then sit down all together. After the Ceremonies are over, the Scaffolding and Tables belong to the Master of the Household.

The Election is to be made at *Frankfurt*, the Coronation at *Aix la Chapelle*, and the first Court at *Nuremberg*. If any Elector send a Deputy, he is not to sit at the Elector's Table.

The last Article orders, That the Successors of the Electors shall, at 7 Years of Age, learn the *Latin*, *Italian*, and *Sclavonian* Tongues; all which are us'd in the Empire.

The PRIVILEGES of the Electors.

THE Electoral College is the most Powerful and Honourable Court of the

Empire. They have Power to chuse and dethrone Emperors, when they judge it necessary for the Good of the Empire; so that 'tis the only Body in *Europe* that can be compar'd with the old *Roman* Senate. Their Precedency before any other Prince at all publick Assemblies of the Empire, is secur'd by the *Golden Bull*; and the Electors have maintain'd it on several Occasions. On this Account *Joachim II.* Elector of *Brandenburg*, refus'd to give Place to *Rodolphus* of *Austria*, tho' he was the Emperor's Son, and crown'd King of *Hungary*. The Elector of *Cologne* would not give the Precedency to Cardinal *Moron*, the Pope's Legate at the Diet of *Ratisbon* in 1556. The *English* Ambassador and the Pope's Nuncio knowing that the Electors would not give Place to them at the Coronation of the Emperor, refus'd to be present at it; but it was provided by the Capitulations of *Ferdinand II.* that the Ambassadors of Electors should give Place to those of Crown'd Heads. Duke *Charles Emanuel* of *Savoy*, tho' that Family has the Title of Kings of *Cyprus*, respect'd the Electors as his Masters and Superiors.

The Electors have Power, 1. To make and annul Laws for the Empire without the Emperor's Consent; so that the Chamber of *Spires* is obliged to submit to their Decisions, tho' against Common Law. 2. Their Subjects swear Allegiance to them, and are obliged more strictly to them than to the Emperor, to whom the Electors pay only the Acknowledgment of Vassals, as the first Person of the Empire. 3. They have all the Officers of State that other Sovereigns have. 4. They make War and Leagues with Foreign Powers without the Emperor. They treat with the Emperor as their Equal, and never ask Pardon of him for Acts of Hostility; but in such Cases, an Amnesty is agreed on by both. 5. They judge decisively in all Cases without Appeal. 6. They protect *Jews*. 7. They grant Pardons. 8. They appoint Fairs and Markets. 9. They lay on Taxes, &c. 10. They coin Money. 11. They have the Tenth of all Mines discovered in their Territories. 12. They send Ambassadors to Kings and States. 13. They give Dispen-sations for Marriage within the Degrees prohibited by Canon-Law. 14. They make what

what Change in Religion they please within their Territories.

By the Capitulation of *Ferdinand III.* the Emperor cannot assemble a Diet of the Empire without Consent of the Electors, under Hand and Seal. He cannot make Leagues or War, make a Prince of the Empire, put any Person into the Ban of the Empire, or declare 'em Infamous, without Consent of the Electors. They have also this Privilege, That they pay nothing for Investitures; whereas other Princes are obliged to pay Fees to the Officers of the Court, and the Horse they ride on to the Grand Marshal of the Empire, or his Vicar.

The Electors use the Words, *By the Grace of God*, in their Titles, which is only us'd by Sovereigns; and Foreign Princes give them the same Honour they do to Crown'd Heads.

Preliminaries to the Election of the Emperor.

WHen Arch-Duke *Charles*, afterwards *Charles V.* was chosen, the Electors found it necessary, in regard of the great Power of *Spain*, and the Time he must spend in his Hereditary Dominions, to limit his Power, which they have practis'd at all Elections since; and those Limitations are call'd by the Name of *Capitulation*, which, together with the *Golden Bull*, is the Fundamental Law of the Empire; and the Electors make such Additions and Explanations to the Bull as they think fit, because they represent the States and Sovereignty of the Empire. Of this sort, the Capitulation made with *Ferdinand III.* was one of the most Remarkable, and consisted of 51 Articles, which the Emperor swore to, and that he himself and his Imperial Council would govern themselves by it. The First Article was, "That as Advocate of the Christian Church, he should take the Church and See of *Rome*, and the Person of the Pope, into his Protection." But by the Capitulation of *Maximilian II.* the Protestant Electors were not obliged to stand to that Article, nor to demand it of the Emperor: And in that same Capitulation 'tis own'd, that the Emperor was call'd to that Dignity by the Providence of

God, and the Choice of the Election; and that he took it upon him for the Glory of God, the universal Good of *Christendom*, and the particular Good of *Germany*, with whom he enter'd into a Contract, and Reciprocal Obligation.

The Way of Electing the Emperor.

TO avoid the Penalty of being reduced to Bread and Water, if they don't finish the Election in a Month after taking the Oath, the Electors have found out a Way to distinguish betwixt their Deliberations about it and the Election it self; and therefore never pretend to meet about the Election till they have agreed on the Person, and then they appoint a Day, which is rather to publish whom they have elected, than to elect. In the Morning they come to the Town-House, without any Order, with their ordinary Habits and Retinues, where each of them enter a Chamber, and put on their Electoral Habits. The Ecclesiasticks have Scarlet Robes, and Caps lin'd with Ermine; and the Seculars have theirs of Crimson Velvet, lin'd also with Ermine. There they take Horse, and go to *St. Bartholomew's Church*, but without any fix'd Order in the Cavalcade. They are all attended by their Hereditary Marshals, who carry the Swords before them, the Scabbards of the Ecclesiasticks being adorned with Silver-gilt, and those of the Seculars in Scabbards of Crimson Velvet, adorn'd with Silver. The Deputies of Electors are allowed none of those Ceremonies; but the Administrators of young Electors are. The Elector of *Saxony* has this Pre-eminence, That the Count *de Papenheim*, and not his own Marshal, carries the Sword before him. When the Electors come to the Church, they alight at the Gate, and go each to their own Seat in the Quire; and several other Princes and Counts, with the Counsellors of the Electors, being called in, Count *Papenheim* shuts the Door, and takes the Keys; and the Sword-Bearers stand before the Electors with their Swords drawn, and laid over their Shoulders. When the Hymn of *Veni Creator* is sung, the Protestant Electors retire till Mass be over, when they return, and take the Oath before-mentioned, with
the

the rest, at the Altar, which is marked down by two Notaries, or the Archbishop of *Ments's* Secretaries, and attested by the other Princes and Lords that are present. The Hymn being again sung, they go to the Conclave for the Election, being a small Vaulted Gallery that goes out of the Quire, and perform every thing according to the Order of the *Golden Bull*. Count *Papenheim* shuts them up; but lays the Keys so as they may find them. The Election is carried by Plurality of Votes; and if the Person chosen be an Elector, he may give his own Vote. They send for their Chancellors and Chief Counsellors a little, merely for Form, to consult them on Difficulties that may happen; after which they retire. The Election is usually dispatched in an Hour; and when 'tis over, they send again for their Principal Counsellors, the Chancellor of the Elector of *Ments*, and the Chancellor of a Secular Elector, who cast up the Suffrages, mark them down, and draw up the Form, which the Electors sign and seal with their Great Seals: Then they come out of the Conclave to the great Altar, upon which they place the Emperor Elect. The Archbishop of *Ments* recommends to him the Interests of the Empire, makes him sign the Conditions on which he is chosen, and confirm the Electors in all their Privileges: After which, the Election is publish'd, and the Emperor proclaim'd by a Herald at Arms. Without this Confirmation given to each of the Electors under the Great Seal, he cannot meddle with the Administration.

When the Electors have agreed upon the Place of Coronation, the Elector of *Ments* orders the Magistrates of *Nuremberg*, who keep the *Regalia*, to send them to the Place. The Electors, or their Ambassadors, attend the Emperor from his Palace to the Church, in their Electoral Robes: The Elector *Palatine* carries the Crown, the Elector of *Bavaria* the Globe, the Elector of *Brandenburg* the Scepter, and march in a-Breast; the Elector of *Saxony* carries the Sword, and the Elector of *Hanover* the Standard. After them comes the Emperor alone, with his Retinue following. At the Door of the Church he is received by the Ecclesiastical Electors also in their Robes, who conduct him to the Altar; and the Archbishop that

officiates being in his Pontificals, anoints his Head, betwixt his Shoulders, his Neck, Breast, and right Arm, and the middle of his right Hand. This they call his Consecration. Then he is carried to another Altar to be crown'd, where he is cloath'd with the ancient Imperial Robes; and after the ordinary Ceremonies, he is plac'd on the Throne, where the Archbishop bids him take and keep the Pledge that was design'd for him by Providence, and the Choice of the Electors. After which, *Te Deum* is sung, Trumpets and Kettle-Drums playing the mean while. The Archbishops of *Ments* and *Cologne* contend for the Privilege of putting the Crown on his Head. After the Coronation, the Emperor creates Knights and Gentlemen.

Of the King of the Romans.

THIS Title is now given to those who are to succeed to the Empire, and are chosen in the same Manner as the Emperors, as appears by the *Golden Bull*. After the Western Empire was translated from the *Greeks* to the *French* in *Charlemagne's* Time, the Successor was first called King of *Italy*, as *Selden* in his Titles of Honour proves from unquestionable Authority; but when *Italy* became tumultuous, and to break off from the Empire, he was called King of *Germany*, and sometimes had both Titles. Lawyers dispute whether he be subject to the Emperor. 'Tis plain, that at first he was; for *Bernard* King of the *Romans* was condemned to Death for Treason against the Emperor *Ludovicus Pius*: Yet some great *German* Lawyers affirm, That if he be chosen in the Emperor's Life-time, he is not subject to his Jurisdiction, but consider'd as the second Head of the Empire: This seems however to depend upon the Nature of his Election, and the Design of the Electors when they chuse him. Thus *Ferdinand* King of the *Romans*, in the Time of *Charles V.* made Edicts as well as he: Yet those who carry his Power highest, say, he is obliged to reverence the Emperor, tho' he be not subject to his Jurisdiction: For some of those who were chosen by that Name after the Emperor's Death, they had the same Power with an Emperor; But in the Times

of Superstition, or when the Pope's Power was formidable, they abstain'd from the Title of Emperor, till they were crown'd at Rome; but since the Coronation at Rome has not been thought necessary, they take the Title of Emperor as soon as chosen. At present, the Kings of the Romans have for their Arms, an Eagle with one Head only; whereas the Emperor's Eagle has two, since the House of Austria succeeded to Spain. The King is only call'd *Augustus*, but the Emperor *Semper Augustus*. The Emperor in his Letters Patents calls the King *Our Beloved*, but the King gives him the Title of *Majesty*. In the Absence of the Emperor, the King has the Administration of the Government. The Emperors have now for many Years procur'd their Eldest Sons to be chosen King of the Romans. The Duke of Saxony, and others, at the League of *Smalkald* protested against this, as contrary to the Golden Bull, and their Freedom of Election: And afterwards it was agreed, That no King of the Romans should be chosen during the Emperor's Life, except the Electors agreed on it beforehand as Necessary; and they may also chuse a King of the Romans without the Emperor's Consent.

Their Nobility, and Titles of Honour, from Selden, &c.

WHence Feuds had their Original, is not certain; some derive them from the Roman Empire, as *Lampridius*, who says, That *Alexander Severus* gave such Territories as were gain'd on the Frontiers, to his Soldiers and their Children to defend their own Lands, and the Empire from Incur-sions; so that they were held by a Military Tenure: Some of those Men had the Title of *Dux*, but not Hereditary, in which they differ'd from the Feudal Titles of Honour now in use. Some ascribe the Origine of 'em to those Northern Nations that over-ran Europe, those Titles being only Official before; but those Nations continued the Roman Names, as they us'd their Language in their Charters, Laws, &c. The Lombards finding that the Title of *Comes* and *Dux* were of equal Honour, and that *Comes*, as it had a relation to the Court, was frequently prefer'd, tho' the *Dux* did more

Service to the State; they gave the greater Honour to the Title of *Dux*, in which they have been imitated by most Nations of Europe. *Sigonius* says, The first Hereditary Duke was *Gisulfus*, Nephew to *Alboinus* the first King of the Lombards, who erected *Friuli*, and the Province about it, into a Dutchy, and gave it him. Some Counts had then a Duke over them, and others were only subject to that King or Emperor who created them. Sir *Thomas Craig*, *De Feudis*, Lib. 1. *Dieges*. 4. ascribes the Origine of the Feudal Law to the *Goths*, *Vandals*, *Huns*, and *Lombards*, who having over-run the Empire, divided the Lands among 'em in a Military manner, according to the Number of their Followers; to whom the Great Officers soddid them for a certain quantity of the Product, to maintain themselves, and the bravest of their Followers, whom they called *Comites* or *Companions*. This he reckons to have been the Infancy of the Feudal Law; for those Possessions were not Hereditary, but conferr'd and taken away at the Pleasure of the Lord or Superior. The Feudal Law, he says, was in its Childhood, when the Proprietors suffer'd those Lands to be enjoy'd by such of the Sons of the present Possessors as they thought fittest for that Service. This Law came to a State of Youth in the Time of the Emperor *Conrad II.* who allow'd Grand-Children, and likewise Collaterals, as Fathers Brothers, to succeed, in order to encourage his great Army he had then levied against *Italy*, because the Popes then began to contend with the Emperor for Preheminence. In *Charlemaign's* Time, Feudal Titles began to be Hereditary, whereas before they were only for Life, except the Lords thought fit it should be otherwise; but in the Time of the *Capets*, that Line, in order to oblige the Nobility, allow'd the Succession to be Hereditary; and then Sir *Thomas* says, the Feudal Law arriv'd to the State of a Man. In the 5th *Diegesis*, he answers those who derive the Feudal Law from that of the Roman; and confutes the Pretensions of the Germans, Gauls, Spaniards, and Greeks, as to the Antiquity of that Law in their respective Countries.

As to the German Titles of Archduke, Dukes, Counts Palatine, and others, Mar-graves, Landgraves, Burg-raves, Barons, &c.

the

THE GENERAL DIET

WITH THE ORDER OF

the Curious may find an Account of them, with their Origine, Investiture and Power, in *Selden's Titles of Honour, Part II.* and we shall give a brief Description of the most remarkable of 'em when we come to the particular Governments in the Geographical Account of the Countries to which they belong.

Their KNIGHTS.

THE only remarkable Order of Knighthood in the Empire, and which properly belongs to it, is that of the *Teutonic* Order, of whom we gave an Account in *Prussia*. Their present Great Master is *Francis Lewis*, Palatine of the *Rhine*: His Residence is at *Mergentheim* in *Franconia*. They have Eleven Bailiwicks or Commanderies in the Empire, under so many Companions of the Order, call'd Commanders: The First in *Alsace*, which the *French* King was oblig'd to restore by the Peace of *Ryswick*; the Second in *Austria*; the Third in *Coblentz*; the Fourth in *Tirol*; the Fifth in *Franconia*; the Sixth in *Hesse*, a Protestant; the Seventh in *Bresen*; the Eighth in *Thuringia*, now a Papist, but to revert to a Protestant; the Ninth in *Westphalia*; the Tenth in *Lorraine*; the Eleventh in *Saxony*, a Protestant.

There's a Branch of the Knights of *Malta* in the Emperor's Hereditary Dominions, who have Possessions in *Bohemia*, *Austria*, *Silesia*, and *Tyrol*. Their present Grand Prior is the Count of *Potting*.

The common Order of Knights in *Germany*, are call'd *Ritter G'schlagen*, or Dubb'd Knights, who are created by the Emperor with the Stroke of a Sword, kneeling before him, but the Title descends not to their Heirs. The Curious may see the Ancient Ceremonies in creating those Knights, with their Qualifications and Privileges, in *Selden's Titles of Honour*.

There are some particular Orders made by Princes of the Empire, which we shall treat of in their Place.

The Empress-Dowager *Eleonora*, in 1662, founded two Orders of Ladies, who are a sort of Knights. The First is call'd,

the Order of the Slaves of Virtue, because they profess a more severe Virtue than others. They are Thirty in Number, part Protestants and part Papists. Their Badge is a golden Medal, representing a Sun encompass'd with a Lawrel Garland, and their Motto, *Sola ubique triumphat*. The Empress is Great Mistress of the Order. The Second is, That of the United Cross-Bearers, founded by the same Empress in 1668, because, when the Palace was burnt, a Golden Crucifix, in which they pretend there's a Piece of the Cross, was found in the Ruins untouch'd by the Flames. They are all Papists, and wear on their Left Side a four-corner'd Cross fasten'd to a black Ribbon, at the End of which there's a sparkling Star; in the Middle, there are two Wood-colour'd Lines; there are four Eagles about it, and the Motto round it is, *Salus & Gloria*. Their Patrons are the Mother of God and St. *Joseph*. It was confirm'd by Pope *Clement*; the Bishop of *Vienna* is their Spiritual Inspector, and the Empress their Protectress. She made Seventeen Ladies of the Order, in May 1698.

The Diet, Colleges, Councils, and Courts of the Empire.

FOR the Diet, the Manner of their Sitting is easily understood by the Cut of it; but the Description of the several Colleges that compose it, we refer to the Account of *Ratisbon*, their usual Place of Meeting. For the Chief Councils of the Empire; as the Aulic Council, the Council of State, the Council of War, and the Council of Finances; we refer them to the Description of *Vienna*, where they Sit, as we do the Chamber of *Spies* to *Spies*, and the College of the *Hans Towns* to *Lubec*.

Their LAWS

ARE, 1. The *Golden Bull*, which we have accounted for already. 'Tis call'd *Golden*, because of the Gold Seal affix'd to it,

it, to denote its Importance, as the Fundamental Law of the Empire; and *Bull*, from the *Bulla*, or little gilt Picture, which the young *Romans* during their Commonwealth hung about their Necks till they were 14 Years of Age, and then consecrated them to their *Lares*; so that it's now become a common Name for the Seals of Emperors and Popes, says Dr. *Nicholson*. It has on the Face the Picture of the Emperor *Charles IV.* on his Throne, with the Imperial Crown on his Head, the Scepter in one Hand, and Globe in t'other; the Arms of the Empire on the Right, and those of *Bohemia* on the Left. The Inscription is, *Carolus Quartus, Divina Favente Clementia Romanorum Imperator, semper Augustus & Bohemia Rex.* On the Reverse it has a Castle, with two Figures, and the Words *Aurea Roma* under them; and in the Circumference this Inscription, *Roma Caput Mundi, Regit Orbis frons Rotundi.* This *Bull* is writ on 24 Leaves of Parchment, and contains 30 Chapters. 2. The *Capitulatio Casarea*, or Imperial Capitulation, which we have also mention'd already, that the Emperor is sworn to observe at his Election. Dr. *Nicholson* says, it consists only of 41 Articles; but that sworn by *Ferdinand III.* consisted of 51; so that the Electors add or alter as they see Occasion.

3. The *Recessus Imperii*, or Acts of the Diets.
 4. The *Pragmatic Sanction*, or Laws made in the Diets for preserving the Publick Peace.
 5. *Justinian's* Collection of the *Roman* Laws; for *Maximilian I.* order'd the Civil Law to be us'd in the Chamber of *Spire* in 1495, and it has since been taught in their Universities; but the General Laws made by the Diet, and those of the particular Princes and States, who have Power to make their own Laws, provided they be not prejudicial to the other States, take Place of the Civil Law; but where there is no Provision otherwise, Causes are determin'd according to that. They also make use of the Canon Law. M. *Raphel*, Plenipotentiary for the Duke of *Holstein-Gottorp* at *Nimeguen*, publish'd an Account of the Common Law through the whole Empire, Entituled, *Introductio ad Jus Publicum Germanicum.*

Their MILITARY Government.

THIS is best to be understood by the following *Matricula*, which regulates the Quota of Men and Money that each Prince and State is to furnish for Defence of the Empire, for what they call a *Roman Month*.

The Matricula of the Empire, or Repartition of the States and Cities, according to the Constitution of Charles V.

Note, That the German Florin is 40 Pence.

The Matricula above does not regulate the Precedency of the Circles or Princes; but serves only to shew the respective Quota's that each of them pay: Much less is it a Determination of the Military Strength of the Empire, or a Limitation what each Prince and State shall raise, but only as to

this particular Occasion; for each Sovereign Prince and State have a Power of Peace and War, and Alliances within themselves, so that they may raise what Force they please, if it be not to disturb the Peace of the Empire.

The *Atlas Historique* gives the following Scheme of the Military Force of the Empire.

The Ecclesiastical Princes are able to raise	Men.	Brought from the other Column	Men.
Mentz	6000	The Bishop of Paderborn	3000
Treves	6000	of Osnabruck	2500
Cologne	6000	The Abbot of Fulda	6000
Salzburg	8000	The other Bishopricks of the	6000
The Bishop of Munster	8000	Empire together	6000
of Liege	8000	The Abbies and Provostships	8000
of Wurzburg	2000	of the Empire	8000
of Bamberg	5000	Total of the Ecclesiastical Princes	74500
	49000		

The Secular Princes are able to raise		Men.	Brought from the other Column—		Men.
The Emperor, for	Hungary	30000	The Duke of Holstein	12000	
	Bohemia, Silesia, and	30000	The Duke of Mecklenburg	15000	
	Moravia	30000	The Princes of Anhalt	6000	
	Austria, and his other	30000	The Prince of Lawenburg	6000	
	Dominions		The Elector of Bavaria	30000	
The King of Prussia		40000	The Dukes of Saxony	10000	
The Elector of Saxony		25000	The Princes of Nassau	10000	
The Elector Palatine		15000	The other Princes and Imperial		
The Duke of Wirtemberg		15000	Towns of the Empire	50000	
The Landgrave of Hesse-Cassel		15000	Total of the Secular Princes	379000	
The Prince of Baden		10000	Total of the Ecclesiastical Princes	74500	
The Prince of Brunswick Lunen-		30000	Total of the Forces of the Empire	453500	
burg, or Elector of Hanover					
		240000			

By which it appears, That the Emperor and Empire make the most potent Government of Europe, when they have a good Understanding with one another.

Besides the Tax before-mentioned, there is another that each State is obliged to pay to the Chamber of the Officers of *Weizlar*, amounting to 48925 Florins.

'Twas *Maximilian I.* who began to divide the Empire into Circles in 1500, and appointed those of *Franconia, Bavaria, Swabia, the Upper Rhine, Westphalia, and Lower Saxony*; Twelve Years after, he added those of *Austria, Burgundy, of the Lower Rhine, and Upper Saxony*. *Charles V.* confirmed this in the Diet at *Nuremberg* in 1522, and appointed the *Matricula* as above, which is kept in the Archbishop of *Mentz's* Chancery. It was order'd, instead of 2000 Foot and 4000 Horse that the Empire was obliged to furnish to attend the Emperor when he went to *Rome* to be crown'd, That those that could not raise Troops, were to pay 12 Florins for each Horseman, and 4 for a Footman; but the Prices of Things increasing, they were to pay 60 for a Horseman, and 12 for a Footman, which made one of the new *Roman* Months equal to five of the old ones. The Tax not being alter'd since, the States augment the Number of *Roman* Months as Occasion requires, and appoint the Time of Payment.

Every Circle has one or two Directors, who summon the States of the Circle to meet, acquaint them with the Cause, and give the necessary Orders for the Publick

Welfare, and good Administration. They chuse a General for the Troops they raise, either of their own Number, or otherwise, as they think meet; but if he be one of themselves, he has no Salary. He is to take Care, that all Things relating to War be managed for the Good of the Circle. He lists their Men, regulates their Quarters and March, and puts the Ban of the Empire in Execution. They chuse 5 Assistants at least, who are as his Lieutenants, and perform his Office, if either he neglect it, or be necessarily absent; and they may either be of their own Circle, or any other; for this Dignity is not annex'd to any particular Family or State; nor are they oblig'd always to serve in that Station. Every Circle has three Publick Ministers or Counsellors, viz. a Treasurer, who superintends the Money; another who receives what the States pay towards the Imperial Chamber, and gives Quittances for it; and a Secretary, who attends the Directors. Sometimes all the Circles meet together, which they call a General Assembly. The Circles that lie nearest one another meet every Year, to regulate the Affairs of Money, Correspondence and Commerce; whence they are call'd the Corresponding Circles. There are three Classes of them: The first are, the *Upper Rhine, Lower Rhine, and Westphalia*: The 2d, *Upper*

and *Lower Saxony*: And the 3d, *Franconia*, *Bavaria*, *Swabia*, and *Austria*. Some of the Circles are fix'd, and always assembled: Others meet only once a Year; and some are only call'd to meet when Necessity requires. The General Assemblies of a Circle appoint the Particular Assemblies; and the Directors give Notice of the Time and Place 6 Weeks before. That of *Upper Saxony* usually meets at *Leipsick*; *Franconia* at *Nuremberg* or *Bamberg*; and *Swabia* at *Ulm*.

They treat about the Goodness or Badness of the Coin, about the Preservation of their Peace, their Publick Defence, about rectifying the *Matricula*, putting the Emperor's Orders in Execution, and appointing Counsellors for the Chamber of *Wetzlar*. They also make Laws; but must take Care they be consistent with the Constitution of the Empire. They take Order about their Records, their Treasury, Arsenals, Magazines, Fortifications, and Frontiers.

The Division of the Empire according to M. Sanfon, the French King's Geographer.

CHAP. XXVII.

The GEOGRAPHY of Modern GERMANY.

GERMANY is bounded on the N. by Denmark and the Baltic, on the N. E. by Prussia, on the E. by Poland, on the S. E. by Hungary, on the S. by the Dominions of the State of Venice, on the S. W. by the Alps, which divides it from Italy; on the W. by Switzerland, France, and the Spanish Netherlands; and on the N. W. by the German Ocean, and the United Provinces.

The Extent of Germany, according to Brietius, is 562 English Miles from W. to E. viz. from Lorrain to the Frontiers of Poland; and the Breadth from the Borders of Switzerland in Lat. 45. 12 Min. to the most Northerly Places of the Isle of Rugen in Lat. 54. 50 Min. is 588 English Miles. La Forrest makes its Breadth from Lat. 45. to Lat. 55. but Moll places the most Southerly Places of Germany in Lat. 46½. La Forrest joins Transilvania to Germany, and makes the Length of it, from the Frontiers of French Flanders to the utmost Parts of Transilvania, 900 English Miles.

We begin with Saxony, according to the Method of Pitt's Atlas.

SAXONY in General.

THE Learned have great Debates about the Origine of the Name *Saxon*, which, since they were Ancestors to a great Part of the People of this Island, we may be allow'd a little to insist upon. Some derive it, with *Isidore Hispalensis*, from the Latin Word *Saxum*, because they were a hardy and valiant People, and bolder Pirates than any

of their Neighbours: But since they were possessed of their Country long before *Rome* was built, we cannot think them obliged to the *Romans* for their Name. Others derive them from the *Saxones* or *Saca*, a People of *Asia*; but this is rejected by *Cluverius*, as wanting Authority. He himself thinks they were the *Fisi*, mentioned by *Tacitus*, which was writ by Mistake instead of *Saxoni*; but this seems to be much strain'd, as well as the Opinion of those who would derive their Name from *Askenaz*, the great Leader of the *Asiatick* Colony into Germany. Therefore most Writers think they take their Name from a short Sword or Dagger, which was peculiar to them, and in their Language called *seax*. This they support by the ancient Arms of Saxony, which were two Cross Hangers or Daggers. But the *Brandenburg* Resident, formerly mentioned, says, the Elector of Saxony bears those Arms merely because he is Hereditary Marshal of the Empire; and therefore no other Prince of his Family bears them: So that upon the whole, the Name seems to be so ancient, that there is but little Hopes of coming at the true Knowledge of the Original.

Their ancient Government, as *Dr. Nicholson* informs us, was like that of most of the other Germans, viz. by 12 of the chief Nobles, chosen by the People during a War, and one of them was appointed to be King; but return'd to a Level with the rest when the War was over; and some will have our Juries to derive their Beginning from this Form of Government.

How far the ancient Saxons extended their Limits, we have heard before in the

Description of Ancient *Germany*; and for what Countries are contained in the Circles of *Upper* and *Lower Saxony*, we refer to the *Matricula* of the Empire, and *Sanson's* Division of *Germany*.

LOWER SAXONY,

IS bounded on the N. by the *German Ocean*, *Denmark*, and the *Baltick*; on the S. by *Hessia*, and *Upper Saxony*; on the E. by *Pomerania*, and the *Marquitate of Brandenburg*; and on the W. by *Westphalia*. It reaches from N. to S. about 200 Miles, and from E. to W. about 220.

The Air of this Country in general is very cold in the Winter; but the Soil is very fruitful in Corn.

The chief Rivers are, the *Elb*, the *Weser*, the *Aller*, the *Hamma*, the *Ilmenow*, the *Lerne*, the *Ocker*, and the *Elder*.

The People in general are tall, well built, strong, Lovers of good Cheer, and pretty much addicted to Drink.

The first considerable Town in this Part, is

HAMBURG.

Historians differ about the Rise of its Name; some derive it from its being a Mart for Hams; others from the Statue of *Jupiter Ammon*, which was worship'd there till destroyed by *Charles the Great*. *Crantzius* derives it from *Hama*, a *Saxon* Champion, slain there by a *Danish* Giant; but it is most probably, says *Dr. Nicholson*, derived from *Ham*, i. e. a Forreſt, that formerly lay between the *Bille* and the *Aller*, and gave Title to the Lords of *Ham*, who first built a Castle there, which they called *Hamburg*. They differ likewise about its Situation: Some will have it to be in the Province of *Stormar*; but the *German*s say, it is in the uttermost Bounds of *Saxony*, and that the greatest Part of it is still divided from *Stormar* by Branches of the *Elb*. Some Antiquaries say, it was a considerable Village in the Days of *Albion*, the great Captain of the *Albingi*; after whose Death, it was enlarged in 789 by *Orbo*, to whom *Charles the Great* gave the adjacent Country; but the *Vandals* ruin'd

it soon after. In 811, the Emperor recover'd the Country, and rebuilt the Town. It was afterwards enlarged by *Ludovicus Pius*, who made it an Archbishoprick, under *Anſgar*, about 833; but the Archbishoprick was translated afterwards to *Bremen*. In 1227, *Waldemar II.* of *Denmark*, took that City, and gave it to *Albert* Count of *Orlemund*, and his Heirs; but he sold his Pretensions to the Citizens 7 Years after for 150000 Marks of Silver. In 1240, *Adolph IV.* Count of *Holſtein*, confirm'd their Liberties, as did his Successors, till 1459, that *Holſtein* was annex'd to the Kingdom of *Denmark*, upon the Death of the last Earl of that Family. At this Time *Hamburg* promis'd their Friendship to the Crown of *Denmark*, as long as those Kings continued their Privileges; to which *Christian* agreed, without desiring any Homage or Mark of Subjection; but his Successors frequently attempted to subdue it. From 1570, to 1621, the Dukes of *Holſtein* pretended to be Masters of this City; but this Controversy was ended, by their paying Homage and swearing Fealty to the King of *Denmark*, and the Duke of *Holſtein Gottorp*, with a Salvo for the Rights of the Emperor and Empire, and of their own Liberties and Privileges. This hinder'd them at that Time from having a Vote in the College of the Free Towns; but in 1510, the Emperor, in a Diet at *Augsburg*, declar'd 'em a Free City; and the Duke of *Holſtein* was summon'd to make good or renounce his Pretensions: Since which they have been made a Member of the Empire, and invested with a Sovereign Power in their own Jurisdiction, like other Imperial Cities, by a Grant of *Frederick I.* which was confirmed by *Ferdinand II.* They are exempted from all Tolls upon the *Elb* betwixt their own City and the Ocean; but the King of *Denmark* has compell'd them several Times since to pay at his Castle of *Gluckstadt*, which commands the *Elb*; particularly in 1645, they paid 120000 Crowns to be free of his Demands: In 1679, they paid 200000 to take them again into his Favour, as the Treaty words it; and in 1686, the *Danes* besieg'd it, but were bought off. The continual Jealousies betwixt *Sweden* and *Denmark* is their chief Security; for when the *Danes* attack their

their Ships from *Gluckstadt*, the Swedes protect them from *Stade* on the other Side the River.

This City is one of the richest in the Empire, and has for a long Time been the greatest Mart of *Germany*, the Haven being crowded with Ships, and their Exchange with Merchants. It lies in a Plain on the N. of the *Elb*, Long 30. Lat. 53 $\frac{1}{2}$. according to *Moll* and *Oznam*, 50 English Miles N. E. from *Bremen*, 30 S. W. from *Lubeck*, 30 S. from *Gluckstadt*, 140 N. E. from *Munster*, and about 330 W. from *Danwick*. 'Tis naturally strong, great Part of it lying in an Island. The Tide runs in Canals through most of the chief Streets, and runs four Leagues higher, viz. 22 Leagues from the Mouth of the River, wherein it exceeds all the Rivers of *Europe*. The *Thames* comes next to it. The City is well fortified after the modern Way; but their Works are not fac'd with Stone. It consists of two Parts, called the Old and New Town, separated by a Wall well fortified. From the Tops of the Towers and Walls, there's a pleasant Prospect every way. It has only 4 great Gates, viz. 1. That which leads to *Altena*, on the W. of the Old Town, commonly called the *Millers Gate*. 2. One which leads to the great Trenches, N. of the Town. 3. The Stone Gate, which leads to the E. 4. The South Gate, which leads to the Islands on the *Elb*. The Streets are generally crooked, but otherwise out-strip any in *Germany*. The *Alster* on the N. Side drives all the Mills, which supply them with Meal. They have strong Ramparts and Outworks, which were cast up for fear of the *Danes*, and finish'd in 4 Years, which is a sufficient Testimony of the Riches of the Inhabitants.

The Town is exceeding populous, consists of a great many little Islands in the *Elb* and the *Alster*, join'd almost by as many Bridges as there are at *Amsterdam*. About the Change of the Moon, the Spring Tides, or in Tempestuous Weather the Sea flows up the small Channels, and sometimes ruins many Houses and Families. The Town suffer'd much this way in 1651. Their Houses are most of Brick, exceeding high and stately. Many of them have fine Frontispieces, and large Halls. The Senate-House is a noble Structure, beautified with

the Statues of the 9 Worthies. They have a fine Exchange, but much short of ours in *London*. Their chief Church is that of *St. Peter*, formerly a Cathedral, while they had an Archbishop. They have still a sort of Dean and Chapter, from whose Court there lies no Appeal but to the Imperial Chamber. It was built, some say, in 801, and others in 830. Many of the Earls of *Schomburg* and *Holstein* are buried here, whose Names, after those of *Charles the Great*, and his Son *Lewis the Pious*, are writ in a fair Catalogue with their other Benefactors, and hung up in the Body of the Church, which some take as an Argument, tho' the Citizens deny it, that those Princes had more than a Titular Power over this City. The Town is noted in general for its fair Churches, and noble Steeples cover'd with Copper. That of *St. Catherine's* has a stately Front, and on the Top of the Steeple a Crown richly gilt: The Pulpit is of white Marble, curiously carv'd, and adorn'd with Figures of Alabaster, and Ornaments of Gold. The Organ is reckon'd one of the best in *Europe*, and plays, as some say, above 6000 Notes. The Church of *St. Nicholas* has a Steeple supported by large gilded Globes. The other Churches of Note are, *St. Jacob's*, *St. Catherine's the Less*, *St. Michael's*, whose Steeple is 400 Foot high; *St. Gertrude's*, *St. John's*, *St. Mary Magdalen's*, that of the *Holy Ghost*, the *Bluecoat-Hospital Church*, *St. George's*, and the New Church in the New Town. In each of these they keep a Register of the Poor and Distressed, who have a Weekly Allowance of Money, and an Annual Allowance for Clothes and Fuel. Their Hospitals are, 1. That call'd the *Oldest*, near the Church of the *Holy Ghost*, where 114 poor, old, blind, dumb, &c. are maintain'd. 2. The Hospital of *St. George*, which was built about 150, and endow'd with a Maintenance for a great Number of Poor, with Servants, and a Minister, and is made use of by such as dwell in the Suburbs, and adjacent Villages. 3. *St. Job's Hospital*, built in 1509, for those who had the Plague, and is now made use of for the Maintenance and Cure of such Poor as have the French Disease. 4. The Orphans Hospital, where abundance of poor Citizens Children are bred up, with Nurses to look after Infants, and a School with 5 Masters for keeping

those who are capable, to Prayer, Reading, Writing, and Accounts. Its Annual Revenue is 210000 Crowns. Sometimes they have near 310 Infants abroad at Nurse, who are taken into the House as soon as able to dress themselves. Such of the Boys as have Parts, are fitted for the University, and maintain'd there at the Charge of the House, till they be able to maintain themselves. The rest are put out to Trades; and the Girls, after they can read, spin, knit, &c. are sent to Service. 5. They have a common Pest-House, where such as have the Plague, or other Infectious Distempers, are taken Care of; and the Attendance and Skill of those belonging to that Hospital is such, that People of the best Rank come thither for Cure of such Distempers. 6. They have a large and sumptuous Hospital, which was built in 1632, where there is a Physician and Surgeon, with necessary Medicines, for poor Strangers and Travellers that fall sick. In 1556, they built a large Hospital, which has been much augmented since both in Revenues and Buildings, for maim'd, ancient, and decay'd Mariners, and the poor Widows and Orphans of such as have lost their Parents or Husbands at Sea. Besides these, they have many lesser Hospitals for certain Numbers of poor Widows, Widowers, Orphans, &c. with a great Number of Free Schools, where the Children of poor Burghers have their Education, Books, and Clothes, till they be fit for the University, or Trades. They have likewise a Work-house for such as want Employment, and are willing to work, and for obliging sturdy Vagrants, or loose Persons of both Sexes, to labour, or give them Correction. The Motto writ over the Door of the Work-house is, *Labore nutrior*; i. e. I am maintain'd by my Labour. And that over the House of Correction is, *Labore plector*; i. e. I am punish'd by Labour.

Their Government is by 4 Burgomasters, and 20 *Schepins* or Aldermen. They us'd formerly to be Civilians, or other Men of Learning; but now they are chosen out of the Merchants or Tradesmen. They have also 12 Common-Council Men, whom they call *Obersalten*, i. e. Chief Elders, who consult about, and take Care of their Publick Affairs; but in extraordinary Cases, they

join with 60 more grave Citizens, called *Burgeralten*, or the Elders of the City; and if they cannot determine the Matter, 'tis refer'd to a general Meeting of the Free-men: But in case of intestine Broils, which they are not able to compose themselves, the Emperor and Empire take Care of their Peace, by sending Troops of the neighbouring Circle to suppress the Seditious, as they did lately.

For speedy Reparation of Loss by Fire, they have a Custom of entring into Societies to repair one another's Losses; and any Man being at Liberty to enter into all the Societies if he pleases, they frequently get more than their Damages.

Their Territories is a small Part of *Stor-mar*, which has several considerable Villages, and Noblemen's fine Seats. They have likewise many little Islands in the *Elb*, which were formerly subject to neighbouring Princes. They have also the strong Castle of *Ritzembüttel*, betwixt the Mouths of the *Elb* and *Wefer*. Below this to the N. W. they have a considerable Fortrefs, call'd the *New-Work*, which is a convenient Harbour for Merchant-men. They have also the Custom-House of *Tollenspucker*, where all Passengers pay a certain Toll for themselves and their Carriages. There are other Places of less Note equally subject to this City and *Lubeck*. Their Harbour is so commodious, and the River up to the Wall so deep, that large Merchant-men come up to the Town; but those of an extraordinary Size anchor at the *New Mills*, 4 English Miles below the Town, and unload in smaller Vessels.

Their chief Home-Commodity is Beer, which is the best in *Germany*, and employs vast Numbers of their People in brewing it. 'Tis exported to many Places in *Germany*, particularly to *Lubeck*, where 'tis much valued; and to *Francfort* on the *Main*, where it sells dearer than the best *Rhenish*.

They have Plenty of Sea and Fresh-Water Fish, which, with the Fruit and Herbs from their Gardens without the Walls, furnishes good Entertainment. The Trade they have with English Merchants, is more considerable than that with any other Nation: Therefore they allow our *Hamburg* Company greater Privileges than they do any others; for all Suits wherein they are more

immediately concern'd, are try'd before the *English* Resident, who judges them in a stately Hall built by the Company. They have also the Freedom of Religion in the City; whereas others that are not *Lutherans* must go to *Altena*.

By means of the *Elb*, this City has a great Trade with a great Part of the Empire. Dr. Brown says, they vend Annually 100000 Pounds worth of *English* Woollen Manufactury. The *General Course of Commerce* says, they have a great Trade with *Holland*, *France*, *Spain*, *Italy*, *Denmark*, *Sweden*, and most other Parts of *Europe*; and Merchant-Ships come hither from most considerable Parts of the known World, so that they furnish the Empire with the richest Merchandize of other Nations.

Their Current Money is that of the Empire, *Sweden* and *Denmark*; and the Coin of most Trading Nations in *Europe* goes here at a good Value. They coin some small Pieces of their own. Their Mark is worth 16 Stivers, 10 $\frac{1}{8}$ d. of *Amsterdam*, and their Rix-Dollar worth 54 Stivers. Their *Gulden* Ducats, old Value, 7 s. 2 d. new Value, 8 s. 9 d. Their Shilling, 9 d. $\frac{1}{2}$. The *Map of Commerce* says, they measure their Corn by the *Schepel*, 83 of which are equal to 10 Quarters *English*. 100 of their Ells make 48 $\frac{1}{2}$ in *London*.

In Consideration that they pay no Tolls to the Emperor on the *Elb*; they are oblig'd to preserve that River from Pirates, of whom they have taken abundance at several Times. *Monconys*, in his Travels, says, the Senators and Burgomasters are during Life. That when a Citizen dies, he must leave the 10th Part of his Estate to the City; and that Foreigners not naturaliz'd, must pay Annually a certain Sum for Liberty to trade there.

This City is by some reckon'd as large as *Rotterdam*, is able to arm 15000 Men, and has a constant Garison of 1800.

Albertus Krantzius, the famous Historian, and *Petrus Lambecius*, who wrote their Antiquities, were born here.

The Dutchy and City of BREMEN.

THE Dutchy has that of *Lunenburg*; on the E. the *Weser* on the S. the German Ocean on the W. and the *Elb* on the N. It

is divided as follows; 1. Into the Bishoprick of *Verden*, on the Borders of *Lunenburg*. 2. The Land of *Bremen*, properly so call'd, which lies some Miles round the City. 3. *Wursterland*, on the Coast from the *Weser* to the Mouth of the *Elb*. 4. *Hadeland*, upon the Mouth of the *Elb*. Part of it is now subject to *Hamburg*, and Part of it under the Duke of *Saxe-Lawenburg*, whose Castle of *Atterndorf* commands most of the Province, in which those of *Bremen* have little but the Village and Castle of *Nyen-busse*, on the Mouth of the *Oste*. 5. *Kedingerland*, in which lies the City of *Stade*. 6. *Alt-Land*, a pleasant and fruitful Country, about 14 *English* Miles long. The People in general are as good Soldiers as any in the Empire; and it is said of the *Wursterlanders* in particular, That they will fight and drink with any in *Germany*. They formerly relied so much on their own Valour, that they despis'd building Cities and Forts. They frequently rebell'd against the Archbishops, and have ever since delighted in War. Those of *Hadeland* are reckon'd ignorant and proud, and delight so much in gay Clothes, that their Neighbours, by way of Jest, say, there are no Peasants in *Hadeland*. Betwixt *Bremen* and *Stade*, the Country is desert and sandy; but the other Parts towards the Rivers are as pleasant as any of the Empire, and abound with Fields, Meadows, and fruitful Orchards. This Country was subject to its Archbishop till 1644, that being conquer'd by the *Swedes*, 'twas by the Treaty of *Westphalia*, with the Bishoprick of *Verden*, annex'd to that Crown, and made a Dutchy, to satisfy the King of *Sweden*, as it is worded in the said Treaty, for the Places taken in the War, which he restor'd, together with the Publick Peace of the Empire.

Dr. *Nicholson* says, they were converted by *Willibaldus*, an *English* Man, sent over by the Archbishop of *Tork*, upon the Desire of *Charles the Great*, was made Bishop of *Bremen*, and died there in 790, where they pretend to shew his Tomb, and, as some say, was succeeded by *Willeric*, another *English* Man, who left it to *Lenderic*, a *German*, that was depos'd for his Pride and Insolence by *Ludovicus Pius*, who gave it to *Ansgarius*, the first Archbishop of *Bremen* and *Hamburg*, and died in 865. During his Life, he

he enjoy'd both Titles; but was oppos'd by the Archbishop of Cologne, who alledg'd the Archbishoprick of Bremen depended on his See; but the Emperor, without regarding that, order'd all the Bishops of Denmark, Sweden, Norway, Greenland, Helsingland, Island, and the other Northern Countries, to be subject to the Archbishop of Bremen and Hamburg. Afterwards, at the Desire of Erick King of Denmark, the Pope erected an Archbishop's See at Lunden; to which, since that Time, the Bishops of Denmark and Sweden were subject. The History of their Archbishops is full of Legends; yet the Commons revere their Memory, and value St. Ansgar's Day as much as Christmas. Their 48th and last Archbishop was Frederick Duke of Holstein, Son to Christian IV. of Denmark; but he lost it by the Swedish War, as above mentioned.

The City of BREMEN.

SOME think its Name comes from the Flat-bottom'd Vessels call'd *Pramen*, they us'd as a Ferry, where now their Bridge stands. Others derive it from *Brame*, i. e. Broom, which abounds in this Country. *Martinus* derives it from *Brame*, a Border, as being the utmost Bounds of the German Empire on that Side. *Cluverius* and others think it was the *Βασιλειαν* of *Ptolomy*, to which the present Name has still some Analogy. 'Tis not certain when 'twas built; but 'tis plain, that a great Part of it, call'd *St. Stephen's-Stadt*, was built long since the main Body of the Town. That call'd the *New-Stadt*, was built within these 100 Years; and the Suburbs of *St. Nicholas*, which make so considerable Part of the City, and the *New-Stadt* on the other Side the *Weser*, were not Wall'd till 1623. The *Old Town* was probably Wall'd in the Time of *Henry the Fowler*, about 1000, when he order'd other Towns to be fortified against the *Vandals*. Their first great Privileges were granted by *Henry V.* in 1111, for their brave Achievements in the Holy War by Sea and Land, as appears by their Charter; but before his Time it was reckon'd to have been a Free City, as is evident from the *Status Rolandi* in the Market-place, with an old Saxon Inscription in Rhime to this Effect; I am a

Testimony of the Liberty which Charles the Great, and many other Emperors, have granted this City, for which I advise you to return God Thanks. Dr. *Nicholson* gives an Account of the Tradition among the Saxons for erecting those monstrous Statues. They say, That this *Roland* was a Man of Gigantick Stature, Nephew to *Charles the Great*, and one of his Generals, thro' whose Assistance he conquer'd much of that Country, and therefore order'd his Statue to be set up in many of those noted Towns he subdued, and granted them larger Privileges than others, so long as they kept up those Statues: But among other Arguments, the Doctor brings against this the Opinion of *Gulastus*, who thinks that *Roland* or *Rugenland* is not a Proper Name, but an Appellative, denoting Cities or great Towns on the Borders of the Empire, where Courts of Justice were established; and that this Authority given to their Magistrates was represented, as now in *Bremen*, *Magdeburg*, &c. by a Gigantick Statue, representing the Emperor, and bearing the Arms of the Empire. He adds, That the People of Towns, when they were deprived of that Privilege, did usually pull down those Statues, as the *Hamburgers* did when *Charles IV.* oblig'd them to submit to the Duke of *Holstein*.

Bremen is now a Free Imperial City, and the Third in Order of the Hans-Towns: It is divided by the *Weser* into two Parts; that on the N. is call'd the *Old Town*, and that on the S. the *New*. They are join'd by Wooden Bridges, and on the largest there is an Engine that raises Water, and distributes it all over the City. The Streets of the *Old Town* are large, and center in the Market-place, where that call'd *Roland's Statue* stands. In this Town stands also the Town-House, a fine late Building, with spacious Rooms; in the first is the Picture of *Willibaldus*, their Apostle, with an old Saxon Inscription above it, not understood now by the Inhabitants; but some will have him to have been a *Holsteiner*. The Front of this House is very handsome, and faces the Market-place. The Senate or Council Chamber is very stately, and has the Picture of 12 Emperors, in which that of the last is included. Here also stands the ancient Cathedral, dedicated to *St. John*, in which they pretend to shew *Willibald's Tomb*.

Tomb. In the *New Town* are the Arsenal, and the University, which was first a Free-School, built soon after the Reformation in 1552; afterwards, advanced to a *Schola Illustri*, where Divinity, Law and Physick, were taught; but has been since so much endow'd by the Citizens, that it is become one of the most noted Universities in Germany, and produc'd several Great Men, among whom were *Chytræus*, *Pezelius*, *Pierius*, *Martinius*, *Lampadius*, *Grocius*, *Combachius*, and the famous *Cocceius*. They had formerly many Struggles with their Archbishops for their Liberties, and bravely defended the Reformation against one of them, for which *Charles V.* order'd the Duke of *Brunswick* to lay Siege to it, which he was obliged to raise after a Year's continuance. They have since had a Controversy with the *Swedes*, and denied that, by the Treaty of *Westphalia*, the Crown of *Sweden* had any more Power over them, than their former Archbishops, in whose Time they were own'd to be a Free Imperial City; and that by the 10th Article of *Osnabrug* it was provided, They should enjoy their present and ancient Liberties; one of which was, That if any of the Citizens appeal'd from their Magistrates to the Imperial Chamber, the Appeller should pay 50 Gilders; but in 1666, the *Swedes* besieg'd it, and, by the Mediation of neighbouring Princes, the City was obliged to agree to a Treaty, by which their Privileges were lessen'd, and they were not to enjoy their Freedom as an Imperial City till 1700, when they should be restored to them, as *De Ville* informs us.

Their Magistracy consists of 4 Burgomasters, and 24 Common-Council Men, divided into a Burgomaster, and 6 Common-Council Men for each Quarter of the City. If any of those die, or grow unable to perform, they are oblig'd to chuse another within 24 Hours after, thus; out of each Class, one Elector is chosen by Lot, and obliged to swear to chuse one of the most considerable Freemen, whom they think fittest for the Place; then they are shut up in a Chamber, and not suffer'd to speak to any Man till the Election is over. This City is strong by Nature and Art; and tho' it had no Walls, it would be hard to take it, if well defended; for they can drown the

neighbouring Plain with the *Weser*, which once a Year overflows its Banks, and much improves the adjacent Fields. Their Ramparts are of Earth, the Ditch large and deep, and the Counterscarp in good Repair. They have a Garison of 600 Men, Detachments of which lie without the City, and 200 of the Citizens keep Guard Day and Night. There are abundance of Gardens and Pleasure-Houses about this City. Their Territory extends 8 or 10 Miles round, and abounds with good Pasture, well stock'd with Cattle; which, with their Trade by Shipping, makes the City rich and populous. Great Floods do many times fill the River with Sand Banks, as puts the City to great Expence to clear it. Ships of great Burden can scarcely come within 6 Miles of their Bridge, and there they unload at the Custom-House, whence Foreign Commodities are brought up in small or Flat-bottom'd Vessels. By this River they transport Commodities to several Parts of the Empire, as well as import them. They are excellent at dressing Leather and Cloth, which are frequently brought for that End from other Parts. They abound also with Fish taken in the Sea and *Weser*, have every Month several Sorts of Fish in Season, and many Thousands of Salmon and Lampries are taken Annually within the Town; which being pickl'd or dry'd, are exported with other Commodities.

All the Magistrates, and most of the Inhabitants, are *Calvinists*; but out of Complaisance to the King of *Sweden*, the *Lutherans* are allow'd the Cathedral, under which there is a Vault, where dead Bodies keep uncorrupted 60 or 70 Years.

Their chief Commodities are Corn, Minerals, Wool, Timber, Leather, and Linen, brought hither from *Osnabrug*: 163 of their Yards make 100 of *English*. The Custom of swearing New-comers by Bread and Salt, and of making them free on paying a Fine of good Liquor to the Company, is said first to have begun here, and is since become general in the other *Hans-Towns*. Their Current Money is that of the Empire and *Sweden*. They have a little Coin of their own, worth about a Halfpenny, which they call a *Gros*. They have a Rix-Dollar of 48 Stivers, 120 of which are equal to 100 Rix-Dollars of *Amsterdam*.

Their

Their Arms are in a *Field-Gules*, a *Key-Argent*, to denote that they can open or shut the Passage of the *Wefer*. This City lies in Long. 29. Lat. 53. 27 *English Miles N. W.* from *Verden*, and 5 from the Sea.

Other Places of Note in the Dutchy of *Bremen* are,

1. *Verden*, formerly a distinct Bishoprick, but united to this Dutchy, and given to the *Swedes* by the Treaty of *Westphalia*. *Bruschius*, in his History of *Germ. Bish.* says, *Charles the Great* established a Bishoprick at *Konende on the Wefer*, or, as others say, at *Bardewick*, about 776, when soon after it was removed to *Verden*, then a strong and populous City. *Crantius* says, the first Bishop was *Swibert*, an *English-man*, who died in 708, and was succeeded by *Patto*, a *Scotts-man*; but *Bruschius* and *Ennmius* contradict this, and say, *Swibert* was a *Friselander*. This City, which gives Name to the Principality, lies on the *Aller*, by which Goods are brought to it from *Bremen*. 'Tis a pretty large Town, was formerly an Imperial City, but afterwards subject to its own Bishop. *Count Tilly*, the Imperial General, took it in 1626 by Storm. The Imperialists took it again in 1631; since which, it has never recover'd its ancient State. The *Swedes* took it in 1634, and kept it till 1678, that the Duke of *Brunswick* seiz'd it; but restor'd it again to the *Swedes* in 1679, for which he had the Bayliwick of *Teddinghouse*, betwixt the *Aller* and *Wefer*. It lies 40 *English Miles S.* from *Stade*, and about 40 *N.* from *Zell*.

2. *Ottersberg*, a small fortified Town, 16 Miles *E.* from *Bremen*, with a strong Castle, formerly the Archbishop's Residence. *Chytraeus* says, it join'd with *Bremen* for many Years against their Archbishop; but submitted on Conditions in 1547. 'Twas taken twice by the Imperialists, and once by the *Swedes*, in the German Civil Wars.

3. *Rottenberg* or *Rotterberg*, a small Town on the *Wein*, 4 Miles from *Ottersberg*, 20 *E.* from *Bremen*, and 15 *N.* from *Verden*, at first a Bishop's Palace, which was fortified, and the Village Walled in by *Berthold*, their 49th Bishop, about 1500. It has become pretty populous, and a Place of Trade.

4. *Buxtehude* on the *Essa*, near the *Elb*, in as pleasant and fruitful a Country as any

in *Germany*; so that 'tis one of the *Granaries of Hamburg*. The Town is pretty large, with broad Streets: 'Tis surrounded with a Ditch, defended with old Towers, now ruinous, and has a Company of Foot in Garrison. The Duke of *Brunswick* seiz'd it in 1676; but restor'd it to the *Swedes* in 1679. It lies 15 Miles *W.* from *Stade*, and 15 *E.* from *Hamburg*.

5. *Stade*, the second City of Note in the Dutchy. It lies on the Mouth of the *Zwhega*, and Banks of the *Elb*, in a fruitful Country, and wholesome Air, 50 Miles *N.* from *Bremen*, and 25 *W.* from *Hamburg*. In the Time of the *Romans*, 'twas called *Statio*, because part of their Fleet was posted there to guard the *Elb*. *Bertius* and others will have it to be the *Στατάριδα* of *Ptolomy*, in Long. 29. and Lat. 51. Deg. 20 Min. which *Dr. Nicholson* observes does not agree to its Situation. It was formerly subject to its own Earls and Marquisses, and the People of the Town and neighbouring Country were called by the Latins *Stadenses*, *Stadingi*, or *Stedingii*. In 1234, they revolted, by the Influence of their Clergy, from their Archbishop, and after a long and bloody War, in which they engaged several of their Neighbours, they were forc'd to submit by the Pope's Excommunication, without much Advantage to the Archbishop's Title; for *Philip* Duke of *Swabia*, their Earl, tho' he annex'd the County to the Archbishoprick about 1240, kept the City, and allow'd them their Privileges as an Imperial City, it having been one of the first that enter'd into the League of the *Hans-Towns*. And thus it continued till 1645, that it was taken, tho' very strong, by the *Swedes* in one Day, and since continued in their Hands till 1676, that it was surpris'd by the Duke of *Brunswick*; but restor'd to the *Swedes* in 1679, and that same Year was most of it burnt down. It was endowed by former Emperors with large Privileges, and particularly to be an *Asylum* for Malefactors who could escape thither. They pretend to a Right of Toll from every Merchant-Ship that goes up to *Hamburg*, which occasioned a Quarrel betwixt the two Cities, that was afterwards compos'd; since which, both enjoy their own Privileges. The great Trade of *Hamburg* did so much drain it, that they were forc'd to sell their Publick Stock,

Stock, and submit to the Archbishop of *Bremen*: But the *Hamburgers* having affronted the *English* Merchants, they removed their Trade hither, by which of a sudden it recover'd its Riches and Grandeur; and tho' the *English* did again settle at *Hamburg*, continues in a flourishing Condition. The Burgers are accounted the most courteous of this Part of the Empire, have good Orchards and Gardens without the Walls, and a large and commodious Haven, capable of larger Ships than go to *Hamburg*. They have a strong Fort at the Mouth of the *Zwinge*, and the Town it self is well fortified. Their Market-place, Town-house, and Churches, are well built, and worth a Traveller's View.

6. *Bremen-Verden*, a Wall'd Town betwixt *Bremen* and *Stade*, 12 *English* Miles from the latter, and 28 from the former. It was built by *Luder* Duke of *Saxony*, and had a Palace, where the Archbishop of *Bremen* did frequently reside. The *Suedes* have a strong Garison in the Castle, which commands the Plain, and was the usual Residence of the Governor of the Dutchy. Their chief Trade is by Passengers betwixt *Bremen* and *Stade*. 'Twas seiz'd by the *Danes*, but restor'd to the *Suedes* by the Treaty of *Reschild*.

In this Country lies also *Rutzenbittel*, a strong Fort on the Mouth of the *Elb*, 32 Miles N. W. from *Stade*, belonging to the *Hamburgers*, who have also another called *Newwerck* near it.

The Dutchy of LUNENBURG.

Buno, in his Notes on *Cluverius*, says, it has the Dutchy of *Mecklenburg*, the Marquisate of *Brandenburg*, and Part of the Archbishoprick of *Magdeburg*, on the E. the Dutchy of *Brunswick*, the Bishoprick of *Hildesheim*, and the Dutchy of *Calenberg*, on the S. the County of *Hoy*, and the Dutchies of *Bremen* and *Verden*, on the W. the County of *Pennyberg*, the Territories of *Lubeck* and *Hamburg*, and the Dutchy of *Sax-Lawenburg*, on the N. Its Rivers are, the *Elb*, the *Alster*, *Elmenow*, formerly called *Linaw*, now the *Aw*, and *Jetze*.

The chief Town, called *Lunenburg*, is thought by some to derive its Name from

Luna, the Moon, worship'd there by the Inhabitants; by others from the River *Linaw*, on which it stands; and this they say, was formerly called *Luno*, from *Isis* the *Egyptian* Goddess, who was worship'd here when she came to see her Kinsman that was Lord of *Hamburg*, and the neighbouring Country. But to pass over this Fable, 'tis certain the Inhabitants did formerly worship the Image of the Moon; and several Rivers and Towns in this and the neighbouring Countries derive their Name from *Luna*. The Annals of the Cathedral of *Verden* say, this Idol stood on the Top of Mount *Calkberg*, and was destroy'd by *Egistus*, one of the 70 Disciples, whom they alledge to have been one of the *German* Apostles; but was set up again by the Inhabitants when they relaps'd, and at last removed by *Swibert*, the first Bishop of *Verden*, who built *St. Mary's* Monastery in its Place about 780.

This Country abounds with Woods and Forrests, with all sorts of Deer, Wild Swine, and other Venison; and a great Part of it is vast Heaths and Wastes, the largest of which lies W. of the City, and is desert for several Leagues.

The Inhabitants are reckon'd by the other *Germans* to be the most rustical both in Habit and Language of any in the Empire; but whatever they were before, it will not appear to be so now, especially as to their Cloathing. The *Cherusci*, part of whom inhabited this Country, contributed much to the Defeat of *Varius*, and the *Roman* Legions. The present Inhabitants are accounted good Soldiers, being bred in a cold Climate, and with a spare Diet.

Historians differ as to the Origine of the present Form of Government here. *Dr. Nicholfsen* is of Opinion, That after the Country was converted in the Reign of *Charlemagne*, they had no other Governors but their Bishops. *Wittikind*, an Author of Credit, says, the Emperor *Orto I.* when he went to *Italy*, left one *Herman*, of Noble Descent, to govern North *Saxony*, which contained *Lunenburg*, and the adjacent Countries; and being well satisfied with his Government, did upon his Return make him Duke of North *Saxony*. By this means the Great Dutchy of *Saxony* was divided; but the Princes of North *Saxony* still assum'd

the Title of the whole. *Herman* is said to have had 4 Successors; but *Magnus*, the last of them, dying without Heirs-Male about 1106, the Emperor *Henry V.* gave the Dutchy of *Lower Saxony* to *Lotharius*, Baron of *Querfurt*. After his Death, *Henry the Proud*, Duke of *Bavaria*, got the Dutchy, having married *Lotharius's* Daughter; and being likewise Son to the Daughter of *Magnus* above mention'd. His Title was opposed by *Albert*, surnam'd the *Bear*, Marquis of *Brandenburg*; but *Lotharius* prevail'd, and left the Dutchy to his Son *Henry*, surnam'd the *Lion*, famous in the *German History*, who enlarged his Dominions from the *Rhine* to a great Part of *Denmark*; and some say, from the *Adriatick* to the *Baltick*; but he was afterwards reduc'd by the Emperor to *Brunswick* and *Lunenburg*. *Henry* died in 1195, when his Dominions were divided betwixt his three Sons, *Henry*, afterwards Prince Palatine of the *Rhine*; *Otho*, afterwards Emperor; and *William*, who succeeded to *Lunenburg* only by the Name of *Lord*; for *Otho* had the City and County of *Brunswick*, and *Henry* had *Zell*, *Bremen*, and *Stade*.

William died in 1213, and was succeeded by his only Son *Otho*, who in 1235 was made Duke of *Brunswick* by the Emperor *Frederick II.* whose *Diploma* is still in the Archives of *Zell*.

William died in 1252, and left two Sons, *Albert* and *John*. *Albert* resign'd *Lunenburg* to his Brother; after which they were reckon'd distinct Principalities, and were for most part subject to two Princes.

John died in 1276, and was succeeded by his Son *Otho*. Here *Dr. Nicholson* observes a Mistake in *Dr. Heylin*, who reckoning only the 8 Years of *John's* Government, without taking Notice that *Albert* kept both Dutchies 15 Years, brings *Otho II.* to the Government 15 Years before his Father's Death.

Otho reign'd 53 Years, and dying in 1330, left two Sons, who govern'd jointly 24 Years. *Otho* the eldest dying without Heirs-Male, *William* the youngest govern'd alone for some Years: After which, he resign'd the Dutchy to *Lodowick* Duke of *Brunswick*, who married his eldest Daughter.

Lodowick died without Issue in 1358, and was succeeded by his Brother *Magnus*, surnam'd *Torquatius*, as the *Atlas Historique* says,

in 1368, on Condition that he should protect the *Lunenburgers* against the Emperor *Charles IV.* and the Duke of *Saxony*: Upon which *Brunswick* and *Lunenburg* were again united; but *Albert* Duke of *Saxony*, assisted by the Emperor, and claiming the Title as descended from the eldest Brother's Daughter, recover'd *Lunenburg* by Force in 1372, and held it 14 Years. After his Death, the War continued betwixt the Houses of *Saxony* and *Brunswick* for the Dutchy: But in 1388, *Bernard*, Duke *Magnus's* Son, prevail'd. Soon after this, *Frederick* Duke of *Brunswick* being slain in his Return from *Frankfort*, where he was chosen Emperor, *Bernard* succeeded to *Brunswick*, and gave *Lunenburg* to his Nephew *Henry*, who shar'd the Government with him before. *Henry* reign'd 16 Years, died in 1416, and was succeeded by his Son *William*, who made War on his Kinsman *Otho* of *Brunswick*, Duke *Bernard's* Son, and took several Places in that Dutchy; but a Peace was afterwards concluded, on Condition that they should change Dominions, in 1428.

Otho's Brother *Frederick*, whom *Heylin* makes his Predecessor, succeeded him in *Lunenburg*; but retir'd to a Monastery at *Zell* in 1459, 14 Years after.

Upon this, his two Sons *Bernard* and *Otho* had the Government. The former died within 5 Years; and the latter surviving 7 after, left his Son *Henry*, then but three Years old. Upon this, old Duke *Frederick* came out of his Monastery in his advanc'd Age, govern'd for his Grandson 7 Years, and died in 1476. the *Atlas* says 1478.

Duke *Henry* being then but 10 Years of Age, was assisted by his Mother for some Time; and 10 Years before his Death, which was in 1532, he settled the Dutchy on his three Sons, *Otho*, *Ernest*, and *Francis*. The first loving Retirement, resign'd to the second during his Father's Life for an Annual Maintenance. *Ernest* shar'd the Government with *Francis* till 1539, when the latter accepted the Lordship of *Gifhorn*, and the Monastery of *Isenhagen*. *Ernest* brought in the Protestant Religion in 1530, died in 1546, and was succeeded by his Son *Francis Otho*, who died 13 Years after without Issue-Male, and left the Dutchy to his Brothers *Henry* and *William*, who rul'd together for 10 Years; but afterwards separated, and agred,

agreed, That *William* should have *Lunenbourg*, and *Henry* the Lordships of *Dannenberg*, *Hitzaker*, *Luchaw*, and *Warbke*, and the Monastery of *Scharnbeck*.

In 1592, *William* died, and was succeeded by his Son *Ernest*, who in 1611 left it to his Brother *Christian*, Elected Bishop of *Minden*, who had a prosperous Reign of 22 Years, and added the Principality of *Grubenhagen* to his Dominions. He died in 1633, and was succeeded by his Brother *Augustus*, Elected Bishop of *Ratzeburg*, who succeeded afterwards to *Brunswick*, upon the Death of *Frederick Ulrick*. We shall speak more of him when we come to *Brunswick*.

Upon this, *Lunenbourg* was given to *George*, Lieutenant-General of the Forces of *Saxony*, and Son to *William* above-mentioned, in 1636. He had 4 Sons. *Christian Lodowick*, the eldest, govern'd alone, allowing Pensions to his Brothers. He died in 1665.

George William, his second Brother, succeeded, and died without Heirs-Male in 1705.

By the Treaty of *Hildesheim*, the Dutchies of *Calenberg* and *Grubbenhage* were made over to the third Brother *John Frederick*, who kept his Court at *Hanover*, and died in 1679 without Issue-Male. His Daughter *Wilhelma Amelie*, born in 1673, is married to the present Emperor *Joseph*.

Ernest Augustus, the youngest Brother, succeeded his Brother *John Frederick* Bishop of *Osnabrug*, and in 1692 was created Elector. He married one of the most accomplish'd Princesses in Europe, *Sophia*, Daughter to *Frederick V.* Elector *Palatine*, King of *Bohemia*, by Princess *Elizabeth*, Daughter to King *James I.* of *Great Britain*.

This Prince was a great General, a good Patriot of the Empire against the Designs of *France*, made a great Figure in the Confederate Army on the *Upper Rhine*, and gave likewise a powerful Assistance to the Allies in the *Netherlands*. In Consideration of which, the late King *William*, by the Influence and Assistance of most of the Protestant Princes of the Empire, got him created a Ninth Elector, which the Emperor agreed to, because of his own great Merit, and upon the Solicitation of those Protestant Princes and States of the Empire; who considering the Danger that might arise to their Interest by the extinguishing

of the Protestant Branch of the *Palatine* Family, after which the Duke of *Neuburg*, a Papist, succeeded to that Electorate, they press'd it with the more Vigour. Upon this Prince *Ernest* was declared Elector, and Standard-bearer of the Empire, tho' several Princes, both Protestants and Papists, oppos'd it.

He was succeeded by his Son *George Lewis*, the present Elector, born in 1660. He married *Sophia Dorothy*, the only Daughter of his Uncle *George William D.* of *Lunenbourg-Zell*; by whose Death, in 1705, the Dutchy of *Zell* fell to him. This Prince is likewise a great General; and in Consideration of the Service he has done the Empire, has commanded their Army in Chief for most part since the Death of Prince *Lewis* of *Baden*, and has been introduc'd into the Electoral College, which his Father could never obtain: His Mother the Electress Dowager, being the next of the Royal *British* Protestant Line, has the Reversion of the Crowns of *Great Britain* and *Ireland* settled upon her and her Heirs, if her present Majesty Queen *Anne* die without Issue.

The Curious, who have a mind to know more of the Genealogy of this Illustrious Family, may find a Tree of it in the *Atlas Historique*. Some derive it from *Atim*, King of *Alba* in *Italy*, from whom the Emperor *Augustus* descended by the Mother's Side; but this being uncertain, others derive it from *Hugo* Marquis of *Ferrara*, Father to *Azo* Count of *Esse*, who was Vicar of the Empire in *Italy* in 970; and another *Azo* the 4th from him, came with the Emperor *Conrad II.* into *Germany*, and married *Cunigunda*, the only Daughter to *Guelph* Duke of *Bavaria*. He was succeeded by his Nephew *Guelph the Valiant*; he by another *Guelph*; he by *Henry the Proud*, Duke of *Bavaria*; and he by *Henry the Lion*, who married *Maud*, Daughter to King *Richard II.* of *England*, as we mentioned before, from whom the present Family is descended. It had several other Branches, which are now extinguisht: The remaining Branches are, that of *Brunswick Wolfembuttel*, the present Prince of which is *Anthony Ulrick*; and the Branch of *Bevern*, the present Prince of which is *Ferdinand Albert*.

The chief Places of Note in this Dutchy are,

1. *Lunenburg*, the Metropolis. Some ascribe the Foundation of it to *Julius Caesar*; but this is rejected as fabulous. It is mentioned in the Reign of the Emperor *Henry II.* and afterwards as the greatest City belonging to *Ordo Duke of Saxony* about 1073. It was said to have been first fortified by *Henry the Lion* in 1189; but had a Castle on the Mountain of *Calkberg*, which lies near it, since 1076. It was formerly an Imperial City, but is now subject to its own Prince, and allowed great Privileges. 'Tis about two English Miles in Compass, of an oblong Form, the Streets broad, and most of the Houses well built. The Town-House is a neat Structure, and over against it stands the Duke's Palace. It has also a fine University, formerly a Monastery, and a stately Bridge over the River *Elminow*, which here is navigable. Their chief Trade is in Salt, which is made from Salt-Springs that rise within the Walls. Their Salt-Houses are fenced, and constantly guarded, as being the main Support of the City, a considerable Branch of the Duke's Revenue, and a constant Employment for a great many Poor. It lies in Long. 30 $\frac{1}{4}$. and Lat. 53. 28 Miles S. E. of *Hamburg*, 46 N. of *Zell*, 14 S. W. of *Lawenburg*, and 65 N. of *Brunswick*.

2. *Bardowick*, a Mile from *Lunenburg*, now a Village, but formerly a strong and populous City. Some reckon it to have been the first City in *Saxony*, and built 990 Years before Christ. It had 9 Churches, of which the Cathedral only is left. Over the Gate, there are some barbarous Latin Verses, in an old *Gothick* Character, which alledge it was built 235 Years before *Rome*, and that it was destroyed by *Henry the Lion* in 1189. Some derive the Name from *Bardo*, an ancient Knight-Errant; but *Meibomius* derives it from an ancient People in that Country called *Bardi*: But 'tis more probable, that it was a College of the ancient Poets called *Bards*. In the Cathedral, there are 8 Residuary Canons, and a few Vicars.

3. *Ultzen*, a neat little Town, mid-way betwixt *Lunenburg* and *Zell*. It was formerly called *Lawenwald*, i. e. *Lion-Forrest*, as appears by their Records, and an Inscription on the Town-Hall. It had its present Name

from the neighbouring Monastery of *Oldenstadt*, formerly called *Old-Ulsen*. In 1646, most of the City was burnt down, and never since wholly rebuilt; but the Streets are larger, and the Houses more splendid and regular, than before. They pretend, that the first English *Saxons* went from hence to *Britain*; and those who returned, hung up a gilt Tin Ship in the Market-place, as a Memorial of their Success, which continued there till the above-mentioned Fire.

4. *Zell*, on a Sandy Plain, near the Conflux of the *Alter* and *Fulfe*, which fall into the *Weser* below *Verden*. It lies in Long. 30. and Lat. 52 $\frac{1}{2}$. 30 Miles S. from *Lunenburg*, 60 S. W. from *Hamburg*, 28 N. from *Hannover*, and 29 N. E. from *Brunswick*. Some derive the Name from its having been a Cellar, which is the Signification of the German Word; but in a Charter of 1203, in the Duke's Archives, 'tis called *Tsellé*. It consists of three Streets, which lie parallel, and is well fortified; the Ramparts large, and well mounted with Cannon. The D. has a Palace here, which stands near the Gate of *Hannover*: 'Tis a square Building, moated round, and has 4 Platforms. In the lower Court, beyond the Ditch, there is a very fine Riding-House; and there are many fine Gardens, Orchards, and Grotto's, near the Palace. It was built in 1485 by Duke *Henry*. The chief Courts of Judicature are held here.

5. *Walfred*, i. e. *Walo's-Cross*, formerly a Monastery, built by *Walo*, a Prince of *Anhalt*, in 986, as appears by an Inscription on his Statue in the Church. It is now a considerable Town, seated in a pleasant Valley, encompassed with Woods and Mountains. Their chief Trade consists in Honey, Wax, Wool, and Beer.

6. *Harburg*, on the *Elb*, over against *Hamburg*, with a strong Castle. The Town is fortified, and is the strongest Frontier of the Country on this Side, tho' the Fortifications be not very good. 'Tis populous however, because the Inhabitants have great Privileges.

7. *Danneberg*, on the *Jetze*, a League above where it falls into the *Elb*, is the chief Town of the County of that Name, which was given to *Ordo D. of Brunswick* in 1462, by *Nicholas Count of Danneberg*.

8. *Snack*.

8. *Snackemburg*, belonging to this County, a large Trading Town, on the Confluence of the *Elb* and the *Wecker*.

The Counties of *Hoya*, *Diepholt*, and *Schawenburg*, in *Westphalia*, belong also to the Duke of *Lunsburg*: But we refer the Description of them to our Account of *Westphalia*.

The Dutchy of MECKLENBURG.

BUO on *Cluverius* lays, it has *Pomerania*, and Part of the Marquifate of *Brandenburg*, on the E. the Dutchie of *Lawenburg* and *Holstein* on the W. the Marquifate of *Brandenburg* on the S. and the *Baltick* on the N. Its Rivers are, the *Elb* and the *Warnaw*.

Geographers can scarce tell where the Place lies which gave Name to this Dutchy; but Historians say, there's a small Village so called near *Wisnar*, and was formerly a large and populous City. *Cluverius* and *Berrius* reprove those who render the Name of *Mecklenburg* by *Megalopolis* or *Megapolis*, as if it had taken its Name from its Largeness, since in German it signifies only a Town of Factors or Brokers, being a Place of great Trade while the *Vandal* Princes resided there; and *Lindeburgius* alledges, but without good Authority, that it was 8 English Miles long, and 20 in Circumference.

This Country is divided betwixt the two Dukes of *Gustrow* and *Swerin*. It has more of Profit than Pleasure, abounds with Corn, Fruit, Fish, and Fowl; but the Air is unwholesome in Summer, and very cold in Winter. It has the Advantage of the *Baltick*, many Rivers and large Lakes, which abound with Fish: One Instance of which is, That at the Marriage of *Helen*, Daughter to the Elector *Palatine*, with the Duke of *Mecklenburg Swerin*, 5000 fresh Breems, newly taken out of the great Lake near *Swerin*, were serv'd up at Table.

Some derive the Dukes of *Mecklenburg* from *Anthonyrius*, one of *Alexander the Great's* Generals, because they bear a Horse's Head in their Arms, which they will have to be that of *Bucephalus*. They say, he was the first Duke of the *Heruli* who inhabited this Country, and founded the City of *Mecklenburg* 300 Years before Christ, from whom,

after several Generations, descended *Biliengus*, a Potent King of the *Vandals*, whose Mother, they say, was Sister to *Charlemain*. They add, That he brought in Christianity; but afterwards he and his Subjects apostatiz'd. Their next famous Prince was *Godeschalk the Pious*, who preach'd to his People, and was murder'd by them in 1066. From him, among others, descended *Henry II.* who died in 1228, and left two Sons, *Nicholas* and *John*: From *Nicholas* came the succeeding Princes of the *Vandals*, till *William*, the last of the Line, died in 1430. From the latter, called *John*, are descended the present Dukes of *Mecklenburg*. His Son *Henry*, who was 26 Years Prisoner among the *Turks*, was Father to *Henry the Lion*, whose Sons *Albert* and *John* were made Princes of the Empire by *Charles IV.* in 1349, on Condition of submitting to its Laws, and assisting him. *Albert's* eldest Son, *Albert II.* was chosen King of *Sweden*, and afterwards taken by *Margaret* of *Denmark*; but releas'd, on paying a great Ransom. His Brother *Magnus*, whom *Chytræus* calls a great Prince, in Deed as well as Name, was advanced to the Government, and succeeded by his Son *John*, who founded the University of *Rostock* in 1469. His Successors, *Henry the Fat*, and *Magnus II.* after the Death of *William*, the last Prince of the *Vandals*, seiz'd the whole Dutchy. *John Albert*, Grandson to this *Magnus*, brought in *Lutheranism* in 1547, and gave the Revenues of the Abbies to the University of *Rostock*. His Son *John III.* succeeded, and left two Sons; the eldest, *Adolph Frederick*, married *Anne Mary* Countess of *East-Friesland*, by whom he had *Christian Lodowick*, the Duke of *Mecklenburg Swerin*; and the youngest, *Gustavus Adolphus*, seated himself at *Gustrow*.

The *Atlas Historique* has a Tree of this Family; but reckons nothing of the Genealogy certain till the Time of *Udo K.* of the *Heruli*, who inhabited Part of this Dutchy, from whom the present Line is descended. They enjoyed the Title of Kings of the *Heruli* or *Odrisites* till about 1150, that the Duke of *Saxony* and Marquis of *Brandenburg* forc'd *Pribislaw* to renounce the Title of King, and take that of Duke. The Branch of the Princes of the *Vandals*, and of the Branch of *Sturgard*, were united in the Branch of *Mecklenburg* about 1429. The Branch

Branch of *Gustrow* issued about 1558, and was extinguish'd last Year. The Branch of *Swerin* issued about the same Time, of whom *Frederick William*, born in 1655, is the present Prince. The Branch of *Strelitz* issued about 1658, and the present Prince is *Adolph Frederick*, born in 1686.

The same Author says, this Dutchy was anciently inhabited partly by the *Varini*, and partly by the *Angli*, who were chas'd thence by the *Heruli*. The Country he says is about 45 German Leagues in Length, and 30 in Breadth. The Dukes, who formerly govern'd independently, have had a Seat in the Diet of the Empire since 1349. It makes Part of the Circle of *Lower Saxony*, where they have a double Suffrage; and *Strelitz* has also a Voice. Their Titles are, Duke of *Mecklenburg*, Prince of *Wenden*, *Schwerin*, and *Ratzeburg*, Count of *Swerin*, Lord of *Rostock* and *Stargard*. The Principality of *Gustrow*, and the Dominion of *Strelitz*, do also depend upon it.

Dr. *Nicholson* observes, That these Princes had Strength enough to secure themselves, and over-awe their Neighbours, had they kept a good Correspondence. *Christian Lewis* turn'd Papist in 1663, which heighten'd the Difference with the House of *Gustrow*. He died without Issue in 1695, as *Gustavus Adolphus*, the Chief of the House of *Gustrow*, did in 1696, which has occasioned the present Differences about the Succession betwixt the Sons of *Frederick* late Duke of *Mecklenburg* *Krabro*, and *Adolphus Augustus* Duke of *Strelitz*, of the same Line.

The chief Places in this Dutchy are,

1. *Lubeck*, an Imperial City, and Chief of the *Hans-Towns*. Some derive the Name from *Luba*, a Fisherman, who first settled here; but the most probable Opinion is, that 'tis so called from *Lob-eck*, which in *High-Dutch* signifies a Point of Land, which agrees with its Situation. The *Polish* Historians say, their Princes having conquer'd this Part of *Germany*, first built a Fort, and then a Wall'd Town here; but the *Germans* say, That *Godefrich*, a K. of the *Vandals*, founded it in 1040; but was a considerable City when taken by *Crito*, a Pr. of *Rugen*, some say in the 11th, and others in the beginning of the 12th Century: But Dr. *Nicholson* says, it never had a Charter till after

it was ruin'd by *Ratzo*, a Prince of *Rugen*, in 1134, and rebuilt by *Adolph II.* of *Holstein* in 1140; but was afterwards obliged to surrender to *Henry* of *Saxony* and *Barvaria*, surnam'd the *Lion*, who being swelled with Success, join'd with the Pope against the Emperor *Frederick Barbarossa*: Upon which he was proscrib'd, and despoil'd of most of his Dominions; and the Emperor took *Lubeck*, which was restored to *Henry* after the Emperor's Death. It was afterwards taken by *Waldemar* of *Sleswick*, Brother to *Canutus* of *Denmark*; but not being able to bear the Severity of the *Danes*, they submitted to the Emperor *Frederick II.* who restor'd their Privileges, which it has enjoy'd ever since. The Bishoprick of *Oudenburg* in *Wagerland* was removed hither in 1163; and since 1596, has for most part been possessed by a Son of *Holstein*. There is no City in the N. of *Germany* equal to this for Beauty, Uniformity of Buildings, and pleasant Gardens and Groves: The Streets are straight and even, the Houses of Brick, cover'd with Tiles, are generally high, and adorn'd with Sculpture. Most of it was burnt in 1238: Since which, the Senate made an Order, That no Houses should be built of Timber, or cover'd with Thatch. They have a publick Conduit, from whence Water is convey'd by Pipes into every private House; which Example has since been followed by *London*, and other great Cities of *Europe*. Several of the Streets are adorn'd with Rows of Tile-Trees on each Side. They have about 20 Churches well built, and adorn'd with high Steeples or Spires. The Cathedral, dedicated to *St. Mary*, is of as good Architecture as most in *Germany*. The City is large, but more long than broad; the Fortifications are strong, and consist of good Bastions and Faussebrays, with a deep and large Ditch. They have no Counterscarp or Half-Moon, but one at the Gate of *Hamburg*. The Haven is defended by Ramparts, and capable of great Merchant-Ships, which come up to *Trave*, 8 or 10 *English* Miles from the Sea, which occasions a great Trade here; so that with *Hamburg*, they continually employ almost 600 Vessels of their own. The Reformation was brought hither in 1561: Since which, their Bishops have been Protestants. The Chapter has only a Shadow of Election; for,

for, as we have heard before, the See is devolved as an Appennage upon a Son of Holstein, who is called Duke of Eutin, from the Place of his Residence, about 16 Miles from the City: But the Chapter resides in the Town. His Revenue is about 10000 Crowns *per Annum*; but he is the only Protestant Bishop in Germany who has the Power of a Diocesan, and Ecclesiastical Jurisdiction. This City defended it self bravely against the Danes in 1500, and 1519. Before the Time of *Gustavus Erickson* of Sweden, it held the Ballance betwixt the two N. Crowns; but since that Time, the Cities of *Hamburg* and *Wisnar* have got much of its Trade. Their Beer is extream good, transported to other Parts, and is us'd medicinally for Wounds and Bruises: 'Tis sold by the Barrel, which contains about 44 *English* Gallons: 160 of their Ells make 100 of ours; Their Corn is measur'd by the Last, which makes 10 $\frac{1}{2}$ *English* Quarters. Their Government is by 12 Burgomasters, and 16 Senators, whose Office is for Life. The former are either Doctors of the Law, or grave Gentlemen of the City. The latter are half Lawyers, half Gentlemen. Their Territory is about 60 *English* Miles, in which there are some small Towns. They have a Garison of 7 or 800 Men, and take Place in the Diet alternately with *Worms*. A remarkable Treaty of Peace was concluded here in 1629 betwixt the Emperor and King of *Denmark*.

The Colledge of the Hans-Towns is kept here. The League betwixt them began in 1164, for mutual Defence, and carrying on their Commerce, and was made up of 70 or 80 in several Countries. The 4 Towns in which they first establish'd their Factories, were, *London*, *Bruges*, *Norwege*, and *Novosorod*. In 1428, they set out 250 Ships of War against *Erick X.* of *Denmark*; but *France*, *Spain*, *Denmark*, *Sweden*, and *England*, having broke off the Towns of their Dependance from the League, those of the Empire continued in it; since which, *Lubeck* has been the chief, keeps their common Stock rais'd by Contribution, with their Records and Alliances: *Lubeck*, *Cologne*, *Brunswick*, and *Dantzick*, are the chief; and when they think fit to call an Assembly, they give Notice to the rest. They meet once in three Years. The Towns of

the first League were, *Antwerp*, *Dort*, *Amsterdam*, *Rotterdam*, *Bruges*, *Ostend*, *Dunkirk*, *Calais*, *Rouen*, *St. Malo*, *Bourdeaux*, *Bayonne*, *Marseilles*, *Barcelona*, *Sevil*, *Cadix*, *Lisbon*, *Leghorn*, *Messina*, *Naples*, *London*, and others of less Note. The chief Towns of the present League are, *Lubeck*, *Cologne*, *Brunswick*, *Dantzick*, *Hamburg*, *Rostock*, *Weimar*, *Lunenburg*, *Stettin*, *Gripswalde*, *Wesel*, *Osnabrug*, *Dortmund*, *Paderborn*, *Norhausen*, *Ruremond*, *Bremen*, *Magdeburg*, *Hildesheim*, *Goslar*, *Minden*, *Emmerick*, *Cohn*, *Thorn*, *Coningberg*, *Riga*, and several others.

2. *Wisnar*, betwixt *Lubeck* and *Rostock*, about 21 *English* Miles from each. Some derive the Name, according to *Saxo Grammaticus* and *Crantzius*, from *Wissmir*, a Polish or Vandal Prince, who, after defeating the Danes, built this Town: But this is contrary both to History and Chronology; so that the Name comes probably from *Wismeer*, which signifies a secure Part of the Sea, such as this Town is built on, as *Dr. Nicholson* observes; and adds, That it was probably built about 1238, or 1250, by *Gunceline II.* of *Swerin*, out of the Ruins of *Mecklenburg*. Afterwards *Henry* of *Mecklenburg*, called *Hierosolymitanus*, because of his Exploits in the Holy Land, modelled this City about 1266, after the Government of *Lubeck*; so that in a little Time it became one of the chief Hans-Towns, was the Harbour for their Men of War, and fortified at their Expence, which made it almost impregnable. It was taken in 1629 by *Wallenstein*, the Imperial General, but retaken in 1632 by the Duke of *Mecklenburg*, with the Assistance of the Swedes, to whom, by the Treaty of *Munster*, it was given up, with other Places; but was since taken by *Christian V.* of *Denmark*, and agreed to be re-deliver'd to the Swedes by the Treaty of *Fountainbleau* in 1679; and by a posterior Treaty that same Year in *Denmark*, it was left in the Hands of the Danes for Arrears due by the Swedes, and continues still in their Hands. It is a Hans-Town, and its Harbour reckon'd the best in Germany. It lies among Fens, in Long. 32 $\frac{1}{2}$. Lat. 54. 40 *English* Miles S. W. from *Rostock*; 12 N. from *Swerin*, and 60 N. E. from *Hamburg*: 'Tis well fortified, and has a strong Citadel, with 5 regular Bastions.

3. *Rostock*, which the German Antiquaries say is the *Lacinium*, *Laciburgium*, and *Rhodopolis* of the *Romans*; but with little probability. Some derive it from *Rostogz*, which in the *Wendish* Language signifies the Conflux of two Rivers; but *Lindeburgium*, which is more probable, derives it from *Rotz-Rock*, a red Pillar, worship'd by the Pagan Inhabitants. Dr. *Nicholson* says, That in 329, it was only a small Village of Fishermen on the Banks of the *Warna*, and advanced to a City by *Godeschalk* King of the *Heruli*, and enlarged by his Successors about 1160. *Burcwinus*, one of his Successors, wall'd and modell'd it by the Laws of *Lubeck*, as appears by his Charter, dated 1218. 'Tis a Hans-Town, and divided into 3 Parts, called the *Old*, *New*, and *Middle* City, consisting of 14 Streets, and many Thousands of stately Houses. The Citizens value themselves on 7 times 7 remarkable Things, viz. 7 Doors in *St. Mary's* Church, 7 large Streets which center in the great Market-place, 7 Gates out to the Country, 7 Bridges over the *Warna*, 7 Towers on the Town-Hall, 7 great Bells belonging to the Town-Clock, which chime at certain Hours, and 7 vast Tile-Trees in the common Garden.

Their chief Commodity is Beer, which they export in great Quantities. They have 150 Priviledg'd Brewers, who they say brew as many Thousand Tuns every Year, besides what particular Persons brew for their own Use.

Their University, now one of the largest and best in *Germany*, was founded in 1419. The City was at half the Charge, and have the Choice of half the Professors, who are 18 in all; and their Rector *Magnificus*, or Chief Magistrate of the University, is chosen ever Half-Year by Turns out of those Professors. He appoints their Meetings, takes Care of collecting and disbursing their Money; and in great Matters, is assisted by a Promotor, chosen from among the eldest of the Professors. They had their Charter from Pope *Martin V.* The Bishop of *Swerin* is their perpetual Chancellor, and deputes a Vice-Chancellor from among the elder Professors. Among other Learned Men bred here, were the famous Historians, *Crantzius*, *Posselius*, and *Chytraeus*. The Government of the City is by 24 Aldermen, chosen out of the Nobility, Scho-

lars, or Merchants: 4 of these are Burgo-masters, 2 Chamberlains, 2 Stewards for the River, and 2 Judges. The Chamberlain collects and pays the Money for repairing the Publick Buildings. The Stewards over-see the Haven at *Warnemund*, and take Care of cleaning the River; and the Judges determine all Causes Civil and Criminal. These 24, call'd the Upper House, determine all Controversies, coin Money, and chuse Officers; but there is besides a Lower House of 100 Common-Council Men, chosen out of the inferior Tradesmen, who are summon'd, and give their Opinions in extraordinary Matters of common Concernment. The River is navigable to the Walls; but their large Ships come no further than *Warnemund*, a little Town 7 Miles distant, at the Mouth of the River. The *Swedes* built a Fort here after the Treaty of *Munster*, and by their Garison demanded a Toll of all Ships, which very much lessen'd the Trade of the Town. The *Mecklenburg* Ministers endeavour'd to have this redress'd at the Treaty of *Nimwegen*; but without Effect. This City and Dutchy was seiz'd by the Imperialists in 1649; but retaken by the *Swedes* in 1651. Most of the Town was burnt in 1677, but is since rebuilt.

4. *Swerin*, on a great Lake, which takes its Name from the Town, about 50 English Miles S. W. from *Rostock*, 28 W. from *Gustrow*, and 12 S. from *Wismar*, in Long. 31¹/₂. Lat. 53³/₄. and is the Capital of the Principality of that Name. It was fortified by *Henry the Lion*, Duke of *Saxony*, soon after its first Foundation, in 1163, and bestow'd, with its Territories, on *Gunceline*, one of his Generals, whom he made Earl of *Swerin*. He was succeeded by his Son *Henry*, Favourite to the Emperor *Oslo IV.* He took *Waldemar* King of *Denmark* in his own Kingdom, brought him bound to *Saxony*, and kept him in the Castle of *Danneburg*, till his Subjects had almost beggar'd themselves by paying his Ransom. *Oslo*, the last Earl of this Family, died in 1355, and his only Child being married to *Albert Duke of Mecklenburg*, brought the Earldom to that Duke. The Bishoprick was removed from *Mecklenburg* to this City about 1062; and *Joannes Scotus*, their first Bishop, was murder'd by the *Wendish* Apostates in 1066, who cut off his Hands and Feet, and left him in that

Misery;

Misery; so that he died some Days after. The See was vacant for 84 Years, till the Emperor *Conrad III.* sent *Eberhard* thither. He was succeeded by one *Benno* or *Bruno*, when *Henry the Lion* built and endowed a new Cathedral, and drove the Pagan *Mecklenburgers* by Thousands into a Place of the Lake of *Swerin*, where they were baptiz'd by *Benno*, from whence that Part of the Lake is still called the *Fons*. The following Bishops had their Residence at *Butzow*, a Fort and considerable Town near *Gustrow*, till by the Treaty of *Munster* it was seculariz'd, and given to the Duke of *Mecklenburg*. It is the usual Residence of the Duke of *Mecklenburg Swerin*. The Religion of this Country is *Lutheranism*.

Other Towns here are, 1. *Domitz*, in an Island made by the Conflux of the *Elb* and *Elda*, with a strong Castle on the *Elb*, where the Duke of *Mecklenburg Swerin* obliges Ships to pay Toll. 2. *Rutzow*, near *Gustrow*, where the Bishop of *Swerin* ordinarily resided. 3. *Travemund*, on the Mouth of the *Trave*, which is broader than the *Sein* at *Paris*, 8 English Miles from *Lubeck*, on which it depends. The Town is small, but fortified with 4 good Bastions. 4. *Mecklenburg*, formerly mentioned, once a great Town, that gave Name to the whole Dutchy.

5. *Gustrow*, a well fortified Town, with a Castle, about 20 English Miles S. from *Rostock*, and is remarkable for little but being the Residence of the Duke of *Mecklenburg Gustrow*, whose Line was extinguish'd in 1688. The Prince *Gustavus Adolphus*, who was born in 1633, and died in 1695, was a Prince of great Learning and Bravery. His Son *Charles* died in 1688, without Issue. His Sister *Louisa*, born in 1667, married *Frederick IV.* the present King of *Denmark*, in 1695.

Other Towns of less Note in this Division are, 1. *Ribnitz*, on the bottom of a Gulph, form'd by the *Baltick*, N. E. from *Rostock*. 2. *Storgarde*, a small Fisher-Town on the same Gulph. 3. *Woren*, an ancient Town on a Lake towards the Frontiers of *Brandenburg*. 4. *Plawen*, on a Lake of the same Name, from whence the River *Elda* rises.

The Arms of *Mecklenburg* are, Or, a Buffalo's Head, the Front Sable, the Curls and Horns Argent, for *Mecklenburg*. Azure, a

Griffin Or, for *Rostock*. Cut in the first Azure, a Griffin Or, in the 2d Argent, fill'd up with Sinople or Green, for *Swerin*. Gules, a-crofs Parre, for *Ratzenburg*. Gules, a naked Arm Carnation, clad above the Elbow with a Sleeve of Silver, ty'd with a Ribbon of the same, issuing from a Cloud, moving from the sinister superior Point of the Chief, holding in the Hand a Black Ring, for *Swerin*. Or, a Buffle of Sable, Langued-Gules, Horn'd and Crown'd the same, for *Vandalia*. Over the whole, cut Gules on Or, for the Lordship of *Storgard*.

The Dutchy of BRUNSWICK.

THE Country, properly so called, comprehends only the Territories subject to the Dukes of *Brunswick* and *Hanover*, or *Calenberg*; but the Principality of *Grubenhagen*, and the Counties of *Blankenburg* and *Reinfein*, are compris'd under the Name, because subject to the Dukes of *Zell* and *Wolfenbittel*, who have both the Title of Dukes of *Brunswick*. This Country has *Hesse* on the S. *Lunenbourg* on the N. *Magdeburg* on the E. and the River *Weser* on the W.

The Dutchies of *Brunswick* and *Hanover* are populous and fruitful. Wheat and Rye grow sometimes to such a Height here, as to exceed the tallest Man on Horseback. A great Part of the *Hercynian* Forrest did formerly run through this Country, and is now divided into smaller Woods and Parks, which afford Timber, Fewel, store of Deer, Wild Swine, Hares, &c. and Fowl of all sorts. They have also rich Mines of Iron, Salt and Coal. Their chief Rivers are, the *Weser*, by which Goods are brought from *Bremen* to *Brunswick*, with the *Leina*, *Innerste*, *Ocker*, and some of less Note, all abounding with Fish. The Ruins of many old Castles and Forts are found on the Tops of Hills and ragged Mountains in this Country, which some take to have been built by the *Romans*, and others by the *Saxons*, during their Wars with *Charles the Great*. The Inhabitants are now, as of old, a stout and warlike People, and of a larger Size than most other *Germans*. They are us'd to cold Lodgings, and coarse Diet, which is usually dry'd Swine's-Flesh, and Sausages, whence

their Neighbours call them Bacon-Guts. Their Bread is black, and made of coarse Rye and Wheat. They have no Wine of their own, but abundance of good Beer. They are not so complaisant as many other *Germans*, but hospitable and sincere.

In the Description of *Lunenbourg*, we gave an Account of the Origine of the Princes of this Family, and how the Families came to be united. They are said to be the only Remains of the Family of the *Guelphs*, formerly Dukes of *Bavaria* and *Saxony*; of which some Historians give this Romantick Account, viz. That *Germtrudis*, Countess of *Altorf* in *Swabia*, having accus'd a poor Woman of Adultery, and caus'd her to be punish'd for having 12 Children at a Birth, was soon after deliver'd of 12 Sons her self: Her Husband, Count *Ißenberd*, being absent at the Time, she, to avoid the same Scandal, order'd the Midwife to carry out 11 of them, in order to kill them. The Count coming home at the same Time, and asking the Midwife, What she carried in her Apron? She answer'd him, *Whelpen*, i. e. Whelps; but he insisting upon it to see them, she confessed the Matter; upon which he enjoin'd her Secrecy, and put them out to Nurse. Six Years after, he invited most of his own and his Lady's Relations to a Feast, and in the midst of their Jollity brought out his 11 Sons, all cloath'd alike. Upon this the Countess own'd her Fault, and was pardon'd. The Count order'd them, in Remembrance of this, to be called *Guelphs* or Whelps. From the eldest of these descended *Henry Guelph* Count of *Altorf*, whom the Emperor *Conrad II.* made afterwards Duke of *Bavaria*.

The Reformation, according to *Luther's* Doctrine, was brought into this Country by *D. Julius*, who died in 1599. Since which Time, they have been zealous *Lutherans*; but those named *Calixti* about *Heimstad*, who are moderate, and have a better Opinion of the *Calvinists*, are much increas'd of late.

The chief Towns are,

1. *Brunswick*. In the Cathedral, among other Monuments, there is an old Parchment Writing, with a brief Account of the most considerable Persons buried here: The first of which is *Dankwarth* Duke of

Saxony, who is said first to have Wall'd this Town, and call'd it *Dankwarth's-Cross*; but that was properly the Name of the Castle, for the Town derives its Name from *Bruno*, his Brother. It was augmented by succeeding Princes, and became one of the most considerable *Hans-Towns*. The Emperor *Frederick II.* erected the Country into a Duchy; and *Ordo* of *Brunswick*, surnam'd the *Courageous*, granted Liberty to the City to chuse their own Magistrates, and to govern according to their own Laws. After which, they pretended to be independent, which occasioned it to be besieged by the Dukes in 1492, 1550, 1553, 1605, 1606, 1616, &c. and at last it was taken by Duke *Rudolphus Augustus* in 1671. After which, he frequently resided in the Town, and kept a strong Guard in it. It lies on the *Ocker*, in Long. 32. Lat. 52 $\frac{1}{2}$. 8 English Miles N. from *Wolfenbüttel*, 85 S. from *Hamburg*, 85 S. E. from *Bremen*, 55 N. W. from *Magdeburg*, 32 S. E. from *Hanover*, and 56 from *Lunenbourg*. The *Ocker* runs through it, and the Town is divided into 5 distinct Corporations, govern'd by several Magistrates of their own, and 5 different Courts of Judicature; but sometimes they unite on extraordinary Occasions. The City is rich and populous, and their Houses well built. The Town-House is very magnificent, and the Palace a stately ancient Building. It has many fine Churches; and glories in having been the first Town of Note which embrac'd the Doctrine of *Luther*. 'Tis well fortified, and surrounded with two Walls, and two Ditches.

Their chief Trade is Hides and Mum: The former they have from other Nations, and return them dress'd, being extraordinary good Tanners. Their Mum is of two Sorts; one thin and weak, which is their ordinary Drink; the other they call *Ship-Mum*, which is very thick, transported into other Nations, and scarce drinkable till purified at Sea. It is brewed with Barley and Hops, and a small Mixture of Wheat. There's a set Number of Brewers, that have the only Power to make it from the beginning of *October* to the end of *March*. They have also another sort of sweet Malt-Liquor in this Country, which they call *Brew-hane*. The City lies in Long. 30. 34. Lat. 52. 36.

2. *Wolfenbüttel*, the ancient Seat of the Dukes of *Brunswick*, famous for its strong Fortifications, being accounted one of the most impregnable Towns in *Germany*: It consists of two Parts; the first called *Arx-Guelphica*, which is the Duke's Palace, and had its Name from Duke *Ebert*, of the Family of the *Guelphs*: The second is called *Henrick-Stadt*, from Duke *Henry* the younger, who founded it. The new Church in this Part of the Town is reckon'd an admirable Piece of Architecture. In a Vault under the Quire, there lie buried 21 Dukes and Dutchessees of *Brunswick* in Coffins of Lead, with Inscriptions. In the Palace, which is the strongest and most stately that belongs to the Family, the Apartments have rich Furniture, and costly Paintings: The Library, founded by their late learned and brave *D. Augustus*, is admir'd by all Strangers, and reckon'd one of the best in *Europe*. In 1604, Mr. *Hanfsius*, the Library-Keeper, gave an Account, That it contain'd 124000 Volumes, which *Dr. Nicholas* questions, since by an Account of it publish'd in 1660, as is suppos'd by *Comringius*, it contain'd only 27666 Volumes, and 115504 Treatises by 56393 Authors. Among the Manuscripts, which are about 2000, those of the greatest Rarity are, 1. 438 Folio's of *French* Embassies, transcrib'd out of the *French* King's Library at the Charge of the Founder. 2. A Latin Psalter, in *Notis Ciceronianis*. 3. The Four Evangelists in *Syriac*, given by *A. Kircher* in 1666. 4. An ancient Copy of the *Edda Islandorum*, with the *Skjaldi* annex'd, much better than that publish'd by *Resenius* in 1665. Besides these, and the like Works of others, there are 41 Volumes writ by the Duke himself, whereof 12 are Musick-Books. He gave also a short Account of the most considerable Authors in his Library, in 4 large Volumes; and in a 5th, an Alphabetical Catalogue of the Authors. He wrote also a Commentary on *Trithemius's* Cryptography, with other Works upon the like Subject, under the covert Name of *Gustavus Selenus*; and writ another call'd *Schachspiel*, with a Learned Account of the Antiquity and Mystery of the Chess; which altogether shew how well he deserved the Character that a Learned Gentleman gave of him in the following

Distich, writ under his Picture in the Library:

*Tota tuos Europa Duces regesque recense:
Hic Senio Cunctos vicit & Ingenio.*

He died in 1666, aged 88. Duke *Rudolphus Augustus*, his Son, succeeded, who is a Mild, Learned, and Religious Prince.

3. *Helmstadt*, reckon'd the oldest Town in *Saxony* next to *Bardewick*. It was built by *Charles the Great* in 782, and had its Name from the abundance of Elms about it. *St. Ludger* was sent by the Emperor to convert this Country, and the Citizens pretend to shew the Church where he first preached. Their chief Ornament is the *Academia Julia*, or University, founded by *D. Julius* in 1566. Among other Privileges granted to it by the Emperor *Maximilian II.* one was, That he should have the Title and Dignity of a Count Palatine: Upon which his eldest Son, *Henry Julius*, then Bishop of *Halberstadt*, was made the first Rector, and founded the fair College called *Julium Novum*. These two Dukes furnished the University with a considerable Library. Among some Hundreds of other Manuscripts, they have two old Volumes in Vellum, containing the *Pentateuch* in Hebrew, in a very fair Character, for which some Jewish Rabbies, well vers'd in Antiquity, offer'd some Hundreds of Rix-Dollars. After the Death of Duke *Frederick Ulrich*, the last Prince of the ancient House of *Wolfenbüttel*, the Dukes of *Lunenburg* agreed, That each of the Dukes Regent should be Rector in their Turns Year about, and so it has continued since. No University in the Empire has bred more Learned Men in one Century than this, nor had more famous Professors; witness, *Casellius*, *Horstius*, *Forsterius*, *Reineccius*, *Meibomius*, *Stukius*, *Lampadius*, *Horneius*, *Calixti*, *Comringius*, *Cellarius*, &c. This Town lies 24 Miles E. of *Brunswick* and *Wolfenbüttel*, in Long. 31. 16. Lat. 52. 32.

4. *Hanover*, the Metropolis of the Duchy of *Calenberg*, whence the Duke's Palace was removed hither by *George Duke of Brunswick Calenberg*, upon the Death of the said *Frederick Ulrich*. The ancient Name of the Town was *Lawenwoda*, from a neigh-

bouring Castle, subject to the Counts of that Name. About *Henry the Lion's* Time, it was called *Hanover*, being at that Time a Ferry over the *Lina*, and the Word signifying *Have over*. The River divides it into two Parts: The City is handsome, and well built, and is the ordinary Residence of the Elector. Most of the Houses are of Timber, interlay'd with Brick or Plaster; but they have many that are likewise of Brick and Stone. The Streets are regular and broad, and well furnish'd with Lanterns every where, to give Light in the Winter. The Fortifications are in good Order, and Ravelins before the Gate well mounted with Cannon. The Elector's Palace or Castle is at one End of the City, near the Ramparts is a large Building of Free-Stone, with several square Courts, and fine Stair-Cases. The Furniture within is very rich, and his Court is one of the most splendid in the Empire. His Troop of Horse-Guards consists of 150 proper Men, with good Horses, and fine Equipage. He has two Regiments of Foot-Guards, of one Battalion each, cloath'd in Red lin'd with Blue; and in Time of Peace he usually kept 6000 Foot and 6000 Horse in Pay, before the Dutchy of *Zell* fell to him. The most remarkable Churches are, 1. That dedicated to *St. James*, in which there are two Crucifixes with the Pictures of the Apostles, and many Saints. 2. That dedicated to the *Holy Cross*, built of Stone, and much finer and neater than the other: It has a double Row of Galleries round from the Altar, and before the first the History of the Gospel, divided into 53 Parts, and painted by the best Masters. This City is enrich'd by the Elector's Court, and 4 Fairs Annually kept here, to which abundance of Foreigners, as well as others, resort; and they have also a considerable Trade from *Breuhane*, of which they export considerable Quantities. This Town lies about Long. 29. Lat. 52. 20.

5. *Hamel*, an ancient City on the Mouth of the *Hamel*, and the Banks of the *Weser*, on the Borders of the Dutchy of *Calenberg*. 'Tis the Key of the Country, and therefore the best fortified and garison'd of any in the Dutchy. The Records of this City give an Account of a strange Accident which befel them the 26th of *June*, 1284.

Being at that Time much pester'd with Rats, which they could by no means destroy, a Stranger at last undertook it, on Promise of Reward; and immediately taking a Tabrel and Pipe, the Rats follow'd his Musick to the River, where they were all drown'd; but being deny'd his Reward, he left the Town in a Rage, and threaten'd Revenge: Accordingly he return'd next Year, and by the same Musick entic'd most of the Children of the Town after him to the Mouth of a great Cave on the Top of a neighbouring Hill called *Koppelberg*, where he and they enter'd; but were never more heard of. In Remembrance of this sad Accident, the Citizens for many Years after dated all their publick Writings from the Day they lost their Children, as appears by many old Deeds and Records. They still call the Street through which the Children pass'd, *Tabret Street*; and at the Mouth of the Cave there is a Monument of Stone, with an Inscription in barbarous Latin Verse, giving an Account of this Tragical Story, by which the Citizens lost 130 Boys. In 1633, the *Swedes* gain'd a great Victory over the Imperialists near this Town; and that same Year *George Duke of Brunswick* retook it. It lies 35 Miles N. from *Gottin-gen*, and 28 S. from *Hanover*, in Long. 28. 10. Lat. 52.

Other Towns here are, 1. *Northeim*, on the *Lein*, a pretty small Town. 2. *Gottin-gen*, on the same River, suppos'd to be the *Munition* of the Ancients. The Imperialists besieg'd it in vain in 1641. 3. *Munden*, on the Confluence of the *Fulda* and *Weser*. It was almost entirely destroy'd by the Imperialists under Count *Tilly* in 1625. 4. *Lavenstein*, where there are Salt-Pits. 5. *Calenberg*, with a strong Castle, 12 Miles S. from *Hanover*.

The Principality of Grubbenhagen.

IT signifies a Wood or Forrest belonging to the Family of the *Grubes*, who built a Castle there, that gave Name to the Country. 'Tis most overgrown with Woods of Fir and Pine, formerly Part of the *Herz-niam* Forrest, now called *Hartz*, because of the great Quantity of Rosin and Pitch distill'd from the Trees. In this Country are most

most of the Mines of Silver, Copper, and Lead, belonging to the Elector. The chief of 'em are, *Rammelsberg*, *Wildman*, and *Zellerfeld*. *Rammelsberg* is a high Mountain near the City of *Goslar*. The Mines here were discover'd by one *Ramme*, a Hunter, whose Horse's Foot struck up a Piece of Ore in 972. Upon which the Emperor *Otto I.* got a Company of *Franks*, who understood Minerals, to refine the Metal, from whom the Town of *Frankenburg*, near this Place, had its Name. The Miners increasing, they found out that of *Wildman* in 1045; and that of *Zellerfeld*, which is the chief, in 1070. The Overseer of the Mines keeps his Court here, and pays the Workmen every *Saturday*. The chief Minerals in those Mines are Silver, Litharge, Lead, and two Sorts of Copper, one melted from the Ore, and the other made by Vitriol-Water, in which they steep great Plates of Iron in Troughs made on purpose. They find many other Minerals here, which yield much Money; but frequently kill the Workmen by their nauseous Smells. The chief of these are, 1. Grey Vitriol. 2. The Ink-Stone, of many Colours; from which two, bray'd and boil'd together, is made Green Vitriol. 3. Another Vitriol, which grows like Icecicles, and is us'd without any further cleansing. 4. Blue Vitriol, from Copper-Ore. 5. White Vitriol, from Lead-Ore. 6. Misy, of the Nature and Colour of Brimstone. 7. Brimstone, from a peculiar Sort of Ore, from whence the *Floris Sulphuris* drop like Icecicles. The chief Town is *Eymbeske*, so called from the Confluence of a great many Rivulets. 'Tis pretty well fortified, and the neighbouring Country abounds with Corn. 'Twas formerly an Imperial Town, but submitted to the Duke of *Brunswick*, to be freed from the Oppression of the Counts of *Welen*. It had formerly a considerable Trade in *Bruhan*. 2. *Grubbenhagen*; the Castle, formerly mentioned, on the *Line*. 3. *Lutterberg*, with the Title of a County towards the Head of that River. 4. *Andreasberg*, a little Town, with rich Iron Mines. 5. *Clausthal*. 6. *Altenau*. 7. *Osterod*; all inhabited by Miners, who live so much under Ground, that they do not much affect good Houses above it.

The County of Blankenburg and Reinstein.

ITS ancient Name was *Hartsow*, i. e. the *Hercynian* County; but the present Name is derived from the Forts of *Blankenburg* and *Reinstein*, and is much contracted in its Boundaries. It lies S. from *Brunswick*, S. W. from *Magdeburg*, W. from *Halberstadt*, N. from *Thuringia*, and E. from *Hildesheim*.

The Air is very sharp, especially in the Winter, being much exposed to the North Winds; so that the Snow lies on the Mountains till Midsummer. The Inhabitants are strong and vigorous, and many of them live to 100 or 110 Years of Age. The highest Mountain in this Country, and perhaps in *Germany*, is the *Bructerus* of the *Latins*, now called *Brockberg*; concerning which, the common People tell many fabulous Things.

They have little Corn; but the Vallies abound with Cattle, and their Forrests with Venisons of all sorts, and have abundance of Iron Mines.

The greatest Curiosity of Nature here, is a huge Cave betwixt *Blankenburg* and *Elbingeroode*, called *Bumanshole*, from *Buman*, the Discoverer. The Mouth is so narrow, that one must creep in, where soon after they come to a dark high Gallery, the End of which was never yet found; tho' some of the Miners have confidently asserted, they have gone as far as *Goslar* under Ground, which is 20 Miles. They say, That a young venturous Fellow going into it alone, his Light went out, and he wander'd 8 Days before he found his Way back. At his Return, his Hair was perfectly grey, and he told many frightful Stories of Spirits, some of whom condemn'd him to be hang'd, and put a Rope about his Neck; but let him go. Others pretend also to have met with Spirits there, but more civil ones. In this Cave are frequently found large Bones of strange Creatures, which the neighbouring Gentry keep for Rarities; and among others, they found the Skeleton of a Man of a monstrous Size.

Near the Monastery of *Michaelstein*, not far from *Blankenburg*, there are two high Rocks

Rocks fronting one another, which represent Monks in their proper Habits, as if they had been form'd by Art, and therefore are call'd the *Monks Craig*. The Country abounds with high and inaccessible Rocks, on the Tops of which there are old Forts and Castles; but the only habitable one almost remaining is that of *Blaikenburg*, where the Duke of *Wolfenbittel* resides when he hunts. Many of them have been hewn out of entire Rocks. The most remarkable of those ruinous Castles is that of *Hartzburg*, near the *Bruckberg*, which they say was built by the *Chauci*, a Branch of the *Saxons*, 300 Years before Christ. Here they had also a Temple for *Saturn*, represented like an old Man, standing bare-foot on the prickled Back of a Ruff, to denote the Security of his Adorers (says *Pomarius*) in their hardest Undertakings. In his Right Hand he had a Bucket of Water, strowed over with Flowers and Fruits, to signify that he would send them Rain and Plenty. In his Left he had a Wheel, to signify that his Worshipers ought to live in Unity. *Mechuilde*, Daughter to the Emperor *Henry the Fowler*, writ the History of this Idol in a rich Silk Coat of Needle-work, which the *Swedes* took out of the Cathedral of *Goslar* during the *German Civil Wars*, and carried to *Sweden*. This Idol and his Temple were destroyed by Command of *Charlemagne*, and the Name of the Place called *Hartzburg*. In the Time of *D. Julius*, a Salt Fountain was found at the bottom of this Hill: Upon which a small Town was built for the Workmen, called *Julius-Hall*, now grown rich and large by their Trade in Salt, Copper-Kettles, Pots, Wire, &c.

Goslar, an Imperial Town, is situate in this Country, on the River *Gose*, but independent on the Dutchy of *Brunswick*, and has the same Privilege with other Imperial Cities, besides an Exemption from Tolls in all the Markets of the Empire but three. In all Imperial Writs, 'tis called, *Nobile Membrum Imperii*, and is supposed to have been built by the Emperor *Henry I.* who had a Palace here. The Houses are cover'd with a glittering Slate, very ornamental, which in a clear Day dazzles one's Eyes. Most of the Inhabitants are Miners, and their Trade consists in digging and cleaning, and tempering Minerals. It lies 25

Miles S. of *Brunswick*, in Long 29 $\frac{1}{2}$. Lat. 51. 47 $\frac{1}{2}$.

The Arms of the Elector of *Hanover* and the Duke of *Wolfenbittel*; Gules, two Leopards Or, Langued, for *Brunswick*. Gules, a Horse-Argent, for *Lower Saxony*. Or, a Lion-Azure, strow'd with Harts-Gules, for *Lunen-burg*. Azure, a Lion-Argent Crown'd, for *Eberstein*. Gules, a Lion-Or, with a Border Campone, Argent and Azure, for *Hamburg*. Azure, a Lion-Argent, for *Diep-Holtz*: Argent, an Eagle-Gules, for *Diep-Holtz*. A Scutcheon-Argent for the Electoral Dignity. Gules, a Lion-Argent, for *Lauterburg*: Or, 3 Fesses-Gules, for *Lauterburg*. Argent, a Hart-Sable, for *Clettenberg*. Quarter'd in the 1st and 4th Or, two Bears Feet in Pale, in the 2d cut in the upper Part Or and Gules, and in the lower Part Girones, Argent and Azure, for *Hoye* and *Bruckhausen*. Chequer, Argent and Gules, for *Hunstein*. Argent, a Branch of Deers-Horns Gules, for *Reinstein*. The like Sable for *Blankenberg*. The Helmets Or, a Peacock's Tail, with Branches of Deers-Horns on the Sides, for *Hunstein-Lauterburg* Or, two Bears-Fect, for *Hoye*. Or, a Beam-Argent, with a Horse a-crofs it Argent, for *Brunswick*. Or, two Horns-Argent, charg'd with 6 Red Ensigns, for *Bruckhausen*. Or, two Buffs-Horns, with two Branches of Deers-Horns on the Sides, for *Reinstein-Blankenstein*.

M A G D E B U R G.

Historians say, this is as ancient a City as most in *Germany*. Some think, it was founded by *Drusus*, and his Son *Germanicus*, in the Time of *Augustus*; but *Pyrrhamer* thinks it older, and to be *Protony's Vesovium*. They who ascribe its Original to *Drusus*, say, it was called *Magdeburg*; in *German*, the Maids Town, the same with the Greek *Parthenopolis*, because the Image of *Venus* was there worship'd; which, together with its Temple, was destroyed by Order of *Charlemagne*, who built *St. Stephen's Church* there, with its Treasure. An ancient Chronicle of *Brunswick* describes this Image thus: She was represented by a naked Woman, with bright shining Eyes, and long yellow Hair, in a gilt Chariot drawn by two white Swans and two white Tur-tles, a Garland of Mirtle on her Head, a flaming

flaming Torch on her Breast, a Globe in her Right Hand, and three Golden Apples in her Left. She was attended by three *Graces*, who cover'd one another's Faces with a Veil. The Dutchy of *Magdeburg* takes its Name from this City, and is 60 Miles long from E. to W. and in some Parts 30 from N. to S. It has *Brunswick* on the W. Part of *Brandenburg* and *Saxony* on the E. Part of *Mecklenburg* and *Brandenburg* on the N. *Anhalt* and *Halberstadt* on the S. and the *Elb* runs through the Country.

The Town lies about Long. 31. 25. Lat. 52 3/4. 70 English Miles W. from *Berlin*, 45 N.W. of *Wittenberg*, 6 E. from *Brunswick*, and 60 N. from *Leipzick*. It was first Wall'd about 940, and enlarged by *Edgisha*, Daughter to the English Saxon King *Edmund*, (Wife to the Emperor *Otho* I.) who some say founded it. This is confirmed as to the Cathedral Church at least, by Dr. *Brown's* Observations, who says, 'tis a very fair Structure, built after the English Model, which has the Effigies of that Empress in Stone, with a Representation of 18 Casks of Gold by her, which she gave to it. That Emperor prevail'd with the Pope to make *Magdeburg* an Archbishoprick, who should be subject to none in Spirituals but the See of *Rome*; so that he was called Primate of *Germany*; but *Cromwell* says, the three Spiritual Electors, and the Archbishop of *Salzburg*, refused to own him as such. In 1566, the Chapter embrac'd *Luther's* Reformation, and chose *Joachim Frederick*, Son to *John George* Elector of *Brandenburg*, their Administrator, on certain Conditions; for which, and refusing the *Interim*, it lost the Title of Archbishoprick. *Joachim* succeeding to the Electorate after his Father's Death, the Chapter chose his Brother *Christian William*, who continued till 1631, that Count *Tilly* and the Imperialists took the Town after a long Siege, put about 36000 Persons to the Sword, and carried *Christian William* to *Austria*, where he turn'd Papist. After this the Chapter elected *Augustus* II. Son to *John George* I. Elector of *Saxony*, to be Coadjutor: After whose Death, it was agreed by the Treaty of *Westphalia*, That the Archbishoprick of *Magdeburg* should be annexed for ever to the Electorate of *Brandenburg*, by the Name of a Dutchy; and *Augustus* dying in 1686, it was accordingly annex'd,

and adds to the Revenues of that Family 600000 Crowns per Annum. Dr. *Nicholson* gives this Account of the above-mention'd Siege in 1631: After a long and brave Defence, and rejecting of all Proposals, without Security for their Religion and Liberties, Count *Tilly* storm'd the Town the 10th of May, order'd his Men to spare neither Age nor Sex, to burn all the Churches and private Houses, and extirpate their Name. Accordingly they ripp'd up Women with Child, murder'd sucking Infants before their Mothers Eyes, ravish'd the Virgins in the open Street; to prevent which, some of them drown'd themselves, and others went into the Fire before *Tilly's* Face; 16 Churches and Chapels, many of them cover'd with Lead, and one with Copper, were burnt down; and all the Houses destroy'd, except a few Fishermen's Cottages, which the Imperialists did not think worth while. So that of 40000 Citizens, scarce 400 escaped, and those destitute of all Support. The brutish General us'd afterwards to boast of this Cruelty in his Cups, and call'd it the Marriage-Feast of *Magdeburg*. He spar'd the Cathedral, which is very magnificent: It has 49 Altars, and the high Altar in the Quire is of one Stone, of divers Colours, curiously wrought, 9 *Hamburg* Ells long, 4 broad, and one thick, and is valued at two Tun of Gold. Tho' the Elector of *Brandenburg* has been very liberal to this City, yet it never recover'd its ancient Glory. They have rebuilt one stately Church; and Dr. *Brown* says, that of the Jesuits is very fine. In the Cathedral of *St. Maurice*, he saw the Statue of the 5 wise Virgins smiling, and of the 5 foolish ones lamenting, both very well done. They pretend, among other Relicks, to show the Basen in which *Pilate* washed his Hands, and the Ladder on which the Cock crow'd after *St. Peter* denied his Master. In the Ruins of the Cloyster of the *Austrian* Fryars, there's *Luther's* Chamber, Bedstead and Table, with German Verses over the Door, expressing so much. Dr. *Brown* observes, That the first Tournaments in *Germany* were appointed here by the Emperor *Henry the Fowler* in 638, where none were admitted but the ancient Nobility. All Bastards, Usurpers, Traitors, Oppressors of Widows and Orphans, Hereticks, Murderers, Cowards,

ards, such as were of ignoble Extraction by one Side, or had offended Ladies in Word or Deed, were excluded. None but one of a Family were admitted at a time. Princes were allow'd four Squires, Counts and Barons three, Knights two, and Gentlemen one. Such as enter'd the Lifts, gave in their Names and Quality at the President's Lodging, in Presence of three Heralds, to whom he gave his Helmet and Sword, and, after Confession, enter'd the Lift. Their Horses were to be without Defect, their Furniture according to Rule, their Saddles without rising before or behind; and after Performance, the Judges gave Sentence, and the Conqueror had the Prize given him by some Lady, or the Prince who furnish'd it; but these Pastimes were abolish'd afterwards, because of the Emulation they occasion'd among the Nobility; for at the 23d Tournament held at *Darmstadt* in 1473, the Animosity arose so high, that 17 *Franconian* Gentlemen, and 9 *Hessians*, were kill'd on the Spot. This Town had formerly the supreme Jurisdiction in Spirituals and Temporals over all *Saxony*. The Emperor *Otho I.* made it an Imperial Town; but now 'tis subje& to the Elector of *Brandenburg*, who is Condi-rector, with the King of *Sweden*, of the Circle of *Lower Saxony*. Their Archbishop was formerly a Count *Palatine*, and determin'd all Causes; but now they have no other Court but what is kept by their Burgomasters and Magistrates. That Part of the Dutchy on the W. of the *Elb* abounds in Corn, but has no Wood; and that on the E. has Plenty of Wood, but no Corn. There are 28 other Towns in the Dutchy, but merit no particular Description. The City is still of considerable Extent, has a good Trade, and is well fortified.

The Principality of Halberstat,

HAS Part of the Dutchy of *Brunswick* and *Magdeburg* on the N. and *Anhalt* on the S. the Bishoprick of *Hildesheim* on the W. and the Electorate of *Saxony* on the E. is about 36 *English* Miles long from E. to W. and 25 broad. The Name comes from the principal Town, which some will have to be the *ἡλύαγορ* of *Ptolomy*; but

without Reason. Authors are not agreed as to the Reason of the Name; but the most probable is *Halbestat*, because the first Foundations seem'd to have been twice as large as the Town now is; so that the Word signifies half a City. The Country is fruitful in Corn, and exceeds its Neighbours in pleasant Forrests, and Plenty of Venison. Their largest Park is the *Hackel*, in the middle of the Country, which gives Name to the ancient Barony of *Hackelborn*. On the N. W. there is nothing but Fens and Marshes, through which there are Ways cast up to *Helmstat*, *Brunswick*, &c. It was made a Bishoprick by *Charlemagne* about 780. We have still some Commentaries on the Scripture by *Heymo*, their 3d Bishop, who died in 827. Their 15th Bishop, *Rainhard*, routed the Emperor *Henry V.* in the Woods of *Welfo*. Their 18th, *Ulrick*, was routed by *Henry the Lion*, Duke of *Brunswick*, who took and burnt the Town, with the Citizens and Clergy, who fled to the Cathedral. Their 29th was *Albert* Duke of *Brunswick*, who, as the History of *Brunswick* says, fought about 20 Battles, and was in most of them a Conqueror. Their 31st was *Albert*, a great Philosopher, who was routed by *Gerard the Eloquent*, Bishop of *Hildesheim*; in Remembrance of which, those of *Halberstat* have a Saying, *That Rhetorick was too hard for Logick*. Their 44th was *Henry Julius*, Son to *Julius* Duke of *Brunswick*, chosen when he was two Years old, on Condition that the Dean and Chapter should have the Government for 12 Years, and pay an Annual Maintenance to their Infant Bishop. In 1591, he establish'd *Luther's* Reformation here. He was succeeded by his Son *Henry Charles*, who died at 6 Years of Age: He by his Brother *Rudolph*, who died the next Year, and was succeeded by his Brother *Christian*, a great, but unfortunate Warrior, in the Civil Wars of *Germany*. Their 48th and last Bishop was *Leopold William* of *Austria*, who restor'd Popery; but the *Swedes* afterwards retaking the Town, did again settle *Lutheranism* there, and kept the City and Diocese till it was seculariz'd, and given to the Elector of *Brandenburg* by the Treaty of *Westphalia*.

The Town is well built, the Streets straight and uniform, and many of the Buildings fair and stately. The most remarkable

markable Thing here is an Inn, called the *Commisr*, reckon'd the largest in *Europe*, and has the best and most Accommodation of the Sort for Strangers; so that in the Time of the Civil War, *Wallenstein*, the Emperor's General, kept his Court in it for some Months, and found Lodgings in it for all his Attendants and Guards. It lies about Long. $30\frac{1}{2}$. Lat. 52. upon the little River *Hoteim*, about 30 Miles S. W. from *Magdeburg*, and 30 S. from *Brunswick*.

Other Towns of Note here are, 1. *Grünningen*, formerly the Residence of their Bishops, with an ancient Castle, built by *Brunno*, and rebuilt by *Henry Julius* above-mention'd: It has a curious gilt Chapel, with a fine large gilt Organ, built by the said *Henry Julius*, and a great Tun, in Imitation of that at *Heidelberg*, but much less; yet it contains 966 Hogheads of Wine. 2. *Oschersleben*, a small Town on the Borders of *Magdeburg*. 3. *Osterwick*, a strong little Town on the W. of this Country, from whence the Bishoprick was removed to *Halberstat* about 819. 4. *Quedlimburg*, lies also in this Principality; but since 'tis reckoned to belong to *Saxony*, we refer the Description to that Country.

The Bishoprick of Hildesheim.

WE return now towards the N. E. to this Bishoprick, which has *Halberstat* on the N. W. the Dutchy of *Lunenbourg* on the N. and is encompassed with the Dominions of *Brunswick*. The Bishoprick was founded by the Emperor *Lewis the Pious*, and, as some think, had its Name from his Mother *Hilda*, the Abbreviation of *Hildegard*. *Gunther*, a poor Priest of *Eltz*, was their first Bishop, about 822, when the Diocese was of small Extent; but afterwards had several Counties added, which were taken away by the Duke of *Brunswick* in 1553, during his War with their Bishop; and what he took, was confirmed to him by the Emperor *Charles V.* so that 'tis not now above 40 *English* Miles from E. to W. It was formerly in the Possession of the Duke of *Brunswick* for many Years; but by the Treaty of *Brunswick* in 1653, it was restor'd to the Elector of *Cologne*, as Administrator, who has a Suffragan that is the

immediate Governor of it, and is the only Popish Bishop in *Lower Saxony*; but the greatest Part of the Diocese are *Lutherans*. The Reformation was introduc'd in 1552 by the Citizens, in Opposition to the Canons, and made a great Progress. By the Treaty of *Brunswick*, *Lutheranism* was confin'd only to some Places; but by the Treaty of *Westphalia*, they were left at Liberty. The Buildings of the Town are old fashion'd, but neat. In their Cathedral, there are the Relicks of the old *Saxon* Idol *Irmensewel*, formerly mention'd. The Jesuits have a fine College here. Their chief Trade is in Corn; and being a *Hans-Town*, they are govern'd by their own Laws. The Imperialists took and sack'd it in 1632, and *George Duke of Brunswick* retook it next Year. The Bishop is a Prince of the Empire. The Town lies in Long. $28\frac{1}{2}$. Lat. $52\frac{1}{2}$. 15 Miles S. E. from *Hanover*, and 25 S. W. from *Brunswick*.

They have had 56 Bishops, of which the present Elector of *Cologne* is the last. There is little remarkable said of them by *Dr. Nischolson*, only that *Gerard*, Baron of *Berge*, their 38th Bishop, is said to have cover'd the Tower of the Cathedral with Gold instead of Lead, as *Bunsingus* reports. *John*, their 46th, lost most of the Diocese in his War with the Duke of *Brunswick*; and *Valentin*, their 49th, recover'd most of it by Law in the Emperor's Court.

Other Places of Note here are, 1. *Peyna*, a Bishoprick, 15 Miles W. from *Brunswick*, the *Castrum Poynum* of the Latins, a little Town with a strong Castle, on a Hill, the chief Strength of the Bishoprick. In 1553, a Battle was fought here between *Maurice* Elector of *Saxony* and *Albert* Marquis of *Brandenburg*, wherein the latter gain'd the Battle, and the former lost his Life. 2. *Marienburg*, a Fort near *Hildesheim*, built by Bishop *Henry III.* when he was press'd by the Dukes of *Brunswick*. 3. *Popenburg*. 4. *Dassel*. 5. *Bokenem*. 6. *Woldenburg*, with others; all of them chief Towns of Counties of the same Names, but of little Note otherwise, except 1. *Eltz*, on the Borders of the Dutchy of *Calenburg*, called *Aulica*, because *Charlemagne* sojourn'd here during his War with the *Saxons*, and founded a Bishoprick, which was afterwards transferred to *Hildesheim*. 2. *Sarstede*, on

the Conflux of the *Immerste* and the *Peysn*, famous for a Battle gain'd there by the Duke of *Brunswick-Lunenbourg* over the Imperialists, as *La Forest* informs us.

The Abbey of *Gonsersheim* lies on the Borders of this Bishoprick: It was founded in the 9th Century for Ladies of a Noble Family, and embrac'd the Reformation in the 16th Century.

The Dutchy of Sax-Lawenburg.

WE come further N. to this Dutchy, which lies on the N. and S. Banks of the *Elb*, between *Holstein* on the W. and N. *Mecklenburg* on the E. and *Lunenbourg* on the S. 'Tis divided by the *Elb*, and is subject to its own Duke, of the ancient Family of the Dukes of *Saxony*: It was comprehended within that Dutchy till about 1260, when *John*, the youngest Son of *Albert* Duke of *Saxony*, had it for his Share; and his Successors call'd themselves Dukes of *Angria* and *Westphalia*; but Duke *Erick V.* missing of his Pretensions to the Electorate after the Death of *Albert*, added the Name of *Sax*, to keep up his Pretensions. *Julius Francis*, their last Duke, dying without Heirs-Male in 1689, the Claims of the Elector of *Saxony*, the Prince of *Anhalt*, and the Duke of *Lunenbourg-Zell*, to it, are not yet determin'd; but the latter seiz'd it, and kept Possession; so that 'tis now in the House of *Hanover*.

The chief Town, *Lawenburg*, lies in Long. 29. 47. Lat. 53. 28. on the Conflux of the *Steckenitz* and *Elb*, with a strong Castle, built on a Hill, over against the Fortrefs of *Ertemberg* on the other Side the River. 'Tis a small Town, but populous, and has a good Trade. 'Tis said to have been built by *Henry the Lion*, Duke of *Saxony*, and from him called *Leoburgum*; but being much damaged by War, it was rebuilt and enlarged by *Bernard* of *Anhalt*. It lies about 35 Miles S. E. from *Hamburg*, and about 20 N. E. from *Lunenbourg*.

Other Places of Note here are, 1. *Mollen*, famous for the Quarrels it has occasion'd betwixt the Dukes of *Sax-Lawenburg* and the Town of *Lubeck*. 2. *Wittenberg*, a pretty little Town, with a Castle, on the *Elb*. 3. *Ratzburg*, on a Lake of that Name, 15

Miles N. of *Lawenburg*, and about 10 N. of *Lubeck*, made a Bishop's See under the Archbishop of *Bremen*, by *Henry the Lion*, and continued subject to its Bishop till by the Treaty of *Munster* it was seculariz'd, and given to the Duke of *Mecklenburg*; but the Castle and Town to the Duke of *Lawenburg*. The Duke of *Lunenbourg* seiz'd and fortified it in 1689, and the King of *Denmark* took it in 1693, and demolished the Fortifications before he restor'd it. 'Tis the chief Town of a small Principality of the same Name, and embrac'd *Lutheranism* in 1566. The Dukes of *Lawenburg* were anciently buried here. Part of the Dutchy of *Bremen* is subject to this Country, as has been formerly mention'd, with the Towns of *Frankenhause*, *Saxenhausen*, and some others on the *Elb*.

H O L S T E I N.

THIS Country was anciently Part of the *Cheronesus Cimbrica*, and now lies in that which was the S. Part of it, where it joins to *Germany*. It has the Dutchy of *Sleswick* and the River *Eyder* on the N. the German Ocean on the W. the Dutchy of *Bremen* on the S. W. the Territory of *Hamburg* and *Lawenburg* on the S. *Mecklenburg* on the S. E. and the *Baltick* on the E. 'Tis divided into *Holstein Proper*, *Wagria*, *Stormar*, and *Dithmarsh*.

Holstein Proper is again divided into the E. and W. Parts; the first belongs to the Duke, and the second to the King of *Denmark*.

Some think the Country derives its Name from the German Word *Holt*, which signifies a Forrest.

The *Atlas Historique* has a large Tree of the Family of *Holstein*, and its different Branches. Most Authors derive it from *Wittikind the Great*, from whom descended *Adolph I.* Earl of *Schawenburg*, to whom *Lotharius* the Emperor gave *Holstein Proper*, and *Stormar*, for his Service in the Wars, with the Title of Earl of *Holstein*, about 1133 according to the *Atlas*, but 1114 according to *Heylin*. He was succeeded by *Adolph II.* who having made a full Conquest of the Country, planted it with other Colonies of *Germans*, that in Time wore out the ancient Inhabitants, call'd the *eslavi*. His Successor *Adolph*

Adolph III. was expell'd his Dominions by *Cannus K. of Denmark*. *Adolph IV.* his Successor, recover'd the Country; after which he retir'd into a Monastery, and died in 1260. He was succeeded by *Gerard I.* who died in 1281. His Son, *Henry I.* shared *Holstein* with his Brother, and died in 1310. His Son *Gerard II.* surnam'd *The Great*, was slain in his Bed by a Dane in 1340. His Son *Henry II.* chas'd the King of Sweden out of his Country, and died in 1381. His Son *Gerard III.* join'd *Kiel* to his Dominions; and this Line fail'd in *Adolph* his Son, who died in 1459, having declared *Christian I.* of Denmark his Successor, being Son to *Theodorick the Fortunate*, by *Hedwige of Holstein Schawenburg*. *Christian I.* was chosen King of Sweden, and got *Holstein* erected into a Dutchy by the Emperor *Frederick III.* and died in 1481. He was succeeded by his Son *John*, who was also King of Norway and Sweden, and died in 1521. He was succeeded by *Christian II.* who was dethron'd, and died in Prison, as we mentioned in the History of Denmark. He was succeeded by *Frederick I.* Son to *Christian I.* who establish'd the *Augsburg* Confession in his Dominions in 1523. From him are descended the present Branch of *Holstein Gottorp*, and the Royal Family of Denmark. His second Son *Adolph* succeeded to the Dutchy of *Holstein*, was made Knight of the Garter by Queen *Elizabeth* in 1560, conquer'd *Ditmarsh*, and oblig'd the *Hamburgers* to do him Homage. He died in 1586, and was succeeded by his Son *Adolph*, who first succeeded his Brother *Philip* in the Archbishoprick of *Bremen*, and Bishoprick of *Lubeck*, which he afterwards resign'd, married the Daughter to *Frederick II.* of Denmark, and died in 1616. His Son *Frederick* succeeded, and was famous for his Learning, and Embassy, through *Moscow*, to the King of *Persia* in 1633, and died in 1659. He was succeeded by *Christian Albert*, who was expell'd his Dominions by the K. of Denmark in 1641, who demolish'd his strong Towns; but was oblig'd to restore him to his Dominions by the neighbouring Princes, but chiefly by the Emperor and King *William of Great-Britain's* Mediation in 1689, by a Treaty sign'd the 30th of June that Year, when a General Amnesty was agreed on to the Subjects on both Sides. The other Branches of this

Family are, that of *Sonderburg*, descended from *Christian III.* the present Prince of which is *Ernest Augustus*: From *John*, Son to *Christian III.* descended the Branch of *Holstein-Ploen*, the present Prince of which is *John Ernest Ferdinand*: From *Joachim Ernest* of this Branch, who died in 1671, descended the Branch of *Ploen and Nortburg*: From the same *John* descended the Branch of *Glucksburg*, of which *Philip Ernest* is Prince: From *John's* Son *Alexander* came the Branch of *Holstein-Beck*, whose present Prince is *Frederick William*: The Branch of *Wisenburg*, whose present Prince is *Frederick*: The Branch of *Frantzshagen*, whose present Prince is *Leopold Christian*; and the Branch of *Silesia*, whose present Prince is *Frederick Leopold*. The extinguish'd Branches we do not mention.

This Country in general is fruitful, and well seated for Trade: It abounds with Corn and Orchards, Black Cattle and Hogs, which are very numerous in their Woods. Its Extent from E. to W. is about 100 Miles, and from N. to S. about 50. The Inhabitants are of a strong Constitution, Courageous, and Just; so that *Holstein Glauke*, or the *Faithful Holsteiner*, is become a Proverb in these Parts.

The Towns in *Holstein Proper* are, 1. *Kiel*, a Town of good Trade on the *Baltick*, about Long. 29. Lat. 54. 17. It derives its Name from a Neck of Land on which 'tis situated, about 45 Miles N. of *Hamburg*, and 40 N. W. from *Lubeck*. It has a good Harbour, well frequented, which, with the Town, is defended by a Castle on a neighbouring Hill. 'Tis populous and wealthy, is the Place where the States meet, and adorn'd with a stately Palace, and a *Franciscan* Monastery, turn'd to an Hospital since the Reformation. An University was establish'd here in 1669, which has had many Learned Professors, and particularly *Marevisus*. 'Tis divided into the New and Old Town: The New is large, and the Streets planted with Rows of Trees: The Old Town is a *Peninsula*, join'd to the Continent on the N. where 'tis fortified by deep Ditches, and has fine Walks of Trees on the Haven. Its Trade was more considerable in the Time of Duke *Frederick*, who sent the Embassy above-mention'd into *Persia*, in order to settle a Trade with that Country. 2. *Rensburg*, the chief Town of

West Holstein, a small Place, but well built, and accounted the greatest Strength of the Country. It has good Ramparts, and is defended by Morasses on the Side of *Flensburg*. It has also a neat Castle, built by *Gerard II.* Earl of *Holstein*. It lies 20 Miles W. from *Kiel*. 3. *Wilster*, a neat Town, on a River of that Name, about 27 Miles S. W. from *Rensburg*. 4. *Itzehoe*, on the *Stor*, about 25 Miles S. W. from *Rensburg*. It is a small Town, at the Foot of a Mountain, and has some Trade by the River: 'Tis defended by an old Castle. 5. *New Munster*, about 20 Miles further E. near the Head of the *Stor*.

N. from *Segeberg*, and 25 N. W. from *Edbeck*. The valiant Prince who bears that Title has signaliz'd himself in the Confederate Armies. 4. *Oldenburg*, an ancient Town in a *Peninsula* upon the *Baltick*, about 20 Miles N. E. from *Ploen*. It gives Name to a Bailiwick, and was formerly the Metropolis of the *Wagrii* and *Venedi*. *Otho the Great*; or, as some say, *Charlemagne*, founded a Bishoprick here in 788, which was transported to *Lubeck* in 1162: It had formerly a great Trade, which is decay'd since *Margaret of Denmark* stopt up the Port. It likewise suffer'd much by Fire; so that 'tis now inconsiderable.

The Province of Wagria or Wagerland,

HAS *Holstein* on the W. and is almost encompassed by the *Baltick*, and the two Rivers *Trave* on the S. and *Swentin* on the W. It extends about 50 Miles from N. to S. and 30 from E. to W. The greatest Part of this Country belongs to the Duke of *Holstein*. It had its Name from the *Wagrii*, said to be *Sclavonians*, who conquer'd it. Within this Province stands *Lubeck*, which we have already describ'd.

The other Places of Note here are, 1. *Oldeslo*, on the *Trave*, formerly the Capital of the Country. It is a fair little Town, about 17 Miles W. from *Lubeck*, and 7 S. from *Segeberg*. *John* Earl of *Wagria* bought it for 10000 Marks in 1338, and it was long a flourishing Town; but it suffered much by the Wars betwixt the Princes of *Pomerania* and *Sweden*; so that 'tis now ruinous, and inhabited mostly by Peasants. 2. *Segeberg*, on the *Trave*, about 20 Miles N. W. from *Lubeck*, and 30 E. from *Gluckstat*. It took its Name from the Castle, built on a neighbouring Hill by the Emperor *Lotharius*, about 1134, to check the *Sclavonians*. 3. *Ploen*, upon the Front of a Hill, and the Banks of the Lake of *Ploen*, encompassed by a Wood. This is a Place of Antiquity, and gives Title of Prince to that Branch of the Family of *Holstein*. The Lake, and a neighbouring Marsh, make it very strong, and 'tis likewise defended by a good Castle, built by *Joachim Ernest* of *Holstein*. It lies about 10 Miles

The Province of Ditmarsh,

HAS *Holstein* Proper on the E. the *German* Ocean on the W. *Denmark* on the N. and the *Elb* on the S. Some write it *Teutish-marsh*, from the ancient *Tentones*, Part of whom inhabited here, whose Valour they retain'd so much, that they would not submit to the Family of *Holstein*, till they succeeded to the Crown of *Denmark*, and then became too powerful for them. 'Tis divided into N. and S. the former belongs to the King of *Denmark*, and the latter to the Duke of *Holstein*, who shar'd it betwixt them, after having totally subdued it in 1559. This Country is fruitful, well water'd, and populous.

The chief Places are, 1. *Meldorp*, the chief Town of the Province, and a Place of good Trade. It lies on the *German* Ocean, about 20 Miles N. W. from *Gluckstat*. The Courts of Justice sit here. Their Church is large and ancient, being built when Christianity was first establish'd here. They have a neat Altar, adorn'd with Paintings, and a Crucifix. 2. *Heyde*, a large, but poor City, on the Brink of a great barren Sand, which over-spreads the middle of the Country. 3. *Lunden*, near the Mouth of the *Eyder*, about 15 Miles N. of *Meldorp*, in the most Northerly Part of the Province. 'Tis a large Town, and belongs to the Duke of *Holstein*. 'Tis famous for Beer, which is exported to other Places. 4. *Brunsbittel*, a Sea-Town on the *Elb*, 12 Miles S. from *Meldorp*. 5. *Westingburn*, upon the Coast, mid-way betwixt *Meldorp* and *Lunden*.

Stor-

Stormar, or Stormarsh.

THis Province is full of Morasses, along the Banks of the *Stor*. It has *Holstein* Proper on the N. and *Hamburg* and *Lunenburg* on the S. The Soil is rich, resembles *Holland* in its manner of Improvement, and Banks and Dikes to keep out the Sea, which sometimes however overflows the low Grounds. The People have a good Trade by the Neighbourhood of *Hamburg* and the *Elb*. Most of this Province, except *Tritow*, and some small Places on the E. is subject to the King of *Denmark*.

Places of Note here are, 1. *Altena*, a small City, remarkable for the Treaty betwixt the King of *Denmark* and the Duke of *Holstein-Gottorp*. It lies on the *Elb*, within a Mile or two of *Hamburg*; the *Calvinists* of which City have their Worship here. 2. *Gluckstadt*, a little City on the *Elb*, about 27 Miles below *Hamburg*, on that same Side of the River. It is well fortified, and has fine Walks of Trees on the Ramparts. The King of *Denmark* has 2000 Foot in Garrison. It was fortified by *Christian IV.* of *Denmark* about 1620, and was made so strong, that it held out a Siege of two Years against the Emperor *Ferdinand II.* and *Christian V.* has since made it one of the most considerable Towns in *Germany*, by the great Privileges allow'd the Inhabitants. It can't be taken without a Fleet by Sea, which made the Imperialists miscarry before it. There are several Canals in the Town, one of which divides it into two Parts: 'Tis crossed by another at the End of the Market-place, which is very magnificent: At one Corner of it stands the great Church, where the *German Calvinists* and *Papists* are each of them allow'd a Chapel. The Harbour is large and deep, and at the End of the Canal, which runs into it from the Town, there is a Tower built on Piles of Wood, round which there are Platforms with Batteries of Cannon, which command the *Elb*. 3. *Cremper*, on a small River of the same Name, falls into the *Stor* about 5 or 6 Miles N. from *Gluckstadt*. 'Tis a strong Place, and reckon'd one of the Keys of *Denmark*. The Fortifications were begun by *Christian IV.* and finished in 1628. It held out a

Siege of 13 Months against Count *Wallenstein*, and the Imperial Army; but at last submitted upon honourable Terms. 4. *Pinnenberg*, about 10 Miles N. W. from *Hamburg*, noted only for giving Name to that County, which fell to the Crown of *Denmark* by the Death of *Otto*, last Earl of *Schaumburg* and *Pinnenberg*, in 1640. 5. *Brædenberg*, one of the fairest little Towns in *Denmark*, the ancient Seat of the Noble Family of *Rentzow*. It made a stout Opposition against Count *Wallenstein*, who took it at last, and put all the Garrison to the Sword. 6. *Tritow*, a large Town, with a Bailiwick of the same Name, E. from *Hamburg*, and belongs to the Duke of *Holstein*.

All the Difference betwixt the Royal Arms of *Denmark*, and the Ducal of *Holstein*, is, That the Arms of *Denmark*, *Gothland*, *Slavia*, and *Sweden*, are not in the Ducal Arms; which, instead of a Royal Crown, have over them the three Helmets of *Norway*, *Silesia*, and *Holstein*. We gave an Account of the Arms of *Denmark* in the Description of that Country; so that 'tis needless to repeat any thing here but the Difference.

UPPER SAXONY.

THis Country has on the N. the Principalities of *Magdeburg* and *Halberstat*, and the Marquisate of *Brandenburg*; on the S. *Franconia* and *Bohemia*; on the E. *Silesia*; and on the W. *Hesse* and *Brunswick*; and is in Length, according to *Mr. Moll*, 220 Miles; and in Breadth, from N. to S. where broadest, 130: But if we include the Electorate of *Brandenburg* and the Duchy of *Pomerania*, belonging to the King of *Prussia*, as the *Matricula* does, 'tis of a much larger Extent, and reaches from Lat. 50. 15. to Lat. 55. the most N. Part of *Pomerania*: So that from the Frontiers of *Bohemia* to the *Baltick*, 'tis above 190 Miles in Breadth; and from the Borders of *Franconia* on the S. W. to the further Part of *Pomerania* on the N. E. it extends about 385 Miles. *Dr. Nicholson* takes Notice, That the Limits of the Saxons are differently describ'd by Historians and Geographers, because the ancient Saxons being a Warlike People, other Germans were ambitious to call themselves

selves by their Name: Thus *Albinus* says, the ancient Saxons had the *Elb* on the E. the *Ems* on the W. *Bohemia* and *Franconia* on the S. and *Denmark* on the N. But *Ptolemy* confines them within narrower Bounds, and the Dr. says, *Henry the Lion's* Territories reach'd from the *Elb* to the *Rhine*, and from the *Baltick* to the utmost Bounds of the *Hercynian* Forrest; and by the Name of *Upper Saxony*, he understands only that small Province, which gives the Elector Title of Duke, and alone only retain'd the Name of Saxony, when *Henry the Lion's* Territories were taken from him by *Frederick Barbarossa*, and *Bernard* Prince of *Anhalt* made Duke and Elector of Saxony in his stead. For the several Principalities and other Governments contain'd in this Circle, we refer to the *Matricula*.

The Dutchy of SAXONY,

HAS *Nether Lusatia*, and Part of the Marquisate of *Brandenburg*, on the E. the County of *Manfeld*, and Landgraviate of *Thuringia*, on the W. the Principality of *Anhalt* on the N. and the Marquisate of *Misnia* on the S. The Country is pretty fruitful in Corn, but short of its neighbouring Provinces: Their Hills have Mines of Silver, and other Metals; but scarce Wood enough to refine them. The Air is cold, but wholesome. Their chief Corn is Wheat, and they have some Vines. The Inhabitants are strict Observers, says Dr. *Nicholson*, of the ancient Municipal Laws of their Pagan Ancestors, which, some say, *Charles the Great* suffer'd them to retain, because they could not be better'd; but others, that he did it to please them; and they are still excepted when General Laws are made by the Diet: The best of them are collected into two Bodies; 1. Called *Sachsen-Spiegel*, or, *Speculum Saxonicum*. 2. *Sachsen-Weichbild*, or, *Statuta Civitatum Saxonicarum*. 'Tis properly an Abridgment of the former. The first contains three Books; the first of which consists of 71 Articles, the 2d of 72, and the 3d of 91; with a Glossary, explaining the antiquated Terms. There have been two Editions of it, the first by *Burchard* Lord of *Mangelfeld*, and the last printed by *Zobelius* at *Leipsick* in 1569. The *Weichbild*

has had several Editions, and contains 137 of the choicest Articles of the former, with Observations upon them.

The chief Places are, 1. *Wittenberg*, on the *Elb*, the Capital of the Dutchy. Some derive its Name from *Wittikind*; and others say, that it only signifies a white Rock, of which there are many in the Neighbourhood; from whence the Students fancying it also to be built upon one, call it *Leucoris*. It lies on the *Elb*, near Long. 32. Lat. 52. about 37 Miles N. E. from *Leipsick*, 37 S. from *Brandenburg*, and 70 E. from *Halberstadt*. 'Tis a fair large City, of an oblong Square, with one great Street in the middle. The Elector *Frederick* built a strong Castle to defend it in the beginning of the 16th Century, and founded the University in 1502, which was made famous by *Lutber's* preaching there, and is now, says *La Foreß*, one of the most flourishing *Lutheran* Universities, and has large Privileges. The Town is well Peopled, and fortified by Marshes on the N. and a Canal to the *Elb*. It has a deep Ditch, a good Rampart, and 5 large Bastions on the Side where 'tis most exposed. It was the Elector's Seat till the Government came into the Family of *Misnia*; since which, it has been at *Dresden*. Dr. *Nicholson* says, it has bred few great Scholars of late, tho' *Abraham Calovius* has writ much to little Purpose; and another Professor, called *Teuchmannus*, has writ much against the *Calvinists*; but so weakly, as will rather confirm than confute them. One gave this waggish Account of the Town, which the Dr. thinks may be pertinent enough.

Leucorin intranti tibi qua sunt obuia quaris?
Sus, Miles, Meretrix, aut Studiosus eris.

At Wittenberg a Man is sure to meet,
Hogs, Soldiers, Whores, or Scholars, in each Street.

2. *Halle*, tho' depending on the Dutchy of *Magdeburg*, and subject to the King of *Prussia*, is within the Confines of this Dutchy. It lies on the Banks of the *Sala*, near Long. 31. Lat. 51. 35. about 40 Miles S. W. from *Wittenberg*, and about 35 S. of *Magdeburg*. Some derive the Name from the Greek Word *Αλς*; or *Αλς*, Salt, because of the

the many Salt-Pits in this Place; but give no Reason why a German Town should have a Greek Name. These Pits were first discovered by the *Hermunduri*, a Branch of the *Sveui*, before our Saviour's Birth, who valued them as much as Mines of Gold. Their Value may be guess'd at by the Weekly Toll of 5 or 600 Crowns, which they pay to the Administrator of *Magdeburg*. The Town is neatly built, on the Side of a pleasant Hill; the Inhabitants are genteel, and are reckon'd to speak the best German. 'Tis called *Halla Saxonum*, to distinguish it from others of that Name elsewhere. *La Forest* places it in the Circle of *Leipsick*, tho' now 'tis in *Misnia*. He says, it was built by the Emperor *Otho II.* in 981, and made an Imperial Town, as it continued to be till 1308, that it was united to *Misnia*, and gave Title of *Sax-Halle* to a Branch of the Family of *Saxony*. It has also a noted University, and has been famous of late for an Hospital built there by *Dr. Franks*, without any certain Fund either for building or supporting it; but has been hitherto maintain'd, and made very considerable both for the Buildings, and Number of Scholars, Mechanicks, and Poor, by a wonderful Chain of Providential Charities, as we have an Account in a Book lately translated and printed here, called *Pietas Hallensis*.

3. *Quedlinburg*, a small City, about 8 Miles S. E. of *Halberstadt*, and about 37 N. W. of *Halle*. It had formerly a Castle on the Top of a neighbouring Hill, but now demolished. It was formerly a Hans-Town; but the Citizens rebelling against their Abbess in 1475, they were made subject to the Elector of *Saxony*. Since the Reformation, the Abbess has been a *Lutheran*, and, as *Dr. Nicholson* says, either a Princess or Countess of the Family of *Saxony*, and is supreme of the City and Territory. *La Forest* says, it lies on the River *Bode*; That the Abbey was founded in the 10th Century by the Emperor *Henry the Fowler*, and his Daughter *Maud* was the first Abbess. The Countess of *Stolberg* brought in *Lutheranism* in 1539. It depends immediately on the Empire, and the Abbess has her Deputy in the Diet among the Prelates of the *Rhine*. It receives no Nuns but of Noble Extract, for 8 Descents. 'Tis under the Protection of the Elector of *Saxony*.

4. *Sweinitz*, a little Town on the *Elster*, which falls into the *Elb* a little above *Wittenberg*.

5. *Hertzberg*, a little Town, very ancient, on the same River.

6. *Torgaw*, on the *Elb*, about 17 Miles above *Wittenberg*, a large fortified Town, which has a great Trade in Beer. It was taken by the Swedes in 1637. It was built by the Elector *John Frederick* in 1535, and beautified with a stately Castle.

7. *Bitterfeld*, on the *Mulda*, which was taken by the Swedes in 1637.

8. *Wiesenburg*, on the Confines of *Anhalt*, then also taken by the Swedes.

The Principality of ANHALT.

THE greatest Part of this Country lies betwixt the *Sala* and the *Elb*, has *Magdeburg* on the N. *Thuringia* on the S. *Quedlinburg* on the W. and the Electorate of *Saxony* on the E. It lies from E. to W. about 90 Miles; but is of an unequal Breadth.

Dr. Nicholson says, some German Antiquaries derive the Pedigree of those Princes from *Aschenaz*, *Noah's* Grandson, which Fable was founded upon their Title of *Principes Ascanii*, but they have a Genealogical Table in their Palace at *Pleskaw*, which affirms, that their Ancestors were Kings, Dukes, and Generals of the Saxons, long before the coming of our Saviour. The *Atlas Historique*, with whom *La Forest* agrees, carries their Origine no higher than *Berentobaldus*, who made War on the *Thuringians* in the 6th Century. *Dr. Nicholson* says, he was a King, and that this War began in 524; when he took some Towns, and adjoining Territories. He was succeeded by *Berenger*, who, the *Atlas* says, was made a Count by *Charlemagne*. The Doctor observes further, That credible Historians say, *Berentobald II.* and *III.* were above 1000 Years ago Generals of the Saxons against *Clovis II.* and *Dagobert*, Kings of *France*; and that *Clovis III.* married *Batildis*, a Princess of this Family; but the *Atlas* mentions only one *Berentobald*. *Otho the Great* succeeded *Berenger*; and *Albert*, call'd the Bear, his Successor, was made Marquis of *Southweld* by the Emperor *Henry V.* and others say, he was made Margrave of

of Brandenburg in 1152 by the Emperor Conrad III. His Son Bernard was made Elector of Saxony instead of Henry the Lion, and likewise possessed Anhalt. He and his Brother Otto, says Dr. Nicholson, divided the Ascanian Family into two Branches, from whence came the great Families of Saxony and Brandenburg. Henry the Young succeeded his Father Bernard; and notwithstanding the great Promotion of his Father and Uncle, says the Doctor, was the first created Prince of Anhalt by Frederick II. But the Atlas says, it was his Son and Successor Henry the Old. He was succeeded by Henry the Fat: He by Sigfried. The next Successors were, Albert the Old, Albert the Young, John, Albert the Lame, Adolphus Sigismund, George the Old, Waldemar John, a very brave Prince, who died in 1551; Joachim Ernest, who died in 1586; John George, the first of Dessau, who died in 1628; John Casimir, who died in 1660; John George II. who married Henrietta Catharine of Orange, and was Statholder of the Marquissate of Brandenburg for the Elector. He died in 1693. The present Prince Leopold of Dessau was born in 1676, and is Lieutenant-General to the King of Prussia. From Joachim Ernest, came the Branch of Anhalt-Zerbst, whose present Prince is Charles William. From John II. of this Branch, came that of Darnburg, whose present Prince is John Lewis. From the same Joachim, proceeded the Branch of Cothen, which was extinguished in 1665; and the Branch of Plotskaw, which came from the same Joachim, succeeded to their Dominions. The present Prince is Augustus Lebrecht. From Joachim, also proceeded the Branch of Anhalt-Bernburg, whose present Prince is Victor Amedeus, who has a numerous Issue. The Branch of Hatzgerode came from Christian I. of Bernburg. The present Prince is William. Dr. Nicholson observes, That Joachim, from whom all these Branches are come, was the only Person left of the Family; but when he died in 1566, he left 5 Sons, and 11 Daughters. The Sons divided the Principality into 4 equal Shares, because the eldest, Augustus, resolv'd not to marry, and to be content with a Pension during Life; but marrying afterwards, they allow'd him the 5th of the Dominions; whereupon John George had Dessau, Christian resided at Bernburg, Augustus at Pleskaw, Rho-

dolph at Zerbst, and Lewis at Cothen. Having all Children, and being of equal Authority, they agreed unanimously to submit to the eldest of the Family, who has the supreme Government, and the only Power to assemble the rest upon Matters of Consequence. They have but one Vote in the Diet, and generally depute one of their own Number to represent them.

Prince Lewis of Cothen founded that called the *Frustrifying Society*, on this Occasion: Having travelled over Europe, and observing the Advantages which the Nobility had elsewhere by excellent Books in their own Language, he persuaded his Countrymen to translate the best Latin and Greek Authors into a good German Style. In pursuance of which, he founded the Society, and was their first President. In a little Time, above 20 Princes and 600 Noblemen enter'd into the Society, which has very much advanced Learning in Germany, and improved their own Language.

The Titles of the Princes of Anhalt Dessau are, Prince of Anhalt, Count of Ascania, Lord of Zerbst, Bernburg, &c. Those of Zerbst add Jevern, Kniphausen, &c. Their Dominions are thus: The Branch of Dessau, has the Principality of Dessau: That of Bernburg, the Lordships of Bernburg and Ballensted, Old-Anhalt, and the Provostship of Geroderode: The Branch of Hatzgerode, the Bailiwick of that Name: The Branch of Cothen, Cothen and its District, Plotskaw, the upper County of Warrendorf, Nieubourg, Wulsen, and Gutsen. The Branch of Zerbst, Zerbst and its District, the Bailiwicks of Lindau, Roswick, Rosla, the Lordships of Jevern, Kniphausen, and Walternenbourg.

Their Arms are, *Argent*, a *Demi-Eagle*, *Gules*, Part of Saxony for Anhalt. *Argent*, a *Bear-Sable* Collar'd and Crown'd *Or*, *Passant*, on a Wall *Gules*, in which there's a Gate *Or*, for Berengen. *Or*, 5 *Fesses-Sable*, for Ballensted. *Checkee*, *Argent* and *Sable*, for Ascania. *Quarter'd Or* and *Gules* for Waldirsee. *Azure*, two Bars-*Or*, for Wansdorf. *Azure*, an *Eagle-Argent*, for Mullingen. *Argent*, a *Bear-Sable*, Crown'd *Or*, *Passant*, on a Wall *Gules*, in which there is a *Port-Or*, for Bernburg. *Gules* plain for the Regalia. The Helmets are those of Anhalt, Berengen, and Ascania. Those of Zerbst add 3 *Quarters* and a *Helmet* as follows; *Azure*, a *Lion-Or*, for Jevern.

Orn. Or, a Lion-Sable, with a fork'd Tail, Azure, a Dog's-Head Argent, supported with an Angle of two Wings, turn'd up-side down, for *Walter-Newburg*. The Helmet of *Jevern*.

The chief Places of this Principality are,

1. *Zerbst*, on a small River about a Mile from the E. Side of the *Elb*, about 20 Miles S. W. from *Magdeburg*, and 40 N. of *Leipfick*. *Dressius* thinks, 'tis a Town of great Antiquity, and that it had its Name from the *Servetii*; but others say, it signified a Fort in the old *Wendish* Dialect. 'Tis remarkable for little but being the Residence of the Prince, and brewing strong Beer, which is sent about into the neighbouring Countries.

2. *Bernburg*, a fortified Town, on the Banks of the *Sala*, about 8 Miles from the *Elb*. The Prince has another Palace here, separated from the Town by the River. It was taken by the Elector of *Saxony's* Troops in 1636, when they put all the Garison and Inhabitants to the Sword, except a few that belong'd to the Prince's Court.

3. *Dessau*, a well fortified Town on the *Elb*, about 30 Miles N. W. from *Magdeburg*, and 15 W. from *Wittenberg*. It lies in a pleasant and fruitful Country, and had its Name, as some think, from the *Jews*, who in their Dialect call'd it *Desse*, from the Fatness of the Soil. The Prince has a Palace here, which, by an Inscription over the Gate, appears to have been built by *Albert* and *Waldemar*, two Princes of this Family, in 1341. In one of the Chapels, there is the Tomb of one *Rehebeck*, an old Miller, who having followed *Waldemar* Marquis of *Brandenburg* in the Wars, counterfeited the said Marquis so artificially after he was slain, that a great many believ'd him to be that Prince, and respected him accordingly. He died about 1350.

4. *Ascherleben*, or *Ascania*, from whence the Princes of *Anhalt* had that Title. 'Tis an ancient Town, on the Borders of the Bishoprick of *Halberstat*, and was seiz'd on by the Canons of that Church after the Death of Prince *Orto's* Widow in 1315; since which, the Princes of *Anhalt* could never recover it, and are not like to do it now, since that Bishoprick is fallen to the House of *Prussia*.

5. *Worlitz*, or *Coswick*, a little Town of good Trade on the *Elb*.

6. *Anhalt*, on the S. of *Halberstat*, remarkable only for an ancient Castle, which gives Name to the Principality.

7. *Koten*, within a League of *Mulsa*, a small Town with a Castle. It's the Chief of a County of the same Name.

8. *Gernrode*, an Abbey founded in 965 by *D. Geron*: It depends on the Empire, and has a Deputy in the Diet among the Prelates of *Westphalia*. The Reformation was introduc'd here in 1531. The Princes of *Anhalt* have the Advouson of it.

The Landgraviate of Thuringia.

THIS Country took its Name from the *Thuringi*, a Branch of the *Vandals*, mentioned by *Tacitus*. *Muralius* is of Opinion, from the Names of several Towns here, as *Gosha*, *Gosleben*, *Altengosben*, &c. That they were a Branch of the *Goths*, and not of the *Vandals*, as *Cluverius* would have them. But *Dr. Nicholson* justly observes, That this Argument will prove no more than that the *Goths* mix'd with them.

This Province has the River *Sala* on the E. the *Werra* on the W. the *Hercynian* Forest on the N. and the Woods of *Franconia* on the S. The Country abounds with Corn, and large Vineyards in some Places, which afford better Wine than is to be had in other Places of *Saxony*, and the Marquissate of *Brandenburg*; and in their Fields and Gardens, they have abundance of Wild Saffron, and Woad us'd by Dyers for their best Blues and Sky-Colours. In other Places, as about *Sangerhausen*, they have Mines of Copper and Silver; and about *Frankenhausen*, rich Salt-Pits. Their chief Rivers are, the *Sala*, *Werra*, *Unstrut*, *Hiera*, *Ilm*, the *Laina*, *Schwertze*, *Wipper*, *Helbe*, *Rabna*, *Helme*, *Lessa*, and *Gissel*. They have also many great Lakes, the most considerable of which are, *Wissensee*, and *Swansee*.

The Boors here are very rough and clownish, and the only People in *Germany* noted to be uncivil to Strangers. Upon their first settling here, they chose themselves a King, under which Government they continued till they were over-run by the *Franks* about 1122. When *Charlemagne* abolish'd Paganism.

nism here, they were for most part govern'd by the Archbishop of *Mentz*, or his Deputies, and were divided into many Counties and Lordships, viz. *Schartzburg*, *Kirchberg*, *Kefernburg*, *Schoneberg*, *Gleichen*, *Sangerhausen*, *Frankenstein*, *Salza*, *Heldrungen*, *Dreßert*, *Apolda*, *Vargila*, &c. as Dr. *Nicholson* informs us. *Conrad II.* made *Ludowick* Count of *Schoneberg* Count of *Thuringia*; and *Lotharius II.* made *Ludowick's* Grandson Landgrave. It continued in this Line till the Death of Landgrave *Herman* in 1226, when *Henry Duke of Brabant* got *Hessia*; and *Thuringia* fell to *Henry Marquis of Misnia*: Since which, it has been under the House of *Saxony*.

The chief Places here are, 1. *Erfurt*, the Metropolis, one of the largest Cities in *Germany*. Dr. *Nicholson* thinks, it took its Name from a Ford or Ferry over the *Hiera*, on which it stands. There are 3 Baronies and 72 fair Villages subject to it, and 'tis about as large and beautiful as *Cologne*. 'Tis not certain when it was first built; but it was reckon'd an ancient City in the Days of *Boniface* Archbishop of *Mentz*, when Pope *Zachary*, as appears by his Letter to that Archbishop, made it a Bishoprick. It lies in a pleasant and fruitful Plain, about 60 Miles S. W. from *Leipsick*, and 60 S. from *Halberstat*, about Long. 30. 27. Lat. 51. The neighbouring Country abounds with all sorts of Corn and good Vines; and the Inhabitants get much Money by selling their Corn, Wine, and Woad, at their two great Fairs, the one in *Trinity Week*, and the other at *Martinmas*. Their publick Edifices, especially their Churches and Abbies, are very beautiful. They have also a stately Castle called *Giriburg*, and a famous University. When they embrac'd the Reformation, they put themselves under the Elector of *Saxony*, which occasioned many Contests betwixt that Prince and the Elector of *Mentz*. They afterwards attempted to make themselves an Imperial City; but in 1664, the Archbishop reduc'd it by the Assistance of the *French*: But by the Treaty of *Leipsick*, 17 of the Villages, with their Dependencies, were given to the Elector of *Saxony*. They have the largest Bell here in *Germany*, called *Susanna*.

2. *Weimar*: 'Tis a large, neat, and well built City, mid-way betwixt *Erfurt* and *Jena*,

which gives Title to a Prince of the Family of *Saxony*, and is famous for the Birth of Duke *Bernard of Sax-Weimar*, one of the greatest Captains of the last Century. 'Tis supposed to derive its Name from *Winemark*, because it has a great Trade in Wine. 'Tis very ancient; for the Emperor *Ordo II.* held a General Diet here in 975. It has a stately Palace, where the Landgrave us'd to reside. It lies about 50 Miles S. W. from *Leipsick*, and about 15 E. from *Erfurt*.

3. *Jena*, on the Banks of the *Sala*, about Long. 30. 55. near Lat. 51. about 23 Miles E. of *Erfurt*. 'Tis famous for an University, and a great Concourse of Learned Men. It was founded by *John Frederick* Elector of *Saxony*, and had many Privileges from the Emperors *Charles V.* and *Ferdinand*. The great Philologer *J. Lipsius* was bred here. Some derive the Name from the Hebrew Word *Jain*, Wine, and think that the *Jews* founded the Town. Others bring it from the Heathen God *Janus*; but neither of the Conjectures seem to be well founded. The Town is well fortified with Walls and Towers, and stands in a pleasant Vale, which abounds with Vines. The Dukes of *Saxony* gave the University a Library, which increases every Day.

4. *Gotha*, on the *Leina*, about 18 Miles S. W. from *Erfurt*. Some derive the Name from the *Gothick* Troops, who founded it in their March to *Italy*. It was only a mean Village, till fortified by *William* Archbishop of *Mentz* in 964. Their chief Trade is in Woad, of which they have three Sorts: The first they sow about *Christmas*; the next in the Spring, Summer, and Harvest, of which they have three Crops: The third grows wild. This Herb is a sovereign Balsamick, and cures Wounds almost with a Touch, if taken in time. It resembles *Plantain*, but has a longer Leaf. The Roots fatten and improve barren Ground exceedingly; and being brought over to *England* with Clover, Cinquefoil, &c. grows with good Success in *Northamptonshire*, and other Places of *England*. This Town is Capital of a Dutchy, and gives Title to a Prince of the Family of *Saxony*, where they have a good Castle, that was demolished by the Emperor *Maximilian II.* in 1567; but since rebuilt by *Ernest Duke of Sax-Gotha*.

3. *Orlamund*, or *Erlamund*, on the same River, a small Town, which gives Title to a County, 8 Miles E. from *Jena*.

6. *Tonnenberg*, a little Town, about 15 Miles W. from *Gotha*. It was sack'd by the Imperialists in 1567.

7. *Eisenach*, about 20 Miles W. from *Gotha*, on the River *Nesse*, the Capital of a Dutchy of the same Name, which gives Title to a Prince of *Saxony*. The University here was founded in 1555. The Inhabitants have a considerable Trade in Iron.

8. *Mulhausen*, an Imperial Town, under the Protection of the Elector of *Saxony*, at the Foot of a Mountain, about 20 Miles N. W. from *Gotha*, and 30 from *Erfurt*.

9. *Marchsul*, some Leagues from *Eisenach*, noted only for a fine Castle, the usual Residence of the Dukes of *Sax-Gotha*.

The County of Schwartzburg,

IS about 40 Miles long, and 25 broad, has *Thuringia* on the S. *Naumburg*, *Mersburg*, and *Halle*, on the W. It takes its Name from the Castle of *Schwartzburg*, on the River *Schwartza*, which gives Title to an ancient Family, divided into the two Branches of *Arnstadt* and *Rudolstadt*. This Castle lies in the upper Part of the County. The chief Town is *Sunderhausen*, a large open Town in the lower Part of the County. The other Towns are, *Frankenhäusen*, *Herfingen*, *Kirderbruch*, and *Keula*; but have nothing of Note.

To this Country belongs *Gleichen*, on the River *On*, an ancient Castle, which gives Name to a County, and formerly Title to a Branch of the Family of *Schwartzburg*, extinguish'd in 1639. The Elector of *Menz* invested the Counts of *Haisfeld*, who possessed Part of this County, with the Castle of *Gleichen*, as a Fief depending on his Church. The other Part consisting of some Bailiwicks, was given to the Counts of *Hohenlo* by the Dukes of *Saxony*, upon the Failure of the Family of *Gleichen*, as *La Forest* informs us.

The County of Hohenstein,

LIES N. of *Schwartzburg*, is about 25 Miles in Length, and 10 in Breadth. The chief Town is *Northhausen*, an Imperial City,

about 40 Miles N. W. of *Erfurt*. It said to have been built by the Emp. *Theodosius II.* or *Merovius* King of *France*, about 447. 'Tis noted for some Diets of the Empire that have been held here, but otherwise not remarkable. 'Tis under the Protection of the Elector of *Saxony*.

The County of Stolberg,

LIES N. of *Schwartzburg*, is about 20 Miles long, and 10 broad. The chief Town is of the same Name, and has a large Castle, said to be built by a *Roman*, the Founder of the Family of *Stolberg*, divided into the two chief Branches of *Isenburg* and *Gudern*, and the latter into those of *Stolberg* and *Ortenberg*. They are Sovereign Counts, and have also the County of *Vernigerode* in the Principality of *Halberstat*. The Castle of *Stolberg* lies near the Borders of *Halberstat*.

The County of Mansfeld.

SOME derive the Name from *Mannus*, Son to *Twisco*, the Father of the *Germani*; but this seems to be fabulous. Others say, That *Heger* Count of *Mansfeld* was one of the Commoners at the British King *Arthur's* round Table, and built *Mansfeld* in *Nottinghamshire*; which is as improbable as the former. Dr. *Nicholson* says, 'tis one of the four *Hercynian* Counties, the other three being *Stolberg*, *Hohenstein*, and *Regenstein*. It has the River *Sala* on the E. *Schwartzburg* on the W. Part of *Anhalt* on the N. and *Thuringia* on the S. 'Tis about 30 Miles long from E. to W. and about 18 where broadest from S. to N. It abounds with Mines of several sorts, which bring great Profit to the Inhabitants. Among the rest, there is that called the *Scheiffersstein*, peculiar to this and the neighbouring Provinces. 'Tis a blackish glittering kind of Salt, which melted and bray'd, yields a vast Quantity of Copper, and much Silver. *Hambesak*, who comments on Part of *Munster's* Geography, says, there is scarce the like of it in the World. Out of this Stone, says he, the Inhabitants melt Copper, each Hundred of which contains 10 or 12 Ounces of pure

pure Silver; and this Stone abounds so much in the Country, that 'tis dug up every where. He adds, That in these Stones, there are the lively Representations, by fair Copper Strokes, of Fishes of several Sorts, Frogs, Water-Rats, and other Animals, that abound in a neighbouring Lake; and the like is asserted by others.

Dr. *Nicholson* says, the more sober Genealogies derive the Pedigree of the Counts of *Mansfeld* from *Burchard V.* Count of *Quernfort*, on whom *Frederick Barbarossa* bestowed this County, for his great Service in the Holy Land. His Great Grandchild *Burchard* was the first who took the Title of Count about 1250, and his Successors have enjoy'd that Honour ever since; but do some sort of Homage to the Elector of *Saxony*. The most remarkable among them have been, 1. *Walerad*, Privy-Counsellor to the Emperor *Sigismund*, to whom he did great Service, and improv'd his own Estate. 2. *John George*, who was Deputy-Governor of *Saxony* under Duke *Augustus*. 3. *Peter Ernest*, Governor of *Luxemburg* under *Charles V.* and *Philip II.* who employ'd him in their Wars against *France* and the *Netherlands*. 4. *Albert*, a great Friend to *Luther*, and to *John Frederick*, the depos'd Elector of *Saxony*, in whose Quarrel he lost his Country, and afterwards defended *Magdeburg* bravely against the Imperialists. 5. *Ernest*, who perform'd great Things in the Wars of *Germany* against *Ferdinand II.* in behalf of the Elector *Palatine*, who was chosen King of *Bohemia*. He was observ'd to be very happy in raising Armies, but unfortunate in Battle. This Family is now divided into 4 or 5 Branches, which has made them less considerable than formerly. The two chief Branches are those of *Bornstet* and *Eysleben*. The latter stays in the County, where they have nothing but the Hunting, Fishery, and Patronage, the rest being sequestered into the Hands of the Elector of *Saxony*. *La Forest* says, That some of the young Counts in the 16th Century oppos'd several Points of the *Lutheran* Doctrine, which gave Rise to a Sect called *Mansfeldians*.

The Metropolis of the Country, and the Seat of the Governing Counts, is *Eysleben*, which derives its Name from the great Quantity of Iron Ore, by the Natives call'd *Eysen*, found in those Parts, and not from

the *Egyptian* Goddeß *Isis*, whom some fabulous Historians alledge to have wander'd into these Parts. 'Tis chiefly remarkable for the Birth and Death of *Luther*; the former in 1483, and the latter in 1564. The Citizens set up his Statue of Stone over the Door of the House where he was born, with this Inscription:

*Hæstis eram Papa, Sociorum pestis & hujus:
Vox mea, cum Scriptis, nil nisi Christus erat.*

'Gainst Pope, and Popelings, I did War declare:
But Christ I preach'd, and wrote, with utmost Care.

Forster, Superintendent of this Church, says, a great Fire in 1601 burnt the Count's Palace, and 250 Houses; but the Church where *Luther* was baptiz'd, the House where he was born, and that where he died, escap'd the Flames, tho' those about 'em were consumed. The Imperialists, in the late Civil Wars, destroy'd his Monument, and defaced the Inscription. The Town is but small, and lies about 8 Miles from *Mansfeld* S. E. and 15 N. W. from *Halle*. This Town suffer'd much in the 11th Century, during the Wars betwixt the Emperor *Henry IV.* and the *Saxons*, and likewise during the Civil Wars of *Germany*. 'Tis fortified with a good Citadel, and reaps considerable Profit from its Quarries of black Stone, and two Annual Fairs.

2. *Mansfeld*, about 5 Miles N. W. from *Eysleben*, an old ruinous City on the River *Vipren*: 'Tis defended by a strong Castle on the top of a Hill, which lay desolate many Years; but was repaired and fortified in 1547.

3. *Wipren*, a Town of good Trade, 8 Miles W. from *Mansfeld*.

The other Towns are, *Arnstein* and *Quernfurt*, noted for little, but giving Names to little Counties belonging to the Branches of this Family.

The Prince of this Country being an Hereditary Count of the Empire, we shall here once for all give an Account of that Dignity: The Learned *Cambden*, in his Reign of Queen *Elizabeth*, speaking of *Thomas Arundel* of *Wardour*, who was made a Count of the Empire by the Emperor *Rudolph II.* takes Notice of his Patent given to him and his

Heirs

Heirs of both Sexes for ever; and adds, That those Counts have a Voice in the Imperial Diet, may purchase Estates in any Part of the Emperor's Dominions, may list Volunteers, and cannot be sued in the Empire, but only in the Imperial Chamber. The Curious many find an Account of the Rise of this Title, and of the several Sorts of Counts, in *Selden's* Titles of Honour, Part II. But that which properly relates to Counts of Territories, such as those of *Mansfeld*, is, That they were anciently created and invested by the Delivery of one or more Banners for Seisin of their Territories, as Dukes were invested, and the Surrender of 'em was made by re-delivering those Banners to the Emperor; but of late, they are sometimes made by Charter, or Word of Mouth, kneeling before the Emperor. They have Caps as the Dukes, and their Coronets are only distinguished by their Richness; those of the Dukes having Precious Stones and Gems in them. There are other Counts who are not invested with any Territory, and yet bear the Titles of some Castles or small Territories they possess, and are conceived to be the Posterity of the Counts of the Old Empire, before Feuds were annexed to this Dignity, as *Selden* informs us.

Sax-Naumburg.

IT gives Title to a Prince of the Family of *Saxony*, and is Capital of the Bishoprick of that Name, founded in 952 by the Emperor *Otho I.* at *Zeitz*, and transferred hither in 981. *Nicholas Amstorf* brought in *Lutheranism* in the 16th Century, and after his Death the Elector of *Saxony* took the Administration of it, and it was yielded to him by the Treaty of *Passau* in 1552. His Successors did afterwards appropriate it, and it gives Title to a Prince of *Saxony*, of the *Ernestine* Line, who is called Administrator. The Town lies on the *Sala*, 25 Miles S.W. from *Leipsick*, and 15 S. of *Mersburg*. It was formerly under the Archbishop of *Magdeburg*, and has a Territory about 25 Miles long, and 15 broad.

Sax-Mersburg,

WAS formerly a Bishop's See, Suffragan to *Magdeburg*, and likewise an Imperial Town. The Bishoprick was founded here in 952 by the Emperor *Otho I.* The Duke of *Saxony* introduc'd *Lutheranism* about 1562, when he was Administrator; and 'tis now apply'd as a Portion for one of the younger Sons, to whom it gives the Title of Duke. The Town lies upon the River *Sala*, and, as *La Forest* says, pretty large, and well Peopled, about 18 Miles N. W. of *Leipsick*. Dr. *Nicholson* says, That some derive the Name from *Mars*, and that the *Saxon* Idol *Irmenscul*, under which Name they worhip'd *Mars*, is by some Antiquaries supposed to have stood here. The Cathedral is the only Thing worth Notice in the Town, and near it there's a Library of many ancient Manuscripts, but ill kept; among which there is the Books of *Samuel* and *Kings* in Latin, in a fair ancient *English* *Saxon* Character.

Sax-Altenburg,

HAS *Thuringia* on the N. Part of *Francia* on the W. and S. and *Voitland* on the E. The Town of *Altenburg*, from whence it takes its Name, lies on the River *Pleiss*, 24 Miles S. of *Leipsick*, and 46 W. of *Dresden*. It was an Imperial City, till *Frederick* Marquis of *Misnia* took it in 1308, and united it to that Country. It has a fine Castle, where the Dukes of *Saxony* sometimes kept their Court. The Town is pretty, and was formerly called *Osterland*. *La Forest* says, That it has been possessed by the Duke of *Sax-Gotha* since 1672. Some reckon it a Part of *Misnia*; but *Moll* places it as a Duchy by it self.

Misnia, or Meissen.

THIS Country is so called from a City of the same Name, formerly a Bishop's See, but now inconsiderable. It has the Title of a Marquissate, has *Lusatia* on the E.

Thu-

Thuringia on the W. the Dutchy of *Saxony* on the N. and *Bohemia* on the S. 'Tis a large Country, and is usually divided into 4 Parts: 1. *Misnia*, properly so called, and sometimes named *Osterland*, which contains the Cities of *Dresden*, *Königsstein*, *Pirna*, the old Fort of *Sonnenstein*. 2. The *Erzgebirgischehecreys*, a Mountainous Country, comprehending the Mine-Towns, with some others. 3. The Circle of *Leipsick*, which, besides that City and its Dependencies, has the Counties of *Rechlitz*, *Waldheim*, and *Geringwald*, with other Places of Note. 4. *Voitland*, formerly reckon'd a distinct Principality. Besides these Provinces, it has the Bishopricks of *Naumburg* and *Mersburg*, which we have already describ'd, because *Moll's* Map makes them separate, and the Bishoprick of *Meissen*. Part of the Revenues of those Bishopricks are applied to maintain a Number of Canons in every Cathedral; but the greatest Share is made use of to maintain the younger Sons of the Elector, and give Titles to them, as *Dr. Nicholson* informs us. According to *Baudrand*, *Sax-Halle*, and the Dutchy of *Sax-Gotha*, which we have already describ'd, were reckon'd Part of this Country.

The Plains of *Misnia* are very fruitful in all sorts of Corn, and their Hills abound with rich Minerals. On the Banks of the *Elb*, about *Dresden* and *Meissen*, there are large Vineyards, but the Wine not very good. They have also Salt-Pits in the Bishoprick of *Mersburg*, which were so much outdone by those of *Halle*, formerly mentioned, that they came to be neglected. The Country abounds with Forests, which have Plenty of Venison, and some of them Bears. Their chief Rivers are, the *Elb*, *Mulda*, *Pleiss*, and the *White* and *Black Elbers*. They have also some lesser ones, and all of them abound with Fish, especially Carps, as large and numerous as any Part of *Europe*.

Historians derive their Original from the *Misii*, a People of *Asia*, who in *Cicero's* Time, as appears by his Oration for *Flaccus*, was so contemptible, that it was reckon'd the greatest Reproach to call a Man *Misforum ultimus*; but the present *Misnians* are so much improv'd, that they are noted for their Courtesy, Affability, neat Apparel, and good Shape; so that it has become a

Proverb, *That the Misnians make the best Figure of any Germans*; and *Albinus* commends them for their Chastity, to which their severe Laws against Adultery has probably contributed.

Their chief Cities are, 1. *Dresden*, the usual Seat of the Elector. *Dr. Brown* gives the following Description of it: 'Tis one of the most remarkable Places in *Germany*: The Fortifications are very strong and modern, the Bastions fac'd with Stone, and in some Places defended by a double Ditch. The *Elb* runs through the Town, and divides it into Old and New by a stately Bridge of 17 Arches. The New Town, where stands the Elector's Palace, is the most beautiful and best fortified, and as well worth a Traveller's View as any Place in *Germany*. *Dr. Nicholson* thinks, it derives its Name from three Lakes near it, which in the Language of the Country they call *Dreyen Seen*. *Dr. Brown* says, the Palace is very large and spacious, and, besides the noble and splendid Apartments for the Court, is remarkable for a House for Wild Beasts, the Arsenal, and Stables. The Hall of the Palace is very spacious, and remarkable for the many Draughts of Cities, Pictures of Giants, and the Habits of Nations, very well done. But the most remarkable, and indeed surprizing, Thing, is the Collection of Rarities, divided into several large Chambers: The first contains all sorts of Mechanical Instruments, made with great Art; and in the other Chambers, among many other Things, these following are most taken Notice of; A Tube-Glass 4 Ells long; a large Blue Turkish Glass; many Artificial Works of Coral; Fowls and Cups made out of Mother of Pearl; Drinking-Cups in the Shape of Dragons, Elephants, &c. Castles of Gold, and of Mother of Pearl; Cups and Fowls made of *Nautilus*, and other Shells; a fine Ostrich made out of its own Shell, with Feathers of Gold; a Cup about a Foot long, richly set, made of a Stone or Ball taken out of an Ox's Stomach; a Stone as big as one's Fist, resembling a Bezoar, taken out of a Horse; a Purse of *Linum Incombustibile*; Silver Ore almost pure, in Strings and Shoots, from the Mines of *Freyberg*; a natural Crofs of Silver Ore; 120 Heads carv'd on the outside of a Cherry-Stone.

Stone; a Chryſtal Cabinet fold by *Oliver Cromwel*, in which is kept a Ring with Stones, in Shape of a Caſtle; *K. Charles II.* of Great Britain carved in Iron; the Head of *K. Charles I.* a Glaſs Organ; ſeveral uni- poliſh'd Topazes, 10 Inches in Diameter; a Cup of Topaz; Emeralds an Inch in Dia- meter, as they grow in the Rock, reſem- bling *Vitriolum Marinum*; Thunder-Stones, which ſmell of Fire; Rocks of all ſorts of Ore, with the Names of the Mines whence they were dug upon them; Figures of Fiſhes in Stones out of *Mauſfeld*, formerly mentioned; all Sorts of Stones found in *Saxony* and *Miſnia* poliſh'd; Two large Pie- ces of pure Virgin-Gold out of the Mine; a Hart with a Cabinet in his Side, con- taining all Medicines which that Creature affords; a White Hart as big as the Life, made of the Filings and Shavings of Hart- horn, which reſembles Plaiſter; Figures printed in Trees; a Spur in Part of a Tree; Horns in Trees, &c. In another Chamber, there is all ſorts of Mathemati- cal Instruments and Books, with Maps, and a Horn, which they alledge to be that of a Land-Unicorn, becauſe 'tis neither wreath'd nor hollow. Among other re- markable Pictures and Draughts, there is the Siege of *Jeruſalem*, done by *Collier*, va- lued at a high Rate; one of *Luther*, &c. and a rolling Bullet, to demonſtrate a per- petual Motion. Of Clock-works, there is vaſt Variety; among others, a Cuckow ſinging, a Horſeman riding, a Ship under Sail, an old Woman walking, a Centaur running and ſhooting, and a Crab crawl- ing on a Table; which at once divert and amaze the Spectators. In the Stables, which are very ſtately and large, there are many fine Horſes, with an Iron Rack and a Copper Manger for each. Near the Sta- bles, there's a curious Fountain and Pond, ſurrounded with Balliſters, for watering and waſhing the Horſes, and a long Arch'd Walk, painted with curious Horſes. Over this Walk, there is a Gallery with the Pi- ctures of all the Dukes and Electors of *Saxony* in their Robes and Military Habits. Among the reſt, there are the Pictures at large of *Hengiſt* and *Horſus*, two *Saxon* Dukes or Generals, under whom the *Saxons* inva- ded *England*, drawn according to the De- ſcriptions given of them by ſome of our

English Roman tick Hiſtorians. In other Chambers over the Stables, there are two Beds of Marble, a Horſeman of Silver, mov'd by a Spring, carrying a Cup of Wine in his Hand; a Pair of very fine Pi- ſtols, with the Stories of the Old and New Teſtament upon them; a Glaſs Gun; and- ther which diſcharges 40 times at once, &c. In another Chamber, there are many rich Sleds, with Accountrements for Cavalcades on the Ice and Snow in Winter; a white Bear's-Skin ſtuff'd, ſitting in a Chair, from whence, by a Spring, it riſes up when the Spectators come near it, with the Skins of Tigers and Lions; a Caſſowary's Skin; very fine Armour for Men and Horſes; a Picture of a *Laplander*, with one of their Magick Drums; and a Chamber full of curious Hunting-Tackle and Arms. The Arsenal is an oblong ſquare Building, containing near 400 Braſs Pieces of Ordnance, with a great Quantity of Muſkets, and other Arms, with ſeveral Suits of Armour, and Coats of Mail of Silver, &c. Here alſo there is the Representation of *Hungarian* and other Horſe and Foot, drawn up in Parties, with their Commanders at their Heads, made ſo as to turn round.

In the Hunting-Houſe in the Old Town, there are kept 15 Bears, with Fountains and Ponds, in which they waſh, with rag- ged Poſts ſet up round them, by which the Bears climb to the Scaffolds on the top, where they ſun and dry themſelves after waſhing. The *Horn-Gallery* here does like- wiſe deſerve Notice, into which we paſs through three Chambers, painted with all ſorts of hunting of Fowls and Wild-Beaſts. In the Houſe where the Wild-Beaſts are kept, there is a Four-leg'd Beaſt called a *Marian*, which hangs on the Boughs of Trees by the Tail; a Wild Mountain Cat of extraordinary Size; 10 young and old Bears, Black and White; 2 Lions, and 10 Lioneſſes. The *Italian* Garden and Sum- mer-Houſe in the Suburbs has two noble Obeliſks, two very fine Fountains, a Thea- tre, and a good Landſkip.

This City lies about Long. 32. 45. Lat. 51. 5. 55 Miles S. E. of *Wittenberg*, about 40 S. E. of *Leipſich*, and 20 N. from the Borders of *Bohemia*.

La Foreſt ſays, the City is large, and well Peopled, and in the Old Town, beſides the Caſtle,

Castle, which is very large, is still to be seen the Fortifications made by *Charlemagne*. Its Arsenal is one of the best furnish'd in *Germany*. This City was possess'd by the Bishops of *Misnia* from 952 till 1274, that one of the Bishops agreed to yield it to *Henry the Illustrious*, Marquis of *Misnia*. The chief Church of *Dresden* is a very fair Structure, and the Citizens contend with those of *Halle* for speaking the best *High-Dutch*.

The *Atlas Historique* has a very large Tree of the Family of *Saxony*. Some pretend to derive their Original from *Harterick*, the most ancient K. of the *Saxons*, who reign'd before our Saviour, and defeated *Borbista* K. of the *Goths*: That he was succeeded by *Anserick* his Son, about the Time of our Saviour, and he by *Wilkin*; but as to these, Authors differ. Some of his three next Successors took the Title of Dukes, and others of Kings. *Luder*, the 4th from *Wilkin*, is said to have carried his Armsth rough *France* into *Spain*. His Successor *Wigisfle* is said to have invaded *Gaul*. *Hengist*, who invaded *England*, is said to have been the 4th from *Luder*. *Sigbricht*, the 3d from *Hengist*, is said to have founded the Family of *Friesland*. *Sighard*, the 6th from *Sigbricht*, made War on *Gallia Belgica*, and he and his immediate Predecessors had great Wars with the *Saxons*. *Witkind*, the 5th from him, was that Prince so famous in History for making War against *Charles the Great*, who, after having conquer'd *Saxony*, made him Duke of *Angria*. *Wigbert* his Brother succeeded; and from the Sons of his Successor *Ludolph*, proceeded other Branches, particularly *Bruno's*, from whom came the Imperial Branch. This *Ludolph* is said to have been the first Hereditary Duke of *Saxony*. His Son *Otho* was Father to the Emperor *Henry the Fowler*; and *Otho's* eldest Son, *Lutolph* Duke of *Swabia*, founded the Branch of the Marq. of *Saxony*. *Rixa*, the 3d from him, married *Lotharius* of *Supplenburg*, who was chosen Emperor after the Death of *Henry V.* by whom her Daughter *Gertrude* brought *Saxony* to *Henry the Proud*. His Son *Henry the Lion*, formerly mention'd, was dispossest'd of his Dominions by *Frederick I.* and succeeded, some say, by Force, and others by Agreement, by *Bernard*, the youngest Son of *Albert the Bear* of *Brandenburg*, who was succeeded by *Albert I.* from whom, in a direct Line, came the Branch

of *Sax-Lawenburg*, which was extinguish'd, as formerly mention'd, in 1689, after having produc'd several great Princes. From *Albert I.* after 8 Descents, came *Frederick the Pacifick* in 1411; from whom sprung the *Albertin* and *Ernestin* Branches. From him, after 7 Descents, came *John George I.* who was born in 1585, and died in 1656. From him, after 4 Descents, came *Frederick Augustus*, the present Elector, who was chosen King of *Poland* in 1700, and renounc'd it by Treaty with the King of *Sweden* in 1706. He was born in 1670, and his Son the Prince Electoral, *Frederick Augustus*, was born in 1696. From *John George I.* above-mention'd, came the Branches of *Sax-Meriburg*, and *Sax-Zeitz*. The Prince of the former is *Maurice William*, born in 1688. The Prince of the latter is also *Maurice William*, born in 1664; and by a Daughter of *Brandenburg*, has *Frederick Augustus*, born in 1700. From *Christian* of *Meriburg* came the Branch of *Zorbich*, the present Prince is *Augustus*, who was born in 1655. From him also proceeded the Branch of *Lauchstet*, of whom there remains only *Charlotta Augustina*, who was born in 1691. From him came likewise the Branch of *Spremburg*, whose Prince *Henry* was born in 1661. From *Maurice* of *Zeitz* came the Branch of *Pegaw*, whose Prince is *Frederick Henry*. From *Maurice* also came *Christian Augustus*, Bishop of *Raab*, and Cardinal of *Sax-Zeitz*, who was made use of to persuade the present Elector of *Saxony* to turn Papist, and has labour'd much to bring the *Hungarians* to an Accommodation. We have mention'd before, that the *Ernestin* Branch proceeded from *Frederick the Pacifick*; and from *John Frederick*, the first of this Line, proceeded that of *Altenburg*, which was extinguish'd in 1672. From *John II.* of this Line came the Branch of *Sax-Gotha*, whose Prince is *Frederick*, born in 1676, whose eldest Son *Frederick* was born in 1699. From *Ernest I.* of this Branch came the Line of *Meinungen* and *Coburg*, whose Prince is *Bernard*; and his eldest Son *Ernest Louis*, born in 1672, is one of the Emperor's Generals. From *Ernest* came likewise the Branch of *Eysenberg*, whose Prince *Christian* was born in 1653. From *Ernest* likewise came the Branch of *Saalfeld*, whose Prince is *John Ernest*, whose eldest Son *Charles Ernest* was born in 1692. From the

the first *Ernest* likewise came the Branch of *Hilburgshausen*, whose eldest Son *Ernest Frederick* was born in 1681. From *William* of *Weimar*, the 7th of the *Ernestin* Line, came the Branch of *Sax-Weimar*, whose Prince *William Ernest* was born in 1664. From *John George I.* of the *Albertine* Line, did also proceed the Branch of *Sax-Weissenfels*, or of *Hall*, whose Prince is *John George*, born in 1677. From *Augustus*, the first of this Branch, came also that of *Barby*, whose Prince is *Henry*, born in 1657. His eldest Son is *Frederick Henry*, born in 1692.

The Elector, as Great Marshal of the Empire, commands the Garison where the Diet of the Empire sits: Accordingly the Elector in *Charles Vth's* Time, when the Emperor posted his Guards at the Gates of *Augsburg* in 1530, protested against it, obliged the Emperor to remove them, and to give Security never to invade his Privileges any more. He has also the Right to appoint the Meeting of all Diets, except the Collegial Diets, which are conven'd by the Elector of *Mentz*; but he is obliged to give Notice of it to the Elector of *Saxony*, who orders Count *Pappenheim* to acquaint the Members with it; and if the Elector of *Saxony* be not present, the Archbishop gives Notice to the Count. The Elector of *Saxony* is also Vicar of the Empire during an *Interregnum*, in all Places not subject to the Vicariate of the Count *Palatine* of the *Rhine*, as the Resident of *Brandenburg*, formerly mentioned, informs us.

The Titles of the Elector of *Saxony* are; By the Grace of God, Duke of *Saxony*, *Juliers*, *Cleve*, *Berg*, *Engers*, *Westphalia*, Arch-Marshal, Elector of the Empire, Landgrave of *Thuringia*, Margrave of *Misnia*, of the *Upper* and *Lower Lusatia*, Count and Prince of *Henneberg*, Count of *La Marck*, *Ravensberg*, and *Barby*, Lord of *Ravensstein*, &c.

The Pretensions of the Elector of *Saxony* are, 1. To the Dutchies of *Juliers*, *Cleve*, and *Berg*, the Counties of *Marck* and *Ravensberg*, and the Lordship of *Ravensstein*, because *Maximilian* invested the Elector of *Saxony* with it, which was confirmed by the Marriage of the Elector *John Frederick* with *Sibylla*, Daughter to *John Duke of Cleve*, in 1526. But after *John William*, the last Duke, died in 1573, *John Sigismund*, the Elector of *Brandenburg*, took Possession of it, and that

Family has still kept it. 2. To *Erfurt*, because 'tis the Capital of *Thuringia*, and is under their Protection; but this is always disputed with him by the Elector of *Mentz*. 3. To the Dutchy of *Engers* and *Westphalia*, especially *Sax-Lawenburg*, which *John*, the first Duke of *Sax-Lawenburg*, inherited from *Bernard*, Son to *Albert the Bear*, whose Successors possess'd it till the Line was extinguish'd, as above-mention'd, which has occasion'd Debates betwixt several Princes, but chiefly betwixt the Elector of *Saxony* and the Duke of *Brunswick-Lunenbourg*; and it was left to the Emperor's Arbitration, tho' the Elector has quitted his Pretensions to the House of *Brunswick* for 11 Tun of Gold.

The Pretensions of the Dukes of *Saxony* are the same with those of the Electors; but the latter pretend also to the Counties of *Eysenburg* and *Budengen*, in case that Branch fail.

The Dominions of the Elector of *Saxony* are, 1. The Electoral Circle. 2. That of *Misnia*. 3. That of *Leipsick*. 4. That of the Mountains. 5. The Bishopricks of *Misnia* and *Wurtzen*. 6, and 7. The Marquises of *Upper* and *Nether Lusatia*. 8. The Towns of *Tennistat* and *Tersfurt*. 9. The Bailiwick of *Ploen*. 10. Of *Vorgtsberg*. 11. Of *Newstat* on the *Orla*. 12. Of *Arnshaus*. 13. Of *Ziegenruck*. 14. The Burgraviate of *Magdeburg*, the Countries of *Weissenfels*, *Mersburg*, and *Naumburg*, the Lordship of *Schemburg*, the Abbey of *Quedlinburg*, the Towns of *Mulhausen*, and *Northhausen*; but all those under Number 14, belong at present to the Family of *Brandenburg*.

The Titles of the Dukes of *Sax-Eysnach* are, Dukes of *Saxony*, *Juliers*, *Cleve*, *Engers*, and *Westphalia*, Landgraves of *Thuringia*, Margraves of *Misnia*, Counts and Princes of *Henneberg*, Counts of *La Marck* and *Ravensberg*, Lords of *Ravensstein*, &c.

Their Dominions are, the 8 Bailiwicks of *Eysenach*, *Lichtenberg*, *Gerstingen*, *Ringolthen*, *Kalten*, *Nordheim*, *Kreinburg*, *Alsted*, and *Zilbach*. 9. The Town of *Osheim*. 10. The Bailiwick and Town of *Creutzberg*. 11. Of *Jena*.

The Titles of the Dukes of *Sax-Gotha* are the same with the former, only they add the Lordship of *Tenna*; and the other Branches

Branches of this Family have the same Titles, but without *Tonna*.

Their Dominions are those of *Gotha*, the three Lordships of *Tonna*, *Wachsenburg*, and *Ichtershausen*. 4. The Bailiwick and Town of *Kranichfeld*. 5. The Bishoprick of *Valckenrad*, and several Towns.

The Titles of the Prince of *Weissenfels* are the same with those of *Gotha*, only they add Count of *Barby*, and leave out *Tonna*.

Their Dominions are, 1. *Weissenfels*. 2. The Principality of *Querfurt*. 3. The Counties of *Barby*, *Eybra*, *Thomasbruck*, *Roblingen*, *Lauscha*, and *Micheln*. 4. The Bailiwicks of *Langensalza*, *Sangershausen*, *Eckersburg*, and *Sachsenburg*.

The Title of the Prince of *Mersburg* is, Administrator of that Bishoprick, with the rest of the Titles of *Gotha*, except *Tonna*.

Their Dominions are, 1. The Bishoprick of *Mersburg*. 2. The Bailiwicks of *Lutzen*, *Lauchshet*, *Bitterfeld*, *Zorbig*, *Brene*, and some Towns in *Nether Lusatia*.

The Titles of the Prince of *Sax-Weitz* are, Administrator of the Bishoprick of *Naumburg*, with all those of *Gotha*, except *Tonna*.

Their Dominions are, 1. *Weitz*, *Naumburg*, and *Pegau*. 2. *Sula*, with its District. 3. *Schleusigen*, and its District. 4. *Plawen*, *Knigsberg*, *Oelsnitz*, *Weida*, *Newkirchen*, *Schonneck*, *Adorff*, and *Pausa*.

The Dominions of the Branch of *Coburg* are, 1. The Town of *Coburg*. 2. *Sonneberg*. 3. *Neuhaus*, and several Cloisters.

The Dominions of *Meinungen* are, 1. The County of *Henneberg* and *Meinungen*. 2. Of *Masfeld*, and *Wassungen*. 3. of *Salzungen*, and *Sand*.

The Dominions of *Romhild* are, 1. *Romhild* and *Konigsberg*. 2. The Bailiwicks of *Thiermar* and *Beringen*.

The Dominions of *Eissenberg* are, 1. The Bailiwick and Town of *Rheda*. 2. Of *Chamberg* and *Ronneburg*. 3. The Town of *Eissenberg*.

The Dominions of *Helburshausen* are, 1. The Bailiwick and Town of *Eisfeld*. 2. Of *Veisdorf*, and some Towns.

The Dominions of *Saalfeld* are, 1. *Saalfeld*, and its Territory. 2. The Bailiwicks of *Grassenthal* and *Zell*.

The Arms of the Elector and Dukes of *Saxony* are, *Azure*, a *Lion* Crown'd, fac'd *Argent* and *Gules*, for *Thuringia*. Fac'd *Or* and

Sable, with *Vert* through the whole, for *Saxony*. *Or*, a *Lion-Sable*, for *Misnia*. *Or*, a *Lion-Sable*, encompass'd and langued *Gules*, for *Juliers*. *Gules*, a *Scutcheon-Argent*, flower'd *Or*, for *Cleves*. *Argent*, a *Lion-Gules*, Crown'd *Azure*, for *Berg*. *Azure*, an *Eagle* Crown'd *Or*, for *Engers*: *Argent*, 3 Chapes of a *Hanger*, for *Engers*. *Coupee-Sable* on *Argent*, two *Swords-Gules*, for the Dignity of *Electo*r, and *Arch-Marsh*al of the *Empire*. *Azure*, an *Eagle Or*, for the County *Palatine* of *Saxony*. *Sable*, an *Eagle Or*, for the County *Palatine* of *Thuringia*. *Argent*, a *Beeve Gules*, and a *Wall Or*, for *Lusatia*. *Or*, two *Pales Azure*, for *Lansberg*. *Azure*, a *Lion Coupe Or Argent*, for *Plaisi*. *Or*, strow'd with *Harts*, a *Lion Sable*, for *Orlamund*. *Parti*, the first *Gules*, one half on the *Dexter* of an *Eagle-Argent*; the 2d, 4 *Fesses-Gules*, for *Magdeburg*. *Argent*, 3 Chapes of *Hangers Azure*, for *Brene*. *Argent*, a *Rose Azure*, for *Eissenberg*. *Argent*, 3 *Cheverons Gules*, for *Ravensburg*. *Or*, the *Front Cheeke Argent* and *Gules* of 3 *Lines*, for *March*. *Gules* plain for the *Rights of Regalia*. *Or*, a *Chicken Sable*, barb'd *Gules*, upon a green *Hill*, for *Henneberg*. *Azure*, two *Bars endors'd Or*, encompass'd with *Roses*, for *Barby* and *Rosenberg*. The *Helmets* are *Or*, surmounted with two blue *Wings*, for *Lusatia*. *Or*, surmounted with an *Eagle* Crown'd, for the *Palatinate* of *Saxony*. *Or*, surmounted with a *Beeve's-Head*, *Gules*, Crown'd *Or*, for *Cleves* and *March*. *Or*, surmounted with two *Horns Argent*, for *Thuringia*. *Or*, two *Crowns Azure* and *Argent*, for *Saxony*. *Or*, surmounted with a *Demiman Azure* and *Argent*, for *Misnia*. *Or*, surmounted with an *Eagle Or*, for *Juliers*. *Or*, surmounted with a *Peacock's-Tail*, for *Berg*. *Or*, surmounted with two *Peacocks-Feathers*, for *Engers*. *Or*, surmounted with an *Eagle Argent*, for *Nether Lusatia*.

Dr. *Nicholson* observes, That upon the Failure of the Line of *Bernard* of *Anhalt* in *Albert III.* and the Neglect of the Princes of *Lauenburg* to lay Claim to the Electorate, *Frederick* Landgrave of *Thuringia*, and *Marquis* of *Misnia*, was created Duke and Elector of *Saxony* by the Emperor *Sigismund*; by which the Title return'd again to the Family of *Wittkind*, K. of the ancient *Saxons*, after it had been out of it 200 Years; and from this *Frederick*, the present Elector is descended. The Elector *John Frederick*, the

the 6th of that Line, protested against that Decree of the Diet of *Spires*, was the Author of the League at *Smalcald*, and was a great Promoter of the Reformation. His Cousin and Successor *John* drove the Emperor *Charles V.* out of *Germany*, and was slain in the Battle of *Siffridkuse* against *Albert* Marquis of *Brandenburg*. *John George*, one of his Successors, first join'd with the Emperor *Ferdinand* against the Elector *Palatine*, and afterwards with the King of *Sweden* against the Emperor.

The Doctor says, The Revenues of this Elector are thought to be as great as those of any Prince of the Empire, except the Arch-Duke of *Austria*, and are modestly computed at 400000 *l.* Sterling per Annum. The Doctor adds, That what he has from his Imposts upon Beer and other Commodities, his Taxes, Mines, &c. will amount to a much greater Sum; for his Revenues from the Silver Mines at *Freydberg*, and other Places, was computed at 130000 *l.* per Annum. And the Impost on Beer at *Leipsick* at 20000 *l.* per Annum. Besides which, and other like Customs, he has the Tenths of all Corn, Fruit, Wine, &c. in his Country, besides a great standing Tax granted at first against the *Turks* in a Time of War, but since continued. Answerable to his Revenues, is the Pomp and Splendour of his Court, wherein it exceeds those of his Neighbours. *Christian II.* is said to have had 3 Foreign Dukes, 3 Earls, and 5 Barons, besides a multitude of his own Nobility, that were Pensioners to him all at once: And at the Funeral of *John George I.* in 1657, there were 24 Horses of State cover'd with Black, with the Electoral Arms embroider'd upon them, led by two Gentlemen each: After which followed 3500 Persons in Mourning. This Court has always been reckon'd the greatest Drinkers in *Germany*; and some of their own Historians say, That a red Nose is an inseparable Badge from the Princes of that Family.

The 2d remarkable City in this Country is *Leipsick*, supposed to have been built by the *Pandals* about the Year 700, and to have derived its Name from *Lipzke*, which in their Language signifies a Tile-Tree, which sort of Wood did then abound in those Parts; and hence some Latin Authors call

it *Philurea*, from *Φίλουργε*, a Tile-Tree. It stands on the Confluence of 3 small Rivers, the *Elster*, *Ploissa*, and *Parda*, about Long. 31. 57. Lat. 51. 22. about 42 Miles N. W. of *Dresden*, and 38 S. W. from *Wittemberg*, in a pleasant and fruitful Plain, abounding with all Necessaries and Pleasures, particularly large and rich Meadows, mow'd constantly twice, and sometimes thrice a Year, besides pleasant Woods, and many fine Orchards with all sorts of Fruit. Within the Walls they have no Orchards or Gardens. The City is large and populous, and the Houses stately, especially about the Market-place, where they are commonly 7 and 9 Stories high. *St. Nicholas's* Church is very fine, and the best adorn'd within of any *Lutheran* Church in *Germany*. The Town is famous, 1. For the Purity of the *German* Tongue. 2. For the Concourse of Merchants from most noted Places in *Europe* to their three Annual Fairs at *Christmas*, *Easter*, and *Michaelmas*. 3. For their High Court of Judicature, to which the Elector himself is oblig'd to answer when summon'd. Their Way of Proceeding is describ'd by *Zobelius*, in his Book called, *Differentia Juris Civilis & Saxonici*, and by the Author of the *Chronicon Lipsiense*. 4. For their University, founded in 1408, upon a Quarrel betwixt the *Hussites* and *Papists* at *Prague*, whence 2000 Students are said to have come hither in one Day. It has 4 Colleges, and 24 Professors. Their Chief Professor of Divinity some Time ago, called *Adam Schertzer*, publish'd a Learned Book, called, *Collegium Anti Socinianum*, wherein he confuted the *Socinian* *Carpsenius*, Son to the famous Lawyer of that Name, was much admir'd for his Learning in the Eastern Languages, and explaining the Mysteries of the *Jewish* Rabbies. *Thomasius*, a Schoolmaster there, was also noted for his Skill in *Philology*. In their Library, they have abundance of Manuscripts taken out of the demolish'd Monasteries, but of no great Value. *Dr. Nicholson* says, the only Rarity in it, is *Tretzer's* Greek Commentary on *Homer's Iliads*, (perhaps not to be met with elsewhere) in a fair and legible Character. Near this Place was the chief Seat of the *German* War; so that in two Years, it was taken 5 several times, and at last by the Imperialists in 1633, but restor'd by the Treaty of *Prague*

in 1635. 'Tis also noted for 3 Victories obtained near it by the *Swedes* over the Imperialists in 1631, 1641, and 1642. 'Tis defended by the Castle of *Pleissenburg*, on the River *Pleisse*, which is very strong, and has a good Garison. In 1520, *Luther* disputed in this City with *Eckius* against the Pope's Supremacy; and soon after, it embrac'd the Reformation.

3. *Freiberg*, or *Freidberg*, a famous and pleasant Town near the Banks of the *Mulda*, about Lat. 51. Long. 32. 43. about 8 Miles S.W. from *Dresden*. Dr. *Nicholson* thinks, it derives its Name from the rich Hills on which it stands. The Town is fortified with strong Walls, and held out against the *Swedes* in the Civil War. St. *Peter's* Church here is the usual Burial-place of the Electors, where many of them lie entomb'd in fair Monuments, particularly the Elector *Maurice*, whose Monument is reckon'd one of the noblest in *Germany*. When this City was surrender'd to the Imperialists in 1632, the Elector of *Saxony* gave 80000 Rix-Dollars to save those Monuments from being rifled, because it being the Fashion to bury the *German* Princes in their Robes, with their Ensigns of Honour, Rings, Jewels, &c. the Soldiers would otherwise have ransack'd the Sepulchres. This City is chiefly noted for the rich Mines in and about it, which were discover'd accidentally in 1180, by a Fellow who was carrying Salt, and found in a Cart-Road a Piece of rich Ore. Since that Time, those Mines have been so much dug, that the greatest Part of the Town is undermin'd, and stands upon Vaults and Caverns. Besides those Mines in the Town, there are a great many more within a Mile or two of it; of which, Dr. *Brown* in his Travels gives the following Account:

The Chief of them is that upon the high Hill, which, he says, is deeper than any of those he saw in *Hungary*, being 77 of their Fathoms, which is 208 of ours.

The 2d Mine is that called the *Prince of Heaven*, which not many Years ago produc'd an Ore so rich, that 100 Pound Weight afforded 130 Marks of Silver, or 65 Pounds in the Hundred: But it is a constant Observation among the Miners, That where the Veins are richest and purest, they are thinnest, and generally not above the Breadth of two Inches. The Ore, as

it generally runs, affords not one Ounce and a half of Silver in the Pound, and they work it, tho' it holds not above half an Ounce; which may seem strange to those who know not, that even in the Silver Mines of *Peru* and *Chili*, they work the Silver Ore which affords not above 4 or 5 Ounces; and the rich Ore in the celebrated Mines of *Potosi*, don't commonly produce above 10 or 12 Ounces of Silver; tho' this Hill alone, if we may credit *Alberto Alonso*, has produc'd in Silver since it was dug, betwixt 4 and 500 Millions of Pieces of Eight.

They have here several Ways of opening the Ore to prepare it for melting, as by Lead, and a kind of Silver Ore which holds Lead.

The Sulphur Ore, which is found here, does, after Calcination, prove no small Addition towards the melting of Metals; as likewise the *Schlich*, or Pounded and Wash'd Ore; and the *Slacken*, being the Dross Sediment, or Scum, taken out of the *Vortiegel* (Pan) which received the melted Minerals, let out into it at the bottom of the melting Furnace.

Their *Treibsheath*, or Furnace for separating where the Litharge is driven, is more like that described in *Agricola*, than those in *Hungary*. Some of the Litharge is green. They wash the purest Ore, and such as is mix'd with Stones or Spars; and they have this peculiar here, that before they melt the Ore in the melting Furnace, they burn the Pounded and Wash'd Ore on the *Roasting-Hearth*, as they term it.

The 3d Mine was called the *Neckbreaker*, about 80 *English* Fathoms deep. The Ore it produces is either Copper and Silver, or Silver and Lead, and sometimes all three; but they work only for Silver. The Mines are cold as far as the Air can penetrate, but otherwise warm enough. Where they are at the deepest, they are full of Damps, that sometimes kill the Workmen; but that which troubles them most, is the Dust which settles upon the Lungs and Stomachs of the Miners, and throws them into Consumptions. They have excellent Engines to prevent the Inconveniencies arising from the Water, and sometimes use large Vizards with Glass Eyes, under which they have room enough to breath a considerable while.

Here:

Here is also a rich Sulphur Ore, hard and stony, that with red Spots being deemed the best. This is melted in a peculiar Furnace, to separate it from the Ore, some of which yields 3 Pound of Sulphur from 100 Weight of Ore, which, as it melts, runs out of the Furnace into Water, or the Exhalations of the Ore are condensed into Brimstone by the Coldness of the Surface of the Water, placed to receive it. It is purified again, by melting it once more. Some of this Brimstone Ore holds Silver, and some Copper, but in small Quantities.

The Remnant, after the Sulphur is separated from the Ore, is reserved for a double Use, either for the melting of Silver, or making of Vitriol. In the first Case, a certain Proportion of it is cast into the melting Furnace of the Silver, which, as the Miners term it, renders it more fluid.

In the making of Vitriol or Copperose, they take the Ore from which the Brimstone has been separated, and burn it over again, or let it continue to burn in the open Air; then putting it into a large Vessel, pour as much Water upon it as is requisite to imbibe the Vitriol; which Water being afterwards boil'd to a certain Consistency, is let out into Coolers, where the purest Part of the Vitriol cleaves to Sticks set in on purpose, and the rest sticks to the Sides and Bottom. It is observable, That the Ore, after it is deprived of its Vitriol, has not the least Virtue left to open the Metals, and make them fluid.

Dr. *Nicholson* gives this Account of their discovering Mines by what they call the *Virgula Divina*, which some reckon to be Conjurat. The Discoverer takes a forked Piece of Hazel, holds the two Horns of it in his Hands, with the Forks upright, and traverses the Ground, muttering a Form of unintelligible Words; and when the forked Stick turns in his Hand, (which they ascribe to an occult Impulse) and points to the Ground, he takes it for an infallible Sign of a rich Silver Mine in the Place pointed at; upon which they fall a digging, and seldom fail of Success.

At *Freyberg*, there's a Yearly Coinage of Rix-Dollars, and other Money, which is commonly true Sterling, and reckon'd the best in *Germany*.

The Resident of *Brandenburg* gives this Account of the Mines, That the richest are those of *Sneberg*, discovered in 1471; from which Time to 1501, which was 30 Years, the Elector had for his Tenths 510 Millions of Gold, and 900000 Crowns; and from thence to 1537, 393 Millions of Gold, and 800000 Crowns; but they have not yielded in the same Proportion since that, (tho' they be still very rich) being in Part ruin'd by the War.

4. *Meissen*, formerly the Metropolis of *Misnia*, but now inconsiderable. It takes its Name from the River *Meissen*, on which it stands. It had formerly the best Wooden Bridge in *Germany*; but was destroy'd by the Civil War, and a worse built in its stead. The most remarkable Thing in it now is, a Palace belonging to the Elector, in Form of a Castle, which defends the Town. 'Twas formerly a Bishoprick, founded by the Emperor *Otho* about the middle of the 10th Century; but since 1581, has been in Possession of the Electors. It lies about 10 Miles N. W. of *Dresden*.

5. *Pirn*, on the *Elb*, about 4 Miles S. E. from *Dresden*, a small Town, noted for the Treaty of Peace made there betwixt the Emperor *Ferdinand II.* the Elector of *Saxony*, and other Princes of the Empire, in 1636, which by others is called the Peace of *Prague*. This Town was taken and pillaged by the *Swedes* in 1640.

6. *Mulberg*, on the *Elb*, somewhat above two German Leagues S. from *Torgau*, and about 7 N. W. from *Dresden*, a Village, famous for the Victory of *Charles V.* over the Protestants there in 1547, where *Frederick* of *Saxony* was taken, the *Spaniards* under the Duke of *Alva* having swum over the River, and brought the Boats from the other Side to pass the same, and attack the Protestants, says *La Forest*.

7. *Chemnitz*, on a small River of that Name, the Capital of the Circle of the Mountains, or *Erzgebirgsche-Creys*. It is defended by a good Castle, called *Augustburg*. 'Twas an Imperial Town till 1308, that *Frederick* Marquis of *Misnia* united it to his Dominions. 'Tis famous for Mines of Lead and Tin in the Neighbourhood. It lies 30 English Miles S. W. of *Dresden*.

8. *Frauenstein*, a little Town among the Mountains, noted for a Lead Mine.

9. *Königsstein*, on the *Elb*, 15 Miles S. from *Dresden*, a Fortress with an Arsenal, where the Electors keep their Treasure.

10. *Marienberg*, on the Frontiers of *Bohemia*, a small Town, built in the 16th Century, for working on the Mines then discover'd there.

11. *Aunaberg*, a League from thence, on the Mountain of *Schneberg*, built in the end of the 15th Century.

12. *Zwickau*, on the *Mulda*, 15 Miles S.W. from *Chemnitz*, the chief Town of *Voigt-Land*, so called from the *Voigts* or Provosts the Emperor sent to govern the Country. It was formerly one of the Theatres of the War betwixt *Charlemagne* and the Saxons, and an Imperial Town till 1308, that *Frederick* Marquis of *Misnia* reduc'd it.

13. *Sneberg*, on the same River, 7 Miles further N. noted for its Silver Mines discover'd in 1471, as mention'd before.

14. *Plauen*, a pretty little City on the River *Elster*.

15. *Werda*, a little City, on a River of that Name, which formerly had its own Lords.

Other Towns reckon'd by *La Forest* in this Country are, 1. *Weissfels*, on the *Sale*, anciently called *Leucopetra*, which gives Title to a Prince of the Family of *Saxony*. 2. *Colditz*, a little City of good Trade, on the Conflux of the *Mulda* and *Mulca*. 3. *Leisnau*, on the latter, noted for the Birth of *Appian* the Geographer. 4. *Lutzen*, on the *Elster*, famous for the great Victory of the *Swedes* over the Imperialists in 1632, where the Great *Gustavus* triumph'd over his Enemies in the Arms of Death, which hinder'd his reaping the Fruits of that Victory, chiefly owing to his Valour and Conduct. 5. *Zeitz*, anciently call'd *Mamilla*, a little City on the *Mulca*, sack'd in 982 by the *Vandals*. It gives Title to a Prince of the *Saxon* Family.

The Marquisate of Lusatia, or Lausnitz,

HAS *Bohemia* on the S. *Brandenburg* on the N. *Misnia* and *Saxony* on the W. and *Lower Lusatia* on the E. 'Twas formerly Part of *Bohemia*, and described as such by Geographers; but having rebelled against the Emperor in 1620,

John George of *Saxony* reduc'd them, had it mortgag'd to him for his Service, and at last 'twas settled upon him and his Heirs by the Treaty of *Prague* in 1635; and so it continues, except some Parts of *Lower Lusatia*, which belong to the Elector of *Brandenburg*.

'Tis divided into *Upper* and *Lower*: The former is by some Geographers called *Hexapolis*, because of the 6 Confederate Cities in it, *Lobau*, *Budissen*, *Camnitz*, *Gorlitz*, *Lauben*, and *Zittau*. In the *Lower*, the Towns subject to the Elector of *Saxony* are, *Lubben* on the *Spree*, *Guben*, *Lucken*, and *Calow*; but *Cothus*, *Peytze*, *Sommerfeld*, and others of less Note, are subject to *Brandenburg*. The Length of this Country from E. to W. is about 65 Miles, and the Breadth from S. to N. is 90.

The Country is for most part sandy or boggy, so that it has scarce Corn enough for the Inhabitants; but they have such Plenty of Wood, Venison, and Fish, as might enrich them, had they any Commerce. Their chief Rivers are, the *Spree* and the *Neisse*. By their Mixture of *Wendish* with *German*, they would seem to be of *Slavonick* Extract; but the Citizens speak good *German*. Some derive them from the ancient *Lusici* or *Lutitii*; others from the *Ilingi*, *Elysi*, or *Ligii*. The People are of as quick Parts as their Neighbours, but Penurious. They breed no Horse; but *Buter* says, they can raise 20000 hardy Footmen. They observe the *Saxon* Laws better than ever they did the *Bohemian*. *La Forest* says, it was anciently called the *Eastern Mark*, and had its own Princes, till the End of the 9th Century. *Christian*, descended from *Wittikind the Young*, was their first. The Emperor *Henry IV.* made it a Marquisate for *Otto*, the last of that Line, who died Childless about 1060. *Henry IV.* gave *Upper Lusatia* to *Ladislav* Duke of *Bohemia*, and left the *Lower* to *Dedon*, *Otto's* Cousin, whose Issue failing in 1125, the Emperor *Lotharius II.* gave it to *Conrad the Pious*, Marquis of *Misnia*, whose Successors held it till 1317, that *Waldemar* of *Brandenburg* seiz'd it. Two Years after, the Emperor *Louis* of *Bavaria* gave it to King *John* of *Bohemia*. It fell to the House of *Austria* by *Anne*, Daughter of *Louis* King of *Hungary* and *Bohemia*, who married the Emperor *Ferdinand*; and who

how it came to the House of *Saxony*, we have heard already.

The chief Towns are, 1. *Bautzen*, or *Baudiffina*, their Metropolis, on the *Spree*, about 30 Miles E. from *Dresden*. 'Twas built by a *Bohemian* Duke of the same Name about 800, and was an Imperial City; but lost its Privileges in the 13th Century, when reduced by the K. of *Bohemia*. The Elector of *Saxony* besieg'd it in 1634, and the Imperialists set Fire to the Suburbs, to dislodge the *Saxons*; which being driven into the Town by a strong Wind, consumed all but the Walls and Castle, which obliged it to surrender. The Remainder was afterwards demolish'd by the *Swedes*; since which, this large Town has never recover'd its Lustre. They have a Church, where both Papists and Lutherans have their Worship.

2. *Gorlitz*, on the W. Side of the *Neisse*, about 25 Miles E. of *Bautzen*. Some say, it was founded by *Sobieslaus* of *Poland* about 1131; others, by *Boleslaus* III. in 1139; but soon after it was burnt, and called *Gorlitz*, which in the *Slavonick* signifies a burnt Town. It has several neat Churches, and many stately Houses. Their chief Trade is in Beer, and dressing and dying Linen and Woollen. It is well fortified, and the Approach difficult, because it stands in a Morass. 'Tis the Seat of Justice, and the Residence of the Governor.

3. *Zittaw*, on the *Neisse*, 20 Miles S. E. from *Gorlitz*, so called from a Lady that founded it, in the beginning of the 11th Century, as some say; tho' others think it was by *Wenceslaus* King of *Bohemia*, in the middle of the 13th. They have a good Trade in Beer, and an old *Franciscan* Monastery, turn'd into an Hospital since the Reformation.

4. *Leiba* or *Lobau*, *Liben*, *Loben*, or *Luben*, one of the oldest Towns in those Parts. The other Confederate Towns send their Deputies hither, to consult in Cases of Importance. It lies on a small Rivulet midway betwixt *Gorlitz* and *Bautzen*, surrounded with pleasant Meadows. In 1639, the *Swedes* found 70000 Crowns of Cash, besides other Booty, here.

5. *Luben*, on the *Spree*, the Capital of *Nether Lusatia*, 55 Miles N. from *Baudiffina*. The Elector has a Palace here, where he some-

times resides. It has the chief Place in the Diets.

6. *Guben*, a well fortified little Town in *Nether Lusatia*, about 24 Miles E. from *Luben*, on the *Neisse*, which contributes much to its Strength. In 1631, the Imperialists took it after the Battle of *Leipsick*; but 'twas not long after taken again by the Marquis of *Hamilton*, afterwards Duke, then a General in the *Swedish* Army, who put most of the Garrison to the Sword. In 1642, it held out 3 Weeks against the *Swedes*; but was obliged to surrender on Discretion for want of Necessaries.

7. *Soraw*, on the Borders of *Silesia*, 20 Miles S. E. from *Guben*, by some reckon'd the Capital of *Nether Lusatia*. 'Twas often taken and retaken during the Civil Wars of *Germany*.

8. *Cothus*, or *Cotuitz*, on the *Spree*, 20 Miles S. from *Luben*. 'Tis a fair Town, subject to the Elector of *Brandenburg*.

9. *Camitz*, or *Caments*, a little City, well built and fortified, on the Frontiers of *Misnia*, about 15 Miles N. W. from *Baudiffina*.

Other Towns here are, 1. *Friedland*, a small City, on a Canal that falls into the *Spree*. 2. *Sprehenberg*, on a Mountain, upon the *Spree*. 3. *Konigswart*, a pretty little City on the *Weiss Elster*. 4. *Zobellitz* on the *Schops*, in the best Part of *Lusatia*.

The Marquisate of Brandenburg.

HAS *Mecklenburg* and *Pomerania* on the N. *Anhalt*, *Upper Saxony*, *Lusatia*, and *Silesia*, on the S. the Dominions of the House of *Brunswick* and *Magdeburg* on the W. *Prussia* and *Poland* on the E. *Dresser* says, it is 7 great Days Journey in Breadth, and 7 in Length. According to *Moll*, 'tis but 190 Miles from E. to W. and about 90 where broadest from S. to N. *Samson* makes it about 225 long, and scarce 90 where broadest; so that *Dresser* must be mistaken, or else mean it, of all the Elector's Dominions, which may be true.

The Country in general is sandy and woody, abounds with Corn; but is not plentiful in other Provisions. They have great Flocks of Sheep, but not of Black Cattle; and tho' in some Parts they boast of their Wine, the *Saxons* despise it to a Proverb.

They

They have few Silver Mines, but some of Brass, Iron and Copper; so that their Money is generally worse than in Saxony and the Dominions of Brunswick. They have many Forreſts, which abound with Veniſon. The ancient Inhabitants were the *Varini* and *Naitbones*, Branches of the *Swevi*, ſucceeded by the *Helvoldi*, *Wilini*, *Beirami*, and other *Slavonians*. Henry I. conquer'd this Country about 620, expelled moſt of thoſe People, and gave the Country to *Siegefrid* Earl of *Rengenheim*, who, with his Succeſſors, new Planted and Peopled it from the *Netherlands*, *Weſtphalia*, *Fraconia*, and *Saxony*, which occaſioned that Confuſion which is ſtill obſervable in their Dialect. Dr. *Nicholſon* ſays, the Country People are generally ſo poor, that a Bed of clean Straw is a Character of one of the better Sort. Their Northerly Situation makes the Winter cold, and 7 or 8 Months long; but they have Plenty of Wood for Fuel, and might make great Profit of their Cattle, were they as much given to Trade, as to Drinking and good Cheer, ſays *La Foreſt*. Their principal Rivers are, the *Elb*, the *Oder*, the *Hawell*, the *Spree*, and the *Warte*. The two firſt have a Communication by means of a Canal, which ſaves their paying the Tolls in the *Sound*, and facilitates the Exportation of their own Commodities. There are abundance of Lakes in this Country, the chief of which is *Uckersee*. The Elector's Dominions in general are called *Mark*, and he himſelf *Mark-Graſ*, for which we uſe the French Word *Marquis*.

Selden, in his Titles of Honour, gives this Account of that Dignity, viz. That they had the Name from being Governors of Frontier Provinces at firſt; but it was afterwards given to thoſe who had the Government of Inland Countries, as *Miſnia*, *Lufatia*, *Brandenburg*, &c. In the Time of the French Empire, they were alſo called *Duces* and *Comites Limitanei*; but the Title of *Marchio*, he ſays, was not found in the Empire till the Time of *Charles the Great*, but 'twas only Officiary, and not Hereditary, till the Time of Henry I. who made one in *Sleſwick* againſt the *Danes*, and another in *Brandenburg* againſt the *Vandals*. In later Times, there were 4 more eminent than the reſt, called the High Margraves, viz. *Brandenburg*, *Moravia*, and *Baden*; and be-

ſides Robes of State, had a Cap of State, ſuch as Dukes.

The *Atlas Historique* has a very large Tree of this Family, which he derives from the Family of *Aſcania*, mention'd formerly in the Families of *Saxony* and *Anhalt*. The firſt is *Bernthobaldus* I. Son to a Lord of *Aſcania* and *Ballenſted*, who liv'd about 524. Others derive them from *Adalgerius*, choſen King of *Bavaria* in 456, whoſe Succeſſors contented themſelves with the Title of Dukes. His Succeſſor *Theodo* I. conquer'd Lower *Bavaria* from the *Romans*. *Theodo* II. carried on the War againſt them with much Glory. From him came the Branch of the *Lombard* Kings; and from *Thaſilo* II. the 6th in Deſcent from *Theodo* II. came the Branches of *Brandenburg* and *Bavaria*, and likewiſe the Branch of *Charlemagne*, and the Branch of *Zollern*. The *Atlas* gives the Origin of the Margraves of *Brandenburg*, who have poſſeſſed this Country, thus: *Sigfrid*, young-eſt Grandſon to *Wittikind* Earl of *Rengenheim*, was firſt created Marquis of *Brandenburg* by Henry I. in 927, being Brother to the Emperſs, and famous for his Wars againſt the *Slavonians*. He was ſucceeded by *Gero*, who built the Monastery of *Gerrenrod*; but our Room allowing us only to make mention of ſuch as were remarkable by their Actions, we proceed to *Hugh*, the 4th Marquis, who built 7 ſtately Monasteries in *Italy*, and died in 1001. The 6th, *Theodorick*, was a great Enemy to the *Veneſi*, and others of the neighbouring *Slawi* and *Vandals*, two of whoſe Princes he perſwaded the Emperor *Henry* II. to hang up. He was at laſt overpower'd by them, beat out of his Dominions by *Miſtiwoius* Prince of the *Obotriti*, and ended his Days miſerably in a Monastery at *Magdeburg*. The 7th, *Udo* Earl of *Soltwedel*, aſſiſted by *Conrad* II. defeated the *Slawi*, drove them out of the Country, and was made Marquis himſelf. His Son *Udo* II. rebelling againſt the Emperor *Henry* IV. was proſcribed, and ſucceeded by *Primiflaus* King of the *Obotriti*, Anceſtor to the Family of *Mecklenburg*; after whoſe Death, *Frederick* I. gave the Country to *Albert the Bear*, Prince of *Anhalt*, and Marquis of *Soltwedel*; after whom came the ſecond Catalogue of the Marquiſſes: The firſt of whom, *Albert*, Elector and Duke of *Saxony*, *Brunſwick*, &c. ſucceeded Henry the

Lion.

Lion. The 6th of this Line, *Otho III.* built *Brandenburg* and *Prussia*; and during the 15 Years of his Reign, had a constant War with the Archbishop of *Magdeburg* and the Bishop of *Halberstat*. The 10th, *Waldemar*, annexed great Part of *Lusatia*, which he won from the Marquis of *Misnia*. The 12th was *John IV.* the last of the House of *Anhalt*, who dying without Heirs, the Emperor gave the Marquifate to the 12th, who was *Louis* of *Bavaria*, Son to *Louis* the Emperor. He resign'd it to his Brother *Louis II.* who was succeeded by the Emperor's 3d Son, *Otho* Count Palatine of the *Rhine*. He sold it to the Emperor *Charles IV.* who gave it to his own Son *Wenceslaw*, who being elected Emperor, gave the Marquifate to his Brother *Sigismund*, King of *Hungary* and *Bohemia*, who was the 17th Marquis of this Catalogue; and succeeding to the Empire, gave the Marquifate to *Frederick* Burgrave of *Nuremberg* in 1417, who was the first of the present Line and Catalogue.

The *Atlas Historique*, before he comes to the History of the Princes of this Line, makes the following Remarks; That the Electorate was possessed 170 Years by the Posterity of *Albert* of *Anhalt*; which failing, the Marquifate return'd as a Fief of the Empire to the Emperor *Louis* of *Bavaria* above-mention'd, who, without any Regard to the Pretensions of the Family of *Anhalt*, from whom the extinguish'd Branch descended, gave it to his own Son *Louis*, who for 26 Years was engaged in War with an Impostor, who, some say, was Son to a Miller; and others, of a Baker, and pretended to be *Waldemar* Marquis of *Brandenburg*, who died in Wars abroad. This Impostor was supported by the King of *Bohemia*, the Dukes of *Saxony*, *Brunswick*, *Pomerania*, *Mecklenburg*, and the Princes of *Anhalt*, who were Enemies to *Louis* on the Account above-mentioned. But the Imposture being discovered, the Emperor *Charles IV.* confirmed *Louis* above-mentioned; After whom it came to *Wenceslaw* and *Sigismund*, as above, who not being able to restore the Peace of the Electorate, it was given to *Frederick V.* Burgrave of *Nuremberg*, as has been said already, who undertook to pacify the Troubles, for which he was to have 100000 Gold Crowns of *Hungary*, and to restore the Electorate to *Sigismund* and *Wences-*

slaw; but *Frederick* having reduc'd the Country, was by *Sigismund* and the Diet made Elector, on Condition, That if the Emperor paid him 400000 Crowns, the Country should again return to *Sigismund* and his Heirs; and if they fail'd, to *Wenceslaw* and his: And after this Treaty, the *Atlas* says, That by Letters Patents in 1415, the Electorate was discharged from their Oath to *Sigismund* and *Wenceslaw*; and two Years after, *Frederick* was solemnly proclaim'd Elector in the Council of *Constance*, with the following Ceremonies, which shew the Form of creating an Elector.

Some Barons and Gentlemen rode three times thro' the Streets, with two Standards, and Trumpets playing: After which all the Princes came to the Burgrave's House with little Colours, bearing the Elector's Arms, and conducted him to the Market-place, where a Scaffold was erected. Upon which the Emperor mounted with his Crown on his Head, and sitting down on his Throne, with the Electors in their Robes on both Sides, the Burgrave came up, attended by two Officers with the Standards of the Marquifate, and of the Burgraviate; the Burgrave kneeling, desir'd the Emperor to create him Margrave, and to invest him with the Marquifate, which, after the Burgrave took the Oath, was done accordingly, by putting into his Hands the Standard of the Marquifate, the Gold Apple or Globe, and the Scepter, and by girding a Sword to his Side: After which he was proclaim'd Elector of *Brandenburg*, and Arch-Chamberlain of the Empire. And thus the Family of *Anhalt*, which had acquir'd two Electorates, viz. that of *Brandenburg* in 1142, and that of *Saxony* in 1180, had the Misfortune to lose both in less than one Age. *Frederick*, after his Investiture, reduc'd several Towns belonging to the Electorate; and while he was thus engaged, *Louis* of *Bavaria* invaded his ancient Dominions of *Nuremberg*, which he reveng'd by a War upon him, in which he acquir'd great Reputation. During this Expedition, the Emperor made *Frederick* Marquis of *Misnia*, Elector of *Saxony*, to whom *Frederick* quitted *Wirtemberg*, and all the Electoral Territory of *Saxony*, on Condition that he should pay him a certain Sum for having defended it. In 1426, the War with the

Hussites began, wherein *Frederick* was declared General. This War proved ruinous to *Bohemia*, and to Part of the Elector's Dominions, which they invaded. The Duke of *Saxony* taking this Opportunity, did also make War upon *Frederick*, but was worsted. Those of *Magdeburg* and *Halle* having rebelled against their Bishops, and being proscribed by the Emperor, were afterwards reconciled by *Frederick* in 1435. The Elector being advanced in Years, resolved to settle his Affairs by his Will, and calling for his Sons, spoke to *John* his eldest thus: *I have observed that you love Peace and Ease, which you cannot enjoy if you possess the Electorate; therefore, if you agree to it, I will leave the Electorate to Frederick, your second Brother, who is more active and strong than you. I will leave you Voiland, Albert shall have what belongs to me in Franconia, and young Frederick a Part of the Marquisate.* *John* willingly agreed to it, thank'd his Father for taking Care that he should enjoy Peace and Quiet, and for laying the Weight and Burden of the Government on his Brother *Frederick*.

The Elector dying in 1440, *Frederick* II. succeeded, and was some Time after chosen King of *Poland*, upon the Death of *Ladislaus* their King at the Battle of *Warha* without Issue; but *Frederick* refus'd it, because *Ladislaus* had a Brother, who was Duke of *Lithuania*. After this the *Poles* besieged *Frankfort* on the *Oder*, where *Frederick* defeated them, and killed 3000 on the Spot. Soon after, *Podiebrat* King of *Bohemia*, and *Louis* Duke of *Bavaria*, made War upon him for *Lusatia*, which he possessed as a Fief of *Poland*; but this War was concluded by dividing the Country betwixt them. *Otto* III. Duke of *Stettin*, dying, *Frederick*, by Vertue of a former Agreement betwixt their Ancestors, demanded the Investiture of the Duchy of *Pomerania* from the Emperor *Frederick* III. but his Title was controverted by the Dukes of *Wolgast* as nearer of Kin. *Frederick* however took Possession by the Emperor's Consent: This occasion'd a troublesome War, which laid waste that Part of his Dominions called the *New Marg.* But a Peace was concluded at last by the Mediation of *Casimir* King of *Poland*. *Podiebrat* King of *Bohemia* being accus'd of Heresy, the Pope offer'd his Crown to *Frederick*, who

refus'd it. Being advanc'd in Years, and not able to bear the Fatigues of Government, he resign'd the Electorate, with the Emperor's Consent, to his Brother *Albert* and his Heirs, whom the Emperor did also invest with the Dutchies of *Pomerania* and *Stettin*, the Burgraviate of *Nuremberg*, the Principality of *Rugen*, and the Right to the Succession of *Mecklenburg*. *Frederick*, after his Resignation, went to *Franconia*, where he died, in the 58th Year of his Age, and was succeeded by his Brother *Albert* I. Dr. *Nicholson* says, That *Frederick* II. was, because of his peevish and cruel Temper, called the Marquis with Iron Teeth; but this does not agree with the Character given him by the *Atlas*, and seems rather to have proceeded from his Success in War.

Albert succeeded him in 1442, and was made General of the Empire at 24 Years of Age against the *Bohemians* and *Poles*, with whom he made a successful War. He gain'd also great Honour in a Tournament at *Augsburg*, being the only Man who was not dismounted. *Louis* the *Hump-back*, Son to *Louis* of *Bavaria*, being disinherited by his Father, courted *Frederick's* Alliance, by which he fought and took his Father, and would not release him till he paid him a considerable Ransom. In 1448, *Albert* had War with those of *Nuremberg*. Most of the Princes of the Empire took Part with him, and all the Imperial Towns sided with *Nuremberg*. In two Years, they fought 9 Battles, of which *Albert* gain'd 8; but both Parties were forc'd to give over for want of Money and Provisions. One of the *Nuremberg* Party being ask'd, Why so many made War upon one Man? He answer'd, That *Albert* alone possessed all the Riches and Strength of the Empire. He acquir'd such Reputation in this War, that he was afterwards made Arbitrator of all the Differences of the Empire. In 1461, he had War with *Louis* the *Rith*, D. of *Lower Bavaria*, for two Years, to support *Adolph* Count of *Nassau*, whom Pope *Pius* II. had made Archbishop of *Mentz*, and deprived *Theodorick* of *Uffenburg* of that Dignity; but the Cardinal of *Augsburg* did afterwards make up the Difference. He did all this, while his Brother was Elector. When he came to the Electorate, he apply'd himself to aggrandise his Family, and would

would have annex'd the Dutchy of *Stettin* to his Dominions; but by the Mediation of the Duke of *Mecklenburg*, he contented himself with what he had taken by Arms, and with the Dukes of *Pomerania* doing him Homage for the Dutchy of *Stettin*. For the better Support of his Family, he perswaded the Houses of *Hesse* and *Saxony* to enter into a Contract of mutual Succession betwixt the three Families, in case any of their Posterities happen'd to fail. After the Death of *Erick* Duke of *Wolgast*, his Son *Bogislas* refus'd Homage to *Albert*, and took Arms; but the Difference was made up, on Condition, That if the Male-Issue of the Dukes of *Pomerania* fail'd, *Albert's* should succeed. Soon after this he was made General by *Frederick III.* against *Charles* Duke of *Burgundy*, who besieg'd *Nuis*; but could not oblige him to raise the Siege. During this Expedition, he left the Government to his eldest Son, and afterwards confirmed him in it; and being advanc'd in Age, reserving only the Title of Elector, he retir'd to his Dominions in *Franconia*. The Emperor *Frederick III.* dying in 1486, *Albert*, notwithstanding his great Age, went to assist at the Election of a new Emperor; but died suddenly in a Bath. The Pope call'd him the *Achilles* of *Germany*, and others the *German Ulysses*. He had all the Qualities of a great General, and was admir'd by every body for his noble Mien, and great Eloquence, as well as for his Wisdom and Valour, having fought more Battles than any General of his Time. *Dr. Nicholson* says, he died at *Frankfort* in 1494; which is more like to be true, since the Emperor *Frederick III.* died, according to the *Atlas*, in 1493; and the Tree of the House of *Austria* says the same.

John I. succeeded his Father *Albert*. He was bred at the Court of his Uncle the Elector *Frederick II.* where there was great Care taken to teach him the Art of Government and War. His Uncle took him with him to the Wars of *Pomerania*; and when he was but 15 Years of Age, he was entrusted with the Administration of the Marquisate. A War happening betwixt *Casimir* King of *Poland*, his Son *Ladislaus*, and *Matthias* King of *Hungary*, *John*, by his Eloquence, brought them to an Accommodation. He was so remarkable for this Qua-

lity, that he was called the *German Cicero*. He likewise obliged the Duke of *Sagan* and the King of *Hungary* to raise the Siege of *Crossen*, and to leave the Dutchy of *Crossen*, and other Countries, as a Mortgage for the Dowry of his Sister, Widow to the Duke of *Glogau* in *Silesia*. After this, *John* contributed much to the Election of the Emperor *Maximilian*. His Money being exhausted by War, he laid an Excise upon Beer in his Dominions. This made the People of the *Old Marq* rebel, and kill some of his Officers, for which he depriv'd them of their Privileges. He became so extraordinary fat, that he was not able to bear it, and endanger'd his Life by attempting to make himself lean. He design'd to establish an University at *Frankfort*; but not being able to accomplish it, order'd his Successor *Joachim* to do it; and finding Death to approach, he sent for him, gave him pious Advice, recommended to him to take Care of his People, to do them Justice, and not to suffer his great Men to oppress them. He died in 1499. His Son *Joachim* succeeded, being scarce 16 Years of Age; and since, according to the *Golden Bull*, he could not take the Government upon him, he consulted the Elector of *Mentz*, who advis'd him to assume the Electoral Dignity notwithstanding. His Father took great Care of his Education, so that he was well instructed in all the Liberal Arts, and very well vers'd in the Art of Government. He establish'd the University of *Frankfort* according to his Father's Order in 1506. *Conrad Wimpia* was their first Rector, and form'd their Statutes. Above 1000 Scholars enter'd to it the first half Year. *Joachim's* Wisdom and Probity gain'd him the Esteem and Affection of all his Neighbours; and the *Hamburgers* trusted him with the Defence of their City. He severely punish'd some *Jews* for prophaning a Consecrated Host. *Louis* of *Erlikhausen*, Great Master of the *Tentonick* Order, sold to the Elector *Frederick II.* the *New Marq*; and *Albert the Great*, his Brother, when Master of that Order, made that Province Hereditary to *Joachim* and his Successors, because of the great Sums the Margraves of *Brandenburg* had laid out in Defence of the Order. In his Time, *Luther* began to preach in *Germany*; and the Emperor *Maximilian* dy-

ing, *Joachim*, and his Brother *Albert* Archbishop of *Mentz*, contributed much to the Election of *Charles V.* He likewise made Peace betwixt the Bishop of *Hildesheim* and the Dukes of *Brunswick*. At the Diet of *Worms*, he and the Elector of *Treves* endeavour'd to perswade *Luther* to retract what he had writ against the Pope, Cardinals, and the rest of the Clergy; which *Luther* refusing, he ask'd him, If he could advise him to any better Method for restoring the Peace of the Church? To which *Luther* answer'd, That he must go and consult at the Feet of *Gamaelel*, which very much disoblig'd the Elector. *Joachim* was so great a Justiciary, that a Merchant being robb'd near *Berlin*, ty'd and thrown into a Pit, whence the Robber thought he could never escape, got out however, and hearing much of the Elector's Justice, complain'd to him, and charg'd it on one of the Courtiers: Upon which, *Joachim* order'd 'em all to be brought before the Merchant, who discovering the Criminal, demanded Justice, and the Courtier confessing it, was put to Death. He had some Difference with the Duke of *Pomerania*, which was accommodated by renewing the Treaty, That his Heirs should succeed, if the Male-Issue of *Pomerania* fail'd. At the Diet of *Augsburg* in 1530, he was chose to speak to the Emperor in the Name both of the Papists and Protestants, because of his Eloquence and Learning; which, with the Solidity of his Advice, was very much admir'd on that Occasion: And *Dr. Nicholson* says, he was the first who authoriz'd the Reformation in his Dominions. At his return from the Diet, he punish'd the Citizens of *Stendal*, who had abus'd the Deputies which the Princes his Sons had sent to accommodate some Differences, which had happen'd among them about Religion; but being stir'd up by a Monk, they assaulted the Deputies and Magistrates, who narrowly escap'd: For this, the Elector depriv'd the City of their Tolls, fin'd them in 10000 Crowns, and oblig'd them to repair the Damage they had done to Houses, &c. in the Tumult, abolish'd the Annual Feast of *Pantheleon*, which the Tradesmen had made use of to raise this Tumult, and condemned the Ringleaders to die; but at the Request of his Sons, he contented himself to banish

them and their Families. After which, he had no more Troubles during his Reign. To prevent any Difference among his Sons, he divided his Dominions betwixt them before his Death: *John* had the *New Mark*, and his eldest Son *Joachim* succeeded to the Electorate, and his other Dominions, after his Death, which happen'd in the 51st Year of his Age, and the 36th of his Reign.

Joachim II. succeeded in 1536. His Father took great Care to breed him up in Learning and Virtue. He acquir'd great Knowledge in the Languages and in the Scriptures, and surpass'd all the young Princes of the Empire in civil and pleasant Behaviour. Having thus accomplish'd himself, he went to the Court of the Emperor *Maximilian I.* who being the perfect Model of a good Sovereign, *Joachim* profited much by his Example. The Emperor, charm'd with his good Qualities, which were so like his own, betroth'd to him the *Infanta* of *Spain*, his Grand-Daughter, and promis'd himself a happy Posterity by this Match; but the Death of the Princess before the Consummation of the Marriage prevented it. This young Prince having always attended his Father at the Diets, and frequently acted as his Deputy, was a perfect Master of Government, and of all the Affairs of the Empire, which procur'd him universal Respect. *Soliman I.* Emperor of the *Turks*, having invaded and over-run most of *Austria*, *Joachim*, with 1000 of his own Horse, join'd the Army of *Philip* Prince *Palatine*, and charged the *Turks* with so much Courage at the Battle of *Leopold*, that he kill'd one of their Basha's, and put them to flight. This did so much advance him in the Esteem of *Charles V.* that he made him a Knight of the *Golden Fleece*, an Honour in those Days conferred upon none but such as had distinguish'd themselves in Battle. He married first *Magdalen* of *Saxony*, who dying in 1534, 2 Years after he married *Hedwige*, Daughter to *Sigismund* King of *Poland*; but the Death of his Father, happening at the same Time, prevented the Solemnities of the Marriage. As soon as he came to the Government, he join'd with those of the *Augsburg* Confession, *Elizabeth* of *Denmark*, his Mother, being a *Lutheran*. *Sigismund* King of *Poland*, and the Elector of *Saxony*, his Fathers-in-Law, and his

his Uncle *Albert* the Elector of *Mentz*; did all they could to hinder his doing so, but in vain. He enrich'd the University of *Francfort* with the Possessions of the Monks and Popish Clergy, and took Care, that those who were bred for the Church or State Employments, should be taught good Principles. His own Example polish'd his Subjects, and inspir'd them with Virtue. He reform'd the Corruptions of the Courts of Justice, and his Subjects liv'd in perfect Peace during his Reign. He preserv'd the Empire from the Invasion of the *Turks*; but was hinder'd by those who envy'd his Glory from doing any thing considerable against them, being kept short of Money and Provisions. He prevented the Execution of the Elector of *Saxony*, who was taken Prisoner, and condemn'd by *Charles V.* and interceded for the Landgrave of *Hesse*, who was made Prisoner by the Duke of *Alva*, contrary to Promise. He bravely oppos'd the *Interim* that was agreed upon at the Diet of *Augsburg* to be the Religion of the Empire, till a General Council should determine the Religious Differences. He and his Electress were sav'd by a special Providence, when the Floor of a Chamber fell under them at *Grimnitz* in 1549; when the Elector went thither to hunt. He hung by a Plank till his Officers rescued him; and the Electress catch'd hold of the Horns of a Deer that hung against the Wall, till she was also rescued. The Emperor refusing to set the Landgrave of *Hesse* at Liberty, *Joachim* join'd with *Maurice* of *Saxony*, and defeated the Emperor's Army commanded by *Albert* of *Brandenburg*, so famous in History, which obliged the Emperor to set the Landgrave at Liberty. He renewed the Treaty of mutual Succession betwixt his own Family and those of *Saxony* and *Hesse*. *Ferdinand I.* having assembled the Electors at *Francfort*, to have his Son *Maximilian II.* chosen King of the *Romans*, he honour'd *Joachim* so far, as to go out of the City with the rest of the Princes to meet him. *Ferdinand* dying in 1564, *Joachim* wept for Grief at the Troubles he foresaw would attend the Death of that peaceable Prince. He was reckon'd to have something of a Spirit of Prophecy, and his Predictions are observ'd by Historians to have come justly to pass. He procur'd the Title of Duke of

Crossen in *Silesia*, and the Right of Succession to the Dutchy of *Prussia*. He was a very Religious Prince, and a little before his Death did meditate much on our Saviour's Passion, and form'd a Draught of it with his own Hand. He died suddenly of Poison given by a Jew in a Glass of Sack, in the 66th Year of his Age, and 36th of his Reign. The Emperor *Frederick* esteem'd him so highly, that at his Death, he order'd his Sons to take his Advice as that of a Father.

His Son *John George I.* succeeded in 1561. He had a very good Education, and made his first Campaign in the Army of *Charles V.* against the Protestant Princes, who enter'd into the League of *Smalcald*. He signaliz'd himself on several Occasions, particularly at the Siege of *Wirtemberg* in 1546. He had a numerous Family, which made him look carefully after his private Affairs, but without neglecting those of the Publick. *Philip II.* of *Spain* made him one of his Privy-Council, and General of his Army, both which Posts he enjoyed under *Maximilian II.* till he came to the Electorate upon the Death of his Father, when he banish'd the Jews out of his Dominions, and order'd him that poison'd his Father to be put to a cruel Death. Finding himself in great Debt, he obtain'd Money to pay them from a Meeting of his States. He renewed all the Constitutions that were for the Good of his Subjects, of whom he took great Care, and preserved their Religious and Civil Liberties. He was so much esteem'd for his Probity, that the Duke of *Mecklenburg*, the Duke of *Anhalt*, and the Elector of *Saxony*, appointed him by their Wills to be Tutors to their Sons, which he executed with great Justice. He endeavour'd to obtain Freedom for the Protestants in the Electorate of *Cologne*, after the Pope had excommunicated their Elector for turning Protestant. He took great Care to have Religion and Justice flourish in his own Dominions, and supported his Grandson *John George*, who was chosen Administrator of the Bishoprick of *Strasburg*, and died piously in 1598, in the 72d Year of his Age, and the 27th of his Reign. He was a Mild, Industrious, Eloquent, Judicious, and Bountiful Prince, had excellent Parts, a noble Mien, and good Face.

He was succeeded by his Son *Joachim Frederick*, whose Preceptor was the Learned *Hübner*, whom he afterwards made one of his Counsellors. During his Minority, he was chosen Bishop of *Havelberg* and *Lubeck*; but his Father took Care of the Administration. At 19 Years of Age, he went to the Court of the Emperor *Maximilian II.* follow'd him in his Wars in *Hungary*; and upon the Death of the Archbishop of *Magdeburg*, was made Administrator of that Archbishoprick, and brought in the Reformation there, where his Government was pleasing to all his Subjects. He liv'd in perfect Amity with his neighbouring Princes, and frequently reconcil'd their Differences. He assisted *Henry IV. of France* against those of the League. After his Father's Death, his Subjects receiv'd him with as great Joy as those of *Magdeburg*, whom he had govern'd so happily for 30 Years, had Grief at his Departure, and out of Love to him, chose his youngest Son in his stead. The Emperor *Redolphus*, who esteem'd him highly, readily invested him, and granted his other Demands. He govern'd his Subjects with great Mildness and Justice; and being taken ill as he was singing Psalms in his Coach, he died suddenly, recommending himself devoutly to God, in the 62d Year of his Age, and 11th of his Reign, in 1609; and was succeeded by

John Sigismund, who was bred up in Learning at *Strasburg*; and in the 19th Year of his Age, was married to *Ann* Dutchess of *Prussia*, Presumptive Heiress of the Dutchy of *Juliers*. He was confirm'd in the Dutchy of *Prussia* by the King and Diet of *Poland*; but not without Opposition by some of the *Polish* Grandees: And the Duke of *Juliers* and *Cleves*, Uncle to his Electress, dying, he took Possession of those Dutchies in her Right; but was opposed by the Duke of *Neuburg*, and at length came to an Agreement to govern jointly. He enter'd into the Union of the Protestant Princes, against the League made by the *Papish* Princes in the Empire, and died in 1619, in the 48th Year of his Age, and 12th of his Reign; and was succeeded by his Son

George William, who was born in 1595, and bred in the University of *Frankfort*. During his Father's Life, he had the Administration of *Juliers* and *Cleves*. He

was very zealous for the Protestant Religion; and in an Assembly held at *Leipsick*, endeavour'd an Union betwixt the *Lutherans* and *Calvinists*, which came to nothing, because of the Peevishness and Stubbornness of some Churchmen. After the Battle of *Prague*, where *Frederick IV.* Elector *Palatine*, was defeated, *George William*, and the Elector of *Saxony*, procur'd Peace in the Empire for some Time: But the Success of the House of *Austria* having made them attempt the Liberties of the Empire, and the Ruin of the Protestants, it brought on the War betwixt *Gustavus Adolphus* and the Emperor; during which, the Dominions of *Brandenburg* suffer'd very much; and all the Elector could do, was to defend his best Places. He dy'd in 1640, and was succeeded by his Son

Frederick William, who provided for the Ease of his Subjects by a Treaty of Neutrality with the *Swedes*, who by the Peace of *Münster* were obliged forthwith to evacuate *Pomerania*, and the Marquisate of *Brandenburg*; but the *Swedish* Deputies delayed it by Tricks till 1653; nor could it then be procured but by the Elector's quitting that now called *Swedish Pomerania*, and several Bailiwicks, with the Isle of *Rügen*, to the *Swedes*; for which he had, but much short of an Equivalent, the Archbishoprick of *Magdeburg*, the Bishopricks of *Halberstadt* and *Camin*, and the Principality of *Minden*, with their Dependencies. He offer'd 2000000 Crowns, and all those Dominions, for that Part of *Pomerania* he was obliged to yield; but in vain. He bravely maintain'd the Prerogatives of the Electors as to the Ceremonial in the Diet of *Frankfort*, and was very zealous in supporting the Interest of Religion, and particularly of the *Calvinists*. In 1656, he was oblig'd, for the Preservation of *Prussia*, to join with the *Swedes* against the *Poles*. But the King of *Denmark* having declared War against *Charles Gustavus* of *Sweden*, he was forced to leave *Poland* to defend his own Country; so that the Burden of the *Polish* War falling upon the Elector, he made it up by a Treaty with the *Poles*, by which they acquitted him from the Homage due to their Crown for *Prussia*, and quitted him the Fiefs of *Lauenburg*, *Botow*, and the Town of *Elbing*, on Condition that he should restore the latter on their paying him 400000 Crowns. After

ter the Death of *Ferdinand III.* in 1657, the *French* were for advancing the Elector of *Bavaria* to the Imperial Throne; but the Elector of *Brandenburg* adhering to the House of *Austria*, the last Emperor *Leopold* was chosen, tho the Elector of *Bavaria* had before-hand gained 3 Votes. He afterwards took Part with the *Poles*, the H. of *Austria*, and the *Danes*, against *Sweden*, after having first endeavour'd to accommodate Matters betwixt the *Swedes* and *Poles*; but not being seconded by the *Dutch*, as he expected, a Treaty was concluded at *Oliva* in 1660. After this he apply'd himself to the Affairs of Peace, to reconcile himself with the Princes at variance with him, and made an Alliance with *France* and *England* for his own Security. The *French* King having seiz'd the Principality of *Orange*, the Elector being Tutor of the young Prince, sent an Embassy to plead for its Restoration. In 1666, he made a perpetual Treaty with the Prince of *Nenburg* about the Succession of *Juliers* and *Cleves*, and afterwards got the latter perpetually annexed to his own Family. He assisted the Emperor against the *Turks*, made Peace betwixt the Dukes of *Lunenbourg*, who had fallen out amongst themselves, and likewise betwixt the *English*, the *Dutch*, and the Bishop of *Munster*. In 1672, the *French* having declared War against the *Dutch*, he sent Assistance to the latter, and his Troops join'd those of the Emperor under General *Montecuculi*, who disagreeing from the Elector's Measures, they did little more than give a bare Diversion to the *French*. On some Discontents by the Emperor and States, he made a Treaty with *France* in 1673; but in 1674, renewed his Alliance with the States against *France*, and went into *Alsace* with 20000 Men; but the Imperial General *Bournoville* thwarting his Measures, little was done that Campaign. In the mean time the *Swedes*, at the Solicitation of *France*, invaded *Pomerania* and the *Marq.* Upon which the Elector return'd from *Alsace* against the *Swedes*, over whom he gain'd a compleat Victory at *Faght-Berlin*, and took from them the Isle of *Wollin*, *Wolgast*, and *Anclam*, one of the strongest Forts of *Pomerania*. He also took *Stettin*, after a famous Siege; of which, in its Place. In 1678, he made himself Master of the

Isle of *Rugen*, took *Stralsund* and *Gripwald*, and chas'd the *Swedes* out of all *Pomerania*. They, to divert him, invaded *Prussia*; but the Elector, in the middle of the Winter, passed the Lake or Bay of *Courland*, which falls into the *Baltick*, with his Army and Artillery upon the Ice, where it was 3 Miles broad, surpris'd and defeated them; so that of 16000, scarce 5000 escaped to *Livonia*. After the War of 1672, he was left out of the Treaty of *Nimeguen*; and Peace being concluded among the other Princes, and the *French* joining with the *Swedes*, he was obliged by the Treaty of *St. Germain* to quit all his Conquests to them, for which the *French* King, by a secret Article, paid him 300000 Crowns towards his Charge of the War. The King of *Spain* refusing to pay him his Arrears, he put out 8 Vessels, that took a rich Merchant-Ship on the Coast of *Spain*, by which he did himself Justice. In order to enlarge the Trade of his Subjects, he built a Fortress in *Guinea*, called *Grand Fredericksburg*, and made a Canal betwixt the *Sprae* and the *Oder*, by which he facilitated the Commerce of the Merchants of *Silesia* with those of *Hamburg* and his own Dominions. He imbelish'd the Town of *Berlin* with fine Buildings, erected an Arsenal there, built a new Town, put his Dominions in a better Condition than ever they had been, abolish'd the Subsidies on Estates; and in lieu of it, laid a Tax on Consumption, which had a very good Effect. He acquir'd greater Authority than any of his Predecessors, was lov'd by his Subjects, and dreaded by his Enemies, by keeping always a good Army on foot. He likewise distinguish'd himself by his Piety, and endeavour'd a Reconciliation betwixt the *Lutherans* and *Calvinists*; but in vain. He was very charitable and bountiful to the *French* Refugees, employ'd their Nobility and Officers in his Court, and establish'd great Numbers of 'em in his Dominions; and had so much Compassion on those Sufferers, that he said, He would rather sell his Plate, than they should want Subsistence. He was so affable, that all People had ready Access to him to demand Justice; for his chief Care was to prevent his Subjects being oppress'd. He applied himself so much to the Affairs of Government, that he would

would spend Hours together in reading Letters from all Parts of his Dominions. His Courage was signaliz'd on many Occasions at the Head of his Armies; and tho' he liv'd in great Splendour, was an Enemy to Luxury and Superfluity; but was very generous in rewarding Services done him. He was very exemplary in his Life, and died April 29, 1688. in the 68th Year of his Age, and 48th of his Reign.

His Son *Frederick* succeeded, and soon after had an Interview with the Elector of Saxony, the Duke of Hanover, and the Landgrave of Hesse-Cassel, about their own Interests, and the Prince of Orange's Expedition to England, which had been concerted with his Father before. At the same Time the French King, to traverse that Design, made War upon the Empire, contrary to his Truce, wherein the Dauphin took *Philipsburg*, and other Places of the *Palatinate*. Next Year the Elector form'd the Siege of *Bonn*, and took it, having narrowly escap'd being surpris'd by a French Detachment, wherein he gave great Proofs of his Valour. In 1690, King *William* having succeeded in his Expedition, sent him the Order of the Garter by *James Johnson Esq*; afterwards Secretary of State for Scotland. In 1693, his Troops distinguish'd themselves at the Battle of *Landen*, under the Conduct of his Brother Prince *Charles*, of which King *William* sent him an Account under his own Hand. In 1694, he sent Assistance to the Duke of *Savoy*, under his two Brothers Prince *Charles* and Prince *Albert*. In 1695, his Troops contributed much to the taking of *Namure*, of which King *William* gave him an Account again with his own Hand: Upon which the Elector came to the *Hague* to congratulate his Majesty, whom, with the Duke of *Zell*, he entertain'd splendidly at *Cleves*. After King *Augustus* was chosen King of *Poland*, the Elector seiz'd the Town of *Elbing* for the Security of the Money due to his Father, as above-mentioned. In 1700, the Elector considering the Antiquity and Dignity of his House, from whence many Crown'd Heads in several Parts of Europe had proceeded, and being himself able to support his Splendour of a Crown, took upon him the Royal Dignity the 17th of December that Year, with extraordinary Ce-

remony. The *Swedes* having enter'd *Poland*, his Majesty found himself obliged to increase his Army to 40000 Men. King *William* dying in 1702, his *Prussian* Majesty, as descended from *Rene of Nassau*, Prince of *Orange*, claim'd Part of his Inheritance; as to which, the Controversy betwixt his *Prussian* Majesty, and the Prince of *Nassau* of *Friseland*, whom King *William* left his Heir, is not yet determin'd. This occasioned the King of *Prussia* to take a Journey to the Dutchy of *Cleves*, to keep the States of *Holland* from being too much discouraged by the Death of King *William*; and he encouraged the Allies to besiege *Koyserswaert*. The French King having seiz'd *Orange* after King *William's* Death, his *Prussian* Majesty kindly received the Protestants who fled from thence into his Dominions. In 1704, his Troops having contributed much to the glorious Victory of *Hochstet* under the Prince of *Anhalt*, Prince *Eugene* gave his Majesty an Account of it by a Letter. In 1705, his Majesty erected an Academy at *Berlin* for the Education of his Youth of Quality, in suitable Exercises, and Learning. That same Year he lost his Queen, Sister to the Elector of *Hanover*. In 1706, he had an Account of the Victory of *Turin*, where his Troops, under the Prince of *Anhalt*, distinguish'd themselves with great Bravery. In 1707, he succeeded the Dutchess of *Nemours* in the Principality of *Neuchassel*, and County of *Vallengin*, by the Interposition of the Queen of *Great Britain* and the Allies, notwithstanding the French King's Opposition. That same Year, the Prince Royal his Son married the Princess of *Hanover*; and in November following, he had a Son by her, whom his Grandfather created Knight and Prince of *Orange*.

His Titles are, *Frederick*, by the Grace of God, King of *Prussia*, Margrave of *Brandenburg*, Arch-Chamberlain and Elector of the Empire, Prince of *Orange*, of *Magdeburg*, *Cleves*, *Juliers*, *Bergen*, *Stettin*, *Pomerania*, *Cassubia*, of the *Vandals* and *Crossen* in *Silesia*, Burgrave of *Nuremberg*, Prince of *Halberstat*, *Minden*, and *Camin*, Count of *Hohenzollern*, *Marc*, *Ravensberg*, *Lawenburg*, *Botow*, *Arley* and *Breda*, and Count of *Neuchassel*.

His Pretensions are, 1. To all Pomerania, of which he has only the lower Part. 2. To the Succession of the late King William, as Prince of Orange. 3. To the Succession of the last Duke of Juliers, Cleves, and Mons. 4. To the Dutchy of Gelderland, and County of Zutphen, which belong'd to the Dukes of Juliers. 5. To the Burgraviate of Nuremberg. 6. To the Town and Territory of Kizingen in Franconia, seiz'd by the Bishop of Wurtzburg in 1626. 7. To the Principality of Lignitz in Silesia, by a Contract of Succession made with Prince Frederick in 1549. 8. Some Rights to the Abbies of Quedlinburg and Erfurt.

The principal Branches of this Family are, those of Bareith-Culmbach, and Anspach. They both came from the Elector John George, who died in 1598. The present Prince of Culmbach is Christian Henry, born in 1661. From Christian I. of this Family, came the Branch of Bareith, the Prince of which is Christian Ernest.

The Branch of Anspach came from the same John George; the present Prince is William Frederick, born in 1703.

There were several other Branches; but they are extinguished.

The present Branches have the same Titles and Pretensions with the Royal Family, except that of King; and there is a Right of Succession among them.

Another of the Branches is that of Hohen-zollern, which is as old as Charlemagne's Time; the present Prince is Frederick William, born in 1663. From this Branch came the Burgraves of Nuremberg, from whence the Royal Family is descended; and from it proceeded also that of Sigmaringen, whose present Prince is Francis Anthony.

The Arms of the Royal Family are, *Argent*, an *Eagle Spread Sable*, Crown'd with a Royal Crown, for Prussia. *Gules*, 1. 4. *fac'd* Or; Or, 2. 3. with a *Cornet Azure*, the whole surmounted with an *Escutcheon Chequee*, Or and *Azure*, for Orange. *Azure*, a *Scepter Or*, for the Dignity of Elector. *Argent*, an *Eagle Gules*, for Brandenburg. Or, a *Lion Sable*, for Juliers. *Argent*, a *Lion Gules*, Crown'd Or, for Berg. *Coupe*, *Argent* and *Gules*, for Magdeburg. *Gules*, an *Escutcheon Argent*, in Form of a Heart, with Rays of a Carbuncle knotted and flower'd Or, illuminated

with *Vert*, for Cleves. Or, a *Lion Sable*, with a Border *Campone*, *Gules* and *Argent*, for Nuremberg. *Azure*, a *Griphin Gules*, for Stettin. Or, a *Griphin Gules*, for Cassubia. *Argent*, a *Griphin Gules*, for Pomerania. *Argent*, a *Griphin Sable*, for Wenden. *Argent*, a *Griphin Azure*, for Stargard. *Argent*, an *Eagle Sable*, for Crossen. Part *Argent* and *Gules*, for Halberstat. Or, *Pale-Chequee*, *Argent* and *Gules*, for March. *Argent*, a *Griphin Sable*, for Schwibussen. *Gules*, two *Cross-Keys Argent*, for Minden. *Argent*, 3 *Cheverons Gules*, for Ravensberg. *Gules*, a *Cross Argent*, for Camin. *Gules*, a *Griphin Argent*, for Wolgast. *Coupe*, in the first *Gules*, a *Griphin Argent*, and in the 2d *Chequee*, Or and *Gules*, for Usedom. Quarter'd *Argent* and *Sable*, for Hohenzollern. Or, a *Griphin Azure*, for Bareith. Or, two Trunks of Branches of Trees, *Saltyre-wise*, for Gatzkow. *Azure*, an *Eagle Argent*, for Rupin. *Azure*, an *Anchor Or*, for Lingen. Or, a *Front Sable*, for Meurs. *Gules*, a *Front indented Argent*, for Buren. *Gules* plain for the Regalia.

The Arms of the Branches of Bareith-Culmbach and Anspach, are the same for Brandenburg, Magdeburg, Prussia, Stettin, Pomerania, Cassubia, Wenden, Crossen, Schwibussen, Nuremberg, Halberstat, Minden, Zollern, Camin, and for the Regalia.

The Arms of Hohenzollern are, *Gules*, two *Scepters Or*, *Saltyre-wise*, for the Dignity of Arch-Chamberlain of the Empire. Quarter'd *Argent* and *Sable*, for Hohenzollern. *Azure*, a *Hart Or* *Passant*, upon 3 Clods of Earth *Vert*, for Sigmaringen.

The Religion of the Country is Lutheran; but since the present King of Prussia's Grandfather turn'd Calvinist, those of that Perswasion have increas'd in the Country, to which they are encourag'd by the Court; and many of their Chief Men are bred that Way in the Universities of Francfort and Coningsberg. The Elector George William having married a Calvinist Lady of the Palatine Family, Daughter to Frederick V. Dr. Nicholsson says, he publish'd an Edict to suppress *Lutheranism*; but was obliged to revoke it, for fear of a Rebellion, and content to have his own Worship in the Chapel of his Family; but now the Calvinists have many Churches in his Dominions. The Country is divided into the Old, Middle, and New Marks, or Marquisates.

The Alt-Marck,

HAS Mecklenburg on the N. Magdeburg on the S. Sax-Lauenburg, and Part of Lauenburg, on the W. and the Middle-Marck on the E. being about 30 English Miles in Length and Breadth. Some Authors call it the *Galiles of Germany*, because it abounds in Herbs and Fruit. 'Tis divided into 4 Petty Provinces; that on the E. called *Ostland*; that on the S. called *Angerland*, from the River *Anger*; that on the W. *Zerwandland*; and that on the N. *Zenland*.

The chief Towns in this Marck are, 1. *Stendal*, the Metropolis, on the River *Ucht*, by a large Forrest, in a pleasant Plain. It was built by the Emperor *Henry I.* in 920, and fortified by *Albert the Bear* in 1150. 'Tis a Hans-Town, neat and well built. Their Trade is in Corn and Linen; and being on the Road from *Hamburg* and *Lubeck* to *Magdeburg* and *Erfurt*, the Inhabitants receive a great Advantage by Travellers, and likewise from the Court of Judicature for the whole Country, which is kept here. It lies about 37 Miles N. W. of *Brandenburg*, and about 20 S. W. of *Havelberg*.

2. *Soltwedel*, a great Town on the Banks of the *Jetze*, half-way betwixt *Lunenbourg* and *Stendal*. Some derive its Name from a Temple dedicated to the Sun in the Times of Paganism. This City, with the neighbouring Territory, had formerly Princes of their own, who, as Historians say, did great Things against the *Huns*; but it has been long annexed to *Brandenburg*. The Town is divided into *Old* and *New*; the former is said to have been built by *Claudius Drusus*, and the latter by the Emperor *Henry I.* Their chief Trade is in *Beer*, which they transport to the neighbouring Country.

3. *Gardaleben* Dr. *Nicholson* thinks, it derives its Name from the many pleasant Gardens near it. Their chief Trade is *Beer* and *Hops*, both reckon'd as good as any in *Germany*, and are bought up by *Danish* and other Merchants. The City has 3 Hop-Poles laden with *Hops* for its Arms. It lies about 20 Miles S. W. of *Stendal*, and has an old Fort in the Neighbourhood, called in their Language *Iron Jaws*.

4. *Angermund*, or *Tangermund*, on the Mouth of the *Anger*, about 22 English Miles E. from *Gardaleben*. The Emperor *Charles IV.* built the Castle here when he bought the Marck in 1376, and resided in it some Years after. They have a considerable Trade for Corn, &c. by the *Elb* with *Hamburg*, and other Places.

5. *Osterburg*, on the *Vecht*, a small Town, which suffered much by Fire in 1491. 'Tis noted for a great Corn-Market.

Other Places of less Note are, 1. *Seehusen*, on the River *Alant*. 2. *Werben*, on the Conflux of the *Elb* and *Havel*, built by *Henry the Fowler*, from the Ruins of the old *Castellum Vari*. *Gustavus Adolphus* fancied it might be made the strongest Fortrefs in *Germany*, and order'd that Castle to be built, which now commands the Town. 3. *Havelburg*, upon the *Havel*, about 8 Miles from the *Elb*, formerly a Bishop's See, Suffragan to *Magdeburg*; but since 1555, they have been *Lutherans*. 4. *Perleberg*, the chief Town of the County of *Prignitz*, in a fruitful and pleasant Plain. *Arneburg*, *Wittenberg*, *Bismarck*, *Smakenburg*, and others, which are rather Villages than Towns.

Middle-Marck,

Lies in the middle of the Marck, and is the largest of the 3 Divisions, being about 100 English Miles from the Banks of the *Elb* to the *Oder*.

The chief Towns are, 1. *Brandenburg*, which gives Name to the Marquisate, and was formerly the Metropolis. Some German Historians alledge it to have been built by one *Brenno*, 416 Years before our Saviour. Others say, 'twas built by one *Brando*, A.C. 230. 'Tis now considerable for little but its Antiquity. It stands in the middle of Marshes on the River *Havel*, which divides it into the *Old* and *New Town*. They are well supplied with Fish by a neighbouring Lake, 10 Miles long. It was made a Bishoprick by the Emperor *Otho I.* in 946; but has been Protestant since 1563. The Elector *George William* appropriated it to himself in 1628. The Streets of the upper Town are built cross-wise, and center in a fine Market-place; where there is a *Satana Rolandina*. In their great Church, there are many

many Monuments and Sepulchres of Princes and Bishops. It lies about 28 Miles W. from *Berlin*, and about 45 N. E. of *Magdeburg*.

2. *Berlin*. *Angelius a Werdenhagen*, a good Author, who has given us the Description of the *Hans-Towns*, derives its Name, as he does those of *Bernau*, *Beerwald*, *Bernstein*, and other Places of the *Marq*, from *Albert the Bear*. 'Tis pleasantly seated on the Banks of the *Spree*, which several Geographers have mistaken for *Ptolemy's Suvva*. On the other Side the River stands *Cohn*, on the *Spree*, so called to distinguish it from *Berlin*. Here the Elector has his Palace in the Castle built by *Joachim II.* but much enlarged and beautified by his Successors, so that 'tis now very stately, and, with the Grandeur of the Court, the Largeness of the Streets, and the regular Architecture of the Houses, makes the City very magnificent. The Elector *Frederick William* enlarged it one Third, by building the Town called *Dorothystat*, from the Name of his second Wife *Dorothy of Holstein-Glücksburg*. The Canals from this Town to the *Oder* and the *Elb*, make it one of the best Trading Towns in *Germany*, as 'tis one of the finest. It was built by *Albert the Bear* in 1152, and fortified by *John the Prudent* in 1222. The Works are very regular, and 'tis capable of holding out a long Siege. It lies about Lat. 52. 33. Long. 31. 58. about 73 Miles N. E. of *Magdeburg*, and 28 E. of *Brandenburg*, in a fruitful Country, with Vineyards on one Side, Marshes on another, and Woods full of Game on the third. The most remarkable Things in and about the Elector's Palace are, the Armory, Chambers of Rarities, Galleries with Multitudes of rare Pictures, many of them by the famous *Luke Kranach*, Gardens, and Water-Works. The present State of *Germany* says, the Palace is built of Free-Stone, and wash'd on one Side by the River *Spree*; and on the other, there's a great Gate into a large Piece of Ground where the Stables are. On the Front, there's the great Street which comes from *Frederickstat*; and behind it lie the Gardens, which are in good Order, and spacious. The Palace contains two great Courts, the first square, where the Officers of the Guard lodge: From thence there are great Stairs, by which one may ride on Horse-

back up to the Court, which is oval; and there are 4 other Stairs which lead to the several Parts of the Court. In the Palace, there are 10 great Apartments for the Royal Family, with great Numbers of Chambers for the Courtiers, all magnificently furnish'd, besides many Halls, Chambers, Closets, and Galleries, with whatever can be wish'd for Conveniency or Grandeur. In the Elector's Apartment, there's extraordinary rich Furniture of massy Plate, Pictures, and other great Curiosities, especially a large Cabinet, full of ancient, rare, and valuable Medals, with abundance of other curious Pieces. The Electress's Apartment abounds with Pictures of the best Masters. There is one great Chamber full of Pictures, done by *Van Dyke*; among which, that of the Holy Supper is reckon'd to be the best ever he did; and the unailing our Saviour from the Cross, done so to the Life, as to move Compassion in all that see it. There's another of the Wise Men that came to worship our Saviour, and a Picture of all the Royal Family of *England*. The Gallery, which is above Fifty Paces long, is full of Pictures by the best *Italian* Masters, one of them the Head of our Lord by the famous *Raphel de Urbino*, valued at Fifty Thousand Crowns. Joining to the Palace on the Side of the Garden, is the Elector's Library, dispos'd in excellent Order, and said to be equal to the best in *Europe*. The great Stables have room for 400 Horses, of which the Elector has above 3000 of his own, having Querries in all his Dominions to breed and take care of them. His Arsenal here is reckon'd one of the best furnish'd in *Europe*, besides what he has elsewhere. In short, his Court is reckon'd one of the most magnificent in *Christendom*, and Strangers are entertain'd there with great Civility, according to their Quality. He is reckon'd to have 2500 Gentlemen belonging to his Court, fit for Command in the Field; and the Troops of his Household are above 8000. He has 6 or 7 supreme Courts of Judicature for trying all Causes in his Dominions, well supplied with Judges; and his Countries are well furnish'd with an able and learned Clergy. He presides in Council himself, and in his Absence the Electoral Prince; next to whom sits the Prince of *Anhalt*. His Father's Annual Revenues

were computed at 15000000 of Livres; and he left his Successors in a Way of augmenting 'em. His Dominions are reckon'd 300 French Leagues in Length; and his Father, in 4 Months time, arm'd 20000 Foot, and 4000 Horse, in his own Dominions, without dreining his Garisons: So that upon the whole, it may be reasonably concluded, That, next to the House of Austria, he is the most powerful Prince of the Empire.

3. *Francfort* on the *Oder*. 'Tis said to have been built about 146, by *Sumno*, a Prince of the *Franks*, who pursued the *Vandals* hither, and planted a Colony of his own People here. In 1253, the Elector *John I.* and his Brother *Otto*, rebuilt and enlarged the Town above a Third. In 1379, the Elector *Sigismund* granted them large Privileges, upon their entering into the Society of the *Hans-Towns*. We have mention'd already, That *Joachim I.* founded their University, and supplied them with Professors from *Leipsick*; since which, they have had several Learned Men. 'Tis divided into two by the *Oder*, over which they have a large Wooden Bridge. The Streets are large and well built; The Market-place spacious and stately; and they have three Annual great Fairs. The Protestant Religion was establish'd here in 1538. It lies about 45 Miles S. of *Berlin*, about Long. 34. Lat. 52. 37. Without the Gates, there's the Ruins of an ancient *Carthusian* Monastery, of which *Joannes ab Indagine*, reckon'd to be Author of 300 Treatises on different Subjects, was Prior.

4. *Spandaw*, on the Conflux of the *Havel* and *Spree*, which makes it very strong; but of no great Note otherwise.

5. *Oranienburg*, about 20 Miles N. E. from *Berlin*, where the Elector has a Country-House. This Place affords the greatest Variety of Pleasures of any in his Dominions, being encompassed on every Side with pleasant Parks and Forrests, well stock'd with all manner of Game.

6. *Ruppin*, on the little River called *Rhine*, which divides it into the Old and New Towns. 'Tis the Chief of the County of that Name, and had formerly Lords of its own, who dying without Issue in 1524, *Joachim I.* purchas'd it.

7. *Potzdam*, about 12 Miles S. W. of *Ber-*

lin, where the Elector has a Country-House, that he makes use of in Summer.

8. *Lebus*, on the *Oder*, formerly a Bishoprick, founded by *Miceflaus*, the first Christian Prince of *Poland*, about 965. It embrac'd the Reformation in 1555, and the Elector of *Brandenburg* united it to his Dominions in 1628, and, as Bishop of *Lebus*, is Chancellor of the University of *Francfort*.

9. *Furstenwalt*, a little pleasant City on the *Spree*.

10. *Prenslow*. 11. *Strasburg*. 12. *Templin*. Three well fortified Towns in that called the *Ucker Marck*. The first is well supplied with Fish from that called the *Ucker Sea*. They belong'd formerly to the Dukes of *Pomerania*; but were seiz'd by the Elector *Frederick I.* in 1424.

The New-Marck,

Lies betwixt the River *Warta* and *Pomerania*, and is divided from the *Middle-Marck* by the *Oder*. 'Tis about 100 Miles in Circuit, and belong'd formerly to the *Teutonic* Knights, from whom it was purchas'd by the Family of *Brandenburg* in the 13th Century; but they had not peaceable Possession of it till the 16th. The Country abounds with Corn and Pasture, more than any other Place of the *Marq.* On the Banks of the *Oder* they have Vineyards, but of no great Account; and the Boors find now and then Quantities of Corn and Precious Stones, which they sell for little.

The chief Towns of this Country are, 1. *Custrin*, on the *Oder*, 18 Miles N. of *Francfort*. It was only a Fishing-Village till the Elector *John*, after returning from the Wars under *Charles V.* fortified it in 1537; so that 'tis now the Key of the *New-Marck*. *Gustavus Adolphus* besieg'd it in vain in 1631, being the first Design of that sort on which he miscarried. 'Tis strong by Nature as well as Art, being situated in a Marsh on the Conflux of the *Oder* and *Warta*. It has an Arsenal well furnish'd, and a Citadel, the strongest of the Country; so that 'tis reckon'd impregnable. The Burghers have neat and well furnish'd Houses, and the Market-place is the best in the *Marq.*

2. *Falkenburg*, a Town with a strong Castle, on the Frontiers of *Pomerania*.

3. *Dresen*,

3. *Dreyfen*, a Town on the Conflux of the *Notex* and the *Trage*, near the Frontiers of *Poland*.

4. *Lansberg*, on the *Warta*, above 30 Miles N. E. from *Francfort*. 'Tis conveniently situated for Trade, which consists much in casting of Iron Ordnance. It was twice taken by the *Swedes* during the *German War*.

5. *Sunneberg*, on the same River, formerly the Residence of the Bailiffs of the Order of *Malta*, till the Electors seiz'd it in the 16th Century, and assum'd the Power to present the Bailiffs, and dispose of their Commanderies.

6. *Sternberg*, Capital of a County on the Frontiers of *Poland*, about 25 Miles E. of *Francfort*.

Buno, in his Notes on *Cluverius*, says from *Aventinus*, That most of this Marq was fold to the Emperor *Charles IV.* by *Otho* of *Bavaria*, for 200000 Pieces of Gold, which *Otho* afterwards spent in the Castle of *Wolfstein* on a Baker's Wife, whom he debauch'd.

P O M E R A N I A.

DR. Nicholson says, the Name comes from its Situation on the Sea-shore, both in the *Sclavonick* and *High-Dutch* Tongues; the first calling it *Pomer*, and the latter *Pomerce*. The common Name is *Pomeran*. Historians say, it was formerly subject to *Poland*, but annexed to the Empire by *Frederick Barbarossa*. It was anciently of a much larger Extent, including *Pomerellia* and *Cassubia*; called *Back Pomerland*, which has been for a long Time in Possession of the *Poles*; and the present Dutchy is that which was then called *Fore Pomerland*. The Dukes of *Pomeran* did likewise possess that Part of *Brandenburg* now called *Uckermark*; and the greatest Share of the *New Mark*. Their Dominions reach'd further also into the *Baltick*, which, with Part of the Isle of *Rugen*, has been swallow'd up by the Sea.

This Country, according to *Moll's Map*, is about 192 Miles from E. to W. and about 70, where broadest, from N. to S. *Sanfon* makes it 210, and much about the same Breadth as the former. *Buno* on *Cluverius* says, it has *Poland* on the E. the Dut-

chy of *Mecklenburg* on the W. the *Baltick* on the N. and the Marq. of *Brandenburg* on the S. The principal Rivers are, the *Oder*, which falls by three Mouths into the *Baltick*, the *Pen*, *Rega*, *Perfant*, *Wiper*, and the *Stolp*. *Cluverius* divides it into 7 Parts or Dutchies, viz. *Wenden*, *Stettin*, *Gutschkow*, *Wolgast*, *Usedom*, *Rugen*, and *Bart*.

Their Air is reckon'd the coldest in *Germany*. Their Soil in most Parts is sandy and barren, and their Corn-Fields near the Shore are frequently overwhelm'd with Sand: Yet the Valley near the City *Piritz* abounds so much in Corn, that it not only supplies the Country, but in fruitful Years furnishes great Quantities for Export. They have few high Mountains, but many large Woods and Forrests, well stock'd with Game, as Deer, Wild-Boars, Hares, Foxes, Wolves, Wild-Horses, Bulls, and Beavers: Their Woods and Lakes furnish them with Plenty of Land and Water Fowl, so that they reckon 20 Sorts of Wild-Ducks; and their Towns of *Stettin*, *Stralsund*, and other Ports, bring them all Sorts of Foreign Commodities. They have such Plenty of Fresh and Salt-Water Fish, that some of their Historians say, the Duke of *Pomeran* had 5000 Rix-Dollars in one Year from Customs on Fish caught in the great *Haff* or Bay below *Stettin*, and the Lake of *Lassan*; and that 30000 Crowns worth are taken Annually at those two Places. The Fish in the *Haff* are Salmon and Lampries; some of 'em of an incredible Bulk. About *Gripswald* and *Rugen*, they have a good Herring-fishing, but in no other Place of the Country; and in the Lake *Maddüje* near *Colbatz*, they have a large broad Fish, called *Musen*, that's found no where else in the Empire.

Dr. Nicholson mentions several other Rivers, and abundance of Lakes; the chief of which are, *Rekenitz*, that separates this Country from *Mecklenburg*, forms a kind of Sea near *Damgarten*, and falls into the *Baltick* at *Dars*. He adds, That there are many large and fair Meadows betwixt the Branches of the *Oder*, which, after it passes by *Zege-north* and *Shwantwitz*, forms a vast Fresh-Water Ocean, 16 Miles broad, and 16 long, called by the Natives the *Great Fresh Haff*, from whence it falls into the Sea in 3 Currents, which make as many safe Harbours: The *Divenow*, *Swine*, and *Pencmund*. He adds,

adds, That *Pomeran* affords as great Quantities of Fruit, and as many Sorts, as any Province in *Germany*. They have no Wine of their own Growth, but excellent Beer of several Sorts, as the Bitter Beer of *Stettin*, the Mum of *Gripswald*, and the Stout of *Wollin*, which Mariners transport to other Nations. They have no Mines, but some of Iron in *Upper Pomeran*. The Sea casts up Amber in some Places, that every one is allow'd to gather and sell as they please, which the Nobility of *Prussia* do not allow to the common People of that Country.

The People are reckon'd as quick and stout as any in *Germany*; but are charg'd on the other hand with being credulous, prodigal, and intemperate in Drink, says *Dr. Nicholson*. *Cromer* gives this Character of the ancient Inhabitants; That they were Strangers to Deceit, Theft, or Robbery, lock'd up nothing, were hospitable to all Strangers according to their Ability, and so kind to one another, that there were no Beggars among them: But during the Times of Paganism, they allow'd Fathers to kill their Daughters, if they had more Children than they could maintain; but would by no means do so by their Males. This seems inconsistent however with the other Part of their Character of being so charitable to one another.

The ancient Inhabitants, among whom were the *Rugii*, *Rendigni*, and *Longideduni*, had for many Centuries their own Princes; but we have little of their History. The first we meet with upon any good Record is *Barnimus*, of the ancient Family of the *Gryphones*, frequently mention'd in their Annals, and the Country bears still a Gryphon for their Arms; but whether they had their Name from that Coat, or they assum'd it because of the Resemblance it had to their Name, is not certain. He is said to have govern'd about 933. His Grandson *Suantibor* is mention'd to have divided his Principality betwixt his Sons *Bogislaus* and *Wartislaus*: The former had *Pomerellia*, and retain'd the Language and Customs of his Countrymen the *Slavonians*: The latter had *Lower Pomerania*, and soon after conform'd himself to the Laws and Customs of the *Saxons*: Upon which it was reckon'd a Part of the Empire, and his Sons *Casimir* and *Wartislaus* were made Dukes of *Pome-*

ren, and Princes of the Empire, by *Frederick Barbarossa*. *La Forest* says, they received Christianity in the 12th Century, and *Luther's* Reformation in the 16th. The two Dutchies were united in 1470, says that same Author, in *Bogislaus X.* surnam'd the Great, who had long Wars with *Albert* of *Brandenburg*, which were concluded by the Treaty of *Wolgast*. *Dr. Nicholson* says, That *Lower Pomerania* was divided in 1217 betwixt *Bogislaus* and *Orko*, two Brothers, from whom came the Houses of *Wolgast* and *Stettin*, which lasted about 200 Years; but that of *Stettin* failing in 1464, his Dominions were given by the Emperor *Frederick III.* to *Frederick II.* of *Brandenburg*, which occasioned a Difference betwixt the Elector and the House of *Wolgast*, that was compos'd by the Treaty above-mention'd, on Condition that both should retain the Arms and Title, but the Possession should be given to the Duke of *Wolgast*; and upon the Failure of his Issue-Male, it should come to the Family of *Brandenburg*. Accordingly *Bogislaus XIV.* dying in 1637 without Issue, *George William* of *Brandenburg* put in his Claim; but the *Swedes* having assisted *Bogislaus* against the Imperialists during the Civil Wars of *Germany*, *La Forest* says, That by his Will he left the King of *Sweden* his Heir; and the *Swedes* being possessed of the Country, would not part with it; and at the Treaty of *Munster* it was agreed, That *Lower Pomerania*, with the Isles of *Rugen* and *Wollin*, should be annexed to the Crown of *Sweden*; and that *Upper Pomerania* should be added likewise, upon Failure of the Male-Issue of the House of *Brandenburg*. In the mean time both Princes were to enjoy the Title and Arms. In Consideration of which, the Family of *Brandenburg* had *Halberstat*, *Minden*, &c. as formerly mention'd; which, tho' the Revenues may be as large, yet the Elector would rather have had *Lower Pomerania*, by which he might have been considerable at Sea, and deliver'd from the Jealousies of such a potent Neighbour as the King of *Sweden*: Tho' the Empire allow'd the Elector 4 more Voices in the Diet for his new Principalities.

The chief Towns are, 1. *Stettin*, always reckon'd the Metropolis of the whole Country. 'Tis so ancient, that its Origine

is not known ; but about 400 Years ago, it appears to have had a quite different Situation ; for the Church of *St. Peter*, now without the Walls, was then in the middle of the Town. The *Saxons* were allow'd to come hither by the Dukes of *Stettin*, to reform the Language and Manners of their *Wendish* Subjects, and contributed much to its Order, Beauty, Strength, and Trade. It's a Hans-Town, stands on the Rising of a small Hill, and is one of the most Trading Places in *Germany* ; tho' *La Forest* says, their Trade is decreas'd since the Settlement of the Republick of *Holland*. The Town is still so populous, that, according to some modern Writers, abundance of the Inhabitants are forc'd to live in Cellars and Vaults. The Castle, formerly the Palace of the Dukes, and now the Residence of the *Swedish* Governor, is one of the best Pieces of Architecture in that Part of *Europe*, and may vie with most of its kind in *Italy*. They have a great Trade in all kind of Merchandize, particularly all sorts of Salt and Fresh Fish, Wood for Fuel and Building, Corn, &c. and 'tis a proper Center for exchanging the Commodities of *Poland*, *Germany*, and the *Baltick*, by the Convenience of the River *Oder*. It falls into the Sea 40 Miles below it, and is navigable a great way above it by lesser Vessels. The Citizens are noted for their Civility to Strangers, and their Courage in defending themselves when attack'd. The Imperialists besieg'd it in vain 4 Months in 1659 ; and in 1677, it held out a long Siege against *Frederick William the Great*, the late Elector of *Brandenburg* ; which being one of the most remarkable Sieges that has happen'd in *Europe*, we shall give some of the chief Particulars, from an Account of it printed at *London* in 1678.

The Elector had the Year before attempted this City ; but finding his Forces too weak, he withdrew them, and provided for a second Attack the following Summer. Accordingly he set out from *Berlin* the 5th of *July*, 1677, with 9 Regiments of Horse, 10 of Foot, 5 of Dragoons, and his Foot-Guards : 4000 *Lunenburgers* did also come to his Assistance, with some Men of War from the King of *Denmark*. On the 7th of *July*, he came before it with 20000 Men, took some Posts, and rais'd Bat-

teries on the *Oder*, which gall'd their Shipping in the River. The Town, who had long expected a Siege, sent out all their useless People, and gave a resolute Defiance to the Elector's Summons. Upon this the Elector push'd on, and took several Forts, wherein the Troops on both Sides shew'd wonderful Courage. The slow March of the *Lunenburgers* retarded the Siege for some time ; but upon their Arrival, it was carried on with more Vigour. The *Danish* and *Swedish* Ships engaged one another in the River ; but the Elector's Forts did so gall the latter, that when they obtained an Advantage over the *Danes*, they could not pursue it. In the mean time the Elector's Artillery did great Execution in the City ; yet the Garison made a brave Defence, sallied out, and attacked his Intrenchments with wonderful Gallantry ; but were always over-power'd and repuls'd. The 14th of *August*, the Elector's Cannon sunk, and shatter'd most of the Ships in the River ; and on the 15th, his Granado's set Fire to the Town in several Places, and burnt down the great Church. The Elector being griev'd at this, sent and offer'd them honourable Terms, which they still refused. The Town having suffer'd much, the Elector sent a new Summons on the 22d, expressing his Pity for them ; but they continued obstinate, made it Death for any one to talk of a Surrender, and secur'd such of their Wives and Children as remained in the Town in Places prepared on purpose under Ground. The Garison continued to make vigorous Sallies, with various Success ; but were always repuls'd at last. On the 6th of *September*, the Elector sent a Trumpet to forewarn them of their Danger, and to offer them larger Privileges than before ; but still they refused. The Winter approaching, the Elector push'd on the Siege with more Vigour ; and to encourage his Soldiers, who suffer'd much by the Rains, promis'd them the Plunder of the Town if he took it by Assault. The 22d of *September*, 8000 *Danes* landed on the Isle of *Rugen* to assist the Elector, of which he gave the City Notice, and summon'd them again to surrender, which they still refused. The 27th, the *Lunenburgers* took a Half-Moon ; and the Elector perceiving that there was no likelihood of the Town's being

being relieved, he forbore pushing on the Siege with Vigour, both to spare his own Men, and the City. The 3d of *October*, he took the Counterscarp; upon which the Burgers writ to Count *Coningsberg*, the *Swedish* General, expressing their Resolution to hold out to the last, and desiring Relief: To which he return'd an Answer in the King's Name, and his own, assuring them they should have it. The Garison in the mean time made vigorous Sallies, drove the *Lunenburgers* out of their Trenches, and took one of their Generals, with two Cannon, and about 40 Officers. The Elector undermin'd the Wall of the Town, fill'd up the Ditch, took a Half-Bastion, and sent them their new Proffers the first of *November*, threat'ning them with Ruin if they refus'd. They return'd a softer Answer than before; but said, They would defend the Town till the end of the Year, and hop'd he would grant them the same Terms then. The 7th, the Elector review'd his Army, and found he had lost near 7000 Men, besides his Sick and Wounded; and thò the Town was in Ruins, and that they had lost 1400 Citizens, besides Soldiers, they continued resolute, and made vigorous Sallies, with great Loss on both Sides, the Townsmen being in Hopes that the cold Weather would oblige him to raise the Siege. On the 20th, a Quarrel happen'd betwixt the Garison and the Burgers, wherein several fell on both Sides, the former being for a Capitulation, but the latter against it; and one of 'em being a Chief Officer, and at his Post on the Walls, when News was brought him that his Wife and Children were killed in his House by the Enemy's Fire, he order'd his Servant to bury them; but would not quit his Post, and said, He could meet his own Death with as little Concern as he had heard of theirs. The 30th, the Garison made a Sally, and carried off a small Man of War in the River; so that every one thought the Elector would be obliged to raise the Siege, his Foot being reduced to 10000, and his Horse in a bad Condition, by the Rigour of the Season. On the 30th, the Garison despairing of Relief, a new Mutiny began betwixt them and the Citizens, which the Governor appeased, by promising to capitulate before it came to Extremity. *December*

the 4th, the Elector took several Posts, and the Citizens prepared against a general Assault, by casting up Intrenchments within, having received a new Charter from the King of *Sweden*, enlarging their Privileges, and exempting them from Taxes for many Years to come. They made several furious Sallies, retook part of the Bastion, and ruin'd some of the Works; but were repuls'd by the *Danes* with great Loss. The 16th, the Elector attacked a Post near that called the *Holy Ghost* Gate, which the Garison defended with great Bravery, and charged their Cannon with small Shot, which did great Execution; but the Elector took the Post at last, after several Repulses, and rais'd a Battery upon it; but very much admir'd the Constancy and Bravery of the Inhabitants. On the 18th, he sprung two Mines, which made a Breach in both their Walls; yet they repuls'd his Men who attacked the Breaches, and fill'd them up by Night. Next Day the Elector made a new Attack, summon'd them again to surrender, and offer'd to confirm all the Terms granted them by the King of *Sweden*, and to add more, which they rejected. Next Day the Garison took two Gallies with Guns and Powder, of which they were in want. They continued obstinate, thò the Garison was reduced to 400 serviceable Men, and distrusted by the Citizens, because they had frequently declared for a Surrender. But on the 20th, finding there was no Hopes of Relief, they propos'd a Capitulation upon honourable Terms, and said, That if they could not obtain them, they would die with their Swords in their Hands, and be buried in the Ruins of the City. The Elector return'd an Answer, That thò their Obstinacy had been enough to harden him, yet his Willingness to spare their Lives, and those of his own Men, which must be lost in a general Assault, he would capitulate with them, if they intreated for it, and sent out Hostages quickly; otherwise they must expect nothing but Fire and Sword.

Upon the Receipt of this Letter, they sent out Hostages, and the Elector, out of Generosity and Pity, granted them an honourable Capitulation, thò he had lost about 8000 Men, and that it had cost him 6000 Crowns every Day and Night in Powder and Shot. He not only ratified all the

King

King of Sweden had promis'd, but granted them more Privileges, and sent the Articles that Night to the Governor; who insisting that the Garison should be conducted to *Stralsund*, and that Major-General *Ludeque* should continue Prisoner till Colonel *Wangelin* was set at Liberty, the Elector refus'd it, which broke off the Treaty, and the Hostilities were renewed on both Sides with great Vigour till the 26th of December, when they sent out again to renew the Treaty. The Capitulation, according to the former Articles, was ratified, and one of the Gates deliver'd to the Elector. All the Churches, and vast Numbers of Houses, were laid in Ruins; their Garison of 3000 Men reduced to 700, and not 400 of them serviceable. They had a fine Train of Artillery in the Place; but they wanted Powder, Salt and Wood. They were allow'd the usual Terms of Honour; but the German Officers and Soldiers were to quit the Swedish Service. Deserters were pardon'd on both Sides, and the Garison had their Choice of two Pieces of Cannon. The Swedish Officers were pardon'd, and receiv'd into the Elector's Protection, on taking an Oath of Fidelity. There was no Change to be made in their Religion, University, or Schools. The Magistrates, and Privileges of the City, were confirm'd, and they were freed from Plunder, Contributions, or ransoming their Bells. He exempted their Fishery for 10 Years from all Taxes of his own Accord, on Condition they would rebuild their Churches; and he promis'd to rebuild their great Church at his own Charge. On the 6th of January, he made a solemn Entrance, when he was received with loud Acclamations. When he enter'd the New Gate, two Boys in Mourning presented him, the one with a Silver Key, with these Words engraven on it in Golden Letters, *Accipe, serva, & conserva*; i. e. Receive, keep, and preserve: The other with a Ducal Hat, with these Words, *Quod Deus dat*, Which God gives. Then 6 Virgins met him in Mourning, who, after Homage, the first presented him with a Cypress Wreath, and this Motto wrought in Threads of Gold, *Victori Cruentatam Virginitatem*; i. e. A Bloody Virginity to the Conqueror. The 2d presented 3 Garlands in a gilt Scale, with this Motto, *Preces pro*

Benevolentia, Prayers for your good Will. The 3d presented a Hat of Orange-Leaves, with this Motto, *Paterna Virtute auctam augendam*; i. e. Your Valour, increas'd by that of your Father, shall still increase more. The 4th presented his Son Prince *Lodowick* with an Apple, in which was writ with gilded Cloves, *Natura Etatem*; i. e. Nature brings Age. The 5th presented his other Son Prince *Philip* with a Griphyn's Claw, and this Motto, *Perge sine mora, & habes*; i. e. Pursue without Delay, and you have it. The 6th presented the Duke of *Lunenburg* with a Nolegay, and this Motto, *Deo Gratias*, Thanks to God. Then all of them repeated these Words, *Happiness and long Life to the Elector, and to all the Princes and Princesses of Stettin*. After this, he was conducted by the Magistrates and Chief Burgers in Mourning to the ancient Palace of their Dukes, where, wishing him Happiness and long Life, they deliver'd him up the Regalia, and swore Fealty. Then he was conducted to the great Church. He was attended by the Judges and Ministers, who swore Fealty to him; and as he went back to the Court, 12 of the chief young Women of the Town strew'd green Herbs before him, till he came to the Banqueting-House, where he had a splendid Entertainment at the Charge of the City. Then the Elector having settled all Things, and given Orders to repair the Fortifications, he return'd to *Berlin* the 10th of January. Doctor *Nicholson* says, he spent in this Siege 30000 Granado's, 24000 Hand-Granado's, 150000 Cannon-shot, and 98000 Pound of Powder. By the Treaty of *Nimeguen*, the Town was restor'd to the Swedes.

The other Towns in Swedish *Pomerania* are, 1. *Stralsund*, the largest and wealthiest in the Country. Its Origine is uncertain; but Historians say 'twas founded about 145, by *Sunno II.* King of the *Franks*; but it derives its Name more probably from the narrow Sea on which it stands, betwixt it and the Isle of *Rugen*. It lies about 75 Miles N. W. of *Stettin*, and 35 N. W. of *Rostock*, in Long. 32. 30. Lat. 54. 31. 'Tis an Imperial City, and enjoys great Privileges, which they have maintain'd against several Princes that design'd to subdue them, and at once are said to have opposed the united Force of *Denmark* and *Sweden*, and 10 other

Princes, when they took *Erick D. of Saxony* Prisoner. After which it became terrible, as it had formerly been accounted impregnable. The first certain Account we have of it, is, That after it had been spoil'd or utterly destroy'd, it was magnificently rebuilt, enlarged, and re-peopled with *Germans*, by *Jaremar* Prince of *Rugen*, about 1209. His Son alter'd the Situation a little, and fortified it about 1230, because the *Danes* and *Pomeranians* had burnt most of that which his Father built; so that the Citizens reckon the Age of the Town from that Time, as appears by a Latin Distich in barbarous Rhyming Verse, engraven in several Places of the Town in Golden Letters. The chief of their Privileges are,

1. That they have a Power to determine all Causes among themselves, without an Appeal.
2. To coin Money, and raise Troops for Sea and Land Service.
3. In case of a Naval War by the Empire, they are not obliged to venture further abroad than is convenient for the Defence of their City.
4. They have a Power to make Leagues and Confederacies for advancing their Trade, and to chuse their Protectors among all the Princes of the Empire.

In the Civil Wars of *Germany*, Count *Wallenstein*, the Imperial General, besieg'd it in vain, and was forc'd to a shameful Retreat. A little after, they put themselves under the Protection of *Gustavus Adolphus*. In 1678, the late Elector of *Brandenburg* took it, after having destroy'd above 1500 Houses with his Bombs, and was the only Prince that could justly boast of ever having taken it by Force; but he was obliged to restore it to the *Swedes* by the Treaty of *St. Germain en Laye* in 1679. 'Tis now a flourishing City, but suffer'd much by Fire in 1680. The Sea betwixt it and *Rugen* is about a Mile broad, and there are 6 Gates, with as many Bridges, leading to it from the City, to which the Merchant-Ships that ride in the Harbour are fasten'd. Towards the Land, 'tis fortified with regular Bulwarks, and Fish-Ponds, two Musket-shots in Breadth, over which there are 4 Dams and Bridges, leading from 4 Gates; which Dams and Bridges are fortified, and make the Approaches very difficult. Their chief Trade is in Corn, which they transport in great Quantities to other Countries.

2. *Bardt*, formerly reckon'd the Metropolis of *Upper Pomerania*, and gave Name to the adjacent Country. It lies about 15 M. W. from *Stralsund*, upon a Bay of the Sea, but so shallow, that 'tis not capable of being made a good Harbour. Some derive its Name from the *Longobardi*; but it has it more probably from the Mouth of the River *Bardt*, on which it stands; tho' the Arms of the Town be a Man's Head with a long Beard. The Fields about it are exceeding Fruitful in all Sorts of Corn, and the Town is well Peopled, and defended by a good Castle. The late Elector of *Brandenburg* took it in 1677; but restor'd it to the *Swedes* by the afore-mentioned Treaty in 1679.

3. *Gripswald*, about 30 English Miles S. E. of *Stralsund*. 'Tis a Hans-Town, within half a League of the *Baltick*, on a small Gulph, with a good Harbour. It was Wall'd in 1233, and is well fortified. *Wartislaus IX.* Duke of *Pomerania*, founded an University here about 1456, which has bred many Learned Men. It was taken by the *Swedes* in 1631, and left to them by the Treaty of *Westphalia*. The late Elector of *Brandenburg* took it in 1678, but restor'd it by Treaty in 1679. It had a great Trade by the excellent Salt which they formerly made; but for want of Wood to supply their Furnaces, 'tis decay'd. The adjacent Fields and Meadows abound so much with wild Garlick, which the Natives call *Rammes*, that when it flowers about *Whitsuntide*, Strangers are hardly able to bear the Smell of it, and all their Butter and Flesh taste of it.

4. *Treplow*, a pretty Town on the *Tollow* Sea, defended by a strong Castle.

5. *Anclam*, on the *Pene*, well fortified. It was taken by the late Elector of *Brandenburg* in 1676, together with *Demmin*, on the same River; but both restored by the Treaty of *St. Germain*.

6. *Damgarten*, and *Tribsee*, two Towns on the Frontiers of *Mecklenburg*, where the *Swedish* Officers exact Toll from Travellers. The Dukes of *Mecklenburg* claim'd those Towns at the Treaty of *Nimeguen*, but did not obtain them. The first is very strong, and situated on a Gulph.

7. *Wolgast*, on that Branch of the *Oder* called the *Fin*, about 15 Miles S. E. of *Gripswald*.

Wald, formerly Capital of a Dutchy, and gave Title of Duke to a Branch of the House of *Pomerania*. It has the best Harbour in the Country, except *Stralsund*; and the Castle, built here by Duke *Barnimus IV.* in 1352, makes it one of the strongest Towns of the Province. *Gustavus Adolphus* took it in 1630, and the late Elector of *Brandenburg* took it in 1679; but restor'd it that same Year to the *Swedes* by Treaty.

Brandenburg Pomerania,

IS about 132 Miles long, and 50 where broadest.

The chief Towns are, 1. *Camin*, formerly a Bishop's See, whose Prelates were invested and confirmed by the Pope himself; but by the Treaty of *Munster*, it was, after the Death of the then Canons, decreed to be converted into a small Principality, to descend on the Family of *Brandenburg*. It lies on the E. Side of the Mouth of the *Oder*, called *Divewow*, about 28 Miles N. of *Stettin*, and about 8 from the Coast of the *Baltick*. *La Forest* says, it was built from the Ruins of a Town called *Julin*, within two Miles of it, and was made a Bishoprick by *Bogislaw II.* of *Pomerania* in 1178. Their Bishop embrac'd *Lutheranism* in 1534. The Bishoprick was given to the Elector of *Brandenburg* by the Treaty of *Munster* in 1648.

2. *Griffenberg*, a pretty Town on the River *Rege*.

3. *Polberg*, a strong Town on the Mouth of the River *Perfant*, about 18 Miles E. from *Camin*. 'Tis the Capital of a little Country called *Cassubia*, has a good Harbour, defended by a strong Citadel, and has a great Trade in good Salt, made here, and transported to other Countries, which has made the Town rich. The *Swedes* took it in 1631, after 5 Months Siege. It was given to the Elector of *Brandenburg* by the Treaty of *Munster*, and he has a great Revenue from its Salt-Pits.

4. *Coslin*, about 10 Miles S. E. from *Colberg*, a City where the Bishop of *Camin* usually resided, because of its good Air.

5. *Coslin*, about 12 Miles N. E. from *Coslin*, on the *Perfant*, a very pleasant City.

6. *Belgarden*, a little Town of good Trade on the same River.

7. *Rugen*, a Wall'd Town, on the Mouth of the *Wiper*, the Capital of the Country called *Vandalia*, about 18 Miles N. E. from *Coslin*. 'Tis supposed to take its Name from the *Rugii*, who founded it.

8. *Stolpe*, a Town fortified with an ancient Castle, about 22 Miles N. E. from *Rugenwald*.

The Towns of *Slage* and *Polnow* lie also in this Country.

La Forest does likewise mention a Division of this Country, which he names *Pomerania*, properly so called; and in this he reckons, 1. *Stargard*, the Capital, about 22 Miles S. E. from *Stettin*. 'Tis but small, and ill Peopled; yet the Courts of Justice for the Country are held here, and 'tis one of the Hans-Towns. 2. *Dam*, a small Town on the *Oder*, opposite to *Stettin*, and was formerly Part of that Dutchy, but mortgaged to the Elector of *Brandenburg*, together with *Golnow*, about 12 Miles N. of it, for 50000 Crowns, in 1679; but redeemable. That same Author calls the most Easterly Part of *Brandenburg Pomerania*, by the Name of *Pomerellia*, in which are the Towns of *Lawenburg*, on the River *Lobo*, 50 Miles N. E. from *Rugenwald*, the Chief of the Country, and *Butow*, 27 Miles S. E. from *Stolpe*, which gives Name to the Lordship of *Butow*.

We come now to the Islands of *Pomerania* on the Coast of the *Baltick*: The First of which is

R U G E N.

THIS is one of the chief Islands in the *Baltick*, and famous for the Courage of its ancient Inhabitants the *Rugii*, to whom all Historians give the Character of a Brave and Warlike People. It was formerly much larger than at present, and reach'd as far E. as *Ruden*, 3 Leagues from it; but formerly a Part of it. The Separation was occasion'd by a great Tempest in the beginning of the 14th Century, when the Sea drown'd a great Part of the Island, and form'd this Channel, which is now passable by the greatest Ships. The Island is about 30 Eng-
l f f f 2 lish

hish Miles in Breadth, and as much in Length; but full of Creeks and Peninsula's. Their chief Forts were *Arcona* and *Camerantz*, both reckon'd impregnable, till *Waldemar* of *Denmark* took them, with the whole Island, in 1368. The former was on a high Rock by the Shore; and not to be taken in those Days but by being starv'd. The Island has so many Inlets, that there is scarce any Part of it above 3 *English* Miles from the Shore; but all the Peninsula's are so well guarded by Rocks, that they fear no Inundation. 'Tis so rich in Corn, that 'tis call'd the Granary of *Stralsund*, and is well Rock'd with Horses, Black Cattle, Sheep, and the largest Geese in *Europe*. They say, That formerly they had no Wolves or Rats, but are now as much pester'd with them as their Neighbours. The Forrest of *Jaswant* furnishes them with Fuel and Timber, and the Sea and Lakes with Plenty of Fish for Consumption and Export. Among other Lakes here, there is one near *Burchwall*, upon which the Inhabitants superstitiously believe no Boat will fail, nor any Net be suffer'd to catch Fish, as we mention'd before in the Account of Ancient *Germany*, under the Head of the *Deuringii*, &c. Near this Lake, there's an exceeding high Promontory, which hangs over the Sea, and was formerly a Shelter for the Pirates who haunted those Coasts. The chief Trade of the Inhabitants is with *Stralsund*, from which 'tis only separated by a narrow Sea, as formerly mention'd; and this City has a sort of Jurisdiction over the Island, for their High Court of Admiralty determines all sorts of Controversies that happen in the Port Towns of *Rugen*, from whence the People in those Cases come to *Stralsund* for Justice. They can erect no Court, nor give any definitive Sentence, nor export any Commodities, without Leave of that City, which is the Key and Fortrefs of the Island.

The ancient Language here was the *Sclavonick*, which was abolish'd, and the *Saxon* introduc'd, when the Dukes of *Pomerania* made themselves Masters of the Island. The Inhabitants were the last of all the Northern People who embrac'd Christianity, which was about 813, by the Preaching of some Monks; but they quickly apostatiz'd; and after having idoliz'd St. *Vite*, a poor

Monk, their Apostle, by the Name of *Swant*, they transferred the Worship they paid to him to a monstrous Idol with 4 Heads, to which they repaired, as to an Oracle; and Merchants who had made a good Voyage, were obliged to pay him a Tribute. They constantly kept 300 Horses for this Idol's Service, one of them white, and never rid but by the Chief Priest, who would now and then shew him in a Morning besmear'd all over with Sweat and Dirt, and told the foolish People, That *Swant* had brought him into that Condition, by pursuing their Enemies in the Night. This Idol was kept at *Arcona*, then their chief City. He had a Horn in his Hand, which had been filled the Year before with precious Liquor; and the Priest looking into it, according to the remaining Quantity of the Liquor, he prognosticated Dearth or Plenty for the succeeding Year; which being done, keeping his Lips shut, lest his Breath should hurt the Idol, he took the Horn, pour'd out the remaining Liquor at the Idol's Foot, fill'd it anew, and put it again with great Reverence into his Right Hand. They continued thus, till by Conversation with the *Pomeranians* they threw off that Heathenish Idolatry, above 500 Years ago, and are now zealous *Lutherans*.

They had formerly Princes of their own, who likewise rul'd Part of *Pomerania* about *Stralsund*, *Gripswald*, &c. 11 of them are mention'd in History: The first is *Wislau*, who liv'd about 938. The 4th is *Raze*, a great Warrior, who took *Lubeck*, and died about 1141. The 5th is *Tessau*, who had great Wars with the *Danes*, with various Success; but at last was conquer'd by *Waldemar* of *Denmark*. The 6th was *Jarimar*, their first Prince who embrac'd Christianity. Their 9th was *Jarimar* II. who, after many Battles, shook off the *Danish* Yoke in 1259. The 10th was *Witzlau* III. a great Promoter of Christianity in *Liefland*, where he frequently preach'd in Person to the poor Infidels. The 11th was *Witzlau* IV. from whom those of *Stralsund* revolted: Upon which, with the Assistance of neighbouring Princes, he besieg'd them; but being kill'd in a Sally, an End was put to the Controversy and his Lineage in 1325.

After this, *Rugen* came to the Dukes of *Pomerania*, and by Contract should have been

been annexed to the Family of *Brandenburg*, on the Failure of that Line; but by the Treaty of *Westphalia*, it was given, with *Lower Pomerania*, to the Crown of *Sweden*. *Frederick III.* of *Denmark* pretended to it; but resign'd his Title to the *Swedes* by the Treaty of *Roschild* in 1658. During the War betwixt the late Elector of *Brandenburg* and the *Swedes*, *Christian*, the late King of *Denmark*, with 6000 Men, attempted to reduce it; but was defeated by Count *Koeningmark*, the *Swedish* General, 600 of his Men killed on the Spot, 2500 taken, with 26 Standards, 16 Cannon, 5 Mortars, and 30000 Rix-Dollars. He attempted it the second time in 1658, and conquer'd the Island; but by the Interposition of the present *French* King, he was obliged to resign it again to the *Swedes* in 1679, who have since put strong Garisons into it. This Island suffer'd much during the Civil Wars of *Germany*. They have many Noble Families, who pretend to derive their Pedigree from the ancient *Rugii* or *Rani*, and fancy this to be what was called the *Insula Rannorum*; but *Wormius* thinks, the *Rani* liv'd further E. near the Coast of *Liesland*. Doctor *Nicholson* observes, That by little Expence in building Forts and Harbours, it might be made independent of *Stralsund*; but their Interest in Commerce keeps them together. The Island, he says, is capable to raise 7000 stout Fighting Men.

The only Town of Note is *Bergen*, about the middle of the Island: It had formerly the Name of a City; but is now only an open Village of about 400 Houses. The Ruins of *Arcona*, formerly their Capital, but destroy'd by *Waldemar I.* of *Denmark* in 1168, are still to be seen in the N. Part of the Island. The Rusticks pay easier Rents here than in most other Places, which makes them pay all the Respect to their Landlords, which they claim as due to their Antiquity. The Island is honour'd with the Title of a Duchy. They have another Village or Town of good Trade, called *Puthus*, which lies S. from *Bergen*.

The 2d Island on this Coast is *WOLLIN*, in the Mouth of the *Oder*, and has a Town of the same Name on that Branch of the *Oder* called *Diveow*. *Adam Bremensis* says, That it was formerly the largest City in *Europe*, and anciently called *Tulinum*; that it

maintain'd War against the Kingdom of *Denmark*, and took their King *Suinotto* three times Prisoner. It was extraordinary strong and populous, and the greatest Mart in *Europe* next unto *Constantinople*. The *Danes*, *Swedes*, *Russians*, *Jews*, and several other People, had their separate Streets and Houses of Exchange here; but by the just Judgment of God for their Apostacy from Christianity, most of it was destroy'd by Lightning, and the rest by *Waldemar* of *Denmark*; who surpris'd it in 1170; since which it has never been remarkable; for *Lubeck* and *Dantzick* have got all its ancient Trade. The Island is about 14 Miles long, and 10 broad.

The 3d Island is *USEDOM*, in the Mouth of the same River, W. from *Wollin*; and separated from it by that Branch of the *Oder* called the *Swine*. After the Destruction of *Wollin*, it had a great Trade; but most of it being burnt down in 1473, it never recover'd its ancient Lustre. It has a good Castle; which the Elector of *Brandenburg* took in 1676; but restor'd it to the *Swedes* by a succeeding Treaty. The Island is about 20 Miles long, and 12 broad:

Having finish'd the Circles of *Upper* and *Lower Saxony*, we shall, according to Promise, in our Account of the Religion of the *Lutherans*, take Notice of that called the *Saxon* Confession, which was one of those added for explaining that of *Augsburg*.

The Saxon Confession.

IT was offer'd to the Council of *Trent* in 1551, and sign'd by the Superintendants, Doctors of Divinity, and Pastors of *Saxony*; among whom, those of most Note were, *Alexander Alesius*, a *Scotts-man*, Doctor of Divinity, and Deacon of the College of Divines in the University of *Leipsick*; *Joachim Camerarius*, Professor of the Liberal Arts at *Leipsick*; *George Major*, Doctor of Divinity, and Professor in the University of *Wittenberg*; and *Philip Melancton*, Professor in the same University.

It was also approved by the Ambassadors of *John* and *George Frederick*, Marquisses of *Brandenburg*; and of *Gebhard* Count of *Mansfeld*, and the other Counts of that Family, with

with the Superintendants and Pastors of their Countries; by the Ministers of *Straßburg*, and those of *Lower Pomerania*, by Order of their Duke, in their Provincial Synod at *Gripßwald*.

In Point of Doctrine, they agree with that of *Augsburg*, which in some Places they explain more at large.

We shall only take Notice, 1. That in the Article of the Church, they describe the visible Church to be a Society of those who in this Life embrace the Gospel of Christ, and use the Sacraments right; in which however there are many who are not Saints, tho' they agree to the true Doctrine. Therefore who, what, and where the true Church is, must be known from the Scripture, since the Church is join'd to the Gospel, as *Paul* says, *If any Man teach another Gospel, let him be accursed*, &c. So that tho' Sadducees, Pharisees, Popes, and others, who teach another Doctrine different from the Gospel, and obstinately establish Idolatry, claim the Title and Government of the Church, they are not Members of it.

They add, That tho' the Church be a Society which may be seen and heard, yet 'tis to be distinguished from Political Governments, or such as carry the Sword; for Bishops have not by Divine Right a Power to punish the Disobedient, or to seize Worldly Governments: Yet there is an Order in the Church, according to that Saying, *Eph. 4. 8. &c. He hath ascended up on high, and gave Gifts unto Men. Verse 11. Some Apostles, some Prophets, some Evangelists, and some Pastors and Teachers. Verse 12. For the Perfecting of the Saints, for the Work of the Ministry, for the Edifying the Body of Christ.* The Son of God is the High Priest, appointed by his Eternal Father, who, that the Church should not perish, gave Ministers of the Gospel to her; some of them call'd immediately by himself, as the Prophets and Apostles, and some of 'em call'd by Humane Election; for he approves her Election. Therefore we retain in our Churches the publick Rite of Ordination, by which the Ministry of the Gospel is recommended to those who are duly chosen, after Trial of their Learning and Manners. Unto this Ministry belongs the Preaching of the Gospel, the Administration of the Sacraments, the Absolution of Penitents,

the Ordination of Ministers lawfully call'd, the putting in Execution the Censures of the Church in a lawful Manner against those who are found guilty in Manners or Doctrine, the Excommunication of the Obstinate, and the absolving and receiving again those who repent. And that these Things may be done in an orderly Manner, Consistories are settled in our Churches.

2. As to the Lord's Supper, they declare against External Sacrifices, Christ having put an End to them once for all; and say, That the ancient Church, by the Words *Sacrifice* and *Oblation*, understood the whole Action, viz. Prayer, the Receiving of the Sacrament, the Remembrance of our Saviour, Faith, Hope, Confession, and Thanksgiving. This whole Action, as 'tis External and Internal, is in every Convert, and in the whole Church, a true Sacrifice of Praise, or *ευχαριστία*, and *λογικὴ λατρεία*, *Rom. 12. 1.*

3. As to Confirmation, they say, The ancient Church understood nothing by it, but a Trial whether their young Members understood their Doctrine, and obliged every one of 'em to repeat a Summary of it, and to profess their Dislike of Paganism and Heresie; that they would continue Members of the true Church, and not depart from the true Doctrine which they themselves profess'd: This they approve as useful for instructing Men, and retaining them in the true Knowledge of God: And this, they say, they did in the Catechising of their Youth, and in private Confession, when the Pastors try'd the Knowledge of their People. But by private Confession, they meant only a private Conference, without requiring a particular Enumeration of the Penitents Faults, which they say is neither commanded by God, nor possible; as they express themselves under the Article *de Penitentia*. And as to the Method of Confirmation then us'd by the Bishops, they reject it as a vain Shadow.

4. As to Rites appointed by Humane Authority in the Church, they lay down several Rules to be observed for the Sake of Decency and Order; but take Notice how readily Humane Rites degenerate into Superstition, and therefore confine all to the general Rules of the Scripture; and confute those who alledge, That Princes, Bishops,

shops, Angels, or any Creature, have Power to appoint Rites contrary to the Scripture; and lay down this Conclusion, That εἰδωλολατρικαὶ, or Will-Worships, invented by Men without God's Command, neither are, nor were, the Worship of God; and take Notice, That the Opinion of the Necessity of such Rites, had always occasioned great Discords in the Church, as of old; the Controversy about *Easter*, Leaven'd Bread, and many such Things, have done of late, which increase Ceremonies, and were Burdens to the Church, and Men's Consciences; for which they quote Col. 2. 16. *Let no Man judge you in Meat or Drink, or in respect of an Holy Day, or of the New Moon, or of the Sabbath-Day, &c.* And Gal. 5. 1. *Stand fast therefore in the Liberty wherewith Christ hath made us free, and be not entangled again with the Yoke of Bondage.*

As to the Power and Office of Superintendants, and their Method of Government and Discipline, we shall have Occasion to mention it when we come to the *Bohemian* and *Wirtemberg* Confessions, &c.

Brandenburg Prussia.

WE formerly gave the Description and History of *Prussia* in General, and of that called *Polish Prussia* in Particular. We come now to this Country, which was formerly called *Ducal*, to distinguish it from the other *Prussia*.

This Country has *Polish Prussia* on the W. *Lithuania* on the E. the *Dutchy of Warsaw* on the S. and the Bay of *Courland* and *Samogitia* on the N. 'Tis the larger Part of *Prussia*, and is now, as formerly mention'd, call'd the Kingdom of *Prussia*, and gives the Title of King to the Elector of *Brandenburg*. According to *Moll's Map*, from *Memel* on the *Baltick*, to the Frontiers of *Poland*, 'tis about 150 Miles from N. to S. and above 120 where broadest from E. to W.

The chief Towns are, 1. *Cönigsberg*, the Capital, on the Mouth of the *Pregel*, in Long. 39. 38. Lat. 54. 44. about 80 Miles N. E. from *Dantzick*. 'Tis a Hans-Town, and a Place of great Trade, large, well built, and divided into 3 Towns. That properly call'd the *Old Town* was built about 1260, by the *Teutonic* Knights, and has the

Ducal Palace in it, a large and splendid Structure, with a famous Library, from whence *Chemnitius* compos'd his Examination of the Council of *Trent*. This Palace was built by *George Frederick* Marquis of *Brandenburg*. The 2d Town stands in an Island, and is call'd *Kniphoff*, from an Officer who join'd it to *Cönigsberg* in 1380, where stands the Cathedral of the Bishoprick of *Samland*, and an University, founded by Duke *Albert* of *Brandenburg* in 1544, which has bred many Learned Men. The 3d Town is call'd *Libenicht*, and was added to the other by *Berthold* of *Austria*. 'Tis fortified by a strong Castle, that commands the Harbour, which is convenient, and makes it a Place of good Trade. Their principal Commerce is in yellow Amber, which grows on that Coast, Oak, Fir, Honey, and Wax. It has been subject to the Elector of *Brandenburg* since 1525.

2. *Memel*, 70 Miles N. E. from *Cönigsberg*. It lies upon the Bay of *Courland*, and has a good Harbour, defended with a strong Citadel. 'Twas built by the *Teutonic* Knights about 1328. 'Twas afterwards subject to the Knights call'd the *Cross-Bearers*, then to the *Poles*, but now to the *Brandenburgers*. It suffered much by War, but more by Fire, being almost quite burnt down in 1545, and 1648. 'Tis seated among Lakes, which makes it naturally strong, and the Key of this Part of the Country.

3. *Pilaw*, on the same Bay, about 20 Miles W. from *Cönigsberg*, noted for Sturgeon-Fishing, and defended by two Fortresses on the Mouth of the *Pregel*, where Criminals of State are imprison'd. The *Swedes* took them in 1625; but restor'd them to the Elector of *Brandenburg* by the Treaty of *Oliva* in 1660.

4. *Brandenburg*, a small Town betwixt *Elbing* and *Cönigsberg*, on the Mouth of the *Pregel*, the Capital of the Country of *Natania*.

5. *Holland*, on the River of *Elbing*, the Capital of *Hockerland*, a barren Country, betwixt *Polish Prussia* and *Masovia*.

Lukaw and *Heiligpeil* are also in this Country, but of no great Note.

Calvinism is now the prevailing Religion in *Prussia*, by means of the University of *Cönigsberg*. Some Places of this Country

try are barren; but others fruitful and well inhabited.

S I L E S I A.

Authors differ about the Name. Some derive it from the *Elisi*, part of its ancient Inhabitants: Others from the River *Schlesi*, which falls into the *Oder*, and seems to be supported by the German Name *Schlesien*. *Cluverius* mentions the *Semnones*, *Osi*, and *Burii*, to have been part of its ancient Inhabitants. *Adam Bremenfis* and *Helmoldus* say, most of this Country was subject to the *Poles* in the Days of their first Prince *Lechus*; but frequently invaded by the ancient *Germans*. *Cureus* proves, that it was subdued by *Charles the Great*; that some Time after they revolted from him and his Sons, but was reduc'd again by *Lewis the Pious*. In 1042, the Emperor *Henry III.* gave *Silesia* to *Bretislau* Duke of *Bohemia*, who resign'd it to the *Poles*, on their paying a Yearly Tribute to him and his Successors. *Henry IV.* in 1086, by Consent of the Diet, as *Cosmas Pragensis*, who was present at it, informs us, empower'd *Wratislau* King of *Bohemia* to invade and reduce this Country, *Lusatia*, and *Poland*, which occasion'd Wars betwixt the *Bohemians* and the *Poles*, wherein 'tis probable, says *Dr. Nicholson*, the latter had the Advantage, since *Silesia* continued subject to them. But *Uladislau II.* Son to *Bolislau III.* of *Poland*, being banish'd by his Brothers, who were left Co-heirs with him by his Father, the Emperor *Frederick I.* forc'd the *Poles* to resign *Silesia* to *Uladislau* and his Heirs for ever. *Uladislau* left 3 Sons, who were joint Dukes of *Silesia*; but paid some Homage to the Crown of *Poland*. But the *Poles* were so angry at the coming in of the *Germans* to that Country, that they seldom call'd those Dukes to the Diet, and never admitted them to their Crown; tho' before it became Elective, they had frequently the greatest Right to it. *John* King of *Bohemia*, Son to the Emperor *Henry VII.* managed those Differences so well, that he obtained most of *Silesia*, by Agreement from *Casimir the Great* of *Poland*; but Part of it still paid Homage to the Polish Crown. Yet *Casimir*, contrary to this Agreement, subdued it again in 1343;

and afterwards the *Poles* invaded other Parts of the Country, where they still retain some Tracts of Land, which belong to *Abbies*, &c. in *Poland*; but now most of the Provinces, except the Dutchy of *Crossen*, belong to the Crown of *Bohemia*. Upon which, the Emperor has the Title of Duke of *Silesia*.

Cluverius divides this Dutchy, which *La Forest* says is one of the largest in *Europe*, and one of the best Countries in *Germany*, into 16 Principalities, viz. *Breslaw*, *Glogaw*, *Sagan*, *Schweinitz*, *Lignitz*, *Brige*, *Neisse*, *Crossen*, *Tesch*, *Oppelen*, *Ratibor*, *Munsterberg*, *Troppe*, *Jaur*, *Olffe*, and *Jagerendorff*. The Length from N. W. to S. E. according to *Moll's* Map, is 235 Miles; and where broadest, 'tis about 76. 'Tis separated from *Bohemia* and *Moravia* on the S. W. and S. by the Mountains called *Rissenbergen*; of which in their Place: From *Poland* on the E. *Lusatia* and Part of *Bohemia* on the W. *Brandenburg* on the N. and *Hungary* on the S. The 4 chief Mountains in this Country are, 1. *Zottenberg*, called by Latin Authors *Mons Zotenfis*, *Zabothus*, and sometimes *Silenfis*, or *Silenius*, called the *Silesian* Weather-cock, because, by the Top of it, those of the Neighbourhood pretend to guess what Weather they shall have next Day. On the Summit, there's the Ruins of an old Castle, demolish'd by the Citizens of *Br. law*, because it was a Shelter for Robbers. From this Hill they dig a fine dark greenish Marble. 2. *Gratzberg*, or *Grodzberg*, on which Duke *Frederick* built a fair Castle, now a Watch Tower. 3. *Spitzberg*, with a Beacon, near the former. 4. *Georgenberg*, in the Dutchy of *Schweidnitz*, famous for the *Terra Sigillata*, first discover'd by *Montan*, an eminent Chymist and Physician. 'Tis a sort of hard Earth, with white, yellow, and red Veins; was by him made use of as an Antidote against all sorts of Poisons, and a sovereign Remedy for many other Diseases. He kept this Secret for some Years; but at last, for the publick Benefit, wrote a Tract in Latin, with an Account of its Virtues.

The chief Rivers in this Country are, the *Oder*, so called from a Town near which it rises on the Borders of *Moravia*; the *Vistula* or *Weissel*, and the *Elb*, have likewise their Rise in this Country. Their other Rivers

are,

are, the *Bobor*, *Neisse*, *Ohla*, and *Queiss*. They abound also with Ponds and Lakes, that have Plenty of all Fresh-Water Fish, especially Lampries, which are taken in vast Quantities in the *Neissish Lake*, &c.

The principal Commodities of the Country are, Madder, Flax, Sweet Cane or Galengal, Wine, (especially in the Dutchy of *Sagan* and *Crossen*) Silver, Copper, Lead, Iron, Chalk, Plenty of Salt-Petre, and some good Salt; but not enough for their own Use, which makes 'em import it from *Poland*, &c. They have all the Wild and Tame Beasts found in the Empire, with Plenty of Butter and Cheese, some of it made of Ewe's Milk; but their chief Trading Commodities are Wool and Flax. They have abundance of Fowl, and Plenty of Game, in their Forrests.

They have had several good Scholars, and brisk Wits; but the Boors are accounted dull and weak. Their Neighbours call 'em *Ass-eaters*, because they say a *Silesian Boor*, who had never seen an Ass before, shot one as travelling in the Country for an overgrown Hare, and he and his Neighbours eat it as such: But to take off this, they frame another Story themselves, That having discover'd a Gold Mine, which they design'd no body else should share with them; to conceal it while they work'd at it privately, they call'd it by the Name of the *Golden Ass*. They reckon the Hours of the Day from the Setting of the Sun, as the *Bohemians*, and some of the *Italians*, do; but those of Quality follow the usual Method.

Matthæus Corvinus, King of Hungary, was for some Time Lieutenant of *Silesia*; but that Post was afterwards conferr'd on the Bishops of *Breslaw*, till the Emperor *Rodolph II.* order'd that some Temporal Prince of the Country, with the Officers under him for determining all Law-Suits, should be appointed by the Council at *Prague*.

Christianity was planted here, as in *Poland*, about the End of the 9th, or the Beginning of the 10th Century; but at first, the Christians worship'd in private, for fear of their Magistrates, till the Court turn'd Christian about 965, when 9 Bishopricks were erected in the Country. Soon after *Luther's* Appearance, they embrac'd the *Augsburg* Confession, which was confirmed

by the Emperor *Rodolph II.* in 1609. But *Ferdinand II.* repeal'd their Charter, and very much restrain'd the Exercise of their Religion, which was restor'd by the Treaty of *Westphalia*; but taken from them since, till the present King of *Sweden* oblig'd the Emperor to allow it them again: But the Controversy, whether the *Calvinists* there shall have the same Privilege, is not yet determin'd.

The Dutchy and City of Crossen.

THE Name in German signifies a Border, because it lies on the Frontiers of *Brandenburg*. It has had several Masters, having been mortgaged to the Archbishop of *Magdeburg* in 1272; but redeemed within two Years by the Duke of *Breslaw*. It was afterwards mortgaged to *John* Marquis of *Brandenburg* for 4000 Crowns towards their Duke's Ransom, and again redeemed. *John* of *Brandenburg*, called the *German Cicero*, had it again for his Wife's Portion of 50000 Crowns; and it was afterwards deliver'd to *John III.* of *Brandenburg* in 1391, by *Uladi-slaw* King of *Hungary* and *Bohemia*; and the full Possession of it was given to the Elector of *Brandenburg* by the Emperor *Frederick I.* King of *Bohemia*: Since which, the Electors have always call'd themselves Dukes of *Crossen*.

The City of that Name is ancient, stands in a pleasant Plain, and good Air, upon the *Oder*. The Duke's Palace, the Town-House, and some of the Citizens Houses, are of neat polish'd Stone. The neighbouring Hills are cover'd with Fruit-Trees of several Sorts; and they have likewise some Wine, but not very good. The City, tho' little, has a considerable Trade, by reason of its Situation on the Conflux of the *Oder* and *Bobor*. It lies about 25 Miles S. E. from *Francfort* on the *Oder*, and about 35 N. W. from *Glogaw*, about Long. 34. 37. Lat. 52. 3.

The City and Dutchy of Glogaw.

THE Name is derived from the *Waldish* Word, which signifies Copses or Thickets, amongst which 'tis situated. Duke *Conrad* Wall'd it, and built the Cathedral,

G g g g

the

the only Strength and Ornament of the Town, about 1260, and stock'd it with *Germans*, who brought in their own Laws. 'Tis called *Glogaw the Great*, because there is a lesser of the same Name in the Dutchy of *Oppelen*. 'Twas formerly subject to its own Princes, but now to the Emperor, as King of *Bohemia*. It lies in Long. 35. 12. Lat. 51. 45. on the *Oder*, 35 Miles S. E. from *Crossen*, and about 45 N. W. from *Breslaw*. It was taken by the *Swedes* in 1647, but restor'd to the Empire afterwards, is regularly fortified, and has a strong Castle. The *Palsie*, Gravel and Stone, are Epidemical Distempers here, ascrib'd to their intemperate drinking of bitter, muddy, strong Beer, and eating too much Pork and Cheese. There are several other petty Towns in this Dutchy, but not worth insisting on. The People of this Dutchy have a Law, by which a Daughter, upon Failure of Issue-Male, inherits her Father's Estate before any of his other Male Relations, which is contrary to the Custom of most other Places in *Germany*.

The City and Dutchy of Sagan.

THIS City is one of the largest and most populous in *Silesia*. It was several times taken and retaken by the *Swedes* and Imperialists during the Civil Wars of *Germany*. The Castle, St. Mary's Church, and two old Monasteries, are the Things of most Note here. It lies about 20 Miles W. from *Glogaw*, on the River *Bobor*. This Dutchy is but of small Extent, was formerly Part of that of *Glogaw*, but afterwards had three or four Princes of its own at a time. There are several large Corn-Fields in this Province, which is well water'd by Rivers; and there are three other small Cities, called *Prius*, *Naumburg*, and *Friwald*, belonging to the Dutchy.

The Town and Dutchy of Wolaw.

THIS Dutchy was formerly Part of that of *Lignitz*. 'Tis divided into 6 Circles or Hundreds, denominated from their chief Towns, *Wolaw*, *Hernst*, *Winzing*, *Ruten*, *Raude*, and *Steinaw*. *Wolaw* it self is but

a small inconsiderable Town, of little Trade. They are furnish'd with Fish from a neighbouring Lake, otherwise they could scarcely subsist. 'Twas however for some Time the Seat of War betwixt the *Swedes* and *Germans*, and a *Swedish* Lieutenant-General kept it with a Garrison. It lies about two Miles S. E. from *Glogaw*.

The Dukedom and City of Oelfe.

THIS City is neat and regularly built, has a fair Church, College, and Town-Hall, and a handsome square Market-place. The Gates, Walls, and Turrets, were handsome and noble before the late *Swedish* War, when most of them were demolish'd by the *Swedes* about 1648. 'Tis seated in a pleasant Country, and wholesome Air, was first made a City by the Emperor *Henry I.* about 936, and afterwards had Dukes of their own; but since 1492, has been subject to the Dukes of *Munsterberg*. There are 7 other small Cities in this Principality. The Town lies about 42 *English* Miles S. E. from *Glogaw*.

The City and Dutchy of Breslaw.

THIS City is called *Uratistawia*, and by some Latin Authors *Budorgis*, and *Butorigum*. It has the first Name from *Wlatistaw*, a *Bohemian* Prince, who founded it, and on that Account the Citizens bear a W in their Coat of Arms. It stands on the Conflux of the *Oder* and *Ohla*, in a rich and pleasant Country, in Long. 36. 7. Lat. 51. 7. about 43 Miles S. E. from *Glogaw*. 'Tis the Metropolis of *Silesia*, very populous, and much resorted to by *Hungarian*, *Bohemian*, *Polish*, and other Foreign Merchants. The Citizens are neat and genteel in their Clothes, and live as handsomely as any others in the Empire; upon which they affect to have been thought to have had an immediate Dependence, and do not love to be reckon'd any Part of the Kingdom of *Bohemia*; tho' it be plain from *Goldastus*, that they formerly were. To support their Pretensions, they obtained Leave of the Emperors to bear the Spread-Eagle in their Escutcheons; and *Charles V.* confirmed their Privileges. Their

Their Buildings are generally fair and stately; and on the Banks of the Oder, there are 4 old fashion'd Piles of Building, with Turrets on the Top, which they say were the Palaces of so many *Swabian* Princes, formerly Lords of this City. The Town is the See of a Bishop, who is put in by the King of *Bohemia*. They were anciently called *Golden Bishops*, because of their large Revenues; and they say, he must always be a *Silesian*; yet others have enjoy'd this Post. They have also an University, which has bred many learned Men, and some eminent Writers. *La Forest* says, it has been a sort of an independant City since 1348. That the Emperor *Charles IV.* enlarg'd and endow'd it with great Privileges; so that their Government is a sort of Commonwealth. Most of the Inhabitants, according to this Author, were *Calvinists*, and had their Liberty ratified by the Treaty of *Munster*. He adds, That in the 13th Century, it was burnt by the *Tartars*, and suffered much by the Civil Wars of *Germany*. 'Tis one of the largest and richest Towns of the Empire; and their stately Churches, and other Buildings, with their fine Squares, make it one of the finest. The Inhabitants have made it very strong, and guard it themselves. Their Government is by 15 Senators, 11 of which are of the Nobility, and the other 4 are chosen out of the Corporations of Drapers, Mercers, Brewers, and Butchers. *Hekelius* gives a mighty Character of this City, and of the Inhabitants, for their Religion, Civility, Liberality, and mentions many learned Men who have been bred there.

The first Duke of this Province was *Bolisslaus*, a *Polish* Prince, who had that Dignity conferr'd on him by the Emperor *Frederick I.* in 1163; but the following Princes not being able to defend themselves against the *Tartars* and *Poles*, they were forced to put themselves under the Protection of the King of *Bohemia*, to whom, *Burno* says, the Emperor *Frederick II.* gave it as a Fief of the Empire; but 'tis now subject immediately to the Emperor.

The City and Dutchy of Lignitz.

THIS is a fair City, on a small River, and is thought to derive its Name from

the ancient *Lugii*, about 25 Miles W. from *Breslaw*, and 30 S. from *Glogaw*. *Bolisslaus*, their first Duke, enlarg'd and fortify'd it about 1170; and Duke *Frederick* did so much improve it in 1532, that it was the best fortified Town in *Silesia*, except *Breslaw*. They have a noble and strong Castle, and a stately Hospital and Town-House. 'Tis famous for the Victory which the *Swedes* obtained near it over the *Germans* in 1635.

This Dutchy is the best Corn-Country in *Silesia*, and abounds with the white sort of *Terra Sigillata*. 'Tis commonly divided into 7 Circles, 4 of which take Name from their principal Towns, *Luben*, *Parchweitz*, *Hayn*, and *Goldberg*, which are not worth insisting upon. The other 3 Divisions are in the barren Part of the Country.

The Dutchie and Cities of Jawer, Schweidnitz, Brieg, Monsterberg, and Oppelen.

Jawer stands in a pleasant Valley, near the rocky Mountains which divide *Silesia* from *Bohemia*. It has no River near it, but is fortified with high Ramparts and deep Ditches. It lies about 10 Miles S. from *Lignitz*. It suffered much by the Civil War in 1648, when their Church was burnt down; but is now rebuilt more stately. It came to *Charles IV.* King of *Bohemia* by Marriage, and is subject to the Emperor as King of that Country. They have a Castle, where the Governor of this Dutchy and *Schweidnitz* resides. There are 11 other Towns in this Dutchy, but of no great Note.

Schweidnitz takes its Name from the great Herds of Swine kept there before the Forest was cut down in 1070, and has a Wild-Boar for its Arms. It was enlarged, fortified, and beautified, by *Bolisslaus I.* and is one of the finest Towns in *Silesia*. They have fine Churches, and Publick Buildings; and in their Armory, there is a great Gun which carries a Bullet of 320 Pound Weight. The Town of *Strigaw* in this Dutchy is noted for great Store of the *Terra Sigillata*. There are 9 other Towns in this Dutchy, but not worth describing. This City lies about 20 Miles S. E. from *Lignitz*, near the Conflux of two small Rivers.

Brieg, is so call'd from the *Polish* Word, signifying the high Bank upon which it stands on the River *Oder*, about 20 Miles S. E. from *Breslaw*. The Streets are uniform, the Houses generally are of Stone, and *St. Nicholas's* Church is a high and stately old Fabrick, with two Towers, after the *Frankish* Mode. Most of it, except the Publick Buildings, was burnt by the *Hussites* in 1428. There are 9 other Towns in this Dutchy, two of which, *Reichenstein* and *Silberberg*, are noted for their Mines, and are jointly subject to the Dukes of *Brieg* and *Lignitz*, who are both of one Family, descended from the ancient Hereditary Kings of *Poland*. This is one of the chief Dutchies of the Country.

Monsterberg stands in a fruitful Plain, about 32 Miles S. from *Breslaw*, and 20 S. E. from *Schweidnitz*, at the Head of a small River which falls into the *Oder* at *Breslaw*. It takes its Name from a Monastery built here by the Emperor *Henry I.* who founded the City. 'Tis but small, and not well fortified, and has nothing of Note but an old Castle, which is a strong Fortrefs; the School, and a fair Town-House. There are 5 other Towns in this Dutchy, but of no great Note.

Oppelen stands on the N. of the *Oder*, over which it has a Bridge. It lies about 37 Miles S. E. from *Breslaw*, is fortified with thick Walls, and strong Gates. 'Tis subject to the *Poles*, and about 36 M. from the Frontiers of that Country. The Emperor was prevailed with by the K. of *Poland*, to whom 'twas mortgaged, to withdraw his Troops from thence in 1647. There are 12 other Towns in this Country, where most of the People speak *Polish*.

The Cities and Dutchies of Grotkaw, Jagerndorf, Troppaw, Ratibor, and Teschen.

Grotkaw is small, and most of the Houses of Wood, except the Church, the Bishop's Palace, and Town-Hall, which are of Stone. There is such Plenty of Wood and Corn in the Neighbourhood, that it is become a Proverb, 'Tis impossible for a *Grotkawer* to starve or freeze. It is subject to the

King of *Bohemia*, and stands about 10 Miles E. from *Monsterberg*. *Neissa*, 10 Miles S. from it, is noted for a great Trade in Ticking. There are 11 other Towns in this Dutchy, but not considerable.

Jagerndorf takes its Name from the great Number of Huntsmen that formerly liv'd in it, where they had Plenty of Game in the neighbouring Woods. Latin Authors call this Dutchy *Carnoviensis*, or rather *Cornoviensis*, from its Arms, which are a Pair of Horns betwixt two Stones. This City and Dutchy was given by *Lewis* King of *Hungary* and *Bohemia* to *George* Marquis of *Brandenburg*, who built a Castle and Fortifications, that defend this little Town. It lies above 30 Miles S. E. from *Monsterberg*.

Troppaw, is so call'd from the River *Oppaw*, on which it stands, about 12 Miles S. E. from *Jagerndorf*. Latin Writers call the Dutchy, *Oppaviensis*. In 1405, it was swallowed up by a Deluge, occasioned by a sudden Thaw of Snow from the neighbouring Mountains. This City has Plenty of all Necessaries, and is noted for good Beer, but of no great Trade. There are 8 other Towns in this Dutchy, where they observe the Customs of *Moravia*, and on that Account have frequently attempted to join themselves to that Marquisate; but have always been hinder'd by those of *Troppaw*. 'Tis a very old Town, and has a Fortrefs built after the Antick Manner.

Ratibor stands in a pleasant Plain, on the W. of the *Oder*, 30 Miles E. from *Oppelen*. 'Tis suppos'd to have been built about 1164. Some Latin Authors call it *Ratibonia*. Most of the Houses are of Wood; but the Duke's Palace, the Cathedral, and some Publick Buildings, are Stone. It has still one Popish Monastery; but the Jesuits were drove from hence at the Reformation. It had formerly Dukes of its own; but their Issue failing in 1516, it became subject to the King of *Bohemia*. The Dutchy has 5 other Towns, but not considerable.

Teschen is one of the oldest Cities of *Silesia*, and is said to have been built by a *Polish* Prince about 810. It stands on the *Oder*, about 28 Miles S. E. from *Ratibor*, on the Confines of *Silesia*, *Moravia*, *Hungary*, and *Poland*; whence it comes, that the Inhabitants have a medly of Language, scarce understood by any but themselves. They have

have Store of Venison, Wild-Fowl, and Fish, and have a great Trade in Wine and Fruit from *Hungary*. They have two Churches, where their Worship is perform'd in *Bohemian* and *High-Dutch*, most of the Inhabitants being of those Countries. They have two Sorts of Beer, one of Wheat, and the other of Barley-Malt; the latter very pleasant and strong, with which the Country People frequently make themselves drunk. In this Dutchy, there are many high Mountains; but there are two Ridges most remarkable, the first the *Carpathian* Mountains, which separate this Country from *Hungary* and *Poland*, and are by the Natives called *Jablunka*; among them are many Mines of Silver and Lead, which make the chief Riches of *Silesia*. The Miners are by the Natives called *Wallachians*, and are a much rougher sort of People than the other *Silesians*: A vast Number of 'em revolted from the Imperialists to the *Swedes* in 1643. The other Mountains are on the S. and divide this Country from *Moravia*. Latin Authors make them part of the *Sudetes*, and call them *Montes Maraviici*. They are well stock'd with Mines, and great Flocks of Sheep; but their Mines do not yield so much Ore as those of the *Carpathian* Mountains. They have 8 or 9 other Towns in this Country, but of no great Note. *La Forge* mentions a little City called *Biczina*, memorable for the Defeat of *Maximilian* of *Austria*, who was taken here by *Sigismund* of *Poland* in 1588; and another called *Plesz* near the *Weissel*, a pretty little City, with the Title of a Barony. He mentions also *Sprottau* in the Dutchy of *Glogaw*, famous for a Salt Mine; and *Freyssas* in that same Dutchy, noted for its Iron Mines.

The County and City of Glatz.

THE County lies among the Mountains of *Moravia*, has the Dutchy of *Silesia* on the E. *Bohemia* on the W. *Moravia* on the S. and Part of *Bohemia* on the N. which *Dr. Nicholson* observes has puzzled Geographers to which of those Countries to assign it; but it most probably belongs to *Silesia*. The ancient Inhabitants are thought to have been the *Marigni*; and after them, the *Hun-*

garians possess'd it, with some neighbouring Countries, till routed by the Emperor *Henry I.* who hang'd their Chief Commander *Gloxar*, from whence this City is said to have taken its Name. The Nobility say, That before this Conquest by *Henry I.* who also planted Christianity here, it was immediately subject to the Emperors, and afterwards subdued by the *Poles* and *Bohemians*, who, by their Records, appear to be Masters of it in the 11th Century. After this, it was some time possessed by the Duke of *Silesia*, till the Reign of *Charles IV.* who subjected it again to *Bohemia*; and thus it continued, till *K. George* of *Bohemia* gave it, with *Monsterberg* and *Frankenstein*, to some of his own Sons, who were called Dukes of *Monsterberg*, and Earls of *Glatz*. It was afterwards sold to several other Princes; but is now subject to the Kingdom of *Bohemia*. Their Commodities are, Iron, Coal, Silver Ore, Timber, Venison of all sorts, Tame Cattel, Butter and Cheese; and the Country is so rich, that it brings some Years 40000 Crowns into the Treasury of *Bohemia*.

The City is neat and compact, stands in a pleasant Plain on the Banks of the *Neissa*, about 22 Miles S. W. from *Monsterberg*. 'Tis defended by a strong Castle on the top of a neighbouring Hill. Their great Church was said to have been formerly the Temple of an Idol, worship'd by the ancient Inhabitants, in which, *Aelurius* says, the young Maids nail'd up their Hair against the Walls; and not long ago, some of these *Tabulae Votive* were to be seen there. The Magistrates have a Power to coin Money in their own Names; but seldom coin any other than Halfpennies and Farthings. There are 9 other large Towns in this County, of which we have no Description, and above 100 fair Villages.

The Marquisate of Moravia.

THE *Bohemians* usually give the Precedency to this Country before *Silesia*, either because 'twas anciently a Kingdom of it self, or was sooner subject to the Kings of *Bohemia*. Some Authors derive the Name from *Mahron*, a Mare, because 'tis noted for breeding of Horses; but it comes
more

more probably from the great River *March*, which runs through the middle of the Country; was formerly the Border of the German Empire on that Side, and gave the Name of *Marchomanni* to the ancient Inhabitants. It has *Silesia* on the N. *Austria* on the S. *Bohemia* on the W. and Part of *Silesia* on the E. is about 110 Miles long, and 80 broad, according to Dr. *Nicholson*. *Mall* makes the Length 120, and the Breadth 80. The greatest Part of the Country towards the N. and W. consists of uninhabitable huge Mountains and Forests; but towards *Austria* and *Hungary*, it abounds as much with fair Fields, Towns and Villages, as most Parts of the Empire. The Water, especially what's found in Pits, is in many Places poisonous and pestilential, because of a mix'd Mineral made up chiefly of Lime and Nitre in the Soil, which not only infects the Water, but gives a Tincture to their Corn, Vines, Fruit-Trees, and other Vegetables, which occasions the Stone, Gout, Cholick, Falling-Sickness, and Hypochondriack Distempers, to be epidemical in this Country; but Providence has furnish'd them with several rich Medicinal Fountains, which are not only a present Remedy against those Distempers, but against most others with which Mankind is afflicted. *Thomas Jordan*, a Physician, and Native, has given a good Account of 'em, and of their Virtues, in a Book Entitled, *Commentarius de Aquis Medicatis Moraviae*. Since which, other Medicinal Waters and Baths have been discover'd there, which *Herdot*, another of their Physicians, has describ'd in a Book, call'd, *Tartaro Mastix Moraviae*. They have likewise other Fountains of a salt and acid Taste, very pleasant and wholesome.

Their two chief Rivers are, 1. *Moraw*, which gives Name to the Country. It rises in the County of *Glatz*, runs through the middle of the Marq. and most of their chief Cities stand on its Banks. 2. *Teya*, which springs from two Fountains, one in *Bohemia*, the other in *Austria*; and after receiving several other Rivers, falls into the *Moraw* on the Borders of *Austria*. These Rivers have Store of Trouts, Crevisses, Barbels, Eels, Jack, Perch, and many other Sorts of Fresh Fish.

The Country abounds with Corn of all Sorts for their own Consumption and Ex-

port, and they have Store of Red and White Wine. They have good Breeds of Horses, Oxen, Sheep, and Goats; but no Asses, Camels, or Mules, which some ascribe to the Sharpness of the Air. They have one kind of Beast peculiar to their Forests, which they call *Rysowe*, somewhat like a Panther. 'Tis about as high as an ordinary Cur, but much thicker; its Belly and Feet are spotted, and it preys upon Deer and other Beasts, whom it surprises, by leaping suddenly upon them from the top of a Rock or Tree. *Dambrevius*, in his History of *Bohemia*, speaks of Frankincense and Myrrh dug out of the Earth here, which he says resembles the Privities of Men and Women, and on that Account is distinguish'd into Male and Female; and he tells us of his own Knowledge, That one of their Noblemen, when his Servants were digging a Fish-Pond, found a Piece of this Myrrh, perfectly resembling an entire Man; part of which, resembling half of a Man's Arm, that Lord gave to himself, which he made use of for Fumigation: And *Herod* above-mention'd assures us likewise, That another Piece, resembling an Infant, was found in the Allum Mines near *Czerua*, which the Miners sold for 30 Crowns to some *Carthusian* Monks, who sent it to their great Monastery in *France*, where the Abbot made a Present of it to the French King. The Country People, among other Virtues, fancy that it drives away Serpents and ill Spirits. *Aeneas Sylvius* says, the Inhabitants, in his Time, were a thievish barbarous People; and that there was no travelling among 'em without Arms. The *Moravians* themselves own, that the Boors on the River *Hanak* are guilty of this Crime; but the Inhabitants in general are of a free Conversation, not easily provoked, and hard to be appeased. They are exemplary for Obedience to their Magistrates, brave in the Field, faithful to their Promises, but credulous of old Prophecies, and addicted to Drink; but not such Drunkards and Bigots as some Geographers represent them.

Their common Language is a Dialect of the *Sclavonick*; but the Nobility and Citizens speak *High-Dutch*.

They are said to have been first converted by *St. Cyril* and *Meludius*, &c. When *John Huss* began to appear in *Bohemia*, many of the

the *Moravians* embrac'd his Doctrine, which was much opposed by *John de Praga*, Bishop of *Olmutz*, afterwards a Cardinal; but soon after, most of their Cities and great Towns threw off Popery. The Synod of *Brin*, in 1608, having given Leave for every Man to believe as God had given him Knowledge, the People abusing their Liberty, abundance of unlearn'd Men, and Mechanics, set up for Preachers, which divided them into 14 Sects, who all rejected Communion with one another. These unhappy Divisions made it easy for the Emperor *Ferdinand II.* after the Defeat of the Elector *Palatine* near *Prague* in 1620, to re-introduce Popery; so that the Protestants were dispersed among the Rocks and Mountains on the Borders of *Silesia*, and durst not meet in publick, as *Dr. Nicholson* informs us.

That same Author says, *Moravia* was anciently a Kingdom, and their Kings the greatest Potentates in this Part of *Europe*, having under them *Bohemia*, *Poland*, and *Silesia*. About 700, *Zuantacop*, King of *Moravia*, refusing Tribute and Homage to the Emperor, the latter invaded him; but was forc'd to a dishonourable Retreat: To revenge which, the Emperor call'd in the Infidel *Hungarians*, by whose Assistance he routed *Zuantacop*, who thereupon became an Hermit; and his Country being divided into Provinces, was annexed to the Empire, and now most of it is subject to *Bohemia*, or broke into a few Petty Baronies. *La Forreſt* says, 'twas united to *Bohemia* about 1048 by *Brzetislas* Duke of *Bohemia*, called the *Bohemian Achilles*. This Country suffer'd much by the Ravages of the *Tartars* during the Siege of *Vienna* in 1683.

Their chief Cities and Towns are,

1. *Olmuts*, their Metropolis, in Latin *Olmotium*, supposed by some to be *Ptolomy's Eburum*. 'Tis a small City, neat, and well built, on the Banks of the *Moraw*, by which it has a Trade with *Bohemia*, *Hungary*, *Poland*, *Silesia*, and *Austria*. It lies about 20 Miles W. from the Borders of *Silesia*, in Long. 35. 53. Lat. 49. 35. Their Antiquaries fancy the Name to be a Corruption of *Julio Montium*, and therefore think it to have been built by *Julius Caesar*; but without any Ground. *St. Cyril*, their Apostle, who liv'd

about 880, was their first Bishop. *Aventinus* says, he was the Author of the old *Wendish* or *Croatian* Alphabet, in which he wrote the Bible that he translated into the *Moravian* Tongue; of which, some Antiquaries take the *Muscovian* Bible, printed in 1581, to be a Transcript. In 1346, the Bishop of *Olmuts* was removed from being subject to the Elector of *Mentz*, and made Suffragan to the Archbishop of *Prague*; yet some of their late Bishops have deny'd Subjection to any but the Pope.

2. *Brin*, in Latin *Bruna*, about 18 Miles S. E. from *Olmuts*. The Courts of Judicature for the Country are held here and at *Olmuts* by Turns. It stands on the Conflux of two small Rivers, and is defended by a strong Castle on the top of a neighbouring Hill. It held out bravely against the *Swedes* in 1645, whereas *Olmuts* surrender'd at first Summons; on which Account, the Inhabitants dispute the Precedency with that Town. 'Tis very well fortified; and is noted for the *Unicornu Minerale* found near it, of which Authors give different Accounts; some representing it like the Trunk of a Walnut-Tree, and others to the Bones of unknown Animals. *Dr. Nicholson* supposes it to be a Petrification of Timber, such as is found in many other Places, and particularly in *Oxfordshire*.

3. *Iglaw*, on the Frontiers of *Bohemia*, about 40 Miles W. from *Brin*. 'Tis said to have been built in 799, and to have taken its Name from *Igle*, the German Word for an Hedgehog, because those Creatures abounded in that Place; but *La Forreſt* derives it from the *Igla*, on which it stands. 'Tis a large, well built, and strong Town, and a great Thororoughfare betwixt *Bohemia* and *Hungary*, which makes the Inhabitants more civil to Strangers than the rest of their Countrymen. It held out obstinately against the Doctrine of *Huss*; but was the first Town of *Moravia*, subject to the King of *Bohemia*, that embrac'd the *Augsburg* Confession. In 1645, it surrender'd to the *Swedes*, who, to make it more tenable, burnt down the large Suburbs, and defended it against the Imperialists, whom they repulsed after a Twelvemonth's Siege. The Jesuits College, with the *Gymnasium* annex'd, one Monastery of *Dominicans*, and another of *Franciscans*, are worth a Traveller's View.

Their

Their greatest Trade is in Beer, and a coarse Woollen Cloth, which they make and dress themselves.

4. *Znaim*, in Latin *Znagma*, on the *Teya*, about 25 Miles S. W. from *Brin*, in a pleasant Soil, and good Air. *Cluverius* thinks it to be *Ptolomy's Medostanium*, which comes pretty near the Longitude, but not his Latitude. The *Moravian Annals* say, 'Twas built where it now stands about 1242, having been formerly destroy'd in 1145 by *Uladislaus* of *Bohemia*. 'Tis defended by a strong Castle; but is over-look'd by an adjacent Mountain within Cannon-shot, which makes it incapable of holding out a Siege. They have many Vineyards in the Neighbourhood, which afford a palatable Wine. Their chief Trade is by Passengers betwixt *Vienna* and *Prague*. 'Tis famous for being frequently taken and retaken during the German Civil War, especially when taken by the *Swedes* in 1645. 'Tis also noted for the Death of the Emperor *Sigismund* in 1437.

5. *Cremser*, on the River *Moraw*, mid-way betwixt *Olmütz* and *Hradib*, was lately a poor Village, but now one of the fairest Cities in *Moravia*, occasioned by being the Residence of the Bishops of *Olmütz*, who, because of its convenient Situation, bought it from the Marq. of *Moravia*, and built a Palace there, which occasioning the Inhabitants to increase, they wall'd and fortify'd the Town. 'Twas taken by the *Swedes* in 1645.

6. *Ewancitz*, on the Conflux of the *Igla* and *Oslaw*, which here lose their Names, and are called *Schwartza*. 'Twas formerly noted for more different Sects in Religion than almost any other Town in *Europe*. The *Hussites* and *Lutherans* had their Worship in the Parish-Church at one and the same time. The *Jews* had one of the Streets, with a Synagogue and School, without the Gates: The *Catholics* had two Churches, one for the *Bohemians*, and another for the *Germans*, who, with the *Lutherans* and *Hussites*, shar'd the Government of the City. In another Part of the Suburbs, dwelt those call'd the *Holy Brethren of Swisserland*, who deny'd Baptism, thought it damnable to wear a Sword, and had a Communion only at *Whitsun-tide*. The *Photinians*, who deny'd the Resurrection, and, as *Dr. Nicholson* thinks, were *Atheists*

and *Quakers*, had their Meeting near a Fountain in a neighbouring Field. At a small Village called *Olekwitz*, about half a Mile from the Town, lived 400 *Anabaptists*. These Differences gave the *Papists* an Opportunity to drive them all from thence; so that no Liberty is granted now to any but *Papists* and *Jews*. *La Forrest* mentions *Austerlitz*, a Town almost ruin'd by the *Swedes* in the Civil War. *Dr. Nicholson* takes Notice of the *Romantick Account* of *Casspar Lowdisman*, who, in his Directions for speedy understanding Foreign Languages, says, there are 100 Cities, 410 Towns, 500 Castles, and 30360 Villages, in this Marq. And since the learned Annotators on *Cluverius* say nothing of this Number, and that those who travel the Country must needs know it to be false, it must be own'd the Doctor's Reflexion is just.

BOHEMIA.

Its Extent.

THIS Kingdom has *Moravia*, and Part of *Silesia*, on the E. *Voitland* and the *Upper Palatinat* on the W. *Austria*, and Part of *Bavaria*, on the S. Part of *Silesia*, *Upper Lusatia*, and *Misnia*, on the N. According to *Moll's* Map, the greatest Length from E. to W. is 160 Miles, and the greatest Breadth from S. to N. about 150. *Goldastus*, from its Situation, urges very reasonably, That it must needs have anciently been a Branch of the German Nation.

Their ancient Inhabitants, with their Manners and Religion.

Goldastus thinks, the *Hermiones* were the ancient Inhabitants, and makes the *Hermunduri* a Branch of 'em. They were drove out by the *Boii*, commanded by their General *Sigovefus*, a *Celtick* Prince. *Micralius*, a learned *Pomeran*, thinks they were not the *Galli Senones*, as most late Antiquaries do, but the ancient *Semnonnes* of *Pomerania*. The Reader may consult what we have said concerning those People in our Account of Ancient Germany. *Micralius* supposes, the *Boii* settled

Is

settled here about the Year 690 of Rome, when *Tarquinius Priscus* was King, and gave Name to the Country, from whence they were drove by the *Marcomanni*, and removed to that Place now called *Bavaria*, which from them was anciently, according to some Authors, called *Boisparia*. The modern *Bohemians* call their Country *Czechome*, and themselves *Czechowsky*. Such of them as allow the Name of *Bohemia*, derive it from *Boy* and *Muz*, which, they say, signifies a Valiant and Pious Man, which agrees well enough with their Character. They are tax'd with being so apt to imitate the Fashions of other Nations, that a Painter, who drew other People in their proper Habits, painted a *Bohemian* naked, with a Web at his Foot, and all other Necessaries for making a Suit, according to the next Mode he should fancy. Some Authors say, That *Zechur*, a *Slavonian* Commander, with a small Number of his Countrymen, from whom the *Bohemians* love to derive their Pedigree, settled here; but they cannot tell whether in the 4th, 5th, or 6th Century; That they were a harmless People, liv'd in a sociable Community, and distributed what they had according to every one's Necessity, (which looks somewhat like *Sir Thomas More's Utopia*.) They add, That after *Zechur's* Death, being disturb'd by their Neighbours, they chose one *Crocus*, an ancient Gentleman, to be their Chief Magistrate, and appointed a certain Number of Men to assist him in determining Controversies. Under this sort of Government they continued, till *Libussa*, *Crocus's* Grand-Daughter, took one *Primislaus*, a Countryman, from the Plough to be her Husband, and he assum'd a more absolute Government, under the Title of a Duke; and they say, their Successors kept the Government about 450 Years. *Hoffman* gives this further Account of 'em, That *Charles the Great* fortified *Dresden* against the *Bohemians* about 808, and his Son made them Tributaries to the Empire. *Lewis* King of the *Romans* made War upon them with various Success, and brought 12 of their Dukes to be Christians in 862. Their Duke *Bozizui* conquer'd *Moravia*, and converted the whole Kingdom. Their Prince *Wencislaus* was brought to a Peace by the Emperor *Henry the Fowler* about 930; and their King *Bolislau* was subdued by *Otto*

the Great, and became his Vassal in 954. *Otto II.* reduc'd them in 976, and their Bishop *Adalbert* forsook them, because of their bad Lives, about 999; and going to *Hungary*, converted many of that People. *Dr. Nicholson* says, The Emperor *Henry IV.* in a Diet of the Empire at *Mentz*, created *Wratislau* D. of *Bohemia* a King, and set a Crown of Gold on his Head; some say in 1072, and others about 1082; from which Time the Emperors always claim'd a Right of investing their Kings, and perswaded the People to rebel from Time to Time against such as did not receive the Investiture at their Hands. The *Brandenburg* Resident gives much the same Account of the Settlement of the *Slavi* here, who he thinks came from *Scythia*; and because they were originally Strangers, their own Authors and others have from Time to Time pleaded an Exemption from their being subject to the Laws or Diets of the Empire. These *Slavi* extended their Boundaries into *Pomerania*, *Macklenburg*, and *Brandenburg*. It has also been debated, whether they be a Circle of the Empire, because when *Maximilian I.* first appointed the Circles to be Six, he did not include *Bohemia*; but the same Author says, That the Emperor *Wencislaus* did long before that Time make it the first of the Four Circles which he appointed: And he makes it plain from History. That since the Time of *Charlemagne*, they have done Homage to the Emperor and Empire.

Dr. Nicholson says, When the *Slavi* came first hither, they brought many Idols with them; their Chief was *Pron*, which in their Language is the same with *Jupiter the Thunderer*, and they gave him the same Reverence as the *Saxons* did to *Thor*; but at last rejected him, and honour'd *Squanto-Wit*, an Idol, whose Temple was at *Wollin* in *Pomerania*; and the Doctor says, they still retain some Remembrance of this Idol; for when they shake Hands with one another, they make use of this Compellation, *Witeg, Witeg*, or *Witamte*. The first that converted them to Christianity was *Methodius*, a Greek Prelate; so that 'twas long before the *Bohemian* Clergy would own the Pope's Supremacy. The Doctor observes, That the Catalogues of their Kings are so contradictory, that 'tis hard to reconcile them.

The HISTORY of their Kings.

THE *Atlas Historique* gives us the following History of their Dukes and Kings.

1. *Zechus* or *Zecco*, said to be descended of a Noble Family, and flying hither with his Brother *Lechus* for killing a Person of Quality in their own Country, they took up their Abode on Mount *Chezup*, where finding none but a few People that look'd after their Flocks, and liv'd on their Milk, they taught them Husbandry: Upon which those Peasants honouring them as their Masters, the rest of the Inhabitants follow'd their Example, and chose *Zechus* for their Governor, because he was the eldest: Upon this, *Lechus* went to Poland, to which he gave Name, and founded the Government there. This is said to have happen'd about the Year of Christ 550. *Zechus* govern'd a long Time; but the Time of his Death is uncertain.

2. *Craco* or *Cracius* succeeded: Some call him *Zechus's* Son, and others make him a Bohemian, and say, he govern'd with so much Prudence, that the Poles chose him also to be their Governor after *Lechus*; and some say, he founded and gave Name to the City *Cracow* in that Country.

3. After his Death, the youngest of his three Daughters, called *Libussa*, had the Government of *Bohemia* about 619, which she managed well; but many of her Subjects thinking it unreasonable that a Woman should govern Men, they revolted; but she pacify'd them, by pretending to the Art of Divination, and telling, That the Gods had order'd them to let a Horse loose, and that she was to marry the Man to whose House the Horse should first betake himself, and that he was to be their Prince. A Horse being let loose accordingly, he stop'd at the House of *Primislaus*, a Peasant, who understanding the Matter, threw down his Stick with which he drove his Cattle at Plough, which the fabulous Pagans said became immediately a Nut-Tree; in Remembrance of which, he distributed a certain Quantity of Nuts every Year to the People. He govern'd with great Success while *Libussa* liv'd; and after her Death, married one *Va-*

lasea, who form'd a Conspiracy to banish all the Men, and set up a Government like that of the Amazons. She and her Women defended themselves bravely for some Time; but being overcome, and put to Death, *Primislaus* died soon after.

4. *Nimislaus* his Son succeeded about 676. He cultivated the Country, and wall'd the Town of *Prague*. He is said to have acquir'd great Glory in his War with the Romans, and died about 715.

5. *Mnatba* his Son succeeded, govern'd the Men himself, as they say, and left the Government of the Women to his Wife *Trefslaw*, had War with the *Alamanni* and *Moravians*, and died about 735.

6. He was succeeded by *Vogenius*, whom some call *Vorinius*. He had War with the Saxons and *Misnians*, and with Rebels of his own Country, whom having subdued, he liv'd peaceably ever after, and died in 763.

7. He was succeeded by *Wancislaus* I. of whom there is nothing remarkable, but that he reign'd 22 Years, and died about 785.

8. He was succeeded by his Brother *Czefzowislaus*, who being ambitious, got himself chosen Prince at *Prague*. He was unsuccessful in his War with *Charlemagne*, and died in 803.

9. He was succeeded by his Son *Belam*, or, as some call him, *Necklam*, who being a cowardly Prince, his Uncle *Vladislaus* usurp'd the Government; but was defeated and kill'd by *Belam's* General, and is said to have been so cruel, that he would allow his Soldiers no Provisions but the dead Bodies of their Enemies, which rais'd all the Country against him. *Belam* died in 839, and was succeeded by his Son *Nossivitus*, whom some call *Nossritius*. He shar'd the Government with his Brother *Misfbogen*, and governing happily, it contributed much to the Peopling of the Country. He had War with *Lewis de Debonnaire*; but made Peace with him a little before his Death, which happen'd in 856.

10. His Son *Borsswojus* I. succeeded, was their first Christian Prince, and converted by *Cyrillus* and *Methodius* in 894. This occasion'd his Subjects to dethrone him; but he subdued the Rebels, establish'd Christianity, left the Government to his Son *Epi-*

signus I. and retir'd with his Queen to a Monastery, where he died piously.

11. *Spitignus* began his Reign in 904, govern'd well at first; but abandoning himself to Ambition, and other Vices, and despising the Threatnings of his Father and Mother, he was cut off by Heaven 4 Days after their Reproof, in 906.

12. His Brother *Uladislaus* or *Wratisslaw* I. succeeded, was an excellent Prince, victorious against the *Hungarians*, and married a Pagan Lady, on her Promise to turn Christian; but soon after she endeavour'd to suppress Christianity, tho' without Success. *Uladislaus* died in 916.

13. *Wencisslaw* I. his Son, succeeded; and during his Minority, his Grandmother *Ludmilla* was chosen to govern, because her Husband would not quit his Monastery. His own Pagan Mother being incens'd at this, got her murder'd, and usurp'd the Government, for which, when he came of Age, he took Arms against her, which brought her to a feign'd Submission; but she perswaded his Brother *Boleslaw* to murder him in 938.

14. *Boleslaw* succeeded; but the Emperor *Otho the Great* made War upon him for murdering his Brother; and after 14 Years Time, brought him to a Peace, to pay Tribute, to do publick Penance for his Crime, and to restore Christianity. After which, *Boleslaw* died in 967.

15. His Son *Boleslaw* II. succeeded, and was an excellent Prince. He founded the Bishoprick of *Prague*, sent for several Clergymen from *Germany* to promote Christianity, made War upon the *Russians* and *Poles*, defeated the Emperor *Otho* II.'s Army, made Peace with his Son *Otho* III. and died, after a good Reign, in 999.

16. His Son *Boleslaw* III. succeeded, was a covetous and negligent Prince, and lost what his Father had conquer'd from his Neighbours: Upon which, his Uncle *Musca* seiz'd him, put out his Eyes, and banish'd him; but by the Help of the *Sclavonians* and *Saxons*, he recover'd Part of his Dominions, and died at *Budowitz* in the 80th Year of his Age.

17. *Jaromir*, his Son, who was made Regent during his Banishment, succeeded; but being incapable of Issue, the People, with the Assistance of his Brother *Ulric* or

Udalric, depos'd him. His Brother, who had been chosen Governor some Time before, put out his Eyes.

18. *Ulric* succeeded in 1035, govern'd for two Years with great Glory, defeated *Gero* Marquis of *Brandenburg* in *Lusatia*, taught the *Bohemians* the Art of War, and dy'd with the Reputation of a great General in 1037.

19. *Bretisslaw* I. his Son, succeeded; and for his Valour, obtain'd the Sirname of the *Bohemian Achilles*. His taking by Force *Judith*, a Daughter to the Elector *Palatine*, occasion'd a War betwixt him and the Emperor *Conrad* II. The first Campaign was successful to neither; but the Emperor coming with a greater Army, that Princess, by her Mediation, and throwing her self at the Emperor's Feet, hinder'd the Battle, and brought on a Peace. He was very successful against the *Poles* and *Hungarians*, and in one Campaign took from the *Poles*, *Breslaw*, *Cracow*, *Gnesna*, and *Posen*: After which he made Peace, and died in 1055.

20. *Spitignus* II. succeeded, who, tho' surnam'd *The Just*, banish'd his Mother-in-Law and some of the Grandees, and seiz'd those Parts of the Country allotted to his Brothers; upon which one of them, called *Uladislaw*, retir'd to *Hungary*, where he married the King's Daughter: After which, he and the rest of his Brothers re-possest'd themselves of their Dominions, and *Spitignus* died in 1061.

21. *Uladislaw* II. his Brother, succeeded, and was by the Emperor crown'd King of *Bohemia* for his Merit. His Brothers rebelled against him; but were subdued. After this, his eldest Son *Brzetisslaw*, being provok'd by a witty Raillery of a Courtier, he got him murder'd, and declar'd War against his Father; but his Uncle *Conrad* hinder'd their coming to a Battle, and *Brzetisslaw* retir'd to *Hungary*. *Uladislaw* died in 1093, having before-hand declared his Brother *Conrad* Successor.

22. *Conrad* would not take the Title of King, but satisfy'd himself with that of Duke, did nothing remarkable, and died in less than 7 Months after.

23. *Brzetisslaw*, Son to *Uladislaw*, being call'd by the People, succeeded. He reduc'd the *Poles*, who had revolted, oblig'd their Prince *Uladislaw* to pay him
H h h h 2 Tri.

Tribute, and was kill'd as a Hunting in 1106.

24. *Borziwoius* II. his Brother, succeeded, by the Interest of the Emperor *Henry* IV. without Consent of the Princes; so that he was thrice dethron'd; and at last, finding that he could not hold the Government, retir'd to *Germany* in 1107.

25. *Suatoplook*, Nephew to *Borziwoius* I. succeeded, being chosen Governor before. He procur'd by Money the Confirmation of the Emperor *Henry* V. and pillaged the Churches to pay him. He ravaged *Hungary*, and made War upon the *Poles*, who favour'd his Uncle; during which he was kill'd in 1109.

26. *Otho* succeeded; but was dethron'd, because of his Incapacity to govern.

27. *Uladislaus* II. Brother to *Borziwoius*, succeeded, subdued his own Brother *Sobieflaw*, and others, who rebelled against him, and died in 1125.

28. *Sobieflaw* I. his Brother, succeeded, He was successful in his War against the *Moravian*s, kill'd *Otho* their Marquis in Battle, and at the same Time defeated the Emperor *Lotharius* II. who assisted him. The Emperor afterwards contracted a Friendship with him, and employ'd him as General against *Conrad* and *Frederick*, whom he defeated. Some of his own Subjects envying his Glory, conspir'd against him; but were discover'd and punish'd. He died in 1140.

29. *Uladislaus* III. succeeded, by the Interest of the Emperor *Frederick Barbarossa*, who gave him the Title of King in a Diet, because he govern'd the Empire well, while the Emperor himself was in *Italy*. He afterwards commanded the Emperor's Armies with Success, and restor'd *Stephen Geissa* to the Dutchy of *Milan*; and, as a Mark of his Valour, had assign'd him for his Arms, *Azure*, a *Lion Argent*, which is still the Arms of *Bohemia*. After a glorious Reign, he died in 1174.

30. *Sobieflaw* II. Son to *Sobieflaw* I. succeeded. He was a wicked tyrannical Prince. During his Time, *Andrew* disputed the Kingdom of *Hungary* with his Brother *Emerrick*, who being worsted, retired to *Bohemia*, in his way to *Germany*; but was deliver'd up to *Andrew* by *Sobieflaw*. The Emperor being incens'd at it, summon'd *Sobieflaw* to answer it, who declining it, a War ensu'd;

but the first Battle decided the Difference, the King of *Hungary* dying of a Wound he receiv'd in it. *Sobieflaw* died in 1178.

31. *Frederick*, Son to *Uladislaus* III. succeeded, by the Assistance of the Emperor *Frederick*. He did nothing remarkable, and died in 1190.

32. *Conrad* II. Cousin to *Frederick*, succeeded, by the Assistance of the Emperor *Henry*, whom he attended in his Expedition against the Pope, wherein he died in 1192.

33. *Wenceslaus* I. another Son of *Sobieflaw* I. succeeded; but was taken and dethroned by *Albert* Marquis of *Lusatia* in 1193.

34. *Bretislaus*, whom some call *Henry* Bishop of *Prague*, Nephew to *Uladislaus* III. succeeded, govern'd with much Glory for 3 Years, and died in 1196.

35. *Uladislaus* IV. Son to *Uladislaus* III. succeeded; but in 5 Months, surrender'd to his Brother.

36. *Premislaus*, who took Part with the Emperor *Otho* against *Philip*. He govern'd 32 Years, and died in 1231.

37. *Wenceslaus* II. succeeded. He was successful in his War before that Time against *Frederick* Duke of *Austria*, and his Brother *Primislaus*. His Subjects revolted; and declared for his Son *Ottocarus*, which occasion'd much Bloodshed; but at last they agreed. After which *Wenceslaus*, who had before lost an Eye as a Hunting, did afterwards lose his Life in that Exercise in 1255.

38. *Ottocarus* II. by some called *Primislaus* III. succeeded. He conquer'd *Austria* from the Emperor *Rodolph* I. who at last drove him out again. The Pope call'd him the Apostle of *Prussia*, because he defeated the Pagans, and founded the Bishoprick of *Sambick* in that Country. He was so potent, that he govern'd from the *Adriatick* Sea to the *Baltick*. But in a second War with *Rodolph*, was kill'd at the Battle of *Murkfeld* in 1278.

39. His Son *Wenceslaus* III. succeeded at 8 Years of Age, under the Care of *Otho the Long*, Marquis of *Brandenburg*, during his Minority. His Mother-in-Law gave him the Provinces of *Cracow* and *Sandomir*, of which he never had peaceable Possession, till he obtain'd it by War, when the *Poles*, for the Esteem they had to his Merit, chose him their King, and crown'd him at *Prague*, where

where he founded the University. The Hungarians did also offer him their Crown, which he resign'd to his Son, and died soon after in 1305.

40. His Son *Wenceslaus IV.* succeeded, was a wicked and lustful Prince; and by forcing the Wives of his Subjects, became so odious, that he was assassinated as he passed by a Gentleman's House at *Olmütz* in 1306.

41. *Henry Duke of Corinthia*, Brother-in-Law to *Wenceslaus III.* arriving at *Prague*, was chosen King by the Interest of the Hungarians; but the Emperor *Albert I.* rais'd an Army, dethron'd him, and set up his own Son *Rodolph*, who, after a short and prudent Reign, died suddenly in 1307. Upon which *Henry* return'd to *Bohemia*, and defeated those who oppos'd him. *Albert* enter'd *Bohemia* against him with an Army; but dying in the Expedition, the Emperor *Henry VII.* expelled *Henry*, and set up

42. *John of Luxemburg*, his own Son, then 14 Years of Age, in 1310. Soon after he was declared Vicar of the Empire, during his Father's Absence, when he conquer'd *Silesia* in 1332. Before this time, he was invited to *Poland*, defeated the *Lithuanian* Pagans, and was, as some say, declared King of *Poland*; but Historians differ in this Matter. He was made blind of one Eye in this Expedition, and went *incognito* to *Montpellier* for Cure, where a Jewish Physician made him lose the other. This did not hinder him however to go to War, says the *Atlas Historique*; for he carried Troops to assist *Philip de Valois* of *France* against the English, and was kill'd in the Battle of *Cressy*, fighting valiantly, in 1346.

43. His Son *Charles* succeeded, and was chosen Emperor a Year before the Death of *Lewis* of *Bavaria*, by the Interest of Pope *Clement VI.* and *Philip de Valois* of *France*. Some Princes of the Empire rais'd up three Competitors against him, whom he vanquish'd, and continued in peaceable Possession. He was present at the Battle where his Father was kill'd. It was he who instituted the *Golden Bull*, and purchas'd from *Orto* of *Bavaria* the Marq. of *Brandenburg*; which he gave to his Son *Wenceslaus*, and died in 1378.

44. His Son *Wenceslaus V.* succeeded, who being a careless ambitious Prince, the Electors

depos'd him, and chose another in 1400; when *Wenceslaus* retir'd to *Prague*, and liv'd there in Debauches for 19 Years.

45. *Sigismund King of Hungary*, and afterwards Emperor, succeeded to the Crown of *Bohemia* in 1418, after the Death of Prince *Robert*, Palatine of the *Rhine*, who succeeded his Brother *Wenceslaus V.* He was oppos'd by the *Hussites*, and was the Occasion of burning *John Hus* and *Jerome* of *Prague* at the Council of *Constance*, contrary to his own safe Conduct, which so provok'd the *Hussites*, that they offer'd their Crown to *Jagelon King of Poland*, who resign'd it to his Son-in-Law *Coributh Duke of Lithuania*; but *Sigismund* overcame him. The Reader may find more of this *Sigismund* in our former Account of the Emperors. He died in 1436, or, as some say, in 1438.

46. *Albert II.* succeeded; for whose History, we likewise refer to our Account of the Emperors. He died in 1439.

47. His Son *Uladislaus V.* succeeded to *Hungary* and *Bohemia* at 5 Years of Age. The famous *Huniades* was chosen Governor during his Minority; and after his Death; *George Podebrache*. When *Uladislaus* came of Age, he persecuted the *Hussites*, and oblig'd the *Turks* to raise the Siege of *Belgrade* in 1451; but died in 1457 of Poison, which the Enemies of the *Hussites* charged upon them.

48. *George Podebrache*, who govern'd during his Minority, was chosen after his Death in 1459. He subdued the *Moravians*; but being a Favourer of the *Hussites*, and casting off the Pope's Yoke, the Court of *Rome* excommunicated him, and rais'd a Rebellion against him; but he kept the Government till he died, in 1471, notwithstanding the Endeavours of *Uladislaus*, and *Matthew Corvin* of *Hungary*, against him.

49. *Uladislaus VI.* Son to *Casimir*, succeeded, and obtain'd also the Crown of *Hungary* in 1490. and vanquish'd his three Competitors, of whom his Brother *Albert*, supported by his Father, was one. He was successful against the Infidels, who did very much Damage to his Country, and died in 1516.

50. He was succeeded by his Son *Louis*, who was crown'd King of *Hungary* and *Bohemia* at 12 Years of Age, under the Protection of the Emperor *Maximilian I.* and

Sigis-

Sigismund King of Poland. When he came of Age, he govern'd with a great deal of Conduct. *Soliman*, Emperor of the *Turks*, made War upon him, and took *Belgrade* in 1521. In 1526, the *Turks* defeated him at the famous Battle of *Mahatz*, when, in his Retreat, he was unhappily drown'd in a Morals.

51. The Emperor *Frederick I.* succeeded; for whose History, we refer to that of the Emperors. Since his Time, the House of *Austria* have been possessed of *Bohemia*, except a small while that the Elector *Palatine* enjoy'd it, till defeated at the Battle of *Prague*; of which, we have already given an Account.

The RELIGION of the Modern Bohemians.

WE have formerly given an Account of their Conversion to Christianity; but their early and remarkable Opposition to the Errors of Popery, under the Name of *Hussites*, deserves to be a little insisted on.

Mr. Fox, in his Book of Martyrs, Vol. I. says, That Queen *Anne*, Wife to *Richard II.* of England, being a *Bohemian*, some of her Countrymen, who came with her, having seen some of *Wickliff's* Works, which Dr. *Nicholson* says was at Oxford, they carried home some Copies of them to *John Huss* and *Jerome* of *Prague*, who, upon reading them, set effectually about reforming the Corruptions of the Church of *Rome*. For such Errors as they objected against, and how they were treacherously burnt at the Council of *Constance*, we refer to the Book of Martyrs, where the Reader may find it at large. The Learned *Spanheim*, in his Epitome of Ecclesiastical History, gives this brief Account of them: In the 15th Century, King *Wenceslaus* reign'd in *Bohemia*, being deprived of the Empire, because of his Defence of the *Hussites*, and refusing to put the Pope's Bulls in Execution against them; for which, the *Papists* load his Memory with Reproaches. After the Murder of *John Huss* and *Jerome* of *Prague*, against which the *Bohemians* protested, most of 'em embrac'd their Doctrine; so that they be-

came formidable to the King, and were persecuted. But their Dispersion tended to the Propagation of the Gospel elsewhere; and one of them, called *Paul Craw*, was burnt in Scotland for opposing the Errors of Popery in 1432, which laid the Foundation of a Reformation there. The *Bohemians* reveng'd the Death of their two Martyrs, *Huss* and *Prague*, on the Popish Clergy; and the University of *Prague* asserted Communion in both Kinds. After the Death of *Wenceslaus* in 1319, Pope *Martin V.* excommunicated the *Hussites*, and stir'd up the Emperor, with other Kings and Princes, to rout them out; Upon which the Emperor *Sigismund* began a terrible Persecution against them, that issued in a 14 Years War, which terribly afflicted *Bohemia*, and most of the Empire. The *Hussites* chose *Zisca*, a valiant Lord, for their General, who became terrible to the Emperor and his *Papists*. He rais'd 40000 Protestants, as we are told in his Life. His first Appearance was in the Reign of *Wenceslaus*, who purposing to disarm the Citizens of *Prague*, *Zisca* presently order'd them to take Arms, and marching to the Castle on a sudden, to the King's great Surprise, said to him, Sir! where are your Enemies that you are so much afraid of? for here your loyal Citizens of *Prague* are come to offer their Lives in your Service. By this Stratagem, he appeased the King, and preserved the Privileges of the City. After the Death of *Huss* and *Prague*, *Zisca*, with his Army above-mention'd, destroy'd the Popish Monasteries, and Idolatrous Temples, and dispers'd the Priests and Monks, whom he compar'd to Swine that were kept in a Sty to be fatted. He afterwards took the Castle of *Wisgrad*, and the Town of *Pelzina*, which he fortified. The Queen Dowager sent to the Emperor and neighbouring Princes for Assistance, and in the mean time retir'd with her Treasury and best Moveables to the Castle of *Prague*, and fortified the Bridge, to keep the Protestants from entering the upper Town. *Zisca* won the Bridge, and the nether Part of the City, and fought with the *Papists* for 5 Days and Nights together; during which, Ambassadors came from the Emperor *Sigismund*, who brought them to a Truce, and afterwards to a Peace, on Promise of settling the Differences among them; but fraudulently en-

deca-

deavour'd afterwards the Subversion of their Religion and Liberty, and began a Persecution at *Breslaw* in *Silesia*, where he put many *Hussites* to cruel Deaths. Upon this, *Zisca* took Arms again, and having gain'd the Governor of the Castle of *Prague*, he sent Letters through the Kingdom, advising the People to arm against the Emperor, who design'd the Destruction of their Country, as was plain from his Letters they had intercepted; had set aside the Marq. of *Brandenburg*, whom they had chosen King, and procur'd the Death of their two Martyrs at *Constance*, contrary to his own Safe-Conduct. The Emperor advanc'd against him with a great Army of Horse, and *Zisca's* Men being all Foot, he encamp'd on a rough Ground, where the Imperial Horse were forced to alight; and *Zisca* having order'd the Women that followed his Army to throw their Handkerchiefs, and other loose Clothes, on the Ground, and his Men to do the like, the Imperial Horsemen being entangled with them by their Spurs when they alighted on the Place, he suddenly attack'd them, and obtain'd a great Victory. After this he took a Town by Storm, from whence the Governor had drove out all the Protestants, burnt it down, and built another called *Tabor*, on a Mountain of that Name, which was strong by Nature, and encompassed by two Rivers, the Entrance to it being scarce 30 Foot broad. He fortified it with a deep Trench, and a triple Wall; and from hence his Followers were called *Taborites*. At this Time *Zisca* had no Horse, but surpris'd by Night 1000 of the Emperor's, who were sent against him, by which, with the Horsemen's Armour, he mounted 1000 of his own Men, that did him great Service afterwards. *Sigismund* enter'd *Bohemia*, and laid Siege to the Castle of *Prague*, which the Governor basely deliver'd to him. Upon this, *Zisca* came to the City, and block'd up the Castle; but the Emperor coming again with his Army, reliev'd it, and besieg'd the Town for 6 Weeks; but after the Defeat of several strong Detachments by *Zisca*, the Emperor was forced to raise the Siege, and *Zisca* return'd to *Tabor*. After this, he reveng'd himself on the Popish Clergy, who excited the Emperor against him, and had put great Numbers of Pro-

testants to terrible Deaths, by destroying 300 of their Monasteries, and driving out all the Monks. The Castle of *Wisgrad* having been surrendr'd to the Imperialists, *Zisca* laid Siege to it, defeated the Emperor, who came to relieve it, and forced it to yield. Next he laid Siege to the strong Monastery of *St. Clare*, and forc'd the Emperor, who came with a strong Army to relieve it, to a shameful Retreat out of *Bohemia*. *Zisca* afterwards took the strong City of *Commotavia* by Storm, and burnt all the Priests, as they had formerly done the Protestants. At the Siege of *Raby*, *Zisca* lost his Eyes; but when cur'd of his Wounds, continued to command his Army, and took many of the Emperor's Garisons. Upon this, the Emperor enter'd the Country with an Army of *Hungarians* on the E. and appointed the Electors to enter it on the W. but *Zisca* defeated them both when join'd, forc'd the Emperor to fly, pursu'd him a whole Day; and 15000 *Hungarian* Horse, whom the Emperor brought to his Assistance, fled with so much Precipitation, that most of 'em were drown'd by venturing to pass a great River on the Ice. After this Victory, wherein many of the *Hungarian* Nobility were cut off, *Zisca* order'd all the Popish Idols in the Country to be destroy'd, and forbade the Priests to wear any superstitious Vestments. He built another strong Town on a Mountain called *Horeb*, from whence many of his Followers were called *Horebites*. The Papists finding there was no other Way of subduing the *Hussites*, they sow'd Divisions betwixt them; of which, more anon. In the meantime *Zisca* laid Siege to the Town of *Asca* on the *Elb*, where there was a strong Garison, and defeated the Marq. of *Mishia*, who came with a strong Army to relieve it. He slew many of the Nobles, and 9000 of the Popish Soldiers; upon which *Asca* surrendr'd, and was raz'd. After this, the Divisions being fomented by the Papists betwixt *Zisca* and the Citizens of *Prague*, they rais'd a great Army against him, which oblig'd him to retire into a narrow Plain, where they not being able to extend their Front any larger than his, he fought and defeated 'em, kill'd 3000 on the Spot, took and burnt the City of *Cuthna*, which they had fortified, and marched to besiege *Prague*, when his Army

Army began to murmur, and said, It was unreasonable to destroy their Chief City, especially since the Citizens were of the same Religion, and that the Emperor fomented their Divisions in order to destroy both. Upon this, *Zisca* made a Speech to his Army, wherein he told them, That he fought for their Sakes, and not for his own; That he never led them on, but where they came off Conquerors; That they were become famous and rich; whereas he had got nothing but Blindness, and an empty Name; That he did not fight against those of *Prague* for his own Sake, but for theirs; whose Blood they fought; That he had no other Design but to banish the seditious Citizens of the Emperor's Faction; but for his Part, he was willing to do what they pleas'd, provided they took Care that they themselves were not betray'd; and that for his own Part, it signify'd little what became of him, a blind old Man. Upon which his Soldiers were so much inflam'd, that they prepared to attack the City; but this Difference was happily concluded by *Rokizana*, a famous Minister of the City, who reconcil'd *Zisca* and the Town.

The Emperor being astonish'd at *Zisca's* Success, sent to promise him the Government of the Kingdom, and many other Advantages, if he would come to him, which *Zisca* agreed to; and some say, was in Danger of being flatter'd by the Emperor to join with the *Calixtines*, who only demanded the Use of the Cup, but in most other Things agreed with the Papists, against his own Followers the *Taborites*, the true Disciples of *Husi*, who insisted on a full Reformation: But these Fears, if there were any Ground for them, *Spanheim* tells us were prevented by *Zisca's* dying of the Plague at the Castle of *Priscovia*, in his Way to the Emperor, in 1424. *Aeneas Sylvius*, afterwards Pope, makes a heavy Complaint, That the Emperor, who was terrible to all *Christendom*, and to the *Turks*, should have so far disgrac'd himself, and the Church of *Rome*, to have truckled so to a blind old Man. *Zisca* was honourably buried by his *Taborites* at *Castavia*, where his Tomb continu'd till 1623, that the Popish Army under the Emperor *Frederick* broke it in Pieces, dug up his Grave, and barbarously threw his

Dust in the Air. When he was on his Death-Bed, he advis'd his Followers to make a Drum of his Skin, the Sound of which would terrify their Enemies, which proved so in effect for a considerable Time, which must be ascribed to the Pannick Fear that God, in his Justice, spread among those cruel Persecutors.

Spanheim informs us, That after his Death, a new Division happen'd among the *Hussites*, when those of *Zisca's* Followers, who call'd themselves *Orphans*, because of his Death, proposed a middle Way betwixt the *Calixtines* and the *Taborites*. Their chief Leader was *Rokizanus*, whom the Pope flatter'd with Hopes of the Archbishoprick of *Prague*; but afterwards refus'd it him, because he would not renounce the Cup. Upon this the Emperor and Pope had recourse to Fraud, and invited the *Bohemians* to send Deputies to the Council of *Basil* in 1431; when being deceived with false Promises, and having Hostages given for their Safety, they went thither with 300 Horse. The *Calixtines*, headed by *Rokizanus*, demanded the Restitution of the Cup. The *Taborites*, led by the invincible *Procopius*, insisted on a Reformation of Manners, and of all Corruptions in the Church. The *Orphans* demanded free Liberty for preaching the Word of God. *Peter Payne*, an English *Wickliffite*, who join'd the *Hussites*, demanded that the Clergy should be forbid all Secular Dominion. These were the Articles call'd the *Compactata*, so famous in the *Bohemian* History, as agreed upon by the *Hussites* among themselves before they went to the Council. When they came thither, these Things were debated 50 Days, when the *Bohemians*, finding themselves impos'd upon, prepar'd to depart; but were circumvented by a new Fraud. The Council sent Messengers to *Bohemia*, who deceived the *Hussites* with School Subtilties; and thus the good *Taborites* were disappointed of their Hopes, and obtained nothing else but the Use of the Cup, which *Rokizanus* and his Party alledg'd was sufficient: And so a Peace was concluded with the *Hussites* for a Time, which proved more fatal to them than the War. *Orthecinus Gracius in fasciculo rerum expetendarum* gives a large Account of all those Transactions.

This Agreement was oppos'd by *Procopius* and his Party, who maintain'd themselves bravely by the Sword against their Enemies; but *Rokizanus*, push'd on with the Hopes of the Archbishoprick, persecuted them severely, and stir'd up *Mainard*, a valiant *Bohemian* Lord and General, against them, who envying the Honour *Procopius* had obtain'd, attack'd him with the *Tabarites* and *Orphans* that join'd him; and being much superior in Force, *Procopius* fell in the Battle, being not so much conquer'd, as weary with conquering, says *Aeneas Sylvius*. Thus the *Tabarites* were almost extinguish'd in a barbarous manner, the Papiests and *Calistines*, tho' they hated one another, joining together to persecute them. The Remainers of them continued some Time in the City of *Tabor*, and declined the Communion of the other *Bohemians*; but they were betray'd at last by *Rokizanus* to submit to a Decree of the States: After which their Town was besieg'd, and taken by the Viceroy *Podiebrachius*, and the poor People condemn'd to perpetual Imprisonment. *Rokizanus* being wearied at last with the just Reproaches of the *Tabarites*, obtained Leave of the Viceroy that they might retire into the Mountainous Country next to *Silesia*, where they were join'd by the sincerer *Calistines*, and the *Waldenses*, who were expelled from *Austria* about 1467, and form'd, as *Hoffman* says, about 200 Congregations in *Bohemia* and *Moravia*. But *Rokizanus* and the Viceroy rais'd a new Persecution against them, loaded 'em with the same Reproaches that the Heathens rais'd against the Primitive Christians, and forc'd them to retire to Caves and Dens. *Rokizanus* being deny'd the Archbishoprick, because he would not part with the Cup, he and his Followers exclaim'd against the Pope as Antichrist, and declar'd they would not stand to the Agreement they made at *Basil*, but have the Word of God for their only Rule. At last, falling sick in 1461, he was struck with Remorse of Conscience, and told the Viceroy when he came to see him, That both of them must answer in a little Time at the Tribunal of God for their Cruelty to their Brethren. Accordingly they both died the same Year, and *Rokizanus* ended his Days in Despair. The *Hussites* having join'd with the *Waldenses*, that Name swallow'd up the

former. In 1500, they were cruelly persecuted; and in 1536, when *Luther* began to appear, there was found to be a great Harmony betwixt him and them in Doctrine and Discipline. The Emperor *Maximilian* gave them their Liberty in 1564; but next Year they were persecuted again by the Chancellor of *Bohemia*, who was drown'd in the *Danube* on his Return from *Vienna* with bloody Orders against them. In 1574, the the *Waldenses* being expell'd from *Prussia*, retir'd to *Bohemia*, in which, together with *Moravia*, there were 17 Barons and 146 Knights of their Communion. To confute the Reproaches of their Enemies, they drew up their Confession, and presented it to the Emperor *Maximilian* in 1575, which had a good Effect, and procur'd 'em Peace. They were afterwards call'd, *The United Brethren of the Bohemian Confession*, and their Liberty was confirmed by the Emperor *Rodolph II.* in 1611. During the Reign of *Matthias*, the Persecution gave Rise to the *Bohemian War* in 1618. But the Elektor *Palatine*, whom they had chosen King, being defeated in 1620, they were brought under, and at last banish'd the Kingdom in 1639, and dispers'd into *Silesia*, *Poland*, &c. Since which, the Protestants have been allow'd no Publick Worship in *Bohemia*.

Their Confession presented to the Emperor at *Vienna* in 1535, agrees in Point of Doctrine with those of other Protestants. It was afterwards approved by *Vergarius*, *Luther*, *Melancthon*, *Bucer*, and *Masculus*, who highly applauded it. In the Preface to their Confession, they take Notice of their Sufferings and Reproaches, and of their Struggles with the Papiests from the Time of *John Huss*; and mention a Prophecy of his, printed in *Matthew Paris's History*, foretelling that a new People should arise, fram'd according to the new Man, from whom should proceed a new Clergy and Priesthood, that hated Avarice and Worldly Glory, and had their Conversation in Heaven. To this there is added a Preface of their Nobility and Gentry, wherein they take Notice, that they were called *Picards* and *Waldenses* by way of Derision.

In their Article of the Church, they say, The true Church is to be known by the Preaching of the Word, and the Administration of the Sacraments according to

Christ's Prescription. In that concerning the Governors and Ministers of the Church, they declare for Ordination by Imposition of Hands, and the Authority of Ministers; That they allow no Man to take that Office upon him, but such as are duly called, whose Business is to take Care of the People committed to their Charge, faithfully to preach the Word, and administer the Sacraments; That they have no Power to compel any Man to embrace the Faith by Punishment, Violence, or Threats, by themselves or others; That they are not to Lord it over the Church or the People's Faith, and quote the 20th of St. Matthew, *Ye know that the Lords of the Gentiles exercise Dominion over them, &c. but it shall not be so among you, &c.* They declare against Priests meddling with Secular Affairs, and think it convenient they should be unmarried; but not that 'tis of it self unlawful, since the Apostles approv'd it; and say, the People ought to be subject to them, obey them, and be directed by them in Things relating to Salvation, according to those Scriptures, *Heb. 13. 17. Obey them that have the Rule over you, and submit your selves, for they watch for your Souls. And the Elders that rule well, are worthy of double Honour, especially they that labour in the Word and Doctrine.* They add, That the People are oblig'd to provide for them; but that such as are able to work with their own Hands, ought to get their own Livelihood, if it do not hinder their Work of the Ministry, according to the Example of the Apostle; and that such Priests or Ministers as are guilty of Crimes or Errors, or negligent in their Office, are first to have a Fatherly Admonition; but if they despise the Advice of the Brethren, and of the whole Church, they are first to be deprived of their Office, and then to be thrown out of the Church.

In the Article of Baptism, they own, That they formerly re-baptiz'd those who were converted to them from Popery, as the Papists did such as they perverted from them; but upon better Information, they had laid that aside. As to the Sacrament of the Lord's Supper, they taught, That no Man ought to add any Thing to our Saviour's own Words in the Institution, nor detract any Thing from them; but is plainly to believe what our

Saviour has said, without going to the Right or Left; for which, they take Notice they had undergone many Reproaches.

In the Article about the Power of the Church, or the Keys, they say, That when Christ gave them to Peter, he gave them to the Church and her Ministers, to continue to the End of the World; That this Authority is to be used according to our Saviour's Command, not at our own Will and Pleasure, but as Stewards of the Mysteries of God, and Ministers and Servants of Christ; That this Power is first given to the Governors and Ministers of the Church in general, and to every Christian Congregation in particular, how small soever, according to that of our Saviour; *Whosoever two or three are gathered together in my Name, there am I in the midst of them.*

They declare themselves for such Rites and Customs as are not contrary to Piety; but are against obtruding such as may prejudice Religion, or make Differences among Christians, who ought to bear charitably with one another, as Members of the same Body.

In the Conclusion, they acquaint the Emperor, That these were the Articles, which all their Elders did unanimously agree to.

In April, 1570, they came to an Agreement with their Brethren of the Augsburg Confession at the Synods of Sendomir and Posen in Poland, which consisted of 20 Articles: The chief of which were, That the Ministers of both Sides should use their own Methods and Forms of Worship, without Offence, either separately or together; That none should be employed by the Patron to preach or administer the Sacraments in the Congregations of another, without his Consent; That the Ministers of neither Side should withdraw one another's Hearers, but confirm them in their Obedience to their own Pastors; That none of the Ministers or People should speak or write ill of those of either of the Confessions, or condemn their Doctrine and Rites, but think and speak well of one another; That Elders should be appointed on both Sides to promote this Union, and to take Care of other Affairs of the Churches, and to meet for that End twice or thrice a Year at a Place appointed; That no particular Societies or Ministers should meddle to change any Thing

Thing in Doctrine, Rites, or Benefices, without the Consent of the Ministers of their own Confession; That they should all agree to preach up Piety against Idolatry, and all manner of Vice, and that Discipline should be exercised against faulty Ministers, and others, without respect of Persons; That none of them should admit the Members of other Congregations to the Sacrament, without a Certificate from their own Ministers, except at Diets, Synods, or on a Journey; That none of them should receive excommunicated Ministers or People into Communion; That Patrons should not make any Innovation in their Worship, without Consent of the Senior Ministers; That they should reject all Popish Rites, Idolatrous Images, Relicks, Crosses of Silver and Gold, &c. lest they should seem to support Antichrist, and prophane the Word of God; That in case of any Controversy about Doctrine or Ceremonies, they were to endeavour peaceably to compromise them among themselves; and if they could not do that, should submit to the General Synods of *Greater and Lesser Poland*.

This was sign'd by the Superintendents, Ministers and Elders, of the several Churches; many of the Elders being Counts, and other Persons of great Quality.

The *Bohemian* Brethren did afterwards, in their Agreement with the Churches of *Poland, Switzerland*, and those of the *Augsburg* Confession, declare themselves more expressly against Transubstantiation.

The Government of those Churches,

WAS managed by Superintendents, Ministers, and Elders.

Their Superintendant, as we find in that Part of the Harmony of Confessions, Intituled, *Polonia Consensus*, was called a Spiritual Elder or Superintendant. He was chosen from among the Ministers of the District by the Ministers and Elders of that District in a Synod; and when they could have it so, the Superintendant of the neighbouring District was to preside at his Inauguration.

His Office was, to perform the Ministerial Function in a certain Cure; to breed up a Catechist at the publick Expence, to per-

form the Work of the Ministry in his Absence, when visiting the Churches, or attending Synods. He was to appoint Ministers where it was necessary in his District. He was once a Year at least, with one or two Elders or Deacons, to visit the Ministers and People in his District, and to take Care that no False or Heretical Doctrine was preached among them. He was to attend when call'd to the Synods of other Districts, at the publick Charge. He was, at stated Times, to call Synods in his own District for necessary Causes, and to direct them in their Proceedings. He was to determine Differences among Brethren in the Consistory, and to reconcile them; but with a Salvo to the Laws of the Country. He was to examine and to take Care of Catechists, and young Men that were fit for the Ministry. He was to receive Letters from other Churches, &c. directed to those of his Diocese; and in difficult Cases, was to return an Answer, by the Advice of the Ministers and Elders, and the rest of the Brethren. His Office was to last from Synod to Synod, and to be continu'd or discharg'd, or succeeded by another, as they should determine.

The Ministers were not to enter upon that Office but when ordain'd, and sent by the Superintendant and Ministers of the District; nor were they to leave their Charge, without the Consent of the Synod, and their Patrons. No Patron, by his private Authority, was to receive or discharge a Minister, but was to propose it to the Consistory of Elders; and none were to publish Books in Writing or Print, without Consent of the Synod.

The Elders, whom they call'd Secular, were for most part Persons of Quality, and were chosen two or three in a District by the free Suffrage of all the Ministers and Patrons, and afterwards inaugurated by the Superintendant and some Ministers. The Synod and Church charg'd them upon their Conscience, That they should carefully look after the Ministers, that they preach'd orthodoxly, faithfully, and diligently; That they liv'd piously and modestly; That if any of them were guilty of Error or Scandal, they should admonish them; and in case of enormous Crimes, were to suspend them from the Ministry, with the Consent

of the Superintendant, till the next Synod. They were likewise to observe the same Method towards every one of the Brethren that was guilty of any Fault, according to the Rules of their Ecclesiastical Discipline. They were to attend at Synods, and to join with the Superintendant in visiting Churches. They were likewise to take Care, by diligent Admonitions, That the Revenues of the Church should be restored; That the Ministers should have a convenient Maintenance and Dwelling, and to defend him from Injury and Oppression. They were likewise to see the Acts of Synods put in Execution, to accommodate Differences among the Brethren, and to continue in Office from one Synod to another, and be discharged or continued, as the Synod thought fit. The Synods were of two Sorts; one of them, call'd a Particular Synod, was held four times a Year; and that call'd the Synod of the District, once a Year. At several of these Synods, we find many of the great Officers of the Crown, and Senators of the Kingdom, attended as Elders.

The Description of the Country.

THE Soil is generally fat and arable, and in few Places barren or sandy. They have many Woods and Forrests, but none so large as to make any considerable Part of the Country uninhabitable. Their Orchards and Gardens are so well stock'd with Fruit, that they export great Quantities to neighbouring Countries, as they do also Saffron. *La Forrest* says, their Grapes do not come to Maturity, which is a Mistake; for they might have enough of Wine for their own Use, stronger than that of *Moravia*, and equal in Taste to that of *Austria*, were the Inhabitants industrious; but it does not keep so long; therefore they buy much from their Neighbours at a reasonable Price. They have abundance of good Meadows and Pasture, and Cattle, especially Horses, of more than ordinary Courage and Bulk. Their Hop-Gardens produce more plentifully than in many other Countries; and their White and Brown Beer is so much valued, that 'tis exported into other Parts of the Empire. They have some Salt-Pits; but the Pro-

duct not answering the Charge, they are supplied from *Misnia* and other Places. They have rich Mines of Silver, Copper, Tin, Iron, Lead, Sulphur, Nitre, &c. and make great Quantities of Glass and Allum, Carbuncles, Amethysts, Jasper, Sapphire: And other Precious Stones are found in their Mines and other Places; of which *Anselm Boetius* has given an Account, call'd, *Historia Lapidum & Gemmarum Bohemiae*. *La Forrest* says, tho' the Air of this Country be very cold, yet in some Places 'tis so bad as to occasion contagious Distempers. His Character of the Inhabitants is, That they are large, well made, subtle, and courageous, true to their Word, but much addicted to Gluttony, Drunkenness, and Robbery; which, tho' it may be true of many, must not be charged on them in general, being inconsistent with his former Part of their Character.

Their Language is a Dialect of the ancient *Slavonick*, which was so copious and sweet, that their old Law-givers commanded its true Orthography and Pronunciation to be kept up; but now most People of Fashion speak the *High-Dutch*, with which the Country People have mix'd their own Language.

Their chief Towns are;

1. *Prague*, their Metropolis, pleasantly situated on the great River *Muldaw*, in a fruitful Country, encompassed with stately Courts, and pleasant Palaces, as if it were in the middle of an Amphitheatre. The ancient Name of it, before the *Bohemians* settled here, is not certainly known; but they call'd it *Boisheim*, as being their Capital. It had the modern Name from the *Slavonians*. 'Tis divided into 3 Parts, call'd the *Old*, *New*, and *Little City*. *Enas Sylvius* compares it to *Florence* in *Italy*; but *Dr. Brown* says, 'tis more large and populous. The *Old Town*, on the E. of the *Muldaw*, is very populous, and full of fair, but old-fashion'd Houses. Here stands the University, frequented by vast Numbers of Students, but not comparable to what it was in former Ages; for if we may believe *Lewis de May*, Counsellor to the Duke of *Wirttemberg*, and Author of the Dialogue concerning the State of the *German Empire*, there were above 40000 Students there.

there in 1409, when *John Hus* was Rector: And when the Emperor *Charles IV.* would have retrench'd their Privileges, 24000 are said to have left it in one Week, and 16000 more soon after. Here are also several Colleges and Monasteries, one belonging to the Jesuits, which is very magnificent and stately. This is the only University in *Bohemia*, and still one of the most famous in Europe. Great Numbers of Jews inhabit this Part of the City, and give it the Name of the *Jews Town*. They are very rich, and trade in all Sorts of Commodities, especially in Jewels, and other Precious Stones, found in the *Bohemian Mines*. The Doctor says, he bought some *Bohemian* Topazes from them, very well cut, at 7 or 8 Crowns a-piece. He takes Notice, That the *Bohemians* do still keep Silver Medals, in Remembrance of those great Men, *John Hus* and *Jerome of Prague*. Others observe, That on one of *Hus's* Medals, there is engraven his Prophecy at the Stake, in these Words; *Cantum revolutis Annis Deo respondebitis & mihi*; i. e. 100 Years hence, ye shall answer for this to God and me; which was reckoned to be fulfilled upon the Church of Rome by *Luther's* Reformation. *Aeneas Sylvius*, afterwards Pope *Pius II.* says, That *Hus* was elder, and of greater Authority; but *Jerome* more learned and eloquent; That they fac'd Death with unparallel'd Constancy, beyond any of the ancient Philosophers, and sung Hymns in the midst of the Flames.

The New Town was formerly separated from the Old by a Wall, but now only by a Ditch, into which they can let the River at Pleasure. Here are the Ruins of the ancient Palace of their Kings, the Walls of which are so cemented, that they can scarce be demolished by any Engine. The Jesuits have built a College here, which much exceeds what they had in the Old Town. Dr. *Brown* says, this Town is of a very large Extent, and that they were building a Citadel and some Bastions for the Defence of it. *Monsieur* says, the Jesuits College and Church is of excellent Architecture; and over the Gate, there are 13 Statues of Men as large as the Life, of a Stone which resembles Brass.

The Lesser Town lies on the W. of the *Muldau*, and much exceeds the Old in Plea-

santness and Building. 'Tis joined to the Old Town by a Bridge of 16 Arches, being in all 1700 Foot long, and 35 broad, with two high Gates, under two large Towers at each End. Part of this Town is built on a rising Ground, at the Top of which stands *Upper Prague*, where the Emperor has a Summer-House, and a very magnificent Palace, where he keeps his Court when he comes to *Prague*. Here stands also the Cathedral of *St. Veit*, which has many ancient Monuments of great Persons. Here are likewise most of the Houses of the Nobility; among which, the Palace of *Colorado* and its Gardens excel for Neatness; but are not very large. The Palace of Count *Wallenstein*, afterwards Duke of *Fridland*, but cut off for his Treason when General of the Emperor's Army, is a very magnificent Structure, above 100 Houses being pulled down to make room for it: The Hall is very lofty and spacious, and the Garden exceeding beautiful; on one Side of which, there's the Place where they us'd to manage his Horses, with a noble Fish-Pond: On the other Side, his Aviary, beautified with Trees, and a Garden, after the Model of that of Prince *Doria* at *Genoa*. The most surprising Thing, is his large Stable for 36 Horses, of fine Architecture, with a Marble Pillar betwixt each Horse, a Rack of Steel and a Marble Manger for each of them; and over their Head, the Picture of every Horse, as large as the Life, and his Name under it. In the Town-House, there is a famous Clock with several Motions, like that of *St. John* at *Lyon*; and in the Market-place, there is a great Stone Column, with a Statue of the Virgin on the Top of gilt Brass, and 4 Angels at the Corners, holding 4 Devils in Chains. Near it, there is a great Fountain with 12 Fronts, but ruinous; the Basin is of red Marble, which resembles Porphyry at a distance: The 12 Signs of the Zodiac are engraven round it, and in the middle there's a Figure on a Pedestal. *Monsieur* says, *Prague* is about as large as *Lyon*; That the Women of Quality dress much after the French Mode: The other Women of the better Sort wear Furr'd Caps, like the *Grecian* Women, long Clokes with large Necks, some of them of Sattin lin'd with Taffata, and Petticoats of the same, but short.

short, because the Streets are dirty. The Jewish Women have a distinct Habit; the Shops are very ill furnish'd, and the Town looks poor. In the Palace, he says, there's a multitude of Apartments, with a large Hall for Comedies, supported in the middle by Columns, plaister'd in Imitation of Marble, with two long Galleries, and another great Hall, besides several Closets full of Pictures by the best Masters; and adjoining to it, there's a large Stable, where are 60 fine Led-Horses, belonging to the Burgrave of the City, who is the Governor of the Kingdom. The Jesuits College in the Old Town near the Bridge was founded by the Emperor Ferdinand, for 100 of that Order; from the Belfrey of which, there is the best View of the City.

Baudrand says, This Town was taken several times during the Civil Wars of Germany; and Dr. Brown says, That the Lesser Town was surpris'd by the Swedes, who carried off from it an incredible Booty. It was formerly an Imperial Town, but is now subject to the Emperor as King of Bohemia. The Castle on the Hill above it is very strong. The Emperor's Deputies were thrown out of its Windows by the enraged States of the Kingdom, whom they had deprived of their Privileges, and received but little Hurt, tho' they fell very high: In Remembrance of which, there is a Pyramid erected on the Place.

On the white Hill near this City, the 8th of November, 1620. was fought the famous Battle betwixt Maximilian Duke of Bavaria, and Frederick V. Elector Palatine, formerly mention'd, wherein the Elector being defeated, lost the Kingdom of Bohemia, and his own Electorate: After which, this City suffer'd much, and many Bohemian Protestants of Quality, who took Part with him, were executed, and Thousands of Families left the Country. This City lies in Long. 33. 17. Lat. 50. 7. about 45 Miles S. E. from the Frontiers of Saxony, about 63 N. W. from the Frontiers of Silesia, near 80 N. from the Frontiers of Austria, and about 130 Miles N. W. from Vienna.

2. Egra, on a River of the same Name, on the Borders of the Palatinate, about 77 Miles W. from Prague. The Bohemians call it Schebbe. Frederick I. made it an Imperial Town in 1179, for their Faithfulness to

him against the Duke of Bavaria. 'Tis fortified with a double, and in some Parts with a treble Wall, and a very strong Castle. The Market-place is encompass'd with fair Buildings, and has fine Churches. Here the Emperor Frederick II.'s treacherous General, Count Wallenstein, was kill'd in 1634. This Town is Capital of its Circle, and formerly belong'd to the Upper Palatinate. About 2 Miles from the Town, there is a Fountain, whose Water is very cool and clear, but salt and brinish, famous for Distempers in the Eyes, Ears, or other Parts of the Head, and many other Cures by Purging.

3. Badweis, or Budweis, near the Mulda, 62 Miles S. from Prague. 'Tis one of the strongest Towns in Bohemia, Capital of its Circle, a fair large Town, continu'd faithful to the House of Austria during the Bohemian Troubles, and lies about 17 Miles N. from Austria.

4. Kuttenberg, or Hora, about 30 Miles E. from Prague, according to Sanjon, a considerable Town, chief of its Circle, and noted for the Silver and Copper Mines in its Neighbourhood. Dr. Brown says, 'tis but 12 Miles from Prague. It lies near the Elb, and has 30 several Mines in the Neighbourhood, which were discovered by a Monk, who found a Silver Tree there. The first is that call'd the Cutenhill, which is 19 Fathom deep. The chief Vein is about a Foot broad, and contains both Silver and Copper: Of the first, 100 Weight yields about an Ounce; and of the latter, 8, 9, 10, or more; and 100 of some Ore, he says, yields 8 or 9 Ounces of Silver; and when they meet with a blue Earth, they take it for a Sign of good Ore.

5. Czaflaw, the Chief of its Circle, about 37 Miles S. E. from Prague. Here the famous Zisca was buried.

6. Janikaw, a Town famous for the Defeat of the Imperialists by the Swedes in 1643. The former had the Advantage at first; but lost it by falling a plundering too soon. It lies about 12 Miles S. E. from Czaflaw, and 48 from Prague.

7. Koningratz, about 45 Miles N. E. from Prague, on the Elb, a Bishop's See, Suffragan to Prague, erected in 1664. 'Tis the Chief of its Circle, and a pretty large Town. 'Tis called in Latin Authors, *Gradium Regina*, or *Regina Graditum*.

8. Glatz,

8. *Glatz*, about 80 Miles N. E. from *Prague*. We have mention'd the Town already in the Description of *Silesia*, of which some Authors make it a Part. We shall only add, That 'tis Capital of its Circle, is defended by a good Castle; and the Country to which it gives Name, contains 9 great Towns, and 100 Villages.

9. *Elnebogen*, a strong Town on the River *Eger*, 5 Miles N. E. from *Egra*, and 65 W. from *Prague*, near the Frontiers of *Misnia*, and reckon'd one of the Keys of *Bohemia*, which opens their Passage into the Empire. About 5 Miles E. from this Town lies *Carlsbad*, noted for its Baths and Medicinal Waters.

10. *Pilsen*, about 40 Miles S. W. from *Prague*, a large, strong, and well fortified City, on the Conflux of two small Rivers. It is the Chief of its Circle, was besieged in vain by the *Hussites* in the 15th Century; but was taken by Count *Mansfeld* in the Civil Wars of *Germany*, and was the last that yielded to the Imperialists. Some reckon it the second Town of the Kingdom. The Market-place is spacious, has 4 or 5 Streets that center in it; the Houses are well built, and they have two fine Churches. The Country belonging to it is one of the most fruitful in *Bohemia*.

11. *Tabor*, on the River *Lasnick*. It was built and fortified by the *Hussites*, lies 42 Miles E. from *Prague*, is very strong, by its Situation on the Conflux of two Rivers; but is now only a small Town with a Castle.

12. *Kaurfsen*, or *Kartstin*, about 14 Miles S. W. from *Prague*, and the Chief of its Circle.

13. *Bohimishbroda*, a small Town, ruin'd by the Civil Wars of *Germany*, 20 Miles S. E. from *Prague*.

14. *Leitomeritz*, on the *Elb*, about 31 Miles N. W. from *Prague*, a very rich Town, erected into a Bishoprick, Suffragan of *Prague* in 1655.

15. *Satz*, or *Ziateck*, on the *Eger*, 37 Miles N. W. from *Prague*, a strong and populous Town, and Chief of its Circle.

16. *Codan*, a small City on the same River, noted for its excellent Beer.

17. *Carlstein*, a Fortress, so call'd from the Emperor *Charles IV.* who founded it. Here the *Regalia* of the Kingdom are kept.

It lies about 8 Miles S. W. from *Prague*, and seems to be the same with *Kaurfsen*, formerly mention'd, the Chief of its Circle; so that *La Forrest* is in a Mistake to make them two.

Other Towns in this Country are, *Eutawissel*, a Bishop's See; *Bechyn*, on the *Laufnick*, a very ancient Town; *Chrudin*, near the Fountains of the *Elb*; *Boleslaw* the Ancient, on the *Gizer*; *Schlany*, *Rakonick*, *Berawn*, *Sedlezany*, *Piseck*; all Chief of their Circles, but noted for little else.

The Circle of A U S T R I A.

FOR the Countries included in this Circle, we refer to the *Matricula*, and begin with

The Arch-Dutchy of A U S T R I A.

THE *Germans* call it *Oestereich*, and *Latin* Authors *Austria* or *Austrasia*, so called by the *Franconians* and *Bavarians*, because of its Easterly Situation from them. It was anciently Part of *Pannonia Superior*, and supposed to have been inhabited by the *Terachatrie* and *Rachate* of *Ptolomy*; and hence the *Poles* and *Bohemians* call them still *Rakauffi*. *Lazius* supposes the *Boii* liv'd here before they were drove out by the *Marcomanni*. It appears by good Authors to have been Part of the large Dukedom of *Boisavia* or *Bavaria*, and was first made a Marquisate before it came to be a Dutchy.

'Tis divided into *Upper* and *Lower* by the River *Ens*. It has *Hungary* on the E. *Bavaria* on the W. *Bohemia* on the N. and *Stiria* on the S. 'Tis in Length from E. to W. according to *Moll's* Map, 172 Miles; and in Breadth from N. to S. about 65.

The Country abounds with all Necessaries for Human Life, as will appear more at large in the Description of its Cities and Towns. The *Danube*, *Erlaph*, *Trafen*, *Yps*, *Melck*, *March*, *Teyn*, *Kampff*, *Ens*, and other Rivers, afford them Plenty of Fish; and their Fields abound with Corn and Saffron. They have Plenty of Wine for Consumption and Export, and are supplied with other rich Wines from *Hungary* and *Italy*; so that there are 30 several Sorts sold at *Vienna*.

Haßled.

Halstadt furnishes them with Salt, which is made by letting in Water into the hollow Parts of a Mountain, where it drinks in the Salt of the Earth, and is afterwards let out and boil'd. They have not such Plenty of Black Cattle as of others, and therefore are supplied with great Part of their Beef from *Hungary*. At *Vienna*, they have a peculiar sort of Bird, called *Hafenhendel*, or *Gallina Corilorum*, which they reckon a choice Dainty. The *Danube* and other Rivers have two Sorts of Fish, unknown to us, one called *Scheiden*, and, by *Gesner Silurus*, larger than a Pike or Salmon; the other called *Haisons*, much larger than the former, some of 'em being 20 Foot long. 'Tis thought to be the *Anacetus* of *Alian*, who gives an Account of fishing for them in the *Ister*, is a grisly Fish, with a hollow Nervous Chord down the Back, which they dry and make into Whips. The Fishermen blow a Trumpet or Horn, the Noise of which brings great Shoals of 'em about their Boats. The Inhabitants having such Plenty of all Necessaries, are more brisk and jovial than their Neighbours, who from hence call them Ranters and Flaggoners. Their unhealthful Air makes it necessary for them to take a larger Glass than ordinary; for in *Lower Austria* especially, except brisk Winds carry off the Vapours, they are much troubled with Agues. This Country abounds so with People of Quality, because of the Emperor's Court at *Vienna*, that some have reckon'd in it 100 Families of Counts and Barons, and 180 Knights, who had Votes in their Diet. *Cluverius* observes, That this is the only Arch-Dutchy in *Europe*.

The Family of Austria.

SOME German Heralds derive it in a direct Line from *Julius Caesar*: Others from one of the *Roman Scipio's*. *Seisfried*, an *Austrian* Abbot, publish'd a Folio Book in 1613, wherein he pretends to derive them from the *Anici*, *Probi*, *Colybri*, and other *Roman* Families which came from *Troy* with *Aeneas*. *Aventinus* derives them from *Ostrin* King of *Egypt*. *Trithemius*, and most ancient Authors of Credit, bring them from *Sigebert* King of *France*; and this has been

approved by *Lazius* and *Reusnerus*, two learned modern Writers; but *Guillimannus*, in a Book printed in 1605, dedicated to the Emperor *Rudolph II.* derives them from *Vindonissa*, an ancient City in *Switzerland*, of which they were Lords, afterwards made Counts of *Altenburg* and *Hapsburg*. This *Vindonissa* is mention'd by *Tacitus*; and other Historians say, it was besieged in the Reigns of *Dioclesian* and *Maximilian*. *Rhenanus* fancies, the true German Name of it was *Wendish*.

The *Atlas Historique* derives them in like manner from *Kanselin* Count of *Altenburg*, Son to *Gentram*, surnam'd *The Rich*, who liv'd in the latter End of the 9th Century. He was succeeded by *Radeboton*; he by *Wernin* Count of *Altenburg* and *Vindonissa*, and he by *Orto* Count of *Hapsburg*, from whom *Rudolph* Count of *Hapsburg*, who was elected Emperor in 1273, was the 5th. The Emperor *Albert I.* succeeded him. *Albert II.* Duke of *Austria*, succeeded him, but not as Emperor. *Leopold I.* surnam'd *The Hammer of War*, and *The Glory of Knights*, was his Son. *Ernest*, the first of the Name, Duke of *Austria*, succeeded him. *Frederick*, surnam'd *The Pacifick*, his Son, was the first who had the Title of Arch-Duke, which the *Atlas* says, signifies Duke of the Dukes of *Germany*. He died in 1493, and was succeeded by his Son *Maximilian*, who married *Mary* of *Burgundy*, the Heiress of that Country, by whom it came to the Family of *Austria* in 1519. His Son Arch-Duke *Philip* married *Jane* of *Aragon*, Daughter to *Ferdinand II.* and *Isabel* Queen of *Castile*, from whom proceeded the present Imperial Family, and the Branch of *Spain*, whose Male-Issue fail'd in the last King *Charles II.* The Founder of the *Spanish* Branch was *Charles V.* and the Founder of the Imperial Branch was his Brother *Ferdinand*, who married *Anne* Queen of *Hungary* and *Bohemia*, which brought those Countries to that Family. From *Charles V.* by his Daughter *Margaret*, came the present Family of *Parma*. From Arch-Duke *Philip*, came the Arch-Dukes of *Ispruck*, which was united to the Imperial Family by the Marriage of the Heiress to the late Emperor *Leopold*. From a Daughter of *Charles* Arch-Duke of *Austria*, comes likewise the present Family of *Tuscany*; and from *Charles V.*'s Branch, comes also *Philip* Duke

Duke of *Anjou*, at present possessed of the Crown of *Spain*. The *Atlas* likewise derives the Kings of *France*, the ancient Kings of *Arragon* and *Castile*, and the Kings of *Portugal*, from the Family of *Hapsburg*; but he is not distinct as to the Manner how.

The *Atlas Historique* has also a large Tree, by which he shews, That most of the Sovereigns of *Europe* are issued from the Emperor *Rodolph*, viz. the Emperor, the King of *Spain*, the King of *France*, the Queen of *England* by the Family of *Denmark*, a Daughter of which was married to *James I.* the K. of *Denmark*, the K. of *Sweden*, the ancient Kings of *Portugal*, the King of *Prussia*, with all the Branches of the Family of *Brandenburg*; the Duke of *Savoy*, the Elector of *Hannover*, with the Branches of the House of *Brunswick*; the Elector of *Saxony*, with all the Branches of that Family; the Elector *Palatine*, the Elector of *Bavaria*, the Duke of *Lorraine*, the Landgrave of *Hesse*, with the Branches of that Family; the Duke of *Wirttemberg*, with the Branches of that Family; the Duke of *Holstein*, and his Branches; the Duke of *Mecklenburg*, the Prince of *Baden*, with the Branches of that Family; the Prince of *Anhalt*, the Counts of *Oettingen* and *Schwartzburg*, and the ancient Kings of *Bohemia* and *Hungary*.

He reckons in all 21 Illustrious Families which proceeded from *Rodolph*; among whom, there have been 19 Emperors, 46 Kings, 31 Electors and Electresses, and 190 Dukes, Dutcheffes, Princes, Princesses, Counts and Countesses, besides more that might be added.

He has also a Tree which shews, That there are issued from *Ferdinand I.* besides the Emperor and King of *Spain*, the Queen of *Great Britain*, by *Mary of Medicis*, Queen to *Henry IV.* of *France*; the King of *France*, the King of *Portugal*, the King of *Sweden*, the King of *Denmark*, the King of *Poland*, the King of *Prussia*, the Electors of *Bavaria*, *Saxony*, and *Palatine*, the Dukes of *Savoy*, *Florence*, and *Lorraine*, the Landgraves of *Hesse*, the Dukes of *Mantua*, *Parma*, and *Courland*, and the Princes of *Baden*.

He has also a Genealogical Tree of the Imperial Families, and Kings of *Spain*, that have issued from the House of *Austria* since *Charlemagne*; among whom, he reckens the

Emperors of the Family of *Saxony*, those of the Family of *Franconia*, those of the Family of *Luxemburg*, those of the Family of *Swabia*, and those of the present Imperial and *Spanish* Families. By all which together it appears, That the House of *Austria* is now the most Illustrious Family in the World.

The Privileges which they have receiv'd from the many Emperors of that Family, are very many and great, as Arch-Dukes of *Austria*; for as such they can create Gentlemen, Barons, and Counts, throughout the whole Empire. The Emperor cannot take from them the Lands they are possessed of. The Arch-Duke is the first and most intimate Privy-Counsellor of the Empire, and his Principality not subject to Contributions. When he receives the Lands he holds in Fee, he pays nothing for the Investiture, wears a Royal Habit, and an Arch-Duke's Cap, and is exempted from the Jurisdiction of the Empire. In Assemblies and Diets, they take Place on the Emperor's Right Hand, after the Electors, and before the Ecclesiastical Princes; and if they be challeng'd to a Duel, they may send a Champion, tho' that Privilege be deny'd their Adversary; and if all their Male-Issues should fail, the eldest Daughter inherits all their Estates, Titles and Privileges, and brings them to her Husband.

The ancient Arms of the Family were in a Field Azure, 5 Larks Or; but upon *Leopold* of *Austria*'s gallant Behaviour at the Siege of *Ptolemais*, where he was cover'd all over with Blood, and nothing appear'd with any White but his Belt, the then Emperor gave him a new Coat, being a Field-Gules, with a Fess-Argent, which they bear to this Day. Their other Arms we have accounted for under the Head of, *The Government of Germany*, Page 498.

The chief Cities and Towns of Austria.

1. *Vienna*, anciently called *Vendurn*, *Vindomina*, and *Vindobona*; and because of a Roman Colony there under their General *Fabianus*, was likewise called *Colonia Fabiana*; and here their *Classis Istrica*, or Navy on the *Danube*, lay, under Protection of the 10th German Legion. Some fancy, that 'tis *Ptolomy's Juliobona*. The Curious may

K k k k

see

See more of this in *Cluverius's Pindelicis & Noricum*, join'd to his *Germania Antiqua*, Page 22. By which it appears, that it was then one of the chief Towns in *Pannonia*. The present Name *Wien*, as 'tis call'd by the *Germans*, seems most probably to come from a small River of that Name, which falls there into the *Danube*. 'Tis situate on the S. Side of that great River, and was anciently famous for the Actions of several *Roman* Emperors against the *Marcomanni* and *Quadi*, particularly for the Wars of *Marcus Aurelius Antoninus Philosophus*, who defeated those Nations, and, according to *Aurelius Victor*, died here. Whether 'twas afterwards totally destroy'd, we know not. *Ptolemy* is the first who mentions it; but there is no certain Account when 'twas founded. In *Tiberius's* Time, it seems not to have been very remarkable, because *Velleius Paterculus* mentions *Carnuntum* or *Carnutum* to be the next Town of Note in Possession of the *Romans* to the Kingdom of *Noricum*; so that it seems first to have been made considerable and enlarged by being the Station of the 10th *German* Legion, as *Cellarius* thinks. We hear little more of it till *Henry I.* of *Austria* is said to have rebuilt it in 1158; and it was afterwards beautified and wall'd in 1192, by the Ransom which the Marquis of *Austria* obliged *Richard I.* of *England* to pay, when he took him Prisoner in his Return from the *Holy Land*, because he took down the *Austrian* Banner at *Joppa*, and threw it into a House of Office. The Ransom he forc'd from King *Richard*, was 140000 Marks of Silver, in *Cologne* Weight, a prodigious Sum in those Days, for which the *English* were oblig'd to sell their Church-Plate; and the Marquis of *Austria* not only fortified and enlarged *Vienna* with it, but wall'd the Towns of *Ens*, *Haimburg*, and *Newstar*. The City lies in Long. 35. 30. Lat. 48. 25. about 130 Miles S. E. from *Prague*, and about 48 W. from *Prasburg*, on a Branch of the *Danube*, which here divides it self into several Streams; and the River *Wien* separates the Town from some of the Suburbs. The City is fortified after the modern Way, with 10 Bastions towards the Land, and a very deep Ditch, into which they can let the River; but generally keep it dry, for fear of incommoding their Cellars. It has two other Bastions towards the

River. Taking in the Suburbs, 'tis of a very large Circuit; but the City it self is not above 3 *English* Miles round. 'Tis very populous; and here we may see some of most Nations in *Europe* in their proper Habits, which is very entertaining to Strangers. *Aeneas Sylvius*, above 200 Years ago, says, This City abounded with Palaces fit for Kings, and had Churches that might vie with those of *Italy*; a Character which it much better deserves now. Most of their Houses are well built of Stone, 6 Stories high, with flat Roofs, after the *Italian* Mode; and those which are otherwise, are cover'd with Pieces of Timber shap'd like Tiles. The Streets are of a middling Size, and many of their Houses have 4 Cellars one under another, with an open Space in the middle of each arch'd Roof for a Communication of Air; and from the lowermost, there's a Tube to the top to let in Air from the Streets. The Cathedral of *St. Stephen's* is a fair stately Fabrick, but something dark, because of the painted Glass in the Windows. It was founded by *Henry I.* of *Austria*, and finished by *Henry II.* The Steeple and Spire is one of the finest in *Germany*, and much stronger than that of *Strasburg*, tho' not so lightly: Under the Cross on the top, there was a Star and Half-Moon set up on this Occasion. When *Seliman the Magnificent* besieged the Town, he design'd to batter down the Steeple; but was dissuaded by his Bassa's, who flatter'd him, that he would soon be Master of it, and it were Pity to destroy so noble a Pyramid. Upon this he sent Word to the Citizens, That if they would set a Half-Moon and Star, the *Turkish* Arms, on the top of it, he would spare it, which was accordingly done; but being repuls'd with great Loss, though he attack'd them with 200000 Men, he was oblig'd to march off; but his Arms continued there till the *Turks* besieg'd it again in 1683. After which, because they fir'd at the Steeple, the Arms were taken down. This Steeple is 480 Foot high; and in the Tower, there hangs a Case of Wooden Hammers, with which they call the People to Church from *Good-Friday* till *Easter-Day*, because they will not suffer the Bells to ring out during the Time that our Saviour lay in the Grave. At the Entrance into this Church, there's a Stone plac'd in the

the Wall, which they fancy to be one of those with which St. Stephen was ston'd to Death: It looks like a Pebble, and is worn very smooth by the superstitious People, who think they merit by touching it as they go in and out. In this Church, there are many sumptuous Monuments of Princes, and other great Persons. Dr. Brown says, the Spire of this Steeple has the largest Crockets that ever he saw, being above a Yard long, and adorn'd with Foliage-work. From the Steeple, there is a noble Prospect of the City, of the adjacent Country, and of the Course of the Danube through most of Austria to near Presburg in Hungary. He adds, there are many other noble Churches and rich Convents in this City. The Convent of the Dominicans is a very fair Structure. The Church of the Austin Fryars is very large, and has a Chapel in the middle, resembling that called the Virgin's-House in Loretto in Italy; upon the top of which, there are many Colours taken from the Turks and Tartars. The Jesuits have several very large and spacious Colleges. The Front of that which faces the Piazza, has a Column of Copper in the Center of the Marketplace before it, on a Pedestal of White Stone, with a Statue of the Virgin on the top, and 4 Angels with Escutcheons round her; on which there are Inscriptions, dedicating Austria to her Patronage. There is likewise a Scots Convent here, founded for the Reception of Scots-men, in their Pilgrimages to the Holy Land. St. Colman, one of their Country-men, (of the Blood Royal) was murder'd by the Peasants near this City, where his Body is said to have remain'd a long time uncorrupted, and to have worked many Miracles: Upon which Account he was reckon'd the Patron of Austria. It was afterwards carried to Alba Regalis in Hungary. The Church of St. Peter is much esteem'd for its Antiquity, being the oldest in the City, and built in the same Place where formerly stood the Ara Flavianus, dedicated to Domitian.

The University of Vienna is also very noble: It was founded by Albert III. of Austria above 300 Years ago, according to the Statutes of that of Paris; or, as some say, it was founded by the Emperor Frederick II. in 1237, long before that, when he endow'd it with great Revenues and Privile-

ges; being afterwards enlarged by Ottocar King of Bohemia, and compleated by Albert, who distinguish'd the Students into 4 Classes or Nations, each of which, besides the general Constitutions, had their peculiar Rules and Privileges. The first Class is the Austrian, which takes in the Students of Austria, Italy, and other Provinces beyond the Mountains. The 2d is that of the Rhine, which takes in the W. of the Empire, France, Spain, and the Netherlands. The 3d is that of the Hungarians, which takes in Hungary, Bohemia, and all the rest of the Countries who speak Sclavonick, with other Parts of Germany. The 4th is that of the Saxons, taking in Saxony, the Northern Kingdoms, the N. Parts of Germany, Great Britain, and Ireland. Hence it comes, that there are Students of many Nations here, who sometimes quarrel about their own Divisions; but are sure to unite upon any Difference with the Citizens or Jews. Dr. Brown says, they had but little Knowledge when he was there of Natural and Experimental Philosophy, tho' they were enquiring after it; but they were well vers'd in Languages, History, Antiquity, and Anatomy, having a Theatre capable of 100 Persons to see the Operations of the latter. The Emperor Ferdinand II. in 1622, made an Order, That none should be Professors of Divinity and Philosophy there but the Jesuits; yet sometimes at Disputations, those of other Orders are allow'd the Chair; but the Civilians and Physicians were govern'd by a Rector of their own choosing, and admit Lutherans and Calvinists, which are excluded from the other. The Rector, with the other Masters of the University, have Power of Life and Death over their own Members.

No Religion is here publicly tolerated but the Romish, and therefore the Protestants go as far as Presburg, about 40 English Miles from hence, to receive the Sacrament. This would be an insupportable Trouble, had they not the Convenience of the Danube, and of Coaches, which daily pass betwixt Vienna and Presburg. Maximilian II. allow'd the Lutherans the Exercise of Religion in the Church of the Holy Cross; but that Privilege was afterwards taken from them by Rodolph II. The Emperor Matthias, not long after, gave them Leave to meet at

Herals, a little more than an *English* Mile from *Vienna*, and allow'd their Ministers to come into the City, and there to marry, baptize, and visit the Sick. This Toleration gave them an Opportunity of promoting their Principles, and of gaining daily great Numbers of Profelytes. But *Ferdinand II.* returning from the Battle of *Prague*, banish'd their Teachers out of *Vienna* and *Arnols*, committing *Baron Jorger*, their Grand Patron, close Prisoner at *Lintz*; and not ceasing, till he had taken away their Privileges of meeting in any Part of the *Lower Austria*.

Formerly the *Jews*, who swarm more in *Germany* than in any other Part of the Christian World, had Freedom of Trade allow'd them in this City; but for many Years past have been exceedingly distast'd by the Citizens and Tradesmen, who look'd upon them as Fellows that robb'd them of their Trafficks and Employments; and upon a Quarrel betwixt them and the Scholars, were wholly banish'd the Town. The Students having received an Affront from 'em, assaulted the *Juden-Stadt*, or *Jews* Town, which is a Part of the Suburbs beyond the River, whither they were always forc'd to retire in the Night-time, tho' permitted to traffick within the Walls in the Day, beat and wounded many of them, and threw several into the River; some of themselves being also killed, and divers wounded. Upon this, a good Number of the *Jews*, who first occasion'd the Uproar, were immediately banish'd the Town; and not long after, the whole Nation of 'em prohibited from living not only at *Vienna*, but in any other Part of *Austria*. 'Tis hard to judge whether a Toleration or Exclusion of 'em conduc'd most to the publick Good of the Town; for tho' they would most readily accommodate you with all manner of Necessaries, either upon Sale, or Exchange for other Commodities, yet the Magistrates of the City, and the Emperor's Ministers of State, were usually jealous of their holding a Correspondence with the *Turks*, and betraying the Secrets they could learn to the *Ottoman* Ministers.

The Imperial Palace is a noble Structure, but not answerable in Bulk to the Grandeur of its Master: It consists chiefly of two Courts; in the outer, which is largest, the

Guards and Courtiers are lodg'd; and in the inner, the Court it self. Over the Gate of the Palace, there are the 5 Vowels, A, E, I, O, U, in Capitals over the Gate; to which some have given this Explanation, *Austria est imperare orbi universo*; i. e. 'Tis the Part of *Austria* to govern the World; but 'tis not certain that this was the Meaning of the Architect.

In the Palace, the Emperor has a Library, which, for the Number and Value of Books, is inferior to none in *Europe*. The worst is, that the Receiptacle is not suitable to so vast a Treasure; for tho' 'tis divided into 8 spacious Rooms, in which the Shelves stand so close, that there is scarce an easy Passage left betwixt them, yet many lie upon the Ground.

The Manuscripts have their peculiar Places distinct from the Printed Books, and are divided into 6 different Classes, viz. Theological, Juridical, Medicinal, Philosophical, Historical, and Philological. The MSS. of *Hebrew*, *Syriac*, *Arabic*, *Turkish*, *Armenian*, *Aethiopic*, and *Chinese* Books, are, without Comparison, the best Collection that is to be found.

The choicest Books of which this Library is compos'd, (which has been collecting ever since the Time of *Maximilian I.*) are,

The famous Library of *Buda*, of *Matthias Corvinus*, Son to *Humniades*.

The choice Library of *Wolfgangus Lazius*: As also 3000 Books of *Johannes Sambucus*.

Augerius Busbequius made a considerable Addition to the rest; and in his two *Turky* Embassies, bought a great many choice Greek MSS. at *Constantinople*, which are mark'd thus with his own Hand, *Aug. de Busbeck. emit. Constantinopoli*.

There was also a considerable Number added out of the Library of the learned *Johannes Cuspinianus*, the Emperor's Library-Keeper: And the noted Libraries and Mathematical Instruments of *Tycho Brache*, *Kepler*, and *Gassendus*, were purchas'd for it.

But the greatest Addition of all, was made by that noble Library of Count *Fugger*, which consisting of 16000 Volumes, was purchas'd by *Ferdinand III.* Besides which, the learned *Peter Lambecius*, the present Library-Keeper, Historiographer, and Counsellor of the Emperor, has brought hither the choicest Books out of the Li-

brary

brary of *Inspruck*; and he himself is Master of a most excellent Library of his own, which will in Time be added to the Imperial Library. Dr. *Brown* says, he had it from his own Mouth, That there were then at least 80000 Volumes in this Library, which are increas'd by the Accession of other Books that are purchas'd since, especially in the *Turkish* Dominions, where the Emperor keeping a constant Resident, no Opportunity is let slip to buy up any good Greek MSS. in their Convents. Dr. *Brown* says, when he was at *Larissa* in *Thessaly*, the Resident, Seignior de *Casa Nova*, was continually enquiring after Greek Books in their Monasteries, the Emperor sparing no Cost to purchase them; and were it only for the Number of *German* Books, 'tis certain, that by the Right the Emperor has of having two Books of whatever is printed in *Germany*, this Library might soon increase to a vast Number.

The chief Things taken Notice of in this Library by Dr. *Brown*, are,

A Letter in the *Chinese* and *Tartarian* Language from the Emperor of *China* to the Emperor *Leopold*, weaved in a very fine Roll.

Another Roll written in an unknown Character, but most resembling the Greek.

A Book in the *Runick* Language.

A very fair MSS. of *Ptolemy*, the Maps colour'd.

A true Copy of *Livy*, the most ancient MSS. extant, 1000 Years old, in very large Letters, without Distinction of Words or Sentences, brought from the *Inspruck* Library.

A very fair MSS. in Greek of *Dioscorides*, 1100 Years old; in large Characters, without Distinction of Words or Accents; the Plants finely painted, with the Pictures of *Dioscorides*, *Galen*, and some other noted Physicians.

Two Books of Geometrical Propositions demonstrated, in the *Chinese* Language, whereof one with Pictures.

An old Greek MSS. in great Letters, without Distinction of Words or Accents.

A Greek MSS. 1300 Years old, of the Book of *Genesis*, without Stops or Accents: It contains 48 Draughts in Miniature or Water-Colours, relating to the Habits of

the Ancients, to the Manner of their Feasting, as their Postures at Meals, Attendance of Servants, and Musick. Among other Things, the Execution of *Pharaoh's* Baker is worth Observation, his Head being thrust thro' a forked Piece of Wood, and his Hands ty'd behind him.

A Book of Painting in Miniature, by *Albert Durer*, and a Sphere with a Globe within it, carved and painted by the same Hand.

A Book of *Michael Angeli*, wherein, besides many Rarities in Architecture, all the Paintings and Designs of the *Belvedere* are seen in Little.

A very fair Alcoran in *Arabic*, with the *Turkish* Explication interlin'd betwixt it.

A Bible in the *Coptic* and *Persian* Languages.

Luther's Bible, with many Notes, written by his own Hand.

A fair Greek MSS. of the New Testament, written with Golden Letters upon Purple 1500 Years ago.

A Magical Glass of the Emperor *Rudolphus*, whereby to see Apparitions of Spirits.

Sixteen Thousand Pieces of ancient Greek, Roman, and *Gothick* Medals and Coins, in Gold, Silver, and Copper. They pretend to have two Copper Coins of the Emperor *Marcus-Otho*.

Dr. *Brown* gives the following Account of the Emperor's Repository or Collection of Rarities.

The whole is divided into 14 Cases or Cupboards.

The first contains many curious Vessels, turn'd out of Ivory, Cups of Amber, Spoons and other Vessels of Mother of Pearl, divers fine Works of Coral, a Gallery of Ivory, and two Cups, one turn'd by the Emperor *Leopold*, and the other by *Ferdinand III.* several Cups of the *Rhinoceros* Horn.

In the 2d, an Elephant with a Castle, and many other Rarities of Workmanship on his Back; two fine Pillars, all of Ivory, with Variety of *Bass-Relievo*, and other Varieties in Ivory; a Picture in Oil of *Gany-mede*, by *Corregio*.

In the 3d, an old Man's Head in Oil, by *Albert Durer*; vast Variety of Watches and

and Clock-work; a fine Centaur in Silver.

The 4th also contains Watches and Clocks; a Triumphant Chariot; a Turk of Quality with his Attendance; a Landskip and a Cupid by *Corregio*.

In the 5th, are divers curious Works of Filegrane, brought from *Spain* and the *Indies*; and a Basen of Agate finely wrought.

The 6th contains an excellent Collection of *Intaglia*, and old Roman Stones, of inestimable Value, for their Workmanship and Bigness; a large Agate, on which is wrought the Victory of *Augustus Caesar* over the *Dalmatians* and *Pannonians*; It is 5 Inches long, and 4 broad, of a very high Value; besides several Heads and Figures cut in Onyxes, Shells, and Sardonyxes; and a Chain, with the Heads of the whole *Austrian* Family.

In the 7th, divers Pieces of Mother of Pearl, curiously wrought; the Head of *Maximilian I.* in Plaster-work, with a Lock of his own Hair, and the 12 *Cesars* Heads; another Head excellently well done in Oil, by *Hans van Aib*.

In the 8th, a Vessel made of one Piece of Chrystal, of a Yard and half high; an Urn; several Hands, with several Chrystal Works.

The 9th has a very noble Ewer of Chrystal, and another noble Vessel; many curious Crosses, and other Varieties.

The 10th contains 5 rich Crowns; the Imperial Crown, adorn'd with Precious Jewels, and a large blue Sapphire on the top; a Model of the Crown wherewith the Emperors are crown'd, much exceeding in Value the Original; a Paragon Diamond, weighing $17\frac{1}{2}$ Carats; divers very large Rubies; a Scepter made of Unicorn's Horn, set with Precious Stone; a Locket made of very large Diamonds; a most magnificent Scepter, Globe, Cross, and Crown, valued at 200000 Crowns; an Opal as big as a Hand, as it came out of the Mine; with many other very fine Opals, and a very large Emerald.

In the 11th, a Golden Basen, us'd at the Baptism of the *Austrian* Family; divers Golden Scepters, Scimiters, Knives, and other Presents, from the *Ottoman* Court; three rich Dog-Collars, sent from *England*, with this Mark, CC CC; a great Piece of pure Gold, of the Bigness of a Hand, as

it came out of the Mine; another Piece of Gold Ore, where you see the pure Gold shooting forth upon a white Stone; besides divers other Basens of Gold, and Vessels of Coral.

In the 12th, great store of Vessels of Jaspis, Agate, *Lapis Lazuli*, Oriental Granates, Cups of Onyx and Sardonyx, one very great, one of an Amethyst, and divers very large ones of *Lapis Nephriticus*.

In the 13th, are divers Flowers made out of Precious Stones; a large high Vessel of *Bohemian* Topaz; a Cup made of an *Hungarian* Diamond; a Piece of Amber-grease of the Bigness of a Man's Hand; a very fine Jaspis Stone; a large Agate Stone on the outside, and a Bed of large Amethysts naturally in it in the middle, which is look'd upon as a great Rarity.

In the 14th, are many noble Chrysolites, Jacinths, Oriental Granates, Beryls or Aquamarines; a very rich Smaragdus or Emerald, or a Cup out of that Stone, three great ones having been already taken out, valued at 300000 Crowns; great store of Gold Vessels, and rare Figures in Coral; *Turkish* Knives, Gauntlets, &c. fine Wax-Works, large Bezoar Stones; a Golden Medal of the Emperor's Arms, worth 1000 l. Sterling; a Cup said to be taken out of *Salomon's* Temple; a most curious Basen and Ewer of carv'd Ivory; King *Philip II.* of *Spain* in Diamond Armour, set in Gold; a curious Picture of an old Man courting a young Woman, with this Motto;

Arctum Annulum ne gestato.

Don't wear too strait a Ring.

A very fine Crucifix of Pearl; the Buff-Coat of *Gustavus Adolphus*, King of *Sweden*, in which he was kill'd near *Lutzen*; all the Gospel written and painted; the Head of *Charles I.* King of *England*, in Marble; Priests Garments set all over with Priests; an inestimable Agate Dish, betwixt three and four Spans Diameter, in which you see in natural Characters $\chi\rho\iota\varsigma$: Unto which may be subjoin'd, that most magnificent Chain of Pearl taken from Count *Tekely* in the late *Hungarian* War.

Near the Palace, the Emperor has a fine Stable, fill'd with manag'd Horses from most

most Parts of Europe. He has also the best Arsenal of the Empire; and in one of the Bastions of the City, there's a great Magazine of Naval Stores for his Gallies, which are made use of in the *Danube* against the *Turks*. They carry Guns, and have a great Number of Soldiers and Seamen belonging to them. Dr. *Brown* takes Notice, That the City is divided from the Suburbs by an Esplanade, descending in an open Ground for 300 Paces; That the Bastions are very large and broad, fac'd with Brick, and edg'd with Free-stone, besides the old inward Wall which was built with the Ransom of our *Richard I.* The Town has 6 Gates: The first call'd the *Stuben Gate*, to the E. 2. The *Carinthian Gate*, to the S. 3. The *Castle Gate*. 4. The *Scotts Gate*. 5. The *New Gate*. 6. The *Red-Tower Gate*. Besides which, there's another Gate near the Emperor's Palace towards the River. The 5 first Gates are vaulted through the Wall, with Draw-Bridges over the Ditch. The 6th is a Passage under a Tower towards the Bridge of the *Danube*, which is here divided into 7 Channels, join'd by as many Bridges, made of many Thousands of Trees, laid close to one another. There is one very remarkable Bridge here, call'd the *High Bridge*, made by the crossing of two Streets by equal Angles; but the Ground in one Street being equal in Height to the Tops of the Houses of the other, they have built a Bridge or Arch in the lowermost Street, to let the upper pass over it. In one of the Market-places, there's upon a Pedestal a very gross Representation of the Trinity, representing the Father like an old venerable Man, with our Saviour on the Cross in his Arms, and the Holy Ghost like a Dove hovering over both. 'Tis fence'd in with Iron Rails, and a Centinel always by it; and the superstitious People bow to it as they pass. This was set up in Remembrance of that City's being deliver'd from the Plague in the last Century. The principal Suburb is that call'd *Leopoldstadt*, divided from the City by a Branch of the *Danube*, and a fair Plain. Before the last Siege, it was almost as considerable as the Town, and abounded with magnificent Houses of the Nobility and Gentry; but was destroy'd during the Siege, and is in part rebuilt since. Among the Islands form'd by the

Danube here, there's one call'd *St. Peter's*, which lies before the Town, and is capable of lodging a considerable Army for their Defence. This City is a Bishop's See, and the Bishop, says *La Forrest*, depends immediately on the Pope. The most memorable Sieges which this City has sustain'd, was that by *Matthew Corvin* King of *Hungary*, who took it in 1490, and died here in 1495; that by *Soliman the Magnificent* in 1529, with 300000 Men, when he made 20 Attacks upon it; but it was bravely defended by *Philip* Elector *Palatine*; and the Emperor *Charles V.* coming to relieve it with 90000 Men, the *Turks* were obliged to retire. 'Twas again besieg'd by the Grand Visier in 1683 with 100000 Men, from the 14th of July, to the beginning of September, and reduc'd to great Streights; but bravely defended by Count *Staremberg*, until relieved by the King of *Poland*, and the Electors of *Bavaria* and *Saxony*. *Baudrand* says, it was made an Imperial Town by *Frederick II.* in 1236; but 4 Years after, made subject to the House of *Austria*.

'Tis very rich and populous, and the Inhabitants live plentifully, and are generally well Apparel'd, it being the Residence of the Emperor's Court, and the Place of Meeting for the States of the Country.

The Emperor's Court, tho' some others may exceed it for outward Pomp, yet for real Grandeur exceeds all the Courts in *Christendom*. He has many great Officers of State, and of the Household, who are all Persons of great Quality. The Lord High Steward, Dr. *Brown* says, was a Prince, the Lord Marshal a Count, the Lord Chamberlain also a Count, with 100 Gentlemen of the Bed-Chamber under him, all Counts and Barons, who wear Golden Keys on their Breasts, as the Grooms of the Bed-Chamber wear one of Steel, and two of each attend every Night. The Master of the Horse, and the Chief Huntsman, were both Counts, as was the Chief Falconer, who had 12 other Falconers under him. The Postmaster-General was a Count; and the Captain of the 100 Horse-Guards, who lodge without the City, was a Prince: The Captain of the 100 Foot-Guards, who attend the Emperor's Person within the City with Lances and Javelins with broad Points, was a Count; and the Emperor had

had 60 Pages, most of whom were Counts and Barons: And besides vast Numbers of Persons of Quality of the Hereditary Dominions who are frequently at Court, there are generally 30 Ambassadors and Ministers from Foreign Kings, Princes and States, and from the Princes of the Empire, residing at *Vienna*. The Emperor has likewise, according to the *Present State of Europe*, belonging to himself, 36 Colonels of Foot, 18 of Horse, and 23 of Dragoons and Hussars, most of 'em Persons of Quality, with an Admiral and Vice-Admiral of his Gallies, and a Colonel of the Troops belonging to them.

The *Present State of Europe* says, The Emperor himself presides in the Cabinet-Council; next to him sits the King of the *Romans*, if there be one of Age; and the other Members are about 10 in Number, all Persons of the First Rank.

The *Atlas Historique* gives us the following Account of the other Courts and Councils held here. The first is the Council of State or Privy-Council, which consults about Affairs of the greatest Importance: It consists of a President, who is generally the Emperor's Chief Minister, and 24 Counsellors, who are for most part Princes, Counts, and the great Officers of the Household. They have 10 Secretaries, the first of whom signs the Emperor's chief Letters, and the rest dispatch the Affairs belonging to the Secretary's Office. But according to the *Present State of Europe*, the Number of the Privy-Counsellors is much greater.

The 3d Council is that of War, which consists of 2 Presidents, who are Generals; 7 Counsellors, who are Marshals de Camp; and several Secretaries. They treat of Affairs of Peace and War.

The 4th is that call'd the *Aulick*, or principal Court of the Empire, the Officers of which are nam'd by the Emperor. It consists of 18 Counsellors, half of which are Protestants, according to the Treaty of *Munster*. 'Tis divided into two Benches, one of which consists of Noblemen, and the other of able Lawyers. It is like the Chamber of *Spire*, and is equal to it in Power for administering Sovereign Justice; so that there lies no Appeal from the one to the other. The Emperor himself can-

not suspend or hinder their Decisions; tho' as supreme Judge, he is President of both: And tho' all those who are immediate Princes of the Empire have a Sovereign Power in Causes Civil and Criminal; yet in Civil Affairs of Importance, there lies an Appeal from them to one of those two Chambers. The *Present State of Europe* makes this *Aulick* Council, and the Council of War, much more numerous.

He mentions also, 1. The Court of *Chancery* of the Empire, of which the Elector of *Mentz* is always Chief Chancellor. The Vice-Chancellor presides in his Absence, and has an Assistant, with an Assessor, two Secretaries, and a Referendary, for dispatching *German* Affairs.

2. The Imperial Council or Chamber, which has a President, consists of many Lords and Gentlemen, among whom are the Governors of the *Hungarian* Cities, where the Mines lie, with the Chief Officers for the Civil Affairs of *Hungary*, *Moravia*, *Bohemia*, and *Silesia*.

He gives the following Account of the most considerable Posts of the Emperor's Hereditary Dominions.

1. In *Hungary*, the Palatine of that Kingdom, who takes Place next the King; the Deputy-Palatine, the High-Chancellor of the Kingdom, the Chancellor, the President of the Chamber, Steward of the Crown, the High-Chamberlain of the Crown, the Keeper of the Crown, the Great Judge or President of the Cities, the Ban and Vice-Ban of *Croatia*. The Royal Chanceries of *Hungary* and *Transylvania*, with the Officers and Councils belonging to them, are kept at *Vienna*.

2. In *Bohemia*, during the Absence of the King, their Administration is in 18 Lieutenants, among whom are the Vice-Chancellor, the High-Steward, High-Marshal, the High-Chamberlain, two Judges, the Grand Prior of the Order of *Malta*, the Chief President of Appeals, the President of the Royal Chamber, the Chief Secretary, and the Deputy-Chamberlain, &c. The Chief Chancery of *Bohemia*, with the Officers, &c. belonging to it, always attend the Imperial Court. There are in that Country 3 Sovereign Courts of Justice; and the 14 Circles are under the Government

ment of two Captains, one Counsellor of State, and one Nobleman each.

3. In the Marq. of *Moravia*, there is a Governor, who presides in the Court of Justice, assisted by three Lawyers and one Secretary. *Moravia* is divided into 5 Circles, under particular Governors, from whom there lies an Appeal. The Governor is assisted by a Chief Chamberlain, the Chief Steward, Deputy Chamberlain, Chief Judge, Chief Secretary, Vice Chamberlain, Under-Secretary, Clerk of Records, and Vice-Chancellor.

4. *Silesia* is always govern'd by a Prince of the Empire, with a Council, High Chancellor, some of the Nobility and Secretaries, with an Imperial Chamber, under the Direction of a President and Council. 'Tis divided into 6 Principalities, and 6 Free States: Some of them are subject to their own Dukes, and they are all call'd Hereditary Principalities, over which the Emperor and the respective Prince appoint Governors.

5. The Arch-Dutchy of *Austria* is divided into 3 Governments: The first is *Lower Austria*, under the Direction of the Emperor and Privy-Council, the Regent Council, and the Chancery. The 2d is *Inner Austria*, which takes in *Styria*, *Carinthia*, and *Carniola*, with several lesser Governments. The Tribunals are held at *Graz*, and the Government is by a Privy-Council, a Regent Council, a Chief Chamber, Council of War, and Martial Court. The 3d Government is that of *Upper Austria*, including *Tirol*, the Hereditary Countries in *Swabia*, that Part of *Switzerland* subject to the House of *Austria*, and several little Governments. The Privy Council is held at *Innsbruck*. There is besides a Regent Council, and one called the Chamber Council.

By all this together, with the Courts of the Empress, and of the King and Queen of the *Romans*, when there is one, 'tis easy to perceive, that the Imperial Court exceeds all those of *Christendom* in real Grandeur.

Dr. Brown says, That two *English* Miles E. from *Vienna*, lie the large Gardens of *Rodolphus II.* The inner Garden is 200 Paces square, and has a Cloister, supported by 40 Pillars of white Stone, on each Side cover'd with Copper, as are also the Pa-

vilions. They have Houses here, where they breed Lions, Tygers, and other Wild-Beasts. Three Miles from *Vienna* lies *Annals*, a Place of Devotion, whither the People go in Pilgrimage, with heavy Crosses on their Shoulders; and the Emperor and Empress, with the Court, perform this Pilgrimage on Foot. Here they have a Model of the Holy Sepulchre at *Jerusalem*, with a curious Picture of our Saviour and the Virgin at full Length, the first exactly 6 Foot high, and the second an Inch or two lower. Nearer the City, there is another Place of Devotion, called *Itzing*, marked out with 12 Stations of the Cross, like the *Via Dolorosa* at *Jerusalem*, in Remembrance of our Saviour's going to Moun *Calvary*. The Emperor has a fine Park near *Vienna*, with abundance of Game, and a House of Pleasure. That called *Luxemburg* is an old Structure, not very large, with a Summer-House in the middle of a Pond, and a neat square Building in the Marsh, from whence they shoot at the Wild-Beasts. They have good Beer, and abundance of Wild-Boars in the Neighbourhood, which are extraordinary good Meat. The Emperor has great Numbers of expert Huntsmen, who always attend the Court when they hunt; for since Count *Serini* was kill'd by a Boar, they seldom attack them singly.

Criminals are usually executed here by cutting off their Heads, which the Executioner performs with one Blow. The Traitors have for most part their Hands first cut off. The Climate is healthful; yet they have an Epidemical Distemper, called the *Austrian Cholick*, which is hard to be cur'd. The Winters are sharp; therefore they sleep between two Feather-Beds, make use of Stoves, and wear much Fur, with which the Women line and face their Bonnets. In the City, they speak good *German*; but in the Country, the People have a different Tone, odd Words, and speak quick.

Dr. Brown says, he saw a surprizing Trick perform'd here, which was, That a middle siz'd Man lay down on his Back, with a heavy Anvil on his Breast, upon which two lusty Fellows with great Hammers gave at least 200 Blows, till they cut an Iron Horse-shoe, about half an Inch thick, asunder.

2. *Baden*, about 15 Miles S. W. from *Vienna*, is a neat little Wall'd Town, seated on a Plain, but nigh to a Ridge of Hills, which are the Excursions of Mount *Cetius*. 'Tis much resorted to, by reason of the natural Baths of that Place, wherein the Springs are so numerous, as to supply two convenient Baths within the Town, & without the Wall, and two beyond a Rivulet, called *Swechet*.

The Duke's Bath is the largest, about 20 Foot square, in the middle of an House of the same Figure built over it. The Vapour passes through a Tunnel of Wood at the Top, and the Water is convey'd into the Bottom of the Bath, at one Corner, thro' Wooden Pipes and Trees under the Town-Wall from the Spring-head; which rises at a little Distance Westward. The Springs of the rest of the Baths rise under them, and are let in through Holes in the *Plancher*. The Water, for the most part, is clear and transparent, yet somewhat bluish, and makes the Skin appear pale in it. It turns all sorts of Metals (except Gold, whose Colour it also heightens) black in a few Minutes.

The Coin of this Country consisting of a Mixture of Copper and Silver, is in a Minute's Time turn'd from a white into a dark yellow, and soon after becomes black. It gives a fine green Colour to the Moss and Plants, which it washes, and leaves often a Scum upon them of purple mix'd with white. *Oleum Sulphuris per Campanum* dropt into the Water of this Bath, newly taken up at the Spring-head, is received into it quickly; but *Oleum Tartari per Deliquium* causes an Ebullition, as in the making of *Tartarum Vitriolatum*. None of the other Baths are very considerable, except the *Sour Bath*, which is set about with Stone Ballasters, and cover'd with an handsome Cupulo and Lantern. The Water of this Bath is very clear, and its Steam colours Silver black, or gilds it at least at a good Distance; and yet the Water it self, once cold, will not change the Colour of any Metal, tho' boil'd in it. The hottest Baths in this Town have not the Heat of the King's or Queen's at Bath in England. They that bathe use no Guides, as with us; but direct themselves with a short Staff.

The German Physicians commend these

Waters for curing most Distempers incident to the Head, as Head-aches, Dimness of Sight, Deafness, &c. They are also good against the Gout, (if drunk in Time) the Dropsie, and other Chronical Distempers. The best Times for Bathing are reckon'd the 4 Months of *June, July, August,* and *September*.

3. *Haimburg*, or *Haynburg*, called by Latin Authors, for Distinction-sake, *Hamburg Austria*, about 33 Miles from *Vienna*. Some have thought it to be the same with *Ptolomy's Carantum*, or *Carnuntum*; tho' that Opinion has since been confuted by the learned *Lazius*, who proves from undeniable Testimonies of Antiquity, and several Medals and Coins lately found, That *Petranel* (now a small Village betwixt *Vienna* and *Haimburg*, about two German Miles from the latter) is the true *Carantum*. However, the Ruins of strong Walls and Fortifications round this Town, sufficiently demonstrate it a Place of great Antiquity; and shew, that 'twas heretofore much more considerable and large than at this Day.

This was anciently the Metropolis of *Austria*, and Seat of the Dukes; during which Time, 'twas one of the greatest Mart-Towns in this Part of Europe, being much frequented and throng'd with the *Schwabians*, and other Nations, who traffick'd this Way into *Hungary* down the *Danube*. But as soon as Duke *Leopold VI.* removed his Court from hence to *Vienna*, the Trade began to decay; and the frequent Incurfions of the *Hungarian* Rebels since have daily render'd it less considerable. The greatest Trade of the Town is in Wine and Corn, of each whereof they have good Plenty. They have also a Bath, but not much regarded, because they make use of an artificial Heat to warm it. In the Clefts of the Rocks, in a craggy Hill adjoining, are bred the best Falcons in the Empire.

4. *Tuln*, an ancient Town, about 16 M. W. from *Vienna*, not far from the Banks of the *Danube*, derives its Name from a small Rivulet whereon 'tis seated. From this Town, a good Part of the adjoining Country has got the Name of *Turnelsfeldt*, which is reckon'd one of the richest and healthiest Parts of *Austria*. Through the middle of this Country runs the River *Trafam*, (whence *Trafamaur*, a Market-Town not far from *Tuln*,

Tuln, has its Name) which, says *Lazius*, is nothing but a Corruption of the Latin Words *Terrasana*, a Name the ancient Romans thought fit to bestow on this healthy Country. But notwithstanding the Compliment usually passed upon this Place, as plentifully stock'd with all manner of Provisions, a Traveller will hardly meet with worse Usage in any Part of the Emperor's Dominions, than at an Inn in *Tuln*. Near this Place, 40000 *Huns* perish'd in a Battle against the Roman Lieutenant *Matrinus*, who himself was slain in the Conflict; which being ended, *Attila* was chosen King of the *Huns*.

5. *Krems*, *Cremesia*, about 30 Miles W. from *Vienna*, has its Name from the small River *Krems*, which (not far from this Town) empties it self into the *Danube*. 'Tis a well built and neat Town, thought to be larger than *Presburg* in *Hungary*. The Citizens have a great Trade, especially at two Fairs, whereof the one begins on St. James's Day, and the other on St. Simon and Jude's; each of them lasts 14 Days; during which Time, the Streets are continually crowded with Merchants and Tradesmen out of all Parts of *Germany*, *Bohemia*, *Moravia*, *Hungary* and *Poland*. It suffered much during the Civil Wars of *Germany*.

6. *Melck*, a pleasant Town on the Banks of the *Danube*, above *Krems*, about 48 Miles W. from *Vienna*. Some think it to have been an ancient Roman Colony, formerly named *Claudianum*. But *Lazius* says, That *Julius Caesar* being in Love with the pleasant Situation of this Town, call'd it *mea Dilecta*, which was afterwards corrupted into *Medelick*. And to make the Story formal, he further tells us, That the said Emperor built 3 Forts in this Country, the first whereof was this *Medelick*; the 2d he named *Turris Mirabilis*, or *Wunderburg*; and the 3d, *Castrum Ferreum*, *Eysenburg*. And one main Argument whereby they endeavour to prove this to be a Roman Colony, is founded on the Pictures of *Romulus* and *Remus* sucking a Wolf, cut in the Wall of the great Church.

In the Monastery, are preserved several Relicks of St. Colman, descended of the Royal Blood of *Scotland*, who, in his Passage through this Country towards *Jerusa-*

lem, was barbarously murder'd by the Boors of *Stockerau*, 4 German Miles from *Vienna*, in the Year 1012. His Body was hung on a Tree; but having for the Space of a Year and half endur'd the Weather uncorrupted, was at last taken Notice of as attended by an extraordinary Providence, and conceived able to cure Diseases, and work other Miracles. The first that try'd the Experiment, was one *Rumaldus*, who having a Son tormented with the Gout, cut a Piece of St. Colman's Flesh from the Tree, (whereupon a fresh Stream of Blood is said to have issued) and applying it to the Place, found present Remedy. The Noise of this Cure immediately retriev'd the Saint's Reputation, who, some say, had been executed as a Vagabond and Spy, and procur'd an honourable Interment for his Corps near *Stockerau*. About a Year after this, the *Danube* (they say) overflow'd its Banks, and destroyed most of the Churches in this Country; only this small Church was miraculously preserved in the midst of the Inundation. Upon this, the Body was translated by *Meginhard* Bishop of *Eichstadt* to *Melck*, from whence 'twas afterwards conveyed into *Hungary*, his Head being kept for some time at *Stutweissenburg* or *Alba Regalis*. Upon a Hill near *Melck* stands a Benedictine Monastery, which challenges the Pre-eminence of all the rest in *Austria*. 'Tis richly endow'd; and besides that of St. Colman, has the Monuments of many other great Persons.

7. *Neustadt*, or *Neapolis Austria*, is another principal Town of this Country, about 27 English Miles S. from *Vienna*, on the Road to *Styria*, in a Bog near the middle of a large Plain; so that it may be seen every Way at a good Distance. 'Tis encompass'd with a Ditch, and two Walls, which render the Place so impregnable, that the *Turks* having long besieg'd it with the main Force of their Army, offer'd to retire, provided the Town would give them some false Trophy to carry to *Constantinople*: Upon which they sent them a Whipping-Post. Over the chief Gate, they have the 5 Capital Vowels, as over the Palace at *Vienna*, which they interpret thus, *Aquila Elefca juste omnia vincit*; i. e. The Eagle being chosen justly, overcomes all. 'Tis a Bishop's See, Suffragan to *Salzburg*, the ordinary

dinary Prison for Criminals of State, and suffer'd much by the *Turks* in 1683.

8. *St. Polten*, on the River *Drafsam*, about 32 Miles W. from *Vienna*, a pretty compact Town. It has its Name from the Monastery and Church of *St. Hippolitus*, which gave Occasion to building this City. The Monastery was built in the Reign of King *Peppin*, and enriched by Pope *Zachary* with the Relicks of *St. Hippolitus* and *St. Quirinus*, for the Assistance they gave him against the *Saracens*. It was first wall'd in 1266, by the Bishop of *Passau*. The only Thing remarkable in it, is the Abbey, the Church, and the Town-Hall.

9. *Pachlarn*, the Remains of an ancient Town and Fort on the *Danube*, about 40 Miles W. from *Vienna*. *Cluverius* says, 'twas anciently call'd *Arlape*, or *Ara Lapidea*, from whence the little River on which it stands retains the Name of *Erlaph*. It appears by old Monuments and Inscriptions found near it, that it was one of the Harbours of the *Roman* Navy, and once the greatest Strength in the Country, for which the *Romans* call'd it *Præclara*; and hence comes the modern Name, by the Corruption of the Word. 'Twas formerly the Residence of the Princes of *Austria*, but now only noted for making Earthen Ware.

Other Places of Note in this Country are, 1. *Bruck*, a neat Town on the Borders of *Hungary*, noted for a Yearly Fair of Cattle. 2. *Horn*, a strong Fort near the Borders of *Moravia*, about 39 Miles N. W. from *Vienna*. 3. *Ips* on the *Danube*, about 52 Miles W. from *Vienna*. *Cluverius* takes it to be the *Pens Iſis* of *Ptolemy*. 4. *Tyrnſtein*, where our *Richard I.* was kept Prisoner.

The Cities and Towns in Upper Austria.

1. *Linz*, by the Latins called *Lentia*, *Linacium*, and *Aurelianum*, is the chief Town of *Upper Austria*, and lies on the *Danube*, about 95 Miles W. from *Vienna*. 'Tis situated in one of the most pleasant Places of the Emperor's Dominions; so that many of the Nobility have Country-Houses near it, where they hunt, hawk, fish, &c. in the Summer. The Suburbs on

the other Side of the River consist chiefly of the Houses of the Nobility and Gentry, and are join'd to the Town by a large Wooden Bridge. Most of the Suburbs were destroyed by the *Swedes* during the Civil War; but the Town had no great Damage. The Emperor *Matthias*, in his Return from the Diet at *Ratisben* in 1614, was so much pleas'd with the Situation of this Place, that he kept his Court here a whole Year: During which Time, all the Branches of the House of *Austria* had a Meeting at this Place, in order to make a League Offensive and Defensive against all Potentates that should offer to oppose them, which had no other Effect but the Ruin of a *Lutheran* Church and University, where, as *Crusius* says, there had in 20 Years Space been educated 3000 Counts, Barons, and other Persons of Quality. Near this Place the *Jesuits* have now a College, plentifully endow'd with a good Library. There are two Fairs Annually held here, at *Easter* and *Bartholomewtide*, when 'tis much frequented by Strangers. *La Forrest* says, the States of *Upper Austria* assemble here, and that the Town is defended by a good Castle. The late Emperor retir'd hither during the Siege of *Vienna*, and the Elector of *Bavaria* took this Town in 1703. Dr. *Brown* says, this City is not large, but neat, all the Houses being of a white Free-stone, the Marketplace spacious and handsome, and a Castle on a Hill, fortified after the modern Way. The Emperor's Army rendezvous'd here when *Soliman* the Magnificent besieg'd *Vienna*. It was besieg'd by 40000 Peasants in *Ferdinand II.*'s Time; but reliev'd by Count *Pappenheim*. Mr. *Ray* says, the City is built after the *Italian* Fashion, with a large square Piazza, adorn'd with two noble Fountains; and that from the Emperor's Palace, which stands on a rising Ground, there's a noble Prospect of the *Danube*, and of the neighbouring Country. 'Tis noted for the excellent Gun-Barrels made here.

2. *Enz*, by the Latins called *Anasum*, *Anasianum*, and sometimes *Ensum Civitas*. 'Tis a fair, strong, and well built City, on the River *Enz*, which separates *Upper* and *Lower Austria*, and lies 85 Miles W. from *Vienna*, near the Mouth of the *Enz*, where it falls into the *Danube*. 'Tis the Remains of a large and famous City, formerly called *Lauriacum*.

riatum, according to *Antonin*, and the *Notitia Imperii*. Some call it *Colonia Aureliana Lauriacensis*; and *Lazius* thinks it was the Metropolis of *Noricum Ripense*, and built by the Emperor *Marcus Aurelius Antoninus* in his Expedition against the *Marcomanni*. Part of the ancient Name continues in the Village of *Laurich*, now called *Lorch*, a small Village on the Banks of the *Danube*, and formerly Part of this City, which was about 2000 Paces in Length, and reached from the *Danube* as far as *St. Florian's* Monastery, which is now quite without the S. Wall of this City. About 903, it was destroyed by the *Huns*, being at that Time the Seat of the Roman Emperors. From its Ruins sprung the present City. It was formerly an Archbishop's See, and, according to some German Authors, was founded by *St. Peter* or *St. Mark*; which Conjecture has occasion'd an old Inscription on the Market-place, the two last Lines of which are as follow;

*Hec de Laureaco reliqua est: Hic Marcus in Oris.
Cum Luca Christi dogma professus erat.*

Some will have it, that *St. Lawrence* was their Apostle, and founded their Cathedral, which was dedicated to him. Here they will also have our King *Lucius* to have been educated in Christianity, but without any good Authority. 'Twas formerly govern'd by Counts of its own; but was bought from their last Count by *Rudolph I.* and, together with *St. Florian's* Monastery, pays Annually a Gold Ring of 5 Ducats Value, as a Token of Homage to the Duke of *Austria*, and was added to their Hereditary Dominions: The Elector of *Bavaria* took this City in 1703.

3. *Steyer*, a neat and compact Town, on the Conflux of the *Steyer* and *Enns*, from whence its Suburbs, *Steyerdorff* and *Ensdorff*, have their Names. It lies about 10 Miles S. from *Enns*. 'Tis chiefly inhabited by Cutlers, Smiths, and other Ironmongers, who, by the Conveniency of the *Danube*, have a great Trade with the neighbouring Countries. *Lazius* says, the *Gefata* were the ancient Inhabitants of this Country, and supposes the Town to be *Ptolomy's Gesodunum*, whence the pleasant Valley on which it stands is

called *Gastenthal*; but it seems rather to derive its Name from the Monastery of *Garsen*, that stands near this City, and is well worth a Traveller's Notice.

4. *Wels*, on the *Draun*, about 10 Miles S. from *Lintz*. *Cluverius* says, That it was the *Colonia Aureliana Antoniana Ovil*. The *Norici*, the ancient Inhabitants, call'd it *Willabr*, from whence the Romans call'd it *Ovilaba*, or *Ovilara*. *La Forrest* says, the Emperor *Aurelian* built it after his Expedition against the *Scythians* in *Pannonia*.

5. *Everding* or *Efferding*, about 3 Leagues W. from *Lintz*, near the *Danube*. 'Tis a strong Town, defended by two Castles, one within the Walls, and another without, called *Schawmburg*, which gave Title to the Counts of that Name, a Branch of the Family of *Julbach*. In 1367, it was sold, with its Dependencies, to the Bishop of *Passau*, but fell afterwards to the Counts of *Schawmburg*; by one of whose Daughters, married to the Count of *Staremburg*, about 1551, it came to that Family.

6. *Gemund*, so called, because it lies on the Mouth of the *Draun*, where it falls into the *Gemunder Lake*. It has a considerable Trade in Salt, which is made here, and exported as far as *Vienna*. It lies about 22 Miles S. W. from *Enns*.

7. *Freystatt*, on the Borders of *Bohemia*, about 22 Miles N. from *Enns*. The Town is well built, but not strong, being taken by a handful of Boors, and soon lost by them during the Civil Wars of *Germany*. 'Tis famous for a palatable Beer, which is exported into the neighbouring Country. They have an Annual Fair, which begins at the Conversion of *St. Paul*, lasts 14 Days, and is very much frequented, which brings them a great Trade. The adjacent Country is called *Machland*, and gave Title to the Counts of *Burckhausen* and *Machland*, who being extinguish'd about 1186, it fell to a Branch of the *Austrian* Family, called Counts of *Hardegg*. *La Forrest* mentions a Town called *Lichtenstein* in *Lower Austria*, near the River *Wien*, which gives Name to a Principality; but we do not find it in any of our Maps.

Stain is also a small City on the N. Side of the *Danube*, a little above *Krems* to the W. with a Bridge over the *Danube*; and

Cloister-

Gloisternewburg is another small City, about 5 Miles W. from *Vienna*, which has escap'd the Description of our Geographers.

The Dutchy of Styria.

THIS Province, with *Croatia*, *Windismark*, *Carniola*, and *Carinthia*, are now reckon'd Parts of *Germany*, they were formerly accounted Part of *Pannonia*; but lost that Denomination by falling to the House of *Austria*. *Styria*, in *German* *Steyr-march*, is by *Marcellinus* and *Aurelius Victor* thought to be the *Roman* Province called *Valeria*, in Honour of *Discelesian's* Daughter; but *Volateranus* thinks it was *Japidia*, and that *Croatia* was *Valeria*. The ancient Inhabitants were the *Styri*, a Branch of the *Taurisci* or *Norici*. 'Tis bounded by *Austria* on the N. with *Carniola* and *Sclavonia* on the S. *Salzburg* and *Carinthia* on the W. and *Hungary* on the E. The Length from E. to W. according to *Moll's* Map, is about 120 Miles; and the greatest Breadth from N. to S. is about 85. 'Tis commonly divided into *Upper* and *Lower*: In the *Lower*, they have store of Wine, Fruit, Fish, Venison, Mines, especially of Iron, Salt-Springs, &c. They have now and then such Plenty of Corn, that they complain of want of Vent for it; yet one bad Harvest puts them in Danger of a general Famine. *Upper Styria* is more mountainous: Their principal Trade is in Wool and Sheep. They have also Plenty of Black Cattle in their Vallies, and exchange their Butter and Cheese for Bread and Wine with their Neighbours; for they have no Wine of their own Growth. The Air is wholesomer than in *Lower Styria*, where the *Hungarian* Fever and Pestilence are too common. Their ordinary Drink is sorry small Beer; but the better Sort have a sharp thin Wine from *Styria*; yet Travellers are better pleas'd with their Entertainment here, than in most other Parts of the Empire. The People of this and the neighbouring Countries are troubled with extraordinary Swellings in their Throat, which frequently make them lose their Voice and Senses; so that in most great Towns, they have Hospitals for those who are afflicted with such Distempers. *Ortelius* says, he saw a

Man in this Country, who had a Swelling of that sort of such a Bulk, that from his Ears down to his Breast, it was as broad as his Shoulders; and the poor Women are so much troubled with those Swellings, that some of them are forc'd to throw them over their Shoulders when they suckle their Young. This is supposed to proceed from their drinking of Snow-Water, which falls down from the Mountains; because those who live well, and drink good Wine and Beer, are seldom troubled with it. Their common Language is *Sclavonick*; but in Cities and Towns, they speak *High-Dutch*, which is made use of in their Courts of Judicature, and Papers of State, and is the common Language in *Upper Styria*, where they speak it better than in the Circle of *Bavaria*. We have given an Account of their Government in the Description of the Emperor's Court. 'Twas formerly a Marquisate, because a Frontier Country, which divided the Empire from *Sclavonia*. The Emperor *Frederick Barbarossa* made it a Dutchy. It came to the House of *Austria* by Marriage; but that Branch being extinguished, they chose a noble *Hungarian* for their Prince; but depos'd him because of his Tyranny, and chose *Ottacar*, Son to the King of *Hungary*, in his stead, who being slain in War with the Emperor *Rodolph*, they have since been subject to the House of *Austria*.

The chief Towns in Lower Styria.

1. **G**ratz, or *Gratz*, in Latin *Gracium*, the Metropolis of the Dutchy, lies on the River *Mur*, in Long. 35. Lat. 47. 17. 60 Miles towards the S. E. from *Vienna*, and 35 W. from the Borders of *Hungary*. 'Tis a neat City, in a pleasant and fruitful Country, fortified with a Wall and Ramparts, and almost impregnable, by reason of a Castle on a high Hill, which commands the neighbouring Country. *Cluverius* thinks it to be *Ptolemy's* *Muroela*; but *Lazius* differs from him, and places *Muroela* above 3 German Leagues further E. on the same River. In the Duke's Palace, there's a good Library in two Rooms, pretty well stock'd with printed Books, and some MSS. In the Gallery, among other Rarities, there's a fine Draught

Draught of *Charles the Great's* Wars, and a Repository of Curiosities, with a good Collection of *American* and *Indian* Idols. The *Jesuits* have a College here richly endow'd with large Privileges, where they give Degrees in all Faculties, and have abundance of Scholars. This Town is the Residence of the Governor, as it was formerly of some Arch-Dukes, who call'd themselves by its Name; particularly *Ferdinand II.* before he was chosen Emperor.

2. *Marchburg*, a well built Town on the Banks of the *Drave*, about 15 Miles W. from *Tettau*, according to *Sanfon*, and 28 S. from *Gratz*. *Lazius* says, There are many old Roman Monuments found here, and supposes it to be the ancient *Castra Marcana*, or *Mariana* of *Ammianus Marcellinus*. This Town and its District was formerly a County; but their Counts failing, it came to the Lords of *Scherfensberg*, and afterwards with some other Counties to the House of *Austria*.

3. *Pettau*, an ancient Roman Town, on the Banks of the *Drave*, then the Boundaries of their Empire on that side, and by them call'd *Petawium*. The Country People call it *Duis*; 'tis not large or well built, but is noted for having been a Bishoprick above 1300 Years. The Bishop is Suffragan of *Salzburg*, the Archbishop of which is Lord of the greatest Part of the Town. Some ancient Geographers place it in the Territories of the old *Norici*; but *Ptolomy* places it in *Upper Pannonia*. It lies 30 Miles S. E. of *Gratz*.

4. *Rakersburg* or *Rakelsburg*, a strong Fort on the Banks of the *Muer*, and a great Bulwark against the *Turks*. The *Latins* call it *Raeltanum*, and the *Slavonians* *Radslony*. The adjacent Country is stock'd with all kinds of Fruit, especially Grapes. The Burghers have the sole Privilege to buy all the New Wines from *Michaelmas* to *St. Catherine's*, afterwards the Rusticks are at liberty to sell to whom they please. There's an Office here, where Toll is paid for Goods brought hither from *Hungary*, and exported from hence. It lies according to *Sanfon*, about 32 Miles S. E. from *Gratz*.

5. *Windisch-Gratz*, so call'd to distinguish it from *Bavarian Gratz*. It was the ancient Boundary of the *Slavonians*. *Lazius* thinks it to be *Ptolomy's Vinudria*, because

of the ancient Monuments found here. Others say it was *Vendum*, and built by the *Japyges*, the old Inhabitants of *Carniola*; 'tis only noted for its Antiquity, which is also disputed by some. It lies about 38 Miles S. W. from *Gratz*.

6. *Leibnitz*, a fair Market-Town near the *Muer*, and the usual Residence of the Bishop of *Seccau*, hence call'd Bishop of *Leibnitz*. The Bishoprick was founded by the Archbishop of *Salzburg* in 1218, and is part of his Province. The Manor of *Seccau*, whence the Bishop has his Title and Revenue, lies in *Upper Styria*, two or three German Leagues from *Judenburg*. It lies according to *Lazius* on the Conflux of two Rivers which fall into the *Muer*, about five German Leagues S. E. of *Gratz*.

7. *Luttenberg*, a Market-Town on the *Muer* and Borders of *Hungary*, famous for the best Wine in those Parts. There are several good Baths in the Neighbourhood of a temperate Heat, much resorted to by Foreigners. Near this Town lie the Borders of *Hungary* on the E. of the County of *Gilly* on the W. of *Slavonia* on the S. and of the Dutchy of *Styria* on the N. According to *Lazius*, it lies near 2½ German Leagues S. E. from *Rakelsburg*, and 9 from *Gratz*.

Other Market-Towns of less Note are,
1. *Furstenfeld* on the Borders of *Hungary*, supposed to be the Roman *Aqua*, about 42 Miles S. from *Gratz*. 2. *Friburg*, supposed to be the Roman *Cordobianca*, about 37 N. E. from *Gratz*. 3. *Rain*, on the Borders of *Carniola*.

Towns of Note in Upper Styria.

1. *Judenburg*, a fair and well built Town on the Bank of the *Muer*, noted for Two great Annual Fairs for Cattle, and other Marchandise. The Duke of *Styria* has a Palace here, little inferior to that of *Gratz*, where his Deputy resides. The *Jesuits* have a College here, endow'd with the Revenues of a *Dominican* Monastery. The Country, for two German Leagues down the River, is very pleasant and fruitful. It lies near 40 Miles W. from *Gratz*.

2. *Bruck* on the *Muer*, Lat. *Muripons*, or *Bruga ad Murum*, an ancient Town, 25 Miles N. W.

N. W. from *Gratz*. The Convenience of the Situation occasions the Emperor to call here a General Diet of the States of *Styria* and *Carinthia*. There's little of Note in it, except two Monasteries of *Franciscans* and *Capuchins*.

3. *Leoben*, Lat. *Lubenum*, a neat and pleasant City on the *Muer*, about 27 Miles N. W. from *Gratz*. This Town has a large Barony formerly subject to the Counts of *Schrobenhausen*, a *Bavarian* Family, then to the Duke of *Carinthia*, but now to the Arch-Dukes of *Austria*. In 1292, it was taken and plunder'd by the Archbishop of *Salzburg* and Duke of *Bavaria*, while at War with *Albert* of *Austria*. Within a Mile of this Town lies the rich Nunnery of *Gosf*.

4. *Eisenartz*, so call'd from the Mines and Forges of Iron, with which it supplies the neighbouring Country. They pretend to have Steel enough to furnish the whole Empire. In the Parish Church dedicated to *St. Oswald*, a *British* Saint, they have a *German* Inscription, implying, That the Mines were discover'd in 712, and have continu'd since without any sensible Decay, tho' vast Numbers of Men are constantly employ'd in them, which occasions a yearly Fair for Hemp, Line, Tallow, Leather, and other Necessaries for the Miners, in exchange for Iron and Steel. They have 19 Mills on 2 small Rivers for their Works, which were formerly manag'd by 19 Officers; but the Emperor *Ferdinand* II. has incorporated these Mines of *Styria*, and those of *Austria*, under a Lieutenant. It lies 40 Miles N. W. from *Gratz*.

5. *Rotenmann*, on the Borders of *Salzburg*, about 8 *German* M. above *Lewben* to the W. and about 62 Miles N. W. from *Gratz*. *Laxius* thinks it to be *Anthony's Montana Castra*, which is supported by a *Roman* Inscription on a Mountain near this Place. There are abundance of red Hills and Rocks in the Neighbourhood. The *Lutherans* had formerly a Church near this Place, which in 1599 was destroyed in a Quarrel with the *Calvinists*.

6. *Knitelfeld*, on the *Muer*, 2 *German* M. from *Judenburg*. 'Tis a fair and neat Town in a pleasant Country, has a handsome Parish Church and Hospital, and other public Buildings. It lies about 36 *English* Miles

N. W. from *Gratz*. The principal Rivers of *Styria*, are the *Drave* and the *Muer*.

The Town and County of Cilley.

THIS being part of *Styria*, according to *Moll* and *Sanfon*, we shall describe it here. This noble and ancient City is by *Pliny* call'd *Celeia*, and by other *Latins* *Celia*, *Celia*, *Zelia* and *Cilia*: It stands on the River *Saan*, about 46 Miles S. from *Gratz*, and 30 W. from the Frontiers of *Sclavonia*, in a pleasant and fruitful Country. The great number of *Roman* Coins, Medals, and other Antiquities daily found in and about this Place, proves it to have been a considerable Town in their Time. They have one remarkable Monument, being the Ruins of a vast Marble Pillar, each Stone of which is above a Waggon Load; there are several fair Monasteries in the Town, the chief of which is that of the *Minorits*, which contains the Monuments of the ancient Counts of *Cilley*. The City is defended by regular Fortifications, an ancient Fort without, and a Castle within the Town. It held out a Siege against the *Turks* in 1492, and repulsed them under the Conduct of *George Baron* of *Herberstein*. The Country is large, and reaches as far as the *Trojan* Hill from the Bridge of *Pettau*, and includes several *Sclavonian* Forts. It was formerly subject to Counts of its own, who were also Barons of *Sanneck*. Their First Count was created by the Emperor *Lewis* IV. in 1339, with the Consent of the Arch-Duke of *Austria*; and the Emperor *Sigismund* made them afterwards Independent Princes of the Empire, and call'd them to the Diers without Consent of the House of *Austria*, who before that time were always accounted the Supreme Lords of the Place. Upon which *Frederick*, Duke of *Austria*, declar'd War against Count *Ulrich*, their Second Prince, and being afterwards chosen Emperor, was too strong an Enemy for *Ulrich*, who by the Assistance of *Albert* of *Austria*, *Frederick's* Brother, not only defended his Territories for a time, but over-ran most of *Styria* and *Carinthia*. At last he was kill'd in Battle by *Ladislaus*, Son to *Hunades*, in 1456, when *Frederick* IV. seized the Country; and it has ever since been subject to the House of *Austria*.

Other

Other Places of Note here are,

1. *Troia*, now a small Village not far from *Gilley*, but anciently a famous City, built by the *Matulli*, a Branch of the *Japides*. In the 31st Year of our Saviour, this City was taken and destroyed by the Emperor *Augustus*. In Remembrance of which, says *Laxius*, the Country People to this Day call all waste and desolate Places *Troia's*. He adds, That abundance of Antiquities are found here and in the neighbouring Towns.

2. *Sachsenfeld*, a Market-Town on the *Saan*, about a German League from *Gilley*, on the Road to *Laubach*. Some think it had its Name from a Colony of *Saxons* sent hither by *Charlemagne*, who dispers'd that People into several Colonies of the Empire in order to prevent their Rebellion; but if it were so, they have now lost the *Saxon* Language; for in this Town, and in the neighbouring Country, they speak *Slavonic*, with a Mixture of the *Austrian* Dialect.

3. *Saaneck*, so call'd from the *Saan*, on which it stands. It was formerly so considerable as to give Title to Barons and Counts, but now only a small Village.

4. *Robitsch*, a fair Market-Town on the Borders of *Croatia*: It has a Fort of the same Name near it, and is mortgag'd to Counts, but the Barons of *Wetz*.

5. *Warassin*, or *Warasdin*, on the Borders of *Styria*, *Hungary* and *Slavonia*, supposed to be *Antonin's Varianna Castra*, which *Laxius* supports by divers Arguments from several Monuments of Antiquity found about it. Being a Frontier Town, 'tis regularly and well fortified. It lies about 40 English Miles N. E. from *Gilley*, and 35 S. E. from *Gratz*.

6. *Copreinitz*, Lat. *Capronia*; 'tis stronger than *Warassin*, but noted for little else. *Globitzer* their Governor got himself and the Town great Reputation, by repulsing the Turkish Army; but was afterwards, in 1581, the chief Instrument of its Overthrow.

The Dutchy of Carniola,

BY the Germans called *Crain*, has *Carinthia*, and Part of *Styria*, on the N. *Styria*, and the Gulf of *Triest*, on the S.

Part of *Carinthia*, with the *Alps* and Dominions of *Venice*, on the W. and *Slavonia* and *Croatia* on the E. The greatest Length from N. W. to S. E. is about 105 English M. and the Breadth from N. to S. according to *Moll*, is about 58. But Dr. *Nicholson* observes, That our Modern Geographers usually Contract it more than they ought. It takes its Name from the ancient *Carni*, a Branch of the *Scythians*, who had for Neighbours the *Japides*; whence this and other adjacent Provinces were call'd by the general Name of *Japidia*. In the Time of *Augustus*, the Romans subdued this Country; but were expell'd by the Princes of *Bavaria*, who were then Lords of this Country, under the Title of *Creinburg*. It was afterwards subdued by the Dukes of *Carinthia*, who erected it into a Marquisate depending on the House of *Carnden*. Thus it continu'd till the Emperor *Frederick II.* made it Independent. Afterwards, the Family of *Engelbrecht*, their Marquisses, failing, it came to the Branch of *Austria Bannberg*, whose Line also failing, it came to *Ottocar* King of *Bohemia*, who being slain in Battle against the Emperor *Rudolph I.* he gave *Carniola* to *Mainhart* Duke of *Carinthia*, and Count of *Tyrol*; after whose Death, the Emperor *Ludowic IV.* made it a Dukedom, and gave it to the Dukes of *Austria Habsburg*, in whose Right the Emperor enjoys it.

The Country is mountainous; but has many large and pleasant Vallies, which abound with Wine, Oil and Corn. It has many great Rivers; the Chief of which are, the *Save*, *Laubach*, and *Gurck*.

The modern Inhabitants are a mixture of *Germans*, *Italians* and *Slavonians*. In Cities, they generally speak *High Dutch*, except in *Laubach*, where they speak a broken *Italian*. The Country People speak *Slavonic*; but in their Courts of Judicature, and Papers of State, they use the *German*.

'Tis divided into Higher and Lower.

The Chief Towns in Upper Carniola,

1. *Lack*, or *Bischofsack*, so call'd, because 'tis the Residence of the Governor, who is Deputy to the Bishop of *Freyzing* in *Bavaria*,
M. m m m

Bavaria, to whom the Emperor *Henry III.* gave this Town, with its District, which reaches 10 *German Leagues* round, and contains 200 Villages. In 1451, this Town was plunder'd and burnt by the Count of *Gilleys* General, but has since been more splendidly Rebuilt, and better Fortify'd. *Conrad* Bishop of *Gurck*, who was set up by the Pope in Opposition to One whom the Emperor had named Bishop of *Freyding*, was murder'd here by his Pages, who robb'd him of 5000 Ducats of Gold, and buried him in his own Garden; where the Corps was found at last, and the Murderers put to Death in 1433. The Town lies in Long. 33. 22. Lat. 46. 30. 30 Miles from the Frontiers of *Vepice*, and 12 S. of the Frontiers of *Carinthia*.

2. *Crainburg*, on the Banks of the *Save*, 7 Miles N. from *Bischofslack*, on the Top of a small Hill fortified with a strong Castle: It has Three Churches, and in the Suburbs a fair Monastery of *Capuchins*. *Lazius* thinks it to be *Japodum Noriodunum*, because it answers *Antonin's* Latitude, that in their ancient Records 'tis call'd *Noriodunum*, the Lat. for *Newburg*; and because there are Roman Coins and Medals dug up every Day in and about the Town, which, with other Monuments, shew it to have been a Roman Colony. It gave Title to the Marquisses of *Crainburg*, formerly mention'd. There is a good Bridge here over the *Save*.

3. *Ratmansdorff*, on the N. Banks of the *Save*, a little above *Crainburg*. *Lazius* says, a great many Roman Antiquities are found near this Place; and that the Noble *Styrian* Family of *Ratmansdorff* have their Title from hence, tho' none of 'em have been Lords of this Place for a great while.

4. *Stain*, on the River *Stretz*, noted for a large and rich Monastery of *Franciscans*.

The Chief Towns of Lower Car-niola.

1. *Laubach*, or *Labach*, which lies on a River of the same Name, and is the Metropolis of the Dutchy. It lies about 15 Miles E. from *Bischofslack*. *Cluverius*, in his *Italia Antiqua*, contradicts some modern Geographers, who fancy this to be the ancient *Nauportus*, where *Jason* and his *Ar-*

gonauts landed, and alledges this Town rose from the Ruins of the ancient *Himona*; but *Lazius*, whose Authority prevails with most late Writers, endeavours to prove this to be the true *Nauportus*, where *Jason* landed; who, as Historians inform us, set out from *Argos Peloponicum* in *Thefaly*, and sail'd to *Colchus*, on the E. side of the *Euxine*: But being pursued by the K. of *Colchus's* Fleet, they bore Northward, and entering the Mouth of the *Danube* they sail'd up to the Conflux of the *Danube* and *Save*; and then taking up the latter, they came to the Mouth of the *Laubach*, and landed at this Town; from whence they travell'd by Land to the *Adriatic* Sea, and then return'd to *Greece*. But we leave the Reader to judge, how *Jason* and his Companions came to be so well acquainted in those Days with Navigation and Geography, as to perform such a Voyage. *Lazius* adds, That the *Latabici*, a Branch of the *Japides*, chang'd the Name of this Port into *Labacum*. Tho' the Air about it be unwholsom, the Town is well built, and very populous. They have a large Castle, with a good Garison; but being commanded by a neighbouring Hill, is not very serviceable; nor is the Town very strong, especially towards the River. It held out a memorable Siege, when *Albert*, Brother to the Emperor *Fredrick*, and Count *Utrie*, attack'd it, while he was at *Aix la Chapelle* receiving the Crown of the Empire; from whence he return'd, defeated them, and rais'd the Siege. 'Tis a Bishops/See, formerly Suffragan to the Patriarch of *Aquileia*, but now depends immediately on the Pope.

2. *Zirchnitz*, a Town and a Lake of the same Name, call'd in Latin, *Lacus Circovicensis*. It lies 20 Miles S. E. from *Laubach*. The Town is inconsiderable, either for Fortifications or Bulk, as not containing above 300 Houses; but is chiefly remarkable for this famous Lake, which is about 4 *German M.* in Length, and 2 in Breadth, encompass'd with Mountains and Forests at some distance, and on the S. has a Forest of Pear-Trees. Every Year in *June* the Water sinks under Ground, through a great many large Holes in the bottom, and returns in *September* with such violence, that it rises to the height of a Pike, and covers all the Ground again. When the

Water

Water retires, it speedily yields Grass, which affords good Pasturage to the Cattle and Deer from the neighbouring Hills and Forests; that retire again before the Water returns. There's great store of Carps, Eels, Tench, and other Fish, in the Lake, which none dare Catch without a Licence from the Prince of *Bickenburg*, who is Lord of the Place, till the Water retire; and then every Man has liberty to take what he can; and the Peasants improving the Opportunity, catch abundance as they retire with the Water. The Neighbours say, The Lake constantly observes this Course, but can give no Account of the Reason: Some fancy this to be *Strabo's Laguna Palus*. But Dr. *Nicholson* justly observes, That if it had been so, 'tis strange that the Ancient Philosophers should take no Notice of this strange Phenomenon in Nature. *Bawdrand* says, That this Lake produces Corn upon the Reeds of the Waters, and affords good Hunting to the Neighbourhood.

3. *Lana*, which lies near this Lake upon a small River that runs into it, about 20 Miles S. E. from *Zirchnitz*, according to *Sansón*. 'Tis noted for a Breed of well-shap'd Horses, tho' much inferior for Service to those bred in *Karstia*. Count *Gilley* attack'd this Town in 1435, but was shamefully repulsed.

4. *Upper Laubach*, alias *Werdick*, about 10 Miles S. W. from the other *Laubach*, on the same River. 'Tis a great Mart for *Italian* Goods brought hither over the Mountains from *Gritz*, and ship'd off for several Parts of Germany.

The Province of Windischmarch;

IN *Latin*, *Vindorum Marchia*. Some reckon it a *Slavonian* Province, and subject to the Emperor as King of *Hungary*, but not as Part of *Carniola* to which it adjoins; yet 'tis made Part of it both by *Moll* and *Sansón*. Dr. *Nicholson* observes, That the present Inhabitants comprehend under this Name all *Dalmatia* and *Liburnia*, and the Country betwixt the *Save* and *Drave*; but most Geographers understand only that Country which has the County of *Gilley* on the N. *Carniola* on the S. and W. and *Croatia* on the E. And so 'tis bounded by *Sansón*, who

makes it from N. W. to S. E. about 33 Miles long, and the greatest Breadth about 30. The Country is mountainous and barren, inhabited, says Dr. *Nicholson*, by the Offspring of the Antient *Venedi*, the most considerable Branch of the *Slavonians*, whose Language they retain, with a small mixture of *German*.

The chief Towns.

1. *Gotsche*, which gives Name to the neighbouring Country: The Inhabitants pretend 'tis a distinct Province; and that their Ancestors were a Colony of *Germans* brought hither from *Swabia*, which their Language seems to justify. The Town is large, stands in the middle of a Wood, but is not strong.

2. *Seisenburg*, a Market-Town of Note on the Banks of the *Gurck*, which supplies them with Plenty of Fish, and is famous for the best Crevises in that Country; 'tis subject to the Counts of *Aversperg*.

3. *Newstut*, or *Rudolphsworth*, a little below *Seisenburg*, on the same River, 18 Miles E. from *Gilley*. 'Tis a Place of great Antiquity, and was a *Roman* Colony, but subdued by the *Goths* under the Empire of *Decius*. *Dieterich* King of the *Goths* resided here; and it had large Privileges from *Frederick IV.* for holding out against *Albert* of *Austria*, and *Ulric* of *Gilley*, in 1435. It has the best Wine in those Parts, a large *Franciscan* Monastery, and a good Bath at 4 Miles distance, much frequented by Foreigners. The Town is well fortified.

4. *Landstrass*, a strong little Town encompassed with the *Gurck*; it was formerly deliver'd with another Town by the House of *Austria* to the Counts of *Gilley*, as a Security for the Peace betwixt them. Near it there's a long Ridge of Hills, the Vallies among which were formerly a Wilderness for some *German* Leagues; but within these few Ages, they are well inhabited, and improved into good Pasturage and Meadows, by a Company of *Wallachians* who settled here; they call themselves *Uffoken*, and are of the Greek Church; they pay the Emperor no Tribute, but acknowledge him for their Sovereign, and furnish him with Men on occasion in Proportion to their Numbers. It lies about 8 Miles N. E. from *Rudolphsworth*.

M m m m 2

5. Met-

5. *Metling*, on the River *Culp*, about 10 Miles S. E. from *Rudolphsworth*, on the Road from *Laubach* to *Croatia*, the Wood through which this Road lies is Rough and Stony, but the rest of the Country pleasant and fruitful. There are two large Forests belonging to the Town, one of Chestnut-Trees, and the other of Oaks, from which the Inhabitants reap much Profit by feeding great Herds of Swine. In 1431, the *Turks* surpriz'd this Town, and cut off most of the Inhabitants. In 1578, they storm'd and plunder'd it again, but returning with their Booty, were all cut off by an Ambuscade of *Croats* and *Sclavonians*. Some make it the chief Town of the Country.

6. *Reifnitz*, a noted Town on the Borders of *Carniola*, near the *Zirlicher* Sea; 'tis the chief Town of a Barony of the same Name, and the Place where the Imperial Trained-Bands in this Country muster. The *Turks* burnt most of it down in 1480.

The Province of Friuli,

WAS anciently call'd *Forum Julii*, of which *Friuli* is a Corruption, or rather Corruption. *Julius Caesar*, when he led his Armies this way, built the Town which gives Name to the Province; and hence also the neighbouring Hills were call'd *Alpes Juliae*. Latin Writers of the middle Centuries call it *Regio Aquilegensis*, because most of it was given by the Emperors, *Orso* and *Conrad*, to the Patriarchate of *Aquileia*. The *Venetians* call it usually *Patria*, because the Republick had its Original here. *D. Nicholson* says, This Province has *Gorizia* on the E. the *Mauckia Trevisana*, and part of the *Alps*, on the W. the great *Alps* which separate it from *Germany* on the N. and the Gulph of *Venice* on the S. *Sanfon* and *Moll* take no Notice of the Name, nor are their Maps exact in the Division of this Province, though they have the principal Towns. *Moll* reckons it in the Dominions of *Venice*; and both he and *Sanfon* make *Goritz* a distinct County, which *Dr. Nicholson* makes a Part of *Friuli*. The Country is pleasant and fruitful, and famous of old for a rich Wine, which *Pliny* prefer'd to the best in *Italy*: 'Tis water'd with many Rivers, the chief of which

is *Tisamento*, which is navigable towards the Mouth, but too rapid for Navigation further up.

The ancient Inhabitants were the *Euganei*, who possessed also Part of *Marchia Trevisana*, but were expell'd by the *Veneti*, and they by the *Galli-Cisalpine*; then it fell to the *Romans*, and on the Decay of the Empire became One of the Four Dukedom founded by the *Lombards*. The *Beringarii* were long Dukes of this Country, but subdu'd by the Emperor *Orso*, who gave great Part of it to the Patriarch of *Aquileia*, after which *Conrad* gave most of it to the same Patriarchate: But there were many Noble Families who retain'd large Estates, paying a small Acknowledgment to the Patriarch; yet it still retain'd the Name of a Duchy, and their Princes pretended to as much Grandeur as ever, which at last prov'd their Ruin: For Duke *Lairprandus* being Jealous of the Growth of the Republick of *Venice*, made War upon them about 1020, but was vanquish'd, and lost his Dominions; since which, the *Venetians* have possessed them. In 1420, The Patriarch of *Aquileia* being over-ballanc'd by the Power of the *Venetians*, he surrender'd his Interest to them as most able to defend it, yet still he retains large Possessions, and good Revenues here, and has full Jurisdiction over all the Prelates in this Country, except those in the Isles of *Venice*, who are subject to the Patriarch of *Grada*. The Reason why *Dr. Nicholson* reckons this Country, &c. Part of the *Austrian* Dominions, though some of 'em be subject to the *Venetians*, is, because the Emperor was once the sole, and is still the chief, Proprietor of them: It appears by *Baudrand*, and others, that a considerable Part of it is still subject to the Emperor, particularly the County of *Goritz*, *Aquileia* with its Territories, and *Gradisca*.

The chief Cities and Towns.

1. **A** *Quileia*, or *Aquileja*; 'twas made the Metropolis of *Istria* and *Venetia*, by *Antoninus*; and afterwards of *Italy*, by the Western Emperors. Authors are not agreed as to its Founder; some ascribe it to one *Aquileius*, who came from *Troy* with *Aeneas*; and

and others say, that the *Romans* having encamp'd a long time on the Place where it stands, were the first who built it, and gave it this Name from the *Eagle* which was their Standard. *Livy* says, 'twas built in the Year 565 of *Rome*, during the Consulship of *Marcus Philippus* and *Sept. Posthum. Albinus*, or as *Berkeley* says in his Notes on *Steph.* of *Byzantium*, because an *Eagle* came flying towards it when they were building. Many Years after the Seat of the *Præfectus Prætoris*, *Augustus* kept his Court here, and gave it the Name of *Roma Altera*. *Tiberius* liv'd here with his Wife *Julia Augustus's* Daughter, before he came to the Empire; and those Two Princes did all they could to Imbellish it. They acquir'd great Honour by holding out a famous Siege against *Maximinus* the Tyrant, in Defence of the Emperors *Maximus* and *Valerianus*, when the Women were so resolute, that they parted with their Hair to make Bow-strings for the Garrison. In remembrance of which, the Senate dedicated a Temple here to *Venus the Bold*. *Maximinus* was kill'd under the Walls, and all his Children put to the Sword; for which the Soldiers gave this Reason, *Pessimi canis catulus, non est relinquendus, i. e.* That all the Whelps of so bad a Litter ought to be destroy'd. It was afterwards ruin'd by *Attila* and his *Huns* in 452, after three Years Siege, wherein 37000 Citizens fell, and the rest narrowly escaped to the Mountains. *La Forrest* says, The Seat of the Patriarch was remov'd, upon the Destruction of it by the *Lombards* in 590, to *Grada*, whence the Bishop of that Place has still the Name of Patriarch; and at last it was remov'd to *Udina*, the Capital of *Friuli*, in the *Venetian* Dominions. Since which, *Aquileia* is become only a poor Fisher Village. *La Forrest* says, the Town lies on the Conflux of the *Ansa* and *Torre*, near the Shoar of the *Adriatick*, but according to *Moll* and *Sanfon*, it lies in a sort of an Island form'd by two Rivers. Long. 32. 34. Lat. 46. about 50 Miles N. E. from *Venice*.

2. *Palma Nova*, a Town built by the *Venetians* in 1594. 'Tis thought to be the largest regular Fortification in *Europe*. 'Tis encompassed with a Wall, and a Ditch 30 Paces broad and 12 deep, which they keep dry, to hinder the Air from putrifying, to which 'tis very subject in this Place; but

they can let in the Water at pleasure. In the Center of the Town, there's fix'd a Standard over a Triple-Well, in the middle of a Sexangular Piazza, whence there's a good Prospect of the Three Gates, and Six chief Streets of the City. In the middle of the great Bridge, cross the River which runs by the Town, there's a Draw-bridge so artfully made, that a Centinel, by a single Touch of a small Piece of Iron with his Foot, can draw it as he sees occasion; so that this Town is now the great Bulwark of the *Venetian* State, and of all *Italy* on this side, it being the Road by which the *Huns* formerly, and the *Turks* since, have made their Incurfions as far as *Trevifo*. From this Town to the Sea, the *Venetians* have cut a large Canal, by which Vessels can supply the Town upon occasion. It lies about 12 Miles N. W. from *Aquileia*.

3. *Udene*, or *Udina*, the largest and best Peopl'd Town in *Friuli*, being about five Miles in Compass, and containing above 15000 Inhabitants. It was formerly the Seat of the *Venetian* Procurator or Lieutenant, but comes short of *Palma Nova* for Strength and Beauty. It lies, according to *Sanfon*, 12 Miles N. W. from *Palma Nova* on the same River.

4. *Ciudad de Friuli*, Lat. *Forum Julii*, an ancient Colony belonging to the *Carli*, according to *Protony* and *Tacitus*. *Paulus Diaconus* calls it *Castrum Julienne*. *Sanfon* places it 12 Miles N. from *Palma Nova* on the River *Natisone*: 'Tis subject to the *Venetians*.

5. *Gortz*, or *Goritz*, Lat. *Goritia*, Capital of a County of the same Name in *Friuli*, which has several lesser Towns and Villages under its Jurisdiction; 'tis supposed to have been anciently call'd *Noritia*, and is one of those Places from whence the ancient *Taurisci* are supposed to have changed their Name into *Norici*, as *Laxius* thinks; who is also of Opinion, that the Counts of *Tyrol* had their Origin from the Counts of this Place. 'Tis an ancient Town, and remarkable for the Defeat of *Dieterich*, King of the *Goths*, by *Odoacrus* the King of the *Heruli* near it. 'Tis divided into the Upper and Lower: The former was built for Defence of the latter, in which the Governor, and others of Quality, have their Houses. Dr. *Nicholson* observes, That the

the *Wendish* or *Sclavonian* Tongue reaches no further W. than this Place; that the Citizens speak a corrupt *Latin*, which comes nearer the *French* than the *Italian* Dialect, so that the other *Italians* can scarce understand them; but in their Courts of Judicature, and Papers of State, they use the *German*, because they are subject to the Emperor. The *Venetians* took this Town in 1508, but were forc'd to surrender it next Year to the Emperor *Maximilian I.* They attempted it again in vain in 1616. It lies about 12 Miles N. E. from *Palma Nova*.

6. *Gradisca*, a small Town, about 6 Miles S. W. from *Goritz*, upon a River of the same Name. It was built in the Fifteenth Century, to put a stop to the IncurSIONS of the *Turks*, who had several times landed in the Neighbourhood. *Culverius* supposes it to be that which the *Romans* call'd, *Ad Undecimum lapidem*.

7. *Idria*, a famous Town among the Mountains of this County on the Borders of *Carniola*, about 18 Miles N. E. from *Goritz*, on a small River of the same Name, which after a great Rain swells so considerably, as to convey great Quantities of Fir-Trees, and other Fuel for the Mines, from the neighbouring Mountains. 'Tis chiefly noted for Mines of Quicksilver; the Entrance to which is in the Town, and their deepest Pit is above 120 Fathoms. In those Mines they have Virgin Quick-silver, which discovers it self without help of Fire, and is plainly to be seen in the Earth and Ore, or falls down in small Drops, and sometimes Streams out in good Quantities. They have another sort not so fine, which is separated from the Earth by Water in a Sieve, and needs no Extraction by Fire. Their plain Quicksilver is not at first perceiv'd by the Eye, but forc'd out of the *Mercury* by the Furnace. This Ore is of a dark Colour mix'd with red, which is beaten to pieces, and so refin'd, of which the Curious may find an Account in the Transactions of our Royal Society, Vol. I. Page 21.

8. *Pontafel*, or *Pont a fel*, so call'd from a Bridge over the *Fels* or *Vellach*, on which it stands. The Middle of the Bridge is the Boundary betwixt the Duke of *Carinthia*,

and the *Venetian* Territories in *Friuli*. The Citizens speak good *Italian* and *High Dutch*. *Lanzi* observes, that the Banks of the *Fels* are subject to Three different Potentates. The House of *Austria* has Part as far as the Fort *Clusum*, another Part belongs to the *Diocece of Bamberg*, and the Third belongs to the *Venetians*, of which this Town is Part. The rich Valley in which this Town stands, is by the *Latins* call'd, *Belvis Vallis*. In 1667, the *Austrians* storm'd this Town, and made a great Slaughter among the *Venetians*, who soon after recover'd the Town, took a bloody Revenge, and invaded *Carinthia*. *Sanfon* places it 22 Miles N. W. from *Ciudad de Friuli*, and puts another Town of the same Name on the N. side of the Bridge, which belongs to the Imperialists. Dr. *Nicholson* mentions *Concordia*, another Town in this Country, about 32 Miles W. from *Aquileia*, formerly a noble City that was ruin'd by *Attila*, King of the *Huns*, and is now only a Village: And *Grada*, the Seat of the Patriarch over the neighbouring Isles, with some others of less Note on the Coasts.

Karstia.

THIS is a small Province betwixt *Friuli* and *Istria*, and is commonly reckon'd Part of the former. 'Tis little taken Notice of by Geographers or Historians, being remarkable for little, except a Breed of good Horses, whence most of the Princes and Nobles of *Italy* furnish their Stables. 'Tis a *Peninsula* almost incircled with the Rivers *Alben* and *Lisonzo*, and according to *Mercator's* Map, is about 35 Miles in Length, and above 20 in Breadth. *La Forrest* says, 'Twas dismembred from *Friuli* and *Istria* in 1500, and is divided into Upper and Lower, and the County of *Gwitz*. In this Province is the famous River *Timavus*, mention'd by *Virgil* in the First Book of his *Æneids*. It rises in the *Alps*, as some say, is call'd by the Name of *Recca* for some Space, runs afterwards under Ground for 41 $\frac{1}{2}$ Miles, and where it breaks out again is call'd *Timavus*, and falls into the Gulph of *Trieste* by 12 small Channels.

The

The chief Towns.

1. **Trieſte**, Lat. *Tergetum*, whence the adjoining Bay was call'd *Sinus Tergetinus*, now the Gulph of *Trieſte*. 'Twas first a Roman Colony, then fell to the *Venetians*, and at last to the House of *Austria*, to whom 'tis still subject. *La Forreſt* ſays, it was built out of the Ruins of the ancient *Tergetum* of the *Carnians*; the Ruins of which are still to be ſeen on a neighbouring Mountain. The chief Trade of the Town is in Salt that is made here, of which they export great Quantities. 'Tis the only Harbour that belongs to the House of *Austria*, but neither ſafe nor large, ſays *Baudrand*. 'Tis defended by two Caſtles, and lies upon the Frontiers of the *Venetians*, by whom 'twas taken in 1507; but afterwards reſtor'd to the Emperor. *Moll* places it 20 Miles E. from *Aquileia*. The Town is little, but well fortified and inhabited, and is a Biſhop's See, Suffragan to *Aquileia*. The adjacent Country produces that Wine which the *Germans* call *Reiſſal*.

2. *Heydſbena*, on the River *Kobel*, near the Borders of *Carniola*, within the Country of *Goritz*, anciently a noted City, but now a ſmall Market-Town.

3. *Proſeg*, or *Proſeck*, 7 Miles N.W. from *Trieſte*, ſubject to the House of *Austria*, who have a noble Revenue hence out of the Wine made and ſold here; for which it was ſo famous in the Days of *Augustus*, that his Wife *Livia* made uſe of no other Cordial when ſhe was above 70 Years of Age. 'Tis ſo ſtrong, that 'twill keep for a Man's Lifetime. *Pliny* deſcribes its excellent Qualities in the 4th Book of his *Nat. Hiſt.* Cap. 6. The *Romans* call'd this Town and the neighbouring Country *Peucinum*.

4. *Wipack*, ſo call'd from a River of the ſame Name, on which it ſtands. 'Tis alſo famous for rich Wine, from which, and the Horſe-Fairs kept there, the H. of *Austria* have a great Revenue. The Wine is carried on Horſeback over the Mountains to *Carniola*, and from thence conveyed into the Empire. The Town lies about 25 Miles E. from *Goritz*.

Iſtria, or Hiſtria,

IS a Peninſula, having the *Adriatick* on the E. W. and S. and is ſeparated on the N. from *Carniola* by the *German Alps*. The Country is Woody and Mountainous, and the Air ſo unwholeſome, that when the *Venetians* firſt ſubdu'd it, they were forc'd to hire People to dwell here. From that Part which is ſtill ſubject to 'em, they have Timber and Stone for building Houſes and Ships. Some reckon the ancient Inhabitants to have been thoſe of *Colchor*, who being ſent to purſue *Jafon* and his *Argonauts*, dar'd not to return home, becauſe they miſs'd 'em, and therefore ſettled here; but the *Iſtri*, from whence the Country has its Name, were brought hither long after by *Japis*, an *Aetolian*, from the Banks of the *Iſter*; and from this *Japis*, ſome Latin Writers call the Country *Japigia*. While the Roman Empire flouriſh'd, *Iſtria* was one of its Provinces; but when it decay'd, recover'd its Liberty, and continued free till about 938, that the *Venetians* being incens'd with their Piracies, took ſeveral of their Towns; and in 1190, laid moſt of the Country under Tribute, and in this State it continues ſtill.

The only City in this Country ſubject to the House of *Austria*, *Dr. Niſholſon* ſays is *St. Veit*, on the Shore of the *Adriatick*, at the Mouth of the River *Flaum*, betwixt the Iſlands of *Cherſo* and *Vegia*, about 68 Miles S. E. from *Aquileia*, and 40 from *Trieſte*. On the top of Mount *Terſtat*, near this City, there's a fair *Franciſcan* Monastery, from which one goes down to the River by a great Number of Steps. In the Suburbs, there's a *Capuchin* Monastery, where a memorable Peace was concluded in 1618, betwixt the Emperor and the *Turks*. Hither the *Auſtrians* of Quality ſend their Children to be taught *Italian*, which is here ſpoke in its Purity. The Town is well fortified, and defended by a Caſtle on a Hill. *Baudrand* ſays, it has a ſmall Harbour, but not very ſafe. For ſuch Towns here as belong to the *Venetians*, we refer them to the Deſcription of that Republick.

The Dutchy of Carinthia.

THE Germans call it *Karnäuten*. It lies in *Norico Mediterraneo*, and was formerly called *Louvirana*, and *Patria Sclavorum*; but in *Charlemagne's* Time, was called *Carinthia*, from the *Carni*, a Branch of the *Venedi*. It has *Salzburg* and *Styria* on the N. *Carniola* and *Friuli* on the S. the Bishoprick of *Brixen* and Part of *Salzburg* on the W. and Part of *Styria* on the E.

The Country is somewhat cold and barren, and every where Mountainous. They have enough of Corn, but have their Wine from their Neighbours. Their most remarkable Mountains for Height are, *St. Ulrich's*, *St. Heilen's*, and *St. Lawrence's*. On the latter, the Peasants have Annual Foot-Races, and other Diversions, on the Three Holy-Nails Day, the 3d Friday after *Easter*, in Remembrance of the 3 Nails on which they suppose our Saviour to have been nail'd to the Cross. They have large Lakes in this Country, which they call by the Name of Seas: The largest of them is about two German M. long, of a considerable Breadth, and best stock'd with Fish. The largest River here is the *Drave*, into which fall abundance of lesser Streams, as it runs through the Country. This Dutchy is subject to the Emperor, and the Clergy own the Archbishop of *Salzburg* as their Metropolitan. *Moll* makes it 120 Miles from E. to W. and about 32 Miles broad from N. to S. 'Tis divided into *Upper* and *Lower*. *La Forrest* says, it lies in *Upper Panmania*, was anciently Part of the Dutchy of *Bavaria*, and given by *Charlemagne* to *Ingeroon*, whose Succession is hard to determine. *Ottocarius* King of *Bohemia* seiz'd it; but was drove out by the Emperor *Rodolph I.* who gave it in 1282 to *Mainard* Count of *Tyrol*, on Condition, That when his Male-Issue fail'd, it should return to the House of *Austria*, which happen'd in 1381. *Cluverius* says, the ancient Inhabitants were Part of the *Ambisontii*. The Peasants pretend to a Right of investing their Duke, thus; He must be clad like a Countryman, with a Shepherd's Hook in his Hand, and go into a Meadow; a Peasant gets up on a Marble Stone, and

presents him with two Beeves, one fat, and the other lean; or, as some say, with a black Cow and a Mare, and asks him, If he be a Judge? If he seeks the Good of the Country? If he be Noble, a Person of Merit, a Christian, and Defender of the Faith? The Prince answering, Yes; the Peasant gives him a gentle Blow on the Cheek, and recommends Justice to him; then the Duke gets upon the Stone, lays aside his Shepherd's Hook, and with a drawn Sword in his Hand, promises Justice to the People, and then goes to our Lady's Church at *St. Veit*, which lies near the Place; and putting on his Princely Habits, he returns to the Meadow, where he receives the Homage of his Subjects. The Peasants had this Privilege, because they embrac'd Christianity long before their Nobles, who were prevail'd with to do the like by *Charlemagne*. *La Forrest* says, That *Lower Carinthia* belongs to the House of *Austria*, and the *Upper* is divided betwixt the Archbishop of *Salzburg* and the Bishop of *Bamberg*.

Their chief Towns.

1. *Clagenfurt*, on the *Glan*, their Metropolis, and the Residence of their ancient Dukes, about 10 Miles from the Frontiers of *Carniola*, in Long. 32. 12. Lat. 47. 'Tis the neatest Town in the Country, of a square Figure, and defended by a good Wall. In the middle of the Piazza, there's a noble Fountain, over which there is a prodigious Dragon made of one Stone, and *Hercules* standing before it with his Club. The Country-People fancy it to be the Statue of a Peasant, who kill'd a great Dragon; but *Dr. Nicholson* says, 'tis one of the Roman Monuments brought from *Saal*, that were plac'd in the neighbouring Towns. *Aeneas Sylvius* relates a very strange old Custom, which he says the Citizens of *Clagenfurt* observ'd in his Time, That if a Man were shrewdly suspected of Theft, they hang'd him, and 3 Days after judg'd of the Fact: If he were found guilty, they let his Body hang till it rotted away; if otherwise, they took down the Corps, bury'd it upon the publick Stock, and said Prayers for his Soul.

2. *St. Veit*,

2. *St. Veit*, about 8 Miles N. from *Clagenfurt*: 'Twas so call'd from one of that Name, who was their Apostle, in the Time of *Dioctesian*. It was formerly their Metropolis, and a Bishop's See; but now only noted for its Antiquity. The *Latins* call it *Fanum Sancti Viti*. It stands on the Conflux of two Rivers, in a fruitful Valley. About a German Mile from hence, stand the Ruins of the ancient City *Salis* or *Saal*, called by *Lazius*, *Colonia Salvensis*. 'Twas destroy'd by *Attila* the Hun in 451, 823 Years after its Foundation. Store of Roman Coins, Medals, and other Antiquities, are found in the Field or Meadow near it, where stand Four-squar'd Stones, resembling two Elbow-Chairs, Back to Back, in which the Dukes of *Carinthia* were invested, as mention'd above; when, *Dr. Nicholson* says, the Duke or his Deputy is obliged to accept the lean Ox, and return the fat one, which are presented him. Upon these Stones there are old Roman Inscriptions, which bear a greater Face of Antiquity than the Stones themselves. The Church of *Saal* is still standing, and in it the Tomb of *Modestus*, *St. Vite's* Companion.

3. *Friesach*, on the Borders of *Styria*, 15 Miles N. E. from *St. Veit*. 'Tis reckon'd the oldest Town in the Country, stands in a fruitful Soil amongst Hills and Mountains, and is defended by a strong Castle on a Rock. Some derive its Name from the ancient *Frifi*. 'Twas called *Verunum* by the Romans, from its old Name *Veruan*, which in the Language of the Country signified Boars, that abounded in those Parts. There were Gold Mines in the neighbouring Mountains, which were exhausted long ago. The Town is encompassed with good Walls, and a broad Ditch.

4. *Strasburg*, on the River *Gurck*, at the bottom of a high Mountain, the Residence of the Bishop of *Gurck*, who swears Fealty to the Emperor for his Temporals, and Canonical Obedience to the Archbishop of *Salzburg* in Spirituals. *Hieronymus Baldus*, the famous Italian Poet, was Bishop of this Place.

5. *Gurck*, 12 Miles N. W. from *St. Veit*, a Market-Town, where the Ruins of an old Monastery was turn'd into a Cathedral, and made a Bishop's See in 1073 by the Archbishop of *Salzburg*, who has a Right

to chuse one Bishop in three, the Emperor chusing the other two.

6. *Villach*, on the *Drave*, thought by some to be the old *Julium Carnicum*, or *Colonia Julia*; but *Lazius* thinks it to be *Antonin's Belva*. *Sanfon* places it about 18 Miles W. from *Clagenfurt*, near the Conflux of three Rivers. They have a Bridge over the *Drave*, which brings them a good Trade by Passengers betwixt Italy and Germany. 'Tis noted for its fine Paintings, and belongs to the Bishop of *Bamberg*, who appoints their Governor once in three Years. The Emperor *Charles V.* fled hither from *Innsbruck*, where he was almost surpris'd by the Protestants in 1552. An English Mile from the Town, there are several good Baths; two of them are sulphureous, moderately hot, of an acid, but of no unpleasant Taste. They are large, and have Stairs to go down to them, with little Rooms of Wood about them, for the Convenience of those who bathe.

7. *Gemund*, on the Mouth of the *Malentein*, according to *Sanfon*, 40 Miles W. from *Gurck*; but *Moll* places it about 17 from thence. This Town and its Territory was bought from *Maximilian I.* by the Archbishop of *Salzburg* for 30000 Crowns, who repair'd the Castle and Fortifications, and endow'd the Hospital; so that 'tis under his Jurisdiction.

8. *St. Andrew's*, a neat Town on the Banks of the *Lavant*. *Lazius* takes it to be *Pliny's Colonia Flaviana*, and the Bishop who resides here calls himself *Flaventinensis*. This Bishoprick was founded in 1221 by the Archbishop of *Salzburg*, to whom, with the adjacent Country, 'tis subject. *Sanfon* places it 22 Miles S. E. from *Gurck*.

9. *Lavamund*, at the Mouth of the *Lavant*, 13 Miles S. E. from *St. Andrew's*, is a Bishop's See, Suffragan to *Salzburg*, and stands in the pleasant Valley of *Lavanttal*.

10. *Volkelmark*, on the *Drave*. *Wolfsperg*, *Pontasela*, and some other Market-Towns in this Country, are not describ'd by Geographers. *Dr. Nicholson* mentions *Mulstat* in this Country, formerly called *Ad Mille Statuas*, because, as some Historians say, there was a Temple here in the Time of Paganism with 1000 Statues. *Mercator* places it in a Lake above two German Leagues S. E. from *Gemund*. *La Ferrest* says, That Word

N n n and

and *Folkmark*, in *Lower Carinthia*, are Towns of good Trade; and that *Pontafel* is an important Pass on the Road from *Vienna* to *Venice*.

The Bishoprick of Brixen.

IT has *Tirol* on the N. and W. *Salzburg* and Part of *Carinthia* on the E. Part of *Trent*, and of the Dominions of *Venice*, on the S. Dr. *Nicholson* makes it Part of the County of *Tirol*; but *Moll* and *Sanson* make it distinct; and the *Matricula* of the Empire makes it Part of the Circle of *Austria*.

Brixen, from whence it has its Name, lies in a pleasant Valley, at the Conflux of the *Eysach* and *Rientz*, about 12 Miles from the Frontiers of *Venice*, in Long. 30. 45. Lat. 46. 45. 'Tis supposed to be *Antonin's Sublacione*; but Dr. *Nicholson* thinks it ought to have been writ *Subsaviione*, because there's a Place not far from it called *Seven* or *Savio*, from whence the Bishoprick was translated to *Brixen*, *Savio*, and some of the neighbouring Towns, having been destroy'd by the *Huns*. *La Forrest* says, the Town lies at the Foot of Mount *Brener*; that the Bishoprick was founded in 370, and is Suffragan to *Salzburg*; yet the Bishop is Lord of the Place, and a Prince of the Empire. The Houses are well built, almost all of the same Size, and curiously painted on the outside. There are Vaults which go from one Side of the Street to the other, and in these Vaults their best Shops are kept. They have three very fine Churches, which join to one another; over against which there's a fine Square, having on one Side the Bishop's Palace, which is a square Building, encompassed with a Ditch, and the Entry is defended by 4 Brass Cannon. Tho' the Bishop be a Prince of the Empire, Dr. *Nicholson* says, there lies an Appeal from him to the Count of *Tyrol's* Court. The Mineral Wells in and about this City occasion a great Concourse of Strangers. That called the *Virgin-Well* is of the greatest Note. They have likewise a considerable Income from the Red Wine which is exported from hence to the neighbouring Countries. *Moll* makes this Bishoprick about 50 Miles long, and 32 broad. We find no other Place of this Bishoprick describ'd except *Braneck*,

or *Bruneck*, which *La Forrest* says is a considerable Fortrefs belonging to the Bishoprick. It lies on the River *Adige*, 15 Miles N. E. from *Brixen*. The Lordship of *Veldes* in *Carniola* belongs to this Bishoprick.

The Bishoprick of Trent,

HA S *Tirol* and Part of *Brixen* on the N. and the Dominions of *Venice* on the S. and E. *Moll* makes it 62 Miles long from E. to W. and about 40 Miles broad from N. to S.

Strabo, *Pliny*, and *Ptolemy*, call the Inhabitants of this Country *Tridentini*, and the Town *Tridentum*, from whence the present Name *Trent* is contracted. Some derive the Name *Tridentum* from the Trident of *Nep-tune*, who, among other Idols, is said to have been worship'd here. Others derive it à *tribus Torrentibus*, three small Rivers which fall into the *Adige* at this City; and others derive it, with very much Probability, from three sharp Peaks or Rocks of the *Alps*, resembling three Teeth, which hang over this City. *Leander Alberti* says, the Town was first built by a Prince of *Tuscany*; but afterwards demolish'd, and then rebuilt by the *Centumani*, and wall'd about with a strong Stone Wall by *Theodoric King of Berne*. After the Invasion of the *Goths*, 'twas subject to the Princes of *Lombardy*, then to the Emperors of *Rome*, and afterwards to a Count of its own, who was Vassal to the Duke of *Bavaria*. At last 'twas made an Imperial Town; but is now subject to its own Bishop, a Vassal to the Emperor, who, as Count of *Tirol*, has the Superiority of this Bishoprick. The City lies in a pleasant Valley, in Long. 30. 2. Lat. 46. 7 $\frac{1}{2}$. 17 Miles from the Frontiers of *Venice*, and 50 S. W. from *Brixen*. 'Tis encompassed with steep and unpassable Hills, so that there is scarce any coming to it but from *Verona* on the S. and from *Tirol* on the N. In Summer, the Rays of the Sun, reflected from the Flinty Rocks which encompass it, make the Heat almost intolerable, as the Cold reflected from them is in the Winter: But in the Spring and Autumn, their Air is wholesome and temperate. They have Plenty of Wine, Oil, and Fruit, in their Fields and Vineyards; but little Corn. Their

Their Wine has a good Taste, is strong, and of a pale red Colour. The Inhabitants, by reason of their Situation on the Borders of Germany and Italy, speak both *High-Dutch* and *Italian* very well. Some Geographers have reproach'd them with the Character of *Germanorum Sentina*, and *Italarum Refugium*, as if it were a Place of Rendezvous of the worst sort of People of both Countries. But Dr. *Nicholson* observes, That they are extreme obliging to Strangers, very faithful to their Promise, and tender of doing any thing inconsistent with Humanity or Friendship. The Bishoprick was founded by St. *Hermagoras*, who made one *Jovinus* their first Bishop. The Diocese was afterwards much enlarged by the Emperor *Conrad II.* and confirm'd by succeeding Emperors, who made the Count of *Tirol* Protector of the Bishop, and obliged him to assist him in case of Invasion. Since the Time of *Frederick II.* the Bishops have been reckon'd Princes of the Empire. Several Princes of which, and of *Italy*, pay Fealty and Homage to this See, for some Part of their Estates they hold of it. The chief of 'em are, the Duke of *Mantua*, and the Count of *Tirol*, who pay them Annually a certain Quit-Rent, and many Earls and Barons do the like. In Temporal Matters, the Bishop acknowledges the Supremacy of the Emperor, as Count of *Tirol*, who, during the Vacancy of the See, sends a Governor, who presides there till a new Bishop be chosen. The Chapter is compos'd of People of the First Quality, who chuse a Bishop from among themselves. Dr. *Nicholson* and *Baudrand* say, the Bishop is Suffragan to the Patron of *Aquileia*; but *La Forreſt* says, he is Suffragan to the Archbishop of *Salzburg*, which is more probable, since by the Treaty of *Munster* he was made Primate of Germany; and that *Trent* is included in the Circle of *Austria*. The Town is most remarkable for its Antiquity. 'Tis pretty populous, tho' not very large, and is defended by an old Castle. There are many stately Palaces in it, and several beautiful Churches. The Cathedral, dedicated to St. *Vigil*, is a fine Piece of Architecture, with Marble Pillars of an extraordinary Height and Thickness. The Church of St. *Mary Major* is noted for the Council of *Trent's* being held in it, and the History of that Council

is finely painted on its Walls. 'Tis noted also for its Organ, which counterfeits all sorts of Instruments, and the singing of Birds so naturally, that 'tis hard to distinguish them. This Town was bombarded from the 3d of September, 1703. to the 8th, by the Duke of *Vendosme*, after he had made himself Master of the adjacent Country.

But that which makes it most famous, is the Council which was held here, being open'd the 4th of January, 1545, and continued till 1563; during which Time, there are said to have been here no less than 4000 Persons of a Publick Character, with their Attendants, who were all accommodated in this City; among whom were 7 Cardinals, 3 Patriarchs, 33 Archbishops, 235 Bishops, 7 Abbots, 7 Vicars-General, and 146 Divines, besides a great Number of Ambassadors. During the first 18 Years they sat, they were several times assembled, and suspended without doing any thing material; but in 1562, it was managed with so much Artifice by the Court of *Rome*, that nothing was determin'd by the Council, but what was first resolv'd on by the Cardinals in their Conclave at *Rome*, which gave just Ground for the bitter Sarcasm of the *Hungarian* Bishops present at the Council, *That the Holy Ghost was sent thither in a Cloak-Bag from Rome*. The Curious may find an Account of their Proceedings in the famous History of this Council by Father *Paul*, and in the Review of it by *Du Ranchin*, a French Courtier, whose Work was translated into English by Dr. *Langbain*, and printed at Oxford in 1638. But since this Council is the Standard of modern Popery in *Italy*, and all the other Popish Countries that submit to its Decisions, we shall, for the Satisfaction of the Publick, give a brief Account of it as follows:

Father *Paul*, in the 2d Page of his History of the Council of *Trent*, says, "This Council was desir'd and procur'd by Godly Men, to re-unite the Church, which began to be divided; but hath so established the Schism, and made the Party so obstinate, that the Discords are become irreconcilable; and being managed by Princes for Reformation of the Ecclesiastical Discipline, has occasioned the greatest Deformation that ever was since Christianity began. And the Council being

hop'd for by the Bishops, to regain the Episcopal Authority, which was for most part usurp'd by the Pope, has made them lose it altogether, and brought them into greater Servitude: And whereas on the contrary, it was fear'd and avoided by the See of *Rome*, as that which might moderate their exorbitant Power, which, from small Beginnings, has by several Degrees come to an unlimited Excess; it has so establish'd and confirm'd the same over that Part of it which remains subject unto it, that it was never so great, and so firmly rooted.

There can be no better Proof of what Father *Paul* says, than the Review of that Council by *M. Ranchin* above-mention'd, who tells us, *Page 1.* " That this Council was call'd on purpose to reform those Abuses of the Pope, and Court of *Rome*, that were the Occasion of the Schism, which had rais'd all *Christendom* in Arms, and had bred Disturbances for 200 Years and upwards in sundry Councils, which Pope *Hadrian* confess'd in the Diet at *Nuremberg*, that some of the Reformers of Pope *Paul III.* could not deny; but the Popes turn'd Cat in Pan, and carried the Matter so, that instead of a natural Birth, the Council was deliver'd of a Monster; and instead of a Synodical Decree, had brought forth a Papal Bull; instead of an Extirpation of Abuses, had brought forth a Nursery of Errors; a Depravation, instead of a Reformation; a Source of Injustice, and a Legitimation of all the Pope's Usurpations upon the Authority of the Church, Emperors, Kings, and Commonwealths; and, in a Word, upon all *Christendom*, with all the Estates therein, as well Temporal as Spiritual. That the Pope and the Court of *Rome* were in a manner compelled by Violence to the holding this Council for excepting honest *Hadrian*, who went about it with an upright Intention; all the rest would have gladly been quit of it. *Clement VII.* did openly contradict the Proposal of it, which *Charles V.* at his Coronation caus'd to be made by his Chancellor at *Bononia*: But the Emperor pursuing his Instances with the Successors of *Clement*, they were forc'd to make a Shew of an Inclination to it; yet so as they stood a consulting 25 Years about calling it,

from 1522, that *Hadrian*, by his Legate at the Diet of *Nuremberg*, promis'd it, till 1546, still giving out fair Pretences, and studying new Occasions to delay it, posting it from one to another, and passing it over as a Debt to their Successors. And after they had set about it, they manag'd it so, that they kept it betwixt living and dying for 18 Years, taking their Time on purpose, that they might level their Stroke right. Many of their Predecessors had left their Weapons in Councils; *Germany* was fatal to them; and the Remembrance of the Councils of *Constance* and *Basle* madd'd them, when they thought upon the Deposal of so many Popes, the Discipline to which they had been made subject, and the cutting short of their Power by the Councils. They had observ'd the Saying of Pope *John XXIII.* *The Place of the Council is all in all*; and that he would not have it in a Place where the Emperor had the upper Hand; so that it necessarily concern'd them to save themselves by Slight, to shuffle on the Time, to spin out Delays, to pump for Pretences; and at last, when they could no longer shift it, 'twas necessary for them to pitch upon such a City as would be sure to them, as depended on them, and where they had absolute Authority; and such at that Time was *Trent*. In the next Place, they would admit none for Members, but such as they had engag'd before-hand, that they might make it more firm for them, and make them proceed slow or quick, as they saw Cause. Then they broke off and defer'd it; and when they found their Party uneasy, they adjourn'd it to another Place, particularly to *Bononia*, on Pretence of the Badness of the Air. Then they sollicit'd all Catholic Princes utterly to extirpate the Protestants; and when that would not do, they scatter'd Reports among the Catholic Princes to set them together by the Ears, and enter'd into Leagues with the stronger Side to support their Greatness, and raise it higher. They us'd all possible Means to win the Bishops, and the rest that had Votes; and the Council gave 'em great Promises, and made them Presents, till they could give them Dignities and Benefices, on Condition, That they should determine nothing but according to the Plea.

' Pleasure of the Holy See; to anathematize
 ' all the Opinions of the *Lutherans* and
 ' *Calvinists*, without Exception; to make
 ' good Decrees in Appearance for the Re-
 ' formation of Manners, and Ecclesiastical
 ' Discipline; about Points unnecessary, or
 ' such as never came in Question; and,
 ' under-hand, to forge others to confirm
 ' the groundless Usurpations of the Pope
 ' over Christian Princes, and to make his
 ' Power truly Monarchical; so as he would
 ' make all the Kings and Princes of the
 ' Earth to tremble at his Voice. They were al-
 ' so to disannul such Decrees of the Councils
 ' of *Constance* and *Basse* that were any way
 ' prejudicial to the Pope, and either covert-
 ' ly repeal them, or take such oblique Me-
 ' thods as might avoid the Force of them.
 ' And in the last Place, they were not to
 ' meddle with the Power of the Pope, with
 ' the Abuses and Misdemeanors of his Court,
 ' nor to suffer him to be charg'd with Neg-
 ' lect of his Spiritual Charge, and the Good
 ' of Souls, or with any unjust Attempts.

This Author gives us a further Account,
 ' That the Kings of *France* did always re-
 ' ject the Instances made by the Pope, and
 ' other Princes, and the Provincial Coun-
 ' cils of *France* by the Pope's Instigation;
 ' That the Pope was a Party, and therefore
 ' could not call the Council, nor be Judge
 ' in his own Cause, according to his own
 ' Canon Law, because of the several Ap-
 ' peals put up against him by Prote-
 ' stants and Papists. That the Papacy stood
 ' in need of Reformation, as had been
 ' confessed by Pope *Hadrian VI.* by the
 ' Councils of *Constance*, *Basse*, and *Pisa*:
 ' Therefore the Pope could not be Judge.
 ' That he had condemn'd the Protestants
 ' before they were called to Council;
 ' therefore they were not obliged to obey
 ' his Summons, nor submit to the Judgment
 ' of their known Enemy. That the Pope
 ' had stir'd up several Wars in the Time of
 ' the Council, and particularly in *France*,
 ' which hinder'd many that ought to have
 ' been present. That the *Germans*, *English*,
 ' and *French*, had demanded that the Coun-
 ' cil should be kept in a free Place, which
 ' *Trent* was not, being subject to the Pope,
 ' and the Passes stop'd and guarded, which
 ' was a just Objection, as had been own'd
 ' in the like Case by the Council of *Pisa*;

' and therefore they protested against the
 ' Council's meeting at the *Lateran*; that
 ' where the Place of Judgment is not safe,
 ' there may be an Appeal. He adds, That
 ' all were not call'd to this Council who
 ' ought to have been call'd, not all the
 ' Clergy, nor yet all the Laity, which was
 ' contrary to ancient Custom: That the
 ' Members of *Trent* were the Pope's Crea-
 ' tures, as was complain'd by the Emperor,
 ' the *French* King, and the *German* Prote-
 ' stants, and as good as confessed by the
 ' Popes: That the Number of Bishops was
 ' so few, it could not be call'd a General
 ' Council: That the Emperor and *French*
 ' King complain'd of the indirect Dealings
 ' in the Council: That the *Germans*, the
 ' *English* and *French*, protested against this
 ' Council: And that Justice was deny'd in
 ' Things demanded by the Emperor, the
 ' K. of *France*, the Catholick Princes of *Ger-*
 ' *many*, and the Duke of *Bavaria*; tho' ma-
 ' ny of the Abuses they desir'd to be re-
 ' form'd, were confessed by the Deputies
 ' of Pope *Paul III.*"

The Curious may see these, and many
 other Things to prove the Nullity of this
 Council, in those Two Authors, who being
 both Papists, cannot be justly suspected of
 Partiality.

Dr. *Nicholson* gives us this summary Ac-
 count of their Proceedings.

At their first Meeting, the Pope's Legate
 declar'd the Causes of the Calamities of the
 Church. In their second Session, they read
 and confirm'd the Articles of Faith pro-
 fess'd by all Members of the Catholick
 Church, according as 'tis in the Missal.
 The *Summa Conciliorum*, by *Corranzani*, says,
 they likewise confirm'd the Books of the
 Old and New Testament, with those of the
 Apocrypha, and Traditions. They also or-
 der'd the old vulgar Latin Translation to
 be used as Authentick in Churches and
 Schools; and that the Rule of Interpreta-
 tion should be the Church, and the ancient
 Fathers. In the 4th Session, they decreed,
 That all Men ought to believe Original Sin
 was utterly taken away in Baptism, inso-
 much, that the Concupiscence which re-
 mains in our Natures after Baptism, is not
 to be accounted a Sin, until we give the
 Consent of our Minds to it. They decreed,
 That

That the Virgin *Mary* was without Original Sin; and that before Regeneration, Man has a free Will to do Good, which being rous'd up and awak'd by God, is an Assistant to his Grace. In the 6th Session, they resolv'd, That Man is justified partly by Faith, and partly by Works; and Justification does by no means consist in a free Forgiveness of Sins; and the Free Imputation of the Righteousness of Christ to all Believers. In the 7th Session, That all Men who would be reputed Members of the Catholick Church, ought to believe that there are 7 Sacraments. These Decrees being pass'd, the Pope's Physician declar'd the Air of *Trent* to be corrupted, on which most of the Bishops were perswaded to remove to *Bononia*; but the *Spanish* Bishops refus'd to go thither. The Emperor's Minister protested against this Translation of the Council, and, in his Master's Name, declar'd, That what was done at *Bononia* should be void. Thus, after two Years, their Meeting was broke up in a Huff.

Their second Meeting was again at *Trent*, in the Time of Pope *Julius III.* September 1551, when the *French* Ambassador declar'd, That his Master was so perplex'd with Rebellions, he could not send his Bishops; and that the Council of *Trent* was not a General Council, but a Synod assembled for the Views of a few private Men, and therefore protested against it. In their 2d Session at this Meeting, they confirmed Transubstantiation: And in the 3d Session, That Penance and Extreme Unction were Sacraments of the New Testament. The Protestant Ambassadors offer'd to exhibit a Confession of their Faith; but the Pope's Legate did not receive it, because in the Title they did not signify their Willingness to submit to the Determination of the Council in all Matters of Faith. During this Time, the Elector of *Saxony* and the Emperor came to an open Rupture; and the Elector having taken *Augsburgh*, the *Italian* Bishops retired from *Trent* in Precipitation.

The *Spanish* Prelates assembled however, and adjourned the Council for two Years; but did not meet again till *January* 1562, in the Time of Pope *Pius IV.* when they condemn'd *Luther's* Books, and order'd several Books that had been writ since the springing up of Heresy, as they call'd it,

to be revis'd and reported. They decreed, That the Laity were not bound to communicate in both Kinds; That the Church had Power to order the outward Administrations of the Sacraments as she thought most convenient for the Good of the Receivers; That the Mass was a Propitiatory Sacrifice for the Quick and Dead; and anathematiz'd such as should dare to affirm, That there was no more than a Sacrifice of Thanksgiving, and a Commemoration of Christ and his Sufferings. They likewise declar'd Ordination to be a Sacrament, and made certain Canons for the Administration of it, and anathematiz'd those who should say, That there was not a Hierarchy in the Church of Divine Institution, consisting of Bishops, Presbyters, and Ministers; or such as should say, That the Bishops were not superior to Presbyters, or that the Power of the one and the other was the same. They likewise decreed, That the Church of *Rome*, or her Representative the Pope, had a Power to dispense with the 18th Chapter of *Leviticus*, not only in allowing Persons to marry who are there forbidden, but also to forbid Marriage betwixt such as the Law of God and Nature had allow'd it. In the 9th and last Session held the 3d of *December*, 1563, they confirmed the Doctrine of Purgatory, the Invocation of Saints, the Worshipping of Images and Relicks, granting of Indulgences, Superstitious Fasts, &c. and then put an End to the Council. Here 'tis fit to observe, That there was as little Regard shew'd to the Demands of the Emperor, the King of *France*, and the Catholick Princes of the Empire assembled in the Diet, as to the Demands of the Protestants.

The Emperor, as *Natalis Comes*, in the History of those Times, informs us, demanded a Reformation both of the Pope and Court of *Rome*; That the Number of Cardinals should be reduc'd; That scandalous Dispensations should be abrogated; That Monasteries should be brought under the Jurisdiction of the Bishops of the Diocese; That the Multitude of Canons and Decrees should be lessen'd, and Superstitious ones repeal'd; That Ecclesiastical Constitutions should be reduc'd to the Rules of God's Law; That none should be excommunicated but for publick Scandal; That

the

the Breviaries and Mass Books should be purged of all that was not taken out of the Scripture; That Prayers should be allowed in the Vulgar Tongue; That Communion should be in both Kinds; That the Rigour of Fasting should be mitigated; That eating of Flesh might be licens'd, Priests Marriage allow'd, and several Glosses upon the Gospels raz'd out. The French Court demanded the like, and also that Psalms might be sung, the Sacraments administred, and a Catechism made in the Vulgar Tongue, that the People might be instructed what they ought to believe concerning the Worship of Images, Indulgences, Pilgrimages, Relicks of Saints, Fraternities; and that all Superstitious Errors might be removed from them; That Publick Penance might be restored for heinous Offences, Publick Fasts appointed for appeasing God's Wrath, and General Councils held once in 10 Years; That holding of Benefices in Trust and Commendams might be abolish'd, and confer'd upon none but Persons of Merit, with Consent of the Bishops and People.

The Catholick Princes of Germany complain'd of these and many other Things, as forbidding of Meats, Marriages, the Abuse of Indulgences, against the excessive Number of Holidays, and against the Usurpation of the Clergy. The Duke of Bavaria's Minister pressed earnestly for the Marriage of Priests, alledging for it, That in the last General Visitation of Bavaria, 'twas found, that there were not 3 in 100 Priests but what were either common Whoremongers, or privately married. He pressed also for Communion in both Kinds, and Reformation in Doctrine. But all these Demands were to no purpose; nor are we to wonder at it, since *M. Ranchin* tells us, That Pope *Paul III.* in 1538, appointed 9 Cardinals, and other Clergymen, to consider and advise him what was best to be done for Reforming the Church, and to tell him upon their Oaths the Truth, on Pain of Excommunication; and tho' they did it, and pointed at many Things that wanted Reformation, yet he had no Regard to what they said.

Mr. Ray, in his Travels, says, That on the Front of the Quire of the Cathedral Church at *Trent*, there's a Latin Inscription, giving a short Account of the Council; by

which it appears, that there were at this Council 13 Cardinal-Legates, 9 that were not Legates, 29 Ministers from Princes, 3 Patriarchs, 33 Archbishops, 233 Bishops, 18 Abbots, 12 Generals of Orders, 148 Doctors of Divinity, 18 Proctors or Deputies, 3 Officials of the Council, 9 Chantors, 4 Notaries, and 2 Couriers from the Pope.

Misson, in his Travels to Italy, says, the City stands on a flat Rock, of a sort of Red and White Marble, which furnishes Materials for Building; and that the City is subject to dangerous Inundations from the overflowing of the River, and some neighbouring Brooks, which fall down sometimes with such Impetuosity from the Mountains, that they roll great Rocks along with them into the Town, which is fortified only with a single Wall. In one of the Chapels of the Cathedral, they have a Crucifix as large as the Life, which the fabulous Priests say bow'd its Head, in Token of its Approbation of the Councils Decrees when they were proclaim'd under it. They add, That this Crucifix was made without Hands, and that no body knows the Materials it is composed of. The Church of *St. Mary Major*, where the Council sat, is built of a base sort of Marble; and the Organ in it, besides counterfeiting the Singing of Birds, resembles the Cries of several Beasts, and the beating of Drums. In *St. Peter's Church*, they have a Chapel for *St. Simonin*, a Shoemaker's Son, who in the 28th Month of his Age was stole and murder'd by the Jews, who drank his Blood at one of their Feasts, and throw his Carcass into a Water-Pipe, where their Synagogue stood; and being thence carried into the River, it was found by Fishermen: Upon which the Murder was discover'd, 39 Jews executed, and the rest for ever banish'd the City. Pope *Sixtus IV.* canoniz'd this Child, which being embalmed, is kept in a Case on the Altar of his Chapel, with the Knife, Pincers, and 4 great Needles, they made use of to torment him, and two Silver Goblets in which they drank his Blood.

The 2d Town in this Bishoprick is *Pozzen*, by the Italians called *Bolzano*, 18 Miles N. E. from *Trent*, on the Banks of the *Adelph*. The Town is more considerable for

its

its Trade than Strength; for it has no other Fortifications but the River, and rocky Hills about it. They have 4 Annual Fairs, of 15 Days each, which are much frequented by Merchants from *Illyricum*, *Dalmatia*, and *Germany*: During which Time, they have a proper Magistracy, and Courts of Judicature of their own, distinct from those of the Town; and none are allowed to trade without being enter'd in their Judges Book, and receiving a Certificate from him, sealed with the Arms of their Corporation, which is a Globe of the Earth, surrounded with abundance of all sorts of Merchandize pack'd up, and this Motto, *Ex Merce pulchrior*; i. e. It becomes more beautiful by Trade. These Privileges were granted them by *Claudia* Arch-Duchess of *Austria*. This Place was taken from the Bishop of *Trent* by *Minard* II. Count of *Tirol*, in 1295, and is now subject to the House of *Austria*.

3. *Roveredo*, or *Roveretum*, on the Banks of the *Adige*, and Frontiers of *Venice*, is a Town of good Note, was formerly subject to *Trent*; but by the Treaty of *Noyon*, was made over to the Emperor *Maximilian* II. It lies about 10 Miles S. from *Trent*, and has a strong Castle.

There are several other Market-Towns and small Cities within this Bishoprick; but are remarkable for little, except that all of them have good Wine. *La Forrest* mentions *Tubino*, *Madrizzo*, *Arco*, *Nago*, and *Torbolo*, which are all fortified Places in this Bishoprick, and were taken by the *French* under the Duke of *Vendosme* during the last War in *Italy*.

The Circle of B A V A R I A.

The Bishoprick of Saltzburg.

THE City of that Name was anciently called *Colonia Hadriana Juvavina*, because the Emperor *Hadrian* plac'd a Colony here on the River *Juvavus*. The Inhabitants say, That the Emperors *Augustus* and *Tiberius* having subdued the *Salassii* and *Rhaeti*, with other Inhabitants of the *Alps*, they invaded the *Vindelici*, the *Norici*, and *Pannoni*; and to secure their Conquests, built a

Fort here, which is frequently mention'd by *Antonin*; but 'tis sometimes corruptly writ *Jovavum*, *Ivavum*, *Ivarum*, and *Vivavum*. *Bertius* and *Cluverius* think it to be *Ptolemy's Gavanodurum*. The present Name of the Town, and the River *Salza*, on which it stands, is derived from the many Salt-Pits on its Banks. This Archbishoprick has Part of the Dutchy of *Bavaria* on the N. and W. *Carinthia* on the S. and E. with Part of *Stiria* and *Austria*; and on the W. it has Part of *Bavaria* and *Tirol*. Its greatest Length from S. W. to N. E. is about 100 Miles; and the greatest Breadth from N. to S. is 65. The Country affords, besides Plenty of Salt, Mines of Copper, Iron, Silver, &c. A little above the Town of *Saltzburg*, springs the famous Bath of *Gastein*; the Water is hot, tastes strong of several Minerals, and by Bathing and Washing cures the Stone, Cholick, Pox, and other Malignant Distempers; but is never taken inwardly. The chief Mines in this Country are at *Gastein*, *Raurist*, *Briental*, &c. They have also many Stone Quarries, with Variety of Stones of different Forms. The large rough Jasper, which lies unregarded in the Court of the Emperor's Palace at *Vienna*, came from hence. The Archbishop is by his Place Legate of the Papal See, which has occasioned Quarrels betwixt him and the Archbishop of *Magdeburg* for Precedency, which the Imperial Court has not yet determin'd. Within this Province, there are reckon'd the Bishopricks of *Chiemsee*, *Gurck*, *Seccaw*, *Lavant*, *Freisingen*, *Passau*, and *Brixen*. Some add *Ratisbon*. The first 3 are not Princes of the Empire, and therefore have no Vote in the Diet. There are 8 Cities in this Province, viz. *Saltzburg*, *Hallein*, *Lawfen*, *Tittmoning*, *Muldorf*, *Frisach*, and *St. Andrew's*. The two last in *Carinthia*, formerly *Pettau* and *Stiria*, and *Gemund* in *Carinthia*, were reckon'd in this Province; but they are not so now.

Towns of Note here.

1. *Saltzburg*, the Metropolis. *Aventinus* thinks it changed its Name of *Juvavina*, when *St. Rupert* began to preach here. The old Name being lost by the Irruptions of

of the *Goths*, *Huns*, &c. about 476. *La Bériss* says, the *Goths* sack'd it in the first Century, and kill'd the Bishop and all the Christians; so that they had no Bishop for 200 Years. After that the Salt-Springs were discover'd, and then it was rebuilt by the Princes of *Bavaria*. *Charlemagne* transferred hither the Title of Metropolitan of all *Bavaria* from *Passau* in 798. The Cathedral was built by *St. Virgilius* in 773, and by him dedicated to *St. Rupert*, who, according to *Strachan's* Account in *Blom's* Atlas, was Son to a King of *Scots*, and the Apostle of *Bavaria*, as appears by *Camisius*, in the Monuments of *Salzburg*, *Antiq. Lect. Tom. 4.* Some say, *Virgilius* was also a *Scotts-man*. Pope *Gregory VII.* made the Archbishop of *Salzburg* perpetual Legate for *Germany* in 1073, and he was made Primate of *Germany* by the Treaty of *Munster* in 1648. He is a Prince of the Empire, Codirector with the Elector of *Bavaria* of that Circle, has the first Voice in the Diet of any of the Ecclesiastical Princes after the Electors, and is chosen by a Chapter of 28 Canons, who must all prove their Nobility before they are admitted. The Town is very strong, and well built; and tho' it has suffered much both by Fire and Water, 'tis now one of the fairest and strongest Cities of the Empire. It was formerly an Imperial Town, but is now subject to its Archbishop. His Palace is a very magnificent Structure, stands upon a Hill, is well fortified, and called *Mirabel*. The great Hall, the Galleries, the Tapestry, and the Chamber of Rarities, are well worth a Traveller's seeing. The Gardens and Orchards are well order'd, and abound with Figs, Pomegranates, and other choice Fruits; but the Archbishop's chief Garden of Pleasure is at *Hellenbrun*, a Mile distant, where there are noble Water-Works of various Shapes, with abundance of strange Beasts, Fowls, Fishes, &c. of all Sorts; and at the further End of it, two curious Prospects from Houses of Pleasure. The publick Inns of the City are so large, that they are capable to entertain the greatest Princes of the Empire, with their Attendants. The Inhabitants have a good Trade from the Salt produc'd in the neighbouring Pits. The Cathedral was new

built in 1618, and is reckon'd one of the most magnificent in *Europe*. In *St. Sebastian's* Church, lies buried the famous Physician *Theophrastus Paracelsus*, who died the 24th of September, 1541. Some will have him to be a *Swiss*; but *Quade*, in his Gallantry of the German Nation, says, he was Bastard to one of the German Lords of *Brembach*, who order'd him to be made an Eunuch, and sent him to a Monastery to study. It lies in Long. 32. 12. Lat. 47. 30. on the Borders of *Bavaria*, at the Conflux of the *Salz*, and two other Rivers, 67 Miles S. E. from *Munich*, and about 50 S. W. from *Passau*. The University here is one of the most considerable in the Empire.

2. *Hallein*, two German Leagues, S. from *Salzburg*, on the Banks of the *Salza*. The Latins call'd it *Halliola* and *Hallula*. 'Tis famous for employing multitudes of People in its Salt-Works, from whence it had its Name. *Dr. Nicholson* says, That in 1563, there was found here in a Salt-Pit, 6300 Foot deep, in the midst of a hard Rock of Salt, a Humane Body, with its Limbs, Hair, and Clothes, uncorrupted; which, by its Antick Dress, seem'd to have lain there some Ages. This is attested by *Megister* in his Chronicle of *Carinthia*, and by the Author of *Metrop. Salisb. Tom. 1. Fol. 35.*

3. *Lauffen*, a small Town betwixt *Salzburg* and *Titmoning*, on the *Salz*, about 15 Miles N. W. from *Salzburg*. In 1147, *Frederick I.* held a General Diet of the Empire here. 'Tis a pleasant Town, and has a good Trade. *Lazius* fancies it to be the Remains of *Antonin's Laviacum*, because of an old Roman Inscription found near this Place.

4. *Titmoning*, a small Town betwixt *Burckhausen* and *Lauffen*, supposed to be *Antonin's Bidaum*. 'Twas almost wholly destroyed by Wild-Fire in 1571, and taken by *Maximilian of Bavaria* in one Day in 1611. 'Tis still fortified, but not strong.

5. *Rudstätt*, a considerable Market-Town on the *Enz*. Several Geographers make it the ancient *Taurina* or *Turnia* of the *Norici Mediterranei*. *Lazius* approves this, because the Names of several Mountains near this City end in *Taurn*, and in ancient Records 'tis call'd *Taurachstätt*. *Albert Duke of Austria*,

Austria, before he was Emperor, besieg'd it two Months, but in vain, being obliged to a shameful Retreat.

6. *Muldorf*, famous for a Battle betwixt the Emperor *Lewis* of *Bavaria* and *Frederick* of *Austria*, in 1322. It lies on the *Imn*, a *German* League from *Oettingen*.

The Archbishop of *Salzburg* has a Power of creating Knights of the Order of *St. Rupert*, who wear a Medal with the Effigies of that Saint, and the Red Cross of the Order on the Reverse.

The County of Tirol.

W *Armand Igle*, a *German* Lord, in his Description of this Country, says, 'twas the *Rhetia Superior* of the *Latins*, which, with *Rhetia Inferior*, was by the *Romans* accounted Part of *Italy*; for this, he quotes *Pliny*, who makes *Trent* to be the *Urbs Rhetica*. He adds, That the *Rhetian*, a Dialect of the old *Tuscan*, is still spoke in many Parts of this Country.

Tirol has *Swabia* and *Bavaria* on the N. Part of *Switzerland* and the *Grisons* Country on the W. *Brinzen* and *Salzburg* on the E. and *Trent* on the S. *Mell* makes it 125 Miles from E. to W. and the greatest Breadth about 52 from N. to S. *Dr. Nicholson* says, for Riches, Number of Inhabitants, and Plenty of Provisions, it is equal to most Duchies in the Empire. They have store of Silver and Copper Mines in their Mountains, especially at *Braunegg*, *Kutznabel*, and *Schwatz*. The Mines at the last were found in 1448; and before 1560, were so much improved, that they employed 30000 People; but in 1600, they were diminished to 2000, and are now fewer; so that the Revenues of the Count of *Tirol* from those Mines fall now much short of 300000 *Gilders per Annum*, which *Cuspinian* says they yielded in his Days. The Country is well stock'd with Wine, Fish, Venison, Wood, and other Necessaries for Life; so that the Emperor *Maximilian* said, It was like a Countryman's Coat, coarse, but warm. The Rocky Mountains, almost perpetually cover'd with Snow, make no good Appearance to the Eye; but the Vallies about *Innsbruck* are as fruitful as elsewhere. The Populousness of the Country may be guess'd at from

Grasser's Account of the small Province of *Namsberg*, which, tho' but 12 *German* Miles long, and 3 broad, he says contains 350 Parishes, and 32 strong Castles.

The whole is divided into many lesser Provinces; the chief of which are, 1. *Essthal*, so called from the River *Essthal*. 2. *Imthal*, or the Valley along the *Imn*, the pleasantest Part of the Country. 3. *Finstertal*. 4. *Pasertal*. 5. *Munstertal*. 6. *Kunstal*. 7. *Wallerthod*. 8. *Namsberg*, besides several others of less Note, and 3 or 4 Lordships, taken from the *Bavarians* by the House of *Austria*.

While this Country was subject to the *Romans*, 'twas governed by a Lieutenant sent from *Rome*; but on the Fall of the Empire, was seized by the Princes of *Bavaria*, whose Deputies govern'd it under the Name of Marquisses, when 'twas joined to the Empire. *Frederick I.* when he proscribed *Henry the Lion*, Duke of *Bavaria*, divided his Dominions among other Princes, and *Tirol* was divided among others, and subjected to several; the chief of 'em was the D. of *Meran*; but that Duchy and City fell at last into the Hands of the Counts of *Tirol*; the last of whom, of the *Bavarian* Line, was *Albrecht*, whose eldest Daughter was married to *Henry*, Son to the Emperor *Frederick II.* and the Country was divided betwixt the Posterity of her and her Sister. And in 1289, *Elizabeth* of *Tirol* marrying *Albert* of *Austria*, brought that Country to his Family; and by Advice of her Council, *Margaret* of *Tirol* having no Issue, settled it again upon the Family of *Austria* in 1363. Since which, it has always continued in their Hands.

The chief Towns.

1. **I** *Innsprug* or *Innsbruck*, Lat. *Oenipons*, so call'd because of its Bridge over the River *Imn*, is the Metropolis of the Country. It lies in Long. 30. 33. Lat. 47. 12. about 12 Miles S. from the Frontiers of *Bavaria*, 28 N. W. from *Brinzen*, and 66 N. E. from *Trent*. It appears by an old Inscription, That *Otto I. D.* of *Meran*, wall'd this Town in 1234; but nothing of these Fortifications remain now, except three Gates. The Princes of *Tirol* thought it not worth while

to make the Fortifications strong, because it lies in the Heart of their Territories, and was defended at some distance by the strong Castle of *Ombraz*, and the Town of *Hall*; so that on the E. Side, it neither has nor needs any Fortifications; but the other Part is defended by Walls and Ditches, which seem rather to be designed for Ornament than Strength. Besides, the Entrance of the Country is so well guarded by strong Castles, that 'twas thought strange *Maurice* Elector of *Saxony* should have been able to march an Army hither, as he did, when he almost surpris'd *Charles V.* The Town is well built, especially the Suburbs, where there are many stately Houses. The Cathedral or chief Church at the *Franciscan* Monastery is a stately Fabrick of hewn Stone, built by the Emperor *Ferdinand I.* who erected a noble Monument here for his Grandfather *Maximilian I.* on the Top of which stands a vast Statue of that Emperor in Alabaſter, guarded by 28 Statues of Brass, of exquisite Workmanship, larger than the Life, which make a noble Appearance; 14 of 'em represent Emperors and Princes of that Family, and 8 of 'em Emperresses and Princesses, and the rest several other Princes. Under the Emperor's Statue, there's a Character of that great Prince in Golden Letters, upon black Marble. The chief Ornament of the Town is the Palace of their ancient Counts, which has since been the Residence of the Princes of the House of *Austria*. 'Tis beautified with many fair Gardens, Groves, Walks, &c. The Palace is convenient and large, but not regular or beautiful, having been built at several times. *M. Miſſon* says, the Roofs of the Houses are flat on the Top, and the Rafters, instead of rising to a Point, are revers'd; so that the Rain is gather'd in the middle of them. In the City, there's a House called the *Chancery*, the Porch of which the Inhabitants pretend to have been cover'd with Plates of Gold by Arch-Duke *Frederick*, when he return'd from his Exile; but *M. Miſſon* having view'd them narrowly, found the Plates, which resembled Tiles, to be of Brass, cover'd with a thin Plate of Gold, or at least of other Metals gilded; and being about 15 Foot square, he supposes it might cost about 200000 Crowns. The Citizens have a good Armory, well

furnish'd for Horse and Foot, as they pretend for 30000 Men. They have two Cannon of a vast wide Bore, and each Barrel 16 Foot long. They have 50 more of a considerable Size, one of which has 7 Barrels, that may be discharged severally. *Dr. Nicholson* says, That in the Palace, there's a vast Collection of Rarities, such as Agates, Chrystals, Corals, Jaspers, Jacynths, *Turkey* Stones, &c. Several Lumps of Virgin Gold and Silver dug out of the Mines in *Germany*, and a vast Number of Medals, with ancient and modern Coins; a compleat *Persian* Suit of Armour, richly adorn'd with *Turkey* Stones and Rubies; the Arms of the House of *Austria*, exactly represented in Diamonds and Rubies; a large Crucifix of Coral; the Sword of an ancient *Swiss*, with an Almanack cut on the Hilt; a large Dish of Chrystal set in Gold, beautified with Pictures in lively Colours, and adorn'd with many different Precious Stones, with abundance of other Rarities, too tedious to insist upon. In the City, there are many curious Fountains, and spacious Market-Places.

About an *English* Mile E. from the City, stands the pleasant and strong Fort called *Ombraz*. They derive its Name from the Design of it, which was to be a shady Summer-House. A large Book was printed here in 1601, with an Account of the Pleasures and Rarities of this Place. In their Armory, the most considerable Things are, the Armour of *Charles IX.* King of *France*, and of the Duke of *Parma*; the Statue of King *Francis I.* on Horseback in Plaister-work, exactly representing him in his Armour, and his Horse in his Trappings, as he was taken at the Battle of *Pavia*. They have likewise the Armour of several Emperors, Kings and Princes of other Nations, with the Picture of each Prince drawn to the Life by his Armour. In another Room, there's a Collection of Rarities, among which, the chief are, Part of the Trunk of an Oak, in the Body of which there's a Deer quite enclos'd with Wood, of which their Philosophers give this Account, That this Deer did probably perish in the Snow; and upon a Thaw, was hurl'd down by a Torrent from the neighbouring Hills a considerable Depth into the Ground, where 'twas first incircled by the Roots, and af-

terwards by the Body of the Tree: Several Drawers of *Roman* and other ancient Coins in Gold and Silver; many Pieces of ancient Armour; a Log of Wood and Wedges petrify'd, because, say the superstitious People, the Carpenter ventur'd to work on a Holy-Day; several fair Copies writ by a *German* with his Feet; a Piece of Wood growing out of a small Lump of Ore, which the Miners call a Farewel, because, when they meet such a Twig as this, they reckon the Ore holds no further. *M. Misson* says, there's a large Hall with all Sorts of Arms more curious than useful, among others a Lance us'd by Arch-Duke *Ferdinand* in Tournaments. They say, he was so strong, that he could stop a Coach and Six by taking hold of a Spoke of the Wheel, and would break two Crown-Pieces join'd together. In an adjacent Gallery, there's the Effigies of many Princes on Horseback in Armour, with all the Ornaments used at Tournaments; and the Skin of a Serpent, 15 Foot long, taken near *Ulm*. At the End of the Gallery, there's an Apartment fill'd with the Spoils and Arms taken from the *Turks*, with a Bassa and Aga of the Janizaries, represented on Horseback, with the same magnificent Habits and Harness, imbelish'd with Gold, Silver, and Precious Stones, they had when taken. In another Gallery, there are the Rarities mention'd by *Dr. Nicholson*; among which, there are 7 large Volumes bound in black Velvet, with Edges and Claps of Silver, which, instead of Leaves, contain small Boxes fill'd with Medals. There's a Cross-Bow, with 34 lesser Bows within its Compass, discharging so many Arrows at a time. There are also abundance of MSS. and rare Books, and Stones naturally representing Trees, Fruits, Shells, and Animals. They have many Sepulchre-Lamps, Urns, Idols, &c. and a Piece of Rope, which they pretend to be Part of that with which *Judas* hang'd himself. On the Walls and Sieling, there are admirable Paintings, among which, *Noah's* Rain-Bow is so extraordinary, that they say, the Great Duke of *Tuscany* offer'd 100000 Crowns for it. They have a Library, which is not in very good Order, and a Gallery full of Busts, and other Pieces of Antiquity; besides many other Apartments adorn'd with Pictures of great Value.

On the S. Side of the Town, cross a pleasant Field, stands the famous Monastery of *Wilhelm* or *Wilden*, called by *Antonin* in his *Itinerary*, *Veldidena*, from which the City of *Insprug* took its Original. The Monks are of the Order of *St. Northbert*, and pretend to great Antiquity. They say, their Founder was *Haymon*, a Gigantick Prince of this Country, of 12 Foot and a half long; and what they still call his Grave, is above 15. They alledge, That he killed a monstrous Dragon, which threw down as much of the Monastery by Night, as his Men built by Day; and they pretend to shew his Tongue, of 3 Span and a half long, which they keep as a valuable Relick. They have a Gallery with the Pictures of all the Abbots since the Foundation. The Monastery is encompassed with a Wall 16 Foot high, which they say was leap'd over by a Hart, when closely pursued by Dogs some Years ago. Before the Gates, there's a Pillar with an Inscription, giving an Account, That the Road from *Italy* towards *Augsburg* lay cross the Field where this Monastery stands; and that it was repaired near 100 Miles together in the Time of the Emperor *Septimius Severus*.

2. *Hall*, 8 Miles N. E. from *Inspruck*, famous for its Salt-Pits, and great Trade in Salt. Their chief Pits are 4 Miles from the Town, in the Mountains, where they dig the Salt like Ore out of Mines, throw it into great Trenches, which they fill with sweet Water, and let it stand a Month, till the Salt be dissolved, and the earthy Part sunk to the bottom: After which they carry it to be boil'd in the City. In their great Salt-House, they have 4 huge Iron Pans, each of which is 48 Foot long, 34 broad, and 3 deep; 3 of 'em are continually boiling, and one of 'em rests a Week by Turns. About 1000 Men are constantly employed in those Mines, and cutting Fuel for them. They have very odd Habits, and Hats of all Colours; and they carry their Salt in little Carts with Wheels, which they draw themselves. This Town, and that of *Trent*, were taken by the Elector of *Baravia* in 1703; but he was soon obliged to quit them.

3. *Meran*, on the Frontiers of *Trent*, 33 Miles S. from *Inspruck*, formerly the Metropolis of the Country, and the Residence of

a Duke. In 1419, a great Flood broke in upon this Town, which destroyed 400 People; and they say, That a Child in a Cradle, with a Cat sitting by it, were carried down the River 12 English Miles, and taken out alive. *La Forrest* says, That 'tis a pretty Town, and a Place of good Trade. Near this Town, stands the ancient and fair Castle of *Tirol*, with a small Market-Town of the same Name, whence the whole Country had its Denomination. 'Tis remarkable for little now but its Situation. *La Forrest* mentions *Glurens*, a small City, in one of the finest Countries of *Tirol*; *Pludentz*, Capital of a County of the same Name; *Sonnenberg* and *Feldkireck* the like.

4. *Stertzigen*, 17 Miles S. from *Innsbruck*, near the Mountains called *Brenner*, noted by ancient Geographers for being almost continually cover'd with Snow; and are by some ancient Authors falsely called the *Pyrenean* Mountains, from whence they make the *Danube* to spring, which is another gross Mistake.

BAVARIA.

THIS Country contains a great Part of the ancient *Rhætia*, *Vindelicia*, and *Noricum*; but chang'd its Name, as we formerly mention'd, when the *Bois* seiz'd it about 472, as *Jornandus* tells us.

The Country abounds with Corn of all Sorts, Fruit, Venison, Metals, Marble, Salt, Baths, &c. and some Wine, which would very much enrich the Inhabitants, were they allowed the same Freedom of Trade with other Parts of the Empire. But their Electors have for many Years monopoliz'd their three chief Commodities: For, 1. They are forbid, on great Penalties, to import Salt from any other Dominions, or to buy any, that is imported; and the Elector's Agents are only allow'd to sell their own Salt they dig at *Dravestein* and *Obenhall*; which being coarse, they mix it with the purer Salt brought from *Salzburg*, and sell it again to those who want it. 2. He engrosses all the Corn, so that none is permitted to sell it but his Agents. 3. He monopolizes all the strong Beer, which is so much valued, that 'tis exported to other Countries of the Empire, and sold only by his

own Servants; but the People are allow'd to brew a sorry small Beer for their own Use. The Bishop of *Passau* has lately followed the same Method; by which he fills his own Treasures, but impoverishes his Subjects; so that the chief Subsistence of the Peasants is from the great Herds of Swine fed in their Woods by Acorns and Crabs. They have also great Numbers of Bears, Wild-Bears, and other Sorts of Venison, in their Forests, which they frequently make bold with, tho' they are forbid it without the Elector's special Commission. Their Deer are generally of an extraordinary Size; and their Historians say, That in 1562, there was a Hart caught which weigh'd 625 Pounds.

This Country has *Misnia* on the N. *Salzburg* and *Tirol* on the S. *Swabia* and *Francia* on the W. and *Bohemia* and *Austria* on the E. From S. to N. is 155 Miles, and from E. to W. about 125.

Some Foreign Authors, and even several of their Neighbours, reckon them a rude and barbarous People in comparison of other Germans, and commonly call 'em Hog-drivers; but those who have travelled the Country of late find it otherwise, and that they are as hospitable and courteous as others; tho' it must be own'd, that the absolute Government of their Prince very much hinders their growing rich, as the Impositions of their Clergy keep 'em grossly ignorant in Matters of Religion; so that most of their Worship is paid to Images and Saints.

Their ancient Government was like that of the other Germans; tho' there is little of their History that can be depended on before *Charlemagne*.

The *Atlas Historique*, and Dr. *Nicholson*, give the following Account of the Genealogy of the *Palatine* Family, and of that of *Bavaria*.

Aldigerus is said to have made himself King of *Bavaria* in 456, and died in 504. He was succeeded by his Son *Theodo I.* who had War with the *Romans*, and, according to Dr. *Nicholson*, was the first who had the Title of Duke in that Country, because the *Franks* having made him their Tributary, that Title was more suitable to his Cir-

cumstances. His Son *Theodo II.* succeeded, who was surnam'd, *The Great*, because he drove the *Romans* out of his Country beyond the *Alps*. The *Atlas* places his Reign in 512. He was succeeded by *Theodo III.* who, Dr. *Nicholson* says, was their first Christian Prince, being converted, with his Country, by *St. Rupert* the *Scotts-man*, formerly mention'd. We have nothing remarkable of their other Princes till *Odilo* or *Willo*, whom the *Atlas* makes their 13th Prince, but Dr. *Nicholson* their 14th; who being encourag'd by the Success of some of his Predecessors, re-assum'd the Title of King; but was defeated near *Augsburg* by *Carloman* and *Pepin*, and forc'd to content himself with his old Title of Duke. He was succeeded by *Tassilo II.* the last Duke of *Aldiger's* Race, who was deposed by *Charles the Great*, and *Tassilo* and his Son *Theodo* were shut up in the Monastery of *Laurefheim* or *Lorsch*, within 4 German Miles of *Heydelberg*, where his Monument is still to be seen, with an Inscription in Rhiming Latin Verse, giving a short Account of his Story. Dr. *Nicholson* says, That *Charlemagne* having thus seiz'd *Bavaria*, he enlarg'd its Boundaries a great way into *Hungary*, and made it once more a Kingdom. After this Emperor's Death, his Son *Lewis the Pious* gave his own Son *Lotharius* the Title of King, tho' he rul'd only as his Father's Deputy. He was succeeded by his Brother *Lewis*, whose Kingdom, says *Aventinus*, reached from the River *Lech*, which runs by *Augsburg*, as far as the *Saave* and the *Teiffe* in *Hungary*. *Lewis* died in 876, and was succeeded by his eldest Son *Carloman*, who being slain in a Battle near *Oettingen*, his Brother *Lewis* succeeded, who being chosen Emperor, *Arnolf*, his Brother *Carloman's* Bastard, Prince of *Stiria* and *Carinthia*, succeeded to *Bavaria*. He also being chosen Emperor after his Uncle's Death, made his own Son *Lewis* King of *Bavaria*, who dying without Issue, and his Brother *Conrad* being Emperor, the *Bavarians* chose *Arnolf II.* called *The Wicked*, a Prince of *Charlemagne's* Lineage, to be their King; who revolting against *Conrad*, was by him and the Emperor *Henry I.* forc'd to lay aside the Title of King, and to re-assume that of Duke. The *Atlas* says, That this *Arnolf* is by some accounted the Founder or Origine

of the present Families of *Bavaria* and the *Palatinate*, and was Son, as some Historians inform us, says Dr. *Nicholson*, to *Leopold* Marquis of *Austria*. He walled *Ratisbon*, and died about 937. From him descended the Counts of *Schiren*, who were for some Time depriv'd of their Succession; but *Werner*, one of those Counts, recover'd it again, and from him the present Family proceeds. *Henry III.* one of his Successors, is observ'd by some to have been the first Emperor who came in by Election, according to the Order made by Pope *Gregory V.* After which, *Bavaria*, since this Emperor died without Issue, was transferred to several Families, according as the Emperors thought fit. But *Conrad II.* *Henry III.* and *Henry IV.* who succeeded him in the Empire, kept it in their own Hands, and their Deputies had the Title of Dukes: At last, the Dukedom was given by the Emperor *Henry IV.* to *Guelph* Count of *Raribon* in *Swabia*, who died in 1101, and was succeeded by *Guelph II.* He by *Henry V.* and he by *Henry VI.* surnam'd *The Proud*, who married the only Daughter of *Lotharius* the Emperor, and was made D. of *Saxony*. After the Emperor's Death, he disput'd the Title of the Empire with *Conrad* Duke of *Swabia*, who was elected Emperor, for which he was proscribed. After this, *Bavaria* was given to his Half Brother *Leopold* of *Austria*; who dying in 1141, he was succeeded by his Brother *Henry VII.* who, at the Emperor's Command, resign'd it to *Henry VIII.* Son to *Henry VII.* who, for his great Performances in the *Holy Land*, had a Lion given him for his Coat of Arms, and on that Account was call'd *Henry the Lion*. But rebelling against the Emperor *Frederick I.* he was proscribed, and succeeded by *Otho* Landgrave of *Witelsbach*, who was descended from *Arnolf* of *Shiren*, formerly mention'd: And thus *Bavaria* return'd to the Family of its ancient Masters. He died in 1183, and was succeeded by his Son *Lewis*, who, as *Aventinus* says, was made Count *Palatine* of the *Rhine* by *Frederick II.* Others say, this Honour was confer'd first on his Son. This Prince being murder'd by a Russian, was succeeded by *Otho the Illustrious*, who married the only Daughter of *Henry* Duke of *Saxony*, and Count *Palatine*; whereupon the Electoral Dignity was first brought into the Family of *Bavaria*, as is

confirmed by an ancient Rhime under the Picture of this Prince in the Electoral Prince's Gallery at *Heydelberg*, where he died, and was succeeded by his Son *Lewis the Constant*, or *the Severe*, Count *Palatine* of the *Rhine*, and Duke of *Bavaria*. He died in 1294, and from his Son *Rodolph I.* came the present *Palatine* Family; and from his Son *Lewis*, came that of *Bavaria*. Here *Dr. Nicholson* and the *Atlas* differ; for the former makes *Lewis* and *Rodolph* the Sons of *Otho the Illustrious*, and the latter makes them Sons to *Lewis the Constant*. *Dr. Nicholson* adds, That *Lewis*, called by Historians *Lewis* of *Bavaria*, was chosen Emperor, and maintain'd his Title against *Frederick of Austria*, and his Brother *Rodolph*, whom he banish'd; but confirm'd the Title of the *Lower Palatinate* and *Amberg* to his Children, and order'd, that the Electoral Dignity should remain by Turns in his own and his Brother's Posterity. The Emperor *Charles IV.* and his Successors refused to observe this Edict, and gave the Electoral Dignity to *Rodolph's* Branch, against which the Dukes of *Bavaria* always protested at the Election of the Emperor; and many Treatises, pro and con have been writ on this Subject, which were printed at *Munichen* and *Heydelberg* about 1612, and 1644. *Stephen* succeeded his Father the Emperor in the Dukedom of *Bavaria*, and died in 1237, leaving three Sons, who for some Time were joint Governors; but at last the greatest Share fell to *Frederick*, the 2d Brother. But here *Dr. Nicholson* and the *Atlas* differ in the Succession; for the latter says nothing of *Frederick*, or of his Son *Henry*, his Grandson *Lodowick*, or *George the Rich*, whom the Doctor makes Successors one after another to *Stephen*. The Doctor says, That *Lewis*, Grandson to *Frederick*, banish'd the Jews, seiz'd their Goods, and died in 1479. That *George the Rich*, who succeeded him, founded the University of *Ingolstat*, and died in 1503, without Issue-Male, having married his only Daughter to *Rupert* Elector *Palatine*, who expected the Dutchy of *Bavaria* as her Dowry; but *Maximilian I.* being unwilling that the *Palatine* Family should rise so high, he encouraged the Princes of the House of *Bavaria*, who resided at *Munichen*, to dispute the Elector *Palatine's* Pretensions by War; so that at last the Dutchy of *Bavaria* came to

Albert, who was lineally descended from Duke *Stephen*; and he dying in 1577, was succeeded by his Son *Albert II.* or, as some call him, *Albert V.* who was so zealous a Papist, that he built and endowed several Colleges for Jesuits in *Lantzberg*, *Ingolstat*, and *Munichen*. He was succeeded by his Son *William*, as zealous a Papist as his Father, who dying in 1626, was succeeded by his Son *Maximilian*, who having join'd with *Ferdinand II.* against *Frederick* Elector *Palatine*, that was chosen King of *Bohemia*, he was invested in the *Upper Palatinate*, and the Electoral Dignity at first for Life, when several Electors protested against it; but afterwards, in a Diet at *Prague* in 1628, it was confirmed to him and his Heirs, and ratified by the Treaty of *Munster*. He died in 1651, and was succeeded by his Son *Ferdinand*, who was noted for Reservedness and Piety, but not much for Valour or Learning. He died in 1679, and was succeeded by the present Elector *Maximilian Emanuel*, who was born in 1662; and declaring against the Emperor in Favour of *France*, and his Sister's Son the D. of *Anjou*, did, with the *French* Forces, raise War in the Empire, subdued Part of *Tirol*, and pushed his Conquests to the Frontiers of *Austria*; but his Army, and that of *France*, being routed at the famous Battle of *Hochstet*, he is dispossest of his Dominions, as is also his Brother the Elector of *Cologne*, and he was put into the Ban of the Empire in 1704. His eldest Son, *Albert Cajetanus John Joseph George*, was born in 1697. From the Branch of *Bavaria* came that of *Wartenberg*, by a Son of *Albert V.* The present Prince is *Francis Marquardus*, Count of *Wartenberg*, who is a Knight of the *Golden Fleece*.

The Elector's Titles are, - By the Grace of God, Duke of *Upper* and *Lower Bavaria*, and of the *Upper Palatinate*, Duke and Count *Palatine* of the *Rhine*, Elector and Grand Master of the Household to the Empire, Governor and Captain-General for his Catholic Majesty in the *Netherlands*, Landgrave of *Luchtenberg*, &c.

His Pretensions are, to the County of *Tirol*, to the Towns of *Ratisbon* and *Dona-wert*, to the Marq. of *Burgaw*, to the Viceriate of the Empire, and to some neighbouring Countries.

The Dominions belonging to him are, the *Upper* and *Lower Bavaria*, the *Upper Palatinate*, the County of *Cham*, the Landgraviate of *Luchtenberg*, the County of *Hag*, the Lordships of *Wisenberg*, and of *Mindelheim*, and the Town of *Donawert*.

His Arms are, *Lozange-wise*, *Argent* and *Azure*, of 2 1 Pieces Bend-wise, for *Bavaria*; 1. and 4. 1 *Sable*, a *Lion Or*, Crown'd *Langued*, and Arm'd *Gules*, for the *Palatinate*; 2. and 3. *Gules*, with an Imperial *Globe Or*, as *Electo*r, and *Grand Master* of the Household of the Empire.

The Elector of *Bavaria* was reckoned one of the powerfulest Princes in the Empire. His Territories are very populous; but his Subjects are not commonly reckon'd such good Soldiers as those in the neighbouring Countries, says Dr. *Nisbolsen*. He adds; That his Monopolies before-mention'd, with the great Imposts on all Commodities carried along the *Danube*, and other Navigable Rivers in his Country, with his own particular Domains, are sufficient to keep as great an Army as any of the other Electors.

His Court was very splendid, and his Great Officers and Ministers were generally Counts and Barons. His principal Councils were, 1. That call'd the *Court-Council*. 2. The *Privy-Council*. 3. Another call'd the *Chamber*. The Chief Lieutenants or Governors under him were, the Governor of the *Upper Palatinate*, the Administrators of *Birgshausen Landshut*, and *Straubingen*, with the Governors of *Munichen*, *Ingolstat*, and *Rodenberg*. His Standing Troops consisted of 14 Regiments of Foot, whereof 2 were of 2400 Men each, 5 of 2100 each, 2 of 1800 each, and 5 of 1200 each. His Cavalry were 10 Regiments, *viz.* the *Partizan*, *Carrabinier* and *Horse-Granadier* Guards, of 130 Men each; 3 Regiments of 940 Men each, 2 of 900 each, and 1 of 940; 7 of 'em being *Horse*, and 3 *Dragoons*.

The Country is divided into *Upper* and *Lower*: The former, which lies under the *Alps*, is cold and barren, affords but little Corn, and no Wine; but the latter, which lies on the Banks of the *Danube*, is scarce inferior to any Province of the Empire in Fruitfulness, Riches, and Pleasantness. There was formerly a strict Alliance betwixt the Family of *Bavaria* and those of *Brandenburg* and *Brunswick*; but since the

Reformation, that good Understanding betwixt them is broke off.

The chief Rivers are, the *Danube*, which runs through it, and divides the *Palatinate* from the *Dutchy*; the *Lech*, which divides it from the *Bishoprick* of *Augsburg*; the *Im*, the *Amber*, the *Iller*, the *Salz*, the *Nab*, and the *Regen*.

The chief Towns in Upper Bavaria.

1. *Munich* or *Munchen*, Lat. *Monachium*, supposed to be the *Kauβόρυον* of *Ptolemy*. *Aventinus* says, Duke *Henry XII* founded this City out of the Ruins of a Monastery; whence it had the Name of *Munichen*, and has the Picture of a Monk for its Arms. 'Tis the Metropolis of *Bavaria*, and the Seat of the Duke. It stands on the River *Isar*, in Long. 30. 30. Lat. 48. 3. 40 Miles S. from *Ingolstat*, about 60 N. from *Innsbruck*, and about 100 Miles W. from *Limtz*. 'Tis esteem'd one of the most pleasant, rich, and populous Cities of *Germany*. The *Isar* runs in Channels thro' many of the Streets; so that the richer Citizens have fair Fountains and Water-Works in their Houses, and the whole Town the Convenience of Mills within their Walls. This City has quarter'd 18000 Soldiers for a considerable Time. Most of its Inhabitants are Glasiors and Silk-Weavers, intermix'd with Nobility and Gentry that attend the Court. The adjacent Country hardly affords Corn to supply the Town. Great Quantities of Salt and Wine are vend'd here, especially at their two Fairs at *St. James-Tide*, and the Week after the Feast of the Three Kings. 'Tis govern'd by a Common-Council of 36, whereof 24 are call'd the Outer-House, and 12 the Inner; all superintended by 6 Aldermen, usually Persons of good Extraction.

The most remarkable Buildings are, The Elector's Palace, a stately and Royal Structure, fit to receive the greatest Monarch in *Europe*, with his Attendants and Guards. 'Twere endless to give a particular Description of all the Curiosities in it. The chief of 'em are, the Long Gallery; the *Antiquarium* or *Statuarium*, containing a vast Number of old and new Pieces in Marble, Wood, Stone, &c. The noble Foun-

Fountain in the middle of the Garden, on the Top of which stands *Perseus*, holding *Medusa's* Head in his Left Hand, and a drawn Sword in his Right, and her Body at his Feet; the Water gushing out of the Head and Neck in small Streams, as out of the Veins of a Body newly dissected: The several rare Water-Works and Grotto's: The Old Palace, wherein are reserv'd the Sword, and several other Relicks of Duke *Christopher*: The Library, wherein, besides a vast Collection of printed Books in all Languages, Ancient and Modern, there are a great many MSS. of good Note; amongst which, are these that follow: A Latin Treatise in Folio, in an old Square Character, pretended to be written by Pope *Clement I.* to *St. James* the Apostle: The New Testament in the *Indian*, *Armenian*, and *Wendish* Tongues: Three noble Volumes in Royal Paper, Folio, of Musical Compositions, by *Orlandi di Lasso*, and other famous Artists: A large Book of Medicinal Preparations, by that famous Italian Physician *Gratiano di Francolino*, &c. In the Chamber of Rarities, Things most observable are, A neat Perspective Globe, in the Circumference whereof you have the whole History of our Saviour's Passion; which being inverted, shews the Elevation of the Serpent in the Wilderness on one Side, and the Crucifixion of our Saviour on the other: A Landskip in Coral: The Figure of *Parnassus* in the same Substance, with the 9 Muses plac'd round it: Flowers and Plants cast in Gold: Several Drawers full of ancient and modern Coins and Medals: A Landskip lively representing Buildings, Fields, Woods, &c. in their proper Colours, made of Stones of different Colours, laid in Wood: Idols, and Heathenish Gods and Goddesses, of various Sorts: The Picture of *Christopher Proschammer*, a notorious Murderer, who is said to have committed 345 Murders with his own Hand, and to have been privy to 400 more, committed by other Persons: With many other Curiosities in Art and Nature.

The next Place worth seeing is the Jesuits College, a Princely Fabrick, by some reckoned the stateliest Piece of new Building (next to the *Escorial* in Spain) that Europe affords. It consists of two large Quadrangles, besides Cloisters, wherein are a vast Number of Lodging and Dining-

Rooms, Schools, &c. and 800 Cross-Windows. The Church, built after the Italian Manner, and dedicated to *St. Michael* the Archangel, is now the usual Burying-place for the Electors and Princes of *Bavaria*. The first of that Race here entomb'd was *Renata*, a Daughter of *Lorraine*, and Wife of *William*, the Founder of this Church and College, who died May 23, 1602. Behind the Quire they have their Treasury, where there's a vast deal of Wealth, besides Golden and Silver Crucifixes, Candlesticks, Chalices, rich Tapestry, and other Church Ornaments.

The *Dom Kirch*, or chief Church in the City, dedicated to the Virgin *Mary*, is beautified with two delicate Towers, each of 'em 333 Foot high, and enrich'd with the Relicks of *St. Benno*. 'Twas at first only a Chapel of Ease to *St. Peter's* Church; but in 1271, was made a Parish-Church. 'Tis govern'd by a Provost, Dean, and 13 Canons.

The *Franciscan* Monastery is worth an *Englishman's* View; 1. Because of the neat Piece of Clock-Work, which represents the Postures of two *English* Cavaliers, to whom an Angel blows a Trumpet. 2. For our Countryman *William Occam's* Sake, who having for some Years stoutly maintain'd Duke *Ludowick's IV's* Cause against the Pope, was here buried in 1347. This City was built in 962, and walled round in 1156. *Gustavus Adolphus* took it in 1632; but would not suffer the Palace or Town to be sack'd, saying, It were pity to deprive the World of such a City, and to ruine such a Palace, that ought to stand to the End of Time. Most of the Houses are well built, and finely painted on the Outside. The Market-place is extreme fine, and the Houses round it uniform, with Piazza's under them, in which there are many rich Shops. Mr. Ray, in his Travels, says, 'tis the fairest City in *Germany* for its Bigness: The Streets are broad and regular; and in the Elector's Gardens, there's a vast Number of Aloe-Trees: He thinks *Europe* cannot produce the like in Number, both for their Stalk and Flowers. There's an *English* Nursery in this City, with Pews after the *English* Fashion, which is not customary in *Papish* Countries, where they have generally moveable Chairs and Benches. M, Missen,

in his Voyage to *Italy*, says, Tho' the City be beautiful, 'tis but indifferently fortified, scarce half so big as *Augsburg*, and has little Trade; but we suppose he excepts the Time of their Fairs. He says, the Jesuits shew'd him a Joint as big as that of an Elephant, which they pretended to be one of St. *Christopher's* Back-Bones. He says, the Outside of the Electoral Palace does not answer the Inside; for tho' it be a vast Structure, 'tis not very regular, because built at several Times. The great Hall of the Elector's Apartment is 118 Foot long, and 52 broad, full of curious Historical Pictures, the Sacred on the one Side, and the Prophane on the other; and each of 'em has a Latin Inscription in Verse annex'd. In the little Chapel belonging to the Electress's Apartment, there's nothing almost to be seen but Gold, Pearls, and Gems. The Parlour of Perspectives is extreme fine; but the Hall of Antiquities brought hither from *Rome* exceeds all the rest, there being no less than 192 Busts, and 400 other Pieces here, much esteemed for their Workmanship and Antiquity. The Furniture of the Palace is rich, beyond Imagination; and besides the Tapestry in Use, they reckon'd in the Wardrobe to the Value of some Millions of Crowns. In the Treasury, there are whole Services of Gold, and many other Precious Vessels, vast Numbers of Pearls, Diamonds, Rubies, and other Precious Stones, with a vast Number of rare Pictures, curious Works, Medals, and such like Rarities; and among the rest, a Cherry-stone, with 140 Heads distinctly engraven upon it, and a Boat of Palm-Tree Wood turn'd into Stone. Wherever one turns their Eye in this Palace, there's nothing to be seen but Marble, which Mr. *Misson* says is an artificial Composition, but so well harden'd and polish'd, that it looks like natural Marble.

2. *Freyding*, which for its Antiquity deserves the next Place. 'Tis supposed to have been founded by the *Romans*, when they subdued *Noricum*, &c. and by them to have been called *Fruxinum*, *Fruxinium*, or *Fruinia*, from whence comes its present Name. The neighbouring Hill, on which stands St. *Stephen's* Monastery, was formerly called *Teutonia Mons*, because of an Altar there to their Idol *Teut*. Others call it *Theo-*

donis Mons, from the Palace of *Theodo*, one of their Princes, where he and his Successors kept their Court, and among others King *Pepin*, whose Name, *Pepinhausen*, and some other neighbouring Villages, still retain. The Town and Bishop's Palace, with its Dependencies, lies pleasantly on the Bank of the *Mosack*, 20 Miles N. E. from *Munichen*, where there's abundance of fair Fields and Parks. Christianity was planted here about 444, when there was a Chapel dedicated to the Virgin, where their Cathedral now stands. Pope *Gregory II.* made it a Bishop's See about 716, and his Successors continued there till most of the Town was destroyed by the *Swedes* in 1632. The See was restor'd in 1639, and is commonly enjoy'd by a *Bavarian* Prince, who owns the Archbishop of *Salzburg* for Metropolitan. The famous Bishop of this See was Otto I. Son to *Leopold* Marquis of *Austria*. He founded the large Monastery of *Newstift* near this Town, with several others. He attended *Conrad II.* to the *Holy Land*, and died in 1158. His Memory is still famous for his Work, called, *Ottonis Frisingensis Chronologia*, which gives a Judicious Account of the most remarkable Revolutions of all the chief Governments of the World, from the Creation to his own Time. *Waldo*, their 9th Bishop, is famous for having translated the Four Evangelists into old *Frankish* Rhimes, for the Use of the common People. Bishop *Rhenanus* concludes from this Book, That the *French* had their Origine from this Country, and that their ancient Language was *High-Dutch*.

3. *Ingolstadt*, near the *Danube*, about 27 Miles N. W. from *Freyfingen*. This, with other Towns in *Germany*, and *Angleria* in *Italy*, are thought by *Cambden* to have deriv'd their Names from the *Angli*, who sent Colonies into these Countries. Hence some Historians call it *Anglopolis*. Others call it *Ortopolis*, and *Oreantum*. *Bertius* says, the Emperor *Ludowick IV.* first made it a City, and wall'd it about 1412, it being a large Town before. *George the Rich* founded a strong Castle, which is still its chief Defence; and Duke *William* compleated the Fortifications about 1537. It stands in a plain and fruitful Country: The Houses are generally well built, and the Streets uniform and fair. 'Tis famous for 3 Things;

1. The

8. The *Gymnasium*, which has the same Privileges with the Universities of *Bonnania* and *Vienna*; and here the great *Beharmin*, *Obertus*, *Gifanius*, and *Petrus Sapiamus*, were educated. 2. For the great Siege it held out against the Protestants in 1545; of which, *Slidan* and others give an Account. It likewise held out against *Gustavus Adolphus* in 1632. 3. For its impregnable Castle, mention'd before; to which *Dr. Nicholson* adds a 4th, viz. the Image of the Virgin in their great Church, which, with its Workmanship and Jewels, cost 50000 Crowns: 'Tis of pure Gold, and a considerable Bulk. Before it, there kneels a French King of the same Metal, but of a less Size, with a long Purple Robe, enamell'd with yellow Flower-de-Luces; and near it, stands another small Image of *St. Michael*, compos'd of Jewels and Precious Stones, with a Pair of Scales in his Hand. This is reckoned the strongest Place of *Bavaria*, and has one of the finest Arsenals in Germany. 'Twas surrender'd to the Confederates after the Battle of *Mochsted*.

4. *Donawert*, has its Name from the *Danube*, on which it stands, about 25 Miles W. from *Ingolstat*. All Travellers who go up or down the River are obliged to land here, and pay a small Toll, which brings the Town a great deal of Money; as does likewise the Passage of their Bridge over the *Danube*, because it stands near so many great Towns, viz. about 14 German Miles from *Munichen*, 12 from *Nuremberg*, 3 from *Nordlingen*, 5 from *Weissenburg*, and 6 from *Augsburg*. 'Tis a strong Town, revolted from the Duke of *Bavaria* in 1420, was made an Imperial Town by the Emperor *Sigismund*, and continu'd so till 1607, that it was proscrib'd by *Rodolph II.* for embracing the Protestant Religion, and afterwards taken by the Duke of *Bavaria*. The *Swedes* took it twice in the Civil Wars of Germany; but 'twas restor'd to *Bavaria* by the Treaty of *Munster* in 1648. Near this Town lies *Schellenberg*, a fortified Mountain, which serves instead of a Castle to the Town, famous for the Defeat given to the French and *Bavarians* there in July, 1704. chiefly by the English and Scots, when they forc'd the Enemy's Trenches with incredible Bravery, and soon after made themselves Masters of *Donawert*.

5. *Rain*, on the *Lech*, 10 Miles S. E. from *Donawert*, a very well fortified Town, and one of the Keys of *Bavaria*.

6. *Landsparg*, on the River *Lech*, 6 German Miles from *Augsburg*. The Jesuits have a College here, which is one of the first they had in the Empire, from whence there's a fine Prospect of the neighbouring Country.

7. *Oettingen*, Old and New, in a Plain, betwixt the River *Imm* and the Mountains, about 50 Miles E. from *Munichen*. These Towns were formerly one, and much larger than now. Some fancy it to have been the *Oenipons* of the Romans. *Otto* Duke of *Bavaria*, and his Brother *Theodo*, had their Palace here, and were baptiz'd by *St. Rupert* about 616, as some would prove from an old Inscription found here. These Princes founded the two ancientest Churches in the Empire, dedicated to the Virgin, the one at *Ratisbon*, where *Theodo* usually kept his Court, and the other at *Osten*. In the latter, there's a fair Image of the Virgin, curiously done in Wood, which is said to have been presented to *Theodo* by *St. Rupert*. In 910, all the Town was destroy'd by the Huns, except the Virgin's Chapel. 'Tis the *Loretto* of Germany, and much enrich'd by the Presents of superstitious People, whom the Jesuits persuade that many Miracles have been done by this Image, *St. Philip's Arm*, and other Relicks they keep here.

8. *Tegernsee*, so called from the *Lacus Tegurinus*, on which it stands. It has a famous Monastery betwixt the *Iser* and *Imm*, about 30 Miles S. E. from *Munichen*, near the Foot of the *Alps*. 'Twas founded by *Albert* and *Oskar*, two *Bavarian* Princes, is well fortified with a Wall and Ditch, and the Abbot takes Place in publick Convocations before all the Abbots and Priors of the Country.

9. *Scheyren*, in Latin *Schyrum*, formerly a Town of good Note, and the Residence of the Dukes; but now remarkable only for a Monastery of *Benedictines*, where 120 Dukes and Dutcheffes of *Bavaria* lie entomb'd.

10. *Wasserburg*, on the River *Imm*, about 32 Miles S. from *Munichen*, a pretty little Town, strong by its Situation, at the Conflux of another River into the *Imm*, and Capital of a County of the same Name, which

was united to *Bavaria* by *Otho the Illustrious*, in 1247.

11. *Hag*, a little Town near the *Inn*, about 5 Miles N. from *Wasserburg*, Capital of a County united to *Bavaria* in 1567. 'Tis govern'd by its own Laws.

12. *Muldorf*, on the *Inn*, about 12 Miles N. E. from *Hag*. 'Tis a small Town, but famous for a Victory gain'd here by the Emperor *Lewis* of *Bavaria* over *Frederick* Duke of *Austria*, whom he took Prisoner in 1322.

13. *Burkhausen*, a strong Town on the River *Salzach*, the *Bedacum* of the Ancients, 10 Miles S. E. from *Muldorf*.

14. *Branaw*, on the *Inn*, 12 Miles E. from *Muldorf*, a Town very well fortified, which held out a strong Siege against the *Swedes* in 1632.

15. *Scharding*, a very pretty Town, on the Conflux of the Rivers *Inn* and *Rott*, 17 Miles N. E. from *Branaw*.

The chief Cities and Towns in Lower Bavaria.

1. **R** *Ariobon*, by the Germans called *Rugenfurg*, the chief City in the Circle of *Bavaria*, and the only Imperial Town in the Elector's Dominions. It lies on the S. Side of the *Danube*, in Long. 31. Lat. 49. near 60 Miles N. E. from *Munichen*, and 60 from *Augsburg*. There are two old Inscriptions here, the one over the outermost Gate upon the great Stone-Bridge, the other in a Tower near St. Peter's Gate, which say, That *Tiberius*, Son-in-Law to *Augustus*, pitch'd his Tents here, and called the Place *Augusta Tiberii*, or *Augusta Colonia Tiberii*; but this is not taken Notice of in *Antonin's* Tables, or in the *Notitia Imperii*, and seems to be contradicted by *Tacitus*, who says, the Romans had but one Colony in *Rætia*, which was the *Augusta Vindelicorum*, now *Augsburg* in *Swabia*. The modern Name comes from the River *Regen*, which runs by one Side of the Town into the *Danube*; and the Name of *Ratisbona* was given it, because of its being a Harbour for Vessels on the *Danube*. *La Forge* says, the Dukes of *Bavaria* possess'd it till 1180, that the Emperor *Frederick Barbarossa* made it an Imperial Town. It has still the Remains of

the Palaces and Houses of the chief Nobility of the old Dukes of *Bavaria*, which are venerable Pieces of Architecture; and there's yet a Place in the Corn-Market called the Duke's Palace, tho' there are scarce any Remains of it now to be seen. The Elector *Palatine* had formerly two other fair Palaces here, one of 'em sold to St. *Emmeran's* Monastery, and the other by the Wooden Bridge which leads to the *Under Werth* of the *Danube*; but he was forced to quit his Pretensions to any Thing in this City, by reason of his Quarrel with the Citizens about the Royalty of the *Danube*, which still occasions Controversies betwixt them and the House of *Bavaria*. The City is large, populous, and well fortified, with a double Wall, Ditches, and Rampires; and the Situation is such, as affords every Thing for the Pleasure and Profit of the Inhabitants. The neighbouring Fields abound with all sorts of Corn and Pasturage, besides Vineyards, which produce a strong and palatable Wine, scarce inferior to the best *Rhenish*. They have a large Trade, by reason of the *Danube*; and the *Regen* and other neighbouring Rivers supply them with Plenty of Fish. The Houses are generally well built, and the Streets large. In one of the old-fashion'd Houses over against the Town-Hall, there's a famous Monument, representing the Emperor *Henry the Fowler*, and a Duel betwixt a Turk and a Nobleman of this City in 913, with the exact Figure of the Launces, Armour, and Habit of those Times. The Turk's Armour continued above 600 Years in the Church of the Monastery of *Nider Munster*, till *Charles V.* begg'd it of the Abbess. His Helmet was of cast Brass, and weigh'd 20 Pound. His Harness was a long Coat of an Elephant's Skin, almost cover'd over with thick Bosses of Iron nail'd upon it. His Shield was of well polish'd Steel, upon which was engrav'd the Picture of a Devil, with a Spear in his Hand. His Sword was two Yards and a half long, and near 5 Inches broad. 'Tis the See of a Bishop, who, *Goldsastus* says, is not subject to the Archbishop of *Salzburg*, but depends immediately on the Pope. They embrac'd the *Augsburg* Confession in 1442; but the Bishop, who is Lord of the neighbouring Territory, has Maß said in the Cathedral every

every Week. The most remarkable Thing in this Cathedral is *St. Emeran* or *Hemeran's* Monastery, who came hither from *Poitiers* in *France* to preach about 640. During his Stay, *Duke Theodo's* Daughter being got with Child by a *Bavarian* Knight, he persuaded her to lay the Bastard to *Emeran*, who being then on his Journey to *Rome*, was pursued and killed by her Brother. But his Innocency being afterwards discover'd, his Corps was brought hither, and buried in *St. George's Church*, where *Duke Theodo* immediately founded a *Benedictine* Monastery, and enjoin'd them to own *St. Peter* and *St. Emeran* for their Patrons. In this Monastery, they pretend to shew the Tomb of *Diomysius* the *Arcopagite*, whose Bones they alledge were brought hither by the Emperor *Arnulf*, their great Benefactor. This occasioned a great Dispute betwixt the Monks of this Place, and those of *St. Dennis* in *France*; for both of them pretended to his Body, as they do still; tho' Pope *Leo IX.* who was a *German*, forbid those of *St. Dennis* to lay Claim to it. The Monks here boast also of some of the Virgin's Hair, a Piece of the Crown of Thorns, and a Part of the Cross. They have three Books of great Antiquity and Value; the first, a Latin Copy of the Four Evangelists, writ in Gold Letters, and in an old *Lombard* Character, by two of this Fraternity, in 870. 'Tis adorned with Bosses of Pearl, and Clasps of Gold, and was presented to the Emperor *Charles the Bald*, whose Picture is before it, and was given to this Monastery by the Emperor *Arnulf*. The 2d is another MSS. of the Gospels, writ in 754, by an Anonymous Bishop of 90 Years of Age, in a delicate ancient Character; but not so richly embellish'd as the other. The 3d is a curious Register of the Exploits of *Attila* the *Hun*. The Abbot depends immediately on the Pope, to whom he pays an Annual Tribute. *Apollonius* studied the Greek, of which he was so great a Master, in this Monastery about 697. The Bishops of *Ratisbon* did usually make their Residence here. The Stone Bridge over the *Danube* is worth a Traveller's Observation: It was built at the equal Charge of *Henry X.* of *Bavaria*, and the City, was begun in 1135, and finished in 1156. It consists of 15 large Arches, supported by square Pillars, defend-

ded from the Violence of the Water, and the Shoals of Ice in Winter, by sharp three-corner'd Buttresses. 'Tis 23 Foot broad, and 1091 long. There are 3 fair Towers built upon it, and they shew Travellers the greatest Stone used at the Building of it, with the least of the same Figure inclos'd in it; by which they are enigmatically given to understand, that all the Stones used in this Structure are cut exactly into one and the same Figure. The *Germans* will not believe that any Traveller has been here, whatever Account you give him of the Town, except you give them an Account of those Stones, and their Meaning. *La Ferret* says, the Papists here have the Cathedral, and 90 other Churches; but the Lutherans are most numerous, and have the Government. He alledges, the Burgers have a Privilege to throw their Children into the *Danube* if they be incorrigible, without being call'd to an Account for it.

That which makes this City most famous, is the Diet of the Empire held here. For their Manner of Sitting, we refer to the Cut of the Diet, *Page 509.* *Dr. Nicholson* and the *Atlas Historique* give us the following Account of the Colleges which compose the Diet, and of their Manner of Proceeding.

'Tis a General Assembly of all the Estates of the Empire, and may properly be called its Parliament. 'Tis summoned by the Emperor, with Advice of the Electors, after they have agreed upon the Time, Place, and Occasion. Upon which the Emperor sends Letters sign'd with his own Hand, and counter-sign'd by the Vice-Chancellor of the Empire, to each of the Princes and States 6 Months before it be open'd, to come thither in Person, or to send their Deputies, which they are obliged to obey upon their Allegiance. He does not write to such Abbots and Bishops as are not Princes, but only to their Directors, who give them Notice of it.

While the Empire was in the Hands of the *French*, the Princes were all obliged to appear in Person, except they were excused by the Emperor and Electors; but now most of 'em send their Deputies, to save Charges, which makes their Proceedings much slower, because their Deputies are

frequently obliged to send to them for Instructions in Cases of Importance: And since the Time of *Maximilian*, many of 'em have even forborn to send Deputies; yet they are as much obliged to submit to the Resolves of the Diet as if they did: But sometimes, in Cases of great Importance, the Emperor not only sends Letters, but Ambassadors, to require their Presence; and in such Cases as require Dispatch, those who do not send, make their Ambassadors Plenipotentiaries. The Emperor has Power, with Advice of the Electors, to call the Diet at what Place he pleases, provided it be within the Bounds of the Empire; but 'tis now generally held here, because of the Conveniency of its Situation, and of the easy Passage which many of the Members have by the *Danube*; and all the Princes bear their own Charge, or that of their Deputies. When they arrive, they give Notice to Count *Papenheim*, Hereditary Marshal of the Empire under the Elector of *Saxony*, who assigns each of 'em their Lodgings according to their Quality, and writes down their Names. If the Emperor be present, they beg Audience of him, shew him their Summons, thank him for calling the Diet, and promise Concurrence for the Good of the Empire. If the Emperor be not there, the Princes send Gentlemen to acquaint the Director of *Mentz* with their Arrival; but if they be Deputies, they send their Secretaries with their full Powers; and the Deputies of Towns do the same. When they are all arrived, the Marshal of the Empire acquaints them with the Time and Place, where the Emperor or his Commissary is to tell them what he has to propose. If the Emperor be there, he goes in his Robes to the Place, and sits down on his Throne, to which he ascends by three Steps. The Electors sit on a Bench, to which they ascend by two, and the Princes upon other Benches not raised so high. If the Emperor be absent, his Commissary, or a Prince whom he chuses, acquaints them with the Occasion of their Meeting. If the Emperor be there before they proceed to Business, they attend him to Church, where publick Prayers are made for a Blessing upon their Consultations. Then they return to the Place of Diet, and having heard the Proposals, the Elector of

Trent, in the Name of the States, thanks the Emperor for calling a Diet; and the Secretary of the Empire receiving the Proposals from the Vice-Chancellor, reads them. After which, each of the Colleges retire to their particular Apartments to deliberate upon them; and after having maturely consider'd them, they agree upon a Day when they are to meet, and to communicate their Thoughts to one another, in order to agree on a Resolve; which being done, they send it to the Emperor; and if it be approved by him, it becomes a Law or Constitution of the Empire. The Princes of the Empire are divided into two Benches, called the Spiritual and Secular. The first Reason of which was, as Dr. *Nicholson* says, because formerly the Secular Princes did not meddle with the Affairs of the Church, nor the Ecclesiasticks with those of the State; but when the Popes brought all Ecclesiastical Affairs to their own Tribunals, such of the Prelates as had no Temporal Jurisdiction were excluded from the Diet. The Arch-Dukes of *Austria* and the Dukes of *Burgundy* sit on the Ecclesiastical Bench, because they are Princes of more than ordinary Eminence; and the Master of the *Teutonic* Order is allow'd the same Privilege. The *Lutheran* Prelates were formerly excluded from the Diet; but could have no Redress, notwithstanding their frequent Protestations, till by the Treaty of *Westphalia* they were allow'd a Place by themselves. All the Ecclesiastical and Secular Members have not equal Votes; for such of both as have Princely Dignities, are allow'd single Votes; but those who have not, give their Votes by Companies, as the Deputies of the Towns of the Bench of the *Rhine*, and of the Bench of *Swabia*. Formerly the Counts and Barons were also divided into two Benches, called those of *Wetteravia* and *Swabia*, when each Bench was allowed but one Vote; but now the Counts of *Franconia* and *Westphalia*, which includes those of *Saxony*, are allow'd two Benches and two Votes; the former since 1641, and the latter since 1654.

The Deputies of the Imperial Towns make up the Third Rank of Members; but when they came to that Privilege, is not certain; tho' the Chronicle of *Spire* says, That several of 'em had this Privilege in the

the 13th Century, which Dr. *Nicholson* thinks to have been only the Cities of *Italy*; and that those called Imperial in the Empire, were not allowed a Vote till the 14th Century. The Deputies of the City where the Diet is held sit at a Table by themselves, and there take an Account of the Voices of the other Delegates which are brought to them, and register'd by the two Registers of *Ulm* and *Spires*; the former representing the Cities in the Circle of the *Rhine*, and the latter those of *Swabia*.

Historians tell us, That the greatest Disputes in the Diet happen about Precedency, in which they spend more Time than in debating the Emperor's Proposals. Another Part of their Time they say is too frequently spent in Drinking-Matches, for which the Emperor *Ferdinand* did sharply reprehend them. A third Part of their Time is spent about the Power of the Diet, shewing in what Cases they may or may not be controlled or curbed by the Emperor: And the last Part of their Time is spent on the Emperor's Proposals about Peace or War, making or annulling of Laws, regulating the Coin, or raising Taxes, and such other Affairs of State.

They sit in a large and stately upper Room in the Town-Hall, richly hung with curious Tapestry and Needle-work. The Emperor's Throne is cover'd with Cloth of Gold, and the Chairs and Benches of the other Princes and States are cover'd with Cloth of Silver, Velvet, Satin, Silk, &c. according to their several Qualities.

The Order of their Sitting is thus: The Way how the Electors sit, may be seen in the Cut, Page 509. The Ecclesiastical Princes sit on the Right Hand thus:

The Arch-Duke of Austria.

The Duke of Burgundy.

The Archbishop of Saltzburg.

The Grand Master of the

Teutonic Order.

The Bishops of

Lubeck.

Osnabrug.

N.B. Those marked with A, have the Precedency of one another alternatively. Those marked with C, contend for Precedency.

The Abbesses who are Princesses send Deputies.

The Bishops of

Bamberg.

Wurtzburg.

Aichstet.

Spires.

The *Atlas Historique* says, That the Princes who have a Right to sit in the College of Princes, are those who have a deliberative and decisive Voice, and who contribute to the Support of the Empire, according to the *Matricula*. The Directors of this College are, the Archbishop of *Salzburg*, the Arch-Duke of *Austria*, and the Duke of *Burgundy*, who preside by Turns, as every new Matter comes to be debated; and the Votes are alternately taken of the Secular and Ecclesiastical Bench. They are gathered

ther'd by Count *Papenheim*: After which, the Archbishop of *Salzburg* and the Arch-Duke draw up the Result, to report it to the Diet. Such Princes as possess several Dominions, which have a Right of Voting, have so many Votes accordingly. Thus the Elector of *Bavaria* has two, as Duke of *Bavaria*, and Prince of *Lichtenberg*: The Elector of *Saxony* has five, and the Elector of *Brandenburg* four. We have mention'd already, That in the College of the Towns, the Magistrates of the City where the Diet is held are the Directors of that College; and in the Electoral College, the Elector of *Mentz* is Director.

The *Atlas* informs us, That there is another Assembly of the States of the Empire, called the *Assembly of Deputations*, where the Deputies chosen for that End determine Things that have been referred to them by a Diet; or when the Elector of *Mentz*, in the Emperor's Name, summons the Deputies, at the Request of the Directors or Captains of one or more Circles, to take Order about their Affairs, or to appease Controversies, which they are not able to do of themselves.

2. *Straubingen*, on the *Danube*, 20 Miles E. from *Ratisbon*, a Town of good Trade, well fortified, and has a Bridge over the *Danube*.

3. *Landshut*, the chief Town in *Lower Bavaria*, and the Seat of the Elector's Lieutenant, who has a Court here, and several Officers for the Government of the Country, which consists of 6 Bailiwicks, 32 Market-Towns, 14 Monasteries, and 74 Noblemen's Seats, with their Dependencies. 'Twas built by *Otho* of *Bavaria*, the first of that Name of the Line of *Wittelsbach*, when *Ratisbon* threw off his Yoke, and became an Imperial Town; and being in the middle of his Territories, and a pleasant Country, he built a Palace here, fortified the Town as much as he could, and call'd it by this Name, which signifies the Bulwark of the Country. His Son Duke *Ladomick* enlarged it, and added the Castle about 1204. The Town is generally well built, being formerly much frequented by the Nobility, who attended the Court, and now by the Elector's Officers above-mention'd. *St. Martin's Church*, the Chief in the Town, has a Tower, which is thought to be the highest

in the Empire. The new Buildings in the Duke's Palace are a neat Piece of Architecture, after the *Italian Manner*.

4. *Passaw*, in Latin *Passavia*, or *Patavia*. Some derive the Name from its being a Passage over the River, which the two German Monosyllables, *Pas* and *Aw*, seem to import. Others say, That it comes from the Word *Battavia*, because it formerly held out a great Siege against the *Dutch*; but this seems too much strain'd, *Clauversius*, *Bertius*, and other Learned Men, think, that the Part of the Town called *Instadt*, on the S. Side of the *Danube*, and the E. Side of the *Inn*, is the ancientest, and was the *Bodojurnum* of the Ancients. That properly called *Passaw*, lies on the S. Side of the *Danube*, and on the W. Side of the *Inn*; and that called *Ilst*, lies on the N. Side of the *Danube*, and on the E. Side of the *Ilz*. The River *Inn*, which gives Name to that Part of the Town called *Instadt*, empties it self into the *Danube* with such Force, that it keeps its Stream unmix'd for a long way, which is easy to be seen from the different Colours, tho' in the same Channel. The *Ilz* or *Ilx*, which gives Name to that Part of the Town on the N. Side of the *Danube*, is also discernable for several Furlongs, tho' in the same Channel with the *Danube*. This City is fortified on all Sides by Rocks or Rivers, and therefore is as strong by Nature almost, as any Town in *Bavaria* is by Art. This City is large, is an Imperial Town, but under the Protection of its Bishop, who is a Prince of the Empire, and the Magistrates act by his Commission, tho' the City pays some Acknowledgment to the Elector of *Bavaria*. The Bishop, who is Lord of the City, and of the Country about 20 Miles in Extent on the N. Side of the *Danube*, has a stately Palace here, and is Suffragan of *Salzburg*. Most of the Houses are of Timber; but the Bishop's Palace, and the Castle on a Mountain near *Ilstadt*, are handsome Stone Buildings. Their Churches are likewise fair and stately, especially the Cathedral dedicated to *St. Stephen*, which is a neat and sumptuous Fabrick, adorn'd with a great many fair Tombs and Monuments. This City is famous for the Treaty of Peace betwixt the Emperor *Charles V.* and *Maurice* Elector of *Saxony* in 1552, by which the

Lutherans had the free Exercise of their Religion granted them in the Empire. It was taken by the Elector of *Bavaria* in 1793; but he was soon after obliged to abandon it. It lies 52 Miles E. from *Landshut*, and 60 S. E. from *Ratisbon*. The Bishoprick has *Bohemia* on the N. *Bavaria* on the S. and W. and *Austria* on the E. Several Towns in *Austria*, and Lordships in *Bavaria*, are Parts of the Diocese, which of late has commonly been govern'd by an *Austrian* Prince, and has 80000 Crowns of Annual Revenue. The River *Ilz* produces Pearls, which belong to the Emperor and the Elector of *Bavaria*, each of whom have an Officer here to take Care of their Interests. Dr. Brown says, That most of the City was not many Years ago consum'd by Fire; so that 'tis now rebuilt after the *Italian* Manner, and reckon'd one of the 10 considerable Cities on the *Danube*. There is a Bridge over the *Im* betwixt *Passau* and the Town called *Innsbruck*.

In this Diocese there's likewise *Obernberg*, a small City, with a good Castle, which has a Privilege to exact a Toll of all those that pass by the River *Im*, and is the usual Residence of the Bishop of *Passau*. It lies about 15 Miles S. W. from *Passau*. *Reichenberg*, a small City near *Obernberg*, is likewise a Place of the Bishop's Residence.

5. *Mosburg*, a Town and County betwixt *Landshut* and *Freyung*, betwixt the Conflux of the *Isar* and *Amber*, and mid-way betwixt *Freyung* and *Landshut*. Some reckon it, next to *Ratisbon*, the oldest Town in *Bavaria*, but without any Reason. 'Tis a fair and pleasant Town, was annexed to *Bavaria* by Duke *Ludowick*, and has 28 Towns of good Rank, besides a great many Villages, which come to a Court held there for Justice. 'Twas formerly govern'd by Counts of its own.

6. The great and famous Monasteries of *Upper* and *Lower Altaich*, about 5 German Leagues from one another, on the Banks of the *Danube*. Latin Authors call them *Altaka*, from two great old Oaks under which the Heathen Priests used to sacrifice; but the *Bavarians*, when converted, built Churches here, that were afterwards turn'd into Monasteries. The Counts of *Pogen* were formerly Protectors of those Monasteries; but now they are immediately subject to

the Elector of *Bavaria*, who disposes of the Revenues and the Government as he pleases.

7. *Abach*, a fair Market-Town on the *Danube*, about 8 Miles S. W. from *Ratisbon*, noted for the Birth of *Henry II.* and for several Pieces of *Roman* Antiquities which have been dug up in the Neighbourhood. It has likewise a good Bath, which being artificially heated, is a ready Cure for Melancholy, Apoplexies, Dropsies, &c.

The Upper Palatinate of Bavaria or Nortgow.

IT has the latter Name, because 'tis the most Northerly Part of the Dutchy of *Bavaria*. It has *Bohemia* on the E. *Franconia* on the W. *Misia* on the N. and the *Danube* on the S. which separates it from the rest of *Bavaria*. *Molt* makes it about 77 Miles long from N. to S. and where 'tis broadest, 'tis much of the same Extent. The Country is rocky and rough, but pleasant to the Eye. They have Plenty of a harsh sort of Wine, and in some Parts store of Corn and Grass; but their chief Riches come from Mines of Silver, Copper, and Iron. They export great Quantities of the latter to neighbouring Countries. In 1664, there were found at *Freyung* in this Country two remarkable Sorts of Lead-Ore, which were sent, with some Specimens of other Metals, to our Royal Society. One of 'em is a kind of Chrystalline Stone, almost all good Lead; the other not so rich; but both of singular Use for Essays upon the Coppel. On the S. W. Corner of this Province there are two small Rivers, *Altmühl* and *Regnitz*; the first falls into the *Danube*, and the latter into the *Main*, and by consequence into the *Rhine*. Betwixt the Heads of those two Rivers, which are at no great distance, *Charles the Great* began a Canal; with a Design to make a Passage betwixt the *Rhine* and the *Danube*. Part of this Canal is still to be seen near *Weissenburg*, towards the Head of the *Regnitz*; but Dr. *Nicholson* informs us, That the Men employ'd in it were obliged to desist by the Fall of excessive Rains, and the Appearance of strange Specters; of which, we leave the Reader to make his own Judgment.

This

This Country was, upon the Partition of the Dutchy by *Lewis* of *Bavaria* the Emperor betwixt him and his eldest Brother *Rudolph*, left for ever to the Family of the *Lower Palatinate*; but *Rudolph* having forfeited the same, by opposing his Brother the Emperor, 'twas confirmed to *Rudolph's* Sons by the Decree of *Pavia* in 1329, and enjoyed by that Branch afterwards, till *Frederick V.* Elector *Palatine*, was proscribed in 1623, when 'twas restored to the Family of *Bavaria*; but the Count *Palatine* of the *Rhine*, the Landgrave of *Lichtenburg*, and the City of *Nuremberg*, have laid Claim to it since.

Cities and Towns of Note here.

1. *Amberg*, the Metropolis of the *Upper Palatinate*, subject to the Elector of *Bavaria*. It lies on the Banks of the *Vils*, 30 Miles N. from *Ratisbon*, and is so well fortified, that 'tis reputed one of the strongest Towns in *Upper Germany*. Some say, 'twas built by the Emperor *Henry I.* but others, by the Bishop of *Aichstat* about 1297, and wall'd round in 1326. 'Twas formerly subject to the Dukes of *Swabia*; but the last Duke gave it to the House of *Bavaria*. Its chief Ornaments are the Castle and Armory, which are both curious Structures. The greatest Trade of the Town is from their Iron Mines, and the Iron-Works made from 'em, which are sent down the *Nab* to *Ratisbon* and other Cities. *La Forrest* says, this is the *Contiebis* of the Ancients, the Metropolis of the *Armanloufi*. The Town has great Privileges, which were granted 'em by the Emperor *Robert*, and lies conveniently for Trade, being almost in the Center betwixt *Ratisbon*, *Ingolstat*, and *Nuremberg*.

2. *Salzbach*, on the top of a Hill near the River *Vils*, about 7 Miles N. W. from *Amberg*. It had formerly Counts of its own, who were so considerable, that *Ernest*, who liv'd in the Time of the Emperor *Henry III.* had one Daughter married to *Conrad III.* Emperor of *Germany*, and another to *Emanuel* Emperor of *Constantinople*. Their last Earl *Gebhard* died of the Plague at *Rome*, in the Reign of the Emperor *Frederick II.* and leaving no Issue-Male, this City and its Ter-

ritories came to the Duke of *Bavaria*, and afterwards to the Family of *Newburg*, a Branch of which does still reside here, where they have a stately Palace, and call'd themselves Counts *Palatine* of the *Rhine*, Dukes of *Newburg*, *Bavaria*, *Juliers*, *Cleves*, &c. from whom the present Elector *Palatine*, of the Family of *Newburg*, is descended. The adjacent Country is so stony, that they have no Water but from one small Rivulet, with which they brew excellent Beer, that supplies their Want of Wine. The Duke's Palace and the Church are fair Structures. 'Tis well built, and the Streets uniform; but it suffered much by the Civil Wars of *Germany*; the Effects of which are still to be seen by ruinous Houses.

3. *Cham*, on the Rivers *Champ* and *Regen*, 39 Miles S. E. from *Amberg*, formerly rul'd by a Marq. of its own, who govern'd the Borders of *Bavaria* and *Bohemia* for the Emperor. The last of their Princes, about 1220, sold it to the Duke of *Bavaria*. Their chief Traffick is from Travellers, who come this Way out of *Bavaria*, and other Parts of *Germany*, to *Bohemia*.

4. *Waldsassen*, a rich *Cistercian* Monastery, a German League from *Eger* or *Egna*, on the Frontiers of *Bohemia*, to which belongs the Market-Town of *Dursenreuth*, with many adjoining Villages. 'Tis noted for the Monuments of several Landgraves of *Lichtenberg*, Counts of *Salzbach*, and other German Princes, who lie buried here. The Archbishop is a Prince, and pays 144 Florins per Annum to the Emperor.

5. *Castel*, another famous Monastery, on the River *Lauter* or *Lauterbach*, one of the pleasantest Countries of the *Upper Palatinate*, formerly govern'd by Counts of its own, who came from *Zeland* upon an Irruption of the Sea into that Country, and built a Castle and three Churches here, at the Mouth of so many Springs. His Posterity turn'd it into a *Benedictine* Monastery about 1098, and Count *Otto* endow'd it nobly some Time after. The Jesuits have lately got Possession of it, as they have done of many other rich Houses and Mannors in *Bavaria*. Among other ancient Monuments in their Chapel, the most remarkable is the Epitaph of *Sigefrid Schwepperman*, a great Champion in the Days of the Emperor *Lewis IV.* which

ends thus; *Let every Man have his Egg, but stout Schwepperman two*; which was occasion'd thus: The Emperor having obtain'd a great Victory against his Competitor *Fredrick III.* chiefly by the Conduct of this General, there being nothing left after the Battle but Eggs, he commanded that every Soldier should have one, and this Champion two, which has since become a Proverb in those Parts.

6. *Newburg*, for Distinction-sake called *Formwaldt*, because situated not far from the *Bohemian* Forrests. 'Tis a small City with a Castle, of no great Strength, and was taken in 1634 at one Assault by the *Suedes*. It lies on the River *Schwarzach*, but is poor, the Country affording no Commodities for Trade.

7. *Luchtenberg*, noted only for giving Title to a Landgrave. 'Twas formerly govern'd by Princes of its own, but now subject to the Elector of *Bavaria*. 'Tis defended by a Castle, and lies about 18 Miles N. E. from *Amberg*.

8. *Averbach*, at the Head of the *Vils*, noted for the fair and strong Monastery of *Nichelsfeld*, founded by *Otto* Bishop of *Bamberg*, the Great Apostle of *Pomeran*, about 1119.

Cities and noted Towns in this Country subject to the Dukes of Newburg.

1. *Newburg*, on the S. of the *Danube*, a neat little City, 12 Miles W. from *Ingolstadt*, and 15 E. from *Donawert*. 'Twas formerly the Seat, and still gives Title of Duke to the Elector *Palatine*; which Dukedom, *Heylin*, by Mistake, ascrib'd to the other *Newburg* last mention'd. It had its Name in Opposition to *Altemberg*, or the Old Town; the Ruins of which are still to be seen near it. *Velferius* says, it was a Bishoprick in *Charlemagne's* Time, when their Bishop *Manno* took Place of all the rest in a National Council held in 711: But *Brunner*, in his Annals of *Bavaria*, says, he was the first and last Bishop of this Diocese, which was united to that of *Augsburg*; and *Maximilian*, when he finish'd the *Bavarian* War in 1505, annex'd this City, with many other great Towns of the Circle, to the *Upper Palatinate*. Soon after it was made a

separate Dutchy, of which *Newburg* is still the Metropolis. The Dutchy is, according to *Moll*, 50 Miles long on both Sides the *Danube*, and 38 where broadest. This new Principality being erected, *Otto Henry*, Count *Palatine* of the *Rhine*, and Duke of *Newburg*, built out of the Ruins of an old Castle a stately Palace, which was the Residence of his Successors; one of whom fortified this City. The noble Nunnery of *Benedictines*, formerly the chief Ornament of the Town, was founded by the Emperor *Henry II.* and his Empress *Conigund*, about 1007; or, as some say, they only repair'd it. It was dissolv'd in 1555, when the Duke embrac'd the *Augsburg* Confession. But *Wolfgang William* turning Papist, he built a fair Church and College out of the Ruins of this Nunnery, and gave them to the Jesuits, who still possess them. The great Trade of this Town is in Wine, which is sold Weekly in their publick Markets; and the Duke has a great Revenue from a Toll on the Vessels that pass up and down the *Danube*, over which they have a Bridge. 'Tis noted for an Image of the Virgin, known by the Name of *Our Lady of Newburg*, to which the superstitious People ascribe many Miracles. This City was taken by the Elector of *Bavaria* in 1703. *Philip William*, Duke of *Newburg*, succeeded to the *Palatinate* of the *Rhine* in 1685, being the nearest Male of Kin to that Illustrious Family. He was the first Popish Prince who succeeded to that Electorate since the Reformation, to the great Disadvantage of the Protestants of that Country, and of all *Germany*. He was very fortunate in his Issue, having 4 Daughters married to great Princes; the first to the late Emperor *Leopold*, the 2d to the late King *Charles* of *Spain*, the 3d to the late King of *Portugal*, and the 4th to Prince *James* of *Poland*. His eldest Son the present Elector, married the late Emperor's Daughter; his 2d Son is Great Master of the *Teutonic* Order; his 3d married the Princess *Radzeville*, Widow to a Marg. of *Brandenburg*; his 4th is Dean of *Augsburg*, and President of the Chapter of *Constance*; and his 5th Bishop of *Breslaw*; so that 'tis now one of the most potent Families of the Empire.

2. *Langingen*, a strong and well fortified Town on the *Danube*. Some call it *La-wingen*.

wingen. It lies 22 Miles W. from *Donawert*, is a neat City, and has a good Trade. By the many *Roman* Antiquities found in the Neighbourhood, there's Ground to suppose, that it was formerly one of their Colonies. 'Twas anciently subject to the Dukes of *Swabia*; but was sold by *Conradine*, their last Duke, to the House of *Bavaria*, who in 1505 annex'd it to the *Palatinate*. The famous *Albertus Magnus* was born here, of a Noble and Ancient Family, and his Memory is much honour'd by the Citizens. In his Time, a stout Shoemaker of the Town procur'd them great Reputation, by killing a *Hungarian* Giant in a Duel; for which, the Emperor *Otto I.* among other Favours, gave them for their Arms a Moor's-Head crown'd, with a Gold Chain about his Neck, which they bear still. The chief Ornaments of the Town are, their Bridge over the *Danube*, the Castle, and great Church, which is cover'd with Copper, and has a Tower of 301 Foot high. 'Twas formerly the Sepulchre of the Dukes of *Newburg*, and other Princes of the *Palatine* Family; but they are now commonly entomb'd at *Newburg*.

3. *Hochstadt*, on the *Danube*, about 8 Miles E. from *Lavingen*. The Bishop of *Bamberg* lays Claim to this Town; but the Duke of *Newburg* keeps Possession by Strength. In 1634, the *Cross*, during the Civil Wars of *Germany*, did barbarously cut off many of the Inhabitants, and ruin'd most of the Town; but they have since rebuilt it pretty well, are defended by a very strong Castle on the *Danube*, and well supplied with all Necessaries, there being rich Corn-Fields and good Pastures in the Neighbourhood; but that which eternizes its Fame, is the famous Victory obtain'd here in *August*, 1703, by the Duke of *Marlborough* and Prince *Eugene*, over the *French* and *Bavarians*. In Remembrance of which, there's a noble Pillar, with an Inscription upon it, erected in the Field of Battle.

4. *Blenheim*, about 8 Miles N. from *Hochstadt*, famous for the taking of 20 *French* Battalions of Foot, and 12 Squadrons of Dragoons, after a stout Resistance, by the Earl of *Orkney*, where the late Lord *Cutts* did also gain immortal Honour. The chief Particulars of this great Victory, we gave an Account of, Page 494, &c.

5. *Dillingen*, on the *Danube*, betwixt *Lavingen* and *Hochstadt*, is a pretty little City, with a fine College of *Jesuits*. It has the Title of a County, and belongs to the Bishop of *Augsburg*, who has a fine Palace here, in which he usually resides.

6. *Naburg*, a pleasant City on the River *Nab*, from whence it has its Name, about half a *German* League from *Amberg*, stands on the top of a Hill, and is a great Road for Travellers betwixt *Bohemia*, &c. and *Ratisbon*.

7. *Aichstadt*, about 12 Miles N. from *Ingolstadt*. 'Tis a Bishop's See, upon the River *Altmuehl*. Their first Bishop is said to have been *St. Willibald*, by some thought to be descended from an *English* *Saxon* King; but others say, he was Son to *Richard* Duke of *Swabia*. The Bishop's Palace, a Mile from the Town, still bears his Name. This City is but small, and noted for some Relicks, to which the Priests ascribe Miracles. The *Scheffer* Stones, mentioned in the Description of *Manisfeld*, are found in the neighbouring Fields. *Moltz*, *La Forreß*, and *Sausen*, reckon this Bishoprick in *Franconia*, where we have given a further Description of it.

The City and Territories of Newmarckt in the Upper Palatinate.

1. *Newmarckt*, a fair City on the Banks of the *Sulz*, about 5 *German* Leagues from *Nuremberg*, and 2 from *Altorf*. 'Twas formerly subject to the Marquisses of *Vohburg*, afterwards to the Kings of *Bohemia*, the Dukes of *Swabia*, the Dukes of *Bavaria*, and the Electors *Palatine*, from whom it was taken during the late Civil Wars; before which, there was a considerable Protestant College here, but destroy'd by the Duke of *Bavaria*, who reduc'd the Town, that was formerly an Imperial City. It stands in a pleasant and fruitful Country; but the Air is too sharp for Vines. Their chief Commodity is Iron, and their Rivers are cover'd with Iron Mills.

2. *Gnadenberg*, i. e. The Hill of Grace, noted for a Monastery of the Order of *St. Salvator*. It lies on the Banks of the *Schwarzach*, half a *German* League from *Altorf*. 'Tis divided into two Parts, one for Monks, and another for Nuns, with one Church betwixt them, which was a magnificent

ficient Fabrick, and had 36 Altars. *Catharine* Dutchess of *Pomeran*, who had for her Husband *John Duke of Bavaria*, founded this Monastery about 1426, and is buried here. It embraced the Reformation in the 16th Century; but since the restoring of Popery, has lost its former Grandeur, and the Revenues are shar'd by two Jesuits, and one of the Elector's Lieutenants.

3. *Allersberg*, on the W. of this District, is a Town of Trade, which, with its Territory, is subject to the Duke of *Newburg*.

Other Places of Note in *Newmarckt* are, 1. *Freyenstailein*, destroyed by the Swedes in 1632, and afterwards came to Count *Tilly*, whose Heirs pretend to it, with a Salvo to the Elector of *Bavaria's* Right. 2. *Sultzburg*, from whence the adjacent Country is called *Sultzgow*. 3. *Hollenstein*, a Wall'd Town and Castle on the Confines of the Bishoprick of *Aichstat*, famous for the Iron Mines in the Neighbourhood. There are so many Proprietors of this Country, that 'tis hard to distinguish their Boundaries; but the Chief are the Elector of *Bavaria* and the Duke of *Newburg*.

The Circle of S W A B I A, or S W E V I A.

DR. *Nicholson* observes, That when the *Romans* came first into these Parts, *Suevia* was a large Kingdom, lying as far W. as the *German Ocean*, and as far N. as the utmost Bounds of the *Swedish* Dominions; so that *Tacitus* reckons no less than 54 different Branches of the *Suevian* Nation, of whom we have given a particular Account from *Cluverius* in *Ancient Germany*. The Doctor observes further, That there's Reason to think, that *Suevia* and *Germany* were at first synonymous Terms with the *Romans*, who afterwards appropriated the Name of *Saevi* to the *Hermunduri*, the most considerable Branch of 'em, who inhabited that now called *Swabia*. *La Forreſt* says, That on the Fall of the *Roman* Empire, it contained all the Country betwixt the *Rhine*, the *Alps*, and the *Elb*, and they call'd their Governors, Kings; but *Clovis*, King of *France*, depriv'd them of that Title after the Battle of *Tolbiac*,

when he gave it to *Thierry*, his eldest Son, and it continued under the *French* Kings of the first Race. *Charlemagne* made some of his Officers Governors of this Country, with the Title of Dukes, and the Sovereignty was usurp'd by their Successors. This Dutchy fell afterwards to several Families, till about 1078, when the Emperor *Henry IV.* invested his Son-in-Law *Frederick Count of Hohenstauffem* with it. His Posterity kept it till 1269, that the Dutchy of *Swabia* was re-united to the Crown, says *La Forreſt*, by the Death of *Conradine*, who was beheaded by Order of *Charles of France*, King of *Naples*. The Emperor *Rodolph I.* invested *Rodolph* his eldest Son with it about 1288; but *John Duke of Swabia* was deprived of it, for having assassinated the Emperor *Albert* his Uncle.

Dr. Nicholson says, That no Prince of the Empire does now pretend a Title to the whole Dutchy, which is subject to many Rulers. The Dukes of *Wirttemberg* have the largest Share; the Arch-Dukes of *Austria* and the Elector of *Bavaria* have another great Part of it; and the rest is possessed by the Marquisses of *Baden*, and the Imperial Cities of *Augsburg*, *Ulm*, &c. as may be seen in the *Matricula* of the Empire, P. 512. The Boundaries of *Swabia* at present are, on the N. the Palatinate of the *Rhine*, and *Franconia*; on the S. *Switzerland*, and the County of *Tirol*; on the W. *Alsace*, and the Upper Part of the Palatinate of the *Rhine*; and on the E. *Bavaria*, and Part of *Franconia*. 'Tis in Length from E. to W. if we include the Marq. of *Baden*, 140 Miles; and where broadest, from N. to S. 132. 'Tis commonly divided into 4 Parts; the first contains the Dutchy of *Wirttemberg*, and the Cities of *Ulm*, *Reutlingen*, *Eſtingen*, *Nordlingen*, *Hailbron*, and *Hall*: The 2d contains the Marq. of *Baden*, the City of *Rotweil*, &c. The 3d has the Bishopricks of *Constance* and *Kempten*, with the Cities of *Bibrach*, *Iſſna*, and *Lindaw*: The 4th has the City and Diocese of *Augsburg*, with the Cities of *Kaufbeuren*, *Memmingen*, &c.

La Forreſt says, That the House of *Austria* has in this Country the Marq. of *Burgaw*, the Bishoprick of *Constance*, the Landgraviate of *Nellenburg*, the County of *Hohenberg*, the *Ortnaw*, the *Brisgaw*, and the Foreſt Towns.

Clayton and *Frecherus* are of Opinion, That *Heidelberg* stands in *Swabia*, and that the *Neckar* is the Boundary betwixt *Francia* and *Swabia*.

This Country was anciently called *Alamannia*, which was afterwards communicated to the whole Empire. *Swabia* in general has Plenty enough of Corn, tho' in many Places 'tis full of large Woods and Forrests, which abound with Venison of all Sorts, good Breeds of Horses, Kine, and Sheep; and in their Mountains, they have Mines of Silver, Copper, and other Metals. Most of their Woods are Pine and Fir. Their Air is healthful; and besides Corn, the Country produces abundance of Wine and Flax; and of the latter, the Inhabitants make much Linen Cloth, which they sell in great Quantities, and in this Trade employ most of their Poor. *Plutarch* says of the ancient Inhabitants, That they were the bravest, boldest, and best Warriors, of the German Nation. The modern Inhabitants being accustomed to spare Diet, and mean Lodgings, are fit to endure all the Fatigues of War: Yet not only Strangers, but their own Authors, accuse both Sexes of being excessively inclin'd to Veneries.

The Diversities of Sovereigns occasion the Diversities of Religions in this Country, where there are *Papists*, *Lutherans*, *Calvinists*, and *Jews*.

'Tis commonly divided into *Upper* and *Lower Swabia*.

The chief Towns of Upper Swabia.

1. *Augsburg*, in Latin *Augusta Vindelicorum*, and anciently *Licetionum Damasia*, on the Conflux of the *Lech* and the *Wertach*, in Long. 29. 47. Lat. 48. 20. 25 Miles S. from *Donawert*, and 62 S. W. from *Ratisbon*. It had its Name from *Augustus Caesar*, who about 12 Years before our Saviour subdued these Parts, and planted a Roman Colony here under *Drusus Nero*, Brother of *Tiberius*. The *Vindelici* were a Branch of the *Illyrians*, who inhabited Part of this Country, and gave it the other Part of its Name; and the *Licatii*, who probably derived their Name from the River *Lech*, occasioned its being called *Licetionum Damasia*; and the

Vindelici are supposed to have had their Name from the *Vinda*, now the *Wertach*, which falls into the *Lech* near *Augsburg*. This City continued under the *Romans* and *Goths* 550 Years, and was afterwards possessed by the Kings of *France*, till the Empires of *Germany* and *Rome* were joined to the Crown of *France* by *Charlemagne*. After which it became subject to the Dukes of *Swabia*, till *Conradin*, their last Duke, sold them their Freedom, and obtained a Confirmation of their Privileges from the Emperor. Some of the old Chronicles of this City say, That Christianity was first planted here by *Lucius*, the first Christian King of *England*, then called *Britain*, about 190, after he had establish'd Christianity at home. But *Dr. Nicholson* justly observes, this seems to be a Monkish Fable, contriv'd for the Honour of the Monastick Life, as preferable to that of a King, especially since they say he travelled also to *Coire* in the *Grisons* Country, and was martyr'd there for his Religion; whereas *Matthew of Westminster* says, he died at *Glocester* in 201. But the whole Story of this King has been so much exploded by the Learned of late Years, that it deserves no Credit. However this may be, there's good Authority to prove, that Christianity was planted here in *Dioclesian's* Time, for which *Narcissus Gerundenfis* and others were martyr'd by his Lieutenant *Gaius* about 303: And in 400, we have an Account, That *Theonestus* and *Albanus* opposed the *Arian* Heresy in this City. *La Forrest* says, 'twas taken by *Attila* the Hun in 452, and by *Clodius* of *France* in 496. It came afterwards to his Son *Thierry* King of *Austrasia*, and then to the ancient Dukes of *Bavaria*. *Charlemagne* took it in 787. His Son *Louis*, the Emperor annex'd it to the Kingdom of *Bavaria* in 817. But in 912, when the *Carlovingian* Race was extinguish'd, it became a Free City, and was endow'd with many Privileges by *Charles IV.* and other Emperors. In 1518, *Luther* gave an Account of his Faith at the Diet here; and in 1530, the Protestants also presented their Confession of Faith to the Emperor *Charles V.* in the Diet here, from hence called the *Augsburg Confession*, as before-mention'd; but the Protestant Princes being persecuted, levied an Army for Defence of their Liberty and Religion, which obliged the Emperan

Peror to call a Council for determining those Differences, where Matters were debated by 7 Deputies on each Side. For the Papists, there were named the Bishop of *Augsburg*, and *Henry Duke of Brunswick*, two Lawyers, and three Divines, viz. *Wimpin*, *Ecceius*, and *Cockleus*. For the Protestants, *George Marquis of Brandenburg*, *John Frederick Elector of Saxony*, *Melancton*, *Brentius*, and *Scheffius*. *Luther*, who was one of 'em, durst not appear with them, for fear of the like Treatment which *John Hef* and *Jerome of Prague* met with at *Constance*; but staid at *Coburg*, on the Borders of *Francia*, from whence he gave them his Advice. The main Things debated were, the Mass, Priests Marriage, Jurisdiction of Bishops, Monastick Vows, and Transubstantiation. The Saxons, says *Dr. Nicholson*, inclin'd to give the Bishops more Respect and Authority, than *Luther* would allow them, who published a Book, Entituled, *Contra Statum Ecclesie, & falsè nominatum ordinem Episcoporum*; i. e. Against the State of the Church, and the Order of Bishops, falsly so called. With him agreed the *Hessians*, *Lunenburghers*, and *Nurembergers*; so that Heats arising, the Deputies were contract'd on both Sides, and the whole Dispute left to *Melancton* and *Ecceius*, assisted by two Lawyers each: But *Charles V.* being displeas'd with the Demands of the Protestants, and hearing that the *Turks* prepared to invade the Empire, he dissolved the Council by an Edict, wherein he order'd, That no other Doctrine should be taught concerning the Lord's Supper, but what had hitherto been received in the Church of *Rome*; That the Cross should be us'd in Baptism; That Statues and Relicks of Saints should be restored and esteemed as formerly; That to deny Free-will, should be an enormous Crime; That the Doctrine of Justification by Faith should be abolish'd, and the Merit of Works maintain'd. In a Word, That the whole Doctrine and Discipline of the Church of *Rome* should be received, and those of the contrary Opinion prosecuted as Hereticks. But the Protestants being too strong to be thus treated, he was oblig'd to revoke his Decree next Year, and return again to *Augsburg*, where he propos'd that call'd the *Interim*, to accommodate Religious Differences, which contain'd a mix'd Model of Religion and Church Government, permitted a few Lu-

theran Doctrines, and enjoin'd most of the Popish, so that it pleas'd neither Side: And the Protestants persisting in their Demands, they were allowed the Freedom of their Religion in a Diet held here in 1555.

The Curious may find an Account of this *Interim* in *Sleidan's Commentaries*, *Annæ* 1548, and how 'twas oppos'd by both Sides, for different Reasons. The Court of *Rome* and the bigotted Papists oppos'd it, because it allow'd Communion in both Kinds, and the Marriage of Priests; and the Protestants rejected it, because it enjoin'd most of the Popish Doctrines; so that the Emperor's Edict, commanding it to be observ'd, had no Effect. The Senate of *Augsburg* embrac'd *Luther's* Reformation, as *Sleidan* informs us, in 1535, and sent to him for Ministers. They afterwards, as *La Forrest* says, expelled their Bishop and Clergy; but *Sleidan* says, they deserted the City upon the Change of Religion, and the Senate publish'd a Paper against them, directed to the Emperor, and States of the Empire, with an Account how ill they had behaved themselves, and had attempted to raise Tumults in the Town. But the Emperor, set on by the Popish Clergy, took the Town, and restored Popery in 1551; and next Year 'twas restored to the *Lutherans* by the Treaty of *Passaw*. Since 1555, the Magistracy of the City has been half Papists, and half *Lutherans*, according to *La Forrest*; but *Dr. Nicholson* says, they consist of 23 Papists, and 22 *Lutherans*, and that their Common-Council has 150 of each. In 1634, the Duke of *Bavaria* took it after a long Siege; but they were restored to their Liberty by the Treaty of *Munster*. 'Tis also famous for the League form'd here in 1687, betwixt the Emperor, the King of *Spain*, the Princes of the Empire, the Prince of *Orange*, the *Dutch*, the Duke of *Savoy*, &c. to declare War, says *La Forrest*, against the King of *France*, and to dethrone the late King *James of Great Britain*: But perhaps there is more Truth in what he says of the Elector of *Bavaria*, who took it in 1704, after 13 Days Siege, with a Design, by that and his other Conquests, to pave his Way to the Empire, which had been possess'd by several of his Ancestors.

Most of the Houses are built of Timber and Clay; but near a 4th Part of the Town is built of Free-stone. The Publick Buildings,

ings, as the Cathedral, the Churches, Town-Hall, Conduits, &c. are in general magnificent and stately; but the Glory of the Town, says Dr. *Nicholson*, is that called the *Fuggery*, which consists of several stately Streets and fair Palaces, built and possessed by the Noble Family of the *Fuggers*, who are Lords of a great Part of the adjacent Country. Four of these Streets in the *Fuggery* are built cross-wise, make a fair Town of themselves, and are inhabited by poor People, who have an Annual Pension. Over the Gate of this Princely Hospital, there's an Inscription in Latin, signifying that 3 Brothers of this Noble Family, out of Thankfulness to God, had, for the Good of the Commonwealth, out of their large Estate, built these 106 Houses, of which the Four Streets consist, for the Use of the frugal Poor of the City. They are under the Inspection of their Chaplain, who has a noble Salary allow'd him. There's a vast Number of *Roman* Monuments in and about this City, of which several Authors have given a large Account. There's a Library in this City, famous for a good Collection of MSS. *Comringius* makes it equal to that of *Vienna*. The Learned *Welfer* left them the greatest Part of those Rarities; and a great Number of Greek MSS. have been added since by several Citizens. A Catalogue of this Library was published by *Reiser*, their Library-Keeper, in 1675.

Monconys commends this City for the Largeness of the Streets, and the Beauty of the Houses, many of which are painted on the Outside. They have also many noble Fountains, with Brazen Statues of different Figures, such as *Mercury*, *Hercules* killing the *Hydra*, and some of 'em are adorn'd with the Statues of Emperors. He gives a large Description of the Town-Hall, which is reckon'd second to that of *Amsterdam*: 'Tis very lofty, the Front is 38 Foot broad, and the Length of it 111 Foot. 'Tis divided into 3 Stories: The first is enter'd into by a fine Porch, adorn'd with two Columns of Marble, and supported by 8 Pillars. The 2d is a Hall of the same Size, with a delicate Sieling of Joyner-work, supported by 8 Columns of green Marble, whose Bases and Chapters, of the *Corinthian* Order, are of Brass. The 3d Story is a large Hall of the same Size, 110

Foot long, 38 broad, and 52 high: The Sieling is of Joyner-work, fram'd in Compartments, painted and gilded. It has two great Gates by which one enters it on each Side of curious Architecture in Joyner-work, painted and gilded; and there are two other on each Side, which enter into as many large Chambers on both Sides the Hall, but not so high. The Upper Hall is pav'd with Marble: And *Misson* says, the Walls are adorn'd with Paintings, intermix'd with Emblems and Devices, relating to the Government; but the Roof, he says, exceeds all the rest for its singular Beauty, the Squares and Pannels of the Compartments being enriched with Sculptures, richly gilt, and beautified with curious Pictures, and other Ornaments. In the upper Chambers, there are very fine Stoves, as there are likewise in the lower, where the Magistrates usually meet; but they are sunk in the Floor, and do not appear but only by a round Copper Grate, which lets the Heat through. There are two Platforms from the Chambers on the Sides, whence one looks down into the great Hall; and the whole Fabrick is of fine hewn Stone.

The next remarkable Structure is their Arsenal, which is very large: The Porch is a fine Piece of Architecture of hewn Stone, with 5 great Figures in Brass over it, one of 'em being the Genius of Peace, with a Flaming Sword in her Hand, trampling upon the Devil of War, and 3 little Cupids about her. By another Gate, one enters into a great Court, where, on the Right Hand, and at the further End, there are two Structures, one 76, and the other 40 Paces long, and each of 20 broad. The two Halls below are full of Cannon, most of 'em Brass, and among them a Leather Culverine, a Six Pounder 26 Foot long; and on the Side by the Walls, there are Pyramids of Bullets handsomely pil'd up. Over each of those two Magazines there are 5 Stories. In the first, are 300 Harquebuses. In the 2d, 3000 new Muskets. The 3d has old Muskets and Arms for Horse: And in the 5th, are Pikes and other Arms for 15000 Men. In a Word, 'tis one of the best furnish'd Magazines in *Germany*. There's a Gate in the Town called the Secret Gate, which was contriv'd to let in People in Time of War, without any Dan-

ger, and has so many Engines and Divisions with Gates and Keys, and Apartments for Guards at some Distance from one another, where the Passengers are examin'd, that 'tis impossible for the Town to be surpris'd by such as are thus let in. They make use of it in Time of Peace, to let People in and out at all Hours of the Night, paying 6 *d.* for a Horseman, and 2 *d.* for a Footman. *Misson* says, the Fortifications of the City are not very considerable; yet it has bravely held out many great Sieges. The *Lutherans* are much more numerous than the *Papists*; but they live in a good Understanding. Their Poor are maintain'd in one and the same Hospital; and to avoid giving Offence, the *Lutherans* pull off their Hats to the Priests and the Company when the Host is carried through the Streets. The *Jews* are confin'd to a separate Place; and for every Hour they stay in the other Parts of the City, are obliged to pay a Florin. They have brought a Branch of the River *Lech* into the City, whose Water is clear and good, and upon this they have several Towers, with great Cisterns on the Top, fill'd by Pumps, which are mov'd by Mills, and convey the Water all over the Town.

'Twas formerly a Place of great Traffick; but is much decayed since Commodities from the *Mediterranean* cease to be brought this Way from *Italy*, and from thence conveyed to other Parts of the Empire. The Cathedral has a Gate of Brass, over which there are represented several Scripture-Histories in *Basso-Relievo*. Their Mechanicks are equal to those of *Nuremberg*, and excel them in Clocks, Goldsmiths-work, and Ivory, in which they are very curious. They make Chains of Steel so very fine, of a Span long, that when they put them about the Neck of a Flea, it will lift it up when it leaps; and these they sell for 10 *d.* a-piece. The Citizens have great Variety of Habits, which are so regulated by the Magistrates, that every one's Quality and Religion may be discern'd by them. The City carries a Pine-Apple for its Arms, which seems to have been a very ancient Bearing in this Place; for a Pillar of 5 or 6 Foot high was lately dug up here, with a Pine-Apple on the Top, and certain Medals of *Augustus*, with such a Pillar on the Reverse; by which 'tis probable, that this

City was then the Boundary of the Empire on that Side. *Mr. Ray* says, it is about 8 *English* Miles round.

2. *Ulm*, on the *Danube*, about 37 Miles W. from *Augsburg*, reckon'd the second for Grandeur, tho' not for Antiquity, in *Swabia*. Yet *Cluverius* thinks it to be as ancient as any of its Neighbours, and takes it to be the *Alcimannis* of *Ptolemy*; but if so, it must have decreased much afterwards, for 'twas only a Village, till *Charlemagne* added the rich Monastery of *Augs* to it. After which, it grew by degrees till it came to be an Imperial City. Its Name is derived from the Elm-Trees, of which there are many in the Neighbourhood. Soon after it was made Imperial, they purchased the County of *Helfenstein*, with some other Towns and Castles, from neighbouring Princes; so that their Territory in a little Time came to be 6 *German* Miles long, and 4 broad. The *Danube* begins first to be navigable here by Vessels of any great Burthen, which advances their Trade of Linen and Cottons. Their Government is by 41 Aldermen, most of which are of the Nobility, and the rest Tradesmen: Out of the Nobility, they chuse Annually two Bayliffs, who preside in their Councils. Their chief Ornament is the Cathedral, which is scarcely exceeded by any in the Empire, except by the great Church of *Strasbourg*. 'Tis said to have been 111 Years in building; during which Time, they had a great Number of Architects in constant Pay. It has 5 stately Spires, the highest of which is supported by 36 vast Pillars, and is 102 Foot high. Their Organ is very remarkable, and has been described by two Learned Men. 'Twas 23 Years a making, is 93 Foot high, 28 broad, has 16 Pair of Bellows, with 125 Pounds of Lead on each, and has above 3000 Pipes of pure *English* Tin, the largest of which is 40 Inches in Circumference, and above 13 in Diameter: But *Dr. Nicholson* thinks it to be short of the Organ in the Cathedral of *Exeter*. There are many other stately Buildings in this City; among which, the Town-House is most remarkable. *La Forrest* says, the City is large, populous, and has a good Trade. They embrac'd the Reformation in 1529, and most of the Inhabitants, and all the Magistrates, are *Lutherans*. Their Territory

tory contains 40 Bailiwicks and Lordships. *Monconys* says, the *Danube* serves for a Ditch on one Side, and the rest is encompassed with a good Wall; beyond which, there is a Ditch 25 Paces broad, which is filled by Water from a little River that runs through the Town. It has besides very fine Ramparts, with 11 Royal Bastions, with Fausses-brays, large Ditches, fine Counterscarps, and Half-Moons, before the Courtaings, all fac'd with Brick, with deep Ditches full of Water, and Cavaliers on some of the Bastions all along the Walls; and within the Town, the Soldiers of the Garison have very pretty small Houses assign'd 'em. He adds, That they have a Stone Bridge of 4 Arches over the *Danube*, which forms several Islands near it; and that they have abundance of ingenious Mechanicks, especially for Clock-work. The great *Franciscan* Monastery was, upon the Reformation, turn'd into a College, where they have Professors of all Arts and Sciences. This Town was taken by Surprize by the Elector of *Bavaria* in 1702; but retaken after the Battle of *Hochstat*.

3. *Bibrach*, i. e. a River of Otters, so call'd from the Multitude of those Creatures near this Place, from whence it had an Otter for its Arms. 'Tis said to have been an Imperial City since the Year 800, and was wall'd in the Reign of *Frederick II*. It stands in a pleasant fruitful Valley, encompassed with fair Fields, Gardens, and Meadows. The River affords them Plenty of Fish, and their Woods Store of Timber. There's a hot Sulphureous Bath in the Town, which draws great Concourse of People of Quality and others hither in the Spring; and their Number is the greater, because it lies almost in the Center of a great Circle of Imperial Cities. It stands upon the River *Rufs*, and the States of the Circle of *Swabia* meet here. The Magistrates are half Protestants, half Papists. The Elector of *Bavaria* took it in 1702. The most remarkable Things in the Town are, *St. Martin's* Church, and the neighbouring Hospital, where Provision is made for many decay'd Citizens. It lies about 20 Miles S. W. from *Ulm*.

4. *Bucaw*, or *Buchaw*, a small Imperial Town, about 11 Miles S. W. from *Bibrach*. 'Tis remarkable for little but its Nunnery,

where all the Nuns are Countesses or Baronesses, and have Liberty to marry, except the Abbess, who is obliged to take the Vow of Chastity. She is one of the Fourteen who is a Princess of the Empire, and has a Vote in the Diet, according to *La Forrest*, and the *Matricula* of the Empire; which shews the Mistake of some Geographers, who made this an Abbey of Men, and the Abbot a Prince of the Empire.

5. *Memmingen*, on the *Bach*, betwixt the *Danube* and the *Liller*, about 17 Miles S. E. from *Bibrach*. 'Tis thought to be the *Rostrum Vermania* of *Antonin*. 'Tis well fortified on one Side with a Marsh, and elsewhere with a strong Wall, and deep Trenches. 'Tis almost as large as *Ulm*, but much short in Buildings, and Number of Inhabitants. It has 7 Gates, and a small Rivulet that runs through it. The Inhabitants are Lutherans and Papists; the former have two Churches and a School, and the latter a Monastery of *Augustine* Friars, and a Nunnery. Their chief Trade is in Linen, Cotton, and Paper: The latter is reckon'd as good as any in *Germany*. They have great Privileges, and are exempted from the Imperial Chamber at *Rotweil*.

6. *Leutkirch*, a small Imperial City, but tolerably well built. It stands on a small River about 12 Miles S. W. from *Memmingen*. Some derive the Name from the Multitude of People who flock'd to it upon the first Preaching of Christianity, and maintain'd abundance of Preachers. *St. Martin's* Church here is a stately Fabrick, possessed by the Papists, who allow only a small Chapel to the Protestants. Half the Magistrates or more are Lutherans. This is a great Thoroughfare for Travellers to and from *Italy* and *Tirol*; and they have a good Trade in Linen-Cloth, Corn, and Flax. The Citizens have a Privilege to dig for Metals in any of the neighbouring Fields.

7. *Kempten*. This is reckon'd as ancient a Town as any in *Germany*. Their Antiquaries say, it was the *Cretica* of the Ancients, and inhabited by the *Cretici*; but being subdued by one of *Tiberius's* Generals, he call'd it *Campodunum*, because of the Hill which commands the whole Plain where it stands, and from which he play'd upon it. Hence by Corruption 'twas call'd *Kemp'en*. When it came under the

R r r r 2

French,

French, they call'd it *Vermetica*, from the multitude of Snakes and other venomous Worms about it; but it has since resum'd its old Name. It was made an Imperial Town by *Frederick IV.* who gave them for Arms the Spread-Eagle of the Empire, half *Or*, and half *Sable*, crown'd with the Imperial Crown. 'Twas taken by the Imperialists in 1633, who burnt 140 Houses, with the great Church, and put 450 of the People to the Sword. Their greatest Trade is in making and whitening Linen, and in lodging Travellers betwixt *Italy* and the Empire, and by the *Swissers*; who bring Salt from *Tirol*, which makes it one of the richest Towns in *Swabia*. They embrac'd the Reformation in 1530. 'Twas formerly the Seat of the Dukes of *Swabia*, and is famous for its Monastery, founded by *Hildegard*, Wife to *Charlemagne*. The Abbot is a Prince of the Empire, and Lord of the adjacent Territory, as he was formerly of the City, before it was made Imperial. It lies 13 Miles S. from *Memmingen*.

8. *Ish*, or *Eisha*, on a River of the same Name, mid-way between *Kempten* and *Lindau*, about 13 Miles from each. It appears, by an Inscription on an old Marble Monument, to have formerly been inhabited by a Roman Colony; and that the High-ways betwixt this City and *Kempten*, which is the Road betwixt *Italy* and the *Rhine*, was then repaired at the Charge of *Septimius Severus*, and *M. A. Antoninus*. In the neighbouring Fields, they have no Wine nor Wheat; but Oats, Rape-Seed, Beans, and Flax. Cattle and Corn, are brought from the *Alps* and other neighbouring Places to their Market. In 1633, in 12 Hours Time, 380 Houses, with most of their Publick Buildings, were burnt down, and the Brass Guns on their Bulwarks melted; but 'tis since rebuilt, and as flourishing as ever.

9. *Lindau*, an Imperial City, upon an Island in the Lake of *Constance*, into which there's an Entrance by a Stone Bridge of 290 Paces long. Part of the City lies upon the Bank of the Lake, on the N. E. Side. The Inhabitants shew the Ruins of an old Tower, which they pretend was built by *Tiberius*, in his Expedition against the *Vindelici*; but this is disputed, for 'tis said to have been first founded by *Adelbert*, one of *Charles the Great's* Courtiers, Lord of this Part of the

Country, who being seiz'd by a Tempest on the Lake of *Constance*, and drove ashore on this Island; did, in Remembrance of his Deliverance, build a Nunnery here about 810, and called it *Lindau*, from his landing in this Place. But *Dresser* denies this Erymology, and says, it had its Name from the Linden Trees planted round the Nunnery; and in Confirmation, alledges the Arms of the City, which are, a Linden-Tree Vert, in a Field Argent. However this be, the Nunnery gave Occasion to the building of the Town, and is govern'd by an Abbess, who is a Princess of the Empire, and has Sovereign Jurisdiction within the Precinct and Territories of the Nunnery. The Nuns must be all of Noble Families, and Papists, but may marry when they please. The Magistrates, and most of the Citizens, are Lutherans. The Situation of the City is pleasant and healthful, and it lies so convenient for Trade, because of the Lake, and the *Rhine* which runs through it, that they call it the *Venice* of *Swabia*. In that Part of the Town on the Bank of the Lake, they have Plenty of Vines, which yield a rough and harsh Wine. The Town on the Island is inhabited mostly by Fishermen, Watermen, and Weavers. They have several Springs of good Water, and on the N. Side of the Town many fair Fields and Meadows. It was made Imperial by *Rudolph I.* and lies about 27 Miles S. W. from *Kempten*. Its Castle and Situation make it very strong, so that the *Swissers* could not take it in 1647.

10. *Bregentz*, or *Bergentz*, on the same Side of the Lake, 5 Miles S. E. from *Lindau*; from whence the Lake was called *Lacus Brigantinus*, was formerly a famous City, and by *Antonin I.* called *Brigantia*. 'Tis now inconsiderable, but is Capital of a small County of the same Name. It lies at the Mouth of a little River that falls into the Lake, which *Dr. Nicholson* says is the largest in *Germany*, being 7 German Miles long, in some Places two, and in others three broad. 'Tis divided into two Parts, the largest of which reaches from *Bergentz* to the old Fort *Podmen*, from whence it first had the Name of *Podmensée*, and by Contraction *Bodensee*: Tho others say, 'twas so called because of its Depth. The other Branch is that which begins at *Constance*, and is usually called *Cel-*

fersee, from *Cell*, a considerable Village on its Banks.

11. *Buchorn*, on the same Side of the Lake, 12 Miles N. W. from *Lindau*. It derives its Name from the adjoining Woods of Beech. 'Twas formerly govern'd by a Count of its own, descended, as they pretend, from *Charlemagne*, and then by the Counts of *Altorf* and *Ravensburg*. It belongs now to the House of *Austria*, who have made it a Dependence of the City of *Überlingen*. The Town is not large, but has a good Trade by Ships, which daily pass from it to *Switzerland*, and from thence again into *Swabia*. The Air here is unwholesome.

12. *Ravensburg*, or rather *Gravensburg*, 10 Miles N. E. from *Buchorn*, on the same River. 'Twas first walled in 1100, afterwards made an Imperial City, and endow'd with many Privileges. In the middle of the Town, there's a very high Tower, called *Blaserturm*, or the Watch-Tower, which in 1552 was blown down by a Whirlwind, when the Watchman or Trumpeter, who, according to the *German* Custom, sounds with his Trumpet to give Notice of the Hour of the Night, fell down from the Top of it without receiving any Hurt, tho' his Wife and Son were killed by it, as appears by an Inscription made upon it when rebuilt. There's little else worth Notice here, but the Town-House, and some Churches. *La Forrest* says, 'tis well built; and that the Town-Council is composed of Lutherans and Papists.

13. *Altorf*, lies, according to *Dr. Nicholson*, within two *English* Miles of *Ravensburg*, is an ancient and famous Town; from the former Earls of which, proceeded a great Branch of the ancient Dukes of *Bavaria*, and the present Dukes of *Brunswick* and *Lüneburg*. Here was formerly the ancient Monastery of *Wingarten*, where the *Guelphian* Family was usually buried. It belongs now to the House of *Austria*, and is the usual Residence of the Emperor's Lieutenant for *Suevia*, who keeps a Court here, to determine all Causes brought before him from any of the Imperial Cities in *Swabia*.

14. *Wangen*, 10 Miles N. E. from *Lindau*, is a small Imperial City on the River *Arg*, famous for Sickles, which are made here in great Numbers, and sent over the Empire.

They have also a considerable Trade in Paper and Flax, but no Wine of their own Growth; tho' some Geographers have said the contrary.

15. *Überlingen*, a fair Imperial City on the Banks of the Lake of *Constance*, 27 Miles N. W. from *Lindau*. 'Tis encompassed with fine Orchards and Vineyards, and situate upon the top of a Rock; at the bottom of which, they dig Stones for building their Houses and Fortifications. The Situation is so pleasant and magnificent, that the ancient Dukes of *Swabia* made it their Residence. Upon the Failure of that Family in 1267, it came to the Emperor's Hands. They have a very good Harbour, from whence they send Vessels with Wine and Fruit to the neighbouring Countries and Towns, which makes the Place rich. Among other Privileges, they have this, That they are not to appeal from the Sentence of their Common-Council any further than to *Friburg* in *Brissgaw*, *Rothwel*, or *Ravensburg*. In the neighbouring Vineyards and Orchards, there are many cool Springs and Mineral Fountains; one of which is particularly famous against the Stone in the Bladder or Kidneys, and a decay'd Appetite. It springs out of a Rock on the E. Side of the Town, and is conveyed by Pipes into a Bath-House in the City for the Use of Patients. The Water has a Tincture of Lead, Copper, and Brimstone, and its Virtues are treated of at large by *Eschen Reuster*, a Physician and Native of the Place, in a *German* Treatise of the wholesomest Baths. He speaks likewise of another Mineral Spring in one of the Vineyards called *Am-Stollen*, which tastes something like *Sal Armoniac*, and by once or twice washing removes Warts from any Place of the Body. The Grapes of this Vineyard, which is a hot and sandy Soil, are the best in the Country. They have an Hospital, accounted the richest in *Swabia*, for poor and decrepit People, of which they have as little need as any of their Neighbours, being generally a laborious and frugal People, and have so good a Trade, that in Time of War they maintain 6 Horsemen and 60 Foot, says *Dr. Nicholson*, which is as much as many of the Princes are oblig'd to do by the *Matricula*; but their Proportion seems to be raised since

since that was constituted, for then they paid only 20 Foot.

16. *Rattolfzell*, or *Cella Ratolfi*, on that Part of the Lake called the *Cellersee*, to which it gives Name. *Ratolf*, Bishop of *Verona*, built a Palace here in 875, and gave Name to the Town, which afterwards fell, with many other Places, into the Hands of the Emperor. The Princes of *Wurtemberg* got Possession of it in 1632, but were forc'd to quit it after the Defeat of the Protestant Forces at the Battle of *Nordlingen*; since which, the House of *Austria* have taken Care to strengthen its Fortifications, chiefly on the Account of the impregnable Castle of *Hohen-Dwiel*, which lies near it. This Castle stands on the top of a high and inaccessible Hill, in the middle of a fine Plain on the Banks of the Lake, according to *Sanson*: But *Dr. Nicholson* says, near the Banks of the *Rhine*. A few Men may hold it out against an Army, the Hill is so very high and steep. Besides, the Soil is so full of Flints, that there's no springing of Mines to annoy it; nor can they be easily starv'd out, because on the top of the Hill they have a good Annual Crop of Corn and Wine. 'Twas formerly one of the Seats of the ancient Dukes of *Swabia*; and when that Family fail'd, it fell to other Masters, and at last, by Marriage in 1520, to the Dukes of *Wurtemberg*.

17. *Constance*, by the Germans called *Cöstnitz*, or *Cöstantz*, is the Metropolis of this Part of the Country, which *La Forrest* calls *Austrian Swabia*. *Dr. Nicholson* says, That all the Country on both Sides the Lake is called by the Name of *Hezog*, and this Lake is commonly taken for the true Boundary betwixt *Swabia* and *Switzerland*. This City lies on the S. W. Side of the Lake of that Name, in Long. 28; 5. Lat. 47. 8. about 8 Miles E. from *Überlingen*, 12 W. from *Buchow*, and 27 S. E. from *Schaffhausen*. Some derive its Name from *Constantius*, Father to *Constantine the Great*, who is said to have founded it, and made his Head Quarter here during the Winter. Others ascribe it to *Constantine* himself, who gave it this Name in Honour of his Father. But from an old Marble Monument, Part of which is still to be seen in the Chapel of *St. Blasius* here, which mentions the Emperors *Dioclesian*, *Maximilian*, and others, some think it to be

much more ancient; which *Dr. Nicholson* obviates, by supposing this Monument to have been brought hither from the Ruins of the old *Vitodurum*, which the Learned *Schedelius* thinks to have stood near this Place. However that is, 'tis certainly an ancient City, since we find it was taken by *Attila the Hun*. It came afterwards into the Hands of the French Kings, and in some of their ancient Records is called, *Villa Regia Dagoberti Regis*. Upon which *Dr. Nicholson* observes, That the French Kings would not suffer the great Towns, which they took at any distance from their own Seats, to be fortified, lest they should revolt. *La Forrest* says, That when *Childebert* King of *Austrasia* sack'd the Town of *Windisb*, which was a Bishop's See, the Bishoprick was transferred to this Place in 594. The Bishop is a Prince of the Empire, and one of the Directors of the Circle of *Swabia*, but Suffragan to the Archbishop of *Mentz*, and has his Residence at *Mersburg*. After 'twas made a Bishoprick, it increas'd daily, and was so well fortified in 938, that it resisted the Hungarian Army, which over-ran the neighbouring Country. 'Twas formerly an Imperial Town; but having refus'd the *Imperial* in 1534, was proscribed, and forced to submit to the House of *Austria*, who governs 'em by a Deputy, allows 'em most of their ancient Privileges, and to retain the Name of an Imperial City. *La Forrest* says, 'tis very populous, well built, has abundance of fair Structures, and is well fortified both by Art and Nature. It has a good Trade by the Neighbourhood of the *Rhine*, which passing by this City out of the great Lake into that called the *Cellersee*, runs through in a fair Stream, without mixing with the Water of the Lake. Their Churches, and particularly the Cathedral of *St. Stephen*, are very magnificent; and their Exchange, Town-House, Market-Places, and Bridges, are very stately. The Bishop has a sumptuous Palace in the Suburb called *Petershausen*, which was fortified in 1635, when the *Swedes* besieg'd the City. That which makes it most remarkable, is the Council held here in 1414, being called by the Emperor *Sigismund*, to remove the Schism occasion'd in the Church by three Popes at a Time; the *Italians* having set up one, the *French* another, and the *Spaniards*

a third, to the general Disturbance of the Christian World. The Council began, as usual, with Mass; at which, while they were singing the Hymn, *Veni Sancte Spiritus*; i. e. Come Holy Ghost, some body clap'd a Paper on the Door with these Words, *Aliis Rebus occupati, nunc adesse vobis non possumus*; i. e. We are taken up with other Affairs, and cannot be present with you now. This the Clergy took for an ill Omen. They quickly agreed to depose all the three Popes; and John, who was set up by the Italians, came hither, according to their Summons, in Expectation, that since he obey'd them, which neither of the other did, they would confirm him in the Chair; but finding it otherwise, he repented of his Forwardness, fled, was pursued, brought back, imprison'd, and depos'd; the other two who were absent had the same Fate; and the Council chose Martin V. at which the Emperor was so overjoy'd, that he immediately went to the Conclave, and kissed the new Pope's Foot. In the 8th Session, they condemn'd Wickliff's Doctrine, in which they inserted many false Articles, and order'd his Bones to be dug up and burnt. In the 15th Session, they condemn'd John Hus, notwithstanding his Safe-Conduct from the Emperor, who at first oppos'd it; but at last, as Sleidan informs us in his Commentaries, being told by the Council, *That Faith was not to be kept to Hereticks*, he comply'd, join'd in the Sentence against him, and order'd him and his Books to be burnt. To justify this, the Council made a Canon, That Faith should not be kept with Hereticks, or those suspected of Heresy, tho' they should come thither with the Emperor's Safe-Conduct, in order to be try'd or examin'd. In the 21st Session, they pass'd the like Sentence upon Jerome of Prague, who was burnt in the same Place with Hus, which the Burghers shew to this Day to any Stranger who desires it. This Council asserted their own Authority to be above that of the Pope, as is own'd by Carranzano, of the Order of the Predicants, in his *Summa Conciliorum*, printed at Lyons with Allowance in 1683; tho' many of the Papists be loth to own it. This Council lasted 4 Years; during which Time, there are said to have been in this little City 4 Patriarchs,

29 Cardinals, 346 Archbishops and Bishops, 564 Abbots and Doctors, 10000 Secular Princes and Nobles, 450 common Harlots, 1600 Barbers, and 320 Musicians, as Doctor Nicholson informs us.

The Bishoprick of Constance lies on the Banks of the Lech, on the Borders of Swiss *serland*, and is commonly reckon'd among the Allies of the Cantons. He is, besides being a Prince, a Count and a Baron of the Empire, was Sovereign of the Town before it was made Imperial, and is said to have 1000 Castles and Villages under his Jurisdiction.

In an Island in this Lake stands the rich Abbey of Reichenau, or *Auge*, founded by a Bishop of Meaux, who retir'd hither in the 9th Century. It was united to the Bishoprick of Constance in 1540. La Forrest says, this Bishoprick is one of the richest and largest in Germany; and that *Mersburg* on the same Lake, the Place of his Residence, is a very pretty City. It lies 12 Miles N. W. from *Buchorn*, over against Constance. Geographers are not agreed as to the Divisions of Upper and Lower Swabia, and therefore, without determining in which of the Parts the Towns stand, we shall only take Notice, That La Forrest places many of the Towns in Upper Swabia, which Dr. Nicholson places in the Lower; nor do our Maps exactly distinguish their Boundaries.

La Forrest, besides the Bishoprick of Constance, reckons in that which he calls *Austrian Swabia*,

I. The Marg. of BURGAW,

Which lies on the S. of the Danube; and had formerly Princes of its own, till 1282; that their Issue failing, the Emperor Rodolph gave it to his own Son Rodolph Duke of Swabia.

The Places of Note here are, 1. *Burgaw*, on the *Mindel*, the Capital of the Country, about 20 Miles N. W. from *Augsburg*. The Emperor Lewis of *Bavaria* besieg'd it in vain in 1321. 2. *Guntzburg*, a small City on the Danube, 8 Miles N. W. from *Burgaw*. It has a Castle, where the Lords of the Country formerly resided, and is now the Seat of the Emperor's Governor. The whole Coun-

Country of *Burgaw* is about 30 Miles long, and as much in Breadth.

II. The Landgraviate of NELLEMBURG.

'Twas Part of the ancient Landgraviate of the *Henow* or *Hegow*, formerly govern'd by Princes of its own; upon the Failure of whom, the Emperor *Rodolph II.* gave it to Arch-Duke *Ferdinand*.

The Places of Note here are, 1. *Nellemburg*, about 4 Miles S. from the *Danube*, and 12 N.W. from *Uberlingen*. 2. *Stokeim*, a small City about 7 Miles E. from *Nellemburg*. The Country is about 27 Miles long, and 12 broad.

III. The County of HOHENBERG,

Formerly govern'd by Princes of its own; but came to the Emperor *Rodolph I.* in the 13th Century, on his marrying the Heiress. It lies betwixt the Dutchy of *Wirtemberg* and the Principality of *Furstenberg*.

The chief Places are, 1. *Hohenberg*, a strong Castle near the Head of the *Neckar*, about 13 Miles N. W. from *Nellemburg*. 2. *Rotemburg* on the *Neckar*, 27 Miles N. E. from *Hohenberg*, which some make the Capital of the Country. 'Twas built by *Albert*, their last Count, in 1271. 3. *Willingen*, on the *Birg*, a large Village, noted for its wholesome Baths. 4. The *Ortnaw*, by some called *Mornaw*. It lies on the *Rhine*, contains no remarkable Cities, belonging properly to the House of *Austria*; but there are 3 Imperial Towns here which are under the Emperor's Protection, viz. 1. *Offenburg*, on the *Kintch*, or, as some call it, *Offingen*, within a League of the *Rhine*, and 10 Miles S. E. from *Strausburg*, where *M. de Villars* took a great Train of Artillery, that the Imperialists design'd to have put into Fort *Kheil*. 2. *Zell*, on the *Nagolt*, near the *Rhine*, 8 Miles S. E. from *Offenburg*. 'Twas taken by *M. de Villars* in 1703. 3. *Gengenbach*, mid-way betwixt *Offenburg* and *Zell*, which was taken by *M. de Villars* at the same Time. *Sanson* makes this Country about 24 Miles long, and 18 broad. The two Bailiwicks of *Oberkirk* and *Oppenaw* in this Country belong to the Bishoprick of *Strausburg*.

IV. The BRISGOW,

Which lies in the Neighbourhood of the *Rhine*, betwixt the *Ortnaw* and the Principality of *Furstenberg*.

The Places of Note here are, 1. *Friburg*, on the River *Treisem*, upon a Hill, where the *Black Forrest* begins. 'Tis now the Capital of *Brisgow*; but was first only a Village, built by Miners, who wrought in the Silver and Gold Mines betwixt it and *Brisac*. In a little Time they grew so rich, as to purchase the Estates and Titles of Noblemen; and the City grew so large, that, on a short Warning, they were able to send 3000 Men to the Field. It belong'd formerly to the Dukes of *Zeringen*, and afterwards by Marriage to the House of *Furstenberg*, from whom they revolted, and submitted to the House of *Austria* in 1386. 'Tis very populous and strong. 'Twas several times taken and retaken during the Civil Wars of *Germany*, particularly three times by the *Swedes*, in 1632, 1634, and 1638; and twice since by the *French*, in 1671, and 1677. 'Twas confirmed to them by the Treaty of *Nimwegen*. After which, they made the Fortifications very strong; but 'twas restored to the Emperor by way of Exchange at the Treaty of *Ryswick* in 1697. 'Tis also noted for a great Victory obtain'd near it by the Prince of *Condé*, then Duke of *Enguien*, over the *Bavarians* in 1644. 'Tis the Seat of a Sovereign Court, and of an University, founded by Arch-Duke *Albert* in 1450. There are 14 Religious Houses in the Town, and the Citizens are famous for polishing Precious Stones found in *Lorraine*, and the neighbouring Countries. *Baudrand* says, 'twas built in 1120 by the Duke of *Zeringen*, and that it was formerly an Imperial Town. He adds, that the Chapter of *Basle* resides here, tho' the Town be in the Diocese of *Constance*. It lies 30 Miles S. from *Strausburg*, and 10 Miles E. from *Brisac*.

2. *Brisac*, called by *Antonin*, *Mont Brisac*; and the ancient Inhabitants are by the Latins called *Brisgawi*. 'Twas formerly the Metropolis of *Brisgow*. Historians say, it was built by the Emperor *Valentinian*. It stands on the top of a round Hill, and is so well

well fortified by Nature and Art, that 'tis reckon'd one of the strongest Places in Europe. But they have only one deep Well, which furnishes Water to the whole City. In 1638, during the Civil Wars of Germany, it held out a great Siege against the Swedes and French, commanded by the D. of Sax-Weimar, for 4 Months: During which, Dr. Nicholson says, they were reduc'd to such Straits, as to dig up the dead Bodies of their Soldiers, and eat them, after they had been buried some Days; and on both Sides there were 80000 Men slain, and 1100000 Crowns spent in Ammunition; but being taken, it was given to the French by the Treaty of Munster. After which, the French King repair'd its Fortifications, and set up a Court of Judicature there, like the Chamber of Spies, to determine all Controversies. It was confirm'd to him by the Treaty of Nimwegen: After which, he laid Claim to several other Towns and Villages, as its Dependencies. 'Twas restor'd to the Empire by the Treaty of Ryswick; but retaken by the Duke of Burgundy in 1703, after 13 Days open Trenches. It is joined to some Islands in the Rhine by Bridges, which are fortified. On the W. Side, it has 8 Baffions fill'd with Earth, and fac'd with Brick; and before every Curtain, there's a Half-Moon. The Ditch is broad, and the Counterfcarp, Cover'd-way, and Palifadoes, in very good Order. It has also a strong Citadel. On the W. of the Town, the Fortifications are a League in Circumference, and the Town is capable of 10000 in Garison. It lies 32 Miles S. from Strasburg, and 10 W. from Friburg. It had a fair strong Bridge over the Rhine, which was destroyed by the French after the Treaty of Ryswick.

To Austrian Swabia, belong also those call'd the Four Forrest Towns, because they lie at the Entrance of the Black Forrest.

These TOWNS are,

1. *Rheinfeld*, a small City, with a Bridge over the Rhine above *Basse* in *Switzerland*. It was the Capital of a County, which came to the Emperor *Rodolph I* by his Marriage with *Anne* Countess of *Hohenberg*. The Duke of Sax-Weimar, General of the Swedes, took it in 1638; but 'twas restor'd to the

Empire by the Treaty of *Westphalia*. It lies on the S. Side of the Rhine, 28 Miles S. from *Brisac*, and 8 E. from *Basse*.

2. *Seckingen*, in an Island of the Rhine, 8 Miles E. from *Rheinfeld*. 'Twas taken by the Duke of Sax-Weimar in 1638, and restor'd to the Emperor in 1648.

3. *Laufenburg*, about 7 Miles E. from *Seckingen*. The Rhine divides it into two Parts. 'Twas taken and restor'd by the Swedes at the same Time with *Rheinfeld*.

4. *Waldshut*, or *Waldshut*, on the Conflux of the *Schult* and Rhine. It has its Name from being a Key into the *Black Forrest*, part of which it covers.

La Forrest, besides the Places already mention'd in *Upper Swabia*, takes Notice of those that follow.

1. *Arbon*, or *Arbonne*, a City near the Lake of *Constance*, which is inclos'd by the Dominions of the *Swissers*, and was formerly call'd *Arbor Felix*. *Sanson* places it 8 Miles N. E. from *St. Gall* in *Switzerland*, and 15 S. E. from *Constance*. 2. *Birchhoffzell*, a small Town on the *Sitter*, about 8 Miles W. from *St. Gall*. 3. *Kiburg*, on the *Danube*, a City which gave Title to the ancient Counts of that Name, who possess'd several Lordships in *Switzerland*. *Gustavus Adolphus* pass'd the *Danube* near this Place in 1632. 4. *Leckpruck*, on the River *Lech*, a small City, which was ruin'd during the Civil Wars of Germany. He mentions also 14 Abbies in this Country, besides those we have already describ'd; several of whose Abbots are Princes of the Empire; but we shall not insist upon them, because he says nothing remarkable of them.

Besides the Secular States already mention'd in *Upper Swabia*, he takes Notice of those that follow.

The Principality of FURSTEMBERG,

A small Country on both Sides the *Danube*, extended about 70 Miles in Length. It has the Fountains of that famous River within its Boundaries, and comprehends Part of the Landgraviate of *Bar*, of the County of *Heyligenberg*, and other Lordships, and was erect'd into a Principality in 1677.

S s s s

The

The chief Town is *Furstemberg*, on the *Danube*, about 12 Miles N. from *Schaffhausen* in *Switzerland*, and 22 N. E. from *Waldshut*. It gives a Title to the ancient Family of *Furstemberg*, which is descended from the Counts of *Friburg*, and divided into two Branches; that of *Heyligenberg*, call'd Princes; and that of *Blamberg*, call'd Counts. The Principality is subject to its own Prince, who is a Count of the Empire. His Family has produced several great Persons; among others, the Cardinal of *Furstemberg* Bishop of *Strasburg*, who being in the French Interest, helped to bring that City under the Subjection of *France*, and procur'd himself to be chosen Archbishop of *Cologne*, which was one of the Causes of the late War betwixt the Empire and *France*.

In this Country lie also, 1. *Huffingen*, a large open Town near the Fountains of the *Danube*. 2. *Doneschingen*, another large Town, within a League of the former, upon the Confines of the old *Hercinian* Forrest. 3. *Heyligenberg*, a Castle on a Mountain, with the Title of a County, belonging to the eldest Branch of the Family. It lies 9 Miles N. E. of *Uberlingen*, and came to this Family by marrying the Heiress in 1534.

The County of FURSTEMBERG,

Adjoining to the Principality, contains the Bailiwick of *Blamberg*, the Barony of *Moeskirk*, the Landgraviate of *Hulingen*, and two Lordships. Its Counts possess likewise *Gundelfingen* in *North Swabia*. The Family of *Blamberg* is divided into the Branches of *Moeskirk* and *Hulingen*. *Moeskirk*, the Title of the eldest Branch, is a pretty small Town, on a little River that falls into the *Danube*. *Hulingen*, the Title of a Landgraviate, belonging to the younger Branch, lies on the Frontiers of *Schaffhausen*. In this Country lies *Engen*, near the Lake of *Constance*; and *Wildenstein*, a large open Town with a Castle, near *Walburg*.

The County of SULTZ,

Lies near the Frontiers of *Zurich* and *Schaffhausen*, and takes its Name from a large open Town called *Sultz*, which gives

Title of Counts to one of the oldest Families in *Germany*.

The County of E M S,

Derives its Name from a Castle near the *Rhine*, towards the Frontiers of the Canton of *Appenzel*, and gives Title to the Counts of *Ems*. It lies about 10 Miles S. from *Bregenz*, is about 10 Miles long, and 5 broad. This Family is divided into two principal Branches, called the *Roman* and *German*; and the latter is divided into the Branches of *Hohenelms* and *Wadutz*.

The County of MONTFORT,

Lies S. of *Ems*, about 12 Miles long, and 6 broad, derives its Name from a fine Castle towards the Frontiers of *St. Gall* and *Appenzel*, within two Leagues of the *Rhine*. It gives Title of Count to the Family of *Montfort*, one of the oldest in *Swabia*.

The County of WALDBURG,

Which lies S. from *Ravensburg*, derives its Name from a fine Castle belonging to the Family of this Name, which is divided into the 4 Branches of *Wolfack*, *Zeil*, *Scheer*, and *Frauchburg*. This County is 20 Miles long, and 18 broad; comprehends the Lordships, 1. Of *Walsee* near *Walzburg*, a large open Town, fortified with a Castle. Here are the Tombs of the Counts of *Walzburg*. 2. Of *Wurtzach*, another large open Town, half a League from *Walsee*. 3. *Friedberg*, which has a fortified Castle, betwixt *Mengen* and *Saulgen*. 4. *Sheer*, an open Town, with a strong Castle, on the *Danube*.

The County of KOENIGSECK,

A pretty open Town, near the River *Schuss*, which gives Title of Count to the Family of this Name, descended from the ancient Family of the *Guelphs*, so well known in History. 'Tis divided into the Branches of *Rottenfels* and *Aulendorf*. *Rottenfels* is the principal Town of a Bailiwick of that Name in the *Algow*, and lies 23 Miles E. from *Bregenz*. *Aulendorf* is the chief Town

Town of a Lordship of that Name, and lies 8 Miles N. W. from *Waldsee*.

The County of KIRKBERG,

On the *Lifser*, otherwise call'd the County of *Suger*, gives Title to Counts of that Name. The County is 18 Miles long, and 8 broad. This Family is divided into several Branches, who are very rich. The Town of *Kirkberg* lies about 7 Miles S. from *Ulm*. These Counts possess likewise the Lordship of *Kirchheim*, a large open Town, within two Leagues of *Ursperg*; and the Lordship of *Obernorf*, a considerable open Town on the River *Lech*, 7 Miles S. from *Donawert*.

The Barony of MINDELHEIM,

In the *Algow*, lies betwixt the Bishoprick of *Augsburg* and the Abbacy of *Kempten*. *Mindelheim*, the chief Town, lies on the River *Mindel*, is a large open Place, 18 Miles N. from *Memmingen*, and 25 S. from *Augsburg*. It was formerly subject to Princes of its own, of several Families, and particularly to the Dukes of *Teck*, and afterwards to the Lords of *Rechberg* and *Fronsberg*, whose Issue failing, the Emperor *Rodolph II.* invested *William V.* of *Bavaria* with it. It continued in that Family till the Proscription of the late Elector; and after the Battle of *Hochstat*, was erected into a Principality for the Duke of *Marlborough* and his Posterity, as a Reward for his Grace's Share in that great Victory. He has a Vote in the Diet, and the Principality is always to be in the Hands of a Protestant. *Sansou* makes it, where longest, about 18 Miles, and the greatest Breadth about 16. It contains, besides *Mindelheim*, the Towns of *Ingried*, and *Schwabek*.

La Forrest mentions also in *Upper Swabia* the City of *Kaufbeuren* on the *Wertach*, formerly govern'd by Counts of its own, who sold 'em their Freedom in 1024; and next Year it was made an Imperial Town by the Emperor *Conrad II.* It lies 18 Miles N. E. from the Abbey of *Kempten*, and 33 S. from *Augsburg*. *Pfullendorf*, on the River *Sal*, a small and neat City, which was made Imperial by the Emperor *Frederick I.* It lies

10 Miles S. of the *Danube*, and 14 N. from *Uberlingen*, on the Lake of *Constance*.

La Forrest mentions the following Places in *Lower Swabia*.

The Principality of HOHENZOLLERN,

Which lies betwixt the Principality of *Furstenberg* and the Dutchy of *Wurtemberg*. It took its Name from the Castle of *Zollern*, built by the Emperor *Henry V.* in 1122. 'Tis, according to *Moll*, 34 Miles in Length, and about 10 where broadest; but in other Places scarce 5. 'Tis govern'd by its own Princes, descended from the ancient Counts of *Zollern*, whose Pedigree is derived from *Taffilo* Count of *Hechingen*. This Family is divided into the two Branches of *Hechingen* and *Sigmaringen*, who were made Princes of the Empire by *Ferdinand II.* They are Chamberlains of the Empire, and Vicars to the Elector of *Brandenburg* in that Office. They and their Subjects are Papists.

The Places of Note here are, 1. *Hechingen*, a small City, with the Title of a County, betwixt the *Danube* and the *Neckar*, 8 Miles S. from *Tubingen*. It gives Title to the eldest Branch of the Family. 2. *Zollern*, an ancient Castle on the River *Zollern*, which gives Title to the Lords who reside there. 3. *Heicherlock*, or *Hagerlach*, upon the same River, a small City, with the Title of a County. 4. *Sigmaringen*, a great open Town on the *Danube*, which gives Title to the younger Branch of this Family.

The Principality of OETINGEN,

A small Country betwixt the Marq. of *Anspach* and the Dutchy of *Newburg*. *Sansou* makes it 28 Miles long, and 18 broad, including *Nordlingen* and its Territory. The Lords of this Country are Protestants, and were made Princes of the Empire in 1674.

The chief Places are, 1. *Oettingen*, or *Oettingen*, on the *Wernitz*, 15 Miles N. W. from *Donawert*, and 10 N. E. from *Nordlingen*. One half of the Town belongs to the Princes of this Name, and the other to the Counts of *Oettingen*. 2. *Allerheimb*, on the same River, the Capital of a Bailiwick.

The County of *Oettingen* comprehends 3 Bailiwicks, belonging to the younger Branch of the Family, sub-divided into 4 other Branches, all Papists, who observe Seniority in Point of Succession among one another.

3. *Wallerstein*, on the *Eyer*, a great open Town, which gives Title to a Branch of the Family, and is Capital of a Bailiwick.

4. *Nordlingen*, called by the Latins, *Alia, Alia Flavia*, and *Nerolinga*. It lies on the River *Eyer*, in the Confines of the *Norgau*. 'Tis a small Imperial City, 10 Miles S. W. from *Oettingen*, 8 N. from *Blenheim*, and 15 N. W. from *Donawert*. 'Twas made an Imperial Town in 1251; and for their Security, is in League with the *Swissers*. 'Tis remarkable for two great Battles; the first in 1634, betwixt the *Germans* and the *Swedes*, when the latter were defeated; and the 2d in 1646, when the *Swedes* and the *French*, who came to the Assistance of the Protestants of the Empire, under the Prince of *Conde*, defeated the *Bavarians*.

5. *Dunkelspibel*, on the *Wernitz*, a small Imperial City in the County of *Oettingen*, taken by the *French* after the Battle of *Nordlingen* in 1646. One half of the Magistrates are Papists, and the other *Lutherans*.

6. *Gingen*, on the *Prenitz*, half-way betwixt *Ulm* and *Nordlingen*, a small Imperial City, whose Magistrates are Protestants.

The County of WASSENSTAIN,

Enclos'd by the Dutchy of *Wurtemberg*, was acquir'd by the Duke of *Bavaria* in 1627. The chief Place is *Weissenstain*, an open Town in a very fruitful Valley, defended by a strong Castle.

The County of LOEWENSTEIN,

Within two Leagues of the *Neckar*. It takes its Name from a Castle, and is partly included in the Dutchy of *Wurtemberg*. The Elector *Palatine* bought it in 1441, from the last of its ancient Counts; so that the present Count is a Branch of the *Palatine* Family, and has several other Lands, particularly the County of *Wertheim* in *Francia*.

The County of HOHENRECHBERG,

Betwixt the Dutchy of *Wurtemberg* and the Territory of *Ulm*. 'Tis possess'd by a Family descended from *Hildebrand*, surnam'd the *Salé*, or *Ugly*, which is divided into several Branches. The only Place of Note here is the Castle of the same Name, which gives Denomination to the County.

The County of GRAVENECK,

Betwixt the Dutchy of *Wurtemberg* and the Principality of *Hohenzollern*, belongs to Lords of the same Name, one of the oldest Families in *Swabia*. The Places of Note are, 1. *Graveneck*, a large open Town, with a fine Castle, well fortified, the usual Residence of the Counts. 2. *Eglingen*, a small City near *Nordlingen*, which belongs to this Family.

The Dutchy of Wurtemberg.

'TIS a Province of the Circle of *Swabia*, and abounds with every Thing that can bring Profit or Pleasure to the Inhabitants. Their Mountains are full of Mines and Vineyards, and the Vallies stock'd with large Herds of Cattle. They have abundance of pleasant Meadows and Forrests, with Variety of Game. 'Tis water'd with many small Rivers; and has several Lakes full of Fish. It has the Palatinate of the *Rhine* and *Franconia* on the N. the *Danube* on the S. the Principality of *Baden* on the W. and the Bishoprick of *Augsburg* on the E. *Moll* makes it about 70 Miles from N. to S. and including the *Black Forest*, 90 from E. to W. 'Tis so populous, that 'tis said to contain 63 Cities, 158 great Towns, 645 Villages, and 14 Abbies. Before the Civil Wars of *Germany*, the Duke was able to raise 24000 Men in 24 Hours; but that calamitous War lessen'd the Number of People here, as in other Places of the Empire. It was made a County in 1078, and a Dutchy in 1495, by the Consent of the Diet, because their Princes had much improv'd their Estates, which at first consisted only of the Castle of *Wurtemberg*,

berg, that gives Name to the County, with the Villages that depended upon it.

The *Atlas Historique* gives the following Account of their Origine and Genealogy: Authors differ as to their Origine: Some derive them from *Everard*, Great Master of *Charlemagne's* Household, who was Son to *Henry* Lord of *Butelsbach*: Others derive them from *Conrad* of *Wirtemberg*, who was made a Count of the Empire by *Henry IV.* for his good Services. His Son *Everard the Debonaire*, or the Good, enlarged his Dominions, by marrying the Heiress of the Duke of *Teck*, and was so potent, that he had always 6 Princes, 8 Counts, 5 Barons, and 70 Gentlemen, in his Retinue. His Son *Everard* acquir'd the County of *Montbelliard*, by marrying the Heiress. His Son *Louis* purchas'd 3 Lordships from the Count of *Helfenstein*. His Successor *Everard*, surnam'd the *Bearded*, was made Duke and Knight of the *Golden Fleece* by the Emperor *Maximilian I.* and dying without Issue, was succeeded by *Everard VII.* a Prince of the same Family. *Ulrich VI.* who was born in 1487, embrac'd *Lutheranism*, and enter'd into the League of *Smalkald*. He died in 1550; and was succeeded by his Son *Christopher*, who deliver'd his Country from the *Spanish Yoke*, and died in 1568. His Son *Louis II.* succeeded, founded the University of *Tubingen*, and having no Issue, appointed his Cousin *Frederick* to succeed. His Country suffer'd much by the Duke of *Guise*, who ravag'd it in 1608. He was succeeded by his Son *John Frederick*, who in his Youth travelled over the World, and died in 1628. The present Duke *Everard Louis*, his Great Grandson, was born in 1676. He is Knight of the *Golden Fleece*, and General of the Emperor's Horse. His eldest Son, *Frederick Louis*, was born in 1698. This Prince and his Subjects are Protestants, and are call'd the Branch of *Stutgard*, which is the eldest of the Family. The other Branches of this Family are that call'd the *Julian* and *Silesian* Branch, and that of *Bernstadt*. They descended from *Frederick* above mention'd. The present Prince is *Charles Frederick*, who was born in 1690. From *Julius Frederick II.* of this Branch, came that of *Weiltingen*, whose Prince is *Frederick Ferdinand*. From *Sylvius Nimrod*, the 2d of the *Julian* Branch, came that of *Juliusburg*, whose Prince is

Charles, born in 1682. From the above-mention'd *Frederick* did also proceed the Branch of *Montbelliard*, whose Prince *George* was despoil'd of his Dominions by the *French*, but reitor'd by the Treaty of *Ryswick*, and died in 1699. His Son *Leopold Everard*, the present Prince, was born in 1670, and is Knight of the Order of the *Elephant*. From *John Frederick*, the great Traveller, came the Branch of *Newstat*, by a 2d Son. The present Prince is *Frederick Augustus*. From *Everard VIII.* who was born in 1614, proceeded the Branch of *Wirtemberg*, whose present Prince, *Frederick Charles*, was born in 1652. He was General of the Emperor's Horse in the last War. His Son *Charles Alexander* is General Major of the Empire.

The Titles of the Princes of *Wirtemberg* are, Dukes of *Wirtemberg* and *Teck*, Counts of *Montbelliard*, Lords of *Heidenheim*, &c.

Their Dominions are, 1. The Duchy of *Wirtemberg*. 2. The County of *Aurach*. 3. The County of *Groningen*. 4. The Castle and Bailiwick of *Teck*. 5. Of *Kirkheim*. 6. Of *Owen*. 7. Of *Guttemberg*. 8. Of *Achalmen*. 9. Of the Fort of *Hohenstauffen*. 10. The Bailiwicks of *Balingen*. 11. Of *Dutlingen*. 12. Of *Blaubeuren*. 13. The Lordship of *Heidenheim*. 14. The County of *Kalbe*. 15. Part of the County of *Eberstein*. 16. The Lordship of *Tubingen*.

The Titles of the Princes of *Oels*, another Branch of this Family, are, Dukes of *Wirtemberg*, *Teck*, and *Oels*, Count of *Montbelliard*, Lord of *Heidenheim*, &c. Their Dominion is, the Principality of *Oels*.

The Dominions of the Branch of *Newstat* are, 1. *Newstat* and its District. 2. *Weinsberg*. 3. *Mackmuche*. The Dominions of the Branch of *Montbelliard* are, 1. The County of *Montbelliard*. 2. The Lordship of *Blamont*. 3. Of *Herricourt*. 4. Of *Chaffet*. 5. Of *Clemont*. 6. Of *Cleerval*. 7. Of *Passavant*. The 6 last are Fiefs of the County of *Burgundy*. The Branch of *Weiltingen* has *Weiltingen* and its District.

The *Atlas* says, the Duchy of *Wirtemberg* is one of the finest and most fruitful Countries in *Germany*. The *Danube*, which runs by its Neighbourhood, and the River *Neckar*, which runs through the Country, enrich the Inhabitants, by the Conveniency of transporting their Commodities: And

the

the Duke of *Wurtemberg* is still able to raise 20000 Men in a little Time. When the Emperor commands his Armies, the Duke carries the Imperial Cornet or Standard, which is Or, a *Baton Sable*, pointed *Argent*, with a *Spread Eagle Sable*. He is also Great Huntsman of the Empire, and Joint Director of the Circle of *Swabia* with the Bishop of *Constance*.

The Arms of *Wurtemberg* are, Or, 3 *Demi-Perches* or Branches of *Stags-Horns Sable*, laid Face-wise one above another, charg'd with 4 Antlers, each of the same, for *Wurtemberg*. In the 1st, *Lozenges Or* and *Sable*, for *Teck*. In the 2d, *Azure*, a *Standard Or*, plac'd Bend-wise, charg'd with a *Spread-Eagle Sable*, for the Standard of the Empire. In the 3d, *Gules*, 2 *Trouts Or*, Back to Back, and fac'd Pale-wise, for *Montbelliard*. The Helmets are Or Crown'd, surmounted with a *Horn*, with white Feathers in its Mouth, for *Wurtemberg* in the 1st. Or Crown'd, a *Dog's-Head Lozeng'd Or* and *Sable*, for *Teck*. The 2d Or Crown'd, surmounted with a *Lady Crown'd Argent*, and clad *Gules*, with 2 *Trouts Or*, instead of Arms, for *Montbelliard*.

Dr. *Nicholson* observes, That Duke *Ulrick* was drove out of his Dominions in 1519, when they were sold to the Emperor *Charles V.* But he was restor'd in 1534, by the Assistance of the King of *France*, and the Landgrave of *Hesse*. Whereupon 'twas agreed, That he should pay Homage to the House of *Austria*. But in 1599, the Duke was restored to his ancient State, the House of *Austria* reserving only the Title and Arms, and the Right of Succession on the Failure of the Duke's Heirs Male.

The Confession of *Wurtemberg*,

WAS one of those added for explaining the Confession of *Augsburg*, and presented to the Council of *Trent* by the Ministers of the Dukes of *Wurtemberg* and *Montbelliard* in 1552. It agrees in Doctrine with that of *Augsburg*, which it explains; and in many Things, is more particular and express. In the Head of Order, they declare against Sacrificing Priests, and for the Identity of Bishop and Presbyter; alledging, That except a Presbyter be appointed in the

Church for Teaching, he cannot rightly be called either Presbyter or Bishop. They declare also against significant Ceremonies, such as lighting of Wax Candles to adumbrate the Revelation or Light of the Gospel, and the Sign of the Cross, to denote Christ's Victory by it, &c.

Their chief Towns.

1. *Stutgard*, the Metropolis of the Country. It lies near the *Neckar*, about the middle of the Dutchy, in Long. 28. Lat. 48. 38. 62 Miles W. from *Nordlingen*, and 52 S. from *Strasburg*. 'Tis the Residence of the Duke, who has a Castle there very well fortified. 'Tis a noble Fabrick, adorn'd with delicate Groves and Gardens, with fair Rows of Orange-Trees, fine Grotto's and Water-works, and a Pleasure-House, as stately as that of any Prince of the Empire. The City is pretty large; but most of the Citizens Houses are built of Wood, and low. The Town is much resorted to, because of its natural Baths, which cure many Diseases. Some derive the Name from its being formerly a Place for breeding young Horses. This, they think, is confirmed by the Arms of the City, which is a young Colt let loose.

2. *Tubingen*, the 2d City of the Dutchy. 'Twas not long ago govern'd by Counts of its own, who had their Residence at *Leichenneck* in *Alsace*. It lies upon the *Neckar*, about 17 Miles S. from *Stutgard*; is a fair City, and adorn'd with an University, founded by Count *Everard*, formerly mention'd, in 1477. The College was projected by Count *Christopher*, built by Count *Lewis*, endow'd by Count *John Frederick*, and advanc'd in Reputation by Duke *Everard*. None are admitted here but such as are descended from ancient Families, and accounted Gentlemen. Here's a Supreme Court of Judicature, where all Causes, Civil and Criminal, are determin'd by 5 Nobles, 4 Doctors of the University, and 4 Burghers. There's likewise a Consistory of Divines and Civilians, who determine Ecclesiastical Causes. The first Rector of the University was *Nauslerus*, whose Historical Works were publish'd by *Melancthon* in 1500, and are much commended by *Camerarius*. The chief

chief Scholars they can boast of, of late, are *Crusius* and *Schickard*, both well vers'd in the Oriental Languages. In the Church of this City, are the Tombs of the Princes and Princesses of *Wurtemberg*. Some Antiquaries pretend, that the Emperor *Caracalla* had a Palace here, where he entertain'd the Germans with Publick Games.

3. *Wurtemberg*, a very ancient Castle on a Hill upon the *Neckar*, which gives Title to the Dukes, and the Name to the Country.

4. *Efingen*, on the *Neckar*, 10 Miles S. E. from *Stutgard*. 'Tis a small Imperial City, under the Protection of the Duke. 'Twas walled by the Emperor *Frederick II.* and made Imperial in the 16th Century. 'Tis a Place of good Trade, and the Magistrates are Protestants.

5. *Reitling*, or *Rutlingen*, on a small River which falls into the *Neckar*. 'Twas made Imperial by *Frederick II.* in 1240. It lies 12 Miles S. E. from *Tubingen*, is under the Protection of the Duke, and most of the Citizens are Protestants.

6. *Gemund*, on the Frontiers of the County of *Hohenrechtberg*, 28 Miles E. from *Stutgard*. *Frederick I.* made it Imperial in 1186. The Magistrates are Papists. 'Twas formerly noted for Tournaments held here by the Nobility of *Swabia*.

7. *Rotweil*, on the *Neckar*, at the Entrance into the *Black Forrest*, 37 Miles S. W. from *Tubingen*. 'Tis a small Imperial Town, fortified after the ancient Manner. An Imperial Chamber was established here by the Emperor *Conrad III.* when he made it Free in 1147. The French took it in 1643, under the M. de *Guebriant*, when they join'd the Swedes. The Marshal died of his Wounds next Day after it was taken. 'Twas also seized by the M. de *Villars* in 1703, after he pass'd the *Black Forrest*.

8. *Hailbron*, i. e. a Fountain of Health, so called from its famous Medicinal Springs. It stands in the Limits of this Dutchy, on the *Neckar*, 28 Miles N. from *Stutgard*. 'Tis a neat well built Town, and has a fine Bridge over the *Neckar*. 'Twas made Imperial by *Frederick II.* in 1240, and was several times taken and retaken during the Wars with the Swedes. Most of the Inhabitants are Protestants.

9. *Hall*, on a little River of the same Name, on the Frontiers of *Franconia*, 22 Miles E. from *Hailbron*. It has its Name

from a Salt Fountain in the Neighbourhood. It depended formerly on the Dukes of *Wurtemberg*; but was made Imperial by *Charles IV.* in 1360.

10. *Weill*, on the *Worm*, 12 Miles W. from *Stutgard*. 'Twas made Imperial by *Frederick II.* in 1240. The Inhabitants are Papists.

La Forreft takes Notice of the other Places following in this Country; 1. *Konstanz*, on the *Neckar*, a pretty Town, of good Trade. 2. *Heidenheim*, on the Frontiers of the Territory of *Ulm*, a large Town, well fortified. 3. *Scherndorf*, on the *Rems*, a small City, noted for the great Quantity of Salt made there. 4. *Marbach* on the *Neckar*, a small, but a pleasant Town. 5. *Lauffen*, another small Town on the same River, seated the most pleasantly of any in *Swabia*. 6. *Neustatt*, on the *Koker*, near the Borders of the Palatinate of the *Rhine*, a small City, which gives Title to a Branch of the Dukes of *Wurtemberg*. 7. *Befigheim*, on the *Ems*, a little above where it falls into the *Neckar*. 8. *Nagolt*, a small City on a River of the same Name. 9. *Neifsen*, within a League of the *Neckar*, a small City, which formerly belong'd to the Counts of *Weinsperg*. 10. *Aurack*, a small City, with a good Castle, on a rising Ground betwixt the *Neckar* and the *Danube*. 11. *Schultz*, on the *Neckar*, near the Borders of *Hohenzollern*. 12. *Hornberg*, a small City, upon a River at the Entrance into the *Black Forrest*. 13. *Reinfat*, an important Pass at the Entrance of the *Black Forrest*, which has been lately fortified, and the Foundations of a Town are marked out within the Fortifications. 14. *Dutlingen*, near the Fountain of the *Danube*, famous for a Battle betwixt the French and Imperialists in 1643.

The Marquisate of Baden.

THIS Country lies on the Eastern Banks of the *Rhine*, has the *Palatinate* on the N. *Switzerland* on the S. the *Black Forrest* on the E. and *Alsace* on the W. *Moll* makes it, including *Brifgow*, 87. Miles long, and the greatest Breath about 20. 'Tis exceeding fruitful in Corn, Wine, and Hemp, and every where so full of Villages, that some compare it to a continu'd City, interlac'd with

with fair Gardens. The *Rhine*, *Ents*, *Wurmb*, *Phints*, and other Rivers, afford them Plenty of Fish. Their Chafes and Parks are so well stock'd with Venison and Fowl, that the Rusticks have them for their ordinary Diet. They sell vast Quantities of Hemp and Flax to the *Dutch* and the *Flemings*. They have many Woods of Chesnuts, in which they have great Herds of Swine. They have many Quarries of Free-Stone, and Marble of all Colours; so that they build fair Houses at a small Charge. In the County of *Spanheim*, they have Agate, which they polish and export. But their chief Advantage is from their great Numbers of excellent hot Baths, and Mineral Springs, that occasion a great Resort of the Nobility from most Parts of the Empire, which has mightily civiliz'd the Inhabitants, and makes them very complaisant to Strangers. The People are stout and Warlike, inur'd to Labour and Hardships, and make as good Soldiers as any in the Empire.

The *Atlas Historique* gives us the following Account of the Genealogy of the Princes of this Family: *Archinoald*, Major-domo to *Clovis II.* King of *France*, is reckon'd the Founder of it. The next taken notice of is *Hugh* Count of *Ferette*, the 6th from *Archinoald*. After him came *Everard* Count of *Alsace*, from whence, according to some Authors, proceeded the Family of *Lorrain*. Next to him came *Gontran the Rich*, Count of *Altenburg*, from whence came the Branches of *Baden* and *Austria*: From whom, after 6 Descents, came *Herman III.* from whom sprung the first Branch of *Baden*, and that called the Branch of *Baden-Hochberg*, which were reunited in the 15th Century. 'Tis fit to observe here, That *Dr. Nicholson* says, the *German* Herald's can scarce determine the Pedigree of this Family, 'tis so ancient. Some derive them from the *Ursins*: Others from the House of *Della Scala*, or the *Scaligers*: But the most probable Opinion is, That they are of the same Origine with the House of *Austria*. The Branch of *Hochberg* came from *Berthold*, Lord of *Brissgaw*, first Duke of *Zeringen*, and afterwards made Duke of *Carinthia*, who died in 1077. *Herman IV.* Son to *Herman III.* above-mention'd, married into the *Palatine* Family of the *Guelphs*, and died in 1190. His Son *Herman V.* conquer'd Part of *Austria*, and

his Son *Frederick* was beheaded at *Naples* in 1269. So that his Brother *Rodolph* succeeded. From him, after 8 Descents, came *Christopher*, who united the Branches of *Hochberg* and *Baden*, and died in 1527. From him proceeded the Branches of *Baden Baden*, and of *Baden Durlach*. From him, after 7 Descents, came the late famous *Louis William*, who was Generalissimo of the Army of the Empire, signaliz'd himself by his great Victories against the *Turks*, and his Defence of the Empire against the *French*, in very discouraging Circumstances. He died in 1706, and has left behind him a Son, born in 1703, who is under his Mother's Guardianship.

The Princes of this Family are Papists; and a Branch of 'em, descended from Prince *Louis's* Grandfather, is that of *Lebeschütz* in *Bohemia*, whose present Prince, *Leopold William*, has a Defect in his Speech.

The Branch of *Baden Durlach* is *Lutheran*. The present Prince is *Frederick III.* call'd *The Great*, who was born in 1647, and has a numerous Issue; among whom, there's a Son, and two Grandsons.

Their Titles are, Margraves of *Baden* and *Hochberg*, Landgrave of *Sausenberg*, Count of *Spanheim* and of *Eberstein*, Lord of *Rotelen*, *Baden Weiler*, *Lahr*, and *Mühlberg*.

The Dominions of the Margraves of *Baden Baden* are, the Upper Marq. of *Baden*, Part of the County of *Eberstein*, Half the County of *Spanheim*, the Lordship of *Uffenberg*, 9 Towns in *Bohemia*, which came to them by Marriage; the Earldom and Castle of *Guntzburg*, betwixt *Ulm* and *Augsburg*, given to Prince *Louis* by the late Emperor, as a Reward of his great Services; and the Fort of *Kheil*.

The Dominions of *Baden Durlach* are, the Lower Marq. of *Baden*, the Marq. of *Hochberg*, the Landgraviate of *Sausenberg*, the Lordships of *Rotelen*, *Lahr*, *Baden Weiler*, and *Mühlberg*.

Their Arms are, Or, a *Brachant Gules*, for *Baden*. 1. *Checkee*, *Argent* and *Gules*, for *Spanheim*. 2. Quarter'd, a *Rose Gules*, and a *Bear Sable*, on a *Green Hill*, for *Eberstein*. 3. A *Lion Gules*, Crown'd Or, for *Brissgaw*. 4. three *Chevrons Sable* for *Baden Weiler*. 5. *Azure*, a *Wing expanded Argent*, charg'd with a *Demi-circle Or*, for *Uffenberg*. 6. *Coupee*, *Wav'd Or*, a *Lion Naissant*, *Gules*, *Fefs'd* and *Wav'd*

Wav'd Argent Azure, for *Rotlen*. 7. Or, a Fess Gules, for *Lahr*. 8. Or, a Lion Sable, and Crown'd Or, for *Mahlberg*. 9. Chequer, Or and Azure, for *Spanheim*.

The Difference betwixt the Arms of the two Families, is, That the Arms of *Eberstein* has only one Quarter in the Arms of *Baden Baden*; but two in those of *Durlach* and *Spanheim*, has two in the former, and but one in the 2d.

These two Families associate themselves with other Princes, according to their different Religions.

Their chief Towns.

1. **Baden**, the Metropolis of the Marquisate. It derives its Name from its numerous hot Baths, of which 'tis said to contain about 300. The Town stands among Hills, upon a rocky uneven Ground, so that the Streets don't lie straight: Some of the Baths are scalding hot; and all of 'em running from Rocks of Salt, Allum, and Brimstone, have the same Taste. Out of that called the *Kettle*, the Water boils at a wonderful rate, and smoaks as if it were set over a Furnace. They are Sovereign against the Cramp and Gout, and some other Distempers, and therefore much frequented. *Reiffer* has given a Learned Description of 'em. The Marquis has his Palace here, which, with the Baths, occasions the chief Trade of the Town. The Palace is well fortified, stands on a rising Ground, and is the principal Defence of the Town. It lies in Long. 27. Lat. 48. 45. 5 Miles E. from the Rhine, 18 N. E. from *Strasbourg*, and 15 E. from *Fort Louis*.

2. **Stolhoffen**, a small Town fortified by Art, and strong by its Situation, near a Morass. It lies 5 Miles S. W. from *Baden*, and about half a League E. from the Rhine. 'Tis famous for the Lines cast up here in the late and present War for Defence of the Empire.

3. **Gerspach**, a small City on the River *Murg*.

4. **Khiel**, on the E. Side of the Rhine, over against *Strasbourg*, a strong Fortrefs, which was taken by the Marshal de *Villars* in 1703.

The Marq. of Baden Durlach.

IT lies contiguous to that of *Baden Baden* towards the N. E.

Their chief Towns.

1. **Durlach**, the Capital of the Country, 18 Miles N. E. from *Baden*, and 10 S. W. from *Philipsburg*. 'Tis the Residence of the Prince, who has a magnificent Palace here, which far exceeds that of *Baden*, and is capable of entertaining the greatest Monarch in Europe. The Town lies on the Banks of the *Pfintz*, at the Foot of a Mountain; on the Top of which there's a strong Tower, with a continual Guard for the Security of the City. The Streets of the Town are straight and fair, and the Buildings stately and uniform. The Marquis has a large Collection of ancient Coins and Medals in his Closet, and a Library with many good Books. There's a *Gymnasium*, with Professors of the several Faculties.

2. **Pfortzheim**, 15 Miles S. E. from *Durlach*, by the Latins called *Porta Hercynia*, because it stands at the Entrance of the *Black Forrest*, Part of the *Hercynia Sylva*. On one Side the Town, there are fair Meadows and Pastures; and on the other, Woods and Mountains. It lies on the Conflux of the *Ens* and *Neckar*. It was formerly subject to the Dukes of *Swabia*, but now to the Marq. of *Baden Durlach*.

3. **Gersbach**, a small Town, with a Lutheran and Popish Church. Here the Marquis has a Palace, and Court of Judicature for determining Causes belonging to the County of *Eberstein*.

4. **Baden Weiler**, betwixt *Friburg* and *Basse*, near the Rhine, about 12 Miles S. from *Brisac*, in the Territories of which it lies, tho' Part of the Marq. of *Baden*. The hot Baths of this Place, which spring from Hills of Allum, Brimstone, and Nitre, are not so hot as those of *Baden*. Being drunk, they cure Asthma's, and all sorts of Stoppage and Shortness of Breath, old inveterate Agues and Fevers; and by washing and bathing, are excellent against Itch, Scabs, Leprosies, old Sores, and Bruises.

T t t

5. *Hoch-*

5. *Hochberg*, an ancient Castle, which gives Name to a Marq. and was the Title of a Branch of the Family, which fail'd in 1503. It lies on the Confines of the *Brifgaw*, 7 Miles N. from *Friburg*, and has a great open Town called *Emertingen* near it.

6. *Sausenberg*, an ancient Castle, which gives Title to a Landgraviate, and lies a little above *Baden Weiler*.

7. *Rotelen*, about 7 Miles S. W. from *Baden Weiler*, a Castle where the Branch of *Hochberg* had their Residence. *Spanheim* and *Mahlberg* are Castles which formerly gave Titles to Princes; but are otherwise of no great Note.

Alsace, or Elface,

HAS its Name from the River *EL* or *IL*, which runs through it, and not from *Edel Saffen*, as being one of the best Countries possessed by the *Saxons*, as some have imagin'd. It has the Palatinate of the *Rhine* on the N. *Switzerland* and Part of *Burgundy* on the S. *Lorrain* on the W. and the Marq. of *Baden* on the E. From S. to N. 'tis about 100 Miles long; and where broadest, from E. to W. excluding *Brifgaw*, about 25.

This Country is as rich and noble a Province, and as well furnish'd with Necessaries, especially Corn and Wine, as any in the Empire. Their Hills are cover'd with Chesnut Groves; and *Lebert-Hall*, with others of their Vallies, abound with Mines of Copper, Lead, &c. In other Places, they have rich Meadows and fat Pastures; so that they have Butter and Cheese equal to the best in *Holland*.

'Twas formerly subject to the Kings of the *Franks*; and *Hilderick*, one of them, bestow'd the Title of a Duke on his Favourite *Eitito* in 684. His Successors were drove out by *Charles Martel*, Master of the *French* King's Household; and in the Time of the Emperor *Otho I.* the Count of *Keiburg*, one of his Kinsmen, was made Landgrave of this Country. Others say, That the Emperor *Otho III.* divided it into two Landgraviates, and gave the *Upper* to the Counts of *Hapsburg*, and the *Lower Alsace* came afterwards to the Counts of *Oettingen*,

who sold it to the Bishop of *Strasbourg*. 'Twas since seiz'd by the *French* King, and confirmed to him by the Treaty of *Munster* in 1648. But being always accounted a Part of the Empire, we describe it here. 'Tis usually divided into *Upper* and *Lower*, besides the lesser Territories of *Ortenaw*, *Brifgow*, *Haguenaw*, *Sungaw*, &c. most of which are by some reckon'd Part of *Upper Alsace*, and by others Part of *Swabia*.

Their chief Towns.

1. *Strasbourg*, on the W. Side of the *Rhine*, in Long. 26. 43. Lat. 41: 42 $\frac{1}{2}$. about 12 Miles S. from *Fort Louis*. The Latins call it *Argentoratum*, *Argentina*, and *Strasburgum*. It stands on the Conflux of the *IL* and *Breisach*, which a little below it fall into the *Rhine*. *Cluverius* derives the Name from *Argen Stranten*, which signifies a bad Streer. It was at first design'd only for a Fort; but is now one of the most populous and best Trading Towns in *Germany*. The Citizens are generally rich and courteous, and have Houses to entertain Princes. 'Twas formerly an Imperial Town, being made Free by *Frederick II.* and so continued till it was treacherously taken by the *French* King in 1682. 'Tis pleasantly situated in the middle of a Plain, and embrac'd the Reformation in 1529. Since the *French* took it, it has lost much of its Religion, Liberty, and Trade. 'Tis the See of a Bishop, who is Suffragan of *Mentz*, and has many stately Buildings; among which, the Town-House, Arsenal, and Cathedral, are most remarkable. The last is one of the Wonders of *Germany*, and was described at large in a Treatise writ on purpose by *Schadaeus*, and publish'd there in 1617. The Tower of the Cathedral is reckon'd the highest in *Germany*, and by some of the whole World. From the Foundation to the Top of the Spire, *Schadaeus* reckons it 489 Feet, and 8 Inches; others reckon 575 Geometrical Feet. But that which makes it most famous, is the great Clock in it, which, by Mr. *Boyle* and others, is usually given as an Instance of the late great Improvement in Mechanicks. 'Twas finished in 1574, at the Charge of the Magistrates, by one *Habrecht*, a great Artist, of whose Work, they have many famous Pieces

Pieces of the same kind. He had his Instructions from two Learned Mathematicians, *Wolkenstein* and *Dalspödis*; the latter of whom publish'd a Treatise about this Clock. The first Thing it presents to our View, is a Celestial Globe, with all the Motions of the Planets, Fix'd Stars, &c. behind which, there's a Perpetual Almanack, in which the Day of the Month is pointed out by a Statue: The Hours are first crow'd by a gilt Cock, and then struck on a Bell by an Angel; near whom stands another, with an Hour-Glass in his Hand, which he turns as soon as the Clock has struck. The first Quarter is struck by a Child with an Apple; the 2d by a Youth with an Arrow; the 3d by a Man of full Age, with a Tip-staff; and the 4th by an old Man with his Cane. On the Outside of the Church, are shewn the true Increase and Decrease of the Moon, with the Course of the Sun through all the Signs of the Zodiac. *Misson*, in his Travels, says, this Clock does much exceed that at *Lyons*, both in the Variety and Curiosity of its Motions. *Ray* says, the Cathedral is a noble Structure, with a Pair of folding Gates of Brass at the W. End; That the Steeple is curiously built of carv'd Stone, and has 662 Steps from Bottom to Top: He went up 640 of them to a Place called the *Crown*, from whence there's a fine Prospect of the City and adjacent Country. He says, the City is of a great Circumference, well fortified with Walls and Outworks. *Misson* says, its Fortifications, since the *French* took it, are so prodigious, that he would not venture on describing them, but referred to the printed Platform for an Idea of them. They reach within 100 Paces of the *Rhine*, and the *French* King built a Citadel betwixt the City and the *Rhine*, which is reckon'd impregnable. The Arsenal is one of the noblest in *Germany*. *Ray* says, 'tis govern'd by two Councils, one of 71 Men, in which there are 6 Burgo-masters, 6 Stadt-masters, 15 *Patres Patriæ*, and 13 chosen out of the Militia. The other is called the Great Council, and consists of 300 Men chosen by the several Companies of the City. *La Forrest* says, That after they embrac'd the Reformation, they expelled the Bishop and Canons, and left the Papists only one little Church, belonging to the Commandery of

Maken; but when the *French* King took it, he restored Popery, with the Bishop to his See, and the Canons to the Cathedral, after they had been dispossest'd 152 Years. *Ray* says, their Publick Granaries, Store-Houses, and Wine-Cellars, are remarkable; That the Women there are generally handsome; That most of the Inhabitants were *Lutherans*; and in his Time, the Papists had but one Church, two Monasteries for Men, and two Nunneries: That the Bishop had a Palace in the City, where he was not allowed to stay above 3 Days at a time; but he might stay in an Inn 8. *Misson* says, their noble Arsenal was almost emptied by the *French*, who, besides the Citadel and other Forts, have added a great Horn-work on the Side next the *Rhine*, with several Forts on the Islands, which secure the Bridge, and command the River. This Town was left to the *French* by the Treaty of *Ryswick*; and Fort *Kheil* at the same Time was restored to the Empire. The Women here are noted for their odd and phantastical Dreffes, as well as for their Beauty. *Misson* takes Notice, That the Rivers which run through the City occasion abundance of Bridges; and that they have many Wells in the Streets, with Pails of Brass handsomely turn'd like small Mortars, with which they take up their Water. He mentions likewise abundance of Cannon of an extraordinary Size, and great store of Arms in their Arsenal. They have an University, founded in 1538, by the Protestant Magistrates, to which *Ferdinand II.* allow'd great Privileges.

2. *Zabern*, or *Elzace-Zabern*, to distinguish it from others of the same Name. 'Tis thought to be *Antonin's Tabernæ*, one of the old *Roman* Garisons, demolished by the ancient *Germans*, and rebuilt by *Julian* the Apostate. The City is defended by a strong Castle on the top of a high Rock, to which there is only a narrow Passage cut out of the Rock by one of the Bishops of *Strasburg*, who usually kept their Residence here, and a Court of Judicature for determining Causes in their Diocese. It lies about 15 Miles N.W. from *Alsace*. *La Forrest* says, 'tis noted for the Defeat of the *Lutheran* Army near it in 1525, by *Anthony* of *Lorraine*.

3. *Phaltzburg*, a little City, with the Title of a Principality, 12 Miles N. W. from *Zabern*. 'Tis pretty well fortified, at the Foot of a Mountain, on the Frontiers of *Lorraine*, to which it formerly belong'd.

4. *Lutzelstein*, a Fortress with the Title of a Count, on the Frontiers of *Lorraine*, about 6 Miles N. E. of *Phaltzburg*.

5. *Hagenaw*, an Imperial City, 15 Miles E. from *Zabern*, between the Rivers *Mottern* and *Zorn*, 6 Miles W. from the *Rhine*, and 14 N. from *Strasbourg*, encompassed with thick Woods, Corn-Fields, and fruitful Vineyards. 'Tis considerable for the Court of Judicature establish'd here in 1230 by *Frederick II.* It was given by *Charles IV.* to the Dukes of *Austria* in 1371, and was quit- ted to *France* by the Treaty of *Munster*. 'Twas anciently reckon'd one of the four chief Villages of the *German* Empire. The *Germans* besieg'd it in vain in 1674, and most of it was burnt by the *French* in 1677. 'Tis the Seat of the Great Baili of *Alsace*, and had the Supreme Court of Judicature for both *Alsaces*. The Emperor *Frederick I.* built a Palace here, where he kept his Residence. The *Jesuits* had in their College here a large old *Roman* Battering-Ram, a Piece of Antiquity of great Value, which 'tis suppos'd the *French* have either removed or destroyed.

6. *Fort-Louis*, on an Island in the *Rhine*, over against *Baden*, from which it lies about 6 Miles N. W. 'Tis small, but very strong, and was built by *Louis XIV.* to command the Passage of the River.

7. *Weissenburg*, an Imperial City in the Province of *Hagenaw*, Latins call it *Sebusium*, because 'tis suppos'd to have been the Seat of the ancient *Sebusii*. It lies 14 Miles N. E. from *Hagenaw*. *Dagobert* King of *France* presented them with a Crown of Silver gilt, adorn'd with a great many Turrets, and other Flourishes of Art, whose Diameter was 24 Foot. In Remembrance of this, the Citizens hung up a Crown of Copper of the same Size in their great Church, where 'twas broke by the Soldiers in the Civil Wars of *Germany*, and carried away. That same King granted them Privileges to hunt and fish for many Miles round; and the Emperor *Charles IV.* made

the Abbot of this Place a Prince of the Empire, and allow'd him to sit at his Feet in the Diet. *La Forrest* says, the Abbey was secularized by Pope *Alexander IV.* in 1496, and erected into a Provostship.

8. *Landau*, on the *Queich*, 11 Miles N. E. from *Weissenburg*. 'Tis properly a Part of the *Palatinate*, tho' now reckon'd Part of *Alsace*, because 'twas formerly under the Jurisdiction of *Hagenaw*. It was yielded to the *French* by the Treaty of *Munster*; and in 1702, was besieged by the King of the *Romans*, now Emperor, and taken, after great Loss on both Sides; the Confederates having lost 3 Princes, and, as *La Forrest* says, 16000 Men. *M. Tallard* took it again next Year, after having obtained a considerable Victory over the Allies near *Spire*. But it has since been retaken by the Confederates, who are still Masters of it. The Plunder of most of the Towns of the *Palatinate*, which the *French* lodg'd here in 1688, was destroyed by an accidental Fire in 1689.

9. *Drusenheim*, 8 Miles S. E. from *Hagenaw*, had its Name from *Drusus*, who built a Fortress here, to stop the Incursions of the *Germans* on this Side the *Rhine*.

10. *Malsheim*, on the River *Bruch*, 10 Miles W. from *Strasbourg*, whither the Canons of this City retired when they were chased out by the Protestants. 'Tis a small City, and was almost ruin'd by the Imperialists in 1677.

11. *Rosenheim*, on the *Mogel*, one of the 10 Cities that *Frederick II.* included in the Jurisdiction of *Hagenaw*. It lies 10 Miles W. from *Strasbourg*.

12. *Benfeld*, upon the *Ill*, a small City, well fortified, and formerly very considerable, but now almost in Ruins. It lies 14 Miles S. W. from *Strasbourg*.

13. *Schlestat*, a pretty small City, on the *Ill*, 7 Miles N. W. from *Benfeld*. 'Twas formerly an Imperial City, but taken by the *French*, and yielded to them by the Treaty of *Munster*. The Fortifications were demolished by the Confederates in 1673; but since rebuilt, and now made very strong.

All these are reckon'd in *Lower Alsace*.

The Towns in Upper Alsace.

Brisac and Eriburg are by some reckon'd in this Country; but by modern Geographers in *Swabia*, where we described them: So that the first Town here is,

Colmar, Lat. *Colmaria*, or *Columbaria*. It lies on the *Ill*, 12 Miles S. from *Schlestat*, and is now the Capital of *Upper Alsace*. Dr. *Nicholson* says, 'twas built out of the Ruins of the ancient *Argentaria*, conquer'd by the Emperor *Gratian* in 378, and afterwards destroyed by *Attila* the Hun. This City stands in a plain and fruitful Country, and was formerly so populous, that in the great Church at *Easter*, 'twas usual to have 4000 Communicants. The Duke of *Saxe-Weimar* took it in 1636; and after his Death, it was put into the Hands of the French in 1639, and quitted to them by the Treaty of *Munster*: Since which, they have established the Sovereign Council of *Alsace* here, which was formerly at *Ensisheim*; but the Town is much short of what it was formerly.

2. *Kaiserberg*, in a Valley, through which runs the River *Wilt*, a City formerly belonging to the Jurisdiction of *Hagenau*. It lies 8 Miles N. W. from *Colmar*.

3. *Turbheim*, formerly an Imperial Town on the River *Fech*, at the Foot of the Mountains.

4. *Mussler*, formerly an Imperial Town in the Valley of *St. Gregory*, 10 Miles W. from *Colmar*.

5. *New Brisac*, a small City, built since the Treaty of *Ryfwick*, about a Mile from the *Rhine*, over against *Old Brisac*.

6. *Murbach*, a famous Abbey at the Foot of the Mountains, which separate *Alsace* from *Lorraine*, 14 Miles S. W. from *Colmar*.

7. *Ensisheim*, on the *Ill*, 10 Miles S. from *Colmar*, a very ancient City, where were formerly the Sovereign Courts of *Alsace*.

8. *Mulhausen*, an Imperial City, in Alliance with the Cantons, 15 Miles S. from *Colmar*. It formerly belong'd to the Bishop of *Strasbourg*.

9. *Humingen*, a very strong Fortrefs, half a League below *Basse* on the *Rhine*. 'Twas built by the French King after the Peace of *Nimeguen*. 'Tis large enough to hold 4 or

5000 Men. 'Tis compos'd of 5 Bastions, and has a Magazine vaulted with Bricks, so strong, that 'tis Proof against Bombs. Besides the *Tenailles*, *Ravelins*, *Counter-scarp*, and double Ditch, two large Horn-works to the N. and S. and a 3d on the other Side the River, and from the Ramparts, there went Vaults to the Horn-works, for conveying Men to them; but all these were destroy'd, as was agreed by the Treaty of *Ryfwick*.

10. *Pfird*, by the French called *Feretz*, a small City, the Capital of *Suntgow*. It lies towards the Frontiers of *Basse*, is a pretty City, and well fortified, about 10 Miles S. W. from *Humingen*. 'Twas quitted to the French by the Treaty of *Westphalia*, and belongs now to the Duke of *Maxarin*.

11. *Besfort*, or *Besfort*, formerly the Capital of this Country; but was almost ruin'd by the Wars. It stands about 17 Miles N. W. from *Pfird*; and *La Forrest* says, 'tis well fortified, and defended by a strong Castle.

The County and City of MONTELLIARD.

It lies W. from the *Suntgow* and *Besfort*, is about 22 Miles long, and 12 broad. It belongs to a Branch of the Family of *Wirtemberg*, to whom it gives Title. Dr. *Nicholson* says, the Name is derived from the sweet Air breath'd from the neighbouring Hills. The Capital City is of the same Name, and lies 33 Miles W. from *Basse*, and 8 S. W. from *Besfort*, in a very pleasant Country, on the utmost Border of the German Empire towards *Burgundy*; whence the Inhabitants are a Mixture of French, Dutch, *Lorrainers*, *Savoyards*, *Swissers*, and *Burgundians*, and their Language a Mixture of French and German. The Houses are generally built of Stone, and 3 or 4 Stories high. The Streets are uniform and large; and without the City, there are fine Groves and Gardens, the chief of which is the Duke's Garden of Pleasure, with a stately Summer-House, and all manner of rare Plants and Herbs. It stands upon the Side of a Hill, on the Top of which there is a good Citadel. The Inhabitants of the City and County are *Calvinists*. Some reckon it Part of the French Country.

The Circle of F R A N C O N I A,

HAS Saxony on the N. Swabia and Part of Bavaria on the S. Part of Hesse, Westphalia, and the Palatinate of the Rhine, on the W. Part of Bavaria and Bohemia on the E. *Moll* makes it about 125 Miles from S. to N. and from E. to W. about 135. 'Tis Chief of the 10 Circles of the Empire. It has its Name from the *Franks*, its ancient Inhabitants, of whom we gave an Account in *Ancient Germany*, Page 417. *Dr. Nicholson* says, they were not one particular People, according to some Authors, but many of the ancient Germans, who enter'd into a League to defend themselves against the *Romans*, and took the general Name of *Franks*, to denote that they fought for their Liberty. Or, as others say, there being a great Controversy betwixt the *Swabians* and *Thuringians*, about 316 Years after Christ, the latter sent to *Clodimir King of France* for Assistance: Accordingly *Genebald* his Brother came with a great Army, fix'd himself in the Territories round *Wurtzburg*, and making himself Master of all the adjacent Country, gave it the Name of *Franconia*. 'Tis encompassed with Woods and Mountains, but has no Hills of any extraordinary Height. They have several Forreſts and Parks well stock'd with Deer, Wild-Boar, and other Sorts of Game. Most of the Hills, especially along the *Mayn* and *Tauber*, are cover'd with Vines, which yield as rich and as good a Wine as the best Vineyards on the *Rhine*. The Fields about *Bamberg* are very fruitful in Corn, Grapes, Apples, and other Fruit; and such Plenty of Liquorish, that 'tis usually carried off the Fields by Waggon-loads. The Citizens of *Bamberg* have also store of Melons and Saffron, and indeed of every Thing necessary for Profit or Pleasure. *La Forreſt* says, this Country was the usual Seat of the *French*, before they settl'd in *Gaul*; That the *French Kings* of the First Race establish'd Lieutenants there, who first had the Title of Dukes, and afterwards became Proprietors of the Country, which was possessed by several Lords, when *Pepin* gave it to the Bi-

shop of *Wurtzburg*; but those who were in Possession of this Dutchy maintain'd it against the Bishop, and became so potent, that *Conrad Duke of Franconia* was the first of the German Princes who possessed the Empire after the Posterity of *Charlemagne*. There were several other Emperors of that Family, and one of them, *Henry V.* gave this Country to *Conrad of Swabia*, his Nephew, who was afterwards Emperor. His youngest Son dying of the Plague at *Rome* in 1167, *Frederick I.* reunited this Dutchy to the Empire.

This Circle is divided into 6 lesser Principalities, 4 of which are subject to Spiritual Princes; viz. the Bishops of *Bamberg*, *Wurtzburg*, *Eichſtat*, and the Great Master of the *Teutonic Order*. The Temporal Princes are, the Burgraves of *Nurimberg*, and two Princes of the Family of *Brandenburg*. Besides these, there are some other small Counties and Lordships subject to other Princes of the Empire, and several of 'em swear Fealty to the Elector of *Mentz*; of all which in their proper Places. The Bishop of *Bamberg* has the Pre-eminence, and claims a sort of Archiepiscopal Jurisdiction over the rest; but the Bishop of *Wurtzburg* is more potent than he. The Bishop of *Eichſtat* has not much in *Franconia*, most of his Territories lying in *Bavaria* and *Swabia*. The Great Master of the *Teutonic Order* has little but a Title to a few Bailiwicks, which seldom take Notice of him as their Governor.

Dr. Nicholson says, the old *Frangick* Language of this Country, or *Lingua Theotisca*, is the Origine of the present *High Dutch*, in which he gives an Account of many Pieces still extant: Some of 'em were presented by the Learned *Junius* to the Publick Library of *Oxford*.

The prevailing Religion of this Country is *Lutheranism*; but they have likewise *Papists*, *Calvinists*, and some *Jews*.

Their chief Rivers are, the *Main*, the *Regnitz*, the *Altmulde*, the *Saal*, and the *Tauber*; all of which have their Rise in this Country.

La Forreſt divides the Country into Ecclesiastical and Temporal Dominions, and Imperial Towns.

The Ecclesiastical Dominions are,

I. The Bishoprick of WURTZBURG,

Which has its Name from the City so called, is the Metropolis of *Franconia*, and lies on the River *Main*, in Longitude 28. 50. Lat. 49. 50. 65 Miles S. E. from *Frankfort am Main*, and 58 N. E. from *Heidelberg*. The ancient Latins call it *Papelia*, and *Marcopolis*; but the Moderns, *Herbipolis*, according to the German Name, which signifies a Town of Herbs, because of the great Variety which grow in and about this Place. The Situation is very pleasant, and the adjacent Country abounds with all sorts of rich Fruits and Plants, in which it exceeds the neighbouring Provinces. The City is divided into two Parts by the *Main*, and joined by a Bridge. There are likewise several little Streams that run thro' the Streets, which adds to the Pleasantness of the City. *Goldmayer*, an Astrologer, born in this Place, alledges, the City was built 3 Years before our Saviour; but *Genebold* says, 'twas built 236 Years after. The Bishop has a stately Palace on the Top of a high Hill beyond the River, which some fancy to have been built before the City, because 'tis called *Old Wurtzburg*. The Bishoprick was founded in the 8th Century, by *St. Boniface*, Archbishop of *Mentz*, and is still Suffragan to that See. The Bishop has supreme Jurisdiction over the City in Temporals as well as Spirituals; and when he appears in Publick, there's a Sword carried before him with this Inscription;

Herbipolis sola judicat ense & stola.

Denoting both Jurisdictions; and when he says Mass, the Sword lies down before him on the Altar. Other remarkable Things here are, 1. the Hospital, one of the richest and most magnificent in *Europe*: The other is the University or great College, founded in 1043, which *Dr. Nicholson* says is very regular and uniform, and equal to most of the new-built Colleges in *Oxford*. The Bishop's Palace is join'd to the Town by a Wall flank'd by 4 Bastions. The City was

formerly Imperial, but reduced by one of the Bishops, and has since been subject to their See. He is a very potent Prince, has 400 Villages and Towns under him, and is able to raise 15000 Men. He has the Title of Duke of *Franconia*, and has above 100600 Crowns Revenue. His Chapter is compos'd of 24 Capitular Canons, and 29 who are domicil'd. They must all make Proof of the Nobility of their Descent; and when a new one is admitted, he must walk through the rest drawn up in a Lane, and each of 'em gives him a Lash with a Whip on the Back. *Monconys* says, the Fortifications of this City are not regular, but the Castle is very strong both by Nature and Art; the Cathedral is ancient, but not very magnificent, and is filled with the Tombs of their Bishops. The Bridge over the River is of Stone, and 300 Paces in Length. There is a good Arsenal in the Castle, well provided with Cannon and Arms. In one of the Courts of the Castle, there's a fine Fountain; and below the Castle, there's a Pump with 3 Branches, which raises the Water as high as the Castle, tho' it be at least 200 Fathom high, which is very much wonder'd at. In the Bishop's Cellar, there are above 60 great Tuns of curious Workmanship, the least of which contains 22 or 25 Waggon-loads of Wine, reckoning 6 Hogsheds to each Waggon-load; and there he said he drank Wine, which they told him was above 123 Years old, and was clearer than the best *Spanish*.

The Places belonging to this Bishoprick are, 1. *Oschensfurt*, a pretty small Town on the *Main*, 10 Miles S. E. from *Wurtzburg*. 2. *Kitzingen*, a good Town on the N. Side of the same River, about 8 Miles S. E. from *Wurtzburg*. Half of this City belongs to the Marquis of *Anspach*. 3. *Wolkach*, a large open Town on the *Main*. 4. *Carlsstat*, upon the same River, a very pretty Town, 12 Miles N. from *Wurtzburg*. 5. *Schwanau*, on the S. Side of the *Main*, 12 Miles N. W. from *Carlsstat*: 'Tis Capital of a Bailiwick, formerly Part of the County of *Reineck*, but acquir'd by the Bishop of *Wurtzburg* in 1559. 6. *Königsbaven*, a strong Town towards the Frontiers of the County of *Henneberg*, taken by the Swedes in 1631. It lies 45 Miles E. from *Wurtzburg*.

II. B. A. M.

II. BAMBERG.

Which derives its Name from *Baba*, the Emperor *Henry I.*'s Sister: Or, according to others, from *Papen*, as being anciently the Residence of Priests. It lies on the *Regnitz*, 43 Miles N. E. from *Wurtzburg*. 'Twas formerly Imperial, and govern'd by Earls of its own, who had their Residence at *Altenburg*, about a Mile from the Town, but is now subject to its Bishop, who has a Palace on an Island in the River *Regnitz*, which runs through the middle of the City, and a little below it falls into the *Idain*. The Palace is very magnificent and beautified, with fair Gardens and Orchards. The adjacent Country abounds with rich Fruits and Plants, and the Bishoprick is reckon'd 60 Miles in Length, and 30 in Breadth, besides several Manors in *Carinthia*, and Royalties elsewhere. *La Forrest* says, he is the first Bishop of the Empire, and depends immediately on the Pope. His Subjects are Papists, and cannot Appeal from him in his Decisions. The King of *Bohemia*, the Electors of *Bavaria* and *Brandenburg*, hold several Lordships of this See. He is Joint Director of the Circle with the Marquis of *Cullenbach*, and has a Right to receive the Oath which the Secular Electors swear to the Emperor, for the Offices of the Household which they bear. This Cathedral is one of the most Magnificent in the Empire, with a lofty Steeple and 4 noble Spires. The Chapter is compos'd of 20 Capitular Canons, and 15 Domicil'd. The Jesuits have a stately College here. Formerly when the Emperors had no Hereditary Countries in the Empire, *Bamberg* was the Place of their Residence, and in that case the Bishop was oblig'd to retire to *Villach* in *Carinthia*. The Bishoprick was founded by the Emperor *Henry II.* in 1106.

Other Places belonging to this Bishoprick, are, 1. *Forcheim*, a strong Town on the Conflux of the *Regnitz* and *Wisner*, 10 Miles S. E. from *Bamberg*. 2. *Chronach*, a Fortrefs on a small River of the same Name.

III. AICHSTAT, or EICHSTAT;

A Bishoprick which takes its Name from the principal Town that lies on the *Altmul*, 12 Miles N. W. from *Ingolstat* on the *Danube*, 12 N. E. from *Newburg*, and 12 S. E. from *Weissenburg*. The Bishoprick is about 30 Miles from E. to W. and from 8 to 15 and 16 in Breadth. The Latins call this Town *Ala-Narista*, and *Eisstadum*. The Bishop is Suffragan of *Mentz*, and was founded by Archbishop *Boniface* at the same time with *Wurtzburg*, and has been richly endow'd since by several Emperors and Princes. The Bishop is a Prince of the Empire, and has a Chapter of 16 Capitular Canons, and 15 Domicil'd. *John Conrad* of *Gemmingen*, says *La Forrest*, presented the Cathedral with a fine *Pyxis* for the Sacrament of pure Gold, weighing 40 Marks, enrich'd with 350 Diamonds, 1400 fine Pearls, 250 Rubies, and several other precious Stones. This Town was taken in 1703, by a Detachment of *French*.

Other Places in this Bishoprick, are, 1. *Willibaldsburg*, a Fortrefs built by one of the Bishops near this City. 2. *Dolfsstein*, a small City on the River *Altmul*.

IV. The DOMAIN of the Great Master of the Teutonic Order;

Of whom we gave a large Account in *Prussia*. After *Albert* of *Brandenburgh*, their Great Master, had imbrac'd *Luther's* Doctrine, he appropriated Part of that Country to himself, and quitted the other to the King of *Poland*: The Knights of the Order remov'd their Chapter to *Mariendal* in *Francia*, where they chose *Walter* of *Cronberg* for their Great Master, who sued *Albert* at the *Aulic* Council of *Vienna*, where he obtain'd a Decree against what he had done, which never had any Effect. This Order possesses still Eleven Commendaries, and the Commanders have a Right to chuse their Great Master, who is always a Prince of the Empire. The Knights before Admission must prove the Nobility of their Extract by 16 Descents, both by Father and

and Mother. Some of them are *Lutherans*, and other *Calvinists*, who possess Commanderies in *Saxony*, *Thuringia*, and *Hesse*.

Mariendal, called also *Margenthal*, and *Mergentheim*, in Latin *Mergetum*, & *Maria Domus*, is a small City on the *Tauber*, where the Grand Master has his Residence. It lies about $22\frac{1}{2}$ Miles S. W. from *Wurtzburg*.

The Secular Dominions in this Country are,

I. COBURG,

A Dutchy, whose Capital is of the same Name, and lies about 18 Miles N. E. from *Bamberg*. *Moll* makes it 43 Miles long, and about 16 where broadest. 'Tis possessed by the Duke of *Sax-Gotha* since 1674, who has a very fine Castle there. *Dr. Nicholson* says, 'tis usually reckon'd a Part of *Upper Saxony*, and one of the ancientest Towns in *Germany*. 'Tis thought to be *Ptolomy's Melocabium*, or *Melocabus*. The City is tolerable large, and well built, and defended by the Duke's strong Castle on a neighbouring Hill, where *Luther* was several times imprison'd, for speaking freely of his Superiors. There he composed several Hymns, which are devoutly sung by his Followers. From hence also he wrote several of his Epistles, which he dated from *Gruboe*, having transposed the Letters to conceal his Confinement, as *Dr. Nicholson* supposes. A College was founded here, with 11 Professors of all Faculties, by *John Casimir Duke of Saxony*, in 1602. He likewise built the Palace some Years before.

II. The Marquisate of CULLEMBACH,

Part of the Burgraviate of *Nuremberg*. It takes its Name from its Capital, which lies on the *Main*, 27 Miles N. E. from *Bamberg*. This Marquisate is situate betwixt the Bishoprick of *Bamberg* on the W. *Bohemia* on the E. *Saxony* on the N. and the Territory of *Nuremberg* on the S. 'Tis divided betwixt the two famous Branches of the House of *Brandenburg*, called *Cullembach* and *Baireith*, who are Princes of the Empire, and have

each of them a Vote in the Diet. The Marq. of *Cullembach* is Joint Director of the Circle of *Franconia* with the Bishop of *Bamberg*. The Town is defended by a Castle called *Blaffenburg*, which was ruin'd by those of *Nuremberg* in 1554; but they were afterwards obliged to rebuild it. The Extent of this Country from E. to W. according to *Moll*, is about 35 Miles, and from N. to S. about 30.

Baireith, the other Division of this Country, takes its Name from its Capital, which is a pleasant City, defended by a fine Castle, where the Prince resides. It lies 15 Miles S. E. from *Cullembach*; and this Country, according to *Moll*, is 38 Miles from N. E. to S. W. but of a very unequal Breadth, being 17 at the two Extremes, and in the Middle not above 4.

III. The Marquisate of ANSPACH, ONSPACH, or ONOLSBACH,

Belongs also to a Branch of the Family of *Brandenburg*, and is, according to *Moll*, 52 Miles from S. E. to N. W. and where broadest about 20. It takes its Name from its Capital City, about 27 Miles S. W. from *Nuremberg*. The Town is fortified, and has a good Castle, where the Prince resides.

Other Towns in this Country are, 1. *Craylingen*, on the *Tauber*, a pretty Town of good Trade. 2. *Craillsheim*, on the River *Jaxt*, Capital of a considerable Bailiwick. All these three Princes are *Lutherans*, and together are very considerable.

IV. The County of SCHWARTZENBURG,

Lies betwixt the Marq. of *Anspach* and the Bishoprick of *Bamberg*. Their Count has been a Prince of the Empire since 1634.

The Towns in this Country are,

1. *Schwarzenburg*, on the River *Lee*, with an ancient Castle, which gives Name to the Country. 2. *Schenfeldt*, on the *Main*, which is the most considerable Town of this Country. 3. *Hohen-Kottenheim*, the principal Town of the Barony of *Sensheim*, which lies S. of *Schwarzenburg*. This County and Barony are about 20 Miles long, and 15 broad.

V. The County of CASTEL,

Betwixt the Bishoprick of *Wurtzburg* and the County of *Schwartzenburg*. 'Tis about 27 Miles long, and 8 where broadest. 'Tis govern'd by Counts of its own, descended from the ancient Dukes of *Franconia*, and divided into the two principal Branches of *Remlingen* and *Rudenhusen*, the former Papists, and the latter Protestants. The chief Towns are, *Castel*, *Remlingen*, and *Rudenhusen*.

VI. The County of HENNEBERG,

Which takes its Name from an ancient Castle. It lies betwixt *Thuringia*, *Hesse*, and the Bishoprick of *Wurtzburg*. This Country, according to *Moll*, is 35 Miles long, and 15 broad. The Counts of this Country were made Princes of the Empire in 1310; but their Male-Issue failing, it came to the Family of *Saxony* by Marriage, together with *Coburg*, which was formerly Part of it, but given to a Prince of the House of *Saxony*, as a Portion to his Wife, Daughter to one of the Counts of *Henneberg*. The Country is populous and fruitful. *Henneberg*, from whence it takes Name, lies on a Hill 30 Miles N. W. from *Coburg*; but has nothing remarkable.

The chief Towns here are, 1. *Mainungen*. a pretty small City on the River *Verra*. 2. *Skleusingen*, on the *Skleus*, noted for a Meeting of the Electoral College in 1623, where *Ferdinand II.* transferred the Electoral Dignity from the *Palatine* Family to that of *Bavaria*. 'Tis reckon'd the chief City in the County, and was the Residence of their Princes, whose Monuments are still to be seen in the great Church. 'Tis also noted for a College erected here by the last Count of the ancient Family in 1557. 'Tis here fit to be noted, That *Sanson* and *Moll* do both of 'em call this Country by the Name of *Sax-Naumberg*. Some likewise include in it *Smalcald* and its Territory, which now belongs to the Landgrave of *Hesse*, which makes the Country 25 Miles broad.

Smalcald lies 16 Miles N. from *Henneberg*, and is famous for the League made by the Protestants there against the Emperor *Charles V.* in 1530. Of which, more in *Hesse*.

VII. The County of ERPACH,

Which lies betwixt the *Lower Palatinate* and the Archbishoprick of *Mentz*, and is by *Moll* made Part of the *Palatinate*. 'Tis 27 Miles long, and about 12 broad. *Dr. Nicholson* says, That most of the Towns and Villages in this County end in *Bach* or *Pach*, which signifies a Stream or Brook, with many of which this Country is well water'd, besides being encompassed with the *Rhine*, the *Neckar*, and the *Mein*, three of the most considerable Rivers of the Empire; so that it abounds with fruitful Vallies, rich Meadows, Vineyards, and all sorts of Corn. The ancient Inhabitants were Part of the old *Franks*, and the modern are accounted Men of Courage, Strength, quick Parts, and generally of good Extract. They make a great many Iron Stoves, with which they furnish other Parts of *Germany*. Their Count is a Prince of the Empire, and derives his Pedigree from *Eginhard*, Secretary to *Charlemagne*. The chief Town, of the same Name, lies on a small River 43 Miles W. from *Wurtzburg*, and 30 S. E. from *Frankfort am Main*. *Dr. Nicholson* says, the Town is not very considerable; and that *Latherus* says, this and some other neighbouring Cities have a Custom of confiscating the Estates of those who die above 25 Years of Age, and never attempted to marry.

VIII. The County of WERTHEIM,

Lies W. from the Bishoprick of *Wurtzburg*. *Moll* makes it 26 Miles long, and 12 broad. It takes its Name from the chief City, on the Conflux of the *Tauber* and *Main*, about 20 Miles W. from *Wurtzburg*. It stands in a fruitful Soil, and good Air, and their chief Trade is Wine: 'Twas formerly a flourishing Town; but suffered much by the Endeavours of their Count to restore Popery, which they opposed, and continue zealous *Lutherans*. This County was Part of the old *Francia Orientalis*, is plentiful in Corn, Wine, Pasturage, Wild-Fowl, and Venison. In the close of the 16th Century, it fell by Marriage to the Count of *Leuvenstein*. Among the several

Villages which depend on the City of *Wertheim*, that of *Nielaßhausen* is most noted, for the Birth and Education of *John Behaim*, who was burnt for an Heretick at *Wurtzburg* in 1476: He was a poor Boor, and in his Melancholy Fits fancied he saw strange Apparitions. He pretended that the Virgin *Mary* gave him a Visit, and told him, among other Secrets, That the Citizens of *Wertheim* ow'd no Obedience to the Count or other Magistrates, but that they were all as free and unbounded as the Rivers that water their Country. By this means, great Numbers of the common People were made his Profelytes, and follow'd him; which might have prov'd dangerous, had he not been suppress'd in time by the Bishop's Troops, who seiz'd their Leader, and brought him to his fiery Exit.

IX. The County of HOHENLOE.

Which lies betwixt the Marquis of *Anspach*, and the Territory of *Hall*, and is by *Sanjon* and *Moll* call'd *Holach*. 'Tis about 27 Miles long, and 15 where broadest. It takes its Name from an ancient Castle, the Seat of its Counts, who are of a very ancient Family, and divided into the chief Branches of *Nevinstein* and *Waldenburg*; the first, subdivided into those of *Weckerßheim* and *Lagenburg*; and the other, into those of *Pfoedelbach* and *Schillingsfurt*. They also possess the County of *Gleichen* in *Thuringia*. The chief Place of this County is *Sinderingen*, on the *Koker*.

Other Temporal Jurisdictions in this Circle, are; the Barony of *Limpurg* or *Limburg*, which lies S. from *Hohenloe*, is about 12 Miles broad and 12 long: The Territory of *Hall*, betwixt them, is about 12 Miles long and 5 broad. The small County of *Lewenstein*, S. W. from *Hohenloe*, is about 10 Miles long and 7 broad. *Moll* places both these in *Swabia*. And the County of *Reineck*, N. of *Wurtzburg*, about 15 Miles long, and 8 broad; the chief Town is *Reineck*. *Moll* places this in *Hesse*.

The Imperial Cities in Franconia.

1. *Nuremberg*, Lat. *Noricorum Mons*, *Nurimberga*, and *Nurimberga*, on the *Ragnitz*, Long. 30. 10. Lat. 49. 26. 50

Miles N. W. from *Ratisbon*, and 55 S. E. from *Wurtzburg*. 'Tis one of the greatest, finest, richest, and best trading Cities in *Germany*. *La Forrest* says, the Houses are all built of hewn Stone. The Streets are large, their Market-Places regular, and they have 11 Stone-Bridges; one of which, consisting but of one Arch, is reckon'd a wonder in Architecture. But before we come to the particular Description, 'tis proper to take Notice of its Antiquity, which is agreed by all to be very great; but those who pretend it to be *Ptolomy's Segodunum*, have fail'd in their Proof, as well as those who ascribe its Foundation to *Drusus* or *Tiberius Nero*: So that 'tis now generally believ'd to have had it's Name and Foundation from the *Norici*, part of whom inhabited this Country; and flying before the *Huns*, built this City for their Defence, and particularly the Castle on the adjoining Hill, under the Protection of which they first lodg'd in Tents, and afterwards built Houses till it grew up to a City: Most of the first Inhabitants were Smiths, and other Artificers in Iron. The *Castrum Noricum* is mention'd in the History of *Charlemagne*, as one of the chief Fortresses which gave a Check to his Conquests. After his Time, it became a Receptracle for such as plunder'd the neighbouring Country, which occasion'd it to be several Times attack'd, and almost destroy'd by succeeding Emperors: And to prevent such Practices for the future, they put a strong Garison into the Castle, commanded by the Burgrave or Governour of the City; who, upon Notice of any Robbery, issu'd out with his Guards to seize the Delinquents. This gave Occasion to the Custom which is still continu'd, of maintaining a Troop of Horse, and Two or Three Companies of Foot, at the publick Charge, to secure the Roads through the Woods, &c. in the Territories of this City, which at last became the Glory of *Germany*, and, considering its great Distance from the Sea, the Wonder of *Europe* for its Trade and Number of Inhabitants. For no City in the World has a greater Number of curious Workmen, in Steel, Brass, Ivory, Wood, &c. nor affords so good a Pennyworth of all sorts of Artificial Commodities. They are particularly so famous for Clock-work, that

U u u u the

the Grand Signior, having a noble Clock presented him by the King of Poland, sent it hither to be mended when out of Order. The Doctor says, The Town is about 7 Miles in compass, surrounded with a large Ditch, and a Triple-Wall, upon which there are 365 Towers, 180 of 'em built of hewn Stone, where the Cannon are plac'd for the Defence of the City. The Stone with which those Towers, and most of the Houses are built, is dug from Quarries in the Neighbourhood, is very soft at first, and easily wrought into any Figure, but when dry'd by the Sun and Wind, is as hard and durable as Marble. The *Regnitz*, which runs through the middle of the City, supplies the Ditch and most of the Town with Water. 'Tis let out of the City much in the same manner as 'tis receiv'd, by 12 large Arches, under the Walls; and upon the Streams, there's a great Number of Mills for Corn, Paper, Iron, &c. In some of which, Swords of all sorts, Knives, and other Iron-Ware, are made with a great deal of Readiness and Art. Within the Walls they have above 60 Mills, many of which are for Corn to serve the Town in case of a Siege. When a Traveller has seen all the other Cities of Germany, he finds himself surpriz'd by this, which exceeds them all in Fairness of Streets, Uniformity of Building, Difference of Habit, and Industry of the Inhabitants. It has about 550 Streets and Alleys, where most of the Houses are of Free Stone, and 6 or 7 Stories high. They have 10 Market-Places, 13 Publick Baths, and a vast Number of Conduits and Draw-Wells. Their chief Fountain is adorn'd with a great many Statues of Brass: The Sea-Horses and Nymphs about it are much larger than the Life; and *Neptune*, who stands on the Top, is about $3\frac{1}{2}$ Yards high. The Inhabitants are reckon'd above 60000; yet they have but properly two Parish Churches, viz. *St. Sebald's* and *St. Lawrence's*. The chief is that of *St. Sebald*, who is said to have been an English Saxon of the Blood Royal, and travell'd hither to Convert the Saxons in these Parts. In Remembrance of which, the *Norembergers* caus'd his dead Corps to be carried in Procession on a Cart, drawn by Oxen; and in that Place where they first halted they interr'd his Body, and

erected this Church to his Memory. The Sextons have a rare Collection of Relicks, &c. which they shew only to Princes and Travellers of Quality. The Church is as stately as any of its kind in the Empire; and the *Lutheran* Doctrine is preach'd here in Purity. Without the Church there's a large Crucifix of a black Colour, in which the People fancy the Magistrates have reposit'd a very great Treasure. *St. Lawrence's* Church is chiefly frequented by the Nobility; and most of the chief Families have their Tombs and Escutcheons here; and there's a long Table of the Names of such as lie buried in the Vaults, and the Time and Manner of their Death. Some of these Registers are above 500 Years old, and continue down to the present Time. *M. Rotenbeck* publish'd a Collection of the Epitaphs and Inscriptions in this and the other Churches and Chappels of the City in 1622. This City, among many other Privileges, has the keeping of most of the Imperial Ornaments made use of at the Emperor's Coronation; as, 1. The Imperial Crown, with which *Charlemagne* was crown'd, about which there's a Mitre enrich'd with vast Numbers of Diamonds, Rubies, Emeralds and Pearls; and on the fore-part a Cross of Diamonds of great Value. 2. His Dalmatick Robe embroidered with huge Pearls. 3. The Golden Apple, or Globe. 4. *Charlemagne's* Sword. 5. The Golden Scepter. 6. The Imperial Cloak embroider'd all over with Eagles, and border'd with great Emeralds, Diamonds, Saphires, and Chrysolites. 7. The Buskins covered with Plates of Gold. 8. The Gloves embroider'd with precious Stones. These Ornaments were first kept at *Carlsstein* in *Bohemia*, then at *Plintenberg* in *Hungary*, and from thence sent to *Nuremberg* by the Emperor *Sigismund*, who brought several other Relicks thither. The Castle where the Emperor lodges when he is here, stands on the Top of an high Hill, from whence there's a fair Prospect of the City. 'Tis adorn'd with many curious Pictures, and other fine Paintings; and in a Rock at the back of the Castle, there's a Draw-Well of an extraordinary Depth; but the Wheels are so contriv'd, that with Buckets they draw up the Water with very great Ease. Near this Well they shew the Armour of *Apelinus*, *Von Gailingen*,

Geilingen, the famous Sorcerer: And in the Wall of the Castle the Marks of his Horse's Feet when they pretend he leap'd from thence over the Town-Ditch. The Town-Hall is a stately Fabrick much larger than that of *Augsburg*, and as well adorn'd within. The Dining-Room, Council-Chamber, and other Apartments, are well painted and gilt, and adorn'd with curious Pictures. The chief Nobility and Gentry consists of 28 Families, and among them they chuse their Supreme Magistrates. Their Common-Council consists of 42 Members, whereof 13 are Burgo-Masters, 13 are Alderman, and the rest are call'd Elders; one Burgo-Master and Alderman have the Superiority over the rest by Turns for the Space of a Lunar Month. Matters of small Concern are debated publicly before the Common Council; but raising of Troops, levying of Taxes, and other Matters of great Moment, are refer'd to the Select Committee of Eight, who may call 3 or 4 Civilians for Advice, but grant them no Vote; for Men of that Faculty are allowed no Share in the Administration, but have Salaries for their Attendance when Occasion requires. These are their Two ordinary Courts of Judicature; but in extraordinary Cases, they have a great Council of 400, chosen out of all the Trades and Callings in the Town; and they annually chuse the Members of the other Courts. They never suffer Mechanicks to meet publicly except at Worship or Burials, to prevent the Danger of tumultuous Rabbles. They have a College, with Professors of all Faculties; but 'tis not much frequented since the University of *Altorff* was erected. *La Forest* says, The Castle is well fortified; that their Arsenal is one of the best furnish'd in *Germany*, and has Arms for 10000 Men. Their 28 Chief Families are distinguish'd by the Name of *Patrisians*, and their Senators are prudent to a Proverb: They were formerly subject to the Family of *Brandenburg*, who sold them their Liberty in 1477; but attempting to recover their Superiority over this City, it occasion'd a long War, which did not end till 1552. They embrac'd the Confession of *Augsburg* in 1530, and allow no Papists the Freedom of the City, and but half of a Church for their Worship. The *Calvinists*

are allowed none, but go a League our of Town to the Marq. of *Anspach*; and the *Lutheran* Ministers baptize their Children. The *Jews* live in a Village without the City, must pay something when they come into it, but not lodge in it. This Town submitted to *Gustavus Adolphus* King of *Sweden* in 1631. He encamp'd near it the Year after, and oblig'd the Imperialists to rise from before it twice. This City has Six Gates towards as many different Roads, each of them defended by a large Tower. They have 12 publick Fountains, 26 Wells, and 300 Cannon, besides the Arms above-mention'd in their Arsenal. *Monconys* says, when he was there the Town-House was not finish'd, but such Part of it as was exceeded that of *Amsterdam*. He commends their Artificers, and mentions one who made a Coach for the King of *Denmark*, that would go forward or backward, and turn about without Horses by Springs, managed by Two Boys within, and make about a League per Hour. He says, he saw small Cannon there of a Foot long that would carry 500 Paces, that there were two great Guns in the Arsenal, which carried Stone Bullets of 400 Pounds weight, and required but 50 Pounds of Powder to charge each. The Magistrate's Library is very large, consists of Four Galleries, and contains about 15000 Volumes bound in an Antick Manner. The Castle, he says, is an Ancient Building after the *Roman* Fashion, tho' he doubts of its being built by *Nero*. He admires the Brazen Monument of *St. Sebaldus*, and its noble Antick Figures, but says he was Son to a King of *Denmark*. The Workmen who made the Coach for the King of *Denmark*, was making for the *Dauphine* a Representation of a Squadron of Horse skirmishing with a Battalion of Foot, which march'd and fir'd by Springs. He says, the Walls of the City are very high, built of good hewn Stone, with large and deep Ditches fac'd also with Stone; but no other Fortifications except the Towers above-mention'd; some of which were very good Fortresses. *Dr. Brown* says, many of the Houses are painted on the Outside, and have gilded Balls on the Top; that *St. Lawrence's* Church is famous for its Bigness, and has Two Steeples in the Front; that the Floor

of

of the Senate-House is pav'd with gilt Stones, intermix'd with divers Colours, and in one of the Chambers there's the Pictures of most of the great Persons in *Germany*, who have been entertain'd there. *Misson* says, The Well in the Castle is said by the Inhabitants to be 1600 Foot deep, and that the Chain of the Bucket weighs 3000 Pounds. In one of the Halls of the Castle there are 4 *Corinthian* Pillars 45 Foot high, that were said to be brought from *Rome* by the Devil, being challeng'd to it by a Monk; which is just as true as the Conjuror's leaping on Horse-back from the Top of the Castle over the Town-Ditch. He says, in the Town-Library there are about 20000 Volumes, and a *Greek* MS. Copy of the Gospels of 900 Years standing, with the Prayers and Hymns formerly us'd in the *Greek* Church, in Characters very much different from those now in Use. They shew'd him a Treatise of Predestination, said to be printed at *Spires* in 1446; but there must be a Mistake, since they shew'd him another printed by *Fausius* at *Mentz* in 1459, with an Advertisement that it was not writ, but printed by a New Invention. He mentions the Cabinet of *Viati*, a private Citizen, and wonders that any Man of his Rank could have a Collection of so many Rarities from all Parts of the World. There's one great Apartment fill'd with Arms of all Nations, and another stor'd with excellent Pictures, Medals, curious Works both Ancient and Modern, Idols, Shells, Plants, Minerals, and other natural Productions. He shew'd him a Wind-Gun, which would do Execution at a Distance without any Noise. He says, in the publick Cellar, which is 250 Paces long, there were 20000 middle-siz'd Tuns, which they call *Aums*, full of Wine. He adds, the River might be made navigable without much Difficulty, which would much increase the Riches and Grandeur of the City. It has under its Jurisdiction 7 other Cities, and 480 Borough and Villages. A Peace was concluded here betwixt the Princes of *Germany* in 1649. The Territory is about 20 Miles broad, and 20 long.

About 15 Miles E. from *Nuremberg* lies *Altorf*, an University, founded by the Se-

nate of *Nuremberg* in 1578, where there are at least 200 Students. 'Tis now the most considerable Town subject to *Nuremberg*. Some say, 'twas founded by *Adolph*, a Count of *Nassau*, and from him call'd *Adolphsdorf*: Others say, it had its Name from the Emperor *Adolph*, who first endow'd it with Privileges. The *Nurembergers*, before they purchas'd it from the *Palatine* Family, attempted it several times by Arms in vain, and in 1449 were defeated before it by *Marquis Albert*, and forc'd to raise the Siege, after they had burnt half the Town. It has bred many learned Men of good Reputation. They have an excellent Physick-Garden stock'd with about 2000 Plants. They have likewise an Anatomy Theatre with several Skeletons, and other Curiosities; and in their Library, they have a fair *Horvius Eistensis*, and *Youngerman's* Collection of Plants, writ by his own Hand.

Laffen upon the *Regnitz*, 10 Miles N. E. from *Nuremberg*, is the next Place of Note, subject to that City; and they have several others that were anciently Parts of the *Upper Palatinate*, but taken by the *Nurembergers* during their Wars with *Marquis Albert* in 1504.

The Second Imperial Town in *Franconia* is *Waissemburg*, in the Bishoprick of *Eichstat*, 28 Miles S. from *Nuremberg*. 'Tis a small City, and considerable for little but its Rank.

3. *Rottenberg*, a very pretty City on the *Tauber*, in the Marquisate of *Ansbach*, 37 Miles S. W. from *Nuremberg*. 'Twas formerly subject to the Counts of *Castel*, but obtain'd their Liberty in 1191, which was confirm'd by *Henry VI.* the Year after.

4. *Wunscheim*, in the same Marquisate, 33 Miles N. W. from *Nuremberg*, on the River *Aisch*.

5. *Schweinsfurt* on the *Main*, in the Bishoprick of *Wurtzburg*, 26 Miles N. E. from that City, upon which they depended till 1388, that they obtain'd their Liberty. The *Latins* call it *Trajectus Suevorum*, because the *Swabians* pass'd the *Main* here, and some will have it to be founded 217 Years before Christ, but without any good Proof. 'Tis neither large nor populous, but well fortified.

The Circle of BURGUNDY.

THIS Circle is divided into Upper and Lower. The Upper contains that call'd the *French Country*, and the Lower the *Netherlands*. The former, though possess'd at present by the *French*, we shall describe here, because 'tis reckon'd Part of the Empire by the *Matricula*. *La Forrest* says, Its ancient Inhabitants were the *Sequani*, who begg'd *Cæsar's* Assistance against *Ariovistus*, and *Augustus* made their Country a Fifth Part of the *Gallia Lugdunensis*, call'd otherwise the Province of the *Sequani*. They continu'd under the *Romans* till the Empire of *Honorius*, when the *Burgundians*, from whence it had the Name of *Burgundy*, invaded it, and made it Part of their Kingdom, which was very large, comprehending not only the Dukedom and County of *Burgundy*, but *Alsace*, *Switzerland*, *Wallisland*, *Savoy*, and afterwards *Dauphiné*, the *Lyonois* and *Nivernois*; and was divided by the *Romans* into *Burgundy Cis*, and *Trans Jura*, because of the Mountain *Jura* which lay in the middle. We refer to what we said of them in the Description of Ancient Germany, Page 424. *Chroverius*, in his *Germania Antiqua*, explodes the Opinion of those who derive their Name from the *Burges*, or moveable Tents in which they dwelt. They were a very great and warlike People, and had Wars with the *Romans*, *Gauls*, *Huns*, &c. And most of their Common People were *Smiths*, *Carpenters*, &c. by which they got their Livelihood. Some say, they were call'd by *Stilico* the Roman General, to assist him against the *Gauls* or *Franks*, for which he gave them the Two *Burgundies*. *La Forrest* says, They made afterwards Part of the Kingdom of *Austrasia*, and were subject to the Second Race of the *French Kings*. That call'd *French Country*, is Part of the *Burgundia Trans Jura*, which was united to the Kingdom of *Arles* in 933. Some say, it continu'd an Independent Kingdom 120 Years in an uninterrupted Succession, till *Childebert* and *Clotaire*, the *French Kings* of *Paris* and *Soissons*, defeated and slew *Gunomarus* their last King; upon which the Western Parts were seiz'd by the *French*, and possess'd by them

for some Ages: And the Eastern Parts were seiz'd by other People. *Lewis the Pious*, Son to *Charlemagne*, erected it again into a Kingdom, the Capital of which being at *Arles*: It was from thence call'd, The Kingdom of *Arles*. *La Forrest* says, That *Otho William* fix'd himself here in 993, and took the Title of Count, which was left him by *Robert King of France* in 1002, after he had chased him out of the County of *Burgundy*. *Renand III.* one of his Successors, refus'd to do Homage for it to the Emperor *Lotharius II.* and defended his Independency so well, that his Country from thence was call'd *Franche County*. His only Daughter *Beatrix* carried it by Marriage to the Emperor *Frederick Barbarossa* in 1157. *Otho IV.*'s Son succeeded as Count Palatine of *Burgundy*. It came afterwards by Marriage to the Duke of *Chalons*, and afterwards to *Philip the Long* of *France*, who married *Jane* the Heiress. His Daughter brought it with the County of *Arras* to *Eudes IV.* Duke of *Burgundy* in 1318. *Philip* their Grandson dying without Posterity, *Margaret of Flanders* descended from a Second Daughter of *Philip the Long* of *France*, married *Philip of France*, Fourth Son to King *John* of *France*, who founded the Second Race of the Dukes of *Burgundy*, which continu'd till the Death of *Charles the Hardy*, the last Duke of *Burgundy*, whose History the Curious may find excellently writ in the Memoirs of *Philip de Commines*. After his Death, in the Battle against the *Swissers* in 1476, the Arch-Duke *Maximilian*, afterwards Emperor, married his only Daughter *Mary* of *Burgundy*, and united this Country with the *Netherlands* to the Empire, and call'd it the Circle of *Burgundy*. But *Lewis XI.* of *France* seiz'd that call'd the Dutchy, as an Escheat to his Crown; and the *French* have possess'd it ever since. The *French Country* continu'd subject to the House of *Austria*, till *Lewis XIV.* of *France* treacherously seiz'd it in 1668, but was obliged to restore it next Year. He seiz'd it again in 1674, and had it confirm'd to him by the Treaties of *Nimeguen* and *Ryswick*.

La Forrest says, The greatest Extent of this Province from S. to N. is 35 *French Leagues*; but *Mall* makes it 42. And the Breadth

Breadth from E. to W. 25; but *Moll* makes it more. It has *Larrain* on the N. *La Bresse* on the S. *Switzerland* on the E. and the Dut-
chy of *Burgundy* on the W.

Its chief Rivers are, the *Saon*, the *Louve*, the *Doux*, and the *Lognon*, which abound with Fish, and fructify the Country, that produces good Corn and Wine. Their Forreſts are ſtor'd with Game, and their Paſtures with Cattle. They have alſo Quar-
ries of Black Marble, Jaſper of ſeveral Co-
lours, and very fine Alabaſter.

'Tis divided into the 4 great Bailiwicks of *Besançon*, *Aval*, *Dole*, and *Amont*.

B E S A N C O N,

Is the Capital of the Province and Baili-
wick, and called in Latin *Vesuntio*, *Bisun-
tium*, *Vesuntium*, and *Chriſopolis*. It lies in
Long. 24 $\frac{1}{2}$. Lat. 47. 12. 50 Miles S. W.
from *Montbelliard*, and 78 from *Baſle*. 'Tis
the See of an Archbiſhop, who has the Ti-
tle of a Prince of the Empire. The Par-
liament, or Chief Tribunal of this Coun-
ty, which was eſtabliſhed at *Dole* in 1422, by
Philip the Good Duke of Burgundy in 1424,
was transferred hither by *Lewis IV.* in 1694.
It has likewiſe an Univerſity, founded by
the Emperor *Ferdinand I.* in 1564. It is
one of the moſt ancient Towns in *Gaul*,
and was much eſteemed by the *Romans*, as
we find in *Cæſar's Commentaries*, and is
ſtill to be ſeen by the remaining Monuments
of its *Grandeur*; among which, there's
Part of an Amphitheatre built in Honour of
the Emperor *Aurelian*. 'Twas then the chief
Town of the *Sequani*, and the *Romans* eſta-
bliſhed a School here, with Profeſſors of
Oratory, as we find by *Anſonius*. 'Twas
taken from the *Romans* by the *Burgundians*,
and after made Imperial by *Henry I.* under
the Protection of the Duke of *Burgundy*.
'Twas exempted from the Empire, and
given to the *Spaniards* in 1651. 'Twas ta-
ken by the *French* in 1658, reſtored to them
by the Treaty of *Aix la Chapelle* next Year,
and taken again by the *French* in 1674 by
Siege, and left to them by the Treaties of
Nimeguen and *Ryſwick*. 'Tis divided into
two Parts by the River *Dubis*, now *Doux*,
over which there's a Stone Bridge; at one
End of which, there was built lately a fine
Triumphal Arch. The Town is defended

by two Citadels, one of 'em built on the
Mount *Celius*, and is embelliſh'd with ſeve-
ral fine Structures; the chief of which is
the Metropolitan Church of *St. John*, noted
for ſeveral pretended Relicks, and particu-
larly for what they call a Part of our Savi-
our's Handkerchief.

The Bailiwick of A V A L,

Contains the following Towns: 1. *Salins*,
ſo called from an excellent Salt-Spring,
from whence the *French King* has a great
Revenue. It lies betwixt two Mountains,
22 Miles S. W. from *Besançon*. The Town
is ſtrong, and well fortified, the Walls being
flank'd with high Towers, and defended by
two Caſtles, and a Citadel on the top of a
Rock, which make it almoſt impregnable.
The Store-houſe where they boil their Salt
is a ſtately Building. 2. *Portelier*, a ſmall
City on the Frontiers of *Switzerland*, near
the River *Doux*, 22 Miles S. E. from *Besan-
çon*. 3. *Arbois*, noted for its excellent Wine,
which is transported to other Countries.
It lies 25 Miles S. W. from *Besançon*, and 7
from *Salins*. 4. *Bletterans*, a City on a ſmall
River near the Dutchy of *Burgundy*, former-
ly fortified, but now diſmantled. 5. *St. Claude*,
a ſmall City, but very ſtrong. 'Tis noted
for its Abbey, where they keep the Body
of *St. Claude*, who was Archbiſhop of *Be-
ſançon* in the 7th Century, and gave Name
to it. It lies near the Mountain *Jura*, 32
Miles S. from *Salins*. 6. *Poligny*, a large
Town, 6 Miles S. from *Arbois*, noted alſo
for good Wine. 'Tis encompassed with
Gardens, Hills, and Forreſts, was formerly
well fortified, but now diſmantled.

The Bailiwick of D O L E,

Is ſo called from its Capital of the ſame
Name. 'Tis a very ancient Town, plea-
ſantly ſituated on the *Doux*, in a fruitful
Country, 8 Miles S. W. from *Besançon*. It
has fine Publick Structures, eſpecially the
Church of *Our Lady*, and the Jeſuits Col-
lege, which deſerve the View of Travel-
lers. *Philip the Good, D. of Burgundy*, found-
ed its Univerſity in 1426. *Lewis XI.* of
France took and ſack'd this Town in 1479.
The Prince of *Condé* beſieg'd it in vain in
1636. *Lewis XIV.* took it in a few Days
in

in 1668, and again in 1674, it having been restored to the *Spaniards* by the Treaty of *Aix la Chapelle*; but quitted to the *French* by the Treaty of *Nimeguen*, who have since dismantled it. It was formerly Capital of the County, and the Seat of the Parliament.

The Bailiwick of AMONT or GRAY,

So called from its Capital on the *Saon*, a small Town, but very neat. It was taken in 1674 by the *French King*, who demolished its Castle and Fortifications. It lies 10 Miles N. W. from *Besançon*.

Other Places of Note in this Bailiwick are, 1. *Beaume-les-Nonnains*, on the River *Ougnon*. 2. *Vesoul*, a little neat City, 33 Miles N. from *Besançon*, and N. E. from *Gray*. 'Twas several Times taken and retaken in the War betwixt the *French* and the House of *Austria*, but quitted to the *French* by the Treaty of *Nimeguen*. 3. *Lure*, a famous Abbey on the River *Ougnon*, 18 Miles N. E. from *Vesoul*. 4. *Luxeuil*, another famous Abbey on the Frontiers of *Lorraine*, 8 Miles N. W. from *Lure*.

In this County, the *French King* has a Governor-General, a Deputy-Governor, and 11 Governors of Places in several Towns, there being no less than 3 in *Besançon*, one in the Citadel, and one in each Fort. On the E Side of this County, lies the Ridge of Hills called *Mont Jura*, which reach from *Bâle* on the N. to the River *Rhone* and the Province of *Bugey* on the S. and divide this Country from *Switzerland*, but go by several Names, according to the Countries they pass through. We refer the Description of the Dutchy of *Burgundy* to *France*, and that of the *Netherlands* to its proper Place.

The Circle of the UPPER RHINE.

THE several Princes and States contain'd in this Circle, may be seen in the *Matricula*, P. 513. We have already describ'd *Alsace*, and the Bishoprick of *Strasbourg*, which make Part of it, and chose to place them next to the Circle of *Swabia*, because they lie contiguous to it in the Map. The Archbishoprick of *Besançon* was likewise formerly accounted Part of this

Circle, as appears by the *Matricula*; but being now Part of the Circle of *Burgundy*, we have accounted for it there, and come to

The Palatinate of the RHINE.

PART of this Country belongs to the Circle of the *Upper Rhine*, and Part to the *Lower*, as may be seen by the *Matricula*; but we think it more proper to describe it altogether, than to divide it according to the Circles, which would necessarily occasion us to describe a great many other Dominions and Cities betwixt the one Part and the other of it, which would confound the Reader, and break the Course of the Map. We shall however, after a General Account of the Country, begin the Geographical Description with that Part of it which belongs to the Circle of the *Upper Rhine*, and take Notice which Part of it belongs to the *Lower Circle*, when we come to it.

The Palatinate of the *Rhine* has *Alsace*, Part of *Lorraine*, and *Swabia*, on the S. Part of the Archbishopricks of *Treves* and *Mentz* on the N. Part of *Treves* and *Lorraine* on the W. and Part of *Mentz*, *Franconia* and *Swabia*, on the E. *Moll* makes it 110 Miles from S. E. to N. W. and its greatest Breadth from N. E. to S. W. about 70. 'Tis called the *Lower Palatinate*, to distinguish it from that of *Bavaria*, called the *Upper*.

As to the Origine of the Name, *Cluverius* gives us many Arguments in his *Germ. Ant. Lib. 3.* to prove, That the ancient *Germans* called what the Moderns name *Palz*, *Paltz*, and *Pfaltz*; *Palanz* or *Palans*; and that 'tis the same that *Marcellinus* calls *Palas*, which he takes to signify in the old *Celtick* Tongue a Court of Jurisdiction, where the Officer called *Palatinus* presided. He quotes the *Speculum Saxonicum*, to prove, that every Province of the *Teutonic* Country had their *Paltzgraviate* or *Palatinate*, and particularly *Saxony*, *Bavaria*, *Franconia*, and *Svevia*; nay, that same Author says, there were 5 Cities in *Saxony* called *Palantie*, where the King presided in those Courts; which shews the Mistake of such as derive the Name of this Office from those called *Comites Palatii*, in the Courts of the ancient *French Kings*.

X x x

'Tis

'Tis agreed however, that this Country is the oldest mention'd in the German History, call'd by the Name of *Palatinate*; and *Cluverius* argues with Reason, That those Countries, where such Courts were kept, had the Name of *Palatinate* from them, which is now appropriated to this Country by way of Eminence. The Curious may find more concerning the several Counts *Palatine* in *Selden's Titles of Honour*, wherein he seems to differ from *Cluverius*; and thinks, that the old Counts *Palatine* in the Empire had some Resemblance to the *Præfatus Prætorio* among the Romans, or the old Chief Justice in England, who had the supreme Jurisdiction for the King, and in his Name, in all Causes that came immediately to his Majesty's Audience: But perhaps the Difference may be reconcil'd thus; That those *French Comites Palatii* had only a Personal Jurisdiction, without the Addition of any Feudal Territory annex'd to it; whereas 'tis otherwise in the Empire: But in this we leave the Reader to his own Judgment, and shall take Notice from *Selden*, That there are other Sorts of Counts *Palatine*, whose Honour and Dignity consist only in the Personal Dignity, which is acquir'd by the Profession of the Law, or by Letters Patents; and of this Sort, both Emperors and Popes have created several, who have a Power sometimes to create Doctors of Divinity, Law, Physick, Philosophy, Poets Laureat, and Notaries, &c. but this, with their other Privileges, is at the Discretion of the Giver.

This Country is much the pleasantest Part of the German Empire, and has therefore been covered by neighbouring Princes in all Ages. Their Hills are cover'd with Vines, which yield the well known *Rhenish* Wine; their Plains and Vallies abound with all sorts of Corn and Fruit; and their Forests are well stock'd with Deer, and other Game. The *Rhine* passing through the middle of the Country, does very much improve their Commerce, and, with the *Neckar*, *Nabe*, and other Rivers, supplies them with Plenty of Fish; and their Mountains abound with Minerals; among which, *La Forreſt* mentions *Agate* and *Jasper*, and Gold found in the Sand of the *Rhine*, of which they coin Pieces, which bear its Name.

The same Author says, That the Part of

the Country on the E. Side the *Rhine*, was anciently inhabited by the *Sedusii*, who were expelled by the *Alemanni*. That on the W. Side, was Part of *Gaul*, afterwards Part of *Upper Germany*, and of the Kingdom of *Austrasia*. Both of 'em came to be subject to the Emperors of the *French Line*; but the Divisions which happen'd about the End of the 11th Century, gave Opportunity to the Counts of the Palace to make themselves Sovereigns of those Countries they held in Fee, and to enlarge their Dominions. These Counts, he says, were originally Judges, who followed the Court, and were entrusted by the Emperors to determine such Differences as happened betwixt the Courtiers and the People, and there were two of 'em, viz. the Counts *Palatine of Saxony*, and of the *Rhine*. Under the latter, were the Provinces which reach from *Franconia* and *Swabia* as far as the *Alps*. This justifies *Selden's* Opinion as to the Origine of the modern Counts *Palatine*; but does not argue against what *Cluverius* says of those of the ancient Sort.

La Forreſt says, the first Count *Palatine* was *Sigonfrid* or *Ehrenfrid*, descended from the Counts of *Arden*. After the Death of *Herman*, one of his Successors, in 1154, the Emperor *Frederick I.* invested his Brother *Conrad* in the *Palatinate*. *Agnes* his Granddaughter, in 1198, married *Henry of Saxony*, Son to *Henry the Lion*. Their Daughter *Agnes* married in 1225 *Orto the Illustrious of Bavaria*, whose Father *Louis of Bavaria* was invested in the *Palatinate* in 1215, by the Emperor *Frederick II.* to the Prejudice of *Henry*, Father of this *Agnes*. Of this Marriage came *Louis the Severe*, or the Ancient, who died in 1294, and left two Sons, from whom are descended the Families of *Bavaria* and the *Palatinate*: The former issued from *Louis*, who was Emperor; and the other from *Rodolph*, whose Posterity is divided into 4 Branches, viz. the Electoral Branch and that of *Newburg*, of *Deux-Ponts*, of *Birkenfeld*, and *Weldentz*.

We refer to what we have said on the Origine of this Family in the Account of that of *Bavaria*, P. 655. and shall only add from the *Atlas Historique*, That *Rodolph I.* of this Illustrious Family, Son to *Louis the Severe*, married *Mechtildis*, Daughter to the Emperor *Adolph of Nassau*, inherited the *Palatinate*

Matinate from his Father, and died in 1319. *Robert II.* who was the 4th from him, married *Beatrice* of *Sicily*, recover'd what the Emperor *Charles IV.* had taken from his Predecessors, and died in 1398. His Successor *Robert III.* called *The Severe*, married *Elizabeth* of *Nuremberg*, was declared Emperor in 1401, and died in 1410. His Successor *Stephen* married *Anne* of *Weldentz*, by whom he had that Country, as he had *Simmeren* and *Deux-Ponts* from his Father. His Successor *Frederick* married *Margaret* of *Guelderland*, and died in 1480. His Successor *John I.* married *Susanna* of *Nassau Saarbruck*, and died in 1509. His Successor *John II.* married *Beatrice* of *Baden-Hochberg*, and for his second Wife *Margaret* of *Oettingen*, and died in 1557. His Successor *Frederick III.* married first *Mary* of *Anspach*, afterwards *Amelia* of *Neuenhaer*, and died in 1576. His Successor *Louis V.* was a Learned Prince, married first *Elizabeth* of *Hesse*, and afterwards *Anne* of *East-Friesland*, and died in 1583. His Successor *Frederick IV.* married *Louisa Julia* of *Orange*, had great Quarrels with the House of *Austria* about the Affairs of Religion, and died in 1610. His Son and Successor *Frederick IV.* married *Elizabeth*, Daughter to *James I.* of *Great Britain*, succeeded to his Father's Quarrels with the House of *Austria* about Religion, and was chosen King of *Bohemia*; but for want of being duly supported, was defeated at the Battle of *Prague*: After which he lost both his Crown and Dominions, as we have mention'd before. He had Issue Princess *Sophia*, born in 1630, married to *Ernestus Augustus D.* of *Hanover*, who is now Electress Dowager, Mother to the present Elector, Presumptive Heiress to the Crowns of *Great Britain* and *Ireland*, and as Illustrious for her excellent Qualities, as for her high Birth. His other Issue was, *Henrietta Mary*, who married Prince *Ragotzki*, and died in 1651; *Maurice*, who was taken during the War with the Emperor, and died not long after; Prince *Rupert*, so well known in *England*, was also taken with his Brother, but afterwards released; was General for *K. Charles I.* of *Great Britain* against the Parliament, made by *K. Ch. II.* Duke of *Cumberland*, and died in 1682; *Edward*, who married *Anne Gonzague*, Daughter to the Duke of *Newers* in *France*.

He had two Daughters, the first married to *Frederick Duke of Brunswick*, and the second to *Charles Prince of Salms*, who are both dead. He had another, who is Dowager of *Henry Julius Prince of Conde*. *Frederick V.* has another Daughter, *Louisa Hollandina*, who is Abbess of *Maubisson* in *France*; and he had another called *Elizabeth*, a Princess of great Learning, who was Abbess of *Hersforden* in *Germany*, and died in 1680. *Frederick V.* was succeeded by his Son *Charles Louis*, who by the Treaty of *Westphalia* was restored to the *Lower Palatinate*, and the Electoral Dignity. He was a pious and learned Prince, and died in 1680. His Son *Charles* succeeded, was the last Elector of this Line, and died without Issue in 1685. He had a Sister called *Charlotte*, who was married to *Philip Duke of Orleans*. We have been the more particular in the Genealogy and Alliances of this Family, because of the Relation which the Electress Dowager of *Hanover*, who is a Daughter of it, has to our Crown; and because it shews her Predecessors have been Emperors; and that she is descended of the Illustrious Families of *Nassau* and *Orange*, as well as from our Royal Family.

The present Elector, of the Branch of *Newburg*, is descended from a Son of *Stephen*, formerly mention'd, of the Family of *Deux-Ponts*, one of whom, his Predecessor, call'd *Lewis II.* the 3d from *Stephen*, married a Daughter of *Hesse*, brought the Reformation into his Dominions, and died in 1532. His Successor *Wolfgang* succeeded to the Countries of *Newburg* and *Sultzbach*, and died in 1569. His Successor *Philip Louis* was Elector, received the *Calvinists* into his Dominions, married *Anne* of *Juliers*, and died in 1614. His Successor, *Wolfgang William* of *Newburg*, married first a Daughter of *Bavaria*, and then of *Deux-Ponts*, and died in 1653. His Successor *Philip William* married first *Anne Catharine* of *Poland*, then a Daughter of *Hesse-Darmstadt*, and died in 1690. We have formerly taken Notice of his numerous Issue, and their being so happily married, or otherwise provided for, in the Account of *Newburg*, P. 670. His Son *John William*, the present Elector, was born in 1658, and married first *Anne*, Daughter to the Emperor *Ferdinand III.* and for second Wife, *Anne Ma-*

by *Louisa of Medicis*. The other Branches of this Family are, 1. That of *Deux-Ponts*, descended from *Wolfgang* above-mention'd. His Son *John I.* of *Deux-Ponts* married *Magdalen* of *Juliers*, *Cleves* and *Berg*, introduc'd the Reformation into his Dominions, and died in 1633. His Son *John Casimir* of *Kleebourg* married *Catharine* of *Sweden*, and died in 1652. His Son *Charles Gustavus* married *Hedwige Eleonora* of *Holstein*, and, in his Mother's Right, was Crown'd King of *Sweden*. His Son *Charles XI.* King of *Sweden*, inherited the Dutchy of *Deux-Ponts*, married *Ulrica Eleonora* of *Denmark*, and died in 1697. His Son *Charles XII.* the present King of *Sweden*, was born in 1682. The ad Branch is that of *Sultzbach*, descended from *Philip Louis*, the Elector above-mention'd. The present Prince is *Theodorus*, who was born in 1659. The 3d Branch is that of *Birkenfels*, which proceeded from *Wolfgang* above-mentioned. The present Prince is *Christian II.* who was born in 1637. His Son *Christian* is Marshal de Camp in the French Army. From *Christian I.* of this Branch proceeded the Branch of *Gelenhausen*, whose Prince is *Frederick Bernard*, born in 1697, and makes a 4th Branch of this Family.

The Branch of *Veldentz* of this Family is barely extinguisht.

The Elector Palatine's Titles are, By the Grace of God, Count Palatine of the Rhine; Arch-Treasurer and Elector of the Empire; Duke of *Bavaria*, *Juliers*, *Cleves*, and *Berg*; Count of *Veldentz*, *Spanheim*, *March*, *Ravensberg*, and *Mauers*, Lord of *Ravensstein*, &c.

His Pretensions are, to the Vicariate of the Empire against the Elector of *Bavaria*; to the Right of the *Upper Palatinate*, to be Director of the Circle of the *Upper Rhine*, to the Dutchies of *Juliers* and *Cleves*, to the Bailiwicks of *Berg* and *Boeckelheim*, to some Rights concerning the Hunting of Wild-Beasts, Taxes, and giving Safe-Conducts in the Countries on the *Rhine*.

The Countries belonging to him are, the Dutchy of *Newburg*, the *Lower Palatinate*, the Bailiwick of *Boeckelheim*, the Dutchies of *Juliers* and *Berg*, the City of *Dusseldorp*, and the Lordship of *Ravensstein*.

His Arms are, a *Lion Or*, drawn arm'd.

langued, and crown'd, for the *Palatinate*, 8. *Lozeng'd*, *Argent* and *Azure*, for *Bavaria*, 2. Or, a *Lion Sable*, for *Juliers*, 3. *Gules*, an *Escutcheon Argent*, with Rays of a Carbuncle knotted Or, for *Cleves*, 4. *Argent*, a *Lion Gules*, arm'd and crown'd *Azure*, for *Berg*, 5. *Argent*, a *Lion Azure* crown'd, for *Veldentz*, 6. Or, a Front Chequer, *Argent* and *Gules*, for *March*, 7. *Argent*, 3 *Cheverons Gules*, for *Ravensberg*, 8. Or, a *Fesse Sable*, for *Mauers*, 9.

Dr. *Nickolson* says, Before the *Bohemian Wars* betwixt the Emperor and *Frederick V.* the Elector Palatine was as formidable as any of the Electors; but their Revenues were much lessen'd afterwards, even when restored, because the *Upper Palatinate* was given to the Elector of *Bavaria*: And tho' the Branch of *Newburg*, which has now the Electorate, had considerable Dominions of their own, yet the *Palatinate* having suffered much by the Barbarity of the French in the late and present Wars, he can scarce be said to equal his Predecessors of the extinguisht Line in Revenues.

La Forrest says, the Elector Palatine has Power to summon the Emperor before him, when any Suit is brought against him, or when he is charg'd with doing any Thing prejudicial to the Rights or Majesty of the Empire; and he is likewise one of the Directors of the Circle of the *Upper and Lower Rhine*.

The Present State of Europe says, his principal Councils and Courts of Justice are, 1. The Privy Council or Chancery. 2. The Council of War. 3. The Ecclesiastical Council. 4. The Chief Chamber. 5. The Court of Justice.

The Provincial Governments under him are, 1 in the *Under Palatinate*, 2 in the Dutchies of *Juliers* and *Berg*, 3 in the Dutchy of *Newburg*, 4 in *Ravensstein*.

In his Military Service, there's a General of the Ordnance and Foot, a General of the Horse, 2 Lieutenant-Generals, 6 Major-Generals, 1 General of the Artillery, and 5 Governors of Towns, besides what he has in the *Upper Palatinate*, restor'd to him since the Elector of *Bavaria* was proscribed.

He has of Standing Forces, 11 Regiments of Foot, including his Guards, 8 Regiments of Horse, and 4 of Dragoons.

Their RELIGION.

THE *Augsburg* Confession was introduced here by the Elector *Frederick II.* *Frederick III.* brought in the Doctrine and Discipline of *Geneva*. After his Death, *Lewis V.* restored *Lutheranism*. *Frederick IV.* restored *Calvinism*; but after *Frederick V.*'s Misfortunes, the House of *Austria* brought in Popery, which is still openly professed in this Country. His two Successors were *Calvinists*. Tho' the Majority of the People be Protestants, yet they have been much discouraged since the Succession of the Duke of *Newburg*, a Papist, to the Electorate, and by the barbarous Invasions of the *French*.

In the Harmony of Confessions, there is one composed by *Frederick III.* found writ in his Last Will, and published by his Son *John Casimir* in 1577, in Vindication of his Father, who was falsely charged by some to have gone back from what he had formerly professed in the Diet at *Augsburg*, Anno 1566. Whereas that excellent Prince sent for his Son *John*, in the Absence of his elder Brother, a little before his Death, told him, He had writ this Confession, as it had been formerly published, with his own Hand, inserted it in his Last Will, sign'd every Page of it, and charged him and his other Children, as they would answer to God, to adhere to it, and defend it; and accordingly it was publish'd by the Elector his Brother's Consent. He declares himself very expressly against Transubstantiation and Consubstantiation, and in Defence of the Ecclesiastical Constitution and Catechism, which he had publish'd in his Dominions before; which agrees with those of *Geneva*, and the *Habuerick* Churches.

The Geographical Description of the Country.

WE begin with that Part which belongs to the Upper Circle of the *Rhine*, and first with the

Bishoprick of SPIRES.

The City of this Name, which gives Denomination to the Bishoprick, lies in the

Palatinate of the *Rhine*, on the W. Side of that River, 8 Miles N. from *Philipsburg*, 17 N. E. from *Landau*, and 13 S. W. from *Heidelberg*. 'Tis thought to be the *Nemetum Civitas*, or *Noviomagus* mention'd by *Julius Caesar*; but *Freherus* alledges, That all the adjacent Country was formerly call'd by that Name. It lies in a Plain, and is a large and populous City; but owes its Security more to the Number of its Inhabitants, than its Fortifications. 'Tis supposed to have been built by the *Nemetes*, the ancient Inhabitants of this Country, and on that Account was called *Augusta Nemetum*. It has been the Darling of many Emperors, who endow'd it with many Privileges. *Henry IV.* made it Imperial in 1090, after having built many fair Structures there, particularly the Cathedral, in which he was buried, where there was his *Mausoleum*, and those of 7 other Emperors, till most of it was burnt down in 1689. 'Tis a Bishop's See, Suffragan to *Mentz*. Its chief Privilege and Glory was the Imperial Chamber, or Sovereign Court of Judicature for the Empire, which *Baudrand* says was first established at *Frankfort* in 1495, by *Maximilian I.* but in 1530, was by *Charles V.* transported hither; but removed to *Wetzlar* in *Hessia*, after it was inhumanly burnt by the *French* in 1689. The *Atlas Historique* says, this Imperial Chamber was at first Ambulatory, having been at *Augsburg*, *Worms*, and *Nuremberg*, before it came hither. Their Business is to do Justice to the Subjects of the Empire. It consists of one Judge, who is a Papist, and two Presidents; one a Papist, and the other a Protestant; of 15 Assessors, 8 of 'em Papists, and 7 Protestants: But tho' this Chamber, as well as the *Aulick* Council at *Vienna*, give Definitive Sentence, yet there are some Causes in which the Subjects may appeal to the Emperor's Revival. The Subjects of the King of *Prussia*, and of the Elector of *Saxony*, do not belong to this Tribunal; their Affairs being determin'd by their own Princes without an Appeal. The *Saxon* Law is observ'd in *Lower Saxony*, and the *Roman* Law in the rest of the Empire. Dr. *Nicholson* gives the following Account of the Imperial Chamber; viz. In the Reign of *Charles the Great*, and some of his Successors, the Emperor, with the Bishops and Officers of the Crown, de-

termin'd all Ecclesiastical Causes: The Prelates, Counts, and others of Quality, were first heard in the Emperor's Court; but the Secular Princes could not be judg'd except in the Diets of the Empire: But when Law-Suits increas'd, and that it was troublesome for those concern'd in them to follow the Emperor's Court, which was not then fix'd, *Maximilian I.* establish'd this Chamber for the Ease of his Subjects. The Doctor says, the Assessors at first were but 16, and have been since increas'd to 30. The Emperor names the Supreme Judge, (who is always a Count or Baron, well vers'd in the Laws of the Empire) and 4 of the principal Officers; each Elector names one Assessor, and the rest are appointed by the other Members of the Diet. The Doctor likewise justly observes, That it can scarce be call'd a Sovereign Court, since their Sentences are subject to be reviewed by the Emperor and the Visitors; so that the supreme Decision seems to rest in them. But it being very difficult to obtain such a Review during the Quarrels betwixt the Protestant and Popish Princes, the latter being deny'd that Privilege, tho' 'twas their Right; the Protestants were restor'd to it by the Treaty of *Westphalia*. There are but few Appeals made hither, because of the Slowness of their Decision, there being many old Suits betwixt Princes of the Empire depending before them; but they have made more Dispatch since the Treaty of *Westphalia*: The Emperor's own immediate Subjects bring all their Law-Suits hither; but others bring only Appeals.

The German Lawyers dispute warmly, Whether the Authority of this Chamber, or of the *Aulick* Council, be greatest? But most of them are for that of *Spire*, and prove by Records, That the Emperor himself has been summoned before the Chamber of *Spire*; but 'tis alledg'd on the other side, That the Sentence of this Court is subject to Revisors, which that of the *Aulick* Council is not; and that when the Emperors have been summoned before that of *Spire*, the Summons run in his own Name; as in the Case of *Maximilian*, who was summon'd as Arch-Duke of *Austria* in his own Name as Emperor. In some Trials at Law, the Electors may be summoned to appear before this Court.

This City was taken by *Gustavus Adolphus*, King of *Sweden*, who demolish'd its Fortifications, because he was not able to spare a sufficient Garrison for its Defence. There were many stately Houses and Churches in this City before 'twas burnt down; the chief of which was the Cathedral, beautified with 4 Towers. The Citizens have rebuilt much of it; but it will be long before it recover its ancient Splendour. The Magistrates, and most of the People, are Protestants: They swear Fealty to the Bishop, but are under the Protection of the Elector *Palatine*. The *Papists*, *Lutherans*, and *Calvinists*, had their Worship by Turns in the Cathedral at different Hours, as Doctor *Brown* informs us. The Houses were generally large, but of Wood, and not very convenient, as Mr. *Ray* says. *Nisson*, in his Travels, says, the Chief Judge of the Chamber of *Spire* represents the Emperor's Person, and has always a Scepter laid before him in Court.

The Bishoprick lies on both Sides the *Rhine*, is about 40 Miles long from E. to W. and 13 broad from S. to N. The See was founded in the 4th Century, and endow'd by several Emperors with large Revenues.

In this Bishoprick lies *Philipsburg*, on the E. Side of the *Rhine*, about 7 Miles S. from *Spire*, on the Mouth of the *Salza*. 'Twas formerly a Village, call'd *Udenheim*, and walled in by *Gerhard* Bishop of *Spire* in 1343, who first made it a City, and procur'd it large Privileges. It stands conveniently for commanding the adjacent Country, and therefore was well fortified by the Bishop in 1629, before the Civil Wars of *Germany*, when *Frederick V.* Elector *Palatine*, being Sovereign of the Town, and suspicious of the Bishop's ill Designs in fortifying this Place during a Peace, order'd him to desist; but the Bishop refused, and alledged the Emperor's Placet for what he did: Upon this, the Elector beat them down by Force. The Emperor did hereupon summon that Prince and his Confederates before the Chamber of *Spire*, and design'd to proceed against 'em with the utmost Severity, which was one of the Causes that gave Rise to the Civil Wars of *Germany*. The Bishop who begun the Fortifications, was *Philip Christopher* of *Lotteren*, and at the same Time Arch-

Archbishop of Treves, and from his own Name call'd it *Philipsburg*, says *La Forrest*, *Spinola*, the Spanish General, repair'd the Fortifications, which the Elector had demolish'd, and made it almost impregnable. It has since been taken 6 times, viz. in 1633, by the Imperialists; the Year after, by the Swedes; and in 1636, by the Imperialists: In 1644, by the Duke of *Enguin*, afterwards Prince of *Conde*; by the *Germani* in 1676; and by the Dauphin, on his own Birth-day, the first of November, 1688; but was restored to the Empire by the Treaty of *Roswick*. The present French King, before the breaking out of his War with Germany, being in Possession of this Town by the Treaty of *Munster*, did, in 1666, cause the following Inscription to be writ over the great Gate of this City.

Tuendis Rheni finibus.

Ludovicus XIV. Francorum & Navarra Rex Christianissimus, confecto in utraque Germania Bello; restaurata ubique Pace; Munimentum hoc sue virtutis, assertaque Libertatis Germaniae, Monumentum firmari isthoc aggere muroque regis sumptibus extructo, fecit.

ANNO 1666.

Perfecit in Terrorem Hostium, Fœderatorum Præsidium, Liliorum Subsidium, alterum Gallie cis Rhenum propugnaculum, ac Germaniam versus Ostium, inferius situ non Robore.

Quod ille claudit, nemo aperit; idem aperit, & nemo claudit.

i. e. "For defending the Countries on the Rhine.

"*Lewis XIV.* the most Christian King of France and *Navarre*, having finished the Wars in both *Germanies*, and restored Peace every where, caused this Fortress to be strengthen'd with these Ramparts and Walls at his own Royal Charge, as a Monument of his Valour, and of the Recovery of the German Liberty.

"In 1666.

"He compleated it for the Terror of his Enemies, the Support of his Allies, and a Security to the French, being the se-

"cond Bulwark of France on this Side the Rhine, and a Key into Germany; the lowest in Situation, but not in Strength.

"What he shuts, no Man opens; and what he opens, no Man shuts.

But being retaken by the Imperialists in 1676, the Emperor order'd that Inscription to be raz'd out, and the following one to be put in its stead.

Leopoldus Imperator, Caesar, Pius, Felix, Augustus, Victor & Triumphator, suscitò juvenis Sociis, cunctis Civibus, ardentis Hostibus, necessario Bello, restauranda ubique Pace, Munimentum hoc, vindicata ab injectis Gallicæ Servitutis compedibus Libertatis Publicæ, futurum ad posteris, Monumentum expugnavit, Germaniæque postliminio restituit.

Anno Christianæ Salutis 1676.

Terrori Hostium, Tutela Civium, Germaniæ Præsidio, alterum Gallie cis Rhenum Receptaculum, ac Germaniam versus Ostium, auspiciò plura pari successu recuperanda Augurio, Gallis clausis, Germanis reclusis.

Quod Gallus claudit, Germanus aperit.

i. e. "Leopold the Emperor, Caesar, Pious, Successful, August, Conqueror and Triumpher, having undertaken a necessary War, for assisting his Confederates, defending his Subjects, curbing his Enemies, and restoring Peace every where, took this Fortress by Siege, that it might be a Monument to Posterity of his breaking off the French Yoke of Slavery from the Neck of the Common Liberty, and restor'd it to Germany, after it had been unjustly taken from her.

"In the Year of our Salvation 1676.

"For the Terror of his Enemies, the Defence of his Subjects, and the Security of Germany, he shut against the French, and open'd to the Germans, this second Bulwark of France on this Side the Rhine, and Key into Germany, as a happy Omen of his like Success in recovering more,

"What the French shut, the Germans open.

Bishop.

Bishop Philip above-mention'd fortified this City with 7 Royal Bastions, and its Fortifications were afterwards much enlarged by *Spaniards*, the *Germans*, and the *French*. It stands about a quarter of a League from the *Rhine*; but its Fortifications extend almost to that River; and the Marshes that encompass it, add much to its Strength.

Other Places in this Bishoprick are, 1. *Bruxhal*, on the River *Salitz*, a great open Town with a Castle, where the Bishop ordinarily resides. 2. *Weibstat*, on a Brook which falls two Leagues below it into the *Neckar*. 3. *Altrip*, which was formerly fortified, because it commands a Pass on the *Rhine*.

The Bishoprick of WORMS,

Has its Name from that City, which was a Metropolitan Church, says *La Ferrest*, in the first Centuries; but was deprived of that Privilege by Pope *Zachary*, who transferred it to *Mentz* in 745, and made it Suffragan to that Sec. The Revenues of this Bishoprick were very considerable till the Reformation, when the Elector *Palatine* took off a considerable Part; so that the Bishop has now only some Villages, and half the Town. This City is reckon'd the second of the *Palatinate*. *Freher*, a Learned Antiquary, says, 'twas the Metropolis of the *Vangiones*; and that not long ago, there was an Inscription in Capitals over the *Peacock-Gate*, with these Words, *Specula Vangionum*. *Cluverius* says, its ancient Name was *Bormiotomagus*, and at last by Corruption was called *Wormatia*. 'Twas destroyed in 451 by *Attila the Hun*, and rebuilt 45 Years after by *Clovis I. of France*. The Emperor *Frederick Barbarossa* enlarged it in 1158, and made it Imperial. While the Imperial Chamber was kept here, it was one of the most considerable Cities in Germany. *Munster* says, That in his Time, 100 Cities, great Towns and Villages, lay so near *Worms*, that they could bring Provisions thither, and return home the same Night; but it suffer'd much during the Civil Wars of Germany, but most by the *French* in 1693, when they burnt down in three Hours what had been the Work of several Ages. The Citizens have since rebuilt much of it. They are subject to the Bishop, but under the Protection of

the Elector *Palatine*. The Papists are numerous here, and have the Cathedral; but the Magistrates, and most of the Inhabitants, are *Lutherans*. 'Tis noted for *Luther's* bold Answer and Defence of himself at the Diet here, for which he was afterwards proscribed, and obliged to retire; during which, he wrote his Works from the Desert. This City lies on the W. Side of the *Rhine*, about 20 Miles N. W. from *Spires*. *Ray* says, 'tis a large City, but was much decayed in his Time; that there are 20 Canons belonging to the Cathedral, who chuse their Bishop. *Miffen* says, 'tis situate in a very fruitful Country, but has no other Fortifications than a double Wall; that 'tis as large as *Frankfort*, but ill Peopled, and become so poor, that he saw a House sold for 1000 Crowns, which had formerly yielded as much *per Annum*. There is so much empty Ground in the Town, that the Vines planted there yield Annually 1500 Fodders of Wine, a Fodder being 250 English Gallons. Their Wine is much esteem'd, and they make Presents of it, with some Fish, to Princes and Travellers of Quality. The *Lutherans*, when he was there, which was in 1687, had only one Church for their own Use, and had their Worship by Turns with the Papists in that of the *Dominicans*; but the Papists had all the rest of the Churches. They make no Processions, except on the Day after *Easter*, nor carry the Host in Publick. The *Calvinists* have a Church at *Neuhausel*, half a League out of the Town. The Churches of *St. Paul* and *St. John* are very ancient, built of vast square Stones, in an irregular Manner, with narrow Windows, and Galleries round the Outside just under the Roof; the Walls are 12 Foot thick, and seem not to have been design'd for a Church at first. The Cathedral is long and high, has a Tower at each of the 4 Corners, and is a strong Fabrick, with Gothic Ornaments. Over one of the Doors, there's the Figure of a strange Animal, of the Size of an Ass, with 4 Heads, supposed to be a Hieroglyphick of the 4 Beasts in *Ezekiel's* Vision. A Woman sits on the Back of it, which they say is the Representation of the Gospel. At the Entrance of *St. Martin's* Church, over a moveable Altar, he says there's a strange Picture, well worth a Traveller's View.

'Tis

'Tis about 5 Foot square, and has on the Top, at one Corner, a Representation of God the Father, addressing himself to the Virgin, who is on her Knees in the middle of the Picture, holding an Infant, representing our Saviour, by the Feet, and putting his Head into the Hopper of a Mill, which the 12 Apostles turn by the Help of a Wheel, and the Assistance of the 4 Beasts above-mention'd on the other Side. Hard by, the Pope is painted on his Knees receiving the Hosts, which fall from the Mill into a Golden Cup; one of which he presents to a Cardinal, who gives it to a Bishop, the Bishop to a Priest, and the Priest to a Layman. There are two publick Places of Meeting in this City; in the one they assemble twice a Week about Matters of State, and in the other for administering Justice. 'Twas in the first where *Luther* made his solemn Appearance, when being heated with the Debate, and by a Fire that was near him, he desir'd a Glass of Wine; which being brought, he was so eager in his Discourse, that he forgot to drink it, and soon after it broke in Pieces on the Bench where it stood, without any body's touching it; whence the *Lutherans* took it for granted, there was Poison mix'd with the Wine: Upon this, they broke the Bench in Pieces, which they still keep as a Memorial of his great Deliverance. *Misson* adds, That in the Mint, he saw a square Piece of Parchment in a Frame, with 12 sorts of Hands, writ with divers Miniatures, and several Draughts curiously done with a Pen, by one *Thomas Shoewener*, with his Feet, he being born without Arms, as the Inscription under it testifies. In a spacious Portico belonging to this House, there's a vast Number of Bones, and Horns hanging betwixt the Arches: The former, they say, were the Bones of Giants among the ancient *Vangiones*; and the latter, the Horns of the Oxen that drew the Stones which built their Cathedral. The Outside of the House is adorn'd with a great Number of Pictures, and among them several of these Giants in Armour. The Bishoprick of *Worms* lies on both Sides the *Rhine*, is about 2 Miles long, and 7 or 8 broad.

The Dutchy of Deux-Ponts,

IN *German*, *Zweybrücken*, and in *Latin*, *Bipontium*; has *Lorrain* on the W. and is surrounded with the *Palatinate*, of which it is a Part, on all other Sides. From N. E. to S. W. 'tis about 40 Miles long. In some Places 'tis 25 broad, and in others not above 8 or 9. It takes its Name from the Capital, on the River *Schwalbe*, and another, over which it has two Bridges, from whence it had its Name. The Town is small, but very neat, and fortified with a good Castle, built by one of its Dukes, descended from the *Palatine* Family. From *John*, one of these Dukes, came the Royal Family of *Sweden*, who are now possessed of this Dutchy. It lies near the Borders of the *Palatinate*, about 40 Miles S. W. from *Worms*, and 47 from *Spires*. It suffered much during the late and present Wars betwixt the *French* and *Germans*.

This Dutchy is divided into the 5 Bailiwicks of *Zweybrücken*, *Meizenheim*, *Lichtenberg*, *Newcastel*, and *Landsberg*, with Part of those of *Guttenberg* and *Bischweiler*; the last of which is in *Lower Alsace*, where the King of *Sweden* has also other Lands.

Germersheim is a considerable City near the *Rhine*, over against *Philipsburg*, from which it lies 5 Miles W.

Newstat, a small neat City near the River of *Spierbach*, about 16 Miles W. from *Spires*, noted for the Defeat of a Body of *Germans* in 1703 by the *French*, as they were coming to the Relief of *Landau*, then besieged by *M. Tallard*.

These above are the chief Places in that Part of the *Palatinate* which belong to the Circle of the *Upper Rhine*. What follows, belong to the Circle of the *Lower Rhine*.

1. *Heydelberg*, the Metropolis of the *Palatinate*, and, as some will have it, formerly, the chief Town of all *Swabia*. It has its Name from a little Shrub, resembling *Mirtles*, which grows in the Neighbourhood, and bears a Berry, by the *Germans* called *Hey*.

Y y y

delbeeren; whence Latin Authors call this City *Myrtilorum Mons*, and *Myrtiletum*. 'Tis encompassed with Hills cover'd with Vines, except towards the W. where there's a Prospect over a large and pleasant Plain; so that the Situation of the City is very agreeable, being in a fruitful Plain on the River *Neckar*, at the Foot of a Mountain, in Long. 27. 31. Lat. 49. 20. about 15 Miles N. E. from *Spire*, 25 N. W. from *Hallbron*, and 25 S. E. from *Worms*. It was a large, populous, and rich City, before the *French* destroyed it. Its chief Beauty consisted in one fair Street, with an uniform Market-place. It was much enlarged in 1392, and had the Suburb called *Borghelm* added to it. The Elector's Palace, on the Ascend of a Hill called *Conigstul*, which overlooks the whole City, was a stately and magnificent Fabrick, beautified with fine Grotto's, Gardens, &c. and not far from it, stood a strong Tower, which, for its Height and Fortifications, was scarce to be parallel'd in the Empire. 'Twas formerly called *Trutz-Keyser*, i. e. a Defiance to the Emperor: but upon the Restoration of the Elector by the Treaty of *Westphalia*, its Name was changed into the *Star-Fort*. Ray says, That the Palace was enclos'd with a Wall and a deep Ditch, hewn out of the Rock; and by an Inscription over the Gate, it appeared to have been begun by *Lewis V.* in 1519; but several Parts had been added since, and one particularly called the *English Building*. In a Cellar under one of the Towers, stood the famous Tun of *Heydelberg*, which contain'd 528 Hogsheds of Wine; but this was taken to Pieces in 1664; and tho' then the largest in the Empire, another was built which contained 600 Hogsheds. The old Tun was encompassed with great Hoops of Iron, weighing each 1200 Pound; but the new one, instead of Hoops, was built with large Trees of Knot-Timber, like the Ribs of a Ship, with several Inscriptions carv'd and painted upon them; and supported by carv'd Pedestals. On one Side of this Tun, there was a handsome Stair-Case leading to the Top, with a Gallery, set round with Ballisters, 43 Steps from the Ground; whereas the old Tun had only 17. Mr. Ray says, the Elector had a fine Closet of Curiosities, where, among other Things, he

saw a Purse made of *Alumen Plumsum*; which being made red-hot, received no Damage; but when cool, appeared the same as before. He saw there also two Unicorns Horns 8 or 10 Foot long, wreath'd, and hollow to the Top, being the Horns of a Fish, and not of a Four-footed Beast, as the Ancients imagin'd. There was also an Imperial Crown and Globe belonging to the Emperor *Rupertus* of this Family, richly beset with Precious Stones, and a choice Collection of ancient and modern Coins and Medals, and among the rest, a Copper *Swedish* Dollar, of the Size of a square Trencher, with the King's Arms and Effigies stamp'd at the 4 Corners. *La Forrest* says, this City was taken by the Spanish General Count *Tilly* in 1622, when he sack'd it, destroy'd many of the Monuments of the Magnificence of their Princes, and carried off their famous Library, that was kept in the Church of the *Holy Ghost*, and was one of the best stock'd with Books and curious MSS. of any in *Europe*; Part of which was carried to *Rome*, and added to the *Vatican* Library; and the other Part was added to the Emperor's Library at *Vienna*. The above-mention'd Church of the *Holy Ghost*, and that of *St. Peter*, contain'd many of the Monuments of the Electors, which, together with the Palace, were barbarously destroyed by the *French* in 1693, and the Corps of those Princes expos'd by the *French* when they took this City, by the Treachery or Cowardice of the Governor, who was a Knight of the *Teutonic* Order; but afterwards justly degraded, and branded publicly, with other Marks of Ignominy and Disgrace. The *French* at the same Time did brutishly ravish the principal Women of the Town in the great Church, whither they fled, notwithstanding they had a Promise of the General's Protection; and did so much ruin the City, that 'tis not like speedily to recover its ancient Splendour. *Scaliger* says, That the Library kept in this Church was larger, and fill'd with better Books, than that of the *Vatican*, and exceeded all in the Empire for the Number and Rarity of the Books, especially for its MSS. in *Hebrew*, *Greek*, *Latin*, *Chaldee*, *Arabic*, *Indian*, *Tartarian*, *Italian*, *French*, *German*, and *Bohemian* Languages; many of which

were

were destroyed, and the rest carried off by the Spaniards.

The University here was founded by Count *Rupert* in 1387, or, as some say, 40 Years before. It bred many great Men; and among others, *R. Agricola*, *Munster*, *H. Buschius*, *Xylander*, *Paul Cifner*, *Pacius*, *Franciscus Junius*, Father and Son; *Smetsius*, *Frecherus*, and *Janus Gruterus*. Dr. Brown says, the Situation of the City is such, that it cannot be regularly fortified. Ray says, the Houses were of Wood, but handsomely built, and the City was divided into 5 Independent Jurisdictions: The 1st called *Aulica*, under which were the Princes and Nobles, and the Marshal of the Court sat as President. 2. *Cancellaria*, to which belong'd all Counsellors, and other Officers of the Courts, Advocates, Doctors, &c. 3. *Bellica*, for the Soldiers, where the General presided. 4. *Academica*, for the Students, of which, the Rector *Magnificus* for the Time was President. 5. *Civica*, for the Citizens. He observes, That the Members of each of those Jurisdictions were not obliged to appear before any Court but their own; and that the City was divided into 4 Wards, under a Prætor and Burgomaster. He says, the University had 3 or 4 Colleges for the Subsistence of poor Scholars; and the Management of it was entrusted to the Academic Senate, composed of 16 Professors, 3 for Divinity, 4 for Law, 3 of Physick, and 6 of Philosophy; but 4 of the latter were only allow'd to sit, lest they should make too strong a Party. This Senate chuses Annually a Rector *Magnificentissimus*, an Honorary Title, resembling that of a Chancellor of the English Universities; and a Rector *Magnificus*, who is Chief of the Senate, and equivalent to our Vice-Chancellor: Besides whom, they chuse two or four more Officers out of their Number, who manage their Concerns; and when a Professor dies, the Senate chuses two in his Room, of whom the Prince names any one he pleases to succeed. This Senate has Power of Life and Death in their own Jurisdiction, the Prince having only reserv'd the Power of Pardoning, if he thinks fit, after they have pass'd Sentence. They have no other Degree in Philosophy but that of Master; but in Law and Physick, they create Licentiates and Doctors; and in Divi-

nity, Batchellors, Licentiates, and Doctors. They have no Regard to the Standing of the Candidates, but make 'em undergo two Examinations: The 1st, called *Examen Tentatorium*, before the Faculty in which he is to commence, and the Rector *Magnificus*. The 2d, called *Examen Rigorosum*, before the said Rector, and all the Professors; after which, they are to hold a publick Disputation *sub Præside*, a Lecture in their own Faculty, and a Speech. This Ceremony is perform'd with great Pomp, and concludes with a sumptuous Feast to all the Professors, and sometimes the Prince or his Deputy is present. Here the Professors publish an Annual Catalogue of their Names, and the Publick Lectures they intend.

The Elector *Palatine*, says Mr. Ray, is absolute in his Dominions; and since the Reformation, has the Supremacy in Ecclesiastical Affairs, that formerly belong'd to the Bishop of *Spire*. He is the Patron of all vacant Benefices; but allows the Ecclesiastical Council, composed of two Clergy men and two Laymen, to present two Candidates, of which he chuses one. The Generality of the People, says the same Author, are of the Reform'd Religion, i. e. *Calvinists*; and the Clergymen are divided into three Prefectures, each of which has an Inspector, who differs not from the other Ministers in Rank or Power, but has only a larger Salary. Each considerable Town has also its Prefecture or Presbytery; and that of *Heidelberg* was composed of 5 Ministers of that City, 2 Deputies from each of the above-mention'd Jurisdictions, except the *Aulica*, and 2 from each of the 4 Wards in the City, making in all 21; in which the Laymen have equal Votes with the Ministers, who have no other Prerogative in this Matter, but that one of 'em always presides by Turns. They can inflict no Church Censure, but to oblige Transgressors to make a publick Confession at the Church-Door, and to promise Amendment, the rest being left to the Civil Magistrate. The Elector is Master of all the Tithes in his Dominions, which in some Parts he allows to the Clergy, and in others he gives them Salaries out of the Church Revenues. Dr. Brown says, the French have a Church here, as well as the *Lutherans*; and that the latter was called the Church of *Providente*, of

delbeeren; whence Latin Authors call this City *Myrtillorum Mons*, and *Myrtileum*. 'Tis encompassed with Hills cover'd with Vines, except towards the W. where there's a Prospect over a large and pleasant Plain; so that the Situation of the City is very agreeable, being in a fruitful Plain on the River *Neckar*, at the Foot of a Mountain, in Long. 27. 31. Lat. 49. 20. about 15 Miles N. E. from *Spires*, 25 N. W. from *Hallbron*, and 25 S. E. from *Worms*. It was a large, populous, and rich City, before the *French* destroyed it. Its chief Beauty consisted in one fair Street, with an uniform Market-place. It was much enlarged in 1392, and had the Suburb called *Berghheim* added to it. The Elector's Palace, on the Ascend of a Hill called *Conigsflut*, which overlooks the whole City, was a stately and magnificent Fabrick, beautified with fine Grotto's, Gardens, &c. and not far from it, stood a strong Tower, which, for its Height and Fortifications, was scarce to be parallel'd in the Empire. 'Twas formerly called *Trutz-Keyser*, i. e. a Defiance to the Emperor: but upon the Restoration of the Elector by the Treaty of *Westphalia*, its Name was changed into the *Star-Fort*. Ray says, That the Palace was enclos'd with a Wall and a deep Ditch, hewn out of the Rock; and by an Inscription over the Gate, it appeared to have been begun by *Lewis V.* in 1519; but several Parts had been added since, and one particularly called the *English Building*. In a Cellar under one of the Towers, stood the famous Tun of *Heydelberg*, which contain'd 528 Hogsheds of Wine; but this was taken to Pieces in 1664; and tho' then the largest in the Empire, another was built which contained 600 Hogsheds. The old Tun was encompassed with great Hoops of Iron, weighing each 1200 Pound; but the new one, instead of Hoops, was built with large Trees of Knet-Timber, like the Ribs of a Ship, with several Inscriptions carv'd and painted upon them, and supported by carv'd Pedestals. On one Side of this Tun, there was a handsome Stair-Case leading to the Top, with a Gallery, set round with Ballisters, 43 Steps from the Ground; whereas the old Tun had only 17. Mr. Ray says, the Elector had a fine Closet of Curiosities, where, among other Things, he

saw a Purse made of *Alumen Plumosum*; which being made red-hot, received no Damage; but when cool, appeared the same as before. He saw there also two Unicorns Horns 8 or 10 Foot long, wreath'd, and hollow to the Top, being the Horns of a Fish, and not of a Four-footed Beast, as the Ancients imagin'd. There was also an Imperial Crown and Globe belonging to the Emperor *Rupertus* of this Family, richly beset with Precious Stones, and a choice Collection of ancient and modern Coins and Medals, and among the rest, a Copper *Swedish* Dollar, of the Size of a square Trencher, with the King's Arms and Effigies stamp'd at the 4 Corners. *La Forrest* says, this City was taken by the Spanish General Count *Tilly* in 1622, when he sack'd it, destroy'd many of the Monuments of the Magnificence of their Princes, and carried off their famous Library, that was kept in the Church of the *Holy Ghost*, and was one of the best stock'd with Books and curious MSS. of any in Europe; Part of which was carried to *Rome*, and added to the *Vatican* Library; and the other Part was added to the Emperor's Library at *Vienna*. The above-mention'd Church of the *Holy Ghost*, and that of *St. Peter*, contain'd many of the Monuments of the Electors, which, together with the Palace, were barbarously destroyed by the *French* in 1693, and the Corps of those Princes exposed by the *French* when they took this City, by the Treachery or Cowardice of the Governor, who was a Knight of the *Teutonic* Order; but afterwards justly degraded, and branded publicly, with other Marks of Ignominy and Disgrace. The *French* at the same Time did brutishly ravish the principal Women of the Town in the great Church, whither they fled, notwithstanding they had a Promise of the General's Protection; and did so much ruin the City, that 'tis not like speedily to recover its ancient Splendour. *Scaliger* says, That the Library kept in this Church was larger, and fill'd with better Books, than that of the *Vatican*, and exceeded all in the Empire for the Number and Rarity of the Books, especially for its MSS. in Hebrew, Greek, Latin, Chaldee, Arabic, Indian, Tartarian, Italian, French, German, and Bohemian Languages; many of which

were destroyed; and the rest carried off by the Spaniards.

The University here was founded by Count Rupert in 1387, or, as some say, 40 Years before. It bred many great Men; and among others, R. Agricola, Munster, H. Buschius, Xylander, Paul Cifner, Pacius, Franciscus Junius, Father and Son; Smectius, Preherius, and Janus Gruterus. Dr. Brown says, the Situation of the City is such, that it cannot be regularly fortified. Ray says, the Houses were of Wood, but handsomely built, and the City was divided into 4 Independent Jurisdictions: The 1st called *Aulica*, under which were the Princes and Nobles, and the Marshal of the Court sat as President. 2. *Cancellaria*, to which belong'd all Counsellors, and other Officers of the Courts, Advocates, Doctors, &c. 3. *Bellica*, for the Soldiers, where the General presided. 4. *Academica*, for the Students, of which, the Rector *Magnificus* for the Time was President. 5. *Civica*, for the Citizens. He observes, That the Members of each of those Jurisdictions were not obliged to appear before any Court but their own; and that the City was divided into 4 Wards, under a Prætor and Burgomaster. He says, the University had 3 or 4 Colleges for the Subsistence of poor Scholars; and the Management of it was entrusted to the Academic Senate, composed of 16 Professors, 3 for Divinity, 4 for Law, 3 of Physick, and 6 of Philosophy; but 4 of the latter were only allow'd to sit, lest they should make too strong a Party. This Senate chuses Annually a Rector *Magnificentissimus*, an Honorary Title, resembling that of a Chancellor of the English Universities; and a Rector *Magnificus*, who is Chief of the Senate, and equivalent to our Vice-Chancellor: Besides whom, they chuse two or four more Officers out of their Number, who manage their Concerns; and when a Professor dies, the Senate chuses two in his Room, of whom the Prince names any one he pleases to succeed. This Senate has Power of Life and Death in their own Jurisdiction, the Prince having only reserv'd the Power of Pardoning, if he thinks fit, after they have pass'd Sentence. They have no other Degree in Philosophy but that of Master; but in Law and Physick, they create Licentiates and Doctors; and in Divi-

nity, Bachelors, Licentiates, and Doctors. They have no Regard to the Standing of the Candidates, but make 'em undergo two Examinations: The 1st, called *Examen Tentatorium*, before the Faculty in which he is to commence, and the Rector *Magnificus*. The 2d, called *Examen Rigorosum*, before the said Rector, and all the Professors; after which, they are to hold a publick Disputation *sub Præside*, a Lecture in their own Faculty, and a Speech. This Ceremony is perform'd with great Pomp, and concludes with a sumptuous Feast to all the Professors, and sometimes the Prince or his Deputy is present. Here the Professors publish an Annual Catalogue of their Names, and the Publick Lectures they intend.

The Elector *Palatine*, says Mr. Ray, is absolute in his Dominions; and since the Reformation, has the Supremacy in Ecclesiastical Affairs, that formerly belong'd to the Bishop of *Spire*. He is the Patron of all vacant Benefices; but allows the Ecclesiastical Council, composed of two Clergymen and two Laymen, to present two Candidates, of which he chuses one. The Generality of the People, says the same Author, are of the Reform'd Religion, i. e. *Calvinists*; and the Clergymen are divided into three Prefectures, each of which has an Inspector, who differs not from the other Ministers in Rank or Power, but has only a larger Salary. Each considerable Town has also its Prefecture or Presbytery; and that of *Heidelberg* was composed of 5 Ministers of that City, 2 Deputies from each of the above-mention'd Jurisdictions, except the *Aulica*, and 2 from each of the 4 Wards in the City, making in all 21; in which the Laymen have equal Votes with the Ministers, who have no other Prerogative in this Matter, but that one of 'em always presides by Turns. They can inflict no Church Censure, but to oblige Transgressors to make a publick Confession at the Church-Door, and to promise Amendment, the rest being left to the Civil Magistrate. The Elector is Master of all the Tithes in his Dominions, which in some Parts he allows to the Clergy, and in others he gives them Salaries out of the Church Revenues. Dr. Brown says, the French have a Church here, as well as the *Lutherans*; and that the latter was called the Church of *Providence*, of

which the Elector, tho' a Calvinist, laid the first Stone. The Town-House was remarkable for its Clock, which had divers Motions, and represented several Figures of Men fighting, and of a Cock crowing, &c. when it struck. About a Mile from *Heydelberg*, he says, there's a solitary Place, from whence spring 3 Fountains from a Mountain; and after they have filled 5 Ponds, and passed through 3 Cascades or Falls, they run in so strong a Stream through the adjacent Plain, that they turn 4 Water-Mills within a small Distance of one another. This is called the *Wolf's Fountain*, because a certain Princess was tore in Pieces by a Wolf near this Place. This City was Part of the Bishoprick of *Worms* before 1225, when *Lewis I.* was invested with the Castle and Old Town: And about 500 Years ago, most of the Cities in the Neighbourhood were either Imperial, or subject to other Princes than the Counts *Palatine*, who have since become Masters of 'em by Marriage, Purchase, or Conquest. The Curious may see more about the Elector's fine Medals in *Moncony's Travels*.

Dr. Brown mentions a Monastery called *Lohensfelt* near *Heydelberg*, which belong'd formerly to the Jesuits, but was since bestow'd upon the *English*; about 100 of whom leaving their Native Country in 1661, came hither and settled with their Families. They call themselves *Christian Jews*, maintain'd a Community of many Things, did not cut nor shave their Beards, and observ'd many other Ceremonies enjoin'd in the Old Testament. Their Head was then one *Mr. Pool* of *Norwich*.

2. *Ladenburg*, on the *Neckar*, about 6 Miles N. W. from *Heydelberg*, a small but pleasant City, which belongs jointly to the Bishop of *Worms* and the Elector *Palatine*, and was spar'd by the *Spaniards* at the Bishop's Intercession.

3. *Manheim*, about a quarter of a League from the *Rhine*, on the E. Side of that River, and about 12 Miles N. W. from *Heydelberg*, near the Conflux of the *Rhine* and *Neckar*. It was strongly fortified by *Frederick IV.* in 1606; but was taken and dismantled by the *Spaniards* in 1622. 'Twas afterwards re-fortified by the last Elector of the old Family with several Outworks, and two Citadels; in one of which there was a

near Church built, called *Concordia*, where the *Papists*, *Lutherans*, and *Calvinists*, had their Worship by Turns. It was taken by the *French* in 1688, who being forc'd to abandon it next Year, destroy'd its Fortifications.

4. *Mosbach*, near the *Neckar*, Capital of a Bailiwick, lies about 18 Miles N. E. from *Heydelberg*.

5. *Horneck*, on the *Neckar*, a small City, which was pillaged by the *Bavarians* in 1622.

6. *Sintshelm*, a small City, in a marshy Country, about 12 Miles S. E. from *Heydelberg*, noted for the Victory which the *Marshall de Turenne* obtain'd there over the Imperial Army in 1674.

7. *Bretzen*, 18 Miles S. from *Heydelberg*, on the Borders of *Wurtemberg*, Capital of a Bailiwick of the same Name, and noted for being the Birth-place of *Melancthon*, who compos'd that called the *Augsburg Confession*.

8. *Frankendal*, on the W. Side of the *Rhine*, about 8 Miles N. W. from *Manheim*, was anciently an Abbey, which the Emperor *Frederick III.* caused to be fortified about 1489. It was long held out by the Protestants in the 16th Century; but at last taken by the *Spaniards*, who were beat out of it by the *Swedes*; but retook it two Years after, and kept it till 1652, tho' they were obliged to have restor'd it in 1648 by the Treaty of *Munster*. It was burnt down by the *French* in 1688.

9. *Altsheim*, or *Alzey*, upon a River of the same Name, lies about 12 Miles N. W. from *Worms*. It was formerly Capital of a County, and now of a Bailiwick. 'Tis a good Town, fortified with a Castle and Walls, and was formerly the Residence of the Electors.

10. *Lauterack*, on the Conflux of the Rivers *Glan* and *Lauter*, gives Title to the Counts of *Lauterack*, descended from *Rupert*, youngest Son to *Alexander the Lame*, Duke of *Deux Ponts*. It lies about 30 Miles W. from *Worms*, and is by the *Matricula* reckon'd to belong to the Upper Circle of the *Rhine*.

11. *Keiserflauter*, on the River *Lauter*, was formerly an Imperial Town. The Emperor *Robert* mortgaged it to the Elector *Palatine* in 1402. 'Tis Capital of a Principality,

lity, whose Prince has a Vote in the Diet. It lies about 26 Miles S. W. from *Frankendal*.

12. *Eberenberg*, a strong Castle, remarkable for a long Siege it held out in 1692. It lies on the River *Nahe*, about 8 or 9 Miles E. from *Creutznach*.

13. *Creutznach*, on the *Nahe*, the Capital of that called the Fore-County of *Spanheim*. 'Tis a good Town, defended by a Castle, on a Hill called *Kaufenberg*, and lies about 18 Miles N. W. from *Alzheim*.

14. *Openheim*, upon a Hill on the Banks of the *Rhine*, was formerly an Imperial Town. The Emperor *Robert*, who died there in 1613, gave it a little before to his Son *Lewis*, who succeeded him in the Electorate. This City lies 22 Miles N. E. from *Creutznach*, 22 N. W. from *Worms*, and 11 S. E. from *Mentz*. 'Twas destroyed by the *French* in 1693.

15. *Simmeren*, lies on a small River of the same Name, about 25 Miles W. from *Mentz*, and is the Capital of a Principality, which has for a long Time been possessed by a Branch of the *Palatine* Family, to whom it was given in 1559. After the Death of *Osbo*, the Elector *Frederick IV.* left the Principalities of *Simmeren* and *Lawteren*, with Part of the County of *Spanheim*, to *Lewis Philip*, his youngest Son, in 1610. *Lewis Herman* Duke of *Simmeren* dying without Issue in 1673, the Elector *Palatine* became his Heir, and, as Duke of *Simmeren*, is Joint-Director with the Bishop of *Worms* of the Circle of the *Upper Rhine*, of which this Duchy, as well as that of *Deux-Ponts*, is reckon'd a Part.

16. *Baccarach*, a small City on the *Rhine*, 8 Miles E. from *Simmeren*, and 20 N. W. from *Mentz*. 'Tis famous for its excellent Wine, to which the Emperor *Wenceslaus* gave so much Reputation in the beginning of the 15th Century. Some derive its Name from *Bacchi Ara*, i. e. the Altar of *Bacchus*, upon the Account of its Wine.

17. *Veldentz*, near the Conflux of the *Moselle* and the *Lefer*, is the Capital of a County of that Name, which gives Title to a Branch of the *Palatine* Family. It lies about 20 Miles W. from *Simmeren*, and belongs to the Circle of the *Upper Rhine*.

18. *Birckenfels*, lies towards the Borders

of the Electorate of *Treves*, in the Upper County of *Spanheim*, 28 Miles E. from *Treves*, and 30 N. E. from *Deux-Ponts*, and gives Title of Prince to a Branch of the *Palatine* Family. It is walled and defended by a Castle. *Charles III.* of *Lorraine* died here in 1675.

19. *Trarbach*, a strong and important Place on the *Moselle*, about 5 Miles N. E. from *Veldentz*. The *French* took it in 1702, and defended it against the Imperialists, who were obliged to raise the Siege they laid to it in 1703.

Leningen, the Capital of the County of *Linage* or *Leningen*, lies 18 Miles N. W. from *Spires*, and about 20 S. W. from *Worms*.

Rhingrausstein, Capital of its County, lies betwixt *Creutznach* and *Eberenburg*, 35 Miles N. W. from *Worms*.

Oberstein, Capital of its County, lies 20 Miles W. from *Creutznach*.

Röpskirk, Capital of its County, lies 30 Miles W. from *Worms*.

The Duchy of Lorrain.

THIS Country has *France* on the W. *Alsace*, the Duchy of *Deux-Ponts*, and Part of the *Palatinate*, on the E. has *Burgundy* on the S. the Duchy of *Luxemburg*, and the Electorate of *Treves*, on the N. *Moselle* makes it about 118 Miles from N. to S. and much about the same from E. to W.

The ancient Inhabitants were the *Medioretici*, and 'twas reckon'd Part of the first *Belgium*. *Baudrand* says, it had its Name from *Lotharius* King of *France*, quasi *Lotharii Regnum*: And under the *French* Kings of the first Race, it was Part of the Kingdom of *Austrasia*, of which *Thierry*, eldest Son to *Clotvis*, was the first King; and under those of the second Race, 'twas Part of the Kingdom of *Lorrain*, and had that Name from *Lotharius* above-mention'd, youngest Son to the Emperor *Lotharius*, who took the Title of King of that Country. After his Death, about 869, there was great Controversies about the Succession betwixt the Kings of *France* and *Germany*, who divided the Country betwixt them. *Charles the Simple* reunited *Lorrain* to the Crown of *France* about 915, and made *Reinier* Governor of it, who.

who took the Title of Duke. The Emperor *Henry the Fowler* taking Advantage of the Troubles of *France* during that Reign, invaded this Dutchy. The Emperor *Otho I.* gave the Government of it to *Bruno* Archbishop of *Cologne*; after whose Death, in 959, *Lorraine* was divided into Upper and Lower. The first was called *Mosellanica*, because the *Moselle* runs through it, and comprehended the Dioceses of *Metz*, *Toul*, and *Verdun*, *Strasburg*, *Treves*, and *Luxemburg*. The Lower was call'd *Ripuarica*, because it lay betwixt the *Rhine*, the *Meuse*, and *Moselle*, and is now called *Brabant*. The Emperor *Otho II.* gave the latter to *Charles*, youngest Son to *K. Lewis IV.* called the *Ultra Marin*, who was excluded from the Crown of *France* after the Death of *Lewis V.* because he did Homage to *Otho* for that Dutchy. That same Emperor gave Upper *Lorraine*, with the Title of Duke, to *Thiery* of *Alsace*, Son to *Fredrick*, who had possessed it in that Quality. His Son *Fredrick* dying without Issue-Male in 1048, the Emperor *Henry III.* gave it to *Gerhard* of *Alsace*, who was the Founder of the present Family of *Lorraine*. His Male Line continued to the Time of *Charles I.* who leaving only one Daughter call'd *Isabel*, she married *Rene* of *Anjou* King of *Sicily* about 1430, and brought him the Dutchy of *Lorraine*. *Anthony* of *Vaudemont*, Grandson to Duke *John*, seiz'd it next Year. *Isabel*, Daughter to King *Rene*, succeeded *Anthony* in 1473. She was Mother to *Rene II.* Great Grandfather to *Charles II.* who had several Children; among others, *Henry* Duke of *Lorraine*, and *Francis* Count of *Vaudemont*. *Henry* was Father to *Nicholas*, that married *Charles* Count of *Vaudemont*, her Cousin-German, who took the Title of Duke of *Lorraine* in 1624, after the Death of *Henry*, by the Name of *Charles III.* so well known by his Misfortunes. *Lewis XIII.* of *France* made War upon him several times, for joining with the Count of *Soissons*, and others of his Enemies; but at last depriv'd him of his Dominions in 1634, after having declar'd him guilty of the Crimes of Lese Majesty, Felony, and Rebellion. But the Dutchy was restor'd again by the Treaty of the *Pyrenees* in 1692. The *French* invaded it again in 1674, by Vertue of a pretended Treaty made with *Charles III.* a-

bove-mention'd, in *February* 1662; by which, after his Death, he transferred to the *French* King the Dutchies of *Lorraine* and *Bar*, and confirmed it by another Treaty the Year following. This Prince oppos'd the Designs of the *French* till his Death, which happen'd in 1665. The *French* King did however, by a Treaty betwixt himself and the Empire in 1679, oblige himself to restore to Prince *Charles* of *Lorraine* the Dominions possess'd by his Uncle *Charles III.* when he was depos'd, except *Nancy*, and its Jurisdiction, which that generous Prince refus'd; so that he only enjoy'd the Title, while *Lewis XIV.* unjustly retain'd the Possession. This Prince was call'd by the Name of *Charles V.* and Son to Duke *Francis* of *Lorraine*, Brother to *Charles IV.* The Family having been ill treated by the *Spaniards*, under whose Protection they put themselves, they were forc'd to cast themselves upon the Court of *France*, where *Charles V.* was bred, and treated with all Princely Honour; but very unhappy in the Matches propos'd to him there, in every one of which he was disappointed, by the Churlishness of his Uncle, and the Treachery of the *French* Court, from whence he made his Escape by Way of *Italy* to *Vienna*, where the late Emperor receiv'd him kindly, promis'd him his Protection, and call'd him always Brother. The *French* King having demand'd *Marsal* in *Lorraine* from his Uncle, the young Duke came from *Vienna*, and put himself into the Place to defend it; but was forced to quit it, because of his Uncle's ill Temper, who could not endure his being possess'd of any Thing before his own Death: And they accus'd him of having spoken reproachfully of the *French* King; which being false, he came to the *French* Court all of a sudden to defend himself; but was deny'd Admittance, had a Guard set upon him, and was order'd to depart the Kingdom in few Days, because *Lewis XIV.* had no mind to part with *Lorraine*, nor to suffer him to consummate his Marriage with *Madammoiselle de Nemours*, to whom he was solemnly affianc'd; and the *French* King had agreed at the Contract, that he should have the Dutchies of *Lorraine* and *Bar*; but to avoid the Performance of his Promise, he prevail'd with the Pope to break

break the Contract, tho' the Duke had actually married her; but was never allow'd to Bed her, and she was afterwards married to the Duke of *Savoy*. The Duke being thus barbarously us'd, retir'd again to *Vienna*, where the Emperor renew'd his Assurances of Protection, and gave him first a Regiment of Horse; but would not allow him to take the Field, because he was then scarce 20 Years old; but he left the Court privately, and went to the Army in *Hungary*, where he contributed much to the Victory which General *Montecuculi* obtain'd over the *Turks*, and with his own Hand took a Pair of Colours from a *Turkish* Ensign, who run at him with the Lance to which they were fasten'd. It not being consistent with our Design to enlarge on the Lives of particular Princes, we shall only take Notice, That he did the Emperor signal Service afterwards as Generalissimo of his Armies, both against the *French* and *Turks*, which has immortaliz'd his Fame. He was afterwards married to the Emperor's Sister, by whom he had 4 Children, and dy'd in 1690, in the 48th Year of his Age, not without Suspicion of Poison, by some *French* Emisseries, he being then in a probable way of recovering his Dominions, by the Assistance of the Emperor and other Princes. He was succeeded in Title by his eldest Son *Leopold*, the present Duke, who was restored to his Dominions by the Treaty of *Ryswick*.

The Air of this Country is very temperate, and the Soil fruitful in Corn, Wine, and Grass, tho' some Part of it be Mountainous, and overgrown with Woods, which are Part of the old Forrest of *Ardenna*. In their Mountains, there are rich Mines of Lead, Copper and Silver, but especially of Iron. The Duke's chief Revenue is from his Salt Fountains. Their Forrests abound with Fowls, Venison, and Game of all sorts. Their most considerable Rivers are, the *Maes*, the *Moselle*, the *Sar*, the *Meurte*, and the *Saone*, which supply them with Plenty of Fish.

Lorraine is divided into 4 principal Parts, viz. *Lorraine Proper* or the Duchy, the Duchy of *Bar*, and those called the *French Lorraine*, and the *French Bar*.

The Duchy of *Lorraine* is divided into 4 Parts, viz. the Bailiwicks of *Nancy*, *Vosge*, *Pandourange*, and the Reunited Countries.

The chief Towns of the Dutchy.

1. *Nancy*, Lat. *Nancium*, *Nancadum*, and *Nannum*, near the River *Meurte*, in Long. 24 48. Lat 48 47. about 168 Miles E. from *Paris*, according to *Sanson*, and 83 W. from *Fort Louis* on the *Rhine*, is the Capital of the Dutchy, and the Place of the Duke's Residence. It stands in the middle of a large Plain, and is divided into two Parts; the Upper call'd the *Old Town*, and the Lower call'd the *New*. The *Old Town* is divided from the other by Ditches and Fortifications, is the least of the two, but best Peopled. It contains the Duke's Palace, the Entrance into which is very magnificent, and leads to a fair Court, surrounded with Piazza's, and adorn'd with large Towers, embellish'd with Figures and Bas-reliefs. One of the Towers serves for an Arsenal, and the rest for Stair Cases. The Garden of the Palace is very curious, on a Bastion where formerly the Wall of the City stood. Here stands also the Parish-Church of *St. Euphrasie*, with a fair Square before it. The *New Town* is much larger, and better built, but not so populous or rich. 'Twas formerly only a Suburb, but was walled in about the latter End of the 16th Century. It has a large Square, with stately Buildings, and opens upon three large Streets. In this Part are the Courts of Judicature, the Town-House, several Churches and Monasteries, and a College of *Jesuits*. This City is the Seat of a Primate, who, tho' not a Bishop, is allow'd to wear a Mitre. While it was under the *French*, it was the Seat of a Parliament, of a Chamber of Accounts, and a Seneschals Court. It has 4 Gates, and is pretty well fortified. This City has been several Times taken and retaken. *Charles the Hardy*, Duke of *Burgundy*, took it in 1475. from *Rene* Duke of *Lorraine*, who retook it the next Year. *Charles* besieg'd it again the Year after; but lost both his Life and the Battle before it. There's an old Chapel near the River *Meurte*, where the Particulars of this Battle are engraven on a Copper Plate. It was very well fortified during the Civil Wars in 1587. *Lewis XIII.* took it in 1633; and *Lewis XIV.* after having

ving added to its Fortifications, dismantled it, when he restor'd it to Duke *Leopold*. He fortified it again after he retook it; but by the Treaty of *Ryswick*, the Fortifications were to be demolished.

2. *St. Nicholas*, a large open Town on the *Meurte*, 7 Miles S. E. from *Nancy*, is noted for the Concourse of People who come thither to pay their Devotion to the Relicks of *St. Nicholas*, Bishop of *Myra* in *Lycia*, a great Opposer of the *Arian* Heresy at the Council of *Nice* in 325.

3. *Rosiers*, on the *Meurte*, 12 Miles S. E. from *Nancy*, a small City, noted for its Salt Fountains.

4. *Lunewille*, a very pleasant Town on the River *Vesouse*, 7 Miles S. E. from *Rosiers*.

5. *Blamont*, on the *Poisiers*, a City with the Title of a County, 13 Miles E. from *Lunewille*. 'Twas formerly fortified, but now dismantled.

6. *Marfal*, 20 Miles N. E. from *Nancy*, near the Head of the River *Seille*, among *Marthes*. It was put into the French King's Hands in 1663 by *Charles III.* of *Lorraine*, according to a Treaty made the Year before. 'Tis a small, but well fortified Town.

7. *Moyenwick*, upon the same River, a small City, yielded to France by the Treaties of *Munster* and the *Pyrenees*; but restor'd to the Duke of *Lorraine* by the Treaty of *Ryswick*, and the Fortifications demolish'd. The Salt Springs here bring the Duke a considerable Revenue. It lies about 3 Miles S. W. from *Marfal*.

8. *Chateau-Salins*, on the *Seille*, renowned for its Salt Springs, from whence it has its Denomination. It lies 15 Miles N. E. from *Nancy*.

9. *Nomeny*, on the same River, 12 Miles further N. W. has the Title of a Marquisate, and formerly depended on the Bishop of *Metz*.

10. *Vaudemont*, an open Town, with the Title of a County and Principality, 15 Miles S. W. from *Nancy*. It was formerly given in Appennage to a younger Son of the House of *Lorraine*, and is defended by a strong Castle.

11. *Vaxelise*, a small City, 17 Miles S. W. from *Nancy*.

The Bailiwick of VAUGE, contains

1. *Mirecourt*, on the *Maidon*, Capital of the Bailiwick. It lies near Mount *Vauge*, 23 Miles S. W. from *Nancy*. 2. *Neufchatel*, on the *Maes*, towards the Borders of *Champaign*, on which it formerly depended. It lies 33 Miles S. W. from *Nancy*. 3. *Charmes*, a very pleasant Town on the *Moselle*, 20 Miles S. from *Nancy*. 4. *Espinal*, on the *Moselle*, 12 Miles S. E. from *Charmes*. It was much noted during the Wars in the last Century. 5. *Remiremont*, on the *Moselle*, at the Foot of Mount *Vauge*, 45 Miles S. E. from *Nancy*. This City is noted for an Abbey of Canonesses, who all have Liberty to quit the Monastery and marry, except the Abbess, who has Spiritual and Temporal Power, and is under the Protection of the Duke of *Lorraine*. All the Canonesses must prove their Nobility for 4 Descents before they be admitted. The Abbey was founded by *St. Romerick*, and from him called *Romerickus Mons*, or *Romerickum Castrum*. The Town was fortified; but *Lewis XIII.* dismantled it in 1635. 6. *St. Diey*, on the *Meurte*, towards the Frontiers of *Alsace*, 30 Miles N. E. from *Remiremont*. 'Tis a small Town, but has a good Trade. 7. *Raon*, on the same River, at the Foot of Mount *Vauge*, 12 Miles N. W. from *St. Diey*. 8. *Fonsenay*, a Village 25 Miles S. from *Mirecourt*, famous for a great Battle betwixt the Emperor *Lotharius*, *Lewis* King of *Germany*, and *Charles the Bald* of *France*, three Brothers, with great Slaughter on all Sides, in 841.

The Bailiwick of VAUDEVANGE, contains

The Town of that Name, on the *Sarre*, which suffered much during the Civil Wars of *Germany*: 'Tis the chief of the Bailiwick; and *Bisch*, a little Town on the Frontiers of *Alsace*, which has the Title of a County, and was reunited to the Dutchy of *Lorraine* in 1680.

THE REUNITED COUNTRY, contains

1. *Saverden*, on the Frontiers of *Alsace*, a small City, with the Title of a County, which

which depended formerly on the Bishoprick of Metz. Part of it belongs to the Dutchy of Lorrain. It lies 47 Miles N. E. from Nancy. 2. *Hombourg*, a Castle on a Mountain, at the Foot of which there's a City, which is the Capital of the County of Sarbruck, and lies 60 Miles N. E. from Nancy. This County has been possessed by several Princes; and among others, by a Branch of the Family of Nassau, called Nassau-Weilburg, from whence came that of Nassau-Sarbruck.

The Dutchy of Bar,

WAS erected about 960, when Frederick of Alsace, being made Governor of Lorrain by Bruno Archbishop of Cologne, built a Town, which he call'd Bar, because 'twas a Barrier against the Incurfions of the People of Champagne. Sophia, Daughter to Frederick, brought this Country by Marriage to Lewis Count of Montbelliard. Robert, one of his Successors, married a Daughter of King John of France, who made him a Duke and Peer. Lewis, Cardinal of Bar, their Son, gave this Dutchy in 1419 to Rene of Anjou, afterwards King of Naples, and Duke of Lorrain. His Daughter Yoland was Dutcheß of Lorrain and Bar in 1473, by the Death of Anthony Count of Vandemont, her Grand Uncle. Since that Time, the Dutchy of Bar has followed the Fortune of the Dutchy of Lorrain, except that small Part of it called French Bar, which was left to France by the Treaty of Ryßwick. This Dutchy is the Appennage of the eldest Sons of the Dukes of Lorrain.

This Dutchy is divided into the 4 Bailiwicks of Bar, Bassignie, St. Michael, and Clere-mont.

The Bailiwick of BAR, contains

1. *Bar-le-duke*, Lat. *Baroducum*, on the Orney, the Capital of the Country. 'Twas called by the Surname of Duke, to distinguish it from other Towns named Bar. It lies near the Borders of Champagne, 38 Miles W. from Nancy. 'Tis a fair and well built City, with a Collegiate Church, and a College for Instruction of Youth. It was several times taken and retaken during the

last Century; and while under the French, had a Seneschal's Court and a Chamber of Accounts. 2. *Ligny*, on the same River, 8 Miles S. E. from Bar-le-duke. 'Tis a small neat City, but suffered much during the last Century. 3. *Dammarié*, on the Sauk, 5 Miles S. W. from Ligny, noted for the Defeat of a Body of Lorrainers by a Detachment of French in 1654. 4. *Commercy*, on the Meuse, a Principality belonging to the Prince of Lillibone, a Branch of the Family of Lorrain, whose Son was killed at the Battle of Luzara in Italy in 1702. It lies 25 Miles W. from Nancy.

The Bailiwick of BASSIGNIE, contains

1. *La Motthe*, a Town built on a Rock, at the Foot of which there's a Stream, which falls a little lower into the Maas. 'Twas formerly reckon'd impregnable; but the French took it in 1634, and demolished its Fortifications the Year after. It lies 33 Miles S. W. from Nancy. 2. *Gondrecourt*, on the Orney.

The Bailiwick of St. MICHAEL, contains

1. *St. Michael*, on the Maas, 27 Miles N. W. from Nancy. 'Tis the Capital of the Bailiwick; and the Parliament of Lorrain afterwards establish'd at Nancy, continued here a long Time. It was taken by Lewis XIII. in 1632, and restor'd by the Treaty of Livourdin. That same Prince took it again in 1633, when the Inhabitants revolted against his Garison; but at last were obliged to submit. 'Tis noted for a famous Monastery of the Order of St. Benet. 2. *Pontamousson*, Lat. *Messi-Pont*, a City with the Title of a Marq. It lies on the Moselle, near the Ruins of the Castle of Mousson, from whence it had its Name, about 12 Miles N. W. from Nancy. Charles Cardinal of Lorrain founded an University here in 1573 for the Jesuits, to teach Divinity, Philosophy, and the Learned Languages: Afterwards the Duke of Lorrain added Professors of Law and Physick; and Pope Gregory XIII. added a Seminary for the Scots Nation. 'Tis a fair City, but without Walls. 'Twas formerly defended by a Castle on a neighbouring Hill, which was demolished by Order of Lewis XIII. in 1635.

It has a Bridge over the *Moselle*, from whence it had Part of its Name, and has two Abbies, and several stately Churches. 4. *Hatron le Chattel*, betwixt *Verdun* and *Pontamousson*, 15 Miles N. W. from the latter. 'Tis a City with a small Territory, that has the Title of a Marquisate.

The Bailiwick of CLEREMONT, contains

1. *Clermont*, on a Hill, water'd by the River *Ayr*. It has the Title of a County. Its Fortifications were demolished in 1635.
2. *Varennes*, on the same River, which was fortified before the Wars betwixt France and Lorrain in the last Century.

We leave that Part of the Country called *French Lorrain*, and *French Bar*, to the Description of France, and proceed to the other Parts of Germany comprehended in the Upper Circle of the Rhine.

H A S S I A.

THIS Country has the Electorate of *Mentz* and *Francfort*, with its Territory, on the N. the *Palatinate* on the W. and S. and *Franconia* on the E. *Moll* makes the greatest Length from S. E. to N. W. about 100 M. and the greatest Breadth 80. But this is understood only of *Hassia* properly so called; for if we take in some other neighbouring Countries that belong to it, 'tis much larger. *Buno*, in his Notes on *Cluverius*, bounds it thus; It has *Thuringia* on the E. the Dutchy of *Brunswick* and *Westphalia* on the N. the Bishopricks of *Mentz* and *Treves*, and the *Palatinate* of the *Rhine*, on the W. and *Franconia* and the *Palatinate* on the S. *Reiskius*, in his Notes on *Bruno*, says, That after the Year 1130, when the Emperor *Lotharius* created his Son *Lewis* Landgrave of *Thuringia*, that Country and *Hesse* made one Landgraviate; but his Issue failing in *Lewis* and *Henry*, two Brothers, in 1249, it occasioned a new Succession and Division of the Country; for *Henry* of *Brabant*, Grandson to *Lewis* by a Daughter, claim'd *Hesse*; and *Henry the Illustrious*, Marquis of *Misnia*, Grandson to *Henry*, the other Brother by a Daughter, claim'd *Thuringia* and the *Palatinate* of *Saxony*, which occasioned a War, that was compromis'd by a Treaty

of mutual Succession betwixt those Families. After this, in 1557, the County of *Catzenellebogen* was added to *Hassia*, and *Ditzum* fell to the House of *Nassau*; but in 1648, *Hesse* was much enlarged by the Treaty of *Westphalia*.

The ancient Inhabitants were the *Catti*, in after Ages called *Hassi*, as we observ'd from *Cluverius* in our Account of Ancient Germany, P. 413. And it appears by *Tacitus*, That they were one of the greatest and most Warlike People in Germany; and from a Branch of them called *Catti*, *Meliboci*, the County of *Catzenellebogen* is, with very good Reason, supposed to derive its Name.

La Forrest says, That *Hesse* was Part of the ancient Kingdom of *Thuringia*, so much spoke of in the History of the French Kings of the first Race, and was afterwards known by the Name of a Landgraviate, which he says is the same with a County. He adds, That *Charlemagne* created two sorts of Counts, the first to defend the Country by Arms, and the second to follow the Court, from whence they were called *Comites*, and their Business was to do Justice to the Subjects; and to this the German Names of Grave and Landgrave bear a Resemblance. *Selden*, in his Titles of Honour, Part II. Cap. 1. is of the same Mind, that a Landgrave is the same with *Comes Provincialis*; and that *Land* was added to the Word *Grave* as a Note of Excellency, because of the greater Extent of Dominions which some of those Graves had than others; and upon that Account it continues to be the Title of the Princes of *Hesse*. He adds, there are 4 Landgraves reckon'd as 4 Dukes, 4 Marquisses, 4 Counts, and 4 of most other Dignities, as the Chief of those Titles in the Empire; and the 4 chief Landgraves were those of *Thuringia*, *Hassia*, *Alsace*, and *Luchtemberg*. The most particular and ancient Creation of a Landgrave he meets with, is that of the above-mention'd *Lewis* Count of *Thuringia*, which he says was by the Emperor *Lotharius*, his Father-in-Law, in 1126, according to the Authors he there quotes, who say, That the Emperor perceiving *Lewis* his Son-in-Law to be a stout and powerful Knight in *Thuringia* and *Hassia*, by the Advice of his Princes, he solemnly invested him with Banners, as the Manner was, gave him the Title of a Prince, and order'd

order'd him to be proclaim'd Landgrave of *Thuringia*. He adds, That this Title, as well as that of Burgrave, does not always denote the same Degree of Eminency; for as the former has been sometimes given to Barons or Lords of lesser Territories, tho' it be a Note of Eminence in the Family of *Hesse*; so that of Burgrave has been given to Commanders of small Towns, as well as the Title of Burgrave of *Nuremberg*, a great City, was given to the Family of *Brandenburg*, by way of Eminence. *La Forge* says, That those Counts or Landgraves did, in after Times, usurp the Sovereignty of those Towns or Provinces of which they were made Governors, and those of *Thuringia* did the like; but this is only to favour the French King's Chimerical Pretensions, for we have just now heard, that a Landgrave of *Thuringia*, from whom those of *Hesse* are descended, were legally invested in this Dignity.

The *Atlas Historique* gives the following Account of the Origine of the Family of *Hesse*.

The Founder of the Families of *Hassia* and *Thuringia*, is by some Antiquaries reckoned to be *Basin* King of *Thuringia* in 485. He was succeeded by *Hermanfrid*, his Son, who married the Widow of *Thrasimond* King of the *Vandals*. He was killed by *Thierry* King of *Metz*, one of the French Princes, who invited him to his Court: After which *Thuringia* came to the Hands of the French; but *Raoul* revolted against them, made himself Sovereign, and *Conrad II.* invested *Lewis*, Son to *Charles* of *Lorraine*, with this Dignity in 1039. He was succeeded by *Lewis II.* and he by *Lewis III.* who was created Landgrave by *Lotharius II.* as above-mention'd, who is the first mention'd by any History of Credit that was legally invested with this Dignity. He was succeeded by *Lewis IV.* who married the Emperor *Conrad III.*'s Daughter, and died in 1172. *Herman* his Brother succeeded, and acquir'd the Palatinate of *Saxony* in 1181. His Daughter *Judith* married *Thierry* Marquis of *Misnia*. Their Son *Henry the Illustrious* was invested in *Thuringia* by the Emperor *Frederick II.* after whom the Succession came to *Henry III.* Son to *Sophia* of *Thuringia*, by *Henry* of *Bra-*

bant, from whom the present Landgrave is descended. The *Atlas* upon that Account gives us likewise the Genealogy of those Dukes of *Brabant*. He says, That this Country having been possessed by particular Princes, under the Title of Counts and Dukes of *Brabant* or *Lower Austrasia*, *Pepin Landan*, Son to *Carloman*, who liv'd in the Time of *Chilperick* of *France*, about the Year 580, was the first Duke of this Country, according to several Authors; and his Son dying without Issue, *Anchises* or *Anchigises*, *Chilperick's* Brother-in-Law, succeeded him. He was succeeded by *Charlemagne*, from whom the *Atlas* brings down the Genealogy to the above-mentioned *Henry III.* who married first a Daughter of *Cleves*, and then a Daughter of the Elector *Palatine*, and died in 1308. *Dr. Nicholson* observes, That his Mother *Sophia* was also descended from *Charlemagne*. He was succeeded by *Otho*, who was put into the Ban of the Empire, and died, according to the *Atlas*, in 1323; but according to the Doctor, in 1319. His eldest Son *Henry* dying without Issue, his younger Son *Lewis* succeeded to all his Dominions. He was succeeded by his Son *Herman* about 1372, who bravely assisted *Balthasar* Landgrave of *Thuringia*, against *Otho* Duke of *Brunswick*, died in 1414, and was succeeded by his Son *Lewis the Mild*, who was the first of the Family that had the Title of Count of *Ziegenheim* and *Nidda*. He was legally chosen Emperor in 1440, but refus'd it, liv'd in Peace all his Days, and died in 1458. Here 'tis fit to observe, That *Henry*, Son to *Herman* and *Sophia* of *Bavaria*, one of the same Family, was chosen Emperor in 1246; but was killed at the Siege of *Ulm* the next Year, and left no Issue. *Dr. Nicholson* makes this Remark, That had *Lewis the Mild* accepted the Dignity, 'tis probable his Posterity might still have enjoy'd it, they having all of 'em been Princes of great Spirit and Courage. He was succeeded by his Son *Lewis the Courageous*, who married a Daughter of *Wirtemberg*, and (says the *Atlas*) shar'd his Dominions with his Brother. He died in 1471, and was succeeded by the two *Williams* his Sons. *William I.* says *Dr. Nicholson*, being, after a long War, taken Prisoner by his Brother, was deprived of his Government, and died without Issue Male in 1515. The *Atlas* says, That

being wounded in the Brain in *Italy*, he was made incapable of Government, and yielded it to his Brother *William II.* who serv'd the Emperor *Frederick III.* and that his Cousin *William III.* made War upon him for the Succession, but died in 1500, and *William II.* died in 1509, 6 Years before his elder Brother *William I.* who having no Issue, *Philip the Magnanimous*, Son to *William II.* succeeded: He married *Christina* of *Saxony*, and was a Prince of such Valour and Conduct, that notwithstanding the Emperor *Charles V.* was his Enemy, he had the greatest Sway of any Prince in the Empire. In 1520, he defeated *Ferdinand King* of the *Romans*, and restored his Cousin Duke *Ulrich* of *Wirtemberg* to his Dominions. He was the chief who procur'd and made the League betwixt the Protestant Princes of the Empire in 1530 at *Smalcald*, in Defence of their Religion and Liberties. In 1545, he defended the City of *Gozlar* against the Duke of *Brunswick*, whom, together with his Son, he defeated and took, and seiz'd his Duchy. In 1548, he united most of the Princes and Imperial Cities of *Germany* in a League Offensive and Defensive against *Charles V.* but that War proving unsuccessful, and the Duke of *Saxony* his Confederate being taken, he was obliged to submit to the Emperor, after being taken at the Battle of *Mulberg*, on the following Conditions: 1. That he should dismantle all his Towns but *Cassels*. 2. That he should give up all his Ammunition. 3. That he should pay him 150000 Crowns: But after this Treaty, he was, contrary to the Emperor's Promise, and the Law of Nations, detained Prisoner 5 Years, upon a Trick of misspelling a Word in the Agreement, to which the Writer was corrupted, whereby the Emperor alledged, he did not promise that he should not be imprison'd, but that he should not be perpetually imprison'd. He was at last rescued by *Maurice D.* of *Saxony*, with the Assistance of his own Son *William*, in 1552. After which he liv'd peaceably at home; but sent Forces to assist the *French* Protestants. He was the first who introduc'd the *Augsburg* Confession into his Dominions. He finished the War of the Enthusiastical Boors, who took Arms at the Instigation of *Thomas* of *Muncer*, the Anabaptist. He was born in his Father's Camp

as he besieg'd *Chamb* in 1504, which was taken as a Presage that he would be a great Warrior. Some Authors say, he was so much inclin'd to the Marriage-Bed, that his Wife, to whom he was very honest, could not bear it, and therefore, with her Consent, and the Advices of Divines, he was allowed to take a Concubine. He died in 1567; and when the Physicians open'd his Corps, they found he had three Cods, which made his Excess of the Marriage-Bed more excusable. He died in 1567, and was succeeded by his Son *William IV.* call'd *The Wise*. He was a Prince of great Valour, Constancy and Piety, contributed much to the Rescue of his Father, as above-mentioned. He was also a Prince of great Learning, and publish'd several Things of Astrology, &c. The *Atlas* says, he introduc'd *Calvinism* into his Dominions, and died in 1592. He was succeeded by his Son *Maurice*, who was a learned and valiant, but unfortunate Prince. *Dr. Nicholson* and others say, it was he who introduc'd *Calvinism*. He had War with *Ferdinand II.* who took *Marpurg* from him, and, as some say, oblig'd him to demit the Government to his Son *William*. He died in 1632, and his Son *William V.* whom *Dr. Nicholson* makes but the 4th, call'd *The Constant*, succeeded. He was a brave Prince, but reduc'd to great Straits by the Emperor. He died in 1637, and left the Administration of the Government, with the Guardianship of his Son, to his Wife *Amelia Elizabeth* of *Heinaw*, the Heroine of her Age, who, after her Husband's Death, supported the Government successfully by Arms, rais'd Fortifications, got her Son's Dominions enlarged by the Treaty of *Westphalia*, and died in 1651. Her Son *William VI.* call'd *The Good*, succeeded. He married a Daughter of *Brandenburg*, was a great Supporter of *Calvinism*, and died in 1663. His Daughter *Charlotte* married *Christian V.* of *Denmark*. He was succeeded by his Son *Charles*, the present Landgrave, who is a very brave Prince, was one of the Confederate Generals upon the *Rhine*, and oblig'd the *French* to raise the Siege of *Rhinfeld* in 1692. His Son *Frederick*, the Hereditary Prince, was born in 1676, married a Daughter of *Brandenburg*, and is Lieutenant-General of the Horse of the United Provinces. The other

Branches

Branches of this Family are, 1. That of *Darmstat*, who came from *George*, a younger Son to *Philip the Magnanimous*, whose present Prince, *Ernest Lewis*, is the 4th from him. He married a Daughter of *Brandenburg Onoltzbach* or *Anspach*, by whom he has a Son called *Lewis*, with two more, and two Daughters. Dr. *Nicholson* observes, That this Branch is now little inferior in Dominions to that of *Hesse-Cassel*; the Territories of *Darmstat* and *Marpurg* having descended upon *George*, their Predecessor, who by that means became an Independent Prince, and a Terror to his eldest Brother *William*; and they have since enlarged their Territories. The Controversy betwixt the two Houses, about the Territories of *Marpurg*, has bred continual Jealousies and different Interests betwixt them, which is heighten'd by their different Religions, the Branch of *Darmstat* being *Lutheran*; but they unite together against the Elector of *Mentz*, of whom they are jealous, because he is their Neighbour, and has Territories mix'd with theirs. He adds, That the Power and Splendour of the Family of *Hesse* was considerably advanc'd by the *Recessus Imperii* in 1654, which establish'd the Right of Primogeniture in that Family, and prevents their dwindling into petty Princes, which has been the Fate of many Families in *Germany*, by dividing the Sovereignty among the several Branches. They have likewise strengthened themselves by their Matches with the two Northern Crowns, the Families of *Brandenburg*, *Saxony* and *Brunswick*, &c. From *George* of this Branch proceeded that of *Homburg*, whose Prince, being the 3d of that Branch, is *Frederick Jacob*, born in 1673. He has married a Daughter of *Hesse-Darmstat*. Another Branch is that of *Rhinfeld*, which proceeded from *Maurice* above-mentioned, by *Ernest* his Son, who turn'd Papist, and died in 1693. From him proceeded, 1. The Branch of *Mansfried-Rhinfeld*, whose present Prince is *Charles*, who was born in 1629. 2. The Branch of *Rotenberg*, whose present Prince is *William*. The Branch of *Rhinfeld* is Papists, and that of *Homburg* is *Lutherans*. The Present State of *Europe* mentions the Prince of *Hirschfeld*, Brother to the present Landgrave, who is a *Calvinist*, and has a numerous Family. There is also the Branch of *Philippthal*, that came

from *William VI*. The present Prince is *Philip*, who has a numerous Issue.

The Landgrave of *Hesse-Cassel's* Titles are, Landgrave of *Hesse*, Prince of *Hirschfeld*, Count of *Catzelnbogen*, *Dietz*, *Ziegenheim*, *Nidda*, *Schwernburg*, *Epenstein*, *Pleß*, *Itter*, *Franckenstein*, and *Budingen*.

The Countries he possesses are, 1. The Lower Landgraviate of *Hesse*, in which are *Cassel*, *Ziegenheim*, and the Lordship of *Pleß*. 2. *Marpurg*, in the Upper Landgraviate. 3. The Principality of *Hirschfeld*. 4. Part of the Lower County of *Catzelnbogen*. 5. The County of *Schwernburg*, except *Buckenburg*. 6. *Smaleald*, in the County of *Henneberg*. 7. The Bailiwicks of *Rotenberg* and *Saxenhausen*.

The Branch of *Darmstat* possesses, 1. The Upper Landgraviate, in which there are, *Gießen*, *Butzbach*, *Aendorf*, *Battenberg*, *Berg*, *Gleunda*, *Blamkerstein*, *Franckenau*, *Gera*, *Grunberg*, *Königsberg*. 2. The County of *Nidda*. 3. The Lordship of *Itter*. 4. The Upper County of *Catzelnbogen*, in which lies *Darmstat*. 5. The County of *Dietz*.

The Branch of *Rhinfeld* possesses, 1. The greatest Part of the Lower Country of *Catzelnbogen*, viz. *Rhinfeld*, *St. Goar* and *Gevernhausen*; the Bailiwicks of *Reichenberg*, *Flornstein*, and *Braunbach*. 2. *Rotenberg*, and its District.

The Branch of *Homburg* possesses, 1. *Homburg* with its District. 2. *Wewelingen* and *Helmstadt*, with its Dependencies. 3. *Bingheim*.

The Arms of *Hesse-Cassel* and *Darmstat*, are, 1. *Argent*, a double Cross *Gules*, for *Hirschfeld*. 2. *Sable*, a Star Or, Coupe Or, for *Ziegenheim*. 3. Or, a Leopard like a *Lioness*, *Gules*, arm'd and crown'd *Azure*, for *Catzelnbogen*. 4. *Gules*, Two Lions spotted like Leopards, langued and arm'd *Azure*, for *Dietz*. 5. *Sable*, Two Stars Or Coupe, for *Nyden*. 6. *Gules*, Three Passion Nails *Argent*, plac'd Pearl-wise, accompany'd with Three Leaves of *Nettles Argent*, plac'd Triangular-wise, cheveron'd and pointed in the Middle of the Escutcheon, Coupe *Gules*, for *Schwernburg*. 7. *Azure*, a Lion, part *Argent*, part *Gules*, for *Hesse*. 8. *Argent*, Two Fesses *Sable*, for *Isenburg*. The Helmets are Five: The First for *Hesse*; Second for *Hirschfeld*; Third for *Ziegenheim*; Fourth for *Catzelnbogen*; Fifth for *Schwernburg*.

The

The Landgrave of *Hesse* has a Privy-Council, a Court for the Game and Forrefts, a Chancery, Treasury, and Consistory, and another Court call'd the *French Commission*, relating particularly to the *French* in his Dominions, for the Administration of the Government. The *Present State of Europe* says, all the Privy-Counsellors are Members of the Consistory for Ecclesiastical Affairs; to whom are added, a Superintendent, a Metropolitan, one of the Court Preachers, and a Syndic. The Religion and Discipline of the Church is that of *Geneva*. The *Lutherans* are permitted to dwell in the Country; but go to their Worship in other Countries.

In his Military Service, there's a General, two Lieutenant-Generals, one Major-General, one Colonel of the Artillery, two Commissary-Generals of War, and one chief Paymaster, two Troops of Life-Guards, one of White, and the other of Black Horses; 3 other Regiments of Horse, 3 of Dragoons, and 5 of Foot, one of which is Guards, besides the Militia, which is commanded by a Lieutenant-General.

The People of this Country are numerous and warlike, being disciplin'd and train'd by the younger Sons of the Family, who are made Lieutenants and Captains of several Districts, and receive Pay from the Prince Regent.

The Laws most in Force in the Courts of Judicature, says Dr. *Nicholson*, are the *Roman* or Civil Law, to which they join Municipal Laws of their own.

The Country has in many Places large Woods and Forrefts; and towards the N. they have one called *Rheinbartswaldt*, which abounds with Deer, and all other sorts of Game. Their Vallies abound with Sheep, which have the finest Wool in *Germany*, that us'd to be bought by our *English* Merchants, and made into Cloth here, or in their Factories abroad. In their Mountains, they have Mines of Copper, Lead, and other Metals, of which they make sometimes great Profit. 'Tis computed, that the Landgrave has 40000 Men in his Dominions able to bear Arms. The Air is wholesome, tho' cold, and the Country is fruitful in Corn and Wine, especially towards the *Rhine* and the *Lach*, its principal Rivers.

The Christian Religion was first planted here about 730, by *Winefrid*, an *English* Saxon, afterwards Archbishop of *Mentz*, says Dr. *Nicholson*. We have heard before, that *Luther's* Reformation was introduc'd by *Philip the Magnanimous*, and continu'd to be the Establish'd Religion, till *Maurice* brought in *Calvinism*, which occasioned him a great deal of Trouble; for his immediate Predecessor *Lewis*, who had divided his Dominions betwixt his two Nephews *Maurice* and *Lewis*, put a Clause in his Will, That if either of 'em endeavour'd an Alteration of the Religion establish'd in his Dominions, he should forfeit his Right of Succession. Upon which *Lewis* claim'd his Brother's Forfeiture, which occasioned a great Breach betwixt them; but the Matter being referred to Arbitrators chosen on both Sides, they determin'd in Favour of what *Maurice* had done among his own Subjects. Upon this, *Lewis* appeal'd to the Emperor's Court, where he obtain'd a Decree, and an Army to support him against his Brother, who was obliged to submit, and left the whole Country to his Brother *Lewis*, and his Son *George*: And thus Matters continued till the Administration of *Amelia Elizabeth* above-mentioned, who drove *George* out of all his Dominions: After which, an Agreement was brought about by the Duke of *Saxony* in 1647. Since which, *Calvinism* has been the Establish'd Religion in *Hesse-Cassel*.

The Situation of the Country betwixt *Upper* and *Lower Saxony*, and the Neighbourhood of *Westphalia*, occasions the Language of the People to be a Mixture of *High* and *Low Dutch*.

Lower Hestia,

Contains the Landgraviate of *Hesse-Cassel*, the Counties of *Waldeck* and *Hassfeld*.

Their principal TOWNS are,

1. *Cassels*, the Metropolis of *Hassia*, and the ordinary Residence of the Elder House, who are from hence called the Landgraves of *Hesse-Cassel*. 'Tis supposed to stand in the same Place where *Drusus* built his *Casselum Catterum*; and the modern Name fa-

vours

vours the Conjecture. 'Tis seated in a pleasant and rich Plain, on the Banks of the River *Fulda*, in Long. 28. 12. Lat. 51. 17. 92 Miles N. E. from *Mentz*, 88 S. from *Munster*, and 60 S. W. from *Hanover*, fortified with strong Walls, broad Ditches, and is almost as strong as *Hamburg*, and has a fine Stone Bridge over the River. The Landgrave's Palace is separate from the Town, and notably contriv'd with fair Chambers and Apartments in the Rampires, to lodge his Family during a Siege, out of the Reach of Bombs or Granadoes. The Houses of the ordinary Burgers have nothing of State, being generally built of Wood and Clay, and cover'd with Laths and Thatch. During the Civil Wars, the Imperialists pass'd by this City without attempting it, because they thought it impregnable. It had anciently a much greater Trade in Wool than at present; tho' their chief Income is still from that Commodity. The adjacent Fields are well stock'd with Sheep, which might bring them in great Profit, were the Inhabitants industrious, and skill'd in Manufacture; but they suffer Strangers to run away with the Profit of making and dressing of Cloth. They have a *Gymnasium* here, where there have been Professors of Note; but of late Years, it has been much eclips'd by the University at *Marpurg*. *La. Forrest* says, this City is now very large, and well built; that the Citadel is good; and that the Landgrave possesses several Territories in *Westeravia* and *Westphalia*. *Monconyr* says, the Fortifications are not regular, but very good; that the Palace is of hewn Stone, beautified without, and fine within, and has a great Number of noble Apartments, with a large Court in the middle; that 'tis very well fortified, has two Riding-Houses for managing the Great Horse, and very fine Gardens, with curious Fountains. The Arsenal is a great Building of hewn Stone, with Arms for 25000 Men; and in the Room underneath, there are 200 Cannon; some of which are 62 Pounds, and many taken from the Emperor and King of Spain. He saw Muskets there, which under the Rammer have Darts, that spring out at the End of the Piece as soon as 'tis discharged. From the Palace, there's a delicate View over the adjacent Country, from whence may be seen 60 Towns, the least

of which contain 300 Houses, a Prospect not to be matched in the Empire. The Streets of the City are large, and full of Shops; and they have several fine Markets, with good Provisions of all sorts; so that the People live very well. The Landgrave has a Library well furnish'd with Books, and Curiosities, too many to be insisted on. In the great Church, are the Monuments of the Landgraves in Brass, Copper and Marble, the Workmanship of which is very good; and they have Inscriptions upon them, with brief Histories of the Princes entomb'd. There are 4 Churches in the City, and the Cathedral called *St. Martin's* is capable of holding 4000 People. They have each of them two Ministers, except that called the *Soldiers Church*, which has but one. There's likewise a Church in the Palace for the Devotions of the Court.

2. *Hirschfeld*, on the same River, a small but neat City, with the Title of a Principality: 'Twas formerly an Abbey, founded by *Pepin*, and endowed by *Charlemagne* in the End of the 8th Century; but was converted into a Secular Principality by the Treaty of *Munster* in 1648. It lies 30 Miles S. E. from *Cassels*. The Abbey in this City, says *Dr. Nickolsen*, is as noble and artificial a Structure as any in the Empire. 'Tis built upon an Arch of 17 Pillars of one entire Stone each. *Sturmius* was their first Abbot, and, as some say, its Founder. 'Twas afterwards under the Inspection of *Alcuinus* or *Albinus*, *Charles the Great's* Schoolmaster, whose Monument is still in the Church. Since their last Abbot died in 1606, the Revenues were kept by one of the Family of *Hesse*, under the Title of Administrator. The District of this Monastery is about 3 German Leagues long, and 3 broad.

3. *Ziegenheim*, on the River *Schwalme*, a small City, Capital of a County of the same Name, which *Lewis the Pacifick* united to his Domain in 1453. It lies 22 Miles W. from *Hirschfeld*.

4. *Waldeck*, on the *Steinback*, 20 Miles S. W. from *Cassels*. 'Tis a small City, with a good Castle, is Capital of the County of its Name, and gives Title to the ancient Family of *Waldeck*, who still enjoy the County of *Pyrmont*.

The County of W A L D E C K,

Is reckon'd one of the most considerable in the Empire, and lies on the Frontiers of the Dutchy of *Westphalia*, and of the Bishoprick of *Paderborn*. 'Tis about 6 German Leagues broad, and 6 long, and reckon'd Part of *Hesse*, tho' under Princes of its own, who derive their Pedigree from *Witekind* Count of *Snaelberg*, whom *Charles the Great* made Prince or Advocate, as they were then called of the Church of *Paderborn*: But others say, the highest they can trace their Pedigree is to Count *Henry*, who slew *Frederick* Duke of *Brunswick*, Emperor Elect, at *Fritzlar* in 1400. This Prince took *Corbach*, and other neighbouring Towns, and craved Protection from the Landgraves of *Hesse*, to whom, for many Years after, his Successors paid Homage. This Family has produc'd many great Men, among whom, *Wolgrad II.* was so much esteem'd for his Bravery and Prudence, that he was chosen President of the Conference at *Ratisbon* in 1556. Prince *Waldeck*, of this Family, was a famous General who serv'd under King *William III.* of *England* after the Revolution. The Country is pleasant and fruitful in Corn and Wine. They have also Plenty of Venison, great Flocks of Sheep, and Mines of Iron and Coal; and for its Extent, is one of the richest Principalities of the Empire.

Other Places of Note in this County are,

1. *Wildungen*, a pleasant and well built City, divided into Two Parts, called the *Old* and *New*, seated on two Hills, with a pleasant Garden betwixt them, stock'd with all manner of choice Fruit, and beautified with curious Water-works, one of which conveys the Water as high as the Top of the adjoining Hills. This Town is noted for good Beer, which is transported into all the neighbouring Countries. They have also Springs of Mineral Waters, which tast strong of Vitriol, and make one drunk as soon as the strongest Wine. They corrode all sorts of Stone, and therefore are enclos'd in Wood. Their Virtues have been described at large by *Wolffius* and *Ellenberger*, two German Physicians.

2. *Corbach*, on the River *Sker*, 10 Miles N. W. from *Waldeck*, an ancient Town, formerly noted for a Mine of Gold found in its Neighbourhood. It lies at an equal Distance of 6 German Miles from *Marpurg*, *Cassels*, *Lipp*, and *Paderborn*, was anciently a free City, had many great Privileges, and is still reckon'd the chief in the County. Their principal Trade is in brewing Beer, as much esteem'd as that of *Wildungen*. Count *Wolgrad I.* founded an Univerfity here, which was afterwards well endowed; and among other Men of Repute, bred *Galenius* and *Ursin*, both well known to the learned World.

3. *Eysenberg*, a famous old Fort, on the Top of an Hill near *Corbach*. Count *Jasias* repair'd it, and at last made it a Seat fit for a Prince. In this Hill there are Mines of different Sorts, but chiefly of Iron, from whence it had its Name. There was formerly considerable Quantities of excellent Gold found there, of which the Counts have still several Rings and Vessels, which they keep in their Repository as great Rarities. About two English Miles from hence, at *Jodlesheim*, there's a Silver Mine; and at *Twisten*, near this Place, there are rich Copper Mines.

HAZFELD, or HARTZFELD.

It has a large Town, Capital of the County of the same Name, on the River *Eder*, 22 Miles S. W. from *Waldeck*, defended with a good Castle. The Counts were created Princes of the Empire by *Ferdinand II.* and possessed several Lands in *Francia*, *Silesia*, and *Wetteravia*.

Other Places of Note in this County are,

1. *Fritzlar*, on the River *Wiper*, 17 Miles S. W. from *Cassel*, a small Town belonging to the Elector of *Mentz*.

2. *Frauenberg*, or *Frankenaw*, a great Town on the utmost Bounds of the Landgraviate of *Hassia* Westward, on the *Eder*, which separates some Part of this Principality from *Westphalia*. 'Tis said to have been built by *Theodorick* King of *France* in 520. In 1590. the Burgers discover'd some Mines of Silver and Copper; but they have not turn'd to great Advantage. About 6 English Miles W. from this Place lies *Sachsen*.

senberg, the Ruins of an old Fort, built by the ancient Saxons, to secure the Frontiers of their Country from any sudden Incurſion which ſhould be made by the French Garifon at Franckenberg.

Upper Heſſia,

Contains the Landgraviate of Heſſe-Darmſtat, and the Counties of Catzenellebogen, Wied, Sayn, Lower Eſſenburgh, and Runkel.

The chief TOWNS and PLACES are,

1. *Marpurg*, reckon'd the ſecond Town in the Landgraviate, ſince it became the Seat of Landgrave *Ludowick*, ſecond Son to *Philip* above-mentioned. The Supreme and Common Court of Judicature for the Country, kept here, would ſeem to give it the Pre-eminence before *Caffel*; for hither there lies an Appeal for both the Burgers of *Caffel* and *Darmſtat*, and for all the other Subjects of both the Landgraves. This Court conſiſts of a Preſident, and 6 Aſſeſſors, who finally determine all Controverſies brought before them. 'Tis pleaſantly ſituate on the River *Lon*; and from the Bridge, there's a fine Proſpect of the neighbouring Vineyards, and ſhady Hills. The great Church is a ſtately Fabrick, founded by *Lewis* Biſhop of *Munſter*, Son to *Henry III.* Landgrave of *Thuringia*. Here there are noble Monuments, a great Part of whole Inſcriptions are given us at large by *Chytræus* in his *Delicie Itinerum*. The Univerſity here was founded by the ſame Prince in 1426, and is now one of the moſt conſiderable in the Empire. *La Forreſt* ſays, this Town belongs to the Landgrave of *Heſſe-Caffel*, is well built and fortified, and has a Citadel on a neighbouring Hill, reckoned one of the beſt in *Germany*. 'Tis alſo noted for the Death of *St. Elizabeth*, Daughter to *Andrew* King of *Hungary*, who married *Lewis V.* Landgrave of *Thuringia*. This City lies 40 Miles S. W. from *Caffel*, and 40 N. E. from *Franckfort am Main*. 'Twas formerly an Imperial City; and *Claverius* thinks it was the old *Caftrum Mattiacorum*.

2. *Gieſſen*, a fair old Town in the Upper *Heſſia*, about 6 German Miles from *Franckfort*, and 3 from *Marpurg*. 'Tis well guar-

ded by a ſtrong Wall, and regular Fortifications, and has an Armory, with Ammunition ſufficient for a conſiderable Army. They had an Univerſity here, which firſt began to flouriſh upon the Deſertion of *Lutheraniſm* by their Profeſſors at *Marpurg*, and their adhering to the Doctrin of *Calvin*. But in 1625, Landgrave *Lewis* recalled the Students; and by a ſtrict Ediſt, forbade any Profeſſors for the future to teach at *Gieſſen*. The Burgers of this Town, as of moſt others in *Heſſia*, live chiefly upon making, dreſſing, and vending of Cloth. The Royalty of the Town is, according to ſome Authors, divided betwixt the Landgraves of *Heſſe-Caffel* and *Darmſtat*. But the *Atlas Hiſtorique* and others ſay, it belongs wholly to the latter.

3. *Grunneberg*, or *Gromberg*, a ſmall Town, remarkable for an extraordinary high Bridge, which joins two Mountains. It lies 18 Miles E. from *Gieſſen*, and belongs to *Heſſe-Darmſtat*.

4. *Niſſen*, a large open Town, with the Title of a County, on a ſmall River of the ſame Name. It belongs alſo to *Heſſe-Darmſtat*.

The County of CATZENELLEBOGEN,

Which came to the Family of *Heſſe* by Marriage about 1479, belongs to Upper *Heſſe*. 'Tis divided into Upper and Lower; a Part of the latter belongs to *Heſſe-Caffel*; and the reſt is divided, ſays *La Forreſt*, betwixt the Branches of *Darmſtat* and *Rhinſfeld*. The Property of this County has been much diſputed betwixt the Houſes of *Naffau* and *Heſſe*; the former having married the Siſter of the laſt Earl, and the latter alledging a Donation from him. *Charles V.* adjudged it to the Family of *Naffau* in 1548; but at the Treaty of *Paffau*, it was given to the Landgrave *Philip*. However, he paid the Count of *Naffau* 600000 Crowns for the Surrender of it; but the Houſe of *Naffau* ſtill retains the Title. This County has a ſmall Town of the ſame Name, 9 Miles S. E. from *Naffau*, and 16 N. W. from *Mentz*.

5. *Darmſtat*, the chief Town in the Upper County of *Catzenellebogen*, and is the uſual Seat of the Landgraves of *Heſſe-Darmſtat*.

A a a a

ffar. The Landgrave's Palace is a Noble and Princely Structure, beautified with a spacious Garden, abounding with all sorts of Common and Foreign Fruits, and yielding Annually a great Quantity of rich Wines. Besides this, there are two more Pleasure-Houses, *Kranckstein* and *Sensfeld*, two English Miles from hence, each of 'em capable to entertain the Landgrave and his Attendants. The Town is not large, but makes a goodly Appearance, most of the Houses being of a great Height, and of hewn Stone. In 1622, it was surpriz'd and taken by *Frederick Elector Palatine*, and Count *Mansfeld*, when Landgrave *Lewis* and his two Sons were taken Prisoners for favouring the Emperor's Interest, which so highly incens'd our King *James I.* Father-in-Law to the Elector, that he sent them a threatening Letter, June 17, 1622; telling them, among other Things, That their pretended brave Exploit stunk in his Nostrils; and therefore advis'd them, as they tender'd his Friendship, to restore their Captives, which they did, and the Matter was accommodated. *Fr. Modius*, in his *Pandectis Triumphalis*, says, 'twas at this Town the *Germans* first gave over their Tiltng, upon an unlucky Accident which happen'd here in 1403. For the *Franconians* and *Hassians* having challeng'd one another to these Exercises, 17 of the *Franconian* Nobility, and 9 of the *Hassian*, were killed on the Spot. *La Forrest* says, this Town was once well fortified; but in the late Wars, the *French* ruin'd the Castle and Fortifications.

6. *Geraw*, a small neat City on the River *Schwartzbach*.

7. *St. Guer* or *Gear*, on the W. Side of the *Rhine*, a small City, defended by the famous Castle of *Rhinfeld*, built on the Top of a Mountain in 1255. It lies 16 Miles S. from *Coblentz*.

8. *Wied*, a great open Town, with the Title of a County, which had formerly Lords of its own, but came afterwards to the Family of *Runkel*. It lies 10 Miles below *Coblentz*, on the other Side the *Rhine*.

9. *Sayn*, another large Town, with a fine Castle, and Capital of a County, 6 Miles above *Wied*. It has belong'd to the Elector of *Cologne* since 1636, that their last Count died.

10. *Isenburg*, 10 Miles S. from *Wied*, a large open Town, having the Title of a

County, and a good Castle, belonging to a Prince of that Name, whose Family is divided into the Branches of *Offenback* and *Budingen*.

11. *Runkel*, a strong Wall'd Town on the *Lahn*, in a pleasant and rich Country: The chief Products whereof are given us by a Poet of their own in this Dittich:

*Argentum, Marmor, Ferrumq; & Fossile Saxum,
Vinum, Frumentum, Suavia Poma gerit.*

What little Silver the Country affords, is found at *Langheck*, a neighbouring Village; the Marble at *Schuppach*; and the Iron near *Walfenhausen*.

12. *Rotenburg* or *Rodenburg*, a fair Town on the *Fulda*, 8 Miles below *Hirschfeld*, in a pleasant Valley, betwixt two high Hills, famous for a Collegiate Church, consisting of a Dean and two Canons, nobly endow'd. A little below it, at a Village call'd *Morsen*, there's a Quarry of white Alabaster; out of which were dug most of the noble Monuments in the great Church at *Marpurg*.

13. *Alsfeldt*, one of the oldest Towns in *Hassia*, and thought to have been the Metropolis of the *Frenab* Territories in those Parts before the building of *Franckenberg*. What its Privileges anciently were, is not well known, since the Burgers lost their Charter, with what Records they had, in a great Fire some Ages ago: But the Chronicle of *Franckenberg* says, they had Power of Life and Death. In Remembrance of which, their Chief Magistrate has still a Sword carried before him. Their Town-Hall is a noble Structure; over the Door of which there's a Monument, in Remembrance of that dreadful Fire, with this Inscription, *Rerum irrecuperabilium summa felicitas obliuio; i. e.* 'Tis the best Way to forget Things irrecoverably lost. This Town was the first in *Hassia* that embrac'd *Luther's* Reformation. It lies 12 Miles E. from *Marpurg*.

14. *Eschwege*, near the Confines of *Thuringia*, 24 Miles S. E. from *Cassel*: 'Twas either built or wall'd by *Charles the Great*, and afterwards destroy'd by the *Huns*; but rebuilt in great Splendour by *Henry II.* It lies on the Bank of the River *Werra*, by which the Burgers convey their Wood, the great Commodity of those Parts, down to the

the *Weser*. Not far from hence, they have Plenty of Pit-Coal, exported in great Quantities to the neighbouring Countries.

15. *Schmalkalden*, a well built Town, on a Rivulet of the same Name. 'Tis noted for Mines of Iron in the Neighbourhood, and employing 400 Smiths, who make all sorts of Iron Ware, transported from hence to the remote Parts of the Empire. They also make and temper Steel, whence a small Village in the Neighbourhood has the Name of *Stallberg*. But that which most advanced the Honour of this Place, was the famous League against the Emperor *Charles V.* by the Protestant Princes in 1537; whence the bloody War that follow'd was called the *Schmalkaldish War*. It lies 36 Miles S. E. from *Hirschfeld*.

16. *Schwalbach*, a noted Town betwixt *Rhingaw* and the County of *Nassau*, famous for its Medicinal Springs, resorted to by Persons of the greatest Quality from all Parts of the Empire. The chief of them is called *Weinbrunn*, because its Waters have a tart or sour Taste. Their Colour is very clear and ChrySTALLINE: They are impregnated with Vitriol, Salt, Oker, Sulphur, Allum, and Salt-Petre; whence their Operation is observ'd to be various, and almost contrary, being in some Cases Laxative, and in others Restrictive. They cure Disturbances of Rheums, Head-ack, Hardness of Hearing, Bleer'd Eyes, &c. and are sovereign against all Hypochondriack Distempers. The other Fountains of best Note are, 1. *Linden-Brunnen*, the Waters of which are so spirituous, that no Glass will hold them; but if stop'd up close in a well temper'd Earthen Vessel over Night, they taste much stronger of the Vitriol next Morning. 2. The *Kochbrunn*, so called, because this is the only Water in the Village sweet enough to be us'd in Cookery. 3. The *Augustbrunn*, the Waters of which do very much resemble those of the *Weinbrunn* in Taste and other Qualities. 4. The *Grindbrunn*, an excellent Remedy against the Itch and Scabs, but very apt to cause that Distemper in those that drink 'em without it. 'Tis also good against the French Disease, the Running of the Reins, &c. 5. The *Rotelbrunn*, whose Water is chiefly used against Convulsions, and Fits of the Mother. The Nature and Physical Operations of all these Fountains,

have been largely treated on by several German Physicians; but are most accurately describ'd in a Treatise publish'd at *Frankfort* in 1631, under the Title of, *Responsa Medica de Probatione, Facultate & Usu Acidularum & Fonticum Swalbacis susurrantium, à celeberrimis aliquot Medicis ad D. Helvicum Dietericum, &c. Scripta*. They have two more Fountains, which they call *Prodelbrunnen*, that strangely differ from the rest, and indeed from any other Mineral Waters in Europe. Out of both, the Steams of Vitriol, Sulphur, and other Minerals, rise with such Vehemency and Force, that they are ready to choak any Man that holds his Head over them. They seem to boil continually; tho' the Waters are so cold, that the Burgers usually cool their Wine in them during the Summer. One of 'em throws out its Streams now and then with that Force, that in a few Minutes it empties it self so, as not to recover its usual Quantity of Water in some Days; which sudden Evacuation is said to proceed from an extraordinarily violent Eruption of subterraneous Spirits; which sometimes burst out like a Storm or Whirlwind. Not far from hence there was, not many Years ago, a famous Cellar, in which, if one let down a Dog or any other Creature, the sulphureous Vapours issuing from all Parts of it, would immediately take away its Breath, and stifle it. In this Condition 'twould lie as dead for some Hours; but when exposed to the fresh Air, would by degrees recover its Strength and Senses. It lies 12 Miles N. W. from *Mentz*, and 26 W. from *Frankfort*.

17. *Embs*, in the County of *Dietz*, noted for its Baths, preferable, according to some German Physicians, to those of *Wiesbaden* in the County of *Nassau*. *Weigelius* publish'd an Account of those Baths at *Frankfort* in 1627, and informs us, they are all built square, and so contriv'd, that the Water us'd in the Day is drawn off at Night, and succeeded by fresh Water next Morning. They are impregnated with Vitriol, Allum, Iron, and Sulphur, are good against natural Weaknesses in the Thighs, Legs, Arms, and other Parts, give present Ease in the Gout and Cramp, help Shortness of Breath, Obstructions in the Breast and Stomach, and are an approved Medicine for all Diseases curable by Bathing. The chief

Bath here was built by the Prince of *Hesse-Darmstadt* in 1583.

18. *Fulda*, the Metropolis of a Country, called by the *Germans*, *Buchen*, and by the *Latins*, *Fagonia*, because anciently a Wilderness of Beech-Trees, but now improv'd into a rich Province. 'Tis by some reckon'd Independent, by others Part of *Hesse*, and by *La Forrest* Part of *Wetteravia*. It takes its Name from the River on which it stands, 15 Miles S. from *Hirschfeld*, and 30 S. W. from *Marpurg*. 'Tis noted for an Abbey of *Benedictines*, founded by *St. Boniface* in 744, and afterwards richly endowed by succeeding Emperors. The Abbot is a Prince of the Empire, sits at the Emperor's Feet in all General Diets, and depends immediately on the Pope, to whom he pays some Tribute after his Election; and he is First Chaplain to the Empress. The great Church dedicated to *St. Boniface* is a stately Pile of ancient Architecture. The Monks have 3 MSS. one of the New Testament compleat, the 4 Evangelists distinct, and a Treatise on the Trinity; all said to be writ by *St. Boniface*, in a Character much different from any now in use. They had formerly a rich Library, well furnish'd with MSS. of all sorts, perused by the learned Antiquary *Flaccius*; but it was much embezzel'd during the Civil Wars. *Buwerius* writ a Treatise of the Antiquities of this Place, and of the Casualties which have befallen it, publish'd in 1612.

Other Places of Note in the Abbot's Jurisdiction are, 1. *Hamelburg*, said to be built by *Amalia*, *Charlemagne's* Sister. 2. *Geisa*, a pleasant Town, 16 Miles N. E. from *Fulda*. 3. *Brucknaw*, 12 Miles S. from *Fulda*, subject formerly to 4 Noblemen, Lords of the neighbouring District. 4. *Hunfeld*, a Market-Town 7 Miles N. E. from *Fulda*.

W E T T E R A V I A,

TAkes its Name from the River *Weter*, and contains the Country betwixt *Hassia* and the *Rhine*. That Part of it which lies towards the Bishoprick of *Cologne* and the Dutchy of *Berg*, is called *Westerwald*. It contains the Counties of *Budingen*, *Hanaw*, *Westerburg*, *Nassau*, and *Wiesbaden*, the Lordship of *Jostein*, the County of *Dieft*, the

Principality of *Hadamar*, the Lordships of *Beilstein*, and the Counties of *Sigen*, *Dillenburg*, *Weilburg*, and *Solms*, with the Imperial Towns of *Frankfort*, *Gelnhausen*, *Fridberg*, and *Wetzlar*. *Sanfon* reckons *Wetteravia* to be a Part of *Hesse*. That Family possesses Part of it; but the rest is enjoyed by other Princes; of which, in their proper Place.

This Country, according to *Moll*, is from S. E. to N. W. 105 Miles long, and 50 where broadest. *Dr. Nicholson* says, some derive the Name from the *Wedreuii*, its ancient Inhabitants; but without good Authority. It abounds with Corn and Wine, and other Necessaries for Profit and Pleasure, as much as most of the other Provinces on the Banks of the *Main* and *Rhine*.

The chief Places and Towns in it are,

I. The County of H A N A W.

The City of this Name lies, according to *Sanfon*, 12 Miles E. from *Frankfort*; but *Moll* makes it 15. 'Tis divided into the Old and New Town by the River *Kintz*, both encompassed with good Walls, and other Fortifications. The Situation is pleasant, the Town well built, and the Streets regular and uniform. 'Tis much frequented by Merchants of several Nations, particularly by the *French* and *Dutch*, who are allowed Churches, and the Liberty of Religion here. *La Forrest* says, they had Counts of their own, who fail'd about the End of the 14th Century, and were succeeded by the Family of *Lichtenberg*, who possess some Lands in *Lower Alsace* and the *Suntgow*. 'Twas twice taken, in 1631 by the *Swedes*, and in 1658 by the Imperialists; but not without Stratagem and Treachery. The County has *Fulda* on the N. Part of the Bishoprick of *Mentz* on the S. *Budingen* on the W. and *Reineck* on the E. is about 40 Miles long, and 15 where broadest.

II. B U D I N G E N,

On the River *Some*, 5 Miles N. from *Hanaw*: 'Tis a neat City, with a fine Castle, Capital of its County, which is about 20 Miles long, and 9 broad. 'Tis also called the County of *Upper Issemburg*, has *Solms* on the

the W. *Hanau* on the E. *Fulda* on the N. and *Nassau* on the S. The Counts of this Place had formerly their Residence at the Castle of *Ronenburg*, a noble old Fort near the Imperial Town of *Gelnhausen*.

III. The County of N A S S A U:

In Latin *Nassovia*, and *Nassgavia*, which signifies a wet or moist Country. 'Twas formerly of small Extent, but of late Ages became a considerable Principality, by the Accession of the Counties of *Weilburg*, *Idstein*, *Wiesbaden*, *Dillenberg*, *Beilstein*, *Gleilberg*, *Sigen*, *Hadamar*, &c. and under this Notion is usually called, The County of *Nassau Katzenellenbogen*. Taken in this Extent, it has *Westphalia* on the N. Part of the *Palatinate*, and of the Electorate of *Mentz*, on the S. the Landgraviate of *Hesse* on the E. and Part of the Dutchy of *Bergs* on the W. but lies so intermix'd with the Dominions of other Princes, that 'tis not easy to give the Dimensions of it. Dr. *Nicholson* says, each of these Counties, into which 'tis divided, are discernable by their different Soil and Product: In general, they yield good store of Hay, but little Corn. The County of *Dietz* is hard and hilly, has store of Venison, good Corn, and some Wine. The County of *Westerwald* has Plenty of fat Pasturage, breeds many large Cattle, and yields great Quantities of Cheese, as good as the best in *Holland*. In several Parts of *Sigen* and *Dillenburg*, they have good Mines of Iron, Lead, Copper, and other Metals; and at *Frudenberg*, they make as much Steel as furnishes most of the Empire. The County of *Nassau* was made a Principality by *Ferdinand II.* in 1653.

The Family of Nassau.

THE *Atlas Historique* has a large Genealogical Tree of this Family, and observes, that for Antiquity, it yields to none in the Empire: And that from Memoirs writ and preserved by its Counts, he is informed, that two Brothers, Counts of *Lebarten*, follow'd *Cesar* in his Conquest of the *Gauls*, who, as a Reward for their Service, gave them Part of the *French* County; and from hence they carry in their Arms

a *Lion Or.* in a *Field Azure*, sprinkled with little Bills or Tickers *Or.*

Those Princes began to build a Castle on the River *Lohn* in *Westeravia*, called *Lebarten*; and their Successors built another called *Luxemburg*, of which those Counts afterwards carried the Name. One of those Princes, in Remembrance of a Hunting-Match, which yielded him a great deal of Pleasure, built the little Town of *Nassau*, which afterwards gave Title to his Successors. He adds, that some Authors write, That a *Roman* Lord, called *Theodosius* of *Lo-peran*, having built some Castles in the County of *Nassau*, while the Emperor *Severus* was at *Mentz*, the Count complained of it to that Emperor; and in order to take away the Difference, *Theodosius* gave his only Daughter in Marriage to the Count of *Nassau*. He says also, That the Town of *Nassau*, which gave Name to the Principality, was formerly a considerable City, which is easy to be perceiv'd by the admirable Monuments still about it, such as the Remains of Publick Ways, Cirques, Aqueducts, Triumphal Arches, &c. About the Year 700, there was a Prince called *Theofret*, who reign'd in this City, and was succeeded by a Son of the same Name: And some Time after *Charlemagne*, there was one of those Princes call'd, *William with the short Nose*, the First, whose Successors can be exactly distinguished; and with him he begins the Genealogies of the Princes of *Orange*, which we shall take Notice of, after a short Account of what he says of the Genealogy of the Counts of *Nassau*. The first he mentions is *Walrave*, who married *Helen*, Daughter to *John* Count of *Ardenne*; but does not say what Time. He names 16 of his Successors, who all married into great Families; and the last of the 16, whom he calls *Walrave I.* married the Emperor *Henry III.*'s Niece. From him proceeded the Branch of *Nassau Guelderland*, whose Male-Issue fail'd, after 9 Descents, about 1371; and the Heiress *Mary* carried *Guelderland* to her Husband *William Duke of Juliers*. From *Walrave I.*'s 2d Son, called *Walrave II.* after 5 Descents, came the Branches of *Nassau Wiesbaden*, and *Nassau Dillenburg*, from *Henry II.* call'd *The Rich*, and his Wife the Countess of *Nassau Guelderland*, about the Year 1254. From the Branch of *Wiesbaden*, proceeded *Adolph* Count

Count of *Nassau*, who was chosen Emperor in 1292, and kill'd at the Battle of *Spire*. In 1298. From his Son *Gerlock* proceeded the Branch of *Wilburg*, about 1371, whose present Prince, *John Ernest*, is General of the *Palatine Troops*, and Governor of *Dusseldorp*. From *Lewis*, the 8th of this Branch, proceeded that of *Nassau Idstein*, whose present Prince is *George Augustus*. From *William Lewis*, eldest Son to the said *Lewis*, proceeded the Branch of *Orweiler*, whose Prince is *Frederick Lewis*. From the said *William* proceeded also the Branch of *Saarbruck*, whose Prince is *Gustavus Adolphus*. From him also proceeded the Branch of *Ufingen*, whose Prince is *William Henry*. The Branch of *Dillenburg*, which proceeded from *Henry the Rich* above-mentioned, after 8 Descents, produc'd the first Branch of *Nassau Orange*, which ended in *Rene* Prince of *Orange*, who died in 1544, and left his Cousin *William I.* of *Orange* his Successor in 1544. From *William Walgraw*, of the Branch of *Dillenburg*, came the 2d Branch of *Nassau Orange*, which, after 4 Descents, ended in *William III.* of *England*, and *II.* of *Scotland*, of Glorious Memory. From *William Walgraw* above-mentioned came *John* of *Nassau*, his Son, who establish'd the Protestant Religion in his Dominions, and died in 1606. From him proceeded the present Branch of *Nassau Dillenburg*, whose Prince, after 5 Descents, is *William*, born in 1670, and married to *Jane* of *Holstein Norburg* in 1698: *John* above-mentioned had a Son, from whom came the Branch of *Nassau Sigen*, whose Prince, after 3 Descents, is *William Hyacynthe*. From another of the Sons came the Branch of *Dietz*, whose present Prince is *John William Friso*, Prince of *Nassau Dietz*, and Stadtholder of *Friseland* and *Groningen*, born in 1687. From another Son of the said *John* proceeded the Branch of *Hadamar*, whose present Prince is *Francis Alexander*, born in 1674, and married to *Elizabeth* of *Hesse Roderberg*. From *Lewis Henry* of *Dillenburg*, Grandson to *John* above-mentioned, came the Branch of *Nassau Schawmburg*, whose Princess, *Ernestine Charlotte*, being the 2d of the Branch, married *William Maurice* of *Nassau Sigen* in 1662.

We come now to the Genealogy of the Princes of *Orange*, which the *Atlas* begins with *William* above-mentioned, who mar-

ried *Guiseburg*, a Princess of the *Saracens*, and afterwards *Guncbonda*. This Prince, according to the *Atlas*, was Son to *Theodoric* Prince of *Bourg*. From him he names 25 Successors, Part of whom he calls the First Branches of the Princes of *Orange*, or the Branch of *Baux Orange*, because they married into the Family of *Baux*; the Heiress of which Family married the Prince of *Chalons Orange*, which was united by Marriage to the First Branch of *Nassau Orange*; whose Male-Issue failing in *Rene* above-mentioned, they were succeeded by the Second Branch of *Nassau Orange*, as has been said already: But we refer the History of the great Princes of this Family of the Second Branch, till we come to the Account of *Holland*; and shall only take Notice, that even *La Forrest*, in his Historical Geography, owns, that this Family has been fruitful in great Men; and that *Cluverius* calls them the Ornament of *Wetteravia*, and the Glory and Support of the United Provinces. *Dr. Nicholson* observes very justly, That the Princes of *Nassau* have in all Ages been observ'd to be great Asserters of the People's Liberty, and ready on all Occasions to assist such as were brought under a Yoke of Tyranny: A Temper which most of their Neighbours have commended as Great and Generous, tho' others have as much decry'd it as Seditious and Rebellious; but this must be observ'd to proceed only from such as have either been Tyrants, or Abettors of Tyranny; and for this generous Temper, *Adolph* of *Nassau* was elected Emperor; tho' the Treachery of the Archbishop of *Mentz*, and others made his Reign short and unsuccessful.

The Counts of *Nassau* have ever enjoy'd as large Privileges and Immunities as any other Princes of the Empire, being always immediately subject to the Emperor, and refusing to pay Homage to any inferior Prince; and hence have always enjoy'd the Royal Prerogative of coining Gold and Money in their own Name. Some ancient Pieces of Gold, still current in the Empire, are a manifest Proof of this; on one Side of which we read, *Moneta Seigen*; and on the other, *Joh. Comes de Nassau*.

The Titles of the Princes of this Family are, Princes of *Nassau*, Counts of *Catzenellebogen*, *Vianen*, *Dietz*, *Limpurg*, and *Bronckhorst*, Lords of *Beilstein*, &c. Those

These of *Nassau Dietz*, add Princes of *Spiegelberg*, Lords of *Liesfeld*, &c.

The Titles of the Counts are, *Nassau Saarbrück*, and *Saarwerden*, Lords of *Lahr*, *Wiesbaden*, and *Idstein*, &c.

The Arms of the Princes of *Nassau* are, 1. *Azure*, sprinkled with *Billets Or*, a *Lion* of the same langued, for *Nassau*. 2. *Or*, a *Lion Gules*, crown'd and langued *Argent*, for *Catzenellebogen*. 3. *Gules*, two *Fesses Argent*, for *Vianen*. 4. *Gules*, two *Lions Or*, Leopard-wise, for *Dietz*. 5. *Argent*, a *Lion Gules*, crown'd *Argent*, for *Limpurg*. 6. *Gules*, a *Lion Argent* crown'd, for *Brockhorst*. 7. *Or*, two *Lions Gules* Leopard-wise, for *Wisch*. 8. *Gules*, three *Bossants* or three Pieces of *Coin Or*, 2d and 3d, for *Borcheloch*. The Helmets are, 1. *Or*, surmounted with two *Wings Sable*, for *Dietz*. 2. *Or*, surmounted with a *Peacock's-Tail Vert*, with a *Lion Gules*, for *Limpurg*. 3. *Or*, surmounted with two *Wings Sable*, and a *Lion Or*, for *Catzenellebogen*. 4. *Or*, surmounted with two *Horses Feet*, one *Or*, and one *Gules*, for *Wisch*. 5. *Or*, surmounted with two *Wings Sable*, a *Bend Argent*, for *Vianen*. 6. *Or*, surmounted with two *Horses Feet*, for *Brockhorst*.

The Arms of the Counts of *Nassau* are, 1. *Azure*, sprinkled with *Crosses Argent*, and a *Lion* of the same crown'd, for *Saarbrück*. 2. *Sable*, a *Spread-Eagle Argent*, for *Saarwerden*. 3. *Or*, a *Fesse Sable*, for *Meurs*. 4. *Or*, two *Lions Gules* Leopard-wise, for *Weilnau*. 5. *Azure*, sprinkled with *Billets Or*, a *Lion* of the same langued, for *Nassau*. 6. *Vert*, sprinkled with *Crosses Argent*, and a *Cross Or* Saltire-wise, for *Mechrenburg*. 7. *Or*, a *Lion Sable* langued, for *Mahlberg*. 8. *Or*, a *Fesse Gules*, for *Lahr*. The Helmets are, 1. *Or*, surmounted with a *Square*, embroider'd with *Crosses Argent*, on a *Cross Or*, for *Mechrenburg*. 2. *Or*, surmounted with a *Wolf's-Head Or*, with a *Collar* and *Points Argent*, for *Saarwerden*. 3. *Or*, surmounted with two *Wings*, part *Sable*, and part *Argent*, for *Saarbrück*. 4. *Or*, surmounted with a *Lion Or* crown'd, having on the Sides two *Buffalo's-Horns* blue, for *Nassau*. 5. *Or*, surmounted with two *Wings Sable*, for *Weilnau*. 6. *Or*, surmounted with a *Man clad Or*, surmounted with a *Bend Azure*; and instead of Arms, 2 *Buffalo's Horns* Bend-wise, *Azure*, for *Lahr*. 7. *Or*, surmounted with a *Buckler Or*, charg'd with a *Lion Sable*, for *Mahlberg*.

The Dominions of the Princes of *Nassau*, the Branch of *Sigen*, *Sigen* and its District. The Branch of *Dillenburg*; 1. *Dillenburg* and *Schwaburg*. 2. The County of *Holtzappel*. The Branch of *Dietz*; 1. *Dietz*. 2. The County of *Spiegelberg*. The Branch of *Hadamar*. *Hadamar* in *Weiteravia*.

The Dominions of the Counts of *Nassau* are, 1. The County of *Saarbrück*. 2. The County of *Saarwerden*. 3. The County of *Bockenheim*. 4. The County of *Wieberfelsler*. 5. The Provostship of *Herbstein*. 6. The Lordship of *Lahr*. 7. The Lordship of *Mahlberg*. 8. The Fort of *Homburg*. 9. The County of *Hanaw*. 10. The County of *Wülburg*. 11. The County of *Idstein*. 12. The County of *Wiesbaden*. 13. The County of *Uffingen*. 14. The County of *Gleichberg*. 15. The County of *Mechrenburg*. 16. The County of *Widen*. 17. The Town of *Schwalbach*. 18. Of *Kirchberg*. 19. Of *Kirchheim*. 20. Of *Stauf*. 21. *Ottweiler*.

The Town of *Nassau*, from whence this County takes its Name, is a small City with a Castle on the River *Lahn*, about 12 Miles S. E. from *Coblenz*, and was the usual Seat of the eldest Branch of this Illustrious Family.

Wiesbaden, the Metropolis of a County of the same Name, belonging to the Branch of *Nassau Saarbrück* we have describ'd already in the County of *Hesse*.

Idstein, Capital of a Barony, belonging to the same Branch, is a large Town, 20 Miles S. E. from *Nassau*.

Dietz or *Dieß*, lies on the River *Lahn*, 10 Miles S. E. from *Nassau*; has two fine Castles on Rocks, is Capital of a County, and belongs to a Branch of the Family of *Nassau*. It had formerly a Collegiate Church, subject to the Elector of *Treves*; but since the Reformation, the Revenues have been applied to the University of *Herborn*.

Hadamar, on the *Elße*, lies on the Confines of the Electorate of *Treves*, 20 Miles N. from *Mentz*, and gives Title to a Prince of the Family of *Nassau*.

Beilstein, a large Town, among rocky Hills, Capital of its Lordship. It lies 22 Miles N. E. of *Nassau*, and gives Title of Count to a Branch of the Family. The Castle and Church are worth a Traveller's View.

Sigen, a small City with a Castle, on a River of the same Name, upon the Top of a rocky Hill, defended by a strong Wall, and regular Fortifications, is the Capital of its County, lies 30 Miles towards the N. E. from *Nassau*, and belongs to a Branch of the Family. 'Tis thought to be *Ptolomy's Segedunum*, which agrees well enough with its Situation. Near the Town there's a noble Iron Mine, with Furnaces and other Necessaries for working and cleansing that Metal. In 1559, the Prince's *Pedagogium* was brought hither from *Herborn*, and in a little Time became so famous, that 'twas frequented by Students from most Parts of *Germany*, *Poland*, *Liesland*, *Denmark*, &c. To which there was added, an Academy for training up Youth in Martial Exercises; a Foundation very well agreeing to the War-like Disposition of the House of *Nassau*.

Dillenburg, Capital of its County, lies 32 Miles N. E. from *Nassau*, is a Town of good Trade, has two Annual Fairs, and a strong Castle on the Top of an Hill, and is the Residence of that Branch of the Family of *Nassau*. In their Arsenal, they have Arms and Ammunition for some Thousands of Horse and Foot, and the Jaw-Bone of a monstrous Fish, caught near *Carwick*, well worth a Traveller's Sight. The chief Trade of this Town consists in Cattle and Wood.

Herborn, about 3 *English* Miles below *Dillenburg*, on the same River. 'Tis noted for an University of good Repute, and is fam'd for the Education of of *John Piscator*, *Matthias Martinus*, *John Althufius*, *George Pasor*, *Henry Alstedius*, and several others. In the Castle, they have a handsome Library, well furnish'd with printed Books in all Faculties. The University was endowed with the Revenues of Monasteries at the Reformation. The Trade of this City consists in Cotton and Woollen Cloth.

Weilburg, a large Town, Capital of its County, belonging to the Branch of the Family of *Nassau Saarbruck*, lies betwixt the County of *Solms* and the County of *Beilstein*, about 35 Miles E. from *Nassau*.

Solms, Capital of its County, that belongs to a Branch of the Family of *Nassau*, which is divided into those of *Brownfels* and *Lich*; and the former has another Branch called *Gressenstein*. It lies 15 Miles S. W.

from *Marburg*, and 35 N. from *Frankfort*. The usual Residence of the Count is the Castle of *Brunfels*, 15 Miles S. from *Solms*.

Wetterburg, a large Town, defended with a good Castle. 'Tis Capital of its County, and lies in the most Westerly Part of *Wetteravia*, 33 Miles N. from *Mentz*, and 11 S. from *Sigen*. The Family of its Counts is divided into the Branches of *Wetterburg* and *Linange*.

Lich, on the *Weter*, in the S. E. Part of the County of *Solms*. It lies 8 Miles N. E. from *Fridberg*, and gives Title to a Branch of the Family of *Solms*, who possess some Lands in the Country of *Lusatia*, *Wiesbaden*, in the most Southerly Part of the County of *Nassau*, is Capital of a Principality of the same Name, and belongs to the Branch of *Nassau Saarbruck*. Some take it to be the *Mattium* of the Ancients: tho' others, with more Reason, give that Honour to *Marburg*. 'Tis a large Town, about 8 Miles N. from *Mentz*, on the other Side the *Rhine*, and is certainly very ancient, as appears by the old Walls round the Town, which the *Germans* call *Heathen*, an Epithet they usually give to any thing which they think of an older standing than Christianity. 'Tis chiefly noted for its famous and healthful Baths, from whence it derives its Name. The Waters by the Taft appear to be impregnated with Sulphur, Salt, Allum, and Salt-Petre; but the first has the Ascendant, and makes the Waters of those Baths the hottest of any in these Parts of *Europe*, next to those of *Carlsbad* in *Bohemia*, and some in the *Black Forrest*. Several *German* Physicians have writ an Account of their Operation and Vertues.

The Imperial Towns in *Wetteravia*.

1. *Frankfort am Main*. Some derive the Name from *Francus*, the first Leader of the *Franks*, who they say founded it, but without good Authority. Others derive it from a Ford on the *Main*, by which the *Franks* use to make their Incursions upon the *Saxons*; and to defend the Passage, built the Town. 'Tis divided into Two Parts by the River *Main*. That on the N. Side is called *Frankfort*, and that on the other *Saxenhausen*, because founded, as 'tis suppos'd, by the

the *Saxons*. They are united by a Stone Bridge of 13 or 14 Arches, and subject to the same Magistrates. 'Tis well fortified with 11 Bastions, large and deep Ditches, and Counterescarps, with other Outworks; which tho' they have some Defects, considering the Exactness of the Modern Fortifications, this is in some Measure repaired by the Conveniency of its Situation in a low Country. The City is large, populous, rich, and drives a considerable Trade by the *Main*, *Rhine*, and several other Rivers which fall into 'em. They have two great Annual Fairs in *March* and *September*, frequented by Merchants with all sorts of Commodities, especially Books from most Parts of *Europe*, and publish Annually a Catalogue of such as are or will be brought thither; so that there's a greater Choice of Books here than in any Town in *Christendom*, during their Mart, which lasts 3 Weeks, but at other Times the Booksellers have but little Business. *Misson* says, they have 3 Annual Marts; but after the Fairs are over, *Monconys* tells us, That most of the Shops of the Foreign Merchants who come thither are shut up, and their Names writ over the Arch before their Doors. Most of the Streets are large, except two or three, which are full of Merchants Shops. The Houses are built either of red Stone, or of Wood plaster'd and painted, or cover'd with Slates. On the N. Side of the City, they have a spacious Horse-Fair, where a vast Number of good Horses are Annually bought and sold. *St. Bartholomew's Church* in this City is a venerable and stately Piece of Architecture. 'Twas built by *Pepin*, Father to *Charlemagne*. Here the Emperor is elected; for the Ceremonies of which, we refer to what we said, P. 506. *Monconys* says, the Town-House is no extraordinary Structure; that the Hall in it, where the Emperor, Electors, and Princes, meet in Council, has, besides the Throne, only some Benches cover'd with green Cloth, and some sorry Pictures; that the great Hall where they have their Entertainment is not very regular; that there's a great Square belonging to it, where at this Solemnity they roast an Ox, and thither one of the Electors comes in Person for a Piece of Beef, which he carries to the Emperor. Another goes to the Fountain in the middle of the Square, which on that

Occasion runs with Wine, and carries it to the Emperor: Another takes a Measure of Oats in the same Square, which he likewise carries to the Emperor: And another distributes in this Square, Pieces of Money, Medals, and other Things, after the Coronation. He adds, That Count *Papenheim* stands with his Sword drawn before the Place in the *Sacristie* or Vestry, where the Electors are shut up, to prevent their coming out, until they have finished the Election. In this City the Emperor has a Palace call'd the *Braunfeld*, which is a Mansion-House belonging to the Knights of the *Teutonic Order*, which, with the Port, the Fortrefs, the Bridge betwixt two Towers, the Bridge over the *Main*, which is 400 Paces long, and the Houses of several Noblemen, are the chief Ornaments of the Town. *Misson* says, That in the Apartment in the Town-House, where the Ceremonies of the Election are performed, the Original of the Golden Bull is preserved; That this Apartment is hung only with Tapestry, furnished with some Elbow Chairs of black Velvet, and a large Table with a green Carpet. This City is Imperial, and govern'd by its own Magistrates, who are, a Prætor, (as *Mr. Ray* informs us) 12 Burgomasters, 14 Eschevins or Aldermen, and 42 Counsellors. The Senate is divided into three Benches; the first is that of the Eschevins, the 2d of that called the *Literati* or Learned, and the 3d is of Tradesmen. When a Vacancy happens in the first Bench, 'tis supplied out of the 2d; the 3d never rises higher. The Senate chuses Annually two Burgomasters out of their own Number. The *Jews*, who are very numerous here, have their peculiar Quarters assign'd them, from whence they are not to stir in the Night-time: They are obliged to wear a Piece of yellow Cloth, to distinguish them from the other Inhabitants; and are forc'd to carry Water when Fire happens in any Place of the City, and do other sorts of Drudgery. The Magistrates, and most of the Inhabitants, are *Lutherans*, and have 5 Churches. The Papists are allow'd their Worship, have the Cathedral, two Convents for Men, and one for Women; but are not to make any publick Processions. The *Jews* are also allowed a Synagogue; but the *Calvinists* have their Church

at *Bochenheim*, about a League from the Town, and are obliged to marry, and to have their Children baptiz'd in the *Lutheran* Churches. There are several noble Fountains in the Town, and three in the Market-place. This City was noted for giving Refuge to the *English* Protestants, who fled from hence in the Days of *Queen Mary*, where they were countenanc'd by the Magistrates, and liv'd in very good Harmony, until, upon the Arrival of some more from *England*, who were zealous for the Ceremonies and Liturgy, they differ'd among themselves about those Things; and the latter insisting upon bringing their Worship to a Conformity to the Liturgy and Ceremonies, the Divisions grew to a great Height; and those that were for the Ceremonies, having accused *Mr. Knox* and others, who were for the Order of *Switzerland* and *Geneva*, which they had establish'd among themselves when they first planted there, of Disloyalty to the Emperor and House of *Austria*, because he had writ against *Queen Mary*, in a Book wherein he oppos'd Government by Women, and spoke sharply of the *Austrian* Persecution; he and his Followers were obliged to retire; the Magistrates who were their Friends being afraid of incurring the Emperor's Displeasure, if they should have protected them any longer. These Divisions gave great Offence to Foreign Protestants, and increased the Animosities which had been begun betwixt the two Parties in *Edward VI.*'s Time, and 'twas hop'd had been extinguished by the Blood of the Bishops, *Latimer* and *Hooper*, who had been the Chief of the contending Parties; but were reconcil'd when they came to suffer in *Queen Mary's* Reign; at which Time *Latimer* own'd his Weakness in those Differences, as *Fox* informs us in his *Acts and Monuments*. The Curious may see the whole Story of these unhappy Controversies in a Book, intituled, *The Troubles of Franckfort*; *Fuller's Church History*; and, *The Book of Martyrs*. The *English* Church, built here during that Time, is fallen much to Decay; and that called the *English* House, is now turn'd to a Storehouse. This City was one of the first which demanded the free Exercise of the *Lutheran* Religion; the Refusal of which, in 1522, occasioned them to set aside their Magistrates, and chuse others; and in 1530, the

Augsburg Confession was established here. There's a Monument to be seen over one of the Gates of this City, of a notorious Crime committed by 3 *Jews*, for which they were tied up in Sacks, and thrown into the *Main*. There are divers Springs and Mineral Baths belonging to this City, which are much frequented; and among others, there's a cold Bath, in which, *Zeiller* informs us, they used to wash Women when they went to be married, and as soon as their Month was over after Child-bearing.

The Territory of this City, which is subject to the Magistrates, has the Landgraviate of *Darmstat* on the S. *Wetteravia*, properly so call'd, on the N. the Archbishoprick of *Mentz* on the W. and the County of *Hanaw* on the S. The People of this District live chiefly by planting Vineyards, and making Wine. The Soil is cover'd with Woods or Vineyards, and has little Arable Ground. The Citizens are very neat in their Apparel, and, with those of their Territory, do still retain the Character of a stout and hardy People. The City lies in Long. 15. Lat. 50. 8. 20 Miles E. from *Mentz*, and 23 W. from *Hanaw*.

La Forrest says, the Citizens enter'd into the League of *Smalcald*; but were obliged to open their Gates to the Imperialists in 1547, and received the *Interim* the next Year. *Gustavus Adolphus* enter'd this City without Resistance in 1630, and the *Swedes* kept Possession till 1634. He says, the Magistrates are chosen from among the Nobility, but named by all the Corporations of Tradesmen, except the Tailors, because one of them was chief in the Revolt against their Magistrates in 1525, for refusing them the Freedom of their Religion. In that Part called *Saxenhausen*, Debtors have a Sanctuary for 14 Days in the House belonging to the *Teutonic* Order.

The 2d Imperial Town in *Wetteravia* is *Gelnhausen*, on the River *Kintz*, which has nothing remarkable but only its Rank. Before the Civil Wars, it was a fair City, beautified with many Palaces, and has still some Publick Structures, which look well; but most of the Citizens Houses are very mean, and themselves so poor, that 'tis scarcely able to keep up its Rank. It lies in the County of *Hanaw*, about 12 Miles N. E. from the City of that Name.

3. *Friedberg*, a rich Imperial City, at the Foot of the great Ridge of Hills called by the Germans, *Die-Höhe*, about 15 Miles N. E. from *Frankfort*, and 16 N. W. from *Hanaw*. It has many large Privileges granted them by *Frederick II.* and other Emperors, who honour'd this Place with their Residence for some Months in the Year. The Annual *Lent Fair*, now held at *Frankfort*, was formerly kept here; but, at the Request of the Merchants, was transported thither, for the Convenience of carrying their Goods by Water; in lieu of which, *Friedberg* had 4 Annual Fairs allow'd them, which keep up the Trade of the Place. The 3d of them they keep on the first Sunday after *Trinity*, which was first occasioned by their Anniversary, in Remembrance of the Dedication of their Church, which brought Pedlars thither with Toys; but at last came to a substantial Trade.

4. *Wetzlar*, near the Mouth of the *Dille*, 12 Miles N. W. from *Friedberg*. 'Tis an ancient City, but has nothing remarkable save the great Church, which makes a good Figure at a Distance. It suffered much by Fire in 1643, and is now noted for the Imperial Chamber, which was transported hither from *Spire*, when that City was destroyed by the *French*. The Provostship of the Town belongs to the Prince of *Hesse-Darmstadt*, who appoints the Mayor to do Justice in his Name.

Dr. *Nicholson* mentions the other following Towns in *Wetteravia*.

1. *Butzbach*, a neat small City, at the Foot of the *Höhe*, a Ridge of Hills, that begin at the Monastery of *Louch* on the *Rhine*, separate *Rhingaw* from *Catzellenbogen*, and extend as far as this City, &c. *Martellinus* says, the ancient Inhabitants were the *Bucinobantes*, from whom this Town had its Name. Near the Road betwixt this Town and *Gießen*, there are Ruins of old Walls and Forts, in which are sometimes found ancient Medals and Coins, that shew *Attila* and his *Huns* to have encamped in these Parts. There's a fair Castle in this City, where the Counts of *Solms* formerly resided. Here they had a good Library, with MSS. writ by *Gabriel Biel*, Provost of the Collegiate Church of *St. Mark*. On the neigh-

bouring Hills grows a strong and palatable Wine, that formerly brought their Prince a considerable Revenue. They had also Mines of Lead and Iron, which have fail'd of late.

2. *Mintzenberg*, a small Town near *Butzbach*, that formerly gave Title to a Count, who dwelt in the Castle that's now in Ruins. This Family was extinguish'd in 1250, and their Lands shar'd among the neighbouring Counts.

3. *Hain*, formerly subject to the County of *Mintzenberg*, but now Part of *Hanaw*. In this old Town, there are the Remains of a Square, and a round Tower. In the Wall of the former, there's a venerable Monument, which shew it to have been the Work of some Roman Commander.

4. *Ortenburg*, betwixt the County of *Nidda* and *Hanaw*, formerly a Place of Note, the Lords of it being Proprietors of the neighbouring Country. 'Tis now reduced to a Village, some neighbouring Monasteries and Places having been built of its Ruins.

5. *Ilmsstadt*, a famous and rich Monastery of *Augustine* Monks, in the very Heart of *Wetteravia*, and the best Soil of the Country. 'Twas anciently called *Elofsstadt*, and founded in 1075. During the Civil Wars of Germany, 'twas for some Time the Head Quarter of the Imperialists and *Bavarians*, and furnish'd them with sufficient Accommodations and Provisions.

The Circle of the LOWER RHINE.

WE formerly mentioned that Part of the Lower Palatinate belong'd to this Circle, and have already describ'd it. We come now to

The Electorate of MENTZ.

THIS Elector's Dominions being dispers'd in different Provinces of the Empire, viz. the Landgraviates of *Hassia*, *Thuringia*, the Counties of *Waldeck*, *Wetteravia*, and other Places, there's no exact Account to be given of the Boundaries of his Territories; but we shall treat of 'em in particular as they come before us. For the Privi-

leges and Offices the Elector holds in the Empire, we refer to p. 500, &c. where we treat of the Origine of the Electors, of the Election of the King of the Romans, and the Privileges of the Electors: To which we shall add, from the Ancient and Present State of Germany, That this Elector is High Chancellor of the Empire, and by Consequence, the second Person in it; Perpetual Dean of the Electoral College, Guardian of the Archives and Matricula, Visiter of the Aulic Council, of the Chamber of Spies, and all the other Courts of the Empire. All Foreign Princes and States direct to him what Propositions they make to the Empire, and to him the Princes and States of Germany make their Complaints, when they would have Grievances redressed: But notwithstanding all those Dignities, the Revenues of his Electorate don't exceed 7000 Crowns per Annum; though some say, His whole Revenues otherwise make about 100000 l. per Annum. He has to assist him in his Government, a Privy-Council, a Chamber of Justice, and Military Government of Towns and Forts.

Some German Antiquaries pretend, That this Bishoprick was founded by *Crescens*, whom *St. Paul* mentions to have gone from him into *Galatia*, 2 Tim. 4. 10. and that having preached in these Parts for 23 or 24 Years, he was martyr'd near this City, and his Corps buried in *St. Hilary's Church*, and from thence removed to that of *St. Albans*. Their Annals name a great many of his Successors, who were also Martyrs, but without any good Authority; since the best German Writers make *Worms* the more ancient Bishoprick, of which this was only a Suffragan till 729, that *Pepin* and Pope *Gregory III.* gave *Mentz* the Preference, and made it an Archbishoprick; which 'tis not probable they would have done, had the Bishoprick of *Mentz* been founded so early, and govern'd by such great Men: Soon after 'twas made an Archbishoprick, *St. Boniface*, formerly mention'd, was made their Archbishop, and martyr'd at *Daccum* in *Friezland*, in 755. The first of 'em that was made an Elector, was Archbishop *Willigisus*, who died in 1011, and is said to have been Son to a Saxon Wheelwright; whence 'tis alledg'd, The Electors bear a Wheel in their Arms to this Day.

The Chief Places.

1. *Mentz*, Lat. *Moguntia*; *Prology* calls it *Moconiacum*; and *Tacitus*, *Magentiacum*; and *Antonin's Itinerary*, *Maguntiacum*. In the Time of the Romans, 'twas the chief of their Towns in Upper Germany; and the Seat of their Governour in that Province. Its Name is most probably derived from the River *Main*, at the Mouth of which it lies: Some German Antiquaries say, 'Twas built 1364 Years before our Saviour, by *Nequam*, a Prince of this Country; but this is rejected as fabulous, and the Origine of it ascribed to *Claudius Drusus*, surnamed *Germanicus*, who, *Florus* says, built several Forts on the *Rhine*; and the Situation being convenient for such an End, 'tis probable this was one of 'em. *La Forrest* says, his Tomb is still to be seen there: But *Misson* thinks justly, That 'tis only a Trophy erected to his Memory; because, though he died in Germany, 'twas not near the *Rhine*; and he was buried in the *Campus Martius* at *Rome*: 'Twas ruin'd by *Attila* the Hun, in 451, and rebuilt by *Dagobert I.* of France, in 632. 'Twas very ill treated by the Emperor *Frederick Enobarbus*, in 1158, but rebuilt by the Emperor *Orto IV.* 'Twas formerly an Imperial City, but taken by *Adolphus* of *Nassau* its Archbishop, in 1462; since which, it has been subject to his Successors. Tho' *La Forrest* says, It was subjected to its Archbishops by *Frederick I.* in 1160. *Gustavus Adolphus* enter'd it in Triumph in 1631, and obliged the Citizens to pay 80000 Crowns, as a Ransom for their Lives and Houses: The Jews paid him 18000, and the Clergy 4000 more. He kept his Christmas here, attended by 6 chief Princes of the Empire, 12 Ambassadors, a great many Dukes, Lords, and other Nobles. It was retaken from the Swedes in 1635, but they took it next Year, and kept it till the Treaty of *Munster*. The French took it during the Civil Wars of Germany in 1644, and afterwards in 1688; but it was retaken from them by the Dukes of *Lorraine* and *Bavaria* in 1689. *Bau-drant* says, 'Twas well fortify'd of late, and has a strong and regular Citadel on a Neighbouring Hill. Dr. *Brown* says, The City is well stor'd with goodly Monasteries, Churches, and Publick Buildings, but the Streets

Streets narrow, and the Private Houses built after an antick Manner. *Misson* says, The Elector's Palace is built of reddish Stone, embellish'd with several Ornaments, and is regular and magnificent, tho' built after the old German Manner. In the Cathedral, there are many magnificent Tombs of the deceas'd Electors: The Ornaments, in which the Elector says Mass, are celebrated for their Richness; and the Canopy, under which they carry the Host in Processions, is cover'd all over with Pearl. The Elector has a Chapter of 42 Canons, 24 of which are Capitulars, who have a Vote in electing him, and the rest Domicil'd. They must all be Gentlemen, at least by four Descents, which shews how much they come short of the Humility of their first Elector, who was a *Wheelwright's* Son; and so far from being ashamed of his low Birth, that he not only ordered a Wheel to be put into his Coat of Arms, but painted on the Windows of his Palace and Cathedral. The Protestants are allowed to live here, but have not the Freedom of their Religion. This City boasts of the Invention of Printing, for which they quote the *Nether-Saxon Chronicle*, a Book of great Authority among the Germans, printed here in 1492; but for this, we refer to what we formerly said of the Controversie betwixt them, and the Town of *Harlem*, about this Matter. They likewise claim the Invention of Gun-Powder, which is also disputed with them, and suppos'd to have been found out by our Friar *Bacon*, 100 Years before them, as we mentioned, p. 436. They value themselves likewise on the Defeat of *Varus*, and the Roman Legions near this Place, which may be as well deny'd them, as we shew'd from *Cluverius* before, p. 436. They have an University, which was founded about the Year 800, by *Charlemagne*, but is now of no great Reputation. They have a Bridge of Boats over the *Rhine*, and *Gustavus Adolphus* laid another formerly over the *Main*, which was since taken away. This City lies in Long. 26. 45. Lat. 50. 5. 20 Miles W. from *Frankfort*, and 37 N. from *Worms*.

2. *Bingen*, a pleasant Town on the *Rhine*, 16 Miles W. from *Mentz*, and is subject to the Dean and Chapter of that City. 'Twas mentioned as a Fort and a City by *Tacitus*, *Ammiannus*, and *Ausonius*, and by them cal-

led *Bingium*; but by later Writers, *Bingia*. Here some will have *Drusus* to have ended his Days; and there's a Well in the Neighbourhood, call'd *Druselbrun*, which they think bears the Remembrance of his Name. 'Twas formerly an Imperial City, has a good Stone Bridge over the *Nabe*, and a Castle on a Neighbouring Hill. On an Island in the *Rhine*, near this City, stands the Ruins of an old square Tower, call'd the *Muse-Tower*, because of a Story generally believed in this Country of *Hatto II.* of that Name, Archbishop of *Mentz*, who seeing a Multitude of poor People, that came to beg Bread at his Gate, said disdainfully, They were Rats which eat up the Corn. Upon which he was, by the just Vengeance of Heaven, pursued by Rats and Mice, and fled to this Tower to avoid them; but in vain, for they swam the River after him, enter'd the Tower, and eat him up. Some reject this Story as a Fable; but the Country-People will not hear of its being contradicted, because they look upon it as a just Punishment of that covetous proud Wretch, and alledge several Histories of the like Nature, in Defence of it. *Tritheimius* says, he will neither approve nor condemn it. Dr. *Brown* mentions the Story, with this Addition, That the Archbishop is charg'd with having invited a great Number of Poor, on Pretence of giving them Corn, but instead of that, shut them up in a Barn, to which he set Fire; and when they cry'd out in the Flames, said, *Hear how the Mice-crap*: But we leave the Reader to his own Judgment of the whole.

3. *Elfeld*, a strong Town on the N. Side of the *Rhine*, 15 Miles W. from *Mentz*; adorned with a fair Church and a high Steeple, is the chief Town of the small Territory, call'd *Ringaw*, about 20 Miles long, on the Banks of the *Rhine*. This Country abounds with rich Wine, especially about *Rodesheim*, which is reckon'd the best in that Country. In this Tract lies the stately Monastery of *Erbach*; where many of the old Counts of *Nassau*, and some Archbishops of *Mentz*, lie buried. Dr. *Nicholson* says, The *Ringaw* looks like one entire City, intermix'd with Gardens and Vineyards, being on one Side shut in with the rocky Hills, call'd *Die-Höhe*, upon which they have Watch-Towers to discover the Approach

of.

of an Enemy; and on the other, they are secur'd against a Surprize by the *Rhine*.

4. *Eichfeld*, or *Eschfeld*, a small Tract of Land, encompass'd with the Landgraviates of *Hesse* and *Thuringia*, and the Dutchy of *Brunswick*; in which lie the Towns, 1. Of *Heiligenstat*, built by King *Dagobert* of *France*, who kept his Court here: There's a College of Jesuits in this Town, but nothing else remarkable. 2. *Tresfurt*, on the *Weser*, in a pleasant and fruitful Country. 3. *Duderstadt*, a small Hans-Town, anciently part of *Grubenhagen*, subject to the Dukes of *Brunswick*, by whom 'twas sold to the Archbishop of *Mentz*. 4. *Wormbys*, a Town of small Note, and some others.

5. *Fritzlar*, a strong Town in the Landgraviate of *Hesse*, formerly mention'd. It was destroy'd in 1232, by *Conrad* Landgrave of *Thuringia*, who put all the Inhabitants to the Sword: The Castle has been well fortified of late, and made as great a Strength as any in those Parts.

6. *Ommenburg*, or *Amelburg*, on the River *Ohm*, near *Marpurg* in *Hesse*, situated in a plain and fruitful Country: This Town is seen at a great Distance, and has a Collegiate-Church, but nothing else remarkable.

7. *Aschaffenburg*, the strongest Fort in the Elector's Dominions on the *Main*, at the Mouth of the *Aschaff*, a small River, from whence it has its Name. It lies 22 Miles E. from *Frankfort*, and about 40 E. from *Mentz*: 'Tis divided into the Upper and Lower Town, and beautified by a stately Palace lately built, where the Elector frequently resides. The Castle was built by Archbishop *Albert* in 1122, to secure himself from the Emperor, whose Resentments he dreaded, for thwarting him in the Election of a Bishop of *Wurtzburg*: 'Twas afterwards enlarged by his Successors. The Elector has a stately and spacious Cellar; and there's a noble Prospect from the Castle down the River *Main*, over which there's a fair Stone Bridge here.

8. *Hochst*, a small Town, with a Right to take Toll from Vessels that pass up and down the *Main*. This was given to the See of *Mentz* by the Emperor *Henry IV.* as a Compensation for Pope *Clement IVth's* having made *Prague* an Archiepiscopal See, and granting those Archbishops the Privilege to crown the Kings of *Bohemia*, which former-

ly belong'd to the Archbishops of *Mentz*. This Town was ruin'd by the *Swedes*, during the Civil Wars of *Germany*.

9. *Konigstein*, a small Town with the Title of a County, 19 Miles N. E. from *Mentz*; 'twas united to this See in 1597, having formerly belong'd to the Church of *Halberstadt*; 'tis very well fortify'd, but commanded by the Neighbouring Hills.

10. The City of *Reineck* in *Franconia*, where we have already describ'd it.

11. *Steinheim*, also in *Franconia*. 12. The City of *Erford* in *Thuringia*, already describ'd.

13. The *Bergrafs*, in the Lower Palatinate.

14. The County of *Loehr* on the Banks of the *Main*, which lies near *Aschaffenburg*.

15. *Epstein*, and some other Places in *Franconia*. 16. The City of *Urb* in *Spessart*, famous for its Salt Springs, and some other Places that are not describ'd.

The Electorate of Trier or Treves.

THE City of this Name, from whence the Country has its Denomination, was the Capital of the ancient *Treviri*, the Metropolis of *Gallia Belgica*; and is mention'd with more Credit and Grandeur by the Roman Writers, than any other City in this Country. The Pre-eminence it had above its Neighbours, procur'd it the Name of *Augusta*, which the Romans never bestow'd upon any thing that was ordinary. *Protolmy* calls it *Αὐγούσταν τῆς Γαλιεας*; and *Aufonius* gives it the same Character. *Dresser* says, That it vies for Antiquity with *Viterbo* and *Genoa*, in *Italy*; but however that is, 'tis certain 'twas a large and noted City before the Roman Colony was settl'd there under *Augustus*; and when the Roman Empire was divided, those who govern'd the Empire on this Side the *Alps*, had usually their Seat here; and among others, *Constantinus*, *Constantinus* the Father and Son, *Constance*, *Gratianus*, and *Maximus*. *Ammianus Marcellinus* calls it, *Domicilium Principum clarum*, i. e. The famous Residence of Princes; and *Aufonius* gives a noble Description of it; wherein he takes Notice of its large and noble Fortifications, and its great Trade. It suffer'd much in those Times, as *Salvian* Bishop of *Marseilles* informs us, in his Book *de Gubernatione Dei*; where he says, 'twas

'twas 4 times taken, and almost destroyed. The *Treviri* are said by *Mela* to be the most famous of the *Belge*, and were bounded up on the W. by the *Remi*; on the S. with the *Mediomatrici*; and in *Cæsar's* Time, their Eastern Boundary was the *Rhine*, and were a free People, until reduc'd by *Vespasian*; so that then they possessed most Part of the Electorate of *Mentz*, and the Country betwixt the *Maes* and the *Rhine*. But the Electorate is much more contracted now, has the Diocese of *Cologne* on the N. with Part of the Dutchy of *Berg*: It has *Lorraine*, the *Palatinate*, and Part of the Dominions of *Hesse*, on the S. the *Spanish* Provinces on the W. and *Wetteravia* on the E.

On the S. and W. the Country is but ill Peopled, and barren, over-run with Hills and Woods; and the cold Winds which generally blow among those Hills, has occasion'd some People to call it, *Planetarum Cloaca*; i. e. The Sink of the worst Influences of the Planets; but in these Deserts, there's great store of Deer, and all sorts of Venison. On the Banks of the *Rhine* and *Moselle*, the Country is well Peopled, and abounds with good Wine and Corn. *Mozl* makes the greatest Length of this Electorate from S. E. to N. W. 85 Miles; but the Breadth is unequal, being about 50 on the W. about 25 in the Middle, and in other Places not above 15.

Julius Cæsar says, their continual Wars with the *Germans* made the ancient Inhabitants a very Warlike People. The *Romans* found it so to their Cost, when they had a whole Army cut off by *Ambioriges*, the General of the *Treviri*. The modern Inhabitants being inur'd to an hard Way of Living, are still very fit for War.

Christianity is said to have been planted here by *Eucharisius*, one of the 72 Disciples, with his two Associates, *Valerius* and *Maternus*, sent hither by St. *Peter*, as they pretend. *Eucharisius* is said, upon his first Arrival, to have rais'd from Death the only Child of a rich Widow, converted her House into a Church, which was afterwards made a Monastery of *Benedictines*, and is now called St. *Matthias*. This they will have to be the Origine of the Bishoprick of *Treves*, where *Eucharisius* govern'd 24 Years, *Valerius* 15, and was succeeded by *Maternus*; but afterwards the People apostatiz'd, and

at *Treves* worship'd *Mars* and *Apollo*, whose Altars stood on two neighbouring Hills, which still retain their Names. Thus it continu'd till *Constantine* prohibited the Worship of Idols, and re-establish'd Christianity. In Remembrance of which, and of the Abolition of Idolatry, they have Annual Revels on the Hill where *Apollo's* Image stood, when they tumble a flaming Wheel or Barrel from the Top of the Mountain. They likewise alledge, That *Constantine* made it an Archbishop's See, and gave the Crozier to *Agritius*, the Patriarch of *Antioch*, in 333. We leave the Readers to judge, whether there be not some Monkish Invention in this History, since Authors contradict one another in it. *La Forrest* says, 'twas Pope *Silvester I.* who made *Agritius* an Archbishop in 330.

The chief Towns.

1. *Treves*, pleasantly situated on the *Moselle*, in Long. 25 $\frac{1}{2}$. Lat. 49 $\frac{1}{2}$. 65 Miles W. from *Mentz*, 50 S. W. from *Coblenz*, and 65 S. W. from *Cologne*. Their Antiquaries pretend, that it was founded 1250 Years before *Rome*, in the Year of the World 1966; and *La Forrest* and *Baudrand* say, 'tis one of the most ancient Cities of Europe; and older than *Rome*. It was ruin'd 4 or 5 times by the *Huns*, *Vandals*, and *Goths*, says *Morery*; but always recover'd it self with greater Lustre, the Roman Emperors and Governors having made it their Place of Residence. *La Forrest* says, 'twas pillaged by the *French* in 415, ruin'd by the *Huns* in 451, by the *French* again in 468, and sack'd by the *Normans* in 882; but was afterwards repaired by the Inhabitants, who obtained large Privileges from the Emperors of the Houses of *Franconia* and *Swabia*. In 1568, it was taken by *James III.* its Archbishop; and since that Time, has been subject to them, by a Decree of the Emperor *Rodolph II.* in 1580. It was put into the Hands of the *French* in 1632, to preserve it from the *Swedes*, as was pretended. They kept it till 1645, and seiz'd it afterwards. The *Germans* retook it in 1675, when the Marshal de *Cregui*, who threw himself into it, refus'd to sign the Capitulation. They put a Garrison into it again in 1688, and was

was abandon'd by them upon the Duke of Marlborough's Approach. 'Tis noted for several Synals or Councils held here, particularly one in 386 against the *Priscillianists*, By Order of the Tyrant *Maximus*, at the Intercession of the Priest *Ibaicus*, who was afterwards excommunicated by the Bishops, because he had acted contrary to their Canons, which abhor'd the shedding of Blood: But *Maximus* having called another Council of his Party, they absolv'd *Ibaicus*. 'Twas formerly an Imperial City, till reduced by its Archbishop, as above-mentioned. 'Twas anciently much larger than at present, is but ill inhabited, and not very well fortified, tho' it is capable of being so by its Situation. 'Tis defended on the W. Side by the *Moselle*, and by a good Wall on the other Sides; upon the Angles of which there were Works lately made to cover the Curtains and Ravelins between them. The Allies cast up Lines for the Defence of the Town and Country in 1704; but were obliged to abandon them in 1705, and to destroy the Magazines laid up there for the Subsistence of their Army. Their Trade is also much decayed, so that the Houses are generally mean, but the Elector's Palace stately; and the Churches and other Public Buildings, says Dr. *Nicholson*, are as fair and more numerous here, than in any other City of its Bulk in the Empire. The *Roman* Coins and Medals, and other Marks of its Antiquity, are frequently found in the Ruins of the old City. *St. Jerome* mentions a good Library here in his Time, from whence he copy'd *St. Hilary's* Commentaries. Their University was founded in 1472, and is very well frequented with Students. They have 4 Collegiate and 5 Parish Churches, 2 Abbies, and several other Religious Houses. Their Archbishop was formerly Metropolitan of *Mentz*, *Cologne*, *Liege*, *Utrecht*, *Strauburg*, *Worms*, and *Spires*; so that he was once the greatest of all the German Metropolitans, till Pope *Zachary* exempted those Bishopricks from his Jurisdiction. He is now the least Metropolitan in Germany, having but three Suffragans under him, viz. the Bishops of *Metz*, *Toul*, and *Verdun*, all in the Hands of the French. He has still many good Bailiwicks, viz. *Trier*, *Sarburg*, *Pfalzel*, *Welshbillig*, *Grimburg*, *St. Wendel*, *Kilburg*, *Witlich*, *Baldenaw*, *Schonnecken*, *Dawn*, *Ulmen*,

Bern-Castle, *Houstein*, *Zel*, *Cocheim*, *Munster*, in *Eysfeld*, *Hillesheim*, *Meir*, *Coblenz*, *Boppard*, *Weisfel*, *Mount-habor*, *Limpurg*, *Werheim*, *Engert*, *Grenles*, and *Herspach*; which, together with the extraordinary Taxes he imposes upon his Subjects, and from his inalienable Office of being Noble Guardian of the Miners, and the Customs of the *Moselle*, afford a very considerable Revenue; which, before the Wars, was reckon'd about 100000 *l.* Sterling *per Annum*; but is much less since. The Chapter is composed of 16 Capitular Canons, who have the Right of chusing the Archbishop, and of 24 Domicil'd. They receive none who cannot prove themselves to be Gentlemen by 4 Descents both by Father and Mother; but they admit no Princes or Counts; the Gentry thinking this the only Way for them to arrive at the Electoral Dignity. The Provost, the Dean, Treasurer, Schoolmaster, and Chanter, are distinguished by their Elective Dignities from the other Canons; and the 5 Archdeacons, who are named by the Archbishop with the Officials, are not of the Chapter, nor oblig'd to prove themselves to be Gentlemen. In the Cathedral, they pretend to have our Saviour's Coat, which they seldom shew'd, for fear of discovering the Cheat, and have never expos'd it since the Treaty of *Westphalia*; tho' before that Time, they pretended that several Miracles were done by it; as they did, that *St. Peter's* Staff raised *St. Maternus*, their suppos'd Bishop, with a Touch, 40 Days after he was dead; and to make the Story the more plausible, they alledge he was the Widow's Son; whom our Saviour had formerly raised from the Dead, as mention'd in the Gospel. This Archbishop precedes the Archbishop of *Cologne*, because his Church is more ancient; and besides his Privileges mention'd before in the Head of the Election of the Emperors, he has a Right to reunite to the Domains of his Church all the Fiefs in his Diocese, and those that fall to it for want of Heirs-Male, unless the next a-kin can shew a Privilege to the contrary. He can likewise, by his own Authority, put those whom he has excommunicated into the Ban of the Empire, if they do not reconcile themselves to the Church within a Year after their Excommunication. He has a Privy-Council to assist him in the Civil Government.

2. *St. Maximin*, a *Benedictine* Abbey with- in a quarter of a League of *Treves*, now united to this Archbishoprick.

3. *Phaltz*, a little neat City on the Con- flux of the *Kyll* and *Moselle*, and the W. Side the latter, about 4 Miles from *Treves*.

4. *Witlich*, Capital of a Bailiwick, on the Frontiers of *Luxemburg*; in the Castle of which, called *Ottenstein*, the Elector has his ordinary Residence.

5. *Prum*, a *Benedictine* Abbey, near the Head of the River *Prum*, of which the Elector is perpetual Administrator. It was founded by King *Pepin* in 760. It lies about 28 Miles N. W. from *Treves*.

6. *Cochaim*, on the *Moselle*, which *M. de Boufflers* took by Storm towards the end of the last Century. It lies 3 Miles N. E. from *Treves*.

7. *Münster*, the principal Town of the small Country called *Eyselt*, 40 Miles N. E. from *Treves*, and 10 S. W. from *Coblentz*.

8. *Saffich*, Capital of a County of the same Name, within a League of the *Rhine*.

9. *Coblentz*, on the Conflux of the *Moselle* and *Rhine*, from whence 'twas called *Confluentia*, and *Confluentes*. It lies 50 Miles N. E. from *Treves*, and 37 S. E. from *Cologne*. 'Tis mentioned in *Antonin's Itinerary*, and the *Notitia Imperii*; was the Seat of the first *Roman* Legion, and one of their *Præfects*, and is supposed to have been fortified, if not founded, by *Drusus*. 'Tis situate in a very pleasant Country, cover'd with choice Vines, and is of Triangular Form, two Sides of which are defended by the Rivers, and the other by a Wall and modern Fortifications; so that 'tis reckon'd one of the strongest Towns in *Germany*. 'Tis populous and large, and by the Conveniency of its Situation has a considerable Trade in Wood, Corn, Wine, and Iron. The Inhabitants are very civil and complaisant to Strangers, because of their Commerce; and their Houses are generally more uniform, and better built, than those of most other Cities on the *Rhine*. They have been subject to the Elector of *Treves* for many Years; but 'twas formerly an Imperial Town, till 1312, when 'twas exempted by the Emperor *Henry VII.* 'Tis pretended to have been given to the See of *Treves* by *Dagobert of France* above 1000 Years ago. Their best Publick Buildings are their two great

Churches, some Monasteries, and a Palace, where the Elector resides when he comes to this City. It has a Stone Bridge over the *Moselle*, and a Bridge of Boats over the *Rhine* to another of the Elector's Palaces. This Bridge is so contriv'd, that they let three of the Boats slip in the middle, to make a Passage for Vessels, and can quickly fasten them again.

On the other Side the *Rhine*, upon a very high Hill, stands the Elector's Castle of *Ehrenbreitstein* or *Hermanstein*, which is reckoned impregnable, commands the Town, and the Passage of the two Rivers; and besides the Strength of its Situation, is fortified by good Outworks. At the Foot of this Hill, on the Banks of the *Rhine*, stands the Elector's Palace above-mentioned, which is a noble Structure. Two large Wings, with a Front of it, and 5 Pavillions, look towards the River and the City.

10. *Meyn*, or *Meyen*, on the River *Netze*, 12 Miles W. from *Coblentz*. It gives Name to a neighbouring Territory, and has a Castle built in 1289, by *Henry* their Archbishop; and the Town was walled by *Baldwin* his Successor, who founded the Monastery there.

11. *Boppard*, *Lät. Bopartium*, and *Bodobriga*, a small City on the *Rhine*. It lies 8 Miles S. from *Coblentz*, has a strong Fort or Castle, built by Archbishop *Baldwin*, when this Town, which was formerly Imperial, was given by the Emperor *Henry VII.* to the See of *Treves*. It has a good Harbour for Vessels which pass up and down the *Rhine*, whence 'tis supposed to have taken its Name of *Boppart*, of which the present Name is a Corruption. 'Tis thought to be *Antonin's Bodobriga*; and by the Remains of its old Fortifications, is conceived to be one of those Forts which *Drusus* built on the *Rhine*. They were very unwilling to lose their Privilege of being an Imperial City, and for some Time resisted the Bishop's Pretensions; but were at last forced to submit. After which, he not only built a Castle to keep them in awe, but erected a Custom-house, to make Vessels which pass this Way pay Toll; both which continue to this Day. Other Publick Buildings worth viewing are, *St. Severus's* Church, and a stately old Palace called *Königshouse*, the Residence of the Barons of *Boppart*, who were Lords

of this and several other Castles in *Lorraine*. Near this Town, there's a fair Nunnery of *Franciscans*, and another of *Benedictines*.

12. *Engers*, a fair Town and Fort on the *Rhine*, betwixt *Coblentz* and *Andernach*. It gives the Name of *Engersgaw* to the neighbouring Territory, and lies 7 Miles N. from *Coblentz*, on the other Side the *Rhine*. It has a Castle, founded by *Cuno* Archbishop of *Treves*, who died in 1388. The Castle is from his Name called *Conen Engers*; and the noble Bridge which he built here over the *Rhine* is called *Cunostein*.

13. *Oberwesel*, on the W. Side of the *Rhine*, 18 Miles W. from *Coblentz*, at the Foot of a Hill. 'Twas formerly an Imperial City; but since 1312, has been subject to the Archbishop of *Treves*. It formerly belong'd to the Burgraves of *Schömburg*. 'Twas taken by the French under the Marquis de *Varenne* in 1703.

14. *Cell* or *Zell*, on the Banks of the *Moselle*, a large open Town, 28 Miles N. E. from *Treves*. 'Tis Capital of its Bailiwick; and by *Freherus*, in his Commentaries, called *Mosella Castellum Tabernarum*. The Town is pleasantly situated, and makes a great Quantity of Wine Annually, which occasions its having a good Trade, and being populous.

15. *St. Vendel*, a small Town on the Borders of the *Palatinate*, well fortified. 'Twas taken by the French in 1703. It lies 33 Miles S. E. from *Treves*.

16. *Sarburg*, on the River *Sar*, a small Town, well fortified, and much beautified, by *Henry de Vestingen* Archbishop of *Treves*. It lies on the Frontiers of *Luxemburg*, 8 Miles S. from *Treves*. 'Twas anciently called *Castra Sarra*. The chief Things of Note in it are *St. Lawrence's Church*, and *St. Nicholas's Hospital*.

17. *Limburg*, on the *Lohn*, betwixt the Counties of *Idstein* and *Weilberg* in the Country of *Hesse*, to the Princes of which Family most of its Territories belong. By an old Chronicle compos'd out of the Records of this City, it appears, That about 1336, they were able to send 2000 arm'd Men into the Field, and had above 8000 Communicants. Their Collegiate Church, dedicated to *St. Gregory*, was then govern'd by Canons of Noble Descent; but 'tis now decayed, having suffer'd much in the late Wars betwixt the French and the Empire.

18. *Ulm*, two German Miles N. W. from *Coeheim*, near which there's a famous Lake, where Tradition says, a monstrous Pike of 12 Foot long always appear'd before the Death of the Lords of that Place: As to which, the Reader may believe what he pleases.

19. *Montroyal*, a Town on the *Moselle*, with a strong Citadel and Outworks; which, together with its Situation in a Peninsula form'd by the *Moselle*, make it almost impregnable. 'Twas possess'd and fortified by the French during the last War; but they were obliged to restore and dismantle it by the Peace of *Ryswick*.

The Electorate of COLOGNE.

THIS Diocese has on the N. the Dutchy of *Cleves*, and County of *Marck*; on the S. the Archbishoprick of *Treves*; on the E. the Dutchy of *Berg*; and on the W. the Dutchy of *Juliers*, and Part of *Guelderland*. It contains the Baronies of *Arnsberg*, *Fredeberg*, *Bylstein*, *Fredehardeskirchen*, *Hovestat*, *Werle*, *Nehem*, and *Balve*, with the Manors of *Wildenborch*, *Homberschen*, *Hachenberg*, and *Hardenberg*, &c. We have formerly mentioned, in our Account of Ancient Germany, that the *Condrusi*, *Eburones*, and *Mannapii*, were the ancient Inhabitants of this Country, and afterwards drove out by the *Ubii*. The Bishoprick is said to have been founded by *Maternus*, formerly mentioned, who, with several of his Successors, were Bishops both of *Treves* and *Cologne*. It was made an Archbishoprick under *Agilulphus*, their 15th Bishop, about the Year 743, by Pope *Stephen III.* and was endowed by *Otho I.* and other Emperors. 'Twas afterwards made an Electorate, under *Erebert*, the 31st Bishop in their Catalogue, who died in 1021. This Elector is more rich and powerful than either of the other two Ecclesiastical Electors, for he generally holds the Bishopricks of *Liege* and *Hildesheim* in *Commendam*; but *Liege* especially is more immediately in his Power, since 'tis become a Custom among the Canons there to compliment the Elector of *Cologne* with their Bishoprick. Formerly the Bishops of *Münster*, *Utrecht*, *Liege*, *Minden*, and *Osnabrug*, were under his Jurisdiction; but since the Reformation

Reformation, that of *Utrecht* has been seculariz'd, as that of *Minden* was by the Treaty of *Westphalia*. He is Chancellor of the Empire for *Italy*, but does not perform the Office; for the *Italian* Princes, who depend upon the Empire, appoint Vicars to do it in their respective Dominions. His other Privileges we have describ'd already in our Account of the Electors, and of the Election of the Emperour. His annual Revenue is reckon'd to be about 100000 *l.* Sterling per Annum. He is also intitled Duke of *Engern* and *Westphalia*, which some say were, with the Revenue of those 2 Principalities, bestow'd upon this See by the Emperour *Otho I.* and others say, by *Frederick I.* upon the Forfeiture of *Henry the Lion*, Duke of *Saxony* and *Bavaria*.

His great Chapter consists of 60 Canons, who are all Princes or Earls, for they admit none of an Inferior Quality. But the Power of Election is lodg'd in the 24 Seniors, according to the Ancient and Present State of *Germany*. The Diocese, so far as it lies contiguous, is about 40 Miles long, and 7 or 8 broad, of which he is supreme Lord. He has also a pretty large Country in *Westphalia*, and some other Places, inclosed by the Dominions of other Princes, which we shall mention in their proper Place. The last Elector was Prince *Clement Joseph* of *Bavaria*, who was elected in 1688, by the Interest of the Emperour and Confederates, in Opposition to Prince *William* of *Furstenberg*, who was set up by the Interest of *France*; but Prince *Clement* having since ungratefully join'd his Brother the late Elector of *Bavaria*, and the *French* King, against the Emperour, he has been dispossest of it. He has a Privy Council to assist him in the Temporal Government, a Council of War for Military Matters, a Chamber or Court for doing Justice to his Subjects; and the late Elector had besides, Garrisons, Guards of Horse-Granadeers, Partizans, Halberdeers, and Carabineers; 3 Regiments of Horse, 3 of Foot, and one of Dragoons.

This Archbishoprick being reckon'd part of the Circle of the *Lower Rhine* by the *Matricula*, which is certainly the best Authority; we shall describe the other remarkable Places of it, in order to finish the Circle of the *Lower Rhine*, before we come to

describe the City of *Cologne*, which, by the same *Matricula*, is reckon'd to belong to the Circle of *Westphalia*; and shall begin, according to the Course of the Map, with, 1. *Andernach*, on the *Rhine*, at the Foot of a Ridge of Mountains, 8 Miles below *Coblentz*. 'Tis memorable for the bloody Battle betwixt the Emperour *Charles the Bald*, and his Brother *Ludovicus Germanicus*, in 876 or 877. 'Tis fortified with a Castle and Bulwarks, is the Boundary betwixt the Archbishopricks of *Treves* and *Cologne*, has a Custom-House belonging to the latter; but its principal Trade is from lodging Passengers.

2. *Lintz*, a small, but very ancient City, on the E. Side of the *Rhine*, 18 Miles below *Coblentz*.

3. *Bonn*, on the *Rhine*, 19 Miles below *Andernach*, and 15 above *Cologne*. 'Twas called *Ara Ubiorum* by the Ancients, because of the Altars on which Sacrifice was offer'd to *Mars*, *Apollo*, and other Idols, said to have been destroy'd by Bishop *Maternus*. Others say, 'tis *Tacitus's Castra Bonnensta*, where the *Romans* sometimes winter'd, and where *Julius Caesar* made his Bridge over the *Rhine*: But *Cellarius* thinks, that the *Ara Ubiorum* was nearer *Cologne*. 'Tis also called by *Latin* Writers, *Colonia Julia Bonna*: *La Forrest* says, 'Twas built in the Reign of *Augustus*, by Order of *Drusus*. 'Tis a small City, but well inhabited, being the usual Residence of the Elector of *Cologne*, who has a magnificent Palace here. 'Tis situate in a plain and fruitful Country, abounding with Vineyards. This Plain lies at the end of a long Ridge of Mountains, which shut in the *Rhine* on both Sides as far as *Bingen*. Their Churches are stately, especially the Collegiate Church dedicated to the Martyr, *Pius*, *Cassius*, *Florentius*, *Mallusius*, with several others of the pretended *Theban* Legion that suffered under the Emperour *Maximian*, whose Bodies were said to be brought hither by *St. Helena*, who founded this Church to their Honour. The Town-House is well built, and adorned with fine Paintings. 'Twas formerly an Imperial City, but now subject to the Elector, and is noted for the Coronation of *Frederick* of *Austria*, who was chosen Emperour, in Opposition to *Lewis* of *Bavaria*, in 1514. It suffer'd much during the Wars of the *Netherlands*, and was taken

by the Duke of Parma in 1588, being forc'd to surrender by Famine. The Fortifications are regular, the Walls faced with Brick, Ditches broad and dry, but the Counterscarp not very defensible. The Prince of Orange, our late King William, after he drove the French out of part of the United Provinces in 1673, took it from the French, into whose Hands the Elector of Cologne had put it; which forced them to withdraw all their Troops from the Dutch Territories. The French King having given Cardinal Furstemberg Troops to garrison this City, when he disputed the Election of Cologne; the Elector of Brandenburg besieged it in 1689, and forced it to surrender, after he had destroyed most of it with Bombs. At this Time, they found an Iron Chest in a Vault full of Gold Medals, to the Value of 100000 Crowns: They were of Ducat Gold; and the Impressions made for Roman, but very ignorantly, for it appear'd they were not above 4 or 500 Years old: Such of them as seem'd true, were of the late Greek Emperors. The French seized it again, but were forced to surrender it to the English and Dutch in 1703. The Elector has fine Gardens, with curious Waterworks and Grotto's, in the Neighbourhood of this City, and there's plenty of Game in the adjacent Mountains. Dr. Brown takes Notice, That there's a Chamber in the Elector's Palace, that goes a great way into the Rhine.

4. *Brensberg*, 18 Miles S. W. from Bonn, according to Mall and Sanfon, is a neat and pleasant Town.

5. *Lecknich*, a small Town, well fortified on the *Erpe*, upon the Frontiers of *Jugery*, 9 Miles S. W. from *Cologne*.

6. *Brue*, or *Brue*, betwixt Bonn and *Cologne*; a small City, with a fine Castle, where the Elector sometimes resides; and diverts himself by Hunting in a noble Forest in the Neighbourhood.

7. *Nays*, on the *Erpe*, a little before it falls into the *Rhine*, about 20 Miles lower than *Cologne*, almost over-against *Dusseldorp*. 'Tis frequently mention'd by Latin Authors, and particularly by *Tacitus*, who calls it *Nassum*, or *Nassus*. *Drusus* built a Fort here, to secure the Limits of the Roman Empire, which occasion'd the Building of this City. 'Tis pretty large, fortified by the River on

one Side, and by a double Wall on the other. 'Tis noted for holding out a long Siege against *Charles the Bold Duke of Burgundy*, in 1474, who espoused the Pretensions of his Kinsman *Rupert* against *Herman*, a Prince of *Hesse*, who was elected Bishop of *Cologne*: For which good Service, the Emperor *Frederick IV.* gave them many Privileges; and particularly to coin Money, to seal their publick Instruments with red Wax, and to bear the Spread-Eagle on their Arms, but on Condition that they should not exact Toll of any Vessels that traded thither. 'Tis said, The *Rhine* did anciently run by its Walls, on which they founded their Pretensions to levy Toll; but having alter'd its Course, they have now dug a navigable Canal from the *Erpe* to the *Rhine*. 'Twas several Times taken and retaken by the French and Confederates before the Peace of *Ryswick*. They have a Collegiate Church dedicated to *St. Quirinus*, where they shew his Tomb and Relicks; and some other publick Buildings.

8. *Zons*, on the *Rhine*, 7 Miles above *Nays*, was founded by Archbishop *Sigefrid*, is pretty well fortified; and the Houses being generally of Brick, make a good Appearance. Their chief Trade is Corn, of which they have Plenty in the adjacent Fields.

9. *Rhinberg*, or *Rhynerk*, a large Town on a Hill near the *Rhine*, which gives it its Name. 'Tis the lowermost Town belonging to this Electorate, and lies 40 Miles below *Cologne*: Some reckon it part of the Dutchy of *Cleves*, and others to belong to *Guelderland*, on which Account it has been frequently claim'd by the *Netherlanders*: 'Tis well fortified, is tolerably Rich, and stands well for Trade; the Neighbouring Country affording plenty of Wine. 'Tis Capital of a small County, about 10 Miles in Extent, and has a Right of Toll on the *Rhine*: 'Twas taken by the French in 1672, but restored soon after. Near this Town stands *Camp*, a rich Mitred Abbey, nobly endow'd by several Emperors.

10. *Murs*, Capital of a County, a neat small City, within a League of the *Rhine*, 8 Miles S. from *Rhinberg*, and 32 N. W. from *Cologne*; 'tis defended by a good Citadel, had formerly Counts of its own, but

has for some time belonged to the Princes of Orange, and is now claim'd by the King of Prussia, as Heir to King William III.

11. *Ordningen*, a small City near the Rhine, 6 Miles S. E. from *Meurs*.

12. *Keyserswart*, a small Town on the E. Side of the Rhine, 5 Miles N. from *Düsseldorf*, and 22 N. W. from *Cologne*. 'Twas formerly the most Northerly Town of the Diocese before *Rhinberg*, and some others in the Duchy of *Cleves* fell to it. *Bertius* says, That about 711, *Swibert* an Englishman built a College in the Island *Werdis*, where *Keyserswart* now stands, but there are no Remains of that College now to be seen. This Town is famous for the long Siege it held out against the Imperialists, commanded by the Elector *Palatine* in 1702; the Garrison being *French*, under the Marquis de *Blainville*, one of the Family of *Colbert*; but he was obliged to surrender, after he had held out 2 Months.

13. *Kempen*, or *Kerpen*, a strong Town and Castle, on the Borders of *Guelderland* and *Juliers*, above 3 German Leagues N. W. from *Cologne*, on the River *Erpe*. It held out a Siege in 1642, from the 20th of January till the 7th of February, against the *French*, *Hessians*, and other *Germans*, under the Duke of *Saxe-Weimar*, and the Castle held out 7 Days longer; the Garrisons being allowed honourable Terms. *La Forrest* places it in the Duchy of *Juliers*, but it was given by the *Spaniards* to the Elector of *Cologne*.

14. *Worringen*, on the Rhine, famous for a bloody Battle in 1297, betwixt the Archbishop of *Cologne*, supported by the Duke of *Brabant*, and the Citizens of *Cologne*, who gained the Victory. It lies on the W. Side of the Rhine, near *Zons*.

The Circle of WESTPHALIA.

THIS is a very large Circle, being from N. to S. according to *Moll*, about 185 Miles long; but if we take in the Duchy of *Juliers*, which the *Matricula* reckons part of it, 'tis 22 Miles longer; and where broadest from E. to W. about 150; but if we take in the Bishoprick of *Liege* according to the *Matricula*; 'tis broader: 'Twas formerly much larger, but we refer to the *Matricula* for the Governments contained in it. It has the Northern Sea on the N. Part

of *Juliers*, and *Wetteravia* on the S. the *Netherlands* on the W. and the Circle of *Lower Saxony* on the E.

Authors differ as to the Origine of its Name; some derive it from *Weyssinholen*, a white Horse, because the ancient Dukes of *Westphalia* bore that in their Arms. But others, with more Probability, derive it from *Westfeld*, being inhabited by the Western Saxons, between the *Weser* and the Rhine, to distinguish it from the *Eastfeld* inhabited by the East Saxons. Dr. *Nicholson* offers Arguments from several Authors, to prove, that the English Saxons were originally *Westphalians*, as appears by the *Saxon Version* of *Bede's Ecclesiastical History*, which says, they descended from 3 of the stoutest Nations in Germany, the Saxons, Angles and Jutes, who, he says, inhabited the Country call'd Old Saxony; and that *Westphalia* bore that Name, is asserted by S. *Peter Leovardensis*, who, in his Treatise *de Origine Frisiorum*, says, He met with several old Manuscript Chronicles, wherein this Country was call'd Old Saxony; and was afterwards called *West-Sassen*, to distinguish it from the Country of the East Saxons. The principal Objection against this, says the Doctor, is, that *Strabo* ascribes all the Country betwixt the Rhine and the Elbe to the Swedes; but he alleges, That the Objection is easily answer'd, if we consider that the Swedes were subdued by the Saxons. We leave the Reader to compare this with what we said in the Description of *S. Friesland*, p. 353, where the ancient Angli inhabited; and what we said from *Cluverius* concerning the Saxons, p. 417, and p. 419, where the Angli are reckon'd a Division of the Swedes, and p. 420; after which we leave them to their own Judgment: But it would rather seem, that it was the *Franks* who were conquer'd by the Saxons; of whom the Angli did afterward make a Part; then the Swedes; of whom they themselves were only a Division. But however that is, 'tis plain enough that the Saxons drove out the *Franks*, and gave the Name of Saxony to that part of the Country, as far as the Rhine; and 'tis probable, that part of those Saxons in *Westphalia* joined with the Angles and Jutes in their Expedition to Britain, which goes a great way to solve all Difficulties in this Matter: *Westphalia* being too large to give a general

Description of its Soil and Commodities, we must refer that to the particular Places: But they have a common Saying among themselves,

*Hospitiura vile Grooff broot, Dun bier, Lange Mile,
Sunt in Westphalia: Qui non vult credere
Loop Da.*

i. e. In *Westphalia*, you are sure to meet with bad Lodging, coarse Bread, small Beer, and long Miles; if you will not believe it, go thither and see.

In the Geographical Description, we shall begin with the City of *Cologne*, according to the Course of the Map, which lies pleasantly on the *Rhine*, Long. 25. 32. Lat. 50. 55. 40 Miles below *Coblentz*. 'Twas called by the Ancients, *Colonia Ubiarum*, and *Colonia Agrippina*; the first, because 'twas founded by the *Ubii*, who removed to this Country from the other Side the *Rhine*. But some, tho' without good Authority, pretend it to be much older, and that 'twas Tributary to *Troves* several Ages before our Saviour's Birth. 'Twas called *Colonia Agrippina*, says *Tacitus*, because *Agrippina*, Daughter to *Germanicus*, and Wife to *Claudius*, would have it honour'd with a *Roman* Colony, as being the Place of her Birth; and hence they chang'd their Name into *Agrippinensis*, which, as *Lipsius* observes, confutes the Opinion of those who will have it to be founded by *Agrippa* her Grandfather, for then they must have called themselves *Agrippenses*; and *Geltius* takes Notice of a Medal of *Claudius*, wherein 'tis call'd *Colonia Agrippina Ubiarum*. Others say, There was a Town here before the *Ubii* came, but they enlarged it about 20 Years before our Saviour's Birth; and that *Agrippina* having brought the *Roman* Colony thither 48 Years after, added much to its Circuit. In the Year of our Saviour 69, when *Vitellius* and *Vespasian* disputed the Empire, this Town was besieged by *Tutor* and *Sabinus*, who rebelled against the *Romans*, at which Time *Agrippina* was forced to receive their Garrison, but massacred them afterwards, when *Cerialis* had defeated the Rebels. *La Forrest*, and other *French* Authors say, That *Merovic*, a *French* King, drove the *Romans* from hence in the Reign of *Valentinian III.* about 449.

In 451, it was taken and ruin'd by *Atila the Hun*. The *Romans* afterwards rebuilt it, but were again dispossest'd by *Childrick*, Son to *Merovic*, who gave it to a Kindman of his own, who was Father to *Sigebert the Lame*, King of *Cologne*, who was assassinated by his own Son *Cloderick* about 599; for which, *Clodvis* the great King of *France* put *Cloderick* to Death, and united *Cologne* to *France*, under which it remained, say the *French* Authors, during their Kings of the first Race: After whom it fell to those Princes of the second Race, who were Kings of *Germany*. About 881, it was destroyed by the *Normans*, who at the same Time took and ruined many of the other great Cities in *Gallia Belgica*. 'Twas afterwards repaired by the Emperor *Orko the Great*, who subjected it to its Bishops, but his Grandson *Orho III.* made it Imperial about 993. *Frederick I.* enlarged its Privileges in 1189, after which it increased mightily, especially in 1260, when it enter'd into the League of the *Hans-Towns*, and was made the Capital of the fourth of their Provinces. After this, 'twas govern'd by Senators, as 'tis still, who have a great Resemblance to the ancient Senate of *Rome*. In 1513, the People made an Insurrection, and cut off their Consuls, Treasurers, and some other Magistrates, whom they charged with having cheated the Publick. 'Twas, during the *Roman* Government, the Metropolis of *Germania Secunda*; and because of its Senate, fine Structures, and large Extent, was by some call'd *Second Rome*. They had many Controversies with their Archbishops about the Jurisdiction over them, and refused to submit to any thing inconsistent with their Dignity of an Imperial City; but this was compromised by *Maximilian I.* who confirm'd their Privileges, yet oblig'd them to do Homage to the Archbishop, to the Effect following: "We the Free Burgers of *Cologne*, do promise to be faithful and favourable to N. Archbishop of *Cologne*, so long as he preserves us, our Wives, Children, and our City of *Cologne*, in our Rights, Honours and Ancient Privileges." Upon which, the Archbishop obliges himself thus: "We N. by the Grace of God Archbishop of the Holy Church of *Cologne*, Elector, and Arch-Chancellor of the Empire throughout

" &c.

"Italy"; that there may be between us and our dear Burgers of the City of *Cologne* an amicable Confederation, entire Confidence, and sincere and inviolable Peace; do by these Presents promise and assure in good Faith, and without Fraud, That we confirm all the Rights and Franchises written or unwritten, old or new, within or without the City of *Cologne*, which have been granted to it by Popes, Emperors, Kings, or Archbishops of *Cologne*; and will never violate nor infringe the same. In Witnesses whereof, we have caused the Seal of our Arms to be affixed to these Presents.

The Senate are Sovereign Judges in all Civil Matters; but in Criminal Causes, the Archbishop has the sole Right, after the Senate has seiz'd and examin'd the Criminals, to condemn or acquit them. This City was made an Archbishoprick; Ten Years after that Dignity was conferred on *Mentz*, and the Electoral Office was conferred on the Archbishop in 1011. *St. Anno*, one of their Archbishops, in 1055, procur'd the Eyes of some Judges there to be pulled out, for unjustly condemning a poor Woman, leaving only one Eye to one of 'em, who was to lead the rest home: And that their Punishment might serve for an Example to others, he order'd Brick-Heads, without any Eyes, to be nail'd over their Doors. The Citizens do not allow the Archbishop to reside above Three Days at a Time in the City, tho' he has Two Palaces here; for which Reason his usual Residence is at *Bonn*. 'Tis built in Form of a Half-Moon, on the Banks of the *Rhine*; is one of the finest, strongest, and largest Cities in *Germany*, encompass'd with two strong Walls, that have above 83 Towers upon them, and a triple Ditch, beautified with several fine Rows of Trees. On the Side of the *Rhine*, it has but one strong Stone Wall; but its chief Strength, according to *Dr. Brown*, consists in Outworks, Half-Moons, and Ravellins. *Ray* says, 'tis perhaps the biggest City in all *Germany*, and has within it 300 Acres planted with Vines, besides many other void Spaces. *Misson* says, it has 24 Gates, 13 to the Land, and 11 on the *Rhine*. *Mr. Ray* says, contrary to what we took Notice of before from the Ancient and Present State of *Germany*, that there are 62 Ca-

nons belonging to the Archiepiscopal See, 54 of whom are Canons Nobles, and 8 Presbyters; and that these 62, in Conjunction with the Dean who has two Voices, and two Burgomasters Regent who have 4 Voices, chuse the Archbishop: But most Authors differing from him, we suppose he is mistaken. The Government of the City is in 6 Burgomasters, 7 Eschevins or Aldermen, and 150 Counsellors, who all continue during Life; only two of the Burgomasters are Regents during a Year by Turns: The Eschevins are chosen by the Archbishop; and the Counsellors by the Companies of the City. There are only 50 of the Counsellors empower'd for a Year; so that it returns to the same Persons once in three Years. If a Burgomaster dies, the Counsellors have Power to chuse another. Most of the Inhabitants are Papists; but there are many Protestants, who are their chief Traders. The *Lutherans* have a Church within the City, and the *Calvinists* have one on the other Side the *Rhine* at *Mulheim*, two Miles from *Cologne*. *Dr. Brown* says, the chief Streets are large, and pav'd with broad Stones. The Ancient and Present State of *Germany* says, they reckon 365 Churches, great and small, in this City. *Dr. Brown* says, a great Part of the Town is taken up with Churches and Monasteries, many of them well endowed; and most of the Houses of the Canons and Prebends have large Gardens and Vineyards belonging to them. The Cathedral, dedicated to *St. Peter*, is very large and magnificent, but not finished. Here they pretend to shew the Tombs of the three Wise Men, who came from the East to worship our Saviour, and are hence called, The Three Kings of *Cologne*. They alledge, their Bodies were first removed to *Constantinople* by *Helena*, Mother to *Constantine the Great*; from thence to *Milan* by *Eusebius*, Bishop of that City; and when that Town was taken by *Frederick Barbarossa* in 1164, they were brought to *Cologne* by Archbishop *Reinold*. Besides these, they pretend to shew 1000 Heads of Martyrs in the Church of *St. Gerson*, who suffered here in the Reign of *Maximinianus*. In the Church of *St. Ursula*, they pretend to shew her Tomb; with an Inscription, signifying that 'twas discover'd by *St. Columba*, a Scotsman; and

and they alledge, that *St. Ursula*, and 11000 Virgins, who came from *Britain* to convert the Infidels in those Parts, were murder'd here by the *Huns*. Upon many of these Tombs, there were old Crosses and Lamps. By these Fables, the Popish Clergy delude the unthinking Rabble, and rob them of their Money, on Pretence of paying Devotions to these Relicks. Upon this Account, they have for a long Time called *Cologne* the *Holy City*; but think they deserve it better for withstanding the Reformation, which two of their Archbishops embrac'd, as *La Forrest* informs us. Of their great Number of Churches, *Dr. Nicholson* says, there are 11 Collegiate, 19 Parish-Churches, and 30. Chapels: Besides which, they have 12 Monasteries, 22 Nunneries, and 4 large Hospitals. *Misson* informs us, That among other Miracles said to be wrought by the Relicks of the Three Kings, they procured a great Rain to the *Hungarians*, who sent Pilgrims hither to beg their Assistance, when their Country was like to be ruin'd by a great Drought: In Remembrance of which, some Pilgrims come hither every 7 Years from *Hungary*, and are entertain'd for 15 Days by the Magistrates in an House built on purpose. In the vaulted Roof of the Church, almost over the Chapel which contains those Relicks, there's a Hole of 3 or 4 Foot wide, which they alledge, as appears by an Inscription round it, was made by a great Wind the 30th of *October*, 1404, at Night, that forc'd a great Stone through the Roof. This Stone they still shew in the Floor near the Chapel, and call it the *Devil's Stone*, alledging, that he threw it out of Malice. He adds, That in *St. Ursula's* Church, they have the Bones of the pretended Virgins hung up in great Order on the Walls: Some of their Heads, most noted for Miracles, are kept in Cases of Silver; others are cover'd with Stuffs of Gold; and some of them have Caps of Cloth of Gold and Velvet. They say, That the Arms of the City, which are, *Argent*, 11 *Flames Gules*, with a *Chief* of the 2d, charged with 3 *Crowns Or*, represent the 11000 Virgins, and the 3 Kings of the East. In the Church of the *Maccabees*, there's a Crucifix with an everlasting Periwig on its Head: For thö each of the *Hungarian* Pilgrims cut off a Lock from it when

they come, yet they tell you it was never diminished. At the Entrance of the Church of the Twelve Apostles, there's a Picture representing the following Story:

They say, That a Burgomaster's Wife being buried there in 1571, with a Ring of great Value on her Hand; the Sexton coming to steal the Ring, open'd the Coffin; and while he was pulling it off, the dead Body reviv'd, which made him run away in a Fright. Upon this, she came home to her House, and knocking at the Door, a Servant came, to whom she told the Adventure. He run and acquainted his Master with it, who told him, He would as soon believe that his Coach-Horses were in the Garret. Immediately a great Noise being heard in the Garret, the Servant run up, and found 6 Coach-Horses there, to convince his Master of his Infidelity. In the mean Time the Woman was let in, and by the Care of her Servants perfectly recover'd; and next Day the Horses were let down by Pullies from the Garret, where to this Day they shew several Wooden Horses, cover'd with the Skins, as they pretend, of those very Horses; and a Piece of Linen, which they alledge was spun by the same Lady, who liv'd 7 Years after her Recovery. These Things we relate, thö fabulous in themselves, for the Diversion of the Curious, and to shew the Advantages of the Reformation, which has deliver'd us from such Impositions. *Misson* adds, That they pretend the Ground of *St. Ursula's* Church will admit no other Corps but that of the martyr'd Virgins; and to prove this, shew a Tomb of a Daughter of the Duke of *Brabant*, who being interr'd there, rais'd her self up, and remaining in the Air, they were forc'd to put her Corps into this Tomb, which is rais'd two or three Foot above the Ground upon Iron Supporters, fix'd to one of the Pillars of the Church. A strange Instance of the Power of Bigottry, from which the Course of so many Years, the Neighbourhood of so many Protestants, the Light of Reason, and of the Sacred Records, has not deliver'd those poor unthinking Creatures.

The Town-House is a vast Fabrick, after the *Gothick* Manner, where there are several Rooms full of Bows, Arrows, Cross-Bows, Bucklers, and all sorts of Antick Arms.

Among

Among others, there's a Cross-Bow of Whalebone 12 Foot long, 8 Inches broad, and 4 Inches thick. From the Tower of this House, there's a lovely Prospect of the City and adjacent Country. This City is one of the greatest Emporiums in Germany, which makes it very populous. They have a great Trade with the Netherlands by long round-bellied Vessels of great Burthen, which in the Winter are secur'd within the Key from the Shoals of Ice. Several Ecclesiastical Councils have been held here; the oldest was that in 346, wherein Euphrates their Bishop was depos'd for Arianism. Another was held by Charlemagne's Order in the 8th Century, and several were held in the 9th for Reformation of Manners, against incestuous Marriages, and Oppressors of the Poor. In 1673, a Treaty of Peace was set on foot at the Convent of Carmelites near this City, betwixt the Emperor, King of Great Britain, Spain, France, &c. but was interrupted by the Seizure of William Count of Furzburg, who, tho' a Native of Germany, and a Count of the Empire, being bred in France, where he was an Abbot, left his Convent, turn'd Colonel in the French Service, and was sent hither as Plenipotentiary for France; but taken up as a Traitor, and carried to Vienna, where he was condemned, but not executed, and set at Liberty by the Treaty of Nimeguen. He was afterwards by the French King made Bishop of Straßburg, and advanc'd to be a Cardinal. An Account of all the remarkable Things which have happen'd to this City, publish'd from their Records, &c. till 1496, was publish'd here in 1500, by John Koelhoff, a Citizen. The greatest Part of it is said to have been composed by the Senate, and some of the chief Citizens. An University was founded here in 1388, and is reckon'd one of the best frequented in the Empire. Montconys says, the Pope has a Nuncio always here, to take Care of his Interest with the Popish Electors. The Town-House of this City, Dr. Brown says, is a goodly Structure; on the Front of which there's a Man in Basso Relievo engag'd with a Lion, representing one of their Burgomasters, who having exasperated their Clergy, they sent in a Lion upon him, which he slew on the Spot. Over against the City, on the other Side the Rhine, there's a Village called Deutz, in-

habited chiefly by Jews, whom the Elector allows to live there; but they are not suffered to enter the City without a Guard. This Village belongs to the Territories of Newburg. Misson says, there are some Families still in Cologne, who derive their Pedigree from the Romans that first settled there.

For the better understanding the ancient History and Geography of these Parts, we have inserted here Cluverius's Map of the ancient Inhabitants betwixt the Rhine and the Elbe, in Caesar and Trajan's Time.

There belongs likewise to the Elector of Cologne, in the Circle of Westphalia, 1. That called

The Dutchy of WESTPHALIA:

Which, according to Moll, is 55 Miles long from S. W. to N. E. and 47 where broadest from E. to W. It has the Bishopricks of Munster and Paderborn on the N. Wittecravia on the S. the County of Mark and Dutchy of Berge on the W. and the Landgraviate of Hesse on the E. Dr. Nishelson says, most of it is cover'd with Woods; but towards Lippstadt, the Country is pleasant and fruitful. They have store of Venison, Corn and Pasturage, and in some Places Mines of Lead, Copper and Silver; but so overpower'd with Water, that they turn to little Account. In this Country, K. Wittekind, and his Successors the Dukes of Saxony and Westphalia, are supposed to have had their Residence, and on that Account it retained the Name of a Dutchy.

The chief Towns are, Arnsberg, a neat and pleasant City on the River Roer, 47 Miles N. E. from Cologne. The Elector frequently resides here when he comes to hunt in this Country. 'Tis defended by a strong Castle, where the Governor has his Residence. 'Twas formerly subject to Counts of its own, the last of whom sold it to the See of Cologne in 1368, as the Chronicle of Cologne informs us.

2. Stadsberg, or Stadspurg, on the River Dimel, a small City, which was demolished by the Swedes in 1645.

3. Mulheim, which La Forreß makes Part of this Dutchy, tho' it lies properly within that of Berg, but is subject to the Elector of Cologne. It stands on the E. Bank of the Rhine, about 6 Miles below Cologne, is a

fair and large Town, and pretends to be the Old Cologne, the Metropolis of the ancient *Ubi*; but this does no way agree with History. Their chief Plea is from the great Quantities of Roman Coins and other Antiquities found in its Neighbourhood; but these might be occasioned by the settling of some Roman Garison in or about this Place afterwards. The Townsmen resolv'd to wall it round in the beginning of the last Century, and to make themselves an Imperial City; but were opposed by the Emperor *Matthias* and the City of Cologne; and the Emperor order'd the Spanish General *Spinola* to demolish their Outworks in 1614; and next Year the Citizens of Cologne sent Workmen to demolish all the new Buildings in the Place. The Townsmen attempted to fortify it again at the beginning of the Civil Wars, on Pretence of Security; but being still opposed by those of Cologne, it continues its Dependency on that City.

The 4th Town taken Notice of in this Dutchy is *Werle*, pleasantly situated betwixt the *Rovere* and *Lippe*, 12 Miles N. W. from *Arenberg*. 'Tis walled and fortified, and is the Residence of the Elector's Judge Official for *Westphalia*.

5. *Geseck*, on the Borders of *Paderborn*, 26 Miles N. E. from *Arenberg*. 'Tis a fortified Town, which came to the See of Cologne in 1501, and was afterwards taken by the *Netherlanders*, who possessed it some Time. It was also taken by the Landgrave of *Hesse* in 1636; but restored by the Treaty of *Westphalia*.

The 2d Country belonging to the Elector in the Circle of *Westphalia*, is

RECKLENHAUSEN,

A County 20 Miles long from E. to W. and 10 broad from S. to N. Its chief Town, of the same Name, lies in the middle of the County, 32 Miles N. E. from Cologne. 'Tis a strong Town, and was taken by the Elector of Cologne from the Duke of *Cleves* in 1343. 'Twas mortgaged afterwards by one of the Electors to the Count of *Schaumburg* for 17550 Crowns; but ranomed, with several other Places, by one of his Successors. There's a Nunnery here, whose Abbess or Priorefs has a Power of Life and

Death. She only is obliged to make the Vow of Chastity; but the Nuns are permitted to marry, after having stay'd here a certain Number of Years.

The next Town in this Country is *Dorstein*, 10 Miles N. W. from *Recklenhausen*. 'Tis a strong Town, and was well fortified by the Landgrave of *Hesse* in 1639. 'Twas besieged in 1641 by the Elector's Troops, and surrender'd after two Months Siege on honourable Terms.

The Dutchy of Juliers.

Some reckon this Country, with the Bishoprick of *Liege*, to be Part of the *Netherlands*; but we chuse rather to follow the *Matricula*, which makes them Part of the Circle of *Westphalia*, and therefore describe them here, according to the Course of the Map.

This Country has *Guelderland* on the N. the Dutchy of *Limburg*, and the Territory of *Aix la Chapelle*, with Part of the Archbishopricks of *Cleves* and *Cologne*, on the S. the Dutchy of *Bergs*, and Part of the Electorate of *Cologne*, on the E. and Part of *Brabant* on the W. The ancient Inhabitants of this and some of the neighbouring Countries were, according to *Bertius*, the *Bructeri*, *Eburones*, and *Menapii*: But for a further Account, we refer to what we have said of Ancient *Germany*. This Dutchy is plentifully stor'd with all Necessaries for Man and Beast, as Corn, Hay, Wood, &c. 'Tis particularly noted for a good Breed of Horses, and Plenty of Wood, which is transported into other Countries for the Use of Dyers.

This Dutchy, with those of *Cleves* and *Bergs*, and the Countries of *Marck* and *Ravensburg*, were for a long Time subject to the same Princes; but that Family being extinguished in 1609, the Emperor *Rudolph II.* conferred the Dominions on the House of *Saxony*; but with a *Salvo* to the Rights of the other Pretenders. Soon after, in the Reign of *Charles V.* the Families of *Brandenburg* and *Newburg* laid Claim to them, as being descended from Daughters of the former Princes. This Controversy was adjusted in some measure in 1611, when the Dutchy of *Cleves* and County of *Marck*, &c. were adjudged to the Family of

Brandenburg.

Brandenburg, and the Dutchy of Juliers to the Family of Newburg; for which, we refer to our former History of those Families, and to *Limneus*, in lib. 5. of his Treatise *de Jure publico Imperii Romano Germanici*, where every ones Pretensions are set down at large. This Dutchy is about 60 Miles long, and 30 broad.

The Principal Towns.

1. *Juliers*, by the Germans called *Gulich*, and by the Latins, *Juliacum*; which occasions some to think that it was founded by *Julius Caesar*, or by *Julia Agrippina*, who founded *Cologne*, which *Cluverius* thinks probable; but *Cellarius* doubts it, because 'tis not mention'd by any of the Ancients, till we meet with it in *Antonin's Itinerary*, and *Theodosius's Tables*. It lies on the River *Roor*, 23 Miles N.W. from *Cologne*, about 17 N.E. from *Aix la Chapelle*, and 22 S.E. from *Burenand*; Long. 25. 5. Lat. 50. 57. The Town is small, but well fortified, and neatly built: The Houses are of Brick, and the Streets broad and regular. The Citadel is large, contains the Duke's Palace, in a spacious Piazza, and is as strong as the best Engineers in Germany could make it, being 30 Years in Building. 'Twas taken by Prince *Maurice of Nassau* in 1610, from the D. of *Saxony*; and by the *Spaniards* in 1622, but restored to the D. of *Newburg* by the Treaty of the *Pyrenees*. In the Suburbs there's a Monastery of *Carthusians*, nobly endowed by several Dukes of *Juliers*.

2. *Duren*, on the same River, 9 Miles S. from *Juliers*. *Cluverius* supposes it to be the *Marcodurum* of the Ancients, by some called *Marcomagum*: It pretends to the same Founder and Antiquity with *Cologne*; was formerly made Imperial by the Emperor *Rupert*, but subdued by the D. of *Juliers*, in 1407. The Streets are neat and uniform, and water'd by Streams in the middle. In *St. Martin's Church*, their fairest Structure, they pretend to have the Head of *St. Anne*, Mother to the Virgin, which formerly brought a great Concourse of Pilgrims thither. In 1543, *Charles V.* took this Town by Storm, and burnt it, after putting the Garrison to the Sword; but it has since been rebuilt, and is subject to the Dutchy of *Juliers*.

La Forrest reckons in this Dutchy, 1. *Kerpen* on the *Erpe*, which the *Spaniards* restored to the Elector of *Cologne*, but we have already described it. 2. The Abbey of *St. Cornelius Munster*, situated on the River *Dense*. There are several other Market-Towns in this Country, which not being described, we shall not insist upon them.

3. *Aken*, Latin *Aquisgranum*, 15 Miles S.W. from *Juliers*, 20 S.E. from *Maastricht*, and S.W. from *Cologne*; Long. 24. 50. Lat. 50. 47. called by the French, *Aix la Chapelle*, from a Chapel in the Great Church, much visited by Pilgrims, for the Multitude of its Relicks. This City lies betwixt the Dutchies of *Juliers* and *Limburg*, but is reckon'd part of the former, and is under Protection of the Duke. 'Twas anciently very considerable, the Seat of *Charlemagne*, and is now an Imperial, large and beautiful City.

Reusner, in his Treatise *de Urbibus Imperialibus*, fancies it had its Name from *Apollo Grannus*, a Deity well known to the ancient Germans and *Rhatians*; which is allowed by *Celtes*, in his Panegyrick on this City; one Verse whereof runs thus;

Fumat aquis calidis Granno Urbs ab Apollino dicta.

i. e. The Smoking Baths have rais'd this City's Fame,
Which from Apollo, Grannus had its Name.

But the most received Opinion is, That its Name came from *Serenus Grannus*, Lieutenant-General of *Gallia Belgica*, under the Emperor *Adrian*; who having, Anno Christi 53, discovered the Hot Springs here, beautified them after the Fashion of the *Roman Baths*, and built himself a Palace, and Lodgings for his Retinue near them. To confirm this, the Citizens still shew a venerable Piece of ancient Architecture at the End of the Town-House, which they call *Turris Grani*, and believe it to be part of the Ruins of his Palace, tho' some think the Architecture does not answer the Antiquity.

Attila the Hun, having afterwards destroyed this Place, with the rest of the Neighbouring Towns, it lay in Ruins; till *Charles the Great* hunting in the Woods near it, his Horse accidentally struck his Hoof into

D d d d d 2

one

one of the Hot Springs; which the Emperor observing, and finding by the Ruins of several great Piles of Buildings, that this must needs have been the ancient *Aquisgranum*, he ordered the Baths to be searched out and rebuilt: And being much taken with the pleasant Situation of the Place, he built a Palace, rebuilt the City, founded a Collegiate-Church, which he dedicated to the *Virgin Mary*, and endowed it with a noble Revenue in 804. By Degrees he finish'd that Part of the Town which is incircled by the old Wall; and thus it continued till 882, when 'twas again ruin'd, and the Emperor's Palace burnt by the *Normans*. It suffer'd much, after it was rebuilt, by other Fires, particularly by one in 1656, which burnt 26 Churches and Chapels, and 5000 Private Houses, which were quickly rebuilt, so that 'tis now more large and beautiful, than in *Charles the Great's* Time. In 1668, a Treaty was held here, and a Peace concluded between the Kings of *France* and *Spain*.

The Town-House, or Senate-House, is a very stately Structure of Free-Stone; 'twas built in 1533, and is adorned with Statues of all the Emperors since *Charles the Great*. The first and second Stories are divided into several Chambers; from all which, the Smoak of the Chimneys is convey'd through 4 large Pillars which support the uppermost Roof. The highest Story is one entire Room, 162 Foot long, and 60 broad. The Emperor, who used to receive his first Crown of Iron here, with the same Ceremonies as he did the second of Silver at *Milan*, and the third of Gold at *Rome*, used to entertain the Electors and other Princes, that attended the Solemnity in this Room.

In this Hall, there are several curious Pieces of Painting, by *Amisaga*, among which, that of the *Resurrection*, and another of *Charles the Great*, giving the Charter to the City of *Aken*, highly valued. In the middle of the Market-Place, before the Town-House, there's a stately Fountain, remarkable for its Largeness and Workmanship, by the famous Artist, *Gerard Coris*. It has 4 Springs, which run continually from above, into a large Copper Cistern of 30 Foot Diameter; and from thence, by 6 Pipes, into a Stone Cistern below, from whence 'tis conveyed through the City.

On the Top of the Fountain there's a large Brass Statue gilt, of *Charlemagne* in Armour, with his Face towards *Germany*. Round the Edges of the Brass Cistern, there's an Inscription in *Latin*, importing, "That the " hot Waters being discovered here by *Gracianus* a Roman Prince, Brother to *Nero* and " *Agrippa*. He first built the Baths; but " they were afterwards renewed by the Emperor " *Charlemagne*, who appointed that " this City should be the Seat of the Empire on this Side the *Alps*. Formerly this " cold Fountain run into the Baths, and " the Senate of this City adorned it with " this Brass Vessel, in 1620.

The Cathedral is large, but of an odd Figure, and of *Gothick* Architecture. At the West-End, there's a Steeple adorned with several Pyramids; and on the Top, with a large Globe and Cross. From this Tower, which is much higher than the Body of the Church, there's a Gallery, supported by a long Arch, to a Cupulo near the middle of the Church. The Inside is beautified with a vast Number of Pillars of Marble and Brass; gilded Statues, Brass Doors and Partitions, with a great deal of Mosaick-Work. Over the Place, where the Body of *Charles the Great* was first inter'd, hangs a very large Crown, given to this Church by the Emperor *Frederick I.* made of Silver and Brass gilt, adorned with 16 small Towers, 48 larger, and 32 lesser, Statues of Silver: Amongst which, are set 48 Candlesticks at great Festivals.

The Emperor *Frederick* removed the Body of *Charlemagne*, and buried part of it under the Altar of the Choir in a Silver Coffin, and the other Part near the Wall of the old Building, which he covered with the same Tombstone it had before, of white Marble, with the Figure of *Proserpina* upon it, and is supposed to have been taken from the Tomb of *Julius Caesar*. In this Church, there is also the Monument of the Emperor *Ordo I.* in black Marble.

Among the many pretended Relicks, worship'd by the Pilgrims who anciently flock'd hither, the most remarkable are, 1. The Gown which the *Virgin* is said to have wore at our Saviour's Birth, made of Wool, not unlike that which grows on Coco-Trees. 2. A coarse Linen Cloth our Saviour was begirt with, when he suffer'd. 3. A Piece of the Cord
that

that bound him when he was delivered to Pilate. 4. Some of the Blood of the Proto-Martyr St. Stephen, richly enshafed in Gold and precious Stones; upon which the Emperors are sworn at their Inauguration. 5. The Picture of the Virgin, with our Saviour in her Arms, embossed upon a Jaspis about 2 Inches broad, found in the Emperor Charlemagne's Tomb, and pretended to be the Work of St. Luke. 6. A noble Manuscript Copy of the Gospels, richly covered with Silver gilt, found in the same Tomb. 7. Charlemagne's Sword, wore by his Successors at their Coronation, and used in the Dubbing of Knights, and conferring other Honours. Some of these, and a great many more, were said to be procured by Charlemagne, from Aaron King of Persia, from the Patriarch of Jerusalem, from Constantinople, and other Places.

But the Hot Baths in this City, very much frequented by Germans and Foreigners, make the Town most considerable. Of these, there are 3 within the Inner Walls; the Emperor's Bath, the Little Bath, and S. Quirinus's. The first of them is in the same Place, and fed with the same Springs, with that which Charlemagne took so much Delight in, that he would often invite his Sons, Nobles and Guards, to bathe in it with him, it being then the Custom to bathe 100 together, tho' now the Baths are divided into lesser Partitions. The little Bath joins with the Emperor's, as the King and Queen's Bath in England; and they both rise so hot, that they let them cool 12 Hours before they use them. Dr. Brown says, These Baths are Nitro-Sulphureous, and that he saw Brimstone an Inch thick, Salt-petre, and other petrified Substances taken out of them. Besides these, there are in the outer Circle of the Town, other Baths which are not so hot as the former, whose Smell is somewhat offensive, and their Water not transparent: Dr. Brown says, They are Sulphureo Nitrous. They have also a Fountain of warm Water, much resorted to, and drunk in Summer Mornings for many Chronical Distempers. Near those hot Springs, there are many cold ones, by which the Heat of the former might be temper'd; and, as Dr. Brown says, with no great Charge, made the most delightful Baths in the World.

About a Furlong out of the S. Gate, stands the Village of *Porcetum* or *Borces*; so called, from the vast Number of wild Hogs that anciently frequented the Woods near this Place. They have here a famous Nunnery of *Bernardines*: The Abbess is Princess of the Empire, tho' there lies an Appeal from her Court to the Court of Aldermen at *Aken*. The Village is well built, and beautified with 4 Churches. There are here a great many hot Springs on both Sides of a small Rivulet, which waters the Town. These are by Pipes and Conduits conveyed into 14 Houses, and distributed into 28 Baths. Their Water is clear and pleasant, without any offensive Smell, but much hotter than any in *Aken*, being usually cool'd 18 Hours before it can be endur'd. They cool it with an Instrument pierced through with a great many Holes, with which also they stir the Water when you enter the Bath, to render the Heat less perceptible.

Dr. Brown says, They are for the most part square, and about 5 or 6 Yards over. He adds, There's one called *The Poor-Man's Bath* in the open Air; and in the Streets there's a Spring as hot as any that he has seen.

Near this Place there are several Mines of Lead, Coal, Vitriol, Sulphur, and Calmey, as they call it, or *Lapis Calaminaris*; with the last whereof they make Brass, in the following Manner: To 28 Pound of the best Swedish Copper, they put 100 Pound of this Mineral; to which they add some broken Pieces of Brass, and a good Quantity of the Dross of both the forementioned Simples. These they melt in Crucibles over a hot Furnace for 12 Hours together, and then pouring 8 of these Crucibles into one, they let the drossy and baser Parts boil over: Then they pour the liquid Metal into a Frame of Stone, bordered with Bars of Iron, by which Means they run into large Brass Plates, which are afterwards cut in Pieces with large Cissars made for that Purpose.

Mr. Ray says, The Government of this City is administer'd by a Mayor, 2 Burgo-Masters, 14 Eschevins, and 120 Counsellors. The Mayor has the Precedence among the Eschevins, is put in by the Duke of *Juliers*, and continues for Life, or *quamdiu se bene gesserit*. The Burgo-Masters are elected by the Majority of the Companies

nies of the City, and administer this Office 2 Years. The Eschevins officiate in the Quality of Judges, during Life. The Counsellors are all chosen by the several Companies, of which there are 14 or 15. The Territories belonging to this City are very large, comprehending near 200 Villages, enclosed on all Sides with Mountains.

Miffon says, It was formerly a very pleasant City, but has lost much of its ancient Lustre. The Emperors were formerly crowned here, but that Custom is laid aside; yet the Emperor always declares, in what Place soever he is crowned, the same shall not be interpreted as a Prejudice to the Privileges of this City. The Emperor is always a Canon of *Aix*, and in that Quality takes an Oath at the Time of his Coronation.

There is a Description in *Latin* of this City and its Baths, by *Dr. Blondel*, a Physician of that Town, which was printed at *Maeſſricht* in 1685. He says, That though *Charlemagne's* Pragmatick Sanction makes *Granus* the Founder of this City, Brother to *Nero* and *Agrippa*; the Chronicle of *Utricht* says, He was a *Roman* Senator, banished with his Family by *Nero*; and others say, He was his Proconsul in these Parts. He adds, That *Charlemagne* was himself a Canon in the Cathedral, and ordered that his Successors in the Empire should always be so. He says, That besides what it suffer'd by the *Huns* and *Normans*, 'twas burnt down in 1146, by an accidental Fire; but by the Bounty of the Emperors, and great Concourse of People, it grew so much, that in 1172, the Emperor *Frederick I.* added the outer Walls, Towers and Ditches. It suffered much again by Fire in 1224, when many of the Citizens and Strangers perish'd in the Flames: It had the like Misfortune in 1236. He says, The Town-House was built about 1353; and that the Brass Cistern of the Fountain above-mentioned, weighs 12000 Pound, is 10 Foot wide, and 13 in Circumference. He adds, The Circuit of the whole City is a League and a half, and that of the Inner City $\frac{1}{2}$ of a League. The Inner has 10 Gates, and the Outer 11. He says, Though the Town lies in a Valley, encompassed with Mountains and Woods; the Air is very wholsom, and the Soil fruitful and pleasant, and abounds with Corn,

Fruit, and Pasturage. The neighbouring Woods and Quarries, furnishes them with Materials for Fire and Building. They have 20 publick Fountains of good clear Water, besides many private Ones. They have 10 hot Mineral Fountains, and some cold ones, without *St. James's-Gate*, besides several in the adjoining Fields. The Streams of Water that run through the Town keep it very clean, and have several Mills upon them. Besides the other Mines already mentioned, they have rich Coal Mines, and are well supplied with all Necessaries by the Neighbourhood of the *Rhine* and *Maes*.

In this Description of the Cathedral, he says, That in the E. End of it there's a Throne, upon which our Saviour is represented sitting in Majesty, with a long Robe; and round the Throne there's the Representation of the 4 Animals mentioned in *Ezekiel's* Vision, and over his Head a Circle of golden Stars. Underneath there's the Symbol of the Cross, which was said to have appeared in the Air to the Emperor *Constantine*, when he defeated *Maxentius*: And near to this are represented the 24 Elders rising from their Seats, laying aside their Crowns, and falling down before the Throne; and the Windows about it are curiously gilt, and the Pavement beneath is of checker'd Marble, very artfully wrought. He says, That in the Great Crown which the Emperor *Frederick I.* gave to this Church, the Clergy formerly, at their great Solemnities, used to put up 450 Wax Tapers; but they seldom use now above half the Number. Over the chief Altar in this Church, there's a Chest of Silver and Gold of Antick Workmanship and Engraving, in which they have the 4 chief Relicks, which they shew to the *Hungarian* Pilgrims and others, at their Jubilee, that they celebrate once in 7 Years. On the Right Hand as they go into the Choir, there's a Pulpit, from whence the Sub-deacon sings the Gospel at Solemnities, cover'd with Plates of Gold and Silver, and adorned with many Jewels and precious Stones, being the Gift of the Emperor *Henry II.* in 1014. The Altar of the Choir is covered with Plates of Gold, representing our Saviour's Passion, and are supposed to have been taken out of *Charles the Great's* Sepulchre. In the upper part of the Church,

over-

over against the Prince's Altar, betwixt two Pillars, there's a Throne of white Marble, where the Emperors use to sit when chosen. 'Tis supposed to be the same that *Charles the Great* plac'd there.

His Account of the Baths or hot Fountains here is thus: Those in the Old Town are, *Nitro-Sulfo-Sulphureous*; those in the New Town are, *Sulphuro-Sulfo-Nitrous*; and those of *Borset* are, *Sulfo-Aluminous*. For the Difference of those Baths, the Way of using them, and our Author's Dissertation as to the natural Causes of Baths, we refer the Curious to the Book it self, to what we said in our Introduction, P. 59, 60, 61. and to another called, *Bathoniensium & Aquis—Grænenisium Thermarum Comparatio*; in a Letter to the Earl of Castelmair, printed at London in 1676, for the Agreement betwixt them and our English Baths. Only in short Dr. *Blondel* says, That Bathing with those of *Aix la Chapelle*, is good against all Affections of the Nerves, such as Convulsions, Palſies of all sorts, Numbness, Tremblings, Gout in the Feet or Hands, Sciatica's, Hardness of the Nerves, Contractions, Swellings, Distempers of the Bowels, Stomach, Spleen, inveterate Head-aches, Vertigo's, Tingling of the Ears, Nephritical Distempers, against all moist and cold Affections of the Womb, Stoppage or Flux of the *Menſes*, Barrenness, Abortion, Scabs of all sorts, and Dregs of bad Mercury made use of in Venereal Distempers; but he does not think them proper for such as have those Distempers actually upon them.

Those at *Borset* are so hot, that the People scald Pigs with the Water, and boil Eggs in it; but 'tis observ'd, that tho' they harden the Yolk, they never harden the White. These Baths are frequented by People of all Sorts, and Ages, who bathe in them for Diversion, without any Danger. They are not so strong as those in the City, and by Consequence fitter for weak People. They are good against the same Distempers, and also against Defluxions on the Head and Breast, moist and squeamish Stomachs, Dropſies, soft Swellings, and Diseases of the Womb, &c. and may be drunk as well as those of the City, were there any Occasion for it. The Fountains are so copious in both Places, that they are capable of filling several times in a Day above

50 Baths, or Channels of 50 and 70 Tun a-piece; and most of the Baths, except those for the Poor, are so contriv'd, that the old Water is drawn off by Conduits under Ground, and the Baths clean'd from all Impurities. The Doctor computes, that from the Baths in the City and *Borset*, there flows 6000 Tun of Water per Day, which carry as many Pounds Weight of Salt. He adds, That these Waters being drunk, are good, 1. Against hot Distempers of the Liver, Spleen, Reins and Bowels. 2. Against Obstructions of the Mesentery, Pancreas, Liver, Spleen, and Reins. 3. The Yellow Jaundice, Cachexy, and Dropſy proceeding from thence. 4. Inveterate and stubborn Fevers, New Tertians and Quartans. 5. The Whites in Women. 6. Bleeding at the Nose, and Flux of the *Menſes*. 7. They kill all sorts of Worms. 8. They help Conception, and dry over-moist Parts. 9. They purge the Urinary Vessels of all Impurities. 10. They cure Stoppage of Water and Stranguries. 11. They dissolve and expel the Stone and Gravel. 12. They help in Melancholy and Hypochondriacal Distempers. 13. They recover lost Appetite, strengthen weak and flatulent Stomachs, and quench immoderate Thirst. 14. They cure the Scurvy, Gout in Hands or Feet, Rheumatisms, and other Distempers proceeding from too much Serum in the Blood. 15. The most inveterate Cholicks. 16. They are excellent against Asthma's. 17. Scirrhus Swellings, Scrophulous Distempers, Imposthumes of the Mesentery, Diarrhea's, Ulcers of the Mouth, and Distempers of the Gums and Teeth.

This City suffered much during the Civil Wars in the middle of the 16th Century, when the greatest Part of the Citizens were Protestants; but the Marquis *de Spinola* took it, and re-establish'd Popery there, which is now the prevailing Religion. The Protestants are allowed no Church in the Town, but go to their Worship to a Church in the Dominions of the States of *Holland* in the Neighbourhood. 'Tis also noted for several Councils which were held here in the Reigns of *Charlemagne* and *Lewis the Pious*: In one of 'em, *Alcuin* disputed against the Bishop of *Urgel*, and convicted him of Heresy. The rest were about the Procession of the Holy Ghost, Reformation of

of Manners, Regulating of Monks and Nuns, and against such as had seiz'd the Patrimony of the Church.

La Forrest says, That when the Emperor is crown'd elsewhere, the Magistrates, who have the Charge of *Charlemagne's* Sword, Shoulder-Belt, and the Gospel in Golden Letters, which he made use of, send 'em to the Elector of *Mentz*, who gives them Security that they shall be restored. The same Author mentions *Sittard* on the Borders of *Limburg*, *Tudder*, and *Susteren*, little Cities belonging to the Duchy of *Juliers*.

The Bishoprick of Liege,

HAS *Flanders* and *Brabant* on the N. and W. the Duchy of *Limburg* on the E. *Luxemburg* and Part of *France* on the S. 'Tis about 70 Miles long from S. to N. and 25 from E. to W. but in one narrow Tract almost 60. The Country is rich and pleasant; and because of the multitude of Clergymen who dwell in *Liege*, and some neighbouring Cities, they call it the *Clergymen's Paradise*. The Valley in which the City of *Liege* stands, is more than ordinary pleasant and fruitful. Some think the Country took its Name from the Latin Word *Legio*, because a Roman Legion was slain near this Place by *Ambiorix*, the famous General of the *Eburones*: But others more probably derive it from a small River of the same Name, which falls here into the *Meuse*.

The most peculiar Commodities of this Country are, Brimstone and Vitriol: An Account of extracting and preparing which, was communicated to Sir *Robert Murray*, a Member of the *English* Royal Society, and is publish'd in their *Transactions* of 1665, N^o 2. to the Effect following:

The Substance from which both are extracted is the same, and not much unlike Lead-Ore; some small Quantities of which is now and then pick'd out of it. The Mines are like Coal-Pits, and dug according to the Depth of the Mineral, sometimes 15, and at other Times above 20 Fathom, according as the Vein lies, or as the Water under Ground suffers them to work. They are most apt to be overflow'd in Summer,

when the Drowth dries up the Water above Ground, so as they have not enough to work their Pumps. They make the Brimstone thus; They break Stone or Ore into small Pieces, and put it into Crucibles 5 Foot long, and made Pyramid-wise. These Crucibles they lay sloping, and the Brimstone being dissolved by the Heat of the Furnaces underneath, drops from the lower End into a Leaden Trough, through which there runs a continual Rivulet of cool Water, convey'd thither by Pipes to cool the dissolv'd Sulphur, which is usually 4 Hours a melting. This being done, they draw out the Ashes with a crooked Iron; and putting them into an Iron Wheelbarrow, carry them out, lay them in a Heap, and cover them with other elix'd Ashes, to keep them warm; and this they repeat as often as they make Brimstone.

When they make Copperas or Vitriol, they take a Quantity of the said Ashes, throw them into a Plank'd Pit 4 Foot deep, and 8 square, cover them with Water, and let them steep 24 Hours, or till an Egg will swim on the Top, which is a Sign that the Liquor is strong enough. When they design to boil it, they let it run through Pipes into the Kettles, and add to it half the Quantity of Water which remains after the boiling of the harden'd Copperas. These Kettles are of Lead, near 5 Foot high, 6 Foot long, and 3 broad, and are set upon thick Iron Bars. In these they boil the Liquor with a strong Coal Fire 24 Hours or more, according to the Strength of the Water. When 'tis boil'd to a Consistence, they remove the Fire, and cool the Liquor; which being done, they let it out at Holes beneath in the Sides of the Kettles by Wooden Troughs into several Receptacles, about 3 Foot deep, and 4 long, where it continues 14 or 15 Days, till the Copperas separates from the Water, and becomes Icy and hard. The remaining Water is that called *Mother Water*, which they mix with the Liquor above-mentioned: And the elix'd or drain'd Ashes are the Dregs or *Caput Mortuum*, which, the Lee whereof the Vitriol is made, leaves behind it in the Plank'd Pits.

This Country has also Mines of Lead and Iron, and Quarries of Marble.

The chief TOWNS are,

1. *Liege*, called *Leodium*, *Leodicum*, and *Legia*, by the Latins. 'Tis the Capital of the Country, and lies on the *Maes*, 17 Miles S. W. from *Aken*, 12 S. from *Maestricht*, 10 N. E. from *Huy*, and 17 N. W. from *Limburg*, in Long. 24. 15. Lat. 50. 40. 'Twas but an ordinary Village before the Time of *Charles the Great*; but the making it a Bishop's See, drew a Concourse of People to it. The See is said to have been founded by *Hubert*, Son to *Bertrand* Prince of *Aquitaine*; tho' some make it of a much older Date. They say, he came into *Brabant* on the Account of his Religion, which had not much Footing in his own Country: That at *Maestricht* he contracted a Friendship with *Lambert*, Bishop of that Place; and going afterwards to *Rome*, was made his Successor by Pope *Sergius*; those of *Maestricht* having murder'd *Lambert*: And tho' *Hubert* was much caref'd by the Inhabitants of that Town, yet not trusting 'em, he remov'd to *Liege*, where he built the Cathedral, which he dedicated to St. *Lambert*, and order'd his Corps to be interr'd here about 713. The Bishop is Suffragan of *Cologne*, and Prince of the City and Country of *Liege*, Marq. of *Franchement*, Count of *Loos* and *Haubaye*, &c. He calls himself likewise Duke of *Bouillon*, because of some Pretensions he has on that Dutchy. *La Forrest* says, the Chapter is compos'd of 60 Canons, all Nobles or Doctors. He is of the Opinion of those who say, the Town was founded by *Ambiorix*, K. of the *Eburones*, after he had cut off the *Roman* Legion. He says, 'twas walled by St. *Hubert* Bishop of *Maestricht*; that 'twas ruin'd by the *Normans* in 881; that *Henry I.* Duke of *Brabant* took it in 1212, and let his Men pillage it for 6 Days. There have been frequent Disorders here about the Elections of their Bishops, and many Quarrels betwixt them and the Magistrates of the City about the Sovereignty of the Town, which they pretend to be independent of him. In 1409, *John* Duke of *Burgundy* killed above 36000 *Liegeois*, for having made War upon their Bishop; and *Charles the Bold*, Duke of *Burgundy*, chastis'd them so severely on the like Account, that ever since they have entertained an irreconcilable Hatred to the *Burgundians*. We

have formerly taken Notice, That of late Years, they have generally chosen the Elector of *Cologne* for their Bishop.

The City is now large and beautiful, about 4 English Miles in Circumference, and much resembles *Roan* in *France*. Within the Walls, there are several Vallies, Hills and Islands, form'd by the *Maes*, which runs through it in two Streams. Most of the Streets are spacious and well built, and have a clear Stream running through the middle of 'em. Besides which, many of the best Houses have two or more Fountains with cool Spring Water. In the City and Suburbs are reckon'd above 100 Churches: The most stately of which is the Cathedral; for which, and many other excellent Fabricks, *Liege* has this Character given it by Travellers, That for fair Churches, Convents, and other Religious Foundations, no City in *Germany* or *France* is able to compare with it. The English Jesuits have a College here, well seated on the top of an Hill; and not far from thence, there's an English Nunnery. In St. *William's* Convent without the City, lies Sir *John Mandeville*, the famous English Traveller, whose Works are better esteem'd in *France* and *Germany* than here. Having viewed most Cities in the World, he chose this to spend his last Days in. Near his Grave are kept his Saddle, Spurs, and Knife, that he made use of in his Travels; and on his Tomb, there's an Inscription in old barbarous *French*, requesting those that pass over him to pray for him. They have an University here, once so famous, that at one Time they had 9 Kings Sons, 24 Dukes, and 29 Counts Sons, besides many others of Quality, who studied here; and, if we may believe *Meibomius*, in 1131, there were 21 Kings Sons in this University. This City is still very populous; but the Account given by some Historians, that *Charles* Duke of *Burgundy*, when he sack'd it, put 100000 of the Inhabitants to the Sword, as is mentioned by Dr. *Nicholson*, seems to have no good Authority; for *Commynes*, who was present in that War, and gives an Account of the sacking and burning the City, says no such Thing; but he owns, that abundance of 'em were drown'd. The Citizens are form'd into 32 Companies of Freemen; among whom the Godsmiths have the Pre-eminence.

E e e e

The

The Dioceſe of *Liege* was formerly more conſiderable than at preſent ; for *Luxemburg*, *Namur*, and *Hainault*, have enrich'd themſelves with its Spoils, beſides what it has ſuffered in the late and preſent Wars. It contains, or has a Right to, 52 Baronies, 18 Wall'd Towns, and 400 Villages, well Peopled. Dr. *Brown* ſays, the Biſhop's Palace in the City is a very noble Structure ; That the Cathedral is built of red Stone, and has abundance of fine Carving about it ; That the Canons of the Church are very rich and powerful. They have 60 called *Canonici Majores*, who muſt all be of Noble Extradion, except a few Learned Men they admit among them. Theſe 60 elect the Biſhop. They have 12 called *Canonici Madioces*, and 12 more called *Minores* or *Parva Menſa*, according to Mr. *Ray*, who ſays, the Three States of this Dioceſe, compos'd of the Clergy, Gentry, and Commons, have a conſiderable Share in the Government, there being no Tax rais'd, or other Matters of Weight tranſacted, without their Conſent. Dr. *Northleigh*, in his Deſcription of the *Spaniſh Netherlands*, ſays, they have a Key of a quarter of a Mile long upon the *Maas* for landing their Goods ; That it reaches to their new Bridge over the *Maas*, which has 6 Arches, every one twice as large as thoſe of *London* Bridge, and not much inferior to the celebrated Arch of the *Rialto* at *Venice*. Veſſels paſs eaſily through 'em. The Bridge riſes high in the middle, is broad enough for 5 or 6 Waggonſ to go a-breast, and is mounted with ſome Cannon. The Form of the City, he ſays, is Triangular, and their Citadel lies on a ſteep Hill ; was built by the Archbiſhop of *Cologne* in 1650, was afterwards demolished by the *French*, but ſince rebuilt, and ſtrongly fortified. He mentions great Variety of Dialling invented by the famous Mathematician *Limus* in the pleaſant Garden belonging to the *Engliſh* Jeſuits ; and among them, that in the middle of the Garden is the moſt curious, by its ſeveral Ways of ſhewing the Hours : 1. By a Wine-Glaſs ; in the middle of which, a perpendicular Gnomon directs to the Figures on the Outſide. 2. By a Glaſs reflecting like a Looking-Glaſs ; in which, if one centers his Eye, he ſees a little Star, cauſed by the Penetration of the Sun-Beams, that points at

the Hour. 3. A round Glaſs full of Wire, and ſmall Braſs Bars that ſurround it, from which, to the Point of Time, the Sun-Beams are reflected in a *Punctum*, as from a Burning-Glaſs ; ſo that by counting the Number of theſe little Bars, from the fiſt to the Point, where the Heat centers, a blind Man may, by his Fingers, find the Hour of the Day. 4. Reflexions on a Globe of Conſtellations for a Night-Dial. 5. By the Elevation of the Pole-Star, and the Light of the Sun trajected. 6. By the receding of the Gnomon, till it caſt no Shadow, the Reverse of ordinary Dials. He ſays, the Convent of *St. James* is a noble Structure, with two beautiful Monuments, one of their Founder, and the other of one of their Abbots, both curiouſly wrought in *Relievo* ; as is the Paſſion of our Saviour in the Skreen. They pretend to abundance of Relicks ; among which, they ſhew a Tooth, ſaid to be one of our Saviour's ; ſeveral Pieces of the Croſs ; ſome of *Mary Magdalen's* Hair ; a Shift of one of the Children murder'd by *Herod's* Command ; ſome of the Apoſtles Skulls ; and many Relicks of Martyrs. Among the laſt, they ſhew an *Antependium*, made of the embroider'd Cloak that our King *Charles I.* wore on the Scaffold when he was murder'd ; which the Doctor ſuppoſes, if it be true, muſt have been given them by his Queen. He adds, That in this City there are two or three handſome Squares ; and that the Biſhop's Palace is a noble Fabrick, with ſeveral Courts ; one of which is more ſpacious than our *Royal Exchange*, and has fine Piazza's. *Miſſon* ſays, the adjacent Coal-Mines have drawn thither a great many Armourers ; and that the Vineyards on the neighbouring Hills afford them a tolerable ſort of Wine, but not ſtrong ; the neighbouring Woods ſupply them with Plenty of Veniſon ; and they have excellent Mutton, fed in the Forreſt of *Ardenne*. This City was taken by the *French* in 1675, and next Year they deſtroy'd the Caſtle. It was retaken in 1702 by the Confederate Troops. Pope *Innocent II.* held a Council here in 1131, and crown'd the Emperor *Lotharius II.* in the Cathedral, when the Chapter, as their Annals ſay, conſiſted of 9 Kings Sons, 14 Dukes Sons, 29 Counts, and 8 Barons.

2. *Bouillon*, on the River *Semay*, is by *Dr. Nicholson* reckon'd to belong to this Diocese; but *La Forrest* and *Moll* reckon it in *Luxemburg*: To the Description of which, we refer it.

3. *Tongren*, called by the Latins *Tungro-rum Oppidum*, and anciently *Atuataca Tungro-rum*. 'Tis the oldest Town in these Parts, and was formerly very considerable, when there lay a pav'd Road from it to *Paris* of 200 Miles long; some Pieces of which are still to be seen. Many Roman Coins, and other Antiquities, have been found in and about this City. There's one very remarkable in the great Church, supposed to be the Image of *Minerva*, worship'd here before they were converted by *Maternus*; but others think, the Image agrees better to the Description of *Hercules*, who had a Temple in this Town. *La Forrest* says, a Bishop's See was founded here very early; but was transported first to *Maastricht*, and then to *Liege*; and some say, there were 100 Churches in it when it was destroyed by *Attila*; but it has nothing now of its ancient Lustre. The French King seiz'd it in 1672, but quitted it next Year. The Marshal *de Villeroi* took it by Surprize in 1703, with a Confederate Garrison of 700 Men; but abandon'd it again in 1705, upon the Approach of the D. of *Marlborough*. *Dr. Northleigh* says, they pretend it was built 1100 Years before our Saviour; and that 'tis generally believ'd, the Ruins of the old Castle, and the old Wall on Bishop *Maternus's* Chapel, are older than the Time of our Saviour's Birth. He says, he observ'd in the Moulding the Images of *Sol*, *Venus*, and *Jupiter*. Their old Church is a very handsome Gothic Structure, and has a Dean and 22 Canons. The French demolished the Jesuits Church there, which is since rebuilt. It had certainly a considerable Territory in the Time of the Romans, as appears from *Cesar*, *Strabo*, *Tacitus*, *Julius Capitolinus*, &c. About half a Mile from the Town, there's a Mineral Water of a Chalybiat Taste, which tinges the Earth and Stones with an Iron Rust, which some take to be the Spring describ'd by *Pliny* in his Natural History, *Lib. 3. Cap. 2.* but most Antiquaries apply it to the present *Spawi*, about 8 Leagues from hence; tho' considering the former Largeness of the Territory of this City, it may

perhaps include both. This Town lies 11 Miles N. W. from *Liege*, and 9 S. W. from *Maastricht*.

4. *Hoy*, on the *Maes*, 12 Miles S. W. from *Liege*, and 17 N. E. from *Namur*, is a fair old City, in a pleasant Valley, on a small River that falls here into the *Maes*, over which there's a fine Stone Bridge, that joins the two Parts of the Town. 'Tis the Capital of the *Gondroz*, and, according to some Antiquaries, was formerly a potent City call'd *Benefacum*, and afterwards *Huum*, or *Huyum*; but being ruin'd by the Incursions of the Barbarians, it lost its Jurisdiction. 'Tis defended by a strong Castle on a neighbouring Hill, and well fortified. It had formerly Counts of its own; but the last of 'em reign'd it to the See of *Liege*. They have Iron Mines in the Neighbourhood, which employ most of the Inhabitants. 'Twas taken by the French in 1675, who dismantled it. The Bishop of *Liege* fortified it again. The French retook it in 1693; but the Duke of *Marlborough* recover'd it in 1703.

5. *Dinant*, a very ancient City on the *Maes*, 12 Miles S. from *Namur*. 'Tis fortified with a strong Castle on a steep Rock, and has a Bridge over the *Maes*. The French dismantled it in 1554; but it was since more regularly fortified. It had formerly a considerable Trade; but has suffer'd much that Way by the late and present Wars. Their chief Income is from Black Marble, Iron and Brass. The French took it in 1675, but restor'd it to the Bishop of *Liege* by the Treaty of *Ryswick*.

6. *Franchimont*, or *Franchenberg*, anciently a large and populous City, but now reduc'd to a Village. 'Tis defended by a Castle, and gives Title of Marquis to the Bishop of *Liege*. The Inhabitants of its District were always accounted the best Soldiers of the Diocese. 'Twas ruin'd by *Charles*, the last Duke of *Burgundy*, and the Inhabitants dispers'd after he took the City of *Liege*, as above-mentioned. They have a good Mine of Lead, and a fine Quarry of Marble, in the Neighbourhood. It lies about 8 Miles S. W. from *Limburg*.

7. *Walcourt*, near the Head of the small River *Heur*. According to *La Forrest*, 'tis the Capital of the Country belonging to the Bishop of *Liege* betwixt the *Sambre* and

the *Maes*, and was noted for an Advantage which the Confederates obtain'd near it over the *French* in the beginning of the last War.

8. *Spaw*, called in Latin *Spadanius Vicus*, is a neat Village, seated in a Valley in the Forrest of *Ardenne*. 'Tis encompassed on all Sides with Hills, and on the N. it has high steep Mountains. It lies 14 Miles S. E. from *Liege*, and 7 S. W. from *Limburg*. 'Tis noted for its Mineral Waters, much frequented by People from all Parts of *Europe*, and on that Account has been always allow'd a Neutrality during the hottest Wars. 'Tis supposed to be the Fountain that *Pliny* mentions, as we took Notice above, to be near *Tungri*, a City of *Gaul*, whose Waters he said had a Taſt of Iron or Steel, was Purgative, cur'd Tertian Agues, and the Stone: When boil'd, it grew turbid, and at laſt of a red Colour. *Cluverius*, in his *Germania Antiqua*, Lib. 2. ſays, That this muſt be meant of the *Spaw*, and answers the Objection from *Pliny's* ſaying it belong'd to *Tungri*, a City of *Gaul*: That by *Civitas*, *Pliny* meant the Community of People call'd *Tungri*, and not the Town of *Tongerren*; and that 'tis certain, the *Spaw* lay within their Boundaries. Dr. *Brown*, in his Account of thoſe Waters, ſays, his Hoſt inform'd him when there, That he had ſent this Water as far as *Saragoſſa* in *Spain*; That he had then 30000 empty Bottles ready to fill; and the moſt convenient Time to do it was the hottest and drieſt Season in the Summer, or the hardeſt Froſt in the Winter, becauſe at ſuch Times the Water is ſtrongeſt, ſparkling and briſk. The chief of theſe Mineral Fountains, he ſays, are Four, viz. *Geronſter*, *Saviniere*, *Tonnelet*, and *Pohunt*. The firſt ſprings in the middle of a thick Wood, a Mile and a half S. from the *Spaw*: 'Tis the ſtrongeſt of any, according to Dr. *Brown*, and the beſt adorn'd, having a Pavilion over it, ſupported by 4 Stone Pillars, and a green Place clear'd in the Wood near to it, with a little Houſe for the Patients to warm themſelves in cold Weather. It ſmells ſtrong of Brimſtone, cauſes many that drink it to vomit, paſſes chiefly by Urine, as the reſt do, and ſtrikes a Purple with Nut-Galls, more inclining to Red than the *Cambridge* Waters. The Sediment is of a light Blue in the Fountain,

but of a dark dirty Red every where elſe. Near this, there's a large Spring in the Wood much like it, but not built or adorn'd. 2. *Saviniere*, lies a Mile and a half E. from *Spaw*, and is built up like a Tower. The Waters are not ſo ſtrong as the former, but peculiarly good againſt the Stone and Gravel. 3. *Tonnelet*, riſes in the Meadows near the Town, and having no Shades about it, is not ſo pleaſant as the other two. *Henricus ab Heer*, in his *Spadacrene*, ſays, 'tis more nitrous than the reſt, and cauſes ſuch a Chilneſs in the Mouth and Stomach, that few can drink it. 4. *Pohunt*, in the middle of the Town, where moſt of the Water that is ſent abroad is taken up, except there be Orders to the contrary. They ſometimes call it the Fountain of St. *Remacius*, a Biſhop of *Liege* of that Name, who beautified it with handſome Stone-Work. Over the Mouth of the Well, there's this Inſcription, *Sanitati Sacrum*, i. e. Conſecrated to Health; and the following Diſtich, with an Account of its Virtues:

*Obſtructum reſerat, durum terit, humida
ſiccant,
Debile fortificat; ſi tamen arte bibas.*

i. e. It opens Obſtructions, diſſolves hard Swellings, dries up too much Moiſture, and ſtrengthens weak Parts, if drunk according to the Advice of Phyſicians.

Dr. *Northleigh* ſays, That the Waters of *Pohunt* have a Vitriolate Taſt; and that if we put into it any thing auſtere, as Galls, Oak-Leaves, *Balaſtium*, &c. it turns black; That thoſe in the Woods are of a more Piquant Taſt, and of quicker Operation, than our Chalybeat Waters; That, according to Mr. *Boyle's* Experiments, they weigh two Grains in three Ounces more than *Cambridge*, and four Grains more than ſome of the *Wington* Waters, yet both leſs than the common Water by ſeveral Grains; but a conſiderable Allowance muſt be given for what they evaporate bringing hither. The Doctor ſays, they are cleerer on the Place than the *Engliſh* Chalybeats; and that 'tis worth Obſervation, that tho' by the exacteſt Scrutiny of Glaſſes, no viſible Difference has been found hitherto betwixt the Contexture of the Minute Parts of Com-

Common and Mineral Water, yet by Chymical Precipitations and ordinary Solutions, and sometimes by subiding, considerable Separations of a different Substance are made without much Difficulty. He adds, That these Waters are much colder than those commonly mix'd with Rhenish Wine upon the *Rhine* and *Moselle*, which generally pass under the Name of *Spaw* Water, and make a strong Ebullition with the Wine; whereas the true *Spaw* Water, tho' mix'd with Sugar, produces no such Ebullition, and is always bottled up in the Place in little Wicker Flasks; but the other in Stone Bottles. He adds, That near the great Well in the Town, there's another lesser one arch'd, the Water of which seems to be stronger than the other; and he thinks it deserves Observation, that there are several Springs both in the Town and Wood near those Chalybeat Waters, which have nothing either of their Taste or Virtue.

Other Places in this Diocese are, 1. *Horn*, a small Town with a Castle, on the *Maes*, Capital of its County, formerly belonging to the Dukes of *Burgundy*, afterwards to particular Lords, but now to the See of *Liege*. 2. *Maseick*, a little Town within a quarter of a League of the *Maes*, 18 Miles N. from *Maastricht*, of Importance, because of the Passage over that River. 3. *Loos*, *Lotz*, or *Borchloen*, a rich little Town betwixt *Tongerén* and *St. Truden*, Capital of its County, and about 6 English Miles distant from each. It had formerly Counts of its own, but was united to the See of *Liege* in 1372. It has a Collegiate Church, dedicated to *St. Odulphus*. 4. *St. Truden*, or *St. Tron*, a Wall'd Town on the Frontiers of *Brabant*, in the County of *Haebaye*. It has its Name from *St. Trudo*, who was martyr'd here in the 7th Century, and has a Monastery of *Benedictines* dedicated to his Memory. Sometimes 'tis called *Centron*, whence some have thought it was the Seat of the *Centrones* mentioned in *Cæsar's* Commentaries. One half of the Town is subject to the Bishop of *Liege*, and the other to the Abbot of the *Benedictines*. 'Tis fortified with a good Wall. 5. *Bilsen*, a small Town two German Leagues from *Maastricht*, and 4 from *Liege*. 'Twas destroyed by Fire in 1636, but well rebuilt since. Near this Town, there's a Nunnery called *Münsterbilsen*, richly endow'd

for young Ladies of Quality, who are allow'd to marry at Discretion. Among other Rarities here, they have a complete Unicorn's Horn near 7 Foot long. 6. *Hasselt*, a well built and populous Town on the *Demer*, 4 German Miles from *Maastricht*, and 6 from *Liege*, where the Bishop has a noble Palace, in which he resides sometimes. 'Tis noted for the Birth of *Hassilius* and *Titelmannus*, two eminent Writers. Near this City lies the rich *Cisterian* Nunnery of *Hirckenrod*. 7. *Cowvin*, in the Forreft of *Lagne*, a small City, purchas'd by the Bishop of *Liege* from the Counts of *Hainault* about the End of the 11th Century. It lies 12 Miles S. W. from *Charleroy*. 8. *Verviers*, a large Town, well built, on the same River with *Franchimont*.

The Dutchy of Berg,

HAS its Name from its Mountainous Soil, has the Dutchy of *Juliers* on the W. the County of *March* on the N. the Dutchy of *Westphalia* on the E. and Part of the Electorate of *Cologne* on the S. 'Tis about 50 Miles long on the Banks of the *Rhine*, and 20 where broadest. 'Twas govern'd formerly by Lords of its own, but at last came to the House of *Juliers*, and was made a Dutchy in 1389, and came to the Family of *Cleves* in 1505; whose Male-Issue failing, a Dispute happen'd about the Succession by several Descendants from Daughters of the Family, which occasion'd great Troubles in *Germany*. The Family of *Brandenburg*, with the Assistance of the *Dutch*, maintain'd their Pretensions; and the Family of *Newburg* maintain'd theirs by the Assistance of the *Spaniards* in like manner; but at last they came to an Agreement, as we have formerly mentioned, in 1614, which was renewed and confirmed in 1651.

The chief PLACES are,

1. *Dusseldorp*, the Metropolis of the Dutchy, and Residence of the Duke of *Newburg*, now Elector *Palatine*, on the E. Banks of the *Rhine*, 26 Miles below *Cologne*, and 6 above *Keyserswart*. The Publick Buildings towards the *Rhine* make a very good Appearance, particularly the Duke's Palace, which

which is a very stately and noble Fabrick. The Town has its Name from a small River called *Duffel*, which empties it self here into the *Rhine*. 'Twas anciently an Imperial City, had a much greater Trade than at present; and in those Days, the Channel of the *Rhine* lay under its Walls; but Vessels cannot now come so close. They have three great Markets for Corn every Week, where great Quantities are bought up and exported. In the Collegiate Church, there are many Monuments of the ancient Dukes of *Juliers* and *Bergen*; but the most stately is that of Duke *William*, the last of the Family. They had formerly a small University, which the Jesuits have of late endeavour'd to restore; but without Effect. The Town is pretty large, and well fortified, but has no Suburbs. *Monconys* says, it has a Citadel, separated from the Town by a small Harbour, into which the *Rhine* enters, and forms a sort of a Gulph. The Jesuits have a fine College here, and a good Seminary for poor Scholars. The Citadel consists only of two Royal Bastions, fac'd with Brick, command the *Rhine*, and cover the City on that Side, which is fortified all round with fine Bastions, and Cavaliers upon them.

2. Not far from *Dusseldorp* stands *Geriheim*, a noble Village, comparable to several Cities in the Empire.

3. *Essen*, on the Borders of the County of *Marck*, 15 Miles N. E. from *Dusseldorp*. 'Twas made an Imperial Town, and had its Privileges confirmed by *Charles V.* in 1523. 'Tis famous for a noble and rich Nunnery founded about 877 by *St. Alfrid*, Bishop of *Hildesheim*; to which belongs the greatest Part of the Town, and several large neighbouring Mannors. The Revenues were settled at first for an Abbeys and 52 Nuns, and 20 Canons, whose Numbers have since been retrench'd. They admit none but the Daughters of Noblemen, who are permitted to marry at Pleasure. The Citizens are noted for making good Fire-Arms, and the adjacent Country abounds with Coal and Wheat.

4. *Bensburg*, a strong Fort and Monastery, built in 1298, of the Order of the *Holy Cross*, and the first of its kind in the Empire.

5. *Solingen*, a small City on the River

Wipper, 15 Miles S. E. from *Dusseldorp*, noted for making good Cutlers Ware.

6. *Wipperford*, on the same River, 15 Miles S. E. from *Solingen*, a small City, but formerly more considerable, when destroy'd by the *Normans* in 881.

The County of Marck,

IS reckon'd the largest County in *Westphalia*, and is supposed to derive its Name from having been the Boundary of Ancient *Germany* towards *Gallia Belgica*. It lies betwixt the *Lippe* and the *Roer*, and is commonly divided into the 15. Bailiwicks of *Isenlohe*, *Huerde*, *Altena*, *Boecksum*, *Schwartzenburg*, *Wetter*, *Hamm*, *Schwerten*, *Lunen*, *Unna*, *Newstat*, *Blaukenstein*, *Rade*, *Werden*, and *Camen*. *La Forrest* adds *Dorsmund*, as belonging also to this Country; which, according to *Moll*, is 43 Miles long from S. E. to N. W. and where broadest about 47 from E. to W.

The principal TOWNS are,

1. *Hamm*, on the Frontiers of *Munster*, 45 Miles S. E. from *Dusseldorp*, and 25 S. from *Munster*. 'Tis a poor Hans-Town on the River *Lippe*, and Capital of the County. 'Twas taken by the *French* in 1673, but restor'd to the Elector of *Brandenburg* the Year after. The adjoining Country is fruitful in Corn, Hemp, and Flax, and the Townsmen have a good Income by Travellers betwixt *Germany* and the *Netherlands*.

2. *Unna*, another Hans-Town, in a large Plain, 9 Miles S. from *Hamm*. 'Tis less than the former, tho' formerly a Place of good Trade, before the Wars betwixt the Families of *Brandenburg* and *Newburg*, when it was reckon'd one of the richest Cities of *Low Germany*.

3. *Altena*, an ancient City, which formerly gave Title to the Counts of *Marck*, till about 1053, when the Count of *Altena* made himself Master of *Marck*, an old ruinous Place near *Hamm*, but then a considerable City. 'Tis remarkable for little now but its Castle.

4. *Werden*, on the Banks of the *Roer*, built in 1317. It lies 10 Miles N. E. from *Dusseldorp*, and is noted for the Monastery of *St. Lud.*

St. Ludger, whose Abbot founded it. Their chief Trade is in feeding Swine, of which vast Herds are brought hither Annually from other Parts of *Westphalia*, and great Numbers of Hams are every Year exported from hence. The River supplies them with Plenty of Eels, and other Fish, and the adjacent Fields abound with Corn. 'Tis a pretty neat City. The Abbey was seculariz'd by the Treaty of *Münster* in Favour of the Elector of *Brandenburg*.

5. *Soest*, on the River *Arse*, 15 Miles E. from *Hamm*. 'Tis a fair and large Imperial City, and reckon'd the largest in *Westphalia* next to *Münster*. 'Tis fortified with a double Wall, upon which stand 30 Turrets or Watch-Towers, and is encompassed with a large deep Ditch. It consists of 10 Parishes, but has many more Churches and Chapels. The Citizens have a Privilege to hunt and kill Venison in any of the neighbouring Countries, and have also a Supreme Court of Judicature, from which there lies no Appeal but to the Chamber of *Spires*. The Emperor *Frederick I.* bestowed this City and the Duchy of *Westphalia* upon *Reinold* Archbishop of *Cologne*, for his Service against *Henry the Lion* Duke of *Saxony*; but the Citizens finding their Privileges invaded by some of his Successors about 1441, they put themselves under the Protection of other Princes, and are now under that of the K. of *Prussia*; but the Collegiate Church of *St. Patroclus* is still under the Jurisdiction of the Elector of *Cologne*.

6. *Dortmund*, on the River *Empser*, 13 Miles S. W. from *Hamm*. It was formerly Capital of a County, which the Lords of it sold to the Inhabitants; upon which they took the Title of an Imperial City, which the Elector of *Brandenburg* disputes with them. 'Tis also one of the Hans-Towns, and tho' small, rich and populous. 'Twas formerly reckon'd the Capital of *Mark*.

The County of Ravensberg,

Takes its Name from a strong Fort on the Top of a Hill near the River *Hessel*. The whole Country is mountainous and rocky, has the Bishoprick of *Osnabrug* on the N. the Duchy of *Westphalia* on the S. the County of *Lippe* on the E. and

the Bishoprick of *Münster* on the W. It belongs to the Elector of *Brandenburg*, to whom it gives the Title of Count.

The chief TOWNS are,

1. *Bielevelt*, a strong Hans-Town, 7 Miles S. E. from *Ravensberg*, and 16 from *Osnabrug*, at the bottom of a great Hill, defended by the impregnable Fort of *Sporenberg*. It made a brave Defence against the French in the former Wars, when having gain'd a Hill which hangs over the Town, they play'd hard upon it with Grenado's and Fire-Balls, against which the Burgers cover'd their Houses with Webs of Linen-Cloth, which is their chief Manufacture, dip'd in Milk, that prevented their receiving any great Damage.

2. *Hervorden*, *Herwerden*, or *Herfurt*, another Hans-Town, 7 Miles N. E. from *Bielevelt*, in a pleasant Country, on the Conflux of the *As* and *Wehre*. 'Tis noted for a noble Nunnery, whose Abbess is a Princess of the Empire, and has a Vote in the Diet. 'Twas founded in 832 by Prince *Waltger*, who was converted by *St. Boniface*, as appears by an Inscription in the Chapel dedicated to *St. Waltger*. This Nunnery embrac'd the Reformation above 100 Years ago, and the Abbess and Nuns are *Calvinists*. The late Abbess was the learned Princess *Elizabeth*, Sister to the Electress Dowager of *Hanover*. She was the Miracle of her Sex, as may be perceived by the Letters that pass'd betwixt her and Monsieur *Des Cartes*, which are published in that great Man's Works. On a little Hill without the City, there's another Nunnery, which was founded by the Abbey of *Hervorden*, and serves it for a Nursery. They have a Deanness, Treasurers, and all the other Offices that belong to Collegiate Churches.

Dr. Nicholson gives the following Account of its Foundation, as he had it from one of their Vicars: In the Times of Popery, the Nuns of *Hervorden* having resolv'd to build a Church, they were inform'd by a Shepherd, that their Patroness the Virgin *Mary* appear'd to him like a Dove, sitting on the Stump of a Tree, and bid him tell them, She would have it built on that Hill, which they would not believe, except he would first

first hold a red-hot Iron in his bare Hand, and go bare-foot over some burning Ploughshares, which the Legend says he perform'd without any Hurt. Near the Altar, they show the Stump of the Tree, guarded with Bars of Iron; and an Annual Fair is still kept on the Hill, which from thence is called the *Vision Market*.

3. *Engern*, or *Angrivaria*, so called from the *Angrivarii*, the ancient Inhabitants of those Parts. 'Twas formerly a famous Town, and the Residence of King *Witekind*, who founded a Collegiate Church here of the Order of *St. Denis*. *Witekind* was buried in it, and his Epitaph was still legible within these few Years; but the Town being destroyed, and now only a poor Village, the Members of the College removed to *Herford*, where they still show some Relicks and other Rarities belonging to their Ancestors. This Town gives Title of Duke to the Elector of *Cologne*.

4. *Plotzwe*, on the *Weser*, 15 Miles E. from *Herwarden*, was anciently a Barony, that reached as far as *Herwarden*; but has for some Ages been reckoned Part of *Ravensberg*. The Castle was built by the Dukes of *Brunswick* for the Count of *Waldeck*, then Baron of this Place. The Town is conveniently seated for Trade; the River there being capable of large Ships.

The Dutchy of Cleve,

IS reckon'd one of the oldest Principalities in *Germany*, being first conferred upon *Ælius Gracilius*, or *Gracilius*, the Companion of *Charles Martel*, in his Expeditions against the *Frisons*, *Saxons*, and *Bavarians*: But *La Forrest* says, 'twas given him by King *Pepin* about 759. His Posterity match'd with the Family of *March* in 1532, by which they procured that County, and one of their Successors was created Duke of *Cleve* by the Emperor *Sigismund* in 1417. The Country is well furnished with Woods, Corn, and Pasturage, and is watered by the *Rhine*, the *Roor*, the *Lippe*, and the *Niersse*. The chief Forreſt is that of *Duysburg*, which almost encompasses that Town, and is thought by some to be this mention'd by *Tacitus*, and other ancient Authors, under the Name of *Sylva Teutoburgensis*. This Dutchy has the Dutch

Netherlands on the N. The Territories of *Cologne* and *Berg* on the S. Part of *Guelderland* on the W. and the Bishoprick of *Munster* on the E. *Moll* makes it 46 Miles long from S. E. to N. W. and about 20 where broadest.

The chief TOWNS are,

1. *Cleve*, so call'd from its Situation on the Rising of a Hill. It stands above 60 M. below *Cologne*, and about 11 S. E. from *Nimwegen*, within a League of the *Rhine*, in one of the finest Countries in *Germany*. *Cluverius* thinks it to be the Remains of the old *Colonia Ulpia Trajana*; the Main of which he supposes was at *Kellen*, about an English Mile from *Cleve*. It appears by several remarkable Ruins to have been formerly much larger than now, which favours *Cluverius's* Opinion. Over the S. Gate, there's the Monument of *Eumenius Rhetor*, who is said to have taught Oratory here; and under it there's an Inscription, which says, he liv'd here in the Time of *Julius Caesar*, who founded the Castle; of *Augustus*, who garrison'd it; of *Ulpian Trajanus*, who made it a Colony; and of *Ælius Adrianus*, who made it a City: But *Eumenius Rhetor's* being here, is strongly argued against by *Lippinus*, and stoutly defended by *Pighius*. The Castle is a Place of no great Strength, but pleasantly seated on the Top of an Hill; and there's a curious Prospect of the neighbouring Country from the Top of that called the *Swan Tower*. The City is little, but well Peopled, being the Residence of the Elector's Deputies who govern the Country, and the Place where the States assemble, who hold their Meeting in the Castle. There are several fine Houses here belonging to Persons of Quality; but those of the ordinary Burgers are mean. The great Church, a Monastery of *Capuchins*, and another of *Franciscans*, are the only Publick Buildings of Note, except the Castle. The Government of the City and Country is in the Hands of the *Calvinists*, who have a large handsome Church here; but the Publick Churches are possessed by the *Papists* in most Places of this Dutchy, by Agreement with the Duke of *Newburg*, who upon that Account is obliged to allow the Protestants a Liberty in his Dominions.

Mon-

Montconys says, the Town has no Fortifications; that the Castle is large, but irregular, and has two old square Dungeons; that it has very Majestick Apartments, and a great Hall, in the End of which there's an Alcove, to which they go up by 20 Steps, the whole Breadth of the Hall; from whence there's a Prospekt of the neighbouring Country further than one's Eye can reach, with a great Number of Cities and Villages, and a noble View of the Course of the *Rhine*, and of the River *Hel*, which runs by the Foot of the Castle. On the W. Side of the Town lies Prince *Maurice's* Parks, where there are a great many pleasant Ponds and Water-Works, Grotto's, &c. Above them, lies the high Hill called *Sternberg*, from whence one may see *Utrecht*, tho' 51 Miles distant, with near 40 other Cities and great Towns, 12 of which are seen through Walks cut in the Wood; at the End of each of which appears a fair rich City. On the E. Side stands the Prince's House in the Wood, where, among other Rarities, there's a notable Collection of old Roman Urns, and other Monuments of Antiquity, with several Inscriptions, omitted by *Gruterus*.

2. *Embrick*, on the E. Side of the *Rhine*, 4 Miles from *Cleve*. The Emperor *Rudolph* prevailed with the States of *Holland* to resign this Town to the Duke of *Cleve* in 1600, and at the same Time engaged the *Spaniards* to restore *Rhinberg* to the Elector of *Cologne*; but the *Spaniards* failing in their Performance, the States repossess'd themselves of *Embrick*, which they fortified; but restor'd it, with other Towns in that Duchy, to the late Elector of *Brandenburg*. The *Jesuits* have a College here, where they teach Youth. The Fortifications consisted of 8 or 9 very fine Bastions of Earth, Half-Moons of the same, and large deep Ditches on the Land Side; but on the Side of the *Rhine*, which is very broad there, they have only a Wall. They have always a small Garrison; but the Fortifications are neglected of late. 'Twas taken by the *French* when they invaded the *Netherlands* in 1672, but was restored in 1674. 'Tis a very ancient City, one of the *Hans-Towns*, and has a pretty good Trade. Over against it, there's a large Island in the *Rhine*, on the Corner of which, next the Town, there

was a Fortification; which, together with the Cannon of the Place, commanded the River.

3. *Griet*, betwixt *Embrick* and *Rees*, on the *Rhine*, formerly a strong Place; but was taken by the *Netherlanders* in 1636.

4. *Gennep*, at the Mouth of the *Niersse*, over against *Guelderland*. 'Twas anciently a large populous City, well fortified, and the chief Defence of these Parts; but of late the Fortifications have been demolished. 'Tis well seated for Trade; but lying on the Frontiers of *Guelderland*, and being subject to frequent Attacks, it has lost its Commerce. The *Dutch*, because of its Situation in the Road betwixt *Nimeguen* and *Venlo*, took it in 1641. The River *Niersse* abounds with delicate Eels, and there's a very strong Fort at a small Distance from the Town. 'Twas taken by the *French* in 1672, but restored after they demolished its Fortifications.

5. *Goch*, on the *Niersse*, a little above *Gennep*, a small fortified Town, which was taken by the *Netherlanders* in 1641.

6. *Calcar*, on the River *Men*, 7 Miles S. E. from *Cleve*. 'Twas built for a Place of Refuge in case of any sudden Invasion from *Guelderland*, or the Electorate of *Cologne*, and grew populous and rich by their Trade in Linen-Cloth, Malt, and Beer. Duke *Adolph I.* built a vast Granary here, where most of the neighbouring Boors bring their Corn to be made into Malt. It has a strong Castle, a fine Market-Place, and a stately Town-House. *St. Nicholas's* Church, and the *Dominican* Monastery, where they have a great Library, are noble Structures. In the Road betwixt this Town and *Santen*, stands the rich Monastery of *Marienboom*; on the Wall of which, next to the Road, there's a Latin Inscription, to testify their Gratitude to the late Elector in 1650, for accepting their great Collection of MSS. on Condition that he would not turn them out, and secularize their Revenues.

7. *Santen*, near the Banks of the *Rhine*, 10 Miles S. E. from *Calcar*. 'Tis an ancient Town, which some say was built by *Trojans*, that came hither under *Francus*, one of *Hector's* Sons, who call'd it *Troja Franco-rum*. Others say, 'twas built by the *Sicambri*, and that 'twas called *Santen*, because the *Theban* Legion suffer'd here under the

F f f f f

Em-

Emperor *Maximianus*, which is just as true as that it was built by the *Trojans*. *Pighius* is of Opinion, That it was the *Ulpia Trajana*; but *Cluverius*, with more Reason, thinks it is the *Vetera Castra* of *Tacitus*, where *Julius Caesar* resided for some Time. 'Tis now very much decayed; but in their great Church, there are many fine Altars of good Workmanship, with abundance of Relicks; and if you will believe them, they have a MS. of *St. Paul's* writing.

8. *Wesel*, called *Nether Wesel*, to distinguish it from *Wesel* in the Dominions of *Treves*. It lies on the E. Side of the *Rhine*, 6 Miles from *Santen*, and is the largest and best built Town in the Dutchy. 'Tis a Hans-Town, and usually reckon'd among the Imperial Cities of *Westphalia*; but the Princes of *Cleve* freed it from the Monthly Contributions paid by other Imperial Towns. 'Tis strong, populous, and well seated for Trade. It first grew rich by the Concourse of Merchants who came hither from the *Netherlands*, to avoid the *Spanish* Persecution; but suffer'd much by the *French*, who took and plunder'd it in 1672, and exacted great Contributions from the Inhabitants, which forc'd many of 'em to retire. 'Twas restored in 1674, and is govern'd by its own Laws; but owns the Elector for Sovereign. Among other Publick Buildings, there's a noble Hospital here, founded by a Chancellor of the Dutchy, and richly endowed for aged and decrepit People. In the Porch of the great Church here, was born *Peregrine Bertie*, afterwards Earl of *Lindsey*, by the Lady *Catharine*, Dutches Dowager of *Suffolk*, who with her Husband fled beyond Seas in the Time of Queen *Mary's* Persecution; and not daring to discover her Quality, was reduced to great Straits for some Time. *Monconys* says, the Ramparts of the Town are flank'd with 9 good Bastions, 4 of which are fac'd with Brick; that there are two Suburbs, well fortified with good Bastions, Half-Moons, and Ditches; and that in the middle of the Curtains, there are Galleries which enter into the Ditch, and have at the end of 'em separate Places for the Men and Women in case of a Siege. There's a small Harbour here for Vessels that sail on the *Rhine*, with several Monasteries.

9. *Rees*, 12 Miles N. W. from *Wesel*, a large well fortified Town. 'Twas taken by the *French* in 1672, and restored in 1674. 'Twas formerly garrison'd by the *Dutch*. There was also a Fort on the other Side the *Rhine*. The Protestants have a Church here, where they have preserved a very fine Altar, which has an excellent Sculpture on gilt Wood, containing the History of our Saviour's Life.

10. *Burich*, a fortified Town over against *Wesel*, within a quarter of a League of the *Rhine*. 'Twas taken by the *Netherlanders* during the *Belgick* War, and by the *French* in 1672, but restor'd again in 1674.

11. *Alphen*, a little City about half a League S. from *Burich*.

12. *Orsoy*, another little City on the W. Bank of the *Rhine*, about 6 Miles S. E. from *Burich*. 'Twas well fortified, but taken by the *French* in 1672, and the Garrison and Burgers cruelly treated by the *French* King, because they offered to hold out against his Army.

13. *Dinslacken*, near the Banks of the *Rhine*, 7 Miles S. E. from *Wesel*, is called by the *German* Geographers *Locus Martis*, but without Ground. 'Twas taken by the *Netherlanders* in 1627; since which, it has never recover'd its ancient State.

14. *Roerort*, on the Mouth of the *Roer*, which was also taken and fortified by the *Netherlanders*.

15. *Duisburg*, on the Borders of *Cleve* and *Berg*, about 16 Miles N. E. from *Wesel*. 'Tis alledg'd by some to be the *Teutoburgum* of the Ancients; and some think that the *Salus Teutoburgensis*, where *Varnus* was slain with his *Roman* Legions, is that called the *Duisburg* Wood. They have had a long Controversy with the Princes of *Cleve* about their Title to be an Imperial City; but have hitherto paid all Subjection to the Elector of *Brandenburg*, who calls himself Supreme Lord of this Place. 'Twas formerly noted for Annual Fairs; but that Trade is now enjoyed by *Francfort*. 'Tis a small City, but strong, well fortified and populous. They have an University; and *St. Salvator* and *St. Mary's* Churches, with several Monasteries, are very fair Structures. 'Twas taken by the *French* under Marshal *Turenne* in 1672, but restor'd in 1674.

The Barony of RAVENSTEIN,

A small Tract of Land betwixt *Guelderland* and *Brabant*, has for some Ages been added to the *Dutchy of Cleve*, and has its Name from the Castle of *Ravenstein* on the *Maes*, a *German League* below *Grave*.

The Bishoprick of Munster,

HAS that of *Osnabrug* on the E. the *Dutchy of Cleve*, and Part of the *County of Zutphen*, on the W. the *Counties of Bentheim* and *Steinfurt* on the N. and the *County of Mark* on the S. The Country is generally barren and ill Peopled, is about 100 Miles in Length, but of an unequal Breadth, being in some Parts 20, in some 40, and in others 60. 'Tis entirely subject to the Bishop, who is a Count of the Empire, and able to maintain 15000 Men. The principal Commodity of this Country is *Westphalia Bacon*. Their Bishops, till the Time of *Bernard Van Galen*, were always reckon'd peaceable, and fond of a Neutrality when their Neighbours were at War, and paid 12000 Crowns Annually to the States of *Holland* for their Protection; but that Bishop join'd with the *French* and *English* against the *Dutch*; and because of his Military Inclinations, was courted by the greatest Potentates. In all the Variety of Fortunes, he was successful in his War, being so cunning as to change Sides opportunely. He made it his Business to foment Divisions among his Neighbours, and to receive Pensions on both Sides; but all his Conquests were not able to compensate the Ruin of his Diocese, and the Loss of so many Thousands of Men as were kill'd by his Means. He died in 1678, just upon the Peace betwixt *France*, *Spain*, and the *Netherlands*. Upon which his Neighbours and Subjects made this Remark, That 'twas time for him to walk off the Stage, when Men grew weary of War, and desirous of Peace.

Their chief PLACES are,

1. *Munster*, the Metropolis of *Westphalia*, in a fruitful Soil, near the Banks of the

Ems, well fortified by Nature and Art. It lies in Long. 26. 7. Lat. 52. 52 Miles N. E. from *Cleve*, and 22 S. W. from *Osnabrug*. The Houses are generally fair and well built, there being a good Quarry of Free-Stone at *Bamberg*, two *German Leagues* from the Town. It has 5 Collegiate Churches, and a College of Jesuits well frequented. The chief College is that of the Cathedral, consisting of a Dean and Chapter, who chuse the Bishop. The River *As* runs through the City, and the Fishing of it belongs to the Bishop. The Bishoprick was founded by *Charlemagne* in 758, who made *St. Ludgar* their first Bishop. It has a strong Castle, and was formerly an Imperial Town; but was taken by *Bernard Galen* in 1661, and has since lost that Privilege. The Revenues of the Diocese were reckon'd in 1661 at 300000 Crowns per Annum; but are now much abated. This City is famous for the bloody Tragedy acted there in 1533 by the Enthusiastical Anabaptists, under the Conduct of *John Buckholt*, a Taylor, born at *Leyden* in *Holland*, and on that Account called *John of Leyden*. He brought over to his Party *Rothman*, a Minister of the Suburbs, who had embrac'd *Luther's* Doctrine, and successfully preach'd it in the City. The Senate endeavour'd to suppress those Disorders; but the Faction grew so strong, that they were obliged to give them a Toleration. After this, *Buckholt's* Followers pretended to Revelations, and bawl'd about the Streets, commanding all Men to repent, and be baptiz'd. Then they seiz'd the Town-Hall, with the publick Arms and Ammunition, and usurp'd the Government: After which they sent *Rothman* and *Knipperdolling* privately to invite all of their Perswasion in the neighbouring Countries, which fill'd the Town with Anabaptists, who drove out the other Inhabitants. In 1534, the Bishop besieg'd them, but in vain. In the mean Time *John of Leyden* took the Title of King, and made one of his Concubines Queen, whom he afterwards beheaded, for shewing a Dislike at some of his Frantick Tricks. In 1535, the Bishop, assisted by the Landgrave of *Hesse*, and the Troops of *Cologne*, surpris'd the City, by the Direction of a Deserter, took the Mock King, with his two great Favourites, and sent them in Derision to the

F f f f 2

neigh

neighbouring Courts. Next Year *John of Leyden* was torn to Pieces with hot Pincers, and his Bones hung in an Iron Cage on the Top of a Steeple. This City is also famous for the Treaty of *Westphalia*, concluded here in 1648. The Bishop is Suffragan to the Elector of Cologne.

2. *Meppen*, at the Mouth of the *Hase*, on the Frontiers of *Friesland*, 43 Miles N. from *Munster*. 'Twas fortified by *Gustavus*, a Swedish General, and afterwards sold to *Charles Lodewick*, Count *Palatine of the Rhine*, for 60000 Crowns. 'Tis reckon'd the Key of *East-Friesland*, and was taken by the *Netherlanders* in 1587. 'Tis the chief Town of *Lower Munster*.

3. *Hafelungen*, 10 Miles E. from *Meppen*. In 1639, 70 Imperialists surpris'd and defeated 100 Swedes, who besieged this small Place, which was defended by 50 Men.

4. *Kloppenburg*, 16 Miles N. E. from *Hafelungen*. 'Twas taken by the Swedes in 1635, and regularly fortified; but soon after surrendered to the Imperialists.

5. *Vech*, a small City near the Confines of *Osnabrug*, 13 Miles S. E. from *Kloppenburg*, formerly subject to Lords of its own, and is Capital of a County of 15 Parishes, each of which contain 10. or 12 Villages; and in the whole, there are 31 Seats of People of Quality. In 1394, the Duke of *Lunenburgh* and Count of *Hoy* invaded the Bishoprick of *Osnabrug*, and carried off much Plunder; but were surpris'd and defeated by the Burgers of *Vech*; who rescued the Prisoners and Booty.

6. *Warenberg*, on the *Ems*, said to have been built by *Varus*, a Roman Captain, who was kill'd at *Paderborn* in a Sedition, under the Reign of *Augustus*.

7. *Stromberg*, S. of *Warenberg*, Capital of a Burgraviate, for which the Bishops of *Munster* obtain'd in 1653. a Vote in the Diet.

8. *Goesfelt*, a small fortified Hans-Town on the River *Borkel*, 20 Miles W. from *Munster*, and the usual Place of the Bishop's Residence.

9. *Abusen*, or *Afenhuys*, on the *Regge*, Capital of a large Barony. It lies 15 Miles N. W. from *Meppen*.

10. *Borklee*, on the River *Borkel*, Capital of a Barony, which belongs to the Counts of *Stirum*.

11. *Tilligt*, on the *Ems*, noted for a Convention of the States of *Munster* in 1532, to oppose the Growth of *Lutheranism*.

12. *Rheyn*, a small neat City on the River *Ems*, 18 Miles N. from *Munster*.

There are several other Market-Towns in this Bishoprick, of which we have no Description.

The Bishoprick of Paderborn,

IS so large, that it contains 24 Market-Towns, 20 Seats of Men of Quality, 16 Monasteries, and 54 Parishes. It has on the E. the Dutchy of *Brunswick*, and Part of *Hesse*; on the W. the Dutchy of *Westphalia*; on the S. the County of *Waldeck*; and on the N. that of *Lippe*; and is, according to *Moll*, 43 Miles long, and 23 broad. There's a great Concourse of Drovers from *France*, *Brabant*, &c. to their Annual Fairs. They abound with Deer and other Venison, rich Springs of Salt, and have some Iron Mines.

The chief TOWNS are,

1. *Paderborn*, on the River *Pader*, a large, fine, and populous City, and one of the Hans-Towns, in Long. 30. 28. Lat. 51. 40. 32 Miles S. W. from *Cassel*, and 50 N. E. from *Munster*. The Bishoprick was founded by *Charlemagne* in 777, and is Suffragan of *Mentz*. 'Twas liberally endowed by neighbouring Princes. The *Romish* Legends make the Foundation of this Bishoprick miraculous; and say, That *Charles the Great* encamping on that Ground where the City now stands, his Army being at that Time in great Want of Water, the first Pin that was struck in the Ground to fasten his Pavilion gave Issue to a plentiful Spring, that now drives some Water-Mills; on which the Emperor order'd the Church to be built upon that Spring, from which the Town derives its Name: But if the opening of every Fountain be a Miracle, there are abundance performed by Labourers every Day. *La Forrest* and others alledge, That 'twas here where the Romans under *Varus* were defeated by *Arminius*, the General of the *Cherusci*; but *Claverius*, in the Third Book of his *Germania Antiqua*, offers many

Aut.

Authorities to prove, that *Varus* was defeated betwixt the Mountains and the Town of *Dietmelle*, which he takes to be the ancient *Teutobergum*, that lies about 12 Miles N. E. from *Paderborn*, and is by *Aimonius* call'd *Theothmelli*, which differs little from its present Name. To the Objection rais'd from *Ptolomy*, that this Battle happen'd near the River *Weser*, he answers, That *Ptolomy* mention'd this, because 'twas the most noted River near the Place of Battle, being within 11 or 12 Miles of it; which confutes those who would have *Duysburg* in the Dutchy of *Cleve* to be the ancient *Teutoburgum*, and that *Varus* was defeated in that called *Duysburg Wood*, there being 95 Miles distance betwixt *Duysburg* and *Dietmelle*. *Pomarius*, in his Chronicle of *Magdeburg*, says, That *Charlemagne* order'd the greatest Part of the *Westphalians* and *Saxons* to be baptiz'd in this Fountain at *Paderborn* in 776, and 777. The most remarkable Publick Structures in this City are, the Bishop's Palace and the Cathedral, to which *Otto II.* gave a Golden Crucifix of 60 Pound Weight, valued at 60000 crowns. *La Forrest* says, the Chapter is composed of 24 Capitular Canons, who are all obliged to study in some French or Italian University; and that the Cathedral is one of the finest in Germany. They lost their Privilege of being an Imperial City since 1604, when they were subjected to their Bishop. In *Luther's* Time, the Citizens began to embrace the Reformation; but *Herman* Archbishop of *Cologne* being elected their Bishop, he condemned 16 of the chief Burgers who embrac'd the Reformation to die, and forc'd the rest to swear, they would never endeavour any Alteration in Religion. *Theodore of Furstemberg*, their Bishop, built the adjacent Castle in 1590, and founded their University in 1592.

2. *Lippespring*, or *Lippesburg*, about a German League N. from *Paderborn*, so called from the River *Lippe*, which rises in a large Stream in this Town. It stands on the Edge of a Heath, two German Miles long, uninhabited, and much infested by Robbers. The Dean and Chapter of *Paderborn*, who are Lords of this Town, have a Castle here, near the Place where the River springs, which, before it leaves the Town, drives 3 or 4 Mills.

3. *Warburg*, a Hans-Town on the *Dymel*, 18 Miles S. E. from *Paderborn*, was formerly subject to Counts of its own, that were Members of the *Westphalian* States; but is now under the Bishop. It stands in a fruitful Soil, drives a great Trade in brewing strong palatable Beer, and has a considerable Income from the neighbouring Mines of Iron and Lead.

4. *Lude*, *Ludge*, or *Loy*, a Town properly in the County of *Pyrmont*, but subject to the Bishop. It lies 27 Miles N. E. from *Paderborn*, and is noted for a Medicinal Fountain, called the *Holy Well*, reckon'd a sovereign Remedy for most Distempers, and upon that Account much frequented. 'Tis also noted for *Charlemagne's* Encampment here in 787.

5. *Brackel*, on the River *Brug*, formerly an Imperial Town, but now subject to the Bishop. It lies 18 Miles E. from *Paderborn*.

6. *Hersel*, on the *Weser*, built by *Charlemagne* in the 8th Century, when he held a Meeting of the Estates there. It had a fine Castle, which was burnt by the *Hessians* in 1637.

7. *Buren*, 5 Miles S. from *Paderborn*, purchas'd from its own Lords by the Bishop in the 16th Century: 'Twas burnt by the Swedes in 1636, but since rebuilt.

8. *Welsburg*, on the River *Alme*, famous for the Cruelty of the *Huns* to the Inhabitants about 450.

9. *Solkot*, 8 Miles S. W. from *Paderborn*, noted for its Salt Pits, which bring in a considerable Revenue.

Our *Philosophical Transactions* of December, 1665, tell us of a Spring in this Bishoprick which loses it self twice in 24 Hours, but returns again with such Violence, that it drives 3 Mills not far from its Source; and because of its Noise, is called by the Inhabitants *Bolderburn*, or the Boisterous Spring. *Morery* says, it lies near *Oldenbeck*, in *Tourburg* Forrest; that it sometimes runs about an Hour, and then stops for three; that it ceas'd running from 1630, to 1638; after which it had a regular Course like other Springs: But the *Philosophical Transactions* being later, we may suppose that it now runs and stops by Turns. The *Philosophical Transactions* of January, 1665, gives us an Account of another Fountain called *Mirburn*, about two Miles from *Paderborn*, which rises

ses with a treble Spring; two of which, tho' not above a Foot and a half distant, differ so much in Quality, that whereas one of 'em is limpid, bluish, luke-warm, bubbling, and holding Sal Armoniac, Ochra, Iron, Vitriol, Allum, Sulphur, Nitre, Orpiment, us'd against Epilepsies, bad Spleens, and the Worms; the other is ice-cold, turbid, and whitish, much stronger in Taste, and heavier than the former, holding much Orpiment, Salt, Nitre, Iron, and some Sal Armoniac. All Birds that drink of it, are observed to die of Convulsions; but if they have common Salt given them immediately after, they do not die so soon: If they have Vinegar given them, they do not die at all; but in 7 or 8 Days after are troubled with the Pip. The Lungs of such as dy'd being open'd, they were found quite shrivel'd up: Yet People who are troubled with the Worms, taking a small Quantity of it mix'd with common Water, it kills the Worms, and brings them away in great Numbers; but makes the Patient very sick. The 3d Stream, that lies lower than the other two, and 20 Paces from them, is greenish, very clear, and of a pleasant Taste, partaking both of Sour and Sweet. 'Tis of a middle Weight, betwixt the other two, and is supposed to be a Mixture of both: For the Gentleman who sent this Account to the *Royal Society*, says, he mix'd an equal Quantity of the two former with a little common Fountain Water, and when they were stir'd together, and suffer'd to settle, they made a Water of the same Colour and Taste with the 3d Spring. We refer the Curious for a further Account of these, and other Springs in this Country, to the Works of *Taberna-Montanus*.

The Abbey of C O R B E Y,

Lies on the E. of this Bishoprick, betwixt it and the River *Weser*. Its Jurisdiction is about 16 Miles long, and 8 broad. The Town of *Corbey*, from whence it has its Name, lies on the *Weser*, 27 Miles E. from *Paderborn*, and, with the adjoining Country, is subject to its Abbot, who is a Prince of the Empire. *La Forrest* says, the Abbey was founded by St. *Adelard*, Abbot of *Corbey* in *France*, about 822, and by him called *New Corbey*. But others say, 'twas

founded by the Emperor *Lewis I.* It stands in the *Solanger Forrest*, and is half encompassed by the *Weser*. He also founded an University here, where several German Bishops have been bred. Their first Rector was *Anscharius*, several of whose Scholars were sent by the same Emperor to convert the Island of *Rugen*; for which the Emperor *Lotharius* bestow'd it upon this Abbey, according to his Vow, when he went to conquer it, That he would bestow it on St. *Vite*, who lay buried in that Monastery, as appears by his *Diploma*, sign'd at *Aix la Chapelle* the 20th of May, 844. *Letzner*, in his Chronicle of this Abbey, gives an Account of all the Abbots and famous Writers buried here; among whom he reckons *Witkind*, a famous Saxon Historian. Near this Place was found the Saxon Idol *Irmenscul*, formerly mentioned.

To this Monastery belongs the City of *Hexter* or *Huxer*, on the *Weser*, 4 Miles S. W. from *Corbey*. 'Tis a fair Town, of good Trade, by the Conveniency of the River, which occasions many of the German Nobility to keep their Houses here, for the Improvement of their Estates by Trade and Merchandize; a Practice not common to Germans of Quality. This Town suffered much during the Civil Wars, when 1500 Men were kill'd in one Siege, and thrown into the *Weser*; but it has since recover'd much of its ancient Lustre, has 3 fair Parish-Churches, and has several other Publick Buildings of Note. *La Forrest* says, it's now a Free Town, under the Protection of the Dukes of *Brunswick*. There are several other Towns and Mannors belonging to this Abbey, but not worth describing.

The County of Lippe,

IS a small Tract of Land S. of the Bishoprick of *Paderborn*. *Moll* makes it 35 Miles where longest, and about 11 where broadest. The Princes of this County are Counts of *Ritberg*, and some other Places in the Neighbourhood, which make them more considerable than the first View of their Dominions in the Map would seem to do. Some German Heralds derive their Pedigree from *Manlius*, who so bravely defended

ded the Roman Capital against the Gauls. Others bring them from the two *Ursini*. But all agree, that they are of ancient Roman Extract. They are divided into the Branches of *Diethmold*, *Brackel*, and *Buckemburg*, and have married into great Families.

Their TOWNS of Note are,

1. *Diethmelle*, *Diethmold*, or *Diethmold*, about 12 Miles N. E. from *Paderborn*, and is the chief Residence of the eldest House. *Clu-verius* derives the Name from *Dith* or *Diet*, the same with *Teuto*, the old German Idol; and, as we have mention'd before, makes it the ancient *Teutoburgum*. 'Tis also remarkable for a great Overthrow given to the Saxons in its Neighbourhood by *Charlemagne*, in his 6th Expedition against those People. The Town is small, and subsists chiefly upon the Court of the Prince.

2. *Lippe*, or *Lippeslat*, Lat. *Lippia*, on the River *Lippe*, 20 Miles W. from *Paderborn*, 35 S. E. from *Munster*, and 36 S. from *Osna-brug*. 'Twas built by Count *Bernard II.* in 1150, who was Son to *Bernard I.* Count of *Oberwal*, Favourite to the Emperor *Lotharius II.* The Town is well fortified, and by the Inhabitants reckon'd impregnable. It made a brave Resistance against *Dietrich Archbishop of Cologne* in 1447. The Fortifications have been much improved since, and 'twas the first Place in those Parts which resisted the French with any Success in their late Wars, that were concluded by the Treaty of *Nimeguen*. Their chief Trade is in preparing Timber for building Vessels on the *Rhine*, to which it has an easy Conveyance by the River *Lippe*. 'Twas formerly the chief Residence of the oldest House of *Lippe*, to whom the County still belongs; but the City is now possessed by the King of *Prussia*.

3. *Horn*, an old Town near *Diethmold*, thought to be seated in or near the Place where *Varus* was defeated. It had Counts of its own till 1567, that it was made subject to the Counts of *Lippe*.

4. *Lemgow*, 15 Miles N. E. from *Paderborn*, and 5 N. from *Diethmold*, a rich and near Hans-Town on the River *Pega*, in a Country abounding with Corn. The Citizens are ingenious and industrious; two Qualities, says *Dr. Nicholson*, not very com-

mon in those Parts. Tho' they be subject to the Counts of *Lippe*, they have as large Privileges as other Hans-Towns, and are one of the Estates of *Westphalia*. The People are generally Lutherans, and have a good Gymnasium, and a Press for the Use of the Scholars.

5. *Uffen*, or *Salzuffen*, in the Road betwixt *Lemgow* and *Hervordren*, noted for a noble Salt-Spring; and a strong Cloth made here, and exported in great Quantities.

6. *Pyrmont*, a strong Fort near *Ludge*, about two German Miles from *Hamel* in the Dutchy of *Brunswick*. It had formerly Counts of its own, who were also Counts of *Spiegelberg*; but their Male-Issue failing, it came by Marriage to the Counts of *Lippe* in 1557.

7. *Ritberg*, a large Town with a Castle, on the *Ems*, 10 Miles N. E. from *Lippstat*. It had formerly Counts of its own; but *John*, the last of 'em, who rais'd a Disturbance among the States of *Westphalia*, was unanimously oppos'd by them, taken and imprison'd at *Cologne*, where he died. Upon which *Ritberg* came to the Count of *Lippe*, who married one of his Daughters; but it pays some Acknowledgment to the Bishop of *Paderborn*.

The County of Schawenburg.

HAS the Dominions of the House of *Brunswick* on the N. E. and S. and of the latter Part of the County of *Lippe*, with the Principality of *Minden*, on the W. *Moll* makes it 30 Miles long, and 17 broad. It abounds with Corn and Hay, Quarries of Free-Stone, of which they export great Quantities, Salt-Pits, Timber, Coal, Allum, Chalk, Venison; and some Years ago they had Copper Mines, in which there were some small Quantities of Gold, and Silver-Ore, which *Dr. Nicholson* thinks now to be lost. 'Tis water'd by the *Wefer*, *Hamel*, *Awe*, *Caspaw*, and the *Exter*; from which, and the *Steinhuder-See*, a Lake 5 Miles long, and 2 broad, they are plentifully supplied with Fish, especially *Perch*, for Consumption and Export. *La Forrest* says, this County was given by the Emperor *Conrad II.* to *Adolph*, a Saxon Lord, about 1032; whose Posterity failing in 1459, *Christian* of *Oldenburg*, King of

of Denmark, descended from a Daughter of the Family, fell Heir to it. *Otho*, descended from another Daughter, had the County of *Pimmenberg*; but his Posterity failing, *Pimmenberg* was divided betwixt the King of Denmark and the Duke of *Holstein*; and most of *Schawenburg* fell to the Landgrave of *Hesse-Cassel*, with which the *Atlas Historique* agrees.

The PLACES of Note here are,

1. *Schawenburg*, an old Castle on the Top of an high Hill on the E. Side the *Weser*, 17 Miles E. from *Minden*, and was the ancient Seat of their Counts.

2. *Buckenburgh*, the Seat of the 2d Branch of the House of *Lippe*, 12 Miles W. from *Schawenburg*. *Cluverius* thinks it to be the *As Bructerorum* of the Ancients, well known in the Time of *Tacitus* for Sacrifices offer'd there to *Hercules*, or an Idol that resembled him. It has nothing remarkable but the Count's Palace, which is a stately Fabrick.

3. *Rentelen*, on the W. Bank of the *Weser*, about 17 Miles N. E. from *Lemgow*, where there is a *Gymnasium*.

4. *Stathagen*, a pleasant little Wall'd City, in the middle of a large Forrest, 17 Miles W. from *Hanover*, and 8 N. from *Schawenburg*. 'Twas built by Count *Adolph* for a Residence of Pleasure, as appears by the Inscription on the Seal of the Town.

5. *Oldendorf*, a little strong Town about 5 Miles S. E. from *Schawenburg*. The Imperialists besieg'd it in vain in 1633, but took and plunder'd it in 1639. The Counts of *Lippe* have a Custom-House here, where all Vessels that pass up and down the *Weser* pay a Duty.

6. *Saxeibagen*, a Town with a strong Fort in the most Northerly Part of the County, about 16 Miles N. W. from *Hanover*.

The Principality of *Minden*.

MOL makes it about 26 Miles where longest from S. to N. and much the same Breadth from E. to W. It has the County of *Hoy* on the N. and *Lippe* on the S. and abounds with Corn, of which they export great Quantities; and in the N. and W. 'tis full of Woods and Hills, which abound with Game.

The PLACES of Note here are,

1. *Minden*, a large and rich Hans-Town, on the W. Bank of the *Weser*, 30 Miles W. from *Hanover*, and 38 E. from *Osnabrug*. *Charles the Great* made it a Bishoprick, and it continued so till 1638, that 'twas seculariz'd by the Treaty of *Munster* in Favour of the Elector of *Brandenburg*. The Cathedral is stately, but dark, and is said to have been formerly King *Witkind's* Palace, which upon his Conversion he turn'd into a Church. The Town is neat, and well fortified. 'Twas taken by the Imperialists in 1628, and by the Duke of *Brunswick* in 1634.

2. *Petersbagen*, on the same River, about 3 Miles below *Minden*. 'Tis defended by a good Castle, formerly the Residence of the Bishops, where now the Chancery for the Principality is kept.

The County of *Hoy*,

HAS *Bremen* on the N. *Minden* on the S. *Lunenburg* on the E. and *Diepholt* on the W. is 28 Miles long, and 20 broad. The chief Town, of the same Name, lies on the E. Side the *Weser*, 30 Miles N. E. from *Minden*, 40 S. W. from *Zell*, and 25 S. E. from *Bremen*. 'Tis a small Town, but well fortified, and has one of the strongest Castles in *Westphalia*. It had formerly Counts of an ancient *Saxon* Family, to whom 'twas given by the Emperor *Lotharius*. They were much respected in the Empire; but the last of 'em dying in 1582, the County was divided betwixt the Families of *Brunswick* and *Hesse*; the latter of which gave their Share, which was *Ucht* and *Freudenburg*, to the Counts of *Bentem*. The most considerable Place next to *Hoy* is *Nyenburg*, on the E. Side the *Weser*, 10 Miles E. from *Hoy*. 'Tis a well fortified Town, and sustained several Sieges during the Wars of Germany.

The Dutchy of *VERDEN* or *FERDEN*,

Is by the *Matricula* made Part of *Westphalia*; but we have formerly describ'd it as Part of the Dutchy of *Bremen*, to which 'twas united by the Treaty of *Westphalia*.

The

The County of Diepholt,

Lies betwixt *Hoy* and the Bishoprick of *Osnabrug*. *Moll* makes it 30 Miles long; but its Breadth is unequal, the broadest Place being about 18 Miles. The Capital, of the same Name, lies on the Lake *Dummer*, 27 Miles W. from *Hoy*. It had Lords of its own, whose Posterity failing in 587, it fell to the Dutchy of *Lunenbourg*. The Town was almost ruin'd during the Civil Wars of *Germany*; but is since rebuilt, and defended by a Fort. In this County there's a Hill called *Hulfemburg*, or the Mountain of *Help*, because, says the Chronicle of *Brunswick*, *Charlemagne* pray'd here against *Witkind* and his Idols; and having obtain'd the Victory, he built a Chapel on the Top of an Hill, which being much frequented, a large Village was built in the Neighbourhood, which they call *St. Hulp*. They had afterwards an Annual Fair granted them, where the Monks sold Indulgences; but since the Reformation, that Custom is abolish'd.

The Bishoprick of Osnabrug,

HAS Part of the Bishoprick of *Munster* on the N. the County of *Ravensburg* on the S. *Minden* and *Hoy* on the E. *Lingen* and Part of *Munster* on the W. *Moll* makes it 39 Miles from S. to N. and 28 where broadest from E. to W.

This is the first Bishoprick founded by *Charles the Great* after he subdued *Witkind* the *Saxon* about 776, when he dedicated the Cathedral to *St. Peter*, and the two Martyrs, *Crispin* and *Crispinianus*. It appears by his Diploma, that he exempted this Bishop from all manner of Homage and Service, except to go in an Embassy at the Emperor's Charge to negotiate any Match that should be propos'd betwixt the Families of the Emperors of the E. and W. *Dr. Nicholson* says, That since the Reformation, which was introduced here in 1634, there has been little more than the Name of a Bishop; the *Lutherans* not allowing the Execution of Episcopal Jurisdiction, and the *Papists* not being strong enough to obtain it for one of their own Opinion. By the

Treaty of *Westphalia*, the House of *Brunswick* is to enjoy this Bishoprick by an alternate Succession. 'Twas lately enjoyed by *Ernest Augustus* of *Hanover*, but now, says *La Forrest*, by a Prince of *Lorrain*. There are 25 Canons, 18 of which are enjoyed by *Popish Ecclesiasticks*; the Revenues of 4 by the *Jesuits*, for the Support of their College; and the other 3 by *Lutherans*. When they have a *Popish Bishop*, he is Suffragan to the Elector of *Cologne*.

The TOWNS of chief Note are,

1. *Osnabrug*, so called from a Bridge over the *Hase* or *Ose*. It lies 22 Miles N. E. from *Munster*, and 37 W. from *Minden*. It stands on a fair Plain. Some say, 'twas founded by *Julius Caesar*, but without any good Authority. *Charles the Great* erected a School for Latin and Greek, which is since become a *Gymnasium*, with 3 or 4 Professors of several Faculties. They have a considerable Trade by brewing a palatable thick sort of Beer, which they call *Buse*, and in baking the best white Bread in *Westphalia*. 'Tis noted for a Treaty betwixt the Emperor and the King of *Sweden* in 1648, wherein all the Affairs of the Protestants were concerted, which was a Branch of the Treaty of *Westphalia*. 'Tis a neat City, and adorn'd with several noble Publick Buildings. 'Tis divided into the Old and New Towns by the River *Ose*. 'Tis pretty strong, encompassed with Walls and Ditches, but commanded by a neighbouring Mountain within half a Cannon-shot, upon which there's an Abbey of Men of Quality. The Ancient and Present State of *Germany* says, it stands in the fruitfulest Part of *Westphalia*, and the Inhabitants are industrious, breed abundance of Cattle, particularly Hogs, which make the best *Westphalia* Bacon. They have also a considerable Trade by making Linen. The same Author adds, That the *Lutheran* Canons are capable of electing a Bishop, but not of being elected; whereas the *Popish* Canons are capable of both. The *Papists* have the Cathedral Church, and the Church and Monastery of the *Dominicans* in the Old City, and the Collegiate Church of *St. John* in the New. The Protestants have the great Parochial Church of *St. Mary* in the Old City, and

have a Voice in chusing Magistrates in both. The Bishop's Palace and Castle of *Petersburg* is well fortified, and a great Defence to the Town. Not far from the City, there's the Ruins of an old Church and Castle called *Beelem*, which some say was built by King *Witekind* upon his Conversion; and the Country People have an old Song with the whole Story of it, by which they pretend to prove he was baptiz'd here, and not at *Minden*; and this they sing with great Veneration. About two *English* Miles from hence lies the Monastery of *Rulle*, on the Bank of a Lake, so deep, that it could never yet be fathom'd.

2. *Iburg*, S. from *Osnabrug* about 10 Miles, with a commodious Castle, in which the Bishop formerly resided. 'Twas taken and plunder'd by *Philip the Great* of *Brunswick* in 1553.

3. *Quakenbrug*, a small and neat City on the River *Ose*, 28 Miles N. from *Osnabrug*.

The County of TECKLENBURG,

Lies on the S. W. of *Osnabrug*, is about 16 Miles long, and 9 broad. The only Place of Note in it is the Capital of the same Name, a large open Town, with a Castle, formerly the Seat of its Counts. It lies 7 Miles W. from *Osnabrug*. The Counts of this Place had formerly large Dominions in the Neighbourhood, which are now parcel'd out among other Princes; but this Town, with the Title, came to the Counts of *Bentem* about 1560. Some will have it to be the Remains of the ancient *Teselia*, the City of the *Angriuari*, who inhabited those Parts.

The County of LINGEN,

Lies on the N. W. Part of *Osnabrug*, is 15 Miles long, and about 10 broad. The only Place of Note in it is the Capital of the same Name. It came to the House of *Nassau* by the Marriage of the only Daughter of the last Count of *Buren* to *William* Prince of *Orange* about 1560. The Inhabitants are *Calvinists*.

The County of STEINFORT,

Is encompassed with the Bishoprick of *Munster*, and lies N. W. from the City of

Munster. 'Tis about 15 Miles long, and 9 where broadest. The only Town of Note in it is *Burchsteinfort*, on the Banks of the *Aa*, 10 Miles N. W. from *Munster*. It belongs to the Counts of *Bentem*. It has a *Gymnasium* for the Languages and Liberal Arts.

The County of BENTEM,

Lies N. from *Steinfort*, is 30 Miles long, and 13 where broadest. It has the United Provinces on the W. and N. These two Counties were formerly subject to different Families; but those of *Steinfort* succeeded to the other by Marriage. They are both full of Woods, except about *Bentem* and *Nienhuys*, where there are pleasant and fruitful Vallies on the River *Aa*. Count *Arnold*, who founded the *Gymnasium* at *Steinfort*, brought in the *Augsburg* Confession in 1564; but their Count *William Henry*, who turn'd Papist in 1668, gave some Trouble to his Protestant Subjects, till the States of *Holland* interposed. The only Place of Note is *Bentem*, the ancient Seat of their Counts, which lies 30 Miles N. W. from *Munster*. It lies in the middle of a Wood, and is of no great Note.

The County of DELMENHORST,

Lies S. E. from *Bremen*, is about 17 Miles long, and 7 broad. The only Place of Note is *Delmenhorst*, on the *Delm*, a small Town, fortified with a Castle, 10 Miles S. W. from *Bremen*. It formerly belong'd to the Counts of *Oldenburg*, and now to the King of *Denmark*.

The County of OLDENBURG,

Has the Sea on the N. Part of the Bishoprick of *Munster* on the S. the County of *Emden* on the W. and the Dutchy of *Bremen* on the E. 'Tis about 50 Miles long from S. E. to N. W. and about 30 where broadest. 'Tis generally barren, full of large Heaths and Marshes, which breed only a small sort of Cattle. The Inhabitants are generally poor, and live in mean Cottages of Clay and Turf; so that were it not for the Barony of *Jevern* in *East-Friesland*, with some other Accessions elsewhere, the Counts

Counts of *Oldenburg* could scarce maintain the Rank of a Prince of the Empire, tho' they boast of as much Antiquity as any in *Germany*, and derive their Pedigree from *Witekind King of the Saxons*, who they alledge call'd himself Count of *Oldenburg*: but *Dr. Nicholson* thinks it must have been of the Country of that Name in *Holstein*. Their own Counts fail'd upon the Death of *Anshony Gunter*, the last of 'em, in 1656; and the King of *Denmark*, who was of the same Family, succeeded, having agreed with the Duke of *Holstein* for his Pretensions. *Crantzius*, *Chytræus*, and *Helmoldus*, speak very honourably of the Antiquity of the Inhabitants.

The only Place of Note is *Oldenburg*, the Capital, on the River *Hund*, which falls into the *Weser* a little below, where there's a Custom-House, at which Ships pay Toll to the King of *Denmark*. The Town is well fortified with Walls and Ditches; and large Barges come up from the *Weser* as far as the Bridge, which brings them a good Trade. The Castle, in which the Count resided, is round, uniform, and stately; but the Houses of the Burgers are mean, and scarcely one of 'em of Stone. *Dr. Nicholson* says, That upon the Division of this County betwixt Count *Christian* and his Brother *Osbo* about 1247, the latter built a Palace on the River *Delma*, which gave Rise to the Town of *Delmenhorst*, formerly mentioned, which was afterwards fortified, and grew considerable. He founded also a Monastery there, which upon the Reformation was converted into a Church, a Free School, and an Hospital. It was taken in 1482 by the Bishop of *Munster*, but retaken in 1547 by the Count of *Oldenburg*. There are some other small Towns in this Country, of which we have no Description.

The County of E M B D E N,

Has the Province of *Groningen* on the W. the County of *Oldenburg* on the E. the Bishoprick of *Munster* on the S. and the Sea on the N. *Moll* makes its greatest Length from N. W. to S. E. 47 Miles, and its greatest Breadth about 36. Most of the *Germans* call it *Emmerland*, and will not allow the Name of *East-Friesland* to be Authentick.

Pliny makes the ancient Inhabitants to be the *Chausi Minores*, to which *Cluverius* agrees; and by the Description *Pliny* gives of their Manners, some of the modern Inhabitants do well enough answer the Character. *Dr. Nicholson* thinks from their Language, that they are of the same Stock with the *Hollanders*; and that some of the Remains of those *Netherlanders* who fled hither from the Spanish Persecution, may still be among them; but in general they differ much from the *Hollanders* and *Flemings*, and fall much short of them in Point of Industry. He adds, That the ancient *Frisi* were originally from the Province of *Utrecht*, and extended their Limits as far N. as *Denmark*, formed themselves into a Monarchy, and chose themselves a King upon extraordinary Occasions; but when those were over, obliged him to lay down his Authority, according to the Practice of the ancient *Saxons*. *Charles the Great* reduc'd them to a Province of his Empire; and thus they continued, till the Earldom of *Holland* was erected by *Charles the Bald* in 840, when this Country was made a Branch of the German Empire, and govern'd by the Emperor's Deputy, till 1453 or 1441, according to *La Forest*, *Ulrick Sirsene*, Governor of the Province, and one of the chief Lords of the Country, was created Count of *East-Friesland* by the Emperor *Frederick IV.* in Consideration of his great Services: Since which, the Title is continued to his Posterity. The first of whom was *Ezard* his Son, who succeeded him in 1468, and recovered *Fredeberg* from the Citizens of *Brunswick*, who much disturbed the Trade of *Embsden*. He was succeeded by his Son *Enno I.* in 1528, who recover'd *Greetzyl*, a considerable Port on the N. Point of *Embsland*, which had been surpris'd by the Duke of *Guelderland*. His Son *Ezard II.* succeeded in 1540, and by marrying the King of *Sweden's* Daughter, advanc'd his Interest and Reputation. His Son *Enno II.* received the *Augsburg* Confession. He was succeeded by his Son *Rudolphus Christianus*, who being a zealous *Lutheran*, and falling into a Controversy on that and some other Accounts with the Citizens of *Embsden*, who were *Catholics*, they dispossessed him in 1599, wherein they were assisted by the *Dutch*, under whose Protection they put themselves. His Son *Enno*, says *Morery*, en-

deavour'd to re-assert his Right, but in vain; and afterwards married his Daughter to his Brother *John*, by the Pope's Dispensation. In 1606, a Peace was made betwixt that City and the Count, by the Intercession of our K. *James I.* Since which Time, they have been govern'd by their own Magistrates; but have a Dependence on the States of *Holland*, as *Bertius* informs us. His Great Grandson *Enno Ludowick II.* was in 1641 married to *Henrica Catharina*, Daughter to *Henry Frederick* Prince of *Orange*, and created Prince of the Empire by *Ferdinand III.* in 1653; but dying without Issue-Male in 1660, he was succeeded by his Brother *George*, who married a Daughter of *Wirtemberg*, by whom he had *Christian Eberhard* in 1665, who succeeded him. *La Forreſt* says, there are 4 Branches of this Family, viz. that of the Eldest or the Prince, that of *Creange*, and two of *Nordeland*. The eldest Branch is *Lutherans*.

The chief PLACES of Note in this Country are,

1. *Embsen*, on the N. Side of the *Ems*, in Long. 25. 35. Lat. 53. 21. 70 Miles N. W. from *Bremen*, 47 from *Oldenburg*, and 20 N. E. from *Groningen*. 'Tis a rich, large, and populous City, fortified towards the Land with a double Ditch, regular Bulwarks and Bastions, and on the S. by a strong Wall and the River. *Ubbo Emmius* calls it the *Eye of Frisland*, because 'tis so conveniently situated, that from hence one may see a great way into the Ocean, and over the neighbouring Country. The *Island Neſſa*, which lies in *Dallert* Bay, over against *Embsen*, and is about 3 English Miles in Circumference, makes the Harbour as large and convenient as any on the *German* Coast. They have likewise artificial Canals, by which they can bring large Vessels into the Heart of the Town; and by opening their Sluces, can lay the neighbouring Country under Water, and make the Town inaccessible. Their Houses are generally neat and high, and the Town-Hall very magnificent. The Count keeps his usual Residence in their Castle, but has no Jurisdiction over them, nor will they allow him to fortify his Castle; but they pay him this Deference, that as when he writes to

them, he calls them *Loving Friends*; when they answer, they sign themselves his *Humble Servants*. They are very industrious, much addicted to Commerce, zealous Asserters of their Liberties, excellent Soldiers, make good Provision for their Poor, and allow Freedom of Worship to all but Papists. Our *English* Merchants formerly kept their chief Storehouse of Cloth here, upon some Difference with those of *Hamburg*; then they remov'd it to *Antwerp*, and at last return'd again to *Hamburg*.

2. *Norden*, a pleasant Sea-Port, about 12 Miles N. E. from *Embsen*. The Town is well built, but not fortified, nor is their Harbour capable of great Ships. 'Twas anciently the Burying-place of the Counts; but the great Church, with Part of the Town, being burnt down by the Baron of *Eſens* in 1531, their Monuments were removed to *Embsen*, where they have since been buried. 'Tis remarkable for the Defeat of a great Army of *Normans*, of which 10000 were killed near this Place.

3. *Aurich*, 15 Miles N. E. from *Embsen*. It gives the Name of *Auricherland* to the adjacent Country, which is rough, woody, and barren, but abounds with Venison and other Game. There are 7 great Fairs of Cattle here every Year. 'Tis encompassed by a slight Wall. They have also a Castle well fortified, the Residence of a Branch of the Family. In this Town are held the Courts of Judicature for the County, of which a Nobleman is always President, and a Doctor of Laws their Chancellor. They have 9 Assessors, 3 of which are Noblemen, and 6 Civilians. The President is obliged to attend the Prince's Court out of Term-time, and to determine Causes within the Verge of the Palace.

4. *Fevern*, 34 Miles N. E. from *Embsen*, a fair Town, which gives Title to a Baron, whose Lordship is about 40 Miles in Circumference, and contains many stately Seats of Nobility and Gentry. The Town is defended by a strong Castle, and has a good Trade by a Canal from the Sea. These Barons pretended formerly to be Sovereign Princes, but are now subject to the Counts of *Oldenburg*.

5. *Eſens*, 25 Miles N. E. from *Embsen*, and 10 W. from *Fevern*. It stands on a River of the same Name, which a little below falls

falls into the Sea. They have have a strong Castle, the usual Residence of their Barons. They had a long Quarrel with the Counts of *East-Friesland*, to whom they pretended to be superior; by Vertue of Grants from the Emperors *Frederick IV.* and *Charles V.* they alledged, it was not in the Power of the Emperors to grant it; but the Controversy was ended in 1581, by the Marriage of the Count of *East-Friesland* with the Heiress of *Efens*, which brought that Barony into the Counts Family. A great Part of this Town was burnt by those of *Bremen* in 1540.

6. *Witmund*, the Capital of a large Barony, which held of the Count of *East-Friesland* at the same Time with *Efens*. 'Twas formerly a Town of good Trade, but now much decayed. It lies about 5 Miles E. from *Efens*.

Other Places of Note in this Country are, 1. *Leer*, or *Lera*, on the *Ems*, a stately Market Town, which surpasses many German Cities, and has a good Trade. 2. *Fredeberg*, 30 Miles N. E. from *Embsen*. It formerly belong'd to the Citizens of *Brunswick*. There are many more Towns and Villages, as neat and populous as those in *Holland*, which we cannot insist upon; but refer the Curious to the Chorographical and Historical Account of that Country, publish'd at *Leiden* by the Learned *Ulbo-Emmius* in 1616.

The principal RIVERS of Germany are,

1. The *Danube*, which is so famous in all ancient Greek and Latin Historians, that *Eratosthenes* and *Apollodorus* are very severe upon *Homer*, for omitting it in his Account of the many large Rivers that fall into the Ocean. 'Tis known by the Name of *Ister*, especially below *Belgrade*; but is promiscuously call'd by both Names, as appears by *Ovid*, who speaking of some memorable Places near its Banks, says,

Stat vetus urbs, ripe vicina binominis Istri.

Mela will not allow it had the Name of *Ister*, till after it had run some Hundreds of Miles, wherein he has been follow'd by

others; but the contrary appears by *Polybius* and *Herodian*, compar'd with *Dion*; for they give the same Description of the whole by the Name *Danubius*, that he does of it under that of *Ister*. Some think, that the Difference of its Names happen'd from the Difference of the Language of the People who dwelt upon it. Authors do not agree as to the Etymology of the Name; but that given by German Writers seems most probable, since *Dona* in their Language signifies a Rushing and Noisy Stream; for every one knows that it runs with a rapid Course for many Miles, and makes a great Noise at several Cataracts. 'Twas known by the Name of *Ister* in the Time of *Jafon* and his *Argonauts*. It rises in *Swabia*, not far from a Village called from thence *Dona*, or *Thonia Eschingen*, in the *Black Forest*. The Hill at the Foot of which it springs is not above 15 or 16 Cubits high; and *Cluverius* says, the Fountain is inclos'd with a Wall. Soon after it leaves the Village, it receives two other Streams, that rise 15 German Miles higher up in the Country, which by others have been reckon'd the true Fountains of the *Danube*; and it receives 10 other considerable Rivers before it comes to *Belgrade*. Its whole Course, from its Fountain to the several Mouths, is reckon'd to be about 27 Degrees, which, reckoning 60 to a Degree, is 1620 English Miles, without including its Turnings and Windings, which must certainly make it much longer. 'Tis doubtless the greatest and noblest River in Europe, and by *Ovid*, who knew it very well, is reckon'd equal to the *Nile*, and resembles it in many Things, as may be seen by comparing it with an Account of the *Nile*, translated from a Portuguese MS. by Sir *Peter Wich*, at the Request of the *Royal Society*, and publish'd in 1673. It begins to be navigable at *Ulm*, which it encompasses with two fair Streams. There are Three remarkable Cataracts in it before it leaves Germany: The First is that called *Der-Saw-Russel*; i. e. The Swine's Snout, so called from a sharp pointed Rock which hangs over Part of the River near *Lintz* in *Austria*, about 92 English Miles above *Vienna*; under which there's a dangerous Whirlpool, that sucks in the Vessels which come near it, without extraordinary Care and Management. *Athanasius Kircher*, in his

Mun-

Mundus Subterraneus, says, whatever it sucks in, is thrown up again in a Lake near *Cannisch* in Hungary. The Second is that called *Der-Strudel*, from the Noise which the Waters make at its Fall near *Grenn* in *Austria*, where it runs with such Violence among the Rocks, that it distracts the Watermen with its Noise and Smoak, and many times splits or over-turns their Vessels; so that formerly few would venture to pass it without an expert Pilot from the Neighbourhood, who made it his Business to understand all the Turnings and Windings of this dangerous Passage; but of late Years the Watermen in those Parts are so well acquainted with it, that they reckon it no great Danger to pass this Way. On the Top of one of the highest Rocks, there's the Ruins of an old Castle, formerly inhabited by Pirates, who us'd to plunder Vessels on the River. The Third Cataract is called *Der-Wurzel*, i. e. Whirlpool, about a Furlong from the *Strudel*, but not so dangerous. As soon as you pass this, a Fellow comes on board from a Chapel dedicated to *St. Nicholas*, on the Bank of the River, with the Picture of that Saint, and an Alms-Box for the Passengers to throw in something as a Thank-Offering to *St. Nicholas* for their Deliverance. On the Top of a great Rock here, there's the Ruins of an ancient Fort, call'd the *Devil's Tower*, on this Occasion, as *Aventinus* informs us, *Bruno* Bishop of *Wurtzburg* attending the Emperor down the *Danube*, when they came to this Tower, one appear'd from it like a Black Man, and cry'd out, *Bruno, I am thy evil Genius, will do thee no Mischief at present, but meet with thee again e're long*: And when they came to *Bosenburg*, 10 Miles from hence, where they lodg'd, the Chamber in which the Emperor and the Bishop were fell down, and kill'd *Bruno*.

The swift Current of the *Danube* makes the Water muddy and whitish; so that the Waters of other Rivers which fall into it may be distinguish'd for a great way. Some Authors alledge it resembles the Ocean in this, that notwithstanding the many Rivers which fall into it, it is scarce ever discernably augmented, tho' those Rivers themselves overflow their Banks; and one Cause they assign for it is, that in the Summer the melted Snow from the Hills keeps the

Channel almost as full as the Floods do in the Winter, which has something of Truth in it, and is very discernable in those Rivers which fall into it from the *Alps*; which keeping the Stream always muddy, makes its Increase at other Times less visible.

The Trouts, Perches, Carps, and other sorts of Fish, are much larger in the *Danube* than other Rivers of Europe. Some ascribe this to the Saline Tinctures of its Water, which washing so many Mines, are supposed to contain more Principles of Fecundity and Nourishment than other Rivers; but this we leave to such as make Natural Philosophy their Study. The rarer Kinds of Fish here, that are not common elsewhere, are, 1. *Coppen*, a sort of *Caprin*. 2. *Biscurn*, which looks like a sort of a Lamprey. 3. *Grundel*, or a spotted sort of *Cobites*, with 6 Beards, 2 short, and 4 long. 4. The *Scheyden*, or *Silurus Gesuri*, somewhat resembling a Pike, but much larger. 5. The most remarkable of all is the *Huso* or *Hauson*, as they call it, which we formerly mentioned in our Description of *Austria*, P. 618. 'Tis a Salt-Water Fish, resembling our Sturgeon, and is supposed to come from the *Euxine* Sea. 'Tis so much valued by the Hungarians and Germans, that they reckon it one of the greatest Dainties for Persons of Quality, and seldom to be met with but at their Tables. We refer the further Description of this River to *Hungary*, and other Countries through which it passes; this being the chief of what is to be said of it, in so far as it relates to *Germany*.

The 2d great River in *Germany* is the *Rhine*. Authors are likewise divided about the Etymology of its Name. Some derive it from the Greek Word *Peiv*, which signifies to flow, because of its rapid Stream: Others from the Celtic Word *Ryen*, which signifies to separate, because it was the ancient Boundary betwixt *Gaul* and *Germany*; and others from the German Word *Rein*, which signifies Pure and Clean, because the ancient Inhabitants, as *Cesar* tells us, if they suspected their Wives, threw their newborn Children into it, fancying they would swim if legitimate; but sink if otherwise. *Schottelius* says, this occasioned the German Proverb, *When a Man was guilty of any notorious Crime, that the Rhine could never wash it*

it off. *Tacitus* says, the old *Germans* worship'd it as a God: To which *Martial* seems to allude, when he calls it the Father of Nymphs and Rivers.

It rises from two Springs 40 Miles distant, says *Dr. Nicholson*, but according to *Sanfon* not above 4. The first near a small Village called *Tavetsch*, out of a high Mountain named *St. Gostards*. The 2d from another Mountain near *Reinwald* in *Rhetia*; both of 'em among the *Alps*. These two Currents meet about 8 Miles from the City of *Coire* in the *Grisons* Country, and after a Course of 45 Miles, according to *Sanfon*, falls into the Lake of *Constance*, runs thro' *Switzerland*, and then thro' the rest of *Germany* and the United Provinces, till it fall into the Sea by several Mouths in the Dominions of the *Dutch*. The Cataracts of this River are reckon'd 9, whereof 7 are small, and all of 'em short of those in the *Danube*. The most dangerous and terrible of 'em is a little below *Schaffhuysen* in *Switzerland*, where it falls from the Top of a Rock 75 Foot high, and is not passable by Vessels. The other great Cataract is near *Lawffenburg* in *Switzerland*, where sometimes Watermen let down their Vessels by Ropes. It runs through a Country above 400 Miles long; but if we reckon its Turnings and Windings, it runs above 600, and is navigable by Vessels of a lesser Size at least 400. There's a great Dispute among ancient and modern Geographers about its Mouths. Formerly there were two known Channels by which it emptied it self into the Sea. They divided at *Schenkenschanz*, a Fort about 5 Miles below *Cleve*, from whence the Southern Branch, call'd the *Vahalia*, runs by *Nimeguen*, and mixing with the *Maas*, falls with it into the Sea below *Rotterdam* and the *Brill*. The other, which retains the Name of the *Rhine*, passing by *Arnhem*, *Utrecht* and *Leiden*, fell into the Sea at *Catwic*; but in 860, or, as some say, in 1170, an extraordinary Spring-Tide fill'd up the Harbour at *Catwic*, and obstructed the Current of the *Rhine*, which still runs with a slow Stream towards the Ruins of *Catwic*, but sinks before it comes near it, and is probably convey'd by a subterraneous Passage into the Sea, or some other River. Ano-

ther Channel by which it empties it self into the *Isel*, and with it falls into the *Zuyder* Sea, was made by the *Roman* General *Druis*, and still bears the Name of his Ditch: But we shall have Occasion to touch further on this Subject in the Description of the *Netherlands*.

The 3d great River is the *Elb*, which Name, some say, was given it, because it rises from 11 Fountains; and the *Saxon* Word *Elve* signifies 11. *Tacitus* and *Ptolemy* were both mistaken about the Head of this River; but *Dubravius* gives the exactest Account of it, viz. That it has its Rise from the Mountains near *Kirschberg* in *Silesia*, on the Confines of *Bohemia*, from 11 Fountains, which 'tis needless to name. It receives several others as it passes through *Bohemia* and *Saxony*, and at *Hamburg* bears Merchant-Ships, as large as most that traffick on the Ocean; it being usual to see in that Harbour, tho' 72 *English* Miles from the Sea, Vessels of 300 Tun, which is farther than Ships of that Burthen can sail in any other River of *Europe*. On the S. of *Hamburg*, it divides it self into a great many Branches, which form a vast Number of Islands; and a little below *Gluchstadt*, it empties it self by two Mouths into the *German* Ocean. 'Tis navigable by lesser Vessels a great way up into *Germany*, which very much promotes the Trade of the Country, especially by its Communication with the *Spre* and the *Moldaw*, the former in the Marq. of *Brandenburg*, and the latter in *Bohemia*; which has occasioned some to think it practicable to form a Communication betwixt this River and the *Danube*, and by that means betwixt the *German* Ocean and the *Black Sea*.

The other most remarkable Rivers in *Germany* are, 1. The *Oder*, which rises in *Moravia*, and after running 300 *English* M. thro' Part of *Brandenburg* and *Pomerania*, falls into the *Baltick* by 3 Mouths. 2. The *Weser*, which begins in the Mountains of *Thuringia*, runs thro' *Hassa* and *Westphalia*, and falls into the *German* Ocean about 40 Miles below *Bremen*.

For such as are of less Note, 'tis needless to say any more of 'em than we have done in the particular Descriptions of the Countries through which they run.

C H A P. XXVIII.

The NETHERLANDS.

Including the 17 Provinces, has the German Ocean on the N. France on the S. *East-Friesland*, *Westphalia*, the Diocese of Cologne, the Dutchy of *Juliers*, and the Diocese of *Treves*, on the E. the British Ocean, and Part of France, on the W. If we take in the French Conquests, the Country, according to *Sanfon*, is about 290 Miles from the Borders of *Picardy* to the Mouth of the River *Ems*; and the greatest Breadth, from the Frontiers of *Treves* to *Gravelin*, is about 200; but the Breadth of the other Parts is very unequal, especially towards the United Netherlands.

The ancient Name of the Country was *Belgica*, according to *Cluverius*, and took its Name from its Inhabitants the *Bellovaci*; but 'twas then of a much larger Extent, having on the E. and N. the *Rhine* and the Ocean; on the W. the *Seine* and the *Marne*; and on the S. the Countries of the *Sequani*, *Leuci*, and *Lingones*, comprehending *Lower Alsace*, *Lorrain*, the *Westereich*, the Diocese of *Treves*, the Dutchies of *Luxemburg* and *Limburg*, the Bishoprick of *Liege*, Part of that of *Cologne*, the Dutchy of *Juliers*, half the Dutchy of *Guelderland*, the S. Part of *Holland*, all *Zeland*, *Brabant*, *Flanders*, the County of *Boulogne*, the 3d Part of *Normandy*, the greatest Part of the Isle of *France*, half *Champagne*, *Picardy*, *Aras*, *Hainault*, the County of *Namur*, and the Dutchy of *Bouillon*. He cautions Authors against the Mistake which some have fallen into of confounding *Belgium* with *Belgica*, the former being only a Part of the latter. We have formerly given an Account of the ancient

Inhabitants of most of that at present called the *Netherlands*, in our Description of Ancient Germany, P. 405, &c. The Reason *Cluverius* gives why this Country was rather called after the *Bellovaci*, than any of the other numerous People that dwelt in it, is, that he supposes in *Cesar's* Time they were at least the most noted People, if they had not the Sovereignty of the whole. He adds, That the ancient Inhabitants of that Part of the Country which lies on the N. Side the *Rhine*, were subdued by *Drusus* in the Reign of *Augustus*; and that those who lay on the S. Side in *Gaul*, had been formerly subdued by *Julius Caesar*. They continued under the Roman Empire, especially those on the S. Side, till the Time of *Theodosius*, when the Empire being over-run by Strangers, several People of Germany came hither one after another. Some of which having afterwards removed into France and Britain, the Inhabitants created Princes over themselves, and recover'd their Liberty. In Process of Time, all this Country was divided into 17 Provinces; some govern'd by Dukes, as *Brabant*, *Limburg*, *Luxemburg*, *Guelderland*; some by Counts, as *Flanders*, *Aras*, *Hainault*, *Holland*, *Zeland*, *Namur*, *Zutphen*; one by a Marquis of the Empire, as *Antwerp*; and 5 by Lords, as *West-Friesland*, *Mecklen*, *Utrecht*, *Overissel*, and *Groningen*. *Friesland* he says, after it shook off the Roman Yoke, was govern'd by Kings for near 400 Years; but these being extinguished, they were brought under by *Charlemagne*; after whom they begun to chuse their separate Princes, as the rest had done before

RD ZEE

Tabular

before them. The several Princes marrying into one another's Families, they came all at last under the Dominion of the Duke of Burgundy, whose Heiress being married to the House of Austria, the Government of them fell into the Hands of that Family.

But the Inhabitants finding their Liberties invaded, from the Time of Charles V. his Great Grandson, they resolv'd to defend their Privileges by Arms; and after a War of 47 Years, 10 of them submitted to the Arms of Spain, and are now called, *The Spanish Netherlands*; and 7 recover'd their ancient Liberty, which are now called, *The United Provinces, or Netherlands*.

The Revolt of the Netherlands from the Crown of Spain: With a brief History of the Republick of Holland, from its Rise to this present Time.

THE Spanish and Italian Writers, such as Strada, &c. ascribe this Revolt to the Stubborness of the People, to the Change of their Religion, and to the Ambition of the Princes of Orange; but the Dutch Writers, Sir William Temple, Mr. Peers in Vol. IV. of Pitt's Atlas, and others, give the following Account of that Matter.

Their former Princes, the Dukes of Burgundy, being engag'd in War with France, began to raise greater Taxes upon 'em than they had been accusom'd to, which made them uneasy; but upon the Succession of the House of Austria, the bringing first of German Troops, and then of Spaniards and Italians, into the Country, heighten'd both their Charge and Discontents; yet Charles V. being a Prince of great Reputation, Conduct, and Success, and having a natural Kindness to the *Netherlanders*, among whom he was born, and employing their Great Men in his Court, Camp, and other Posts, he left them in a peaceable Condition, when he resign'd the Government to his Son Philip II. in 1556. This Prince being a Spaniard born, resolv'd to return to Spain, and to leave the *Low Countries* under a Subordinate Government, which, till his Father's

Time, had been the constant Seat of their own Princes. He likewise gave the chief Offices and Posts of Honour to Spaniards, introduc'd their Customs, Language, and Habit, into the Court of Flanders; and after the Peace, continued the Spanish and Italian Forces; and the same Taxes he had demanded from them during the War, which quickly lost him the Love of his Subjects. This he regarded so little, that when he return'd to Spain, he was so far from thinking their Grievances worth hearing or redressing, that he added new ones, by subverting their Constitution, and changing all their ancient Forms. At his Departure, he left his natural Sister, the Dutchess of Parma, to be Governess of the Country, with Cardinal Granvell to assist her as her Chief Minister; and order'd her to continue the Foreign Troops, and the former Taxes; to establish the 14 Bishops he had agreed with the Pope to add to the former three; to revive the Edicts of Charles V. against Luther, publish'd in a Diet of the Empire in 1550, tho' never executed in the *Low Countries*, even in that Emperor's Time; but this Philip was resolv'd on, in order to bring the Inquisition into the *Netherlands* against the Protestants, as 'twas practis'd in Spain against the Moors and Jews.

Sir William says, when these Things came to be known and executed, it made a general Uneasiness in the Minds of the People. The Insolency of the Spanish Troops, and the Charge of maintaining them in a Time of Peace, made the *Netherlanders* hate them, as the Instruments of their Slavery and Oppression. Therefore the States began their Complaints with this Grievance, with the general Consent and Concurrence of People of all Ranks; but meeting with no Redress, the States first refused to pay any more Money either for their own standing Troops, or for the Spaniards; and the People were so much discourag'd and enrag'd, particularly in Zealand, that they gave over working at their Dykes or Banks, and suffer'd the Sea to gain upon them, resolving rather to be drown'd, as they said, than to be made Slaves by the Spanish Soldiers. So that after many Disputes with the Governess, the King, upon her Remonstrance, remov'd those Spaniards, to the great Satisfaction of the People.

H h h h h

The

The next Controversy was about the 14 new Bishops. The Lords oppos'd it as a lessening of their Power to introduce so many great Men into the Council. The Abbots, out of whose Lands they were to be endow'd, decry'd it as an Usurpation upon the Rights of the Church, and contrary to the Will of the Decēas'd, who had mortify'd those Lands to particular Uses. The common People oppos'd it as much as any, and complain'd of it as the highest Degree of Oppression upon their Liberties and Consciences to erect 17 Spiritual Courts of Judicature instead of 3, especially when they must entirely depend upon the Pope or the King; every one exclaim'd against it; and *Strada* himself confesses it was a Breach of the King's Coronation-Oath, who at his Accession to the Government had sworn to preserve the Church and State as he found them. This Point however was gain'd by the Governess, but not without the general Discontent of the People, which in a little Time had fatal Effects.

At the same Time Sir *William* observes, a great many Protestants were drove out of *France*, *Germany*, and *England*, by Persecution, which in a little while fill'd the Country, but especially the Cities, with new Inhabitants; who being in Favour with the People, because of their Doctrine and Piety, as well as for the Riches and other Advantages they brought them, their Numbers increas'd every Day. This made Work for the Court of Inquisition, in which *Granvell* screw'd up his Master's Authority to the greatest Height. On the other hand, this Court became universally hateful to the Lords, because 'twas a new and arbitrary Judicature, unknown to their Ancestors; and 'twas no less odious to the People, because of the Cruelty of their Executions.

These Things occasion'd angry Debates in Council, which were increased by the absolute Power assumed by the Cardinal, a *Burgundian* of mean Birth, and more remarkable for his Parts than his Piety. This made the Prince of *Orange*, the Counts of *Egmont* and *Horn*, and other chief Lords of the Country, protest that they would not attend at Council while a Person so absolute sat there, to the Ruin of their Country. This at last oblig'd the Court to turn out the Cardinal: Upon which, the Prince

of *Orange* and other Lords return'd to Council, the Rigour in Affairs of Religion was abated, a Redress of other Grievances was promised, and the Governess was both honour'd and obey'd. But about the beginning of 1565, there was a Conference at *Bayonne* betwixt *Catharine* Queen Mother of *France*, her Son *Charles IX.* tho' very young, and his Sister *Isabella* Queen of *Spain*, to which none was admitted but the Duke of *Alva*. King *Philip* excus'd his own Presence, in order to make it pass for an Interview of Kindness betwixt the Mother and the Children; whereas 'twas own'd afterwards, that the Subject of the Conference was about Religion; and the Prince of *Orange* declar'd, That he had discover'd their Design to be a Combination betwixt the two Crowns, to assist one another in extirpating all Protestants out of their Dominions. The Truth of which was confirm'd by the Orders that soon after came from King *Philip* to the Dutchess of *Parma*, to put all Hereticks to Death without Remission; to publish and observe the Emperor's Edicts, and the Council of *Trent*; and to give her utmost Assistance to the Court of Inquisition, which was quite contrary to what he had promised to Count *Egmont*.

When this was divulg'd, the People were at first seiz'd with Astonishment, which soon gave Way to their Rage, as appear'd by their Looks, Speeches, Meetings, and Libels. Their Resentments were heighten'd by so many cruel Executions on the Account of Religion, and the Constancy of the Sufferers, that they breath'd nothing but Revenge against the Authors of those Proceedings, of whom the Duke of *Alva* was reckon'd the chief. In the beginning of 1566, the People mutiny'd in many Cities, hinder'd Executions, and forc'd Prisons and Officers, which was follow'd by a Confederacy of the Lords, never to suffer the Inquisition in the *Low Countries*, as being contrary to all Laws Sacred and Profane, and exceeding the Cruelty of all former Tyrannies. After this, the Count de *Brederoode*, at the Head of 200 Gentlemen, went through the Provinces to *Brussels*, and boldly petition'd the Governess to abolish the Inquisition, and the Edicts about Religion; and that those Affairs should be left to a general Meeting of the States. While the Go-

Governers look'd upon them with some sort of Astonishment, *Barlemont*, one of her Confidants, standing by her, said, *Madam, I hope you are not afraid of those Gueux*, which in their Language signifies Beggars; but the Count, and those who adher'd to him, were so far from being aham'd of the Reproach, that they glory'd in the Name, cloath'd themselves soon after in mean Apparel, and hung Budgets at their Girdles, with a Medal, having this Inscription on it, *We will be true to the King, even to our Budgets*.

These Proceedings oblig'd the Governors to milder Methods, and the promis'd to represent their Desires to the King, at which, tho' he was startled, his Answer came too late; and the People having lost all Confidence in him, a great Insurrection ensued, wherein they spoil'd many Churches of their Ornaments, pull'd down Images, and, which is unavoidable in such Cases, committed many Disorders. After this, the Protestants began to elect Magistrates of their own, and to set up Consistories in each Town, to form publick Confederacies, and to raise private Contributions for the Support of the Common Cause: But the Nobility and richest Citizens dreading the Effects of such Proceedings, tho' they were unsatisfied with the Government, yet on the Arrival of the King's Concessions, they join'd with the Governors to suppress the Insurrections, wherein the Authority of the Prince of *Orange*, and the Count of *Egmont*, who were belov'd by the People, was of great Use to her. But some Time after, the Government having reduced several Towns by Arms, others having submitted, the Count of *Egmont* having deserted the Confederacy, which afterwards prov'd his Ruin, Count *Bredersode* dying, and the Prince of *Orange* being forc'd to fly into *Germany*, the Country seem'd to be entirely reduc'd to their former Obedience.

King *Philip* had been long press'd by his wisest Counsellors to go into *Flanders*, where his Presence was thought necessary to suppress those Disorders: But instead of that, he sent the Duke of *Alva* with 10000 Veteran Troops to execute his first Resolutions with all Violence and Rigour; which, as *Bentivoglio* informs us, was not only contrary to the Advice of the Governors, and

his other best Friends, but displeasing to many of the *German* Popish Princes, who dreaded the Effects of so sudden a Change in a neighbouring Government; but the King was unmoveable in his Resolutions. Upon the Approach of this Army of *Spaniards* and *Italians*, under the most expert Officers in *Europe*, the Trading People left the Country in such Numbers and Precipitation, that, as the Governors inform'd the King, above 100000 of 'em went off in a few Days with their Effects: So great is the Antipathy, observes Sir *William*, between Merchants and Soldiers. When the Duke arrived, first he seiz'd the Counts of *Egmont* and *Horn*, which, with the suspected Death of the Marquis of *Bergen*, and the Imprisonment of *Montigny*, who had been sent to *Spain* with Instructions by the Governors, oblig'd her to desire Leave to retire. This was easily obtain'd, and she went for *Italy* the beginning of 1568.

The Duke of *Alva* having receiv'd the Government, with greater Powers than any of his Predecessors, he seiz'd the Count of *Buren*, the Prince of *Orange's* eldest Son, who was studying at *Louvain*, and sent him under a Guard to *Spain*: Then he erected a Council of 12, who determin'd all Civil and Criminal Causes sovereignly, without Appeal, put great Numbers of People to Death every Day, imprison'd, banish'd, and confiscated others, exceeded the Inquisition in Cruelty, and treated the Country with as much Barbarity, as if it had been a Conquest: Upon which Account, the People justly call'd it the Council of Blood. They utterly subverted the Constitution, depriv'd the Towns of their Charters, the People of their Liberties, the Knights of the *Golden Fleece* of their Privileges, and all other Courts of their Power; making as much Havock among the Subjects on Pretence of the above-mentioned Insurrections, as the Inquisition did among them on Pretence of Heresy. This occasioned People of all Ranks to complain of the laying aside the States, and of governing them by a standing Army, but without Redress. The Duke of *Alva* being naturally cruel, and inexorable, wanted nothing so much as Rebellion to make Work for his Army. The People were enrag'd, but over-aw'd, and without a Head. The Prince of *Orange* was

H h h h h 2

fled,

fled, and proclaim'd a Traitor, and the Counts of *Egmont* and *Horn* publicly executed at *Brussels*, notwithstanding all the great Services they had formerly done to *Charles V.* and King *Philip*, and their late Merits in suppressing the Insurrections of the People. After their Murther, the Prince of *Orange* was summoned to appear and take his Tryal; which not having obey'd, he was condemn'd as a Traytor, and his large Estate in the *Netherlands* and *Burgundy* confiscated; and a Proclamation was publish'd in King *Philip's* Name, authorizing any Man to kill him, and promising a Reward to them that should do it, or assist in it. This was publish'd through all the Provinces in 1580, which occasioned the Prince to publish that noble Piece, well known by the Name of his *Apology*, wherein he vindicates himself, and gives a large Account of all the Tyrannical Proceedings, Perjury and Treachery, of King *Philip*, and his Governors. This was publish'd at *Delft* in *Holland* the 25th of *January*, 1581, with a Letter directed to all the Kings and Potentates of *Christendom*; and this *Apology* was justified by the *States General* of the *Low Countries*. The Prince at the same Time made use of his Interest with the Princes of *Germany*, where he was living quietly when the Proclamation was publish'd against him, to obtain some Forces. He was also join'd by great Numbers who flock'd to him out of the Provinces, which were universally enrag'd at the Execution of Count *Egmont* their Darling, and likewise by Troops from the Protestants of *France*, who had then taken Arms under the Prince of *Condé*. With these Troops he enter'd *Brabant*, and after many Encounters with various Success, not being able to do much against the Duke of *Alva's* Veteran Troops, especially since his own began to mutiny for want of Pay, he was oblig'd to disband his Army, and to return to *Germany*. The Duke of *Alva* after this return'd to *Brussels* in Triumph; and out of the Cannon taken from *Lewis* of *Nassau*, who was defeated at the Battle of *Gemming* on the Borders of *West Friesland*, he order'd his own Statue to be cast in Brass, treading upon two smaller Statues, representing the two Estates of the *Low Countries*. This Statue was set up in the Citadel of *Antwerp*, that

he had newly built for curbing that City. Nothing could more raise the Indignation of the *Flemings* than this Piece of Insolence, considering that they had now lost the Liberties enjoyed by their Ancestors for so many Ages: But the Duke of *Alva* thinking them to be absolutely brought under, would be no longer ty'd to any Forms or Measures, but demanded larger Taxes than what had been usually granted, particularly the Hundredth Part of every Man's Estate at once, and for the future the Twentieth of all their Immoveables, and the Tenth of all that was sold. The States, with much Reluctancy, agreed to the first, as a Thing finish'd at once; but refused the other two, because of their Poverty, and the Ruin of Trade. But the Duke persisting, they petition'd the King for a Redress, without obtaining it: Upon which the Duke publish'd an Edict, commanding the People to pay it without the Consent of the States; which being refused, the Soldiers began to levy it by Force: The Townsmen shut up their Shops, and the Country People forbore coming to Market; so that there were no Provisions to be had in the Town. This so much enrag'd the Duke, that he order'd several of the Burgers, who refus'd Payment, to be hang'd immediately on their Sign-Posts; and as the Soldiers were going to put it in Execution, News came that the *Brill* in *Holland* was surpris'd, and a general Revolt in *Holland* expected, which forc'd the Duke to put a Stop to those barbarous Proceedings, for fear likewise of a general Revolt in *Brabant*. This Seizure of the *Brill* having begun the second Insurrection of the *Low Countries* in 1570, which ended in the Loss of the United Provinces to the Crown of *Spain*, we shall give the following Account of it:

A great many of the People who fled from the Duke of *Alva's* Cruelty, put themselves under Protection of the Count of *Marck*, who hated the Duke and his Government, while others of 'em fled into the Woods, and liv'd upon plundering the *Spanish* Soldiers, and their Adherents, to whom they did a great deal of Mischief, when the Prince of *Orange* first enter'd the Country with his Army. Some of the former, who had sav'd Money for their Subsistence, put out to Sea in Ships with the Prince of

Orange's

Orange's Commission, called themselves by the Name of the *Water Gueuse*, took all the *Spanish* Ships they met with, and by this Means acquir'd considerable Riches, sheltering themselves sometimes in the Harbours of *England*, and at other Times in the Mouth of the *Ems*, and other Ports of *Friesland*; but being prohibited the *English* Ports by Queen *Elizabeth*, then at Peace with *Spain*, *Strada* says, they were drove to the *Brill* by a Tempest, which they took by Storm. Upon this, the People being provok'd, as above, most of the Towns of *Holland*, *Zealand*, and *West-Friesland*, revolted, pull'd down the Images in their Churches, declar'd publickly for the Protestant Religion, and against the *Spanish* Tyranny, renounc'd King *Philip*, and swore Obedience to the Prince of *Orange*. They publish'd Libels against the D. of *Alva*, and pictur'd him with the Count of *Mark* standing behind him, putting a Pair of Spectacles on his Nose, because *Brill* signifies Spectacles in their Language. At the same Time Queen *Elizabeth*, upon some old Pretensions, seiz'd a great Sum of *Spanish* Money, as 'twas going to *Flanders* to pay their Army, and would never restore it, which prov'd a great Mortification to them in their then Circumstances.

The Prince of *Orange* having levy'd some new Troops in *Germany*, made use of this Opportunity to possess himself of *Holland* and *Zealand*, march'd up within 5 Leagues of *Brussels*, seiz'd several other Towns, and had like to have reduc'd all the Provinces, had not his Men been discourag'd, and the Duke of *Alva's* Party reviv'd by the horrid Massacre of the Protestants at *Paris*, contriv'd by the joint Councils of *France* and *Spain*, and one of the Effects of the Interview at *Bayonne*, formerly mention'd. This oblig'd the Prince of *Orange* to retire into *Holland*, because of the natural Strength of the Country, and the Genius of the People, who being proud of their ancient Fame, recorded in the *Roman* History, as noble Defenders of their Liberty, they scorn'd to come behind their Ancestors in defending themselves against the Tyranny of *Spain*. They were confirm'd in this Resolution by the Cruelty of the Duke of *Alva* and his Son, who upon the taking of *Narden*, cut off all the People, without

Regard to the Capitulation, Age or Sex, and destroy'd the Town; and upon the Surrender of *Haerlem* by Famine, after an obstinate Siege of 10 Months, kill'd 400 of the Burgers in cold Blood, which made their Averſion to the Government of *Spain*, and their Hatred to the Duke of *Alva*, incurable. In 1572, the Duke of *Alva* sat down before *Alkmaer*; but after a long and fierce Siege, was oblig'd to rise from before it, because of the Plague in his Camp; and the King becoming at last sensible of the Danger of a total Defection of the Provinces, he recall'd the Duke of *Alva*, who had made himself so hateful to the People, and sent in his stead Don *Lewis de Requesenes*, great Commander of *Castile*, who arriv'd here in 1573, and endeavour'd to appease the People, by pulling down the insolent Statue the Duke of *Alva* had set up in the Citadel of *Antwerp*: But the Distemper was too far gone to be cur'd; for they were so provok'd by the Duke of *Alva's* Cruelty, who boasted, besides what he had slain in Battles and Sieges, of his having brought 18000 Men to their End by the Hand of Justice, that they would hear no more of the *Spanish* Government. In 1574, the *Spaniards* besieg'd *Leiden*, and not being able to take it by Force, they resolv'd to starve it; but were prevented by the Boors, who open'd the Sluces, drown'd the Country, and forc'd the *Spaniards* to raise the Siege, which gave a great Turn for the worse to the Affairs of *Spain*. In the mean Time Don *Lewis de Requesenes* died without any appointed Successor; so that the Government, by the Custom of the Country, devolv'd upon the High Council, which, *Bentivoglio* says, occasioned the most violent Agitations that ever were known in *Flanders*; for the *Spanish* Army having taken *Ziricksea*, and being deny'd the Plunder of the Town, and also in want of Pay, they seiz'd and plunder'd *Alost* near *Brussels*: Upon which the People shut up their Shops, the Country-men gave over their Labour, and all took to Arms. They forc'd the Senate of *Brussels*; pull'd out such as were for the *Spanish* Government, kill'd all the *Spaniards* they met, demanded an Expulsion of all Foreigners out of the *Low Countries*, and an Assembly of the States; to which the Council was forced to agree. In the mean

Time,

Time, the chief Men of the Provinces agreed with the Prince of *Orange* to carry on their common Affairs by joint Councils; so that when the States assembled at *Ghent*, they agreed upon that Act, call'd, *The Pacification of Ghent*, in 1576. The chief Articles were; To drive all Foreign Soldiers out of the Province; To restore the ancient Constitution, which had been subverted by the Duke of *Alva*; To refer Matters of Religion in each Province to their own States; and that for Performance of it, the rest of the Provinces should enter into a Confederacy with *Holland* and *Zealand*. Here we must observe, That the Prince of *Orange* had acquir'd great Reputation by bringing King *Philip's* Commissioners to the like Agreement for *Holland* and *Zealand* the Year before, which pav'd the Way for this Agreement; which, says Sir *William Temple*, made the first Period of the *Low Country* Troubles, and prov'd to King *Philip*, by dear-bought Experience, that the best Conduct, and the boldest Armies, are not able to withstand the Torrent of a stubborn and enrag'd People, which ever bears all down before it so long as it lasts. Upon the passing of this Act, not only the *Spaniards*, but the *German* Troops, were order'd to depart the Country; and upon their Refusal, were declared Rebels. The *Spaniards* being enrag'd at this, plunder'd several Towns, and *Antwerp* among the rest, which alienated the Affections of many People from King *Philip*, who till then had adher'd to him. The *Spaniards* defended themselves in some of those Places till the Arrival of Don *John of Austria* to take the Government upon him.

The States refused to admit him, except he would confirm the *Pacification of Ghent*, which at length he did, by Consent of the King, and sent away the Foreign Troops; but soon after, on Pretence of complimenting Queen *Margaret of Navarre* upon her Journey from *France* to the *Spaw*, he surpris'd the Castle of *Namur*. Upon which the Provinces renounc'd the *Spanish* Government the third time, and called the Prince of *Orange* to *Brussels*, where the States made him Protector of *Brabant*; so that *Spain* had nothing left but the Provinces of *Namur* and *Luxemburg*. The rest of the Provinces, that did not chuse the Prince of

Orange, sent and offer'd their Government to Archduke *Matthias*, the Emperor's Brother. This was occasioned by the Envy of some of the Grandees against the growing Greatness of the Prince of *Orange*. Upon which they form'd a third Party, who declar'd their Adherence to the Church of *Rome*, and agreed in nothing with the Prince but in driving out the Foreign Troops, and Defence of their old Constitution. The Head of this Faction was the Duke of *Arjchut*; but the Archduke having neither the Consent of his Brother, nor the King of *Spain*, could do nothing to the purpose, and therefore return'd to *Germany*. In the mean Time Don *John* died suddenly, not without Suspicion of Poison by a *Spanish* Lady, and the Duke of *Parma* succeeded as Governor for *Spain*. The Malecontent Party offer'd their Government to *John Casimir*, of the *Palatine* Family; but being afterwards discontented with him, they sent for the Duke of *Alençon*, Brother to the *French* King, who came to their Assistance with a considerable Army. The Queen of *Navarre* had made an Interest for him on Pretence of going to the *Spaw*, as before-mentioned, whither Don *John* went foolishly to compliment her: But the very Day when the Duke of *Alençon* enter'd *Antwerp* in 1582, a *Biscayner* shot at the Prince of *Orange*, and wounded him, which began a Jealousy betwixt the *French* and the *Netherlanders*, that afterwards increas'd upon the Duke's Endeavours to possess himself of the Town by Violence, and make himself absolute; so that he was forced to return to *France*, after having been shamefully drove out of that City, and died of Grief at the Castle of *Thierry*. Upon the Growth of the Malecontent Party, and the Breach of the *Pacification of Ghent* by Don *John*, the Deputies of *Guelderland*, *Zutphen*, *Holland*, *Zealand*, *Utrecht*, and the Omlands of *Frise*, enter'd into the Union of *Utrecht* in 1579; wisely foreseeing, that the said Party, which pretended to follow a middle Course, would at last betray the whole to *Spain*. The chief Articles of that Union consisted in these Points, drawn out of the Instrument it self.

"The 7 Provinces unite themselves so
"as if they were but one Province, and so
"as never to be divided by Testament, Do-

"nation, Exchange, Sale, or Agreement;
"reserving to each particular Province and
"City all Privileges, Rights, Customs, and
"Statutes. In adjudging whereof, or Dif-
"ferences that shall arise between any of
"the Provinces, the rest shall not inter-
"meddle, further than to intercede towards
"an Agreement.

"They bind themselves to assist one ano-
"ther with Life and Fortunes, against all
"Force and Assaults made upon any of
"them, whether upon Pretence of Royal
"Majesty, of restoring Catholick Religion,
"or any other whatsoever.

"All Frontier Towns belonging to the
"Union, if old, to be fortified at the
"Charge of the Province where they lie;
"if new, to be erected at the Charge of
"the Generality.

"All Imposts and Customs, from three
"Months to three Months, to be offer'd to
"them that bid most; and, with the In-
"comes of the Royal Majesty, to be em-
"ployed for the common Defence.

"All Inhabitants to be list'd and train'd
"within a Month, from 18 to 60 Years
"old. Peace and War not to be made
"without Consent of all the Provinces.

"Other Cases, that concern the Manage-
"ment of both, by most Voices: Differen-
"ces that shall arise upon the first, between
"the Provinces, to be submitted to the
"Stadtholders.

"Neighbouring Princes, Lords, Lands,
"and Cities, to be admitted into the U-
"nion, by Consent of the Provinces.

"For Religion, those of *Holland* and *Zea-*
"land to act in it as seems good unto them-
"selves. The other Provinces may regu-
"late themselves according to the Tenor
"establish'd by *Matthias*, or else as they
"shall judge to be most for the Peace and
"Welfare of their particular Provinces;
"provided every one remain free in his
"Religion, and no Man to be examin'd
"or entrapp'd for that Cause, according to
"the *Pacification of Ghent*.

"In case of any Dissention or Differen-
"ces between Provinces, if it concern one
"in particular, it shall be accommodated
"by the others; if it concern all in general,
"by the Stadtholders: In both which Ca-
"ses, Sentence to be pronounc'd within a
"Month, and without Appeal or Revision.

"The States to be held as has been for-
"merly mentioned; and the Mint in such
"manner as shall hereafter be agreed by all
"the Provinces.

"Interpretation of these Articles to re-
"main in the States; but in case of their
"differing, in the Stadtholder's.

"They bind themselves to fall upon and
"imprison any that shall act contrary to
"these Articles; in which Case, no Privi-
"lege nor Exemption to be valid.

This Act was signed by the Deputies of
of *Guelderland*, *Zutphen*, *Holland*, *Zealand*, *U-*
trecht, and the Omlands of *Frize*, Jan. 23,
1579. but was not sign'd by the Prince of
Orange till May following; and with this
Signification, judging that by the same the
Superiority and Authority of Arch-Duke
Matthias is not lessen'd.

That same Year the Cities of *Ghent*, *Ni-*
meguen, *Arnhem*, *Leewarden*, and some of
the Nobles of *Friesland*, with the Towns of
Venlo, *Ipre*, *Antwerp*, *Brada*, and *Bruges*, en-
ter'd into the Union; but the Confederates
were in so low and uncertain a State, be-
cause of the different Humours and Inte-
rests of the Parties they were made up of,
and because of the great Preparations a-
gainst them by *Spain*, that on their first
Coin they caus'd a Ship to be stamp'd, to-
sed by the Waves, without Sails or Oars,
and this Motto upon it: *Incertum quo fata-*
ferant; i. e. *We know not what Providence will*
do with us.

Not long after the Duke of *Alençon*'s un-
happy Management, the States renewed
their Union in 1583, obliging themselves
to see such Points of it as had been neg-
lected during the Fury of the War, careful-
ly observ'd; in case any Doubt happen'd,
to see it clear'd; and any Difficulties that
were arisen, compos'd: And as to Religion,
whereas in the first Union Popery was al-
low'd in all the Provinces, the States find-
ing that many of the Papists were for sub-
mitting again to the *Spanish* Yoke; they a-
greed, That in those Provinces which con-
tinued firm to the Union, the Protestant
Religion only should be openly exercis'd.
The Prince of *Orange* was barbarously mur-
ther'd at *Delft* by one *Balthazar Gerard*, a
Burgundian, who shot him Anno 1584, in the
51st Year of his Age, with a Pistol charg'd
with

with three Bullets; just as he was rising from Table, and ordering the Villain a Passport to go to a certain Place whither he was sending him; for he had got into the Prince's Service on purpose, pretending to be a Protestant, and that his Father had suffer'd Martyrdom for his Religion: Upon which Account the Prince employ'd him on several Messages, without suspecting his Fidelity. Thus the Court of Spain effected his Death at last, which they had several times attempted before: For besides the Shot by which he was wounded at *Antwerp* by a *Spaniard*, in hopes of the Reward promis'd him in King *Philip's* Proscription, the Baron *de Maurier* informs us in his Lives of the Princes of *Orange*, That *Salvado*, a *Spaniard*, who was in a Conspiracy with others to have murder'd him, confess'd before his Execution, by Order of the Parliament of *Paris*, that the Prince of *Parma* had given him 4000 Crowns to murder the Prince of *Orange* by Poison or otherwise. After the Prince received his Wound, he died immediately, with these Words in his Mouth, *Lord have Mercy on my Soul, and on this poor People*; which was an effectual Confutation of the Calumnies thrown upon him by the *Spaniards*, that his Ambition and Desire of Government was the Cause of his Revolt, since with his last Breath he plainly discover'd it to be the cordial Affection which he bore to his Country, as became so noble a Patriot. The People lamented his Loss as that of a common Father, and never was a Funeral attended with greater Pomp, and more real Sorrow. The execrable Assassin was soon after put to Death, and died so harden'd, that he said, If it were to be done again, he would do it: Yet this Villain is enroll'd by the Papists among their Martyrs.

The Murder of this great Prince was so far from discouraging the United States, that it confirm'd them in their Resolution never to submit again to the *Spaniards*: And after having done what they could in Honour to the Prince's Memory, they confer'd upon his Son Prince *Maurice* all his Honours and Employments, and bravely reject'd all the Proposals that were made them by the Court of *Spain*, being encourag'd and supported under-hand by Queen *Elizabeth* of *England*, as a just Reprisal for

the Encouragement given to her *Irish* Rebels by the Court of *Spain*. K. *Philip* had lately increas'd his Dominions by invading and usurping *Portugal*; and aiming at the Universal Monarchy, he embrac'd at once the Protection of that call'd the *Catholic League* against *Henry III.* and *IV.* of *France*, and the Donation of *Ireland* made him by the Pope, which brought on his War with *England* and *France*, and engag'd both those Crowns in the Assistance of the *Dutch*; for thó Queen *Elizabeth* refus'd their Sovereignty when they petition'd her to accept it, yet in 1585 she enter'd into Articles with their Deputies, to furnish them great Supplies of Men and Money, upon their putting the *Brill*, *Flushing*, and *Ramekins*, into her Hands as Cautionary Towns. She sent Sir *John Norris* with Forces to assist them; and in 1587, being then at open War with *Spain*, who were preparing their Armado to invade her, she sent over greater Forces under the Earl of *Leicester* to assist them, and the States swore Obedience to him as Governor of the United Provinces. But his Government was of no long Duration, the States growing jealous that he affected an absolute Dominion, and having just Cause to be offended with his Male-Administration, particularly with the scandalous Loss of several of their Towns by his Governors, and the ill Management of their Naval Affairs, as we find in *De Witt's Interest of Holland*: And thó they were jealous also that the Queen would make a Peace with *Spain*, those Suspicions were soon removed by her Majesty's recalling the Earl of *Leicester*, and continuing her Supplies to them; and they on the other hand assisted her very frankly by Sea against the *Spaniards*. After the Earl of *Leicester's* Removal, they chose Prince *Maurice* to be their Governor, with a Reservation to Queen *Elizabeth*, to whom they paid the greatest Deference that ever they did to any Foreign Prince; and her Memory, their Successors still revere. Prince *Maurice* answer'd the Expectations which the States conceived of him, proved the greatest Captain of his Age, particularly for the Discipline of his Armies, and the Ways of Fortification he invented. Before his Father's Death, the Prince of *Parma*, by his Conduct, Valour, and other good Qualities, did, with the

Assistance of the Malecontents, reduce most of the Provinces to the Obedience of Spain; which he effected the more easily, because of the Differences which were fomented by the Popish Clergy betwixt the Protestants and Papists that were united against Spain; so that the Papists chas'd the Protestants out of *Buissenduc*, and the Protestants chas'd the Papists out of *Antwerp*. The Duke of *Parma* improving those Divisions, took several Towns, and endeavoured to bring off the Prince of *Orange* by large Promises, but in vain. The Duke of *Parma* recover'd all *Flanders*, with some other Provinces, and took *Antwerp* after a long Siege; so that the Affairs of the Confederate Provinces seem'd to be reduc'd to a desperate Condition by those Losses, and the Murder of the Prince; but were happily retrieved by Prince *Maurice's* Conduct, and Queen *Elizabeth's* Assistance. The reducing of *Flanders* by the Duke of *Parma*, forced all the Protestants to retire from thence into the United Provinces, which much contributed to their Strength, and to the Establishment of the Reformation there. Prince *Maurice* gain'd great Reputation by his first Essay, which was the Surprisal of *Axel*, and taking it by Scalade. The *Spaniards* at the same Time endeavour'd to amuse Queen *Elizabeth*, and to raise Jealousies betwixt her and the States, by making Proposals of Peace to her. But King *Philip's* Disimulation was soon discover'd by the Equipment of what he call'd his *Invincible Armado*; with which, and his Army in the *Netherlands*, he flatter'd himself with Hopes of conquering *England* and *Holland*; to which Pope *Sixtus V.* encourag'd him, by laying *England* under an Interdict, excommunicating Queen *Elizabeth*, and giving her Crown to any that could seize it. The *Atlas Historique* says, That both *England* and *Holland* were too negligent at first in preparing for their Defence; but if it were so, that Defect was happily supplied by the Care of Providence, and their after Diligence. The *Spanish Armado* was destroy'd by the Hand of Heaven, which scatter'd them by Tempests, and by the Valour of the *English*, who attack'd them with a Fleet far inferior in Number and Greatness of Ships, while the *Dutch* block'd up the Mouth of the *Scheld*, and hinder'd the Duke of *Parma* from send-

ing an Army that Way to invade *England* by Land; so that very few of the *Spanish Fleet* return'd home with the News of their Disaster, which occasion'd an universal Consternation and Mourning in *Spain*, and laid the Foundation of the Declension and Weakness which has since come upon that Monarchy.

After this, the Duke of *Parma* laid Siege to *Bergenopzoom*, but was forc'd to raise it. *Gertrudenberg* revolted to the *Spaniards*, and Prince *Maurice* reliev'd the Town of *Houfden*, which they had closely besieg'd, while the Duke of *Parma* took *Rhinberg*, after a long Defence; and the brave *Schenk* was unhappily drown'd while he attack'd *Nimeguen*, and had almost taken it in Behalf of the States. But Prince *Maurice* had better Success in surprising *Breda* by 70 Men, who got into the Citadel under a Load of Turf, which was carried in a Boat for Fuel to the Garrison. Sir *William Temple* observes, That the Affairs of the States had a mighty Turn for the better by the sharp Wars which Queen *Elizabeth* made upon the *Spaniards* in the *Indies* by Sea, and the Expeditions against *Lisbon* and *Cadiz*; to which Turn, the Declension of the Affairs of the League in *France* did very much contribute; for whose Support K. *Philip* was so passionately engaged, that he twice commanded the Duke of *Parma* to interrupt the Course of his Victories in the *Netherlands*, and march into *France* for the Relief of *Roan* and *Paris*, which were then much pressed by the Forces that the *French King* had rais'd against those of the League; and this, as Sir *William Temple* justly observes, did very much increase the Fame of this great Captain; but as much impair'd the State of the Affairs of *Spain* in the *Netherlands*, where Prince *Maurice* took several Places, notwithstanding the Opposition made to him by Count *Mansfeld*, an old and experienc'd Captain; and after the Duke's Return in 1590, the Prince took *Hulst* and *Nimeguen*, and oblig'd the Duke to raise the Siege of *Knodsemburg*. After these and several other Conquests during that Campaign, Prince *Maurice* return'd to *Holland*, loaden with Glory; and his Fame was spread through all *Europe*. In 1592, the Duke of *Parma* was commanded again into *France* to assist the Leaguers, but without much Effect; for their Affairs,

and those of *Spain*, received a fatal Blow by the Succession of *Henry IV.* to the Crown of *France*, and the good Correspondence he entertain'd with Queen *Elizabeth* and the States of *Holland*. This Year the Duke of *Parma* died, and with him the Success and Discipline of the *Spanish* Armies in the *Netherlands*. In the mean Time Prince *Maurice* appeased some Seditions in *Utrecht* and *Zealand*, and took *Stenwick*, *Coeworden*, and *Otmarsen*. In 1593, he retook *Gertrudenberg*, and punish'd those who occasioned its former Revolt. In 1594, Archduke *Ernest* succeeded the Duke of *Parma*. Prince *Maurice* miscarried in his Design on *Maestricht* and *Boisleduc*, but reduced *Groningen*. The Archduke made Proposals to the States, which they rejected; and soon after he and some other great Men form'd a Conspiracy to murder the Prince, and some of the principal States, as appear'd by the Confession of several of the Assassins who were seiz'd: Upon which the Design was happily defeated. In 1595, the Archduke died, and King *Philip* left the Government of the *Netherlands* to a Senate, under the Direction of the Count de *Fuentes*, their President. They sent Deputies to treat with Prince *Maurice*, but without Effect. About this Time the *Dutch* began to enlarge their Navigation to the *East-Indies*. In 1596, King *Philip* sent Archduke *Albert* to govern the *Netherlands*, where his Armies had been very mutinous since the Death of the Duke of *Parma*. Sir *William Temple* says, That the sending of Archduke *Albert* had a deeper Root and Design than appear'd at first; of which he gives the following Account:

King *Philip* finding his Body broke with Age and Infirmities, and his Mind with Care and distemper'd Thoughts, was willing now to be at Rest and Quiet, which he had never yet allow'd the World or himself. His Designs upon *England* by his *Invincible Armado*, had ended in Smoak; and those upon *France* had Events quite contrary to his Expectation. Instead of establishing a Tyrannical Government in the *Low Countries*, he had lost 7 of his Provinces, and kept the rest only by a War, which cost him more than they were worth. He had lately made a Peace with *England*, and desired it with *France*; and tho' he seem'd to make Peace with the *Dutch* in his

own Name, yet he wish'd it in another's, and was unwilling to entail a Quarrel upon his Son, which had ruin'd all his own vast Projects. He therefore committed the Management of this Affair to Archduke *Albert*, to whom he gave the Title of Governor and Prince of the *Low Countries*, who, if he could reduce them, was to govern them as *Spanish* Dominions; but if he could not, he was to marry *Clara Isabella Eugenia*, King *Philip's* beloved Daughter, and to receive the 10 Provinces as her Dowry, on Condition they should return to *Spain* if she died without Issue. He hop'd that the Birth and Manners of the Archduke, who was a *German*, and the generous and obliging Temper of *Isabella*, might gain more upon the *Netherlanders* than his own Tyrannical Conduct, and that at worst they might make a Peace, if they were not successful in War, without interesting the Honour and Greatness of the *Spanish* Monarchy. In Pursuit of this Determination, King *Philip*, while he intended nothing but Peace, made Preparations as if he design'd nothing but War, well knowing that his own Desires of Peace would signify nothing, except his Enemies were brought to desire it too. He therefore sent the Archduke with an Army into *Flanders*; and believing that Peace with *France* must be the first in Order, and make Way for that of the *Low Countries*, he marched into *France*, took *Amiens*, the Capital of *Picardy*, and gave the *French* Court such an Alarm, as they had not received in the former Wars. But we return from Sir *William's* judicious Reflection to the Course of the History, part of which has been anticipated by this necessary Digression. The Archduke brought with him *Philip* Prince of *Orange*, Prince *Maurice's* eldest Brother, whom we mentioned before to have been carried off from his Studies at *Lowain*, contrary to the Privileges of that University, thinking by his Means to bring the United Provinces to a Compliance. The Archduke had Success against the *French* at first, having taken *Amiens*, *Calais*, and *Arras*, from them, as well as *Hull* from the States. Soon after this, the Queen of *England* and the *Dutch* sent a Fleet against *Spain*, where they took *Cadiz*, as above mentioned: But a Misunderstanding betwixt the Commanders hinder'd the Ad-

vantage that might have accrued from it both to *England* and *Holland*. After this, the *Dutch* made an Alliance with *France* and *England*. King *Philip* sent a Fleet of 128 Sail against the *English* to revenge their plundering of *Cadiz*; but they were overtaken by a Tempest off of *Cape Finisterre*, that drove 40 of their Vessels ashore, and drown'd 5000 Men, which made this Expedition abortive. The same Year the *Dutch* continued their Navigation to the *East-Indies*, and sent a Vessel a third time to discover a Passage by the N.E. but miscarried in the Design, the Ship being frozen up, and the Men Wintering in *Nova-Zembla*. They all died but 12, who return'd with a melancholy Account of that fatal Adventure. In 1597, Prince *Maurice* defeated the Count *de Varax* with the *Spanish* Veteran Troops at *Turnhout*; but fail'd in his Design to surprise *Venlo*. This Year there happen'd a Difference betwixt the City of *Groningen* and the neighbouring Country, and likewise betwixt the Provinces of *Holland* and *Zealand* about a Tax on Merchandize; but they were both accommodated. Ambassadors from *Poland* and *Denmark* endeavoured to mediate a Peace betwixt the States and *Spain*; but the former rejected the Proposals, and publish'd their Reasons. This Year 4 *Dutch* Ships return'd from the *East-Indies*, after a Voyage of 3 Years; and their Success laid the Foundation of their *East-India* Company, which is since become so powerful. The Prince took *Rheinberg*, *Meurs*, *Grol*, *Bredesfort*, *Ostnarsen*, *Oldenseel*, *Lingen*, and all the other Towns beyond the *Rhine*, from the *Spaniards*; during the Archduke's Expedition against *France*; and the Prince, upon the Close of this Campaign, return'd to *Holland*, where he was received with great Pomp, and the loud Acclamations of the People. In 1598, Archduke *Albert* married *Isabella*, King *Philip's* Daughter above-mentioned, and had with her *Burgundy* and the *Netherlands*. He hop'd by this Means to have brought the *Dutch* to submit, on the Prospect of having a Prince of their own continually dwelling in the Country, whose Posterity would be Natives, and govern them according to their own Laws and Customs. He made use of the Prince of *Orange* to persuade them to it, but in vain;

for they look'd upon it to be only a Trap to ensnare them. After this, the States sent two splendid Embassies to *Henry IV.* of *France*, and Queen *Elizabeth*, being the first they had sent since they form'd their Republick, and made a new Treaty with *England*. At this Time a *Russian* had undertaken to murder Prince *Maurice*, but was discovered and punish'd. This Year King *Philip II.* of *Spain* died, having been a Prince of great Qualities as well as Dominions, but guilty of great Defects, being a Dissembler, Revengeful, Superstitious, and of unmeasurable Ambition. His whole Reign was a Course of War, during which he acquir'd *Portugal*, that was no lasting Conquest, and he lost the United Provinces. About this Time *Mendoza*, the Admirant of *Aragon*, commanded the *Spanish* Army in the *Netherlands*, passed the *Maes* into *Guelderland*, and marched to the Frontiers of *Germany*, where he committed great Disorders and Cruelties on Papists as well as Protestants, his lustful *Spaniards* not sparing the Nuns, which obliged the *German* Princes to raise Troops, and repulse him. In 1599, the *Dutch* Army being inconsiderable, it made Prince *Maurice* very uneasy, since he had not above 4000 Men to defend the Passages of the *Rhine* and the *Issel*. The States put out a considerable Fleet under *Peter la Donze*; but he was unsuccessful, having only burnt the Fort and Town of the *Canaries*, but lost his own Life, and part of his Equipage, in the Expedition. *Frederick Spinola* brought 6 Gallies into the *Netherlands* to infest the *Dutch* Trade, and was to have all the Prizes he took for a Reward. The *Dunkirkers* would not let him have their Harbours, so that he brought them to *Sluys*, and cruised upon the *Zealanders*, who were very much afraid of them at first; but at last defeated them in several Rencounters. The Republick endeavour'd to raise a Tax for the Support of the War; but some of the Provinces oppos'd it, and the Elector *Palatine* solicited other Princes of *Germany* to assist them. *Breute*, a *Norman* Gentleman in the Service of the States, with 19 of his Countrymen, challeng'd 20 *Spaniards* of the Garrison of *Boisledue* to a Combat, which they accepted: *Breute* kill'd the *Spanish* Commander at first, and the Conflict was so sharp, that half the Men on

both Sides were kill'd in a little Time; but the *French* fled, and *Breute* yielding, was barbarously kill'd by the *Spaniards*, tho' they promis'd him Quarter. The States of *Zealand* having represented the Necessity of making War in *Flanders*, Prince *Maurice* went thither in 1600 with an Army, and the Archduke encounter'd him near *Newport*, where the Victory fell to the *Dutch*, chiefly by the Bravery of the *English*, under the Conduct of Sir *Francis Vere*. The Archduke was wounded, and very near taken in this Battle, where he had 6000 Men killed, and 600 taken, with 300 Colours; but the Badness of the Season hinder'd Prince *Maurice* from improving this Victory. Some Conferences were held at *Bergenopzoom* this Year about Peace, but without Success. In 1601, the Archduke form'd the Siege of *Offend*, where the Garrison of the States made such a brave Defence, as very much dishearten'd him, and made him despair of Success; but being recruited by 8000 *Italians*, under the Marquis de *Spinola*, he left the Direction of the Siege to him, who took it after 3 Years, 3 Months, 3 Weeks, 3 Days, and 3 Hours; not so much by any want of Men or Provisions within, the Haven being open all that while, so that they had constant Supplies by Sea, but perfectly for want of Ground, which he gain'd from them Foot by Foot, till they had not so much left as would hold Men to defend it. Prince *Maurice* attempted to relieve it several times, but in vain, the *Spaniards* were so strongly intrench'd, and his Army not large enough to force them. In the mean time the *Dutch* increas'd in their Trade, *Olivier de Nord* having discover'd the Streights of *Magellan*, and their Navigation being successful in the *Indies*, from whence in 1602 they had Ambassadors sent them. They likewise burnt *Spinola's* Gallies, formerly mentioned, in 1603, and took *Sluys*, which he came to relieve, where his Troops were defeated, and himself kill'd. The King of *Spain* publish'd an Edict, allowing the *Dutch* to trade in his Kingdom; but because of the great Imposts he laid on their Goods, they would not accept it. The same Year they sent a Squadron to the *East-Indies* and *Brazil* to pillage the *Spaniards*. In 1604, the Emperor wrote to the *Dutch* to persuade them to Peace, which they re-

fused, and excused themselves, by alledging that they could not rely upon any Treaty with the *Spaniards*. This Year concluded the Siege of *Offend* above-mention'd, when the Garrison obtain'd very honourable Terms, and retir'd to *Sluys*, where Prince *Maurice* receiv'd them with as much Honour, because of their brave Defence, as if they had come from a Conquest. *Psiffendorf* says, the *Dutch* lost 70000 Men during that Siege; but the *Spaniards* a great many more, besides the Loss of *Rhinberg*, *Grave*, and *Sluys*, which Prince *Maurice* took in the mean time. The *English* under Sir *Francis Vere* did the *Dutch* great Service in Defence of this Town while he continued Governor, as both they and the *Scots* did on other Occasions; for they had Troops from *Scotland* before King *James* came to the Crown of *England*, the *Spaniards* having espoused the Cause of his Mother, in order to dethrone him; and *Strada* takes particular Notice of the Intrepidity of some of the *Scots* during this War, who in Engagements strip'd themselves, and fought naked, with amazing Courage. In 1605, the *Spaniards* made fresh Proposals of Peace, but without Effect, tho' *Spinola* took *Lingen*, *Groll*, and *Rhinberg*, from the States, and Prince *Maurice* miscarried in his Design upon *Antwerp*. This Year a *Dutch* Squadron return'd from the *East-Indies* and *Brazil*, with a great Booty they had taken from the *Spaniards*; and they sent out more Ships, under the Director of their *East-India* Company. In 1606, the *Spaniards* enter'd the United Provinces with several Armies, against whom Prince *Maurice* made a brave Defence on all Sides; so that they only took *Rhinberg*, but were repulsed at *Nimwegen* and *Zwol*. In 1607, the States continued successful in the *Indies* against the *Spaniards*, and in their Negotiations with the Princes in those Parts, by which in a manner they engrossed the Spice Trade. The *Portuguese* sustaining great Loss by these Expeditions, they advised the King of *Spain* to make Peace with the *Dutch*, wherein *Spinola* concurred with them, and Deputies were accordingly sent to the *Hague*, but without Success, tho' there was a Cessation of Arms for some Time. After this the *Dutch* sent *Hemskirk* with a Fleet against *Spain*. He attack'd the *Spanish* Fleet in the

Har-

Harbour of *Gibraltar*, tho' they were very strong, and had a numerous Artillery, and several Regiments of the best Land-Forces aboard. This brave Admiral was kill'd in the Battle; but his Fleet obtain'd a compleat Victory over the *Spaniards*. The Kings of *France*, *Denmark*, and *Sweden*, with several Princes of *Germany*, interposed for a Peace; but the Ratification of the Articles sent from *Spain* not being answerable to the Archduke's Promises, 'twas not then concluded; yet a great many Troops were cashier'd on both Sides on the Prospect of an Agreement. In 1608, the Negotiations were again set on foot; as to which, Sir *William Temple* gives us the following Account: The *Dutch* had pursued their *East-India* Trade with so much Application and Advantage, that they made themselves Masters of most of the Colonies and Forts belonging there to the *Portuguese*, then Subjects of *Spain*; That *Holland* became the great Magazine of all the Commodities of those Eastern Regions. In the *West-Indies*, tho' the Attempts of the *Dutch* were neither so frequent nor prosperous, the *Spanish* Plantations there being too numerous and strong, yet by the Multitude of their Ships set out with publick and private Commissions, they infested those Seas, laid wait for the *Spanish* Plate-Fleets, and sometimes attempted their Coasts in that New World, which was to touch *Spain* in the most sensible Part, and was a strong Motive to their Court to endeavour a Peace, in order to secure those Treasures, and preserve them in *Spain*, by stopping the Issue of those vast Sums that they continually sent out to maintain the War in the *Netherlands*. This occasioned the Proposals of Peace to come wholly from the *Spaniards*; but the *Dutch* would never hear of it, till the Archduke declared he would treat with them as with Free Provinces, upon whom neither he nor *Spain* had any Pretences: And the *Spanish* Court condescended so far as to treat at the *Hague*, the Seat of the States General; and the Archduke's Four chief Ministers were appointed to go thither to manage the Treaty, viz. their General *Spinola*, the President of the Council, and the Secretaries of State and War. The *Dutch* proceeded with the greatest Coldness imaginable, criticiz'd upon every Word of the Archduke's Decla-

ration to treat with them as Free Provinces and upon the King of *Spain*'s Ratification of it; so that they forc'd them to send Expresses to *Spain* upon every Occasion, and to attend their tedious Returns: For the Success of the States in 30 Years War by Land, and the mighty Growth of their Naval Power and Trade, had made all those concern'd in the War by Sea or Land averse to a Peace, as well as the greatest Part of their People, whose Hatred against *Spain* was still as great as ever; and not a few of them had Hopes of raising their Fortunes by the War, of which they had many great Examples among them: But that, says Sir *William*, which chiefly contributed to bring them to a Peace, was, 1. Their Jealousy of the Growth of *France* under the Conduct of *Henry IV.* who had then made a Peace with *Spain*: For they knew that the hot Spirits of the *French* could not long continue without some Exercise; and they were afraid that King *Henry's* great Preparations for War might be designed against *Flanders*, and that the Neighbourhood of the *French* would prove more dangerous to them than the Government of *Spain*, whose Power they now saw declining very fast. The 2d was their Jealousy of Prince *Maurice*, whose Credit and Power being founded on that of his Father, and advanc'd to a great Height by his own Personal Merit and Success, they were afraid he might aim at an absolute Power, he being then Stadtholder of 4 of the Provinces, and two of his Cousins of the other 3: These Jealousies were heighten'd by *Barnveldt*, Pensioner of *Holland*, a Person of great Abilities and Authority. This had more Influence upon the Peace than the Intercession of neighbouring Princes, or any other Consideration; yet the Treaty was like to break off on the Points of Religion, and the *Indian* Trade. But the latter of those Difficulties being referr'd, a Truce of 12 Years was sign'd in 1609; and Foreign Powers did after this receive the Deputies sent them by the States as Ambassadors. The principal Things agreed on at this Treaty were, 1. The Declaration by the Archduke, owning that he treated with them as with a Free People, which was afterward ratified by the King of *Spain*. The States a long time debated the Word *As*, conceiving it might bear a double

ble Meaning; but by the Advice of the French Ambassador, they pass'd from it, he having said, as *Puffendorf* informs us, that this Word could not add much to the Strength of *Spain*, nor diminish theirs.

2. That all Prisoners should be relieved on both Sides without Ransom.
3. That each Party should enjoy what they then possess'd.
4. That all Hostilities during the Truce should cease.
5. That a free Commerce should be restored on both Sides as before the War.
6. That no new Fortifications should be rais'd on either Side during the Truce.

About this Time the Differences betwixt the *Calvinists*, who had the Publick Establishment, and the *Arminians*, began to break out. *Hudson*, an *Englishman*, says the *Atlas Historique*, being sent this Year by the *Dutch East-India Company* to seek a Passage to the *Indies* by the N. was stop'd by Ice; and afterwards going to seek a Passage by *Davis's Streights*, discover'd that since call'd *Hudson's Bay*. He went to *England* in his Return, where he was detain'd, and oblig'd to serve his own Country, who made use of his Discovery. The *East-India Trade* being referred at the Treaty, as above-mentioned, new Controversies happen'd betwixt the *Dutch* and the *Spaniards*, and mutual Hostilities ensued in the *Indies* on that Account. In 1611, the Difference betwixt the *Calvinists* and *Arminians* occasioned great Disturbances in the State, the latter being countenanc'd by *Barneveldt* and others, who rais'd Suspicions of the Prince, as if he design'd to make himself absolute. In 1612, the *Spaniards* and *Portuguese* envying the Success of the *Dutch* in their Trade, they oppos'd their Commerce, and pretended that none but themselves had any Right to pass the Line, which oblig'd the States to set out a Fleet to secure their Navigation. In 1613, King *James I.* of Great Britain made Prince *Maurice* a Knight of the Garter. In 1614, new Differences happen'd betwixt the *Dutch* and the *Spaniards* about the Succession of *Cleve* and *Juliers*, which was claimed by the Elector of *Brandenburg* and the Duke of *Newburg*. *Puffendorf* says, the Emperor, upon the Death of the last Duke of those Countries in 1609, had a Mind to annex them to his own House, and sent the Archduke *Leopold* to make a Sequestration of them: Upon which he took the strong

City of *Juliers*; but was beat out again by the *Dutch* and *French*. The Elector of *Brandenburg* and Duke of *Newburg* came afterwards to an Agreement; but differing again, the Duke was supported by the *Spaniards*, and the Elector by the *Dutch*; so that the States and the *Spaniards* made War upon one another in the Name of their Allies, tho' the Truce was still continued betwixt themselves. During these Wars, *Spinola* took *Wesel* by Surprise, and the *Dutch* put Garrisons into *Rees* and *Embrick* in the Dutchy of *Cleve*; but were so much alarm'd at the taking of *Wesel*, which might give the *Spaniards* a new Opportunity of invading their Provinces on that Side, that they engaged the *English* and *French* to mediate an Agreement betwixt the Elector and the Duke, who divided those Dominions betwixt them, and engaged neither to call the *Dutch* nor the *Spaniards* afterwards into those Countries. In 1616, the *Dutch* sent *Barneveldt* into *England*, upon King *James's* Demand of the Money which Queen *Elizabeth* had advanc'd to them on the Security of the Cautionary Towns. *Barneveldt* agreed to repay the Sum, and had those Towns restor'd, which the States were the more willing to have effected, because till that Time the *English* Ambassador had not only the Preference of all others in their Dominions, but likewise a Vote in their Council of State; which, *Sir William Temple* says, was by Agreement with Queen *Elizabeth*, because of the Assistance she gave them; tho' the *Dutch* pretended, that 'twas on the Account of the Cautionary Towns being possess'd by the Crown of *England*, and that this Privilege was to cease upon the Redemption of those Towns. *Sir William* also observes, That when the States made the Truce with *Spain*, they enter'd into a mutual Alliance with *Henry IV.* of *France* for preserving the Peace, who, in case of a Breach, was to assist them with 10000 Men; and if he was invaded, they were to send him 5000. This King maintain'd a Body of Horse and Foot at his own Charge in their Service after his Truce with *Spain*, in order to oblige the *Dutch*, and to make himself the Arbitrer of Peace and War, he being their chief Support after Queen *Elizabeth's* Death. In 1617, *James le Maire* discovered a new Passage near the Streights of

of Magellan, by him call'd, *Le Maire's Streights*. He discovered also two Countries, one of which he called, *Maurice of Nassau*; and the other, *The Country of the States*. In 1618, the Troubles increasing in the Country by the Practices of the *Arminians*, and the Opposition made to them, the States assembled a National Synod at *Dort*, at which Divines assisted from *England*, *Germany*, *Switzerland*, and *Geneva*, wherein the 5 Articles of *Arminius* and his Adherents were condemned; but more of this when we come to the Account of their Religion. This Year *Philip Prince of Orange* died at *Brussels* without Heirs: Upon which Prince *Maurice*, his Brother, succeeded to his Title and Dominions. In 1619, *Barneveldt*, *Hugo Grotius*, and others, who had supported the *Arminians*, were Heads of the Faction that oppos'd Prince *Maurice*, and countenanc'd the levying of Troops to the Disturbance of the State, were imprison'd; for the Differences were come to that Height, that one of the Parties must be suppress'd, or the Ruin of the State endanger'd. Upon which *Barneveldt* was condemned to lose his Head in an Assembly of the States General, and was accordingly executed in the 72d Year of his Age, much lamented by many, because of the great Services he had done the State, and his having always profess'd himself a Patriot of his Country's Liberty. This made the Prince's Enemies write bitterly against him, as aiming still at an absolute Power. At the same time *Grotius* was condemn'd to perpetual Imprisonment in the Castle of *Louvestein*, from whence his Wife got him convey'd in a Chest by which she sent him Books. After this he retir'd into the *Spanish Netherlands*, and from thence into *France*, where he was kindly received by *Louis XIII*. He return'd afterwards to the *Netherlands*, upon Encouragement from Prince *Henry Frederick*; but the States would not suffer him to stay there: Upon which he went to *Christina* of *Sweden*, who employ'd him in Affairs of the greatest Importance, to *France*, and elsewhere; and he died at *Roslock* in *Mecklenburg* in 1649. But tho' he was a Man of extraordinary Learning and Parts, it must be own'd, that his Unsteadiness in Matters of Religion and Politics, gave too great Ground to the Adversaries of the then *Arminians* in *Holland*, one

of whose Leaders he was, to say, that they intended very dangerous Innovations in Matters of Religion, if not in the State. These Controversies laid the Foundation of that called the *Louvestein* or the Republican Faction, and that called the Prince's or Stadtholder's Faction, who, as Sir *William Temple* observes, have ever been very liberal in their mutual Reflections; the *Calvinists* charging the *Arminians* to be Enemies to the true and purer Reformation, and the *Arminians* charging them as Enemies to the true and free Liberty of the State. But this Matter will appear in a clearer Light when we come to the Synod of *Dort*.

In 1620, the Differences which happen'd betwixt the Emperor and the Elector *Palatine* occasion'd the *Spaniards* to assist the former, and the States the latter; so that they made War upon one another a second time in the Name of their Allies, without breaking the Truce.

In 1621, the Truce ending, both Sides prepared to renew the War. That Year the Archduke *Albert* died at *Brussels*, much belov'd of his Subjects, because of his sweet Temper. He was much troubled at his Death, because he had not been able to establish a lasting Peace with the *Dutch*.

In 1622, the War began afresh with *Spain*. *Spinola* took *Juliers*; but was oblig'd to raise the Siege of *Bergenszoom*, after he had lost 10000 Men before it; because Count *Mansfeld*, and *Christian Duke of Brunswick*, having defeated the *Spaniards* near *Fleury*, were marching to the Assistance of the *Dutch*.

In 1623, a Conspiracy was form'd against the Prince, but the Authors discover'd and punish'd. That same Year the States settled their *East-India Company* by an Edict, were successful in their Navigation, and took *St. Salvador* from the *Spaniards*.

In 1625, *Spinola* besieg'd *Breda*, and so fortified his Camp, that the Prince was not able to raise the Siege; so that it was taken after 9 Months Attack. The Loss of this Town, and the Miscarriage of his own Design on *Antwerp*, threw the Prince into a Melancholy, of which he died, extremely lamented, having been a wise and valiant Commander, and endowed with all the Qualities requisite in a great Captain.

In 1626, his Brother *Frederick Henry* succeeded. He hinder'd the *Spaniards* from finishing the Canal which they had begun to dig betwixt the *Rhine* and the *Mâes*, and design'd to have brought by the Town of *Gelder*.

In 1627, he was made Knight of the Garter: The Marquis *de Spinola* was called back to *Spain*, and the Prince took *Grol*.

In 1628, General *Carpenter*, sent out with a Fleet by the *East-India* Company, discovered that Part of *Terra Australis* called *New Holland*. *Peter Adrian*, with 12 Vessels, attack'd the *Spaniards* at the Isle of *Cuba*, drove their Vessels ashore, and brought home a rich Booty to *Holland*. Admiral *Heyn*, who the Year before had defeated and taken the *Brazile* Sugar Fleet, did this Year take the *Spanish* Plate Fleet, and brought home in 1629, in Plate and Goods, above 60 Millions. The Prince receiv'd him with great Honour, gave him noble Presents, and the States made him Knight and Admiral, and presented him with a Crown of Gold, in Form of a Lawrel. The Prince took *Boisseduc*, notwithstanding the brave Defence of the Garrison, and that the Count *de Berg* came with a great Army to relieve it. At the same Time the Governor of *Embrick* surpris'd *Wesl* for the States, which put a Stop to the Invasion of the *Spaniards*, who had pass'd the *Iffel* to ravage the United Provinces.

In 1630, the *Dutch* were successful in the *West* and *East Indies*, and obliged the Emperor of the Isle of *Java* to raise the Siege of *Battavia*, which he attack'd with 200000 Men, and the Year after with 150000; but also in vain: And their *West-India* Company possess'd themselves of *Brazile*. Cardinal *Richelieu* had corrupted the Governor of *Orange*; but the Prince having Notice of it, turn'd him out, and sav'd that Principality.

In 1631, the *Spaniards*, with a great Fleet of Gallies and other Ships, endeavour'd to cut off the Communication betwixt *Holland* and *Zealand*; but Vice-Admiral *Hollart* defeated them; and of 6000 Men on board that Fleet, only 11 escaped, besides the Governor of *Breda*, and one Captain.

In 1632, the Prince took *Venlo*, *Ruremond*, and *Maestricht*. The Imperial General *Paggenheim* came with a great Army to relieve

the latter; but the Prince intrench'd himself, so as to repulse him in several Attacks, which obliged the Town to surrender.

In 1633, the *Spaniards* despairing to reduce the United Provinces, made new Proposals of Peace, but in vain; and the Prince took *Rheinberg*, and all the Towns which the *Spaniards* had in *Guelderland*. This Year the Archduchess *Isabel* died at *Brussels*, in the 67th Year of her Age, much lamented by her Subjects, because of her Justice, Wisdom, and Exemplary Piety in her Religion.

In 1634, the Cardinal Infant, Brother to *Philip III.* of *Spain*, succeeded her as Governor of the *Spanish Netherlands*. The Count of *Nassau* defeated the *Portuguese* in *Brazile*, and the *Dutch* made a considerable Progress in the *Indies*.

In 1635, *France* declar'd War against *Spain*, and join'd their Troops with the *Dutch*; so that the *Spanish Netherlands* suffer'd much on both Sides. The Confederates took *Tillmont*, and besieg'd *Louvain*; but their Progress was hinder'd by Jealousies betwixt the *French* General and the Prince of *Orange*; and the *Spaniards* surpris'd the important Fort of *Schenk*.

In 1636, the Prince retook it by a vigorous Siege; and the *Dutch* Fleet defeated the *Dunkirkers* near *Diep*.

In 1637, the *Dutch* were successful in the *West-Indies*, took two or three Places, and gain'd a Battle. That same Year the Prince recover'd *Breda*.

In 1638, the Count *de Nassau* was oblig'd to raise the Siege of *Callo*, attack'd by the *Spaniards* with a superior Force, oblig'd to retire, and lost his Son in the Action.

In 1639, *Van Trump* defeated the *Spanish* Fleet on the Coast of *Flanders*, made their Admiral run ashore, burnt their Vice-Admiral, took two of their Ships, and forc'd the rest ashore. The *Spaniards* in Revenge sent out a greater Fleet to attack *Van Trump*. The Battle continued two Days; but the *Spaniards* were defeated, and few of 'em escap'd to *Dunkirk*. The *Spanish* Power being broke at Sea, the Prince enter'd *Flanders* next Year, but without any great Success. The States possess'd themselves of the Streights of *Malaca*, which was a great Advantage to their *East-India* Company.

In 1641, the Prince's Son *William* married *K. Charles I.* of Great Britain's eldest Daughter *Mary*, and the Prince took *Gennep*. The Cardinal Infant died, and was succeeded by *Castel Rodrigo* as Governor of the *Spanish Netherlands*.

In 1642, there was no great Matter done on either Side.

In 1643, the *Portuguese* shook off the *Spanish* Yoke, and chose the Duke of *Braganza*, a Prince of their own Blood Royal, for King, with whom the *Dutch* made an Alliance. Count *Maurice* of *Nassau*, who commanded in *Brazile*, sent some of his Men to *Chili*: They discover'd that call'd *Brewer's Streights*, from the Name of their Commander, and took several Forts; but his Death stop'd their Progress. He was succeeded by *Herkman*, with whom the Natives were so well pleas'd, that they revolted from under the *Spaniards*; but he was obliged to retire for want of a sufficient Number of Troops. The *Dutch East-India* Company made themselves Masters of the Streights which forms the *Peninsula* of the *East-Indies*, from *Cape Comorin* as far as the Coasts of *Coromandel*.

In 1644, Negotiations of Peace were set on foot betwixt the *Dutch* and *Spain*, but without Effect. The States renewed their Alliance with *France*, and engaged themselves to make no Peace without them. The *French* besieg'd *Gravelin* by Land, and *Van Trump* to block'd it up by Sea, that the *Spaniards* lost it. In the mean time the Prince took *Hulst* and *Sas van Ghent*.

In 1645, while the Preliminaries of Peace were treating at *Munster*, the Prince attempted to take *Antwerp*, but miscarried, because the *French* General refus'd to let him have 3000 Horse. This Year the *Portuguese*, during a Truce, and contrary to the publick Faith, says the *Atlas Historique*, possess'd themselves again of *Brazile*, which was a great Prejudice to the *Dutch West-India* Company.

In 1646, Cardinal *Mazarine* proposed the Siege of *Ghent*, in order afterwards to form that of *Antwerp*. The *Spaniards* being inform'd of this, sent to propose a Truce at the *Hague*; and the States of *Zealand*, with the City of *Amsterdam*, oppos'd the Design against *Antwerp*, because they thought the taking of that Town would damage their own Commerce.

In March 1647, the Prince of *Orange* died of a Dropsy, having been, says the *Atlas Historique*, the Ornament of his Country, the Support of the Republick, and the Instrument of its Liberty and Power.

He was succeeded by his Son *William II.* with general Applause. Some were for imposing hard Conditions upon him; but the more moderate Party carried it.

In 1648, the Peace was concluded betwixt *Spain* and the *Dutch* at *Munster*, wherein the King of *Spain* own'd them to be a Free and Sovereign People, and renounc'd for himself and his Successors all Pretences to Dominion over them. But as this Peace was an Authentick Acknowledgment of the Liberty of the Provinces, the Prince's Faction reckon'd it a Check to his Power. New Treaties were afterwards made with *Spain*, to clear some Things relating to Commerce: And Admiral *Baucher* did in Part retrieve the Affairs of the *Dutch* in *Brazile*; but was obliged to return to *Europe* for want of Soldiers and Ammunition, which prov'd a great Loss to their *West-India* Company; but that of the *East-Indies* gain'd by it: For this having occasioned a War with *Portugal*, which lasted till 1661, the *Dutch* took from the *Portuguese* almost all the Places they were possess'd of in the *East-Indies*.

In 1650, a General Assembly of the States met, to consider of Methods for discharging the publick Debts, and easing the People of the Taxes they had been obliged to pay during the War. Some of the States, and particularly those of *Holland*, as *Puffendorf* and the *Atlas* inform us, were for cashiering a great Part of their Troops. The Prince took it ill that they should talk of disbanding such a great Part of the Army, that had so faithfully serv'd their Country. He represented how dangerous this might be to the States during the War betwixt *France* and *Spain*, and that in *England* betwixt the King and the Parliament. The States being divided about this Matter, 'twas agreed upon by the Majority of the States General who were Friends to the Prince, that he should visit the Cities in Person, and endeavour to convince them; but this was petition'd against by some of the Cities in *Holland*, and particularly by *Amsterdam*, alleging, that if he should come thither in Person, he might, by changing their Ma-

K k k k k

gistrates.

gistrates, and other Alterations, invade their Liberty. The Prince, dissatisfied with those Proceedings, alledg'd they did it to affront him and his Officers. He went to *Dort*, *Haerlem*, and *Amsterdam*, to prevent their disbanding the Troops; and desir'd the Magistrates of the latter might be assembled, which being deny'd, provok'd him to the highest Degree. He demanded Reparation; but the Cities continued in their Resolution, alledging that it was according to their Privileges. Upon this the Prince took into Custody 6 of the States, whom he thought to be most opposite to his Designs, and among them *De Wit*, the Burgomaster of *Dort*, whom he sent Prisoners to the Castle of *Louvestein*. He likewise form'd a Design to surprise *Amsterdam* by his Army, but miscarried, some of the Troops having mistaken their Way in the Night, and their March being discover'd by the *Hamburg* Post, who rode through them without being discern'd. Upon this the *Amsterdammers* assembled their Senate, and sent Deputies to acquaint the Prince, That if he had put himself at the Head of so great an Army to execute any Design for the publick Good, they had 60000 Men ready to follow his Banner. He answer'd, That he had no other Design but the publick Service, and to reduce those to Reason, who, out of a seditious Principle, endeavour'd to break the Fundamental Union of the Provinces, of whom their Burgomaster *Bicker* being one of the chief, he was come at the Head of 30000 Men to punish him, according to the Laws of their Country; and bid the Deputies tell those of *Amsterdam*, That his Army being the same which had so frequently made *Spain* to tremble, and secur'd the Liberty of the Provinces, their 60000 Burgers would find it a hard Task to oppose them. The City being startled at this resolute Answer, put themselves in the best Posture of Defence they could, open'd their Sluces, and threaten'd to pierce their Dykes, in order to hinder his nearer Approach; but at the same time enter'd upon a Treaty with him. In order to give him some Satisfaction, they turn'd out Burgomaster *Bicker*, on Condition that he should release the 6 Gentlemen whom he had imprison'd. Thus the Affair was compromised; but the Prince was so much vex'd at

the miscarrying of his Design, and the disbanding of his Army, which made him incapable of doing any thing to relieve his Father-in-Law King *Charles I.* against the Designs which *Oliver* had then form'd upon his Life, that he was oppress'd with a heavy Melancholy; and going to compose some Differences betwixt the Nobles and Cities of *Guelderland*, he was taken ill, and returning to the *Hague*, his Physicians let him Blood; soon after which the Small-Pox appear'd, and he died the 6th of *November* following, when his Physicians thought him to be past all Danger, which gave occasion to a Discourse, that he had been poison'd. He was a Prince of excellent Qualities, of a strong Constitution, and a Majestick Countenance, which commanded Respect from all that beheld him. He was popular, valiant, able in Counsel, and indefatigable, well vers'd in Languages, History, and Mathematicks; and had he liv'd, was like to have equal'd, if not exceeded, any of his great Ancestors. Seven Days after his Death, the Princess was brought to Bed of a Son, *William III.* who was afterwards Stadtholder, and King of *Great Britain*; of whom in his Place.

In 1651, the Republick being without a General and Stadtholder, it occasioned a solemn Meeting of the States, to whom the Princess of *Orange* wrote, and recommended the Interest of the young Prince her Son: But the Remembrance of his Father's Attempt upon *Amsterdam*, and the Solicitations of *Cromwel*, who had then usurp'd the Government of *Great Britain*, occasion'd them to suppress the Office of Stadtholder; and they renew'd the Union of *Utrecht*. *Cromwel*, says the *Atlas*, having attain'd his ambitious Ends, he made use of several Pretexts to declare War against the *Dutch*, and one of them was, That the States had not done *England* Justice for the Murder of *Dr. Dorislaus*, who was sent from the Parliament as a Publick Minister to the *Hague*; but having been one of *K. Charles I.*'s Judges, was assassinated there by some *Scots* and others that belong'd to *King Charles II.* before he had his publick Audience of the States. To prevent a Rupture, the *Dutch* sent Ambassadors to *England*, who could effect nothing, says the Author of *The Life of Van Trump*. In the mean time the *English*, according

cording to that Author, had taken near 200 Merchant Ships, by which the *Dutch* suffered some Millions of Loss. The *English* likewise pretended to the Dominion of the Narrow Seas, and would allow no Flag to appear there but their own.

In 1652, the *English* declar'd War against the *Dutch*, and Admiral *Trump* put to Sea to convoy home some Merchant Ships; but had Orders to avoid engaging with the *English* if possible, and to pay the usual Respect to their Flag, if he chanc'd to meet them in the Narrow Seas. *Trump* was forc'd by a Tempest on the *English* Coast, but quitted it again as soon as possible, and made towards *Calais*: But being inform'd that the *English* were pursuing some Merchant Ships, he advanc'd to their Relief, and met *Blake* with the *English* Fleet, who, the *Atlas* says, had Orders to attack the *Dutch*. *Trump* prepared to give the usual Honours to the *English* Flag, and order'd one of his Captains to go on board with a Compliment to the *English* Admiral; but *Blake* having no Regard to these Marks of Submission, fir'd twice at *Trump's* Ship, who made no Return till he receiv'd a third Shot, and then the Fight began, which lasted till Night parted them; and both Admirals sent an Account of the Action to their Principals. *Trump's* Letter to the States was sign'd by all his Officers, to prove that he was not the Aggressor; and by *Blake's* Letter to the Parliament, after he retir'd to the *Downes*, 'twould seem to be true. The States sent *Trump's* Letter to their Ambassadors, to lay it before the Parliament; but the *Dutch* Ambassadors being at *Chelsey*, the Letter was kept up, and the Mob went to *Chelsea* to attack them, which obliged the Parliament to give them Guards; and *Cromwel* march'd with some Forces to the Coast to appease the People, and secure them against their Apprehensions of being ravag'd by the *Dutch*. The Curious may see more of this in *The Life of Van Trump*, with what *Blake* and his Officers said in their own Defence, alledging, that *Trump*, when he came to an Anchor before *Dover* Castle, refus'd to strike his Flag, tho' the Garrison fir'd three times to give him Notice of his Duty: And they pretended likewise, that *Trump* came up to the *English* Fleet on purpose to brave them; and to justify their Charge, produc'd a Co-

py of the Commission which *Trump* had given to his Captains. Yet by that Commission it does not appear there was any sufficient Ground for the Accusation; but it serv'd *Oliver* for a Pretext to cover his ambitious Designs. In the mean time the *Dutch* Ambassadors obtain'd Audience of the Parliament, to whom they made a Speech, and did what they could to renew a good Understanding betwixt *England* and *Holland*, but in vain. They sent another Ambassador, who made Application to the Parliament and Council of State, but without Success; so that the *Dutch* Ambassadors return'd home, and an Engagement happen'd betwixt *De Ruyter*, and the *English* Admiral *Asschew*, who had the worst. The *English* had also the Disadvantage in an Engagment near *Leghorn*, betwixt Commadore *Bodley* and the *Dutch* Commander *De Galen*; but the *Dutch* were worsted in the Fight betwixt *Calais* and *Dover* under *De Ruyter* and *De Wit*, the *English* Fleet under *Blake* being much superior in Force. Another Engagement happen'd betwixt *Trump* and *Blake*, wherein the *English* were obliged to retire into the *Thames*: But afterwards in another Engagement betwixt *Trump* and *Blake*, which lasted three Days, the *Dutch* were worsted. *De Galen* obtain'd another Advantage over the *English* in the *Streights*, but lost his Life in the Action. The *English* after this, in 1653, inclin'd to a Peace; but were prevented by *Cromwel*, who dissolv'd the Parliament. That Year a cruel Battle happen'd betwixt *Van Trump* and the *English* Admirals *Dean* and *Monk*, wherein the *Dutch* were worsted, which occasioned Tumults in *Holland*: And in *August* that Year, there happen'd another terrible Battle, wherein the *Dutch* were defeated, and *Trump* killed. He was buried with great State in *Holland*, and had a sumptuous Monument erected for him by the States.

In 1654, the *Dutch* made a dishonourable Peace with the *English*, in which there was an Article excluding the young Prince of *Orange* from all publick Offices in the Commonwealth, which occasioned some Commotions in *Holland*, the People having a great Love for him, because of the glorious Actions perform'd by his Ancestors in the Defence of their Liberty; but the prevailing Faction abolish'd the Office of Stadtholder and Cap-

tain-General, except in the Province of *Friesland*, where the People continued that Dignity in the other Branch of the Family of *Nassau*.

In 1655, Differences happen'd in *Overijssel*, where several of the Nobility chose the Prince of *Orange* for their Stadtholder, and nam'd Count *William* of *Nassau* for his Lieutenant, whence Quarrels ensu'd; but the Matter was accommodated by the Mediation of the States General.

In 1656, the States, on Account of their Trade, concern'd themselves in the Quarrels betwixt *Charles Gustavus* King of *Sweden*, and *John Casimir* King of *Poland*, whom they brought to a Peace by the Treaty of *Elbing*, their Admiral *Obdam* having overaw'd both of them with his Fleet. This Year, the sumptuous Stadthouse at *Amsterdam*, which they began in 1654, was almost finish'd. The Plague cut off many People in the Provinces of *Holland* and *Utrecht*, and 13000 died at *Leiden* in a small Time.

In 1657, Differences happen'd betwixt the *French* and the *Dutch*, because of some *French* Privateers, which took their Ships, and disturb'd their Commerce. The *Dutch* complain'd of it in vain, and took the Privateers, for which their Ships were seiz'd in *France*, and the *Dutch* made Reprisals; but *M. de Thou* being sent into *Holland* by the Court of *France*, made up the Difference, and the Ships were released on both Sides.

In 1657, the *West-India* Company discover'd the *New Netherlands*, built *New Amsterdam*, and made War on the *Portuguese* to recover *Brazils*.

In 1658, they sent a famous Embassy to *China*; but the *Jesuits* hinder'd the Success of it. Their Embassy in *Japan* had a better Effect. The States concern'd themselves in the War betwixt the *Danes* and *Swedes*, and deliver'd the King of *Denmark*, who was much streighten'd in his Capital. The *Dutch* Admiral *Obdam* defeated the *Swedish* Fleet, reliev'd *Copenhagen*, and enter'd it in a triumphant Manner.

In 1659, *De Ruyter* sail'd to the North, and joining his Troops with those of *Denmark*, defeated the *Swedes* at the Battle of *Niburg*; for Grief of which, the King of *Sweden* died.

In 1660, a Peace was concluded in the North by the Mediation of *England* and

France. The States were successful in the *East-Indies* against the *Portuguese*.

In 1661, the *Dutch*, by their Negligence, gave the *Chinese* an Opportunity to seize the Isle of *Formosa*, which was a great Prejudice to their *East-India* Company.

In 1662, an Alliance of 25 Years was renewed betwixt *England*, *France*, and *Holland*; and *John de Wit*, the Pensionary of *Holland*, got the Right of *Aubaine* taken off the *Dutch* Subjects in *France*, by which the *French* King was before intitled to the Estates of all Strangers that died in his Dominions.

In 1663, the *Dutch* had some Difference with the Bishop of *Munster*, but obliged him to keep the Peace, and were successful against the *Portuguese* in the *Indies*.

In 1664, an *English* Squadron under Commodore *Holmes* unexpectedly surpris'd and took several Forts from the *Dutch* on the Coast of *Guinea*; but *De Ruyter* quickly retook them. The *Dutch* did all they could to avoid a War with *England*, but in vain; so that they came to an open Rupture in 1665; the Duke of *York* and his prevailing Faction at Court refusing all the advantageous Proposals made by the *Dutch*, who put a Fleet to Sea under Admiral *Obdam*, to whom they gave positive, but imprudent, Orders to fight the *English*, let the Wind be how it would; which being forced to obey, contrary to the Opinion of his Officers, it had a fatal Effect to the *Dutch*; for the *English* Fleet, commanded by the Duke of *York*, Prince *Robert*, and the Earl of *Sandwich*, defeated the *Dutch*, burnt and sunk 19 of their Men of War, kill'd about 6000 of their Men, with the Loss only of 4 Men of War, and 1500 Men, on our Side, among whom were Rear-Admiral *Samson*, the Earls of *Marlborough* and *Falmouth*, the Lords *Portland* and *Fitzharding*, with 14 other Persons of Note. The Lord *Obdam*, in the beginning of the Action, attack'd the Duke of *York*, sunk the 3 Yachts that attended him, and had almost disabled him; but he was seasonably rescued by Vice-Admiral *Lawson* and Captain *Smith*; and *Obdam* being engaged with several other *English* Ships who had the Wind of him, he was blown up, either by an accidental Shot that enter'd his Powder-Room, or, as the *Dutch* say, by the Treachery of an *English* Gunner that serv'd on board him. *Obdam*

was interr'd with great State in *Holland*, and had a noble Monument erected for him, being one of their ancient Nobility.

In 1666, *De Ruyter* succeeding *Obdam* as Admiral, he fought the *English* Fleet under General *Monk* for 4 Days; and tho' the *English* behav'd themselves with their usual Gallantry, they lost, says the Author of *The History of the United Provinces*, 23 large Men of War, besides many others, and had 6000 Men killed, besides 2600 taken; the *Dutch* having lost about 6 Capital Ships, and 2300 Men. Notwithstanding which, our Court made publick Rejoycings at *London*, as if they had obtain'd the Victory. In August that same Year, another Engagement happen'd, wherein the *English* had the Advantage, for which *De Ruyter* blam'd the Conduct of *Van Trump*, who was thereupon discharged from his Employment, while *De Ruyter* himself acquir'd as much Glory by his Gallantry in the Fight, and brave Retreat, as if he had obtain'd the Victory: And besides the Honours he receiv'd from the States, the *French* King, who was then their Ally, sent him the Collar of the Order of *St. Michael*, with a Gold Chain, and his own Picture richly set with Diamonds. Soon after this Engagement, the States sent a Squadron to join 36 *French* in the *Mediterranean*, in order to destroy our Commerce there; a Treaty was set on foot by the Mediation of the Queen Mother of *England*, which had no Effect. And the *French* and *Dutch* having join'd their Fleet near *Dunkirk*, ours retir'd before 'em, after having lost one Ship of 50 Guns. Not long after this, 20 Men of War, under Commadore *Holmes*, made a Descent on the *Dutch* Coast near the *Vlissinge* and the *Texel*, where they burnt two Frigates, miss'd narrowly of destroying their *Russia* Fleet, and committed some other Hostilities, to countenance a Rebellion against the States, rais'd by one *Heemskirk*, who revolted with some of their Ships under his Command, burnt about 100 of their Merchant-men, and some Men of War on the Stocks; but being pursued by a *Dutch* Squadron, he was killed in the Engagement, several of his Ships taken, and the Men on board them executed in *Holland*, while the rest made their Escape to *England*.

In 1667, the *Dutch* made Proposals of Peace, which were treated of at *Breda*: But

while the *English* protracted the Negotiation, *De Ruyter* put to Sea, and anchoring at the Mouth of the *Thames*, sent 17 of his lightest Ships, with 4 Barks and 4 Fire-ships, into the River, where they took *Sheerness* Fort, demolished the Fortifications, and burnt or carried off the Naval Stores laid up there. After this, *De Ruyter* advanced as far as *Chatham*, where he met with little Resistance, except from a few *Scots* under the Command of Captain *Douglas*, who was burnt on board one of our Men of War as he bravely defended her. The *Dutch* came from thence to *Gravesend*, where they burnt 6 of our largest Ships, among whom were the Admiral and Vice-Admiral of the White, took the *Royal Charles*, and a Frigate of 44 Guns, which hasten'd the Conclusion of the Peace to the Advantage of the *Dutch*, who presented their Commanders *Ruyter*, *De Wit*, and *Ghent*, with a Gold Cup each, on which was engraven the Action of *Chatham*, to perpetuate in their Families the Memory of this great Enterprize. This Disgrace to *England* was chiefly ascrib'd to the Treachery of the *French*, who push'd the *Dutch* on to it during the Treaty, it being their Interest to foment a Division betwixt those Protestant Maritime Powers, in order to destroy both. That same Year, the *Dutch* East-India Company brought the King of *Madagascar*, and some other neighbouring Princes, to a Submission.

In 1668, the *French* King having treacherously declar'd War against *Spain* the Year before, on Pretence of the Rights of his Queen, which he had solemnly renounc'd at his Treaty of Marriage; the *Dutch* being alarm'd at his Progress, rais'd 25000 Men, and solicited *England* to enter into an Alliance with them, which brought on the Peace of *Aix la Chapelle*.

In 1669, they solicited the Triple Alliance betwixt *England*, *Sweden* and themselves, which broke the *French* King's Measures, and provok'd him so much, that he found Means to break the said Triple Alliance, and engage *England* with him in a War against *Holland*, as we shall hear anon.

In 1671, the *Dutch* did all they could to prevent a Rupture with *England* and *France*, but in vain; for the *French* King, by the Interview betwixt King *Charles II.* and his Sister the Dutchess of *Orleans*, at *Dover*, had

had riveted that Prince in his Interest. The *Dutch* upon this prepar'd for War; but their Force was very unequal to that of their Enemies. Besides, they were divided into three Factions at home. The first was for continuing the Exclusion of the Prince of *Orange* from all the Dignities and Offices enjoyed by his glorious Ancestors; the 2d was for restoring him; and the 3d was Neuter, but at last join'd with the 2d, and carried it for the Prince; who in 1672, tho' very young, put himself at the Head of their Forces, which were then but inconsiderable. Tho' King *Charles II.* of *Great-Britain* endeavour'd to persuade them by his Ambassador *Sir George Downing*, that he would faithfully adhere to the Triple Alliance, he at the same time prepared his Fleet to attack the *Dutch* by Sea, and sent Forces into *France*, under the Conduct of his natural Son the late Duke of *Monmouth*; and soon after, without any Declaration of War, order'd *Commadore Holmes* to attack their *Smirna* Fleet in their Return home off of the Isle of *Wight*; which he did, and took some of 'em, after two Days Fight, wherein the *Dutch* made a brave Defence, and got home with most of their Fleet, having only lost one of their Convoys, and three Ships. This Conduct of King *Charles* was displeasing to the People, and the House of Commons, because it was contrary to the late Treaty of *Breda*, and done without any Declaration of War. But the King notwithstanding order'd 4 of their *East-India* Ships to be taken in their Return from *Bassavia*, and all their other Vessels to be seiz'd in his Harbours. In *April* following, he publish'd his Declaration of War, alledging they had broke the Treaty of *Breda*, disturb'd our Commerce in the *Indies*, injur'd the *English* at *Surinam*, and affronted his Person by insolent Medals and Pictures, and burnt his Effigies in *Persia*. The *French* King and the Bishop of *Munster*, with the Archbishop of *Cologne*, declar'd War against the *Dutch* at the same time; for which the *French* King alledged no other Reason, but that he was dissatisfied with their Conduct; and that he could no longer dissemble his Indignation, without a Diminution of his Glory. The Declarations of the two Bishops were every whit as frivolous: But we refer the Curious for the Motives of

this War to the History of it, publish'd in the First Volume of *State Tracts*, collected since the Revolution, translated from the *French* Copy printed at *Paris* in 1682; but suppress'd at the Instance of the *English* Ambassador, because of the Discoveries it made of the League betwixt the Kings of *France* and *England* for enslaving *Europe*, and introducing Popery into *England* and *Holland*.

In the mean time the Prince of *Orange* did all that he could for the Defence of his Country, and *De Ruyter* put to Sea with a Fleet. The *French* King at the same time invaded the *Netherlands* with 100000 Men in 4 Bodies, and took 6 of their Frontier Garrisons in the Dutchy of *Cleve*, in so little a Time, as struck an universal Terror into the *Dutch*, which was very much heighten'd by his passing the *Rhine*, while the Prince of *Orange*, who was encamp'd on the *Issel* with about 13000 Men, marched to cover the Country, and such Towns as were most exposed. At the same time *De Ruyter* attack'd the *English* and *French* Fleets in *Selbay*, commanded by the Duke of *York*. The Battle was fierce, and maintain'd with great Bravery on both Sides, and almost with equal Advantage; tho' each ascribed the Victory to themselves, and made publick Rejoycings accordingly. The Loss of Men was computed to be near the same; but the *English* lost four Ships, and the *French* one; whereas the *Dutch* lost but three. In this Engagement, we lost the brave Earl of *Sandwich*, who commanded the Blue Squadron, himself, with his Son, and 850 Men, being blown up, with his Ship of 102 Guns: But had it not been for the Advantage of the Wind, the *Dutch*, being much superior in Number, might probably have done us more Mischief. The Account of this Naval Engagement, in which the *Dutch* pretended to have the Victory, did serve to keep up the Spirits of their People; but the *French* Army having pass'd the *Rhine*, not without a Mixture of Treachery and Cowardice in some, that the Prince of *Orange* sent to oppose their Passage. They took several important Places, with the strong Forts of *Schenk* and *Knodsenburg*, while the Bishop of *Munster* took *Deventer*; and the *French* being Masters of the *Betaw*, the Prince was obliged to retire towards *Utrecht* where,

where being refused Admittance by the mutinous Faction, he was obliged to de-camp, and to divide his small Army into 4 Bodies, to cover the Country as well as he could; and the *French* took so many Towns, and made such a Progress, that the Pensionary *De Wit* advis'd the *Dutch* to sue for a Peace on the best Terms they could. Accordingly they sent Deputies to the *French* King, who insisted on such hard Conditions, that they resolv'd to abide the last Extremity rather than agree to them. The People in the mean time were so enraged at the Management of the two *De Witts*, whom they charged with all their Misfortunes, that some of them attempted to assassinate them both, for which one of the Assassins was executed. During these Disorders, *Zutphen* and *Utrecht* surrender'd to the *French*; and the Approach of their Army to *Naerden* occasioned an universal Confusion in the Cities of *Holland*, where the People besieged their Magistrates in their Houses, and threaten'd to kill 'em, except they would declare the Prince of *Orange* their Stadtholder, being of Opinion, that none but the Family that founded the Republick, were able to restore it. The City of *Amsterdam* was under such a Consternation, that the greatest Part of the People were for surrendering betimes, to save their Riches; but were dissuaded by their Magistrates, who prepar'd for a vigorous Defence, and laid the neighbouring Country under Water to hinder the Approach of the Enemy. Their Example being followed by other Towns, did, with the Conduct of the Prince, save their Republick, when it was brought to the Brink of Ruin. The Calamity of the Country, and the Inclinations of the People, being improv'd against the *De Witts* and their Party by the Princess Dowager, Grandmother to the Prince, and others of his Friends, supported by the Elector of *Brandenburg* who was his Uncle, the People threaten'd to abolish the perpetual Edict themselves, which excluded the Prince from the Dignities of his Ancestors, if the States would not do it. The Peasants of *West-Friesland*, who make the best Soldiers in the *Dutch* Dominions, refused to take Arms till they were admitted to swear to be true to the Republick, and to obey the States, and his Highness the Prince of

Orange. Upon which he was unanimously chosen General by the States, and enter'd upon his Office after taking the Oaths. Then he went to the Army intrench'd at *Newrop*, and kept his Post with so much Courage and Conduct against *Lewis XIV.* who commanded his Army in Person, that he forc'd him to retire with Loss, and to abandon his Works, when he thought to have beat the Prince out of his Trenches. But in the mean time the *Dutch* Frontier Towns and Garrisons fell so fast into the Hands of the *French*, that the People suspecting Treachery, would not be satisfied till the Prince was created Stadtholder, and possessed of all the Posts enjoyed by his Ancestors. The Inhabitants of *Dort* were the first that took Arms on that Account, and forc'd their Burgomaster old *De Wit*, Father to *Cornelius* and *John*, to draw up an Act, to absolve themselves and the Prince from the Oath they had taken to observe the perpetual Edict, which excluded him from the Stadtholdership, and sent for the Prince to accept it. He modestly represented the Danger that might accrue to them by his leaving the Army; but they would not be deny'd. He came to the City, where he was received with great Solemnity; but refused to be Stadtholder, till he was absolved from his Oath by Consent of the States General. They sent Ministers to confer with the Prince, and convince him that he might lawfully do it; and accordingly an Act was drawn in the Name of the Magistrates, by which they renounc'd the Perpetual Edict; and made the Prince their Stadtholder; which *Cornelius de Wit* refus'd to sign, till he was prevail'd on by the Tears of his Wife and Children. The Example of *Dort* being followed by the other Cities, and confirmed by the States General, who absolved the Prince and the People from their Oath to observe the Perpetual Edict; he was by general Consent created Stadtholder, and restored to all those Dignities which his Ancestors had purchas'd with their Blood. The People insisted likewise, that those whom they charged as the Occasion of their Calamities should be turned out of their Posts in the Government; and desir'd their new Stadtholder to interpose his Authority for that End; but he wisely acted

another Part, considering the Danger of the Juncture, and writ Circular Letters to the Cities, declaring it to be his Opinion, that the Deputies of the States, and the Magistrates of their Cities, had perform'd their Duties; and that such disorderly Practices deserv'd to be restrain'd by Corporal Punishments. From this Time the Dutch were inspir'd with new Courage. The small Town of *Ardeburgh* repuls'd 5000 French that attack'd them, and killed a great many of their Officers and Persons of Quality. Those of *Groningen* oblig'd the Bishop of *Munster* to raise their Siege, with the Loss of 10000 Men, after a prodigious Expence he had been at in the Undertaking. A Stop being thus put to the Course of the French King's Victories, the Dutch sent Deputies to *England* to sollicite a Peace with King *Charles II.* They were very grateful to the People, but coldly receiv'd at Court; yet the King gave them Audience, and having heard their Proposals, sent the Duke of *Buckingham*, the Marquis of *Hallifax*, and Mr. *Silvius*, to the French Court then at *Utrecht*. My Lord *Hallifax* and Mr. *Silvius* went directly thither; but the others going to the *Hague*, they had a Conference with the States, and another with the Prince of *Orange* at his Camp; and declar'd to them both, that the King had not enter'd into the Alliance with *France* to reduce them under the French Yoke, but only to humble them; and that *England* being alarm'd at the Progress of the French, was much inclin'd to the Interest of *Holland*: But notwithstanding this, says the Author of *The History of the United Provinces*, when they came to *Utrecht*, and knew the Instructions given by the King to the Lord *Hallifax* and Mr. *Silvius*, they labour'd all they could to renew the Alliance betwixt the two Crowns, while Preparations were making in *England* for a Descent upon *Holland* by our Fleet, which was accordingly attempted, but disappointed by a violent Tempest, which oblig'd our Fleet to return, without being able to put to Sea again that Year. In the mean time the Towns of *Grave* and *Nimeguen* were surrender'd to the French. The King of *France* having made the Duke of *Luxemburg* Governor of *Utrecht*, return'd to *France*, and in his Way was met by the English Ambassadors, who renewed a Treaty

with him for three Years; by which the two Crowns were to communicate to one another whatever Proposals of Peace were made: After which, their Demands were deliver'd to the Dutch Deputies that were sent to attend the French King and our Ambassadors.

The Demands of the French were, 1. That all Placets against French Wine and Manufactures should be recalled. 2. That the Papists should have Freedom of Worship, with publick Churches and Maintenance for their Priests through all the Dominions of the States. 3. That his Majesty should leave the Provinces in their present State, and restore such as he had conquer'd, except as follows. 4. The States should yield to the French King all the Countries, Towns and Places, they possess'd in *Flanders* and *Brabant*, that were yielded him by the King of *Spain*, except the Town of *Sluys* and the Island of *Cadfant*. 5. That they should also quit *Nimeguen*, *Knodsenburg*, *Schenckenschantz*, and that Part of *Guelderland* on the W. Side of the *Rhine*, together with the Island and Town of *Bommel*, the Island and Fort of *Voorn*, the Fort of *St. Andrew*, *Louvestein*, and *Crevecœur*. 6. The City of *Grave*, and the County of *Meurs*, for which the States should make the Prince of *Orange* a Compensation. 7. That the States should quit all their Pretensions to such Places as his Majesty had seiz'd in the Empire, together with the County of *Embsen*, and the Fort of *Liersort*, to the Count of *East-Friesland*. 8. That the French Subjects of all the Places to be yielded to the French King, should have Liberty to pass and repass through all the Domignions of the States by Sea or by Land, and all Rivers and Canals, without having their Goods, Baggage, Ammunition, or Provisions, visited, or paying any Duty. 9. That the States should restore all the Commanderies belonging to the Knights of *Malta* in their Dominions. 10. That they should restore the Count of *Benthem*, his Children to be bred Papists. 11. That they should pay for the Charge of the War 20 Millions. 12. That in Consideration of the Peace which his Majesty was willing to give them, they should Annually, on a certain Day, by an Ambassador sent on purpose, present him with a Gold Medal weighing a Mark, with this Inscription, That they

they owe the Preservation of their Liberty to his Majesty, which he and his Ancestors had in a great measure procur'd to them.

13. That if they did not accept these Proposals in 10 Days, his Majesty would not stand to them; and if they did, they must also give Satisfaction to the King of *Great Britain*, and to the Princes of the Empire, who were the *French King's* Allies. His Majesty likewise further declar'd, That without tying himself to the Terms which he had propos'd to them by way of Alternative, he would content himself with the Conquests he had already made, or should yet make, before they accepted his Proposals; viz. the whole Province and Dutchy of *Guisland* belonging to the said States, the Lordship of *Utrecht*, the County of *Zutphen*, and all the Towns and Forts he had possess'd himself of: And that he might the better secure the Possession of 'em, the States should resign to him the absolute Sovereignty of the Towns of *Maastricht* and *Wyck*, and all that they possess'd on the *Upper Maas*, *Dalen*, *Fauquemont*, the Town and Mayory of *Boisleduc*, with its Dependencies, and the Fort of *Crevuecaur*. And further, That the States should withdraw all their Garrisons in Towns and Places belonging to the Empire.

The Demands made by the King of *Great Britain* were, 1. That the *Dutch* should give him the Honour of the Flag without any Dispute; and that their whole Fleet should strike their Flags, and lower their Topsails, to any one *English* Ship bearing his Majesty's Flag, in any Part of the *English* Sea, as far as the Roads of *Holland*. 2. That the *English* remaining in *Surinam* should be allowed a whole Year to retire whither they pleas'd with their Effects, according to the Treaty of *Breda*. 3. That all his Majesty's Subjects, who had by him been declared Criminals, should for ever be banish'd their Dominions, and likewise all others whom his Majesty should signify to them had publish'd Seditious Books, or conspir'd against the Peace of his Kingdoms. 4. That towards the Charge of the War, they should pay his Majesty a Million of Pounds Sterling at certain Terms. 5. That they should pay him Annually 10000 *l*. Sterling for Liberty to fish for Herring on the *British* and *Irish* Coasts. 6. That the Prince of *Orange* and

his Posterity should from henceforward enjoy the Sovereignty of the United Provinces, except such Parts of 'em as were to be yielded to the two Kings and their Allies; or at least, that the Prince and his Heirs should for ever enjoy the Dignities of General, Admiral, and Stadtholder of the said Provinces. 7. That in three Months Time they should make a Treaty of Commerce. 8. That they should yield to his Majesty the Island of *Walcheren*, the Town and Castle of *Sluys*, the Islands of *Cadfan*, *Garee*, and *Voorne*, as Cautionary Places for the Performances of the Conditions. 9. That they should give full Satisfaction to the most Christian King.

These exorbitant Demands, which we have from the Author of *The Lives of the De Witt*, publish'd in *Holland* in 1677, were rejected both by the Prince and the States, who applied themselves to the Princes of *Germany* for Assistance, and sent them Copies of those Demands, which had the desired Effect. The Elector of *Brandenburg* arm'd first on their Behalf, and the Prince of *Orange* fortify'd the Places that were most expos'd, and changed many of the Magistrates to satisfy the People, who still made Complaints of the *De Witt* and their Faction. They publish'd Libels against the Pensionary, whom they charg'd with mismanaging the Publick Money, and their Military Forces. Upon which he wrote a Letter to the Prince, desiring him to justify his Conduct in both those Respects. To which, says the Author of *The History of the United Provinces*, and the Author of *The Lives of the De Witt*, the Prince answer'd, That he ought to despise those scurrilous Pamphlets, as he himself had been frequently forc'd to do; and for what related to the Publick Money, he referred it to the Council of State, because he himself knew nothing of the Matter. This Answer, says the Author of *The History of the United Provinces*, confirm'd the Suspicion of *John de Witt's* Enemies, tho' he procur'd a Discharge from the Council of State. His Brother *Cornelius de Wit* had the same Misfortune, tho' he was vindicated by *De Ruyter* as to his Behaviour in the Fleet; and not only they, but their Friends were pursu'd by the Hatred of the People, particularly *Peter Gratius*, who with much ado escap'd their

Fury, by retiring out of the Country; but he return'd afterwards, vindicated himself, and died of the Gout, or, as some say, of Poison, according to the last mention'd Author. The Count *de Mombae*, Brother-in-Law to *Cornelius de Wit*, was likewise condemned by a Council of War to lose all his Employments, and to be imprison'd for 15 Years; but making his Escape, he was condemned to lose his Head, and executed in Effigie. He was charged among other Things with not having defended the Pass of the *Rhine* as he ought to have done, when the *French* swam that River. While the Faction of the *De Wits* labour'd under these Misfortunes, a Barber-Surgeon called *Tschalaer* came to the Prince's Camp, and informed the Lord *Zuylenstein*, Natural Uncle to the Prince, that *Cornelius de Wit*, the Burgomaster of *Dart*, and Brother to the Pensionary *Johu de Wit*, had given him Money, and promis'd him a great Reward, to poison or murder the Prince, because, as he said, they could not otherwise preserve their Liberty, the Prince being now made Stadtholder, contrary to the Perpetual Edict, and that they might come to fall under a Foreign Power, by a Match betwixt some Foreign Potentate and a Daughter of the Prince, if he should have any. The Surgeon having given in this Information upon Oath, the Prince communicated the same to the Court of *Holland*, who thereupon committed *De Wit* to Prison; and after having examin'd both Parties, confronted them, and enquir'd into the Matter by Torture and otherwise, the Author of *The Lives of the De Wits* informs us, That considering all Circumstances, with the stedfast Adherence of the Surgeon to his Accusation, and the perplex'd Answers of the Defendant, they condemn'd the latter to lose all his Offices and Employments, banish'd him for ever out of *Holland* and *West-Friesland*, and order'd him to depart as soon as possible, without ever returning, on Pain of severer Punishment, condemn'd him in Costs of Suit, and set his Accuser at Liberty. *De Wit's* Wife and Friends presented several Petitions and Informations to the Court to vindicate the Defendant; insisting upon the well known Services he had done to the State for a great many Years, and that he was but just return'd

home from on board the Fleet, where his very Enemies would bear Witness to his Courage and Conduct. They alledged also the whole Tenor of his Conversation as a sufficient Defence against this Calumny, and referred to the Records of several Courts, where the Surgeon had been condemned for Perjury, and scandalizing several Persons of Note: That he was under Sentence at the same Time for a Rape, for which he was answerable to a Court of the Defendant's Jurisdiction, who was thereby entitl'd to his Forfeiture, for which he ow'd the Defendant a Grudge: That the Defendant never saw him but once, which was soon after his Return from Sea, when the Surgeon, after several Applications, was admitted to his Bed-Chamber, on Pretence of having something of Importance to discover to him, without any body's being by: That Mrs. *De Wit* distrusting the Fellow because of his ill Looks, and because of the universal Clamour that was rais'd against her Husband and his Brother, who had narrowly escap'd being murder'd by Assassins a very little before, she order'd the Chamber-Door to be kept open, and her Son and her Servant to stay in the next Room in view of the Bed upon which her Husband then lay, because of his Indisposition: That they heard all that pass'd betwixt her Husband and the Surgeon: That the latter, after some Discourse about the Calamities of their Country, and the present ill Posture of Affairs, said, He had something to propose to him, if he would keep it secret, and give him Assistance. To which her Husband answer'd, That if what he had to propose was good, he would do what he desir'd; but if otherwise, he might get him gone. To which the Surgeon reply'd, *Since you will not hear me, Sir, I'll be gone.* And so bidding him farewell, was let out of the House by her Servant, after he had stay'd about a quarter of an Hour. That *De Wit* reflecting upon what had pass'd, sent for the Town-Clerk, gave him an Account of what the Fellow had said, and desir'd him, since he was not able to go himself, that he would go to the present Burgomaster, and get a Warrant to take up and examine the Surgeon. A Warrant was accordingly had; but the Witness could not be found till after he had given in his Accu-

Accusation upon Oath, to which he was encourag'd by the Clamours of the People against her Husband. All which Mrs. *De Wit* and her Friends offer'd to prove, as may be seen at large in *The Lives of the De Wits* above-mention'd, together with the Surgeon's Defences. The Substance of which was, That the Courts, who had condemn'd him for the Crimes above-mentioned, had proceeded unjustly against him: That he came to *De Wit* in order to represent his Case to him, and to desire a Redress, which *De Wit* promis'd him, if he would do something he had to propose to him; and that he readily undertook it, provided it were in his Power. Upon this, *De Wit* having taken his Oath to keep the Proposal secret, perswaded him to poison or kill the Prince, for which he laid down several Schemes, promis'd to give him Money, and a considerable Post; and if he lost his Life in the Attempt, to reward his Friends. The Surgeon desir'd a Security under *De Wit*'s Hand, which he refused; but told him, there were 30 more Persons of Note engaged in the Design against the Prince, that would see to the Performance of what he had promis'd him. Upon this, the Surgeon, not daring to refuse for fear of his Life, consented to it, and *De Wit* gave him 6 Ducatoons in Hand, telling him, 'twas all the Money he had about him; and that he would not call for more, for fear of giving Cause of Suspicion. The Surgeon going home, was uneasy in his Mind until he had reveal'd it, as above; and that *De Wit* being sensible of his Danger, in order to prevent it, had sent for the Town-Clerk, as above-mentioned; and that they might easily have taken the Surgeon up if they would, since he was well known in the Town, and appear'd publicly there several Days after, before he made his Discovery.

But however that Matter was, the Surgeon being set at Liberty, and telling about the *Hague*, that *De Wit* was convicted upon his Accusation, the People, especially after *De Wit*'s Sentence was publish'd, began to murmur, and to grow tumultuous; to which they were prompted by the Surgeon, who told them, That if they did not prevent it, *De Wit* would soon be carried out of the Prison: Upon which they took Arms, and went to the Prison. In the

mean time the Pensionary, who had been sent for by his Brother, went to him, contrary to the Advice of his Friends; and as he was bringing him out of Prison, in order to depart according to Sentence, a Woman cry'd out to the Guard of Burgers who stood before the Prison-Door, *What the Devil! Men, there's the Traytors going off; drive them up again, or knock them dead.* Upon which, the Guard order'd them both to go up again, or they would fire upon 'em; and while the Pensionary spoke to them with Authority to forbear, they forc'd 'em both in again, and oblig'd their Coach to ride off, in which 'twas reported their Father sat, in order to have carried them to Dinner. In the mean time the Tumult increas'd, and the Report being spread, that *Cornelius* had escap'd, the People would not be satisfied till two of the Burgomasters and four Burgers went up, and satisfied them to the contrary. The Pensionary prevail'd with the Magistrates to dine with him and his Brother. But in the mean time all the Companies of Burgers came in Arms about the Prison, drew up in good Order, and would suffer no Man to go in for fear of an Uproar. Three Troops of Horse, which then lay in the *Hague*, did also mount: One of 'em went to the usual Place of Rendezvous, and the other two endeavour'd to get into the outer Court of the Prison; but the People kept them off with their Pikes and Muskets, and the arm'd Rabble got up to the Tops of the neighbouring Houses, to see that neither of the *De Wits* should escape; and perceiving that the Officers stay'd long in the Prison, and apprehending them to be murder'd, they began to throw Stones, and to fire their Pieces at the Doors and Windows, till the Officers spoke to them out at the Windows, and told them, All was well. In the mean time a false Report was spread, That the Mob of the neighbouring Villages and Towns had taken Arms, and were coming to plunder the *Hague*. This increas'd the Tumult, and some of the Burgers cry'd out, *We stay here to guard a couple of Rogues, who will certainly be rescued ere next Morning by Force or Craft; and if they escape, the Town will be next Day all in Blood and Confusion, and our Houses plunder'd.* Upon which, many requested that the *De Wits* might be car-

ried to the Town-House, where they would be kept securely without any Trouble. Others cry'd out, *Let us tie them to the Gibbet, and shoot them.* Upon which one of the Mob bid them follow him, and he would be their Leader; and then with their Muskets and Smiths Hammers they broke up the Doors, and came to the Chamber, where they found the Pensionary sitting upon the Foot of the Bed, reading in his Bible, and his Brother laid down in his Night-Gown. The Pensionary ask'd them, What they would have, and why all that Violence? One of 'em answer'd, *You must walk down, for we will have your Lives.* Cornelius rising from his Bed, spoke roughly to the Fellow, and bid him go down; but the Pensionary seeing that no Reason would do, he took his Brother by the Hand to go down Stairs, where he was wounded by a Pike over the Eye: Upon which he held up his Hands and Eyes to Heaven, recommending his Soul to God; and as he went out, was forced by the Mob to the very Place where he had been assassinated two Months before, and barbarously murder'd, covering his Face with his Cloak, says the Author of their Lives, as *Julius Caesar* did; and his last Words were, *Well Men! Well Citizens!* And soon after his Brother had the same Fate. Upon this, the Companies retir'd under their respective Colours in good Order, while the barbarous Mob carried their dead Bodies to the Gallows, where they hung the Pensionary a Foot higher than his Brother, and afterwards mangling their Corps, cut their Clothes in a Thousand Pieces, and sent them about the Country as if they had been Trophies of a Conquest; and, says *The History of the United Provinces*, and the Author of *The Lives of the De Witts*, some of 'em cut out large Pieces of their Flesh, which they broil'd and eat.

Thus fell those two great Men by popular Fury, Cornelius in the 49th, and the Pensionary in the 47th Year of his Age, both equally zealous, says that Author, for the Glory and Liberty of their Native Country, and formerly as much belov'd, as now they were hated by the People, who look'd upon them to be the Causes of all the Calamities with which their Country was at that time overwhelmed. The *Atlas Historique* says, the Cause of their Ruin was the

too great Opposition they made to the Prince's Parry; with which Sir *William Temple* seems to agree in *The Causes of the Fall of this Republick*, where he says, "That the chief Thing which concurr'd to weaken, and indeed to break the Strength of their Land Force, was the Alteration of their State, which happen'd by the Perpetual Edict of *Holland* and *West Friesland* upon the Death of the last Prince of *Orange*, for the Exclusion of the Power of Stadtholder, or at least the Separation of it from the Charge of Captain-General; for after that Time, the main Design and Application of those Provinces had been to work out by degrees all the old Officers both Native and Foreign, who had been formerly sworn to the Prince of *Orange*, and were still thought affectionate to the Interest of that Family, and to fill the Commands of their Army with the Sons or Kinmen of Burgomasters, and other Officers or Deputies in the State, whom they esteem'd sure to their popular Constitution, and good enough for an Age, wherein they saw no Appearance of an Enemy to attack them by Land. But the Humour of Kindness to the young Prince, both in the People and Army, was not to be dissolv'd or dispers'd by any Medicines or Operations either of Rigour or Artifice, but grew up insensibly with the Age of the Prince, ever presaging some Revolution in the State, when he should come to the Years of aspiring and managing the general Affections of the People; being a Prince who join'd to the great Qualities of his Royal Blood, the popular Virtues of his Country; silent and thoughtful; given to hear, and to enquire; of a sound and steady Understanding; much Firmness in what he once resolves, or once denies; great Industry and Application to his Business, little to Pleasures; Piety and Religion of his Country, but with Charity to others; Temperance unusual to his Youth, and to the Climate; frugal in the common Management of his Fortune, and yet magnificent upon Occasion; of great Spirit and Heart, aspiring to the Glory of Military Actions, with strong Ambition to grow great, but rather by the Service, than the Servitude of his Cour-

try.

try. In short, a Prince of many Virtues, without any appearing Mixture of Vice. At the same time the Prince was approaching the 22d Year of his Age, which the States of *Holland*, ever since their Alliance with *England* in 1668, pretended should be the Time of advancing him to the Charge of Captain-General and Admiral of their Forces, tho' without that of Stadtholder; but the nearer they drew to this Period, which was like to make a new Figure in their Government, the more desirous some of their Ministers seem'd either to decline or restrain it. On the other side, the Prince grew confident upon the former Promises of *Holland*, and the concurring Dispositions of the other Six Provinces, to his Advancement; and his Party, spirited by their Hopes, and the great Qualities of this young Prince, now grown ripe for Action, resolv'd to bring this Point to a sudden Decision; against which the other Party prepared, and united all their Defences. — Besides, those Ministers who had still the Direction of Affairs, bent their chief Application to the Strength and Order of their Fleet, rather than of their Army. — Perhaps content that some ill Successes should attend the Prince of *Orange* at his first Entrance upon the Command of their Armies, and thereby contribute to their Designs of restraining his Authority, while they were to leave him the Name of Captain-General. This indeed was not likely to fail, considering the ill Constitution of their old Army, the hasty Levies of their new, and the Height of the Faction now broken out in the State, which left both the Towns and the Troops in Suspence under whose Banners they fought, and by whose Orders they were to be governed, the Prince's or the States. — In this Posture were the Affairs of this Commonwealth when the War broke out, with those fatal Events that must needs attend any Kingdom or State where the Violence of a Foreign Invasion happens to meet with the distracted Estate of a Domestick Sedition. — Their Towns were without Order, their Burgers without Obedience, their Soldiers without Discipline, and all with-

out Heart; and indeed it was the Name of *England* joining in the War against them that chiefly broke their Hearts, and contributed more to the Loss of so many Towns, and so much Country, than the Armies of *Munster* and *France*.

These judicious Reflections of Sir *William*'s are confirmed by the Account given even by the Author of *The Lives of the De Witt*, who, tho' a Friend to that Faction, yet does not dissemble the great Opposition made in the United Provinces to the Exclusion of the Prince from the Dignities of his Ancestors, which was so very ungrateful to the People in general, and so manifestly contrary to their Fundamental Union concluded at *Utrecht*. That those who were for it thought it necessary to vindicate themselves, as not being the first Movers of it, but merely forc'd to it by *Cromwel*, who would listen to a Peace on no other Terms but the Exclusion of the Prince, lest he should some Time or other revenge the Murder of his Grandfather upon him and his Party, as *Van Beverning*, the Dutch Ambassador who negotiated the Treaty in *England*, did afterwards openly declare in the Assembly of the States General.

However that was, the Author of *The History of the United Provinces* says, the Prince of *Orange* was so far from shewing the least Countenance to these barbarous Proceedings, that when the States of *Holland* wrote to him, expressing their Abhorrence of so detestable an Action, he order'd a strict Enquiry to be made after the Authors and Promoters of it; but upon several Petitions by the Burgers of the *Hague*, who excus'd the same by the vast Numbers of those concern'd in it, these Proceedings went no further than summoning the Guilty before the Court of Justice. Soon after this the *Sieur Teckbars*, Head Bailiff of the Mayoralty of *Boisteduc*, and Cousin-German to the *De Witt*, was accused by his own Coachman of the like Conspiracy against the Prince, but acquitted, because the Coachman could not make good his Accusation. We have been the larger on this Particular, because the Dutch were then so much divided in their Opinions about it, as they are still, that both the Factions make it a Handle for bitter Reflections on one another. And as the

one Side was so much enraged against the Memory of the *De Witts*, that after their mangled Corps were buried, they threaten'd to take them up, to burn them, and scatter their Ashes, lest they should afterwards have Monuments erected for them as Martyrs of State, as some had talk'd of doing for *Barneveldt*: The other Party struck Medals in Honour of their Memory; of which the Curious may find an Account in the History of their Lives: And we leave the Reader to make his own Judgment on the whole.

Fagel was chosen Pensionary after the Murder of *De Witt*; and having observ'd the Fate of his Predecessors, because of their violent Opposition to the Family of *Orange*, he steer'd a contrary Course.

Much about this Time the Elector of *Brandenburg* wrote to the States, to whom he recommended the Prince, as inheriting all the Virtues of his Ancestors; and said, He thought himself oblig'd to have assisted him in recovering those Dignities, which they had so dearly purchas'd; but since the States had restor'd him, he doubted not that Heaven would prosper a Resolution so advantageous to the Publick.

After this, the Prince chas'd the *French* advanc'd Guards as far as their Trenches before *Utrecht*, and besieg'd *Naerden*, but without Success, the *French* being directed by some treacherous Peasants how to throw Succours into the Town; but not without Loss, the Prince having defeated 5 of their Regiments, and killed or wounded most of their Officers. Then he marched with 24000 Men to the Country of *Liege*, oblig'd the *French* to retire, and invested *Charleroy*, to bring them to a Battle, which they avoided, and the unseasonable Weather oblig'd the Prince to rise from before *Charleroy*; but he took *Bins*, made the Garrison Prisoners of War, demolished the Fortifications, and put his Army into Winter Quarters. During this Expedition, the Duke of *Luxemburg*, with 40000 Men, attempted to conquer and plunder the Province of *Holland* by the Favour of the Ice; but was prevented by a Thaw, and retir'd with Loss, having narrowly escap'd being drown'd himself. His Men made themselves more odious to the *Dutch* than ever by their Cruelties and Rapes, in some small

Places that had been abandon'd by the *Garrisons*; but the Return of the Prince soon restor'd Things to their former State.

In 1673, the Prince took *Naerden*, *Rhinberg*, and *Bonne*, which oblig'd the *French* to abandon most of their Conquests in the United Provinces. This, with the taking of *Coeworden* by Surprize, and some other Advantages, very much rais'd the Spirits of the *Dutch*; tho' the Elector of *Brandenburg*, for want of being duly assisted by the Empire, was oblig'd to come to a Neutrality with the *French* King, on Condition of having what the *French* had taken in the Dutchy of *Gleve* restored to him. That same Year the *Dutch* under *Van Trump* had another Engagement by Sea against the *English* and *French* commanded by Prince *Robert* near *Dungeness*, in which both pretended to the Victory; the *English* and *French* lost most Ships; the *Dutch* made Rejoicings in *Holland*, and order'd a Day of Thanksgiving for their Advantage. In July after, there was another bloody Engagement betwixt the Fleets at Sea, while the *English* prepared for a new Descent upon *Holland*; but after a sharp Engagement, they both retired without claiming the Victory, and the Descent miscarried. That same Year the *French* King took *Maefricht*, after a vigorous Siege; but his further Progress was stopp'd, by laying the Country about *Bergenopzoom* and *Boisledue* under Water. At the same time the *Dutch* recover'd most of the Places that had been taken from them by the Bishop of *Munster*.

In 1674, the Parliament and People of *England* being dissatisfied at the War with the *Dutch*, and uneasy at the Progress of the *French* in the *Netherlands*, a Treaty for a General Peace was set on foot at *Cologne*, but without Effect, because the Emperor order'd the Prince of *Fursenberg*, a Native of the Empire, but Plenipotentiary for *France*, tho' under Pretence of being so for the Elector of *Cologne*, to be carried off. In Consideration of the Prince of *Orange's* great Services, the States of *Holland* and *West-Friesland*, and the States General, made his Dignities Hereditary to him and his Heirs-Male lawfully begotten; so that he was exalted above any of his Ancestors in the 23d Year of his Age. This Year was also fought the Battle of *Senef*, where the *French* had

had the Advantage at first; but the Prince of *Condé* lost the Honour and Profit of it by his too great Eagerness. Both Sides claim'd the Victory; but the *French* avoided coming to a second Engagement, tho' the Prince of *Orange* did all he could to bring them to it. He gave such Proofs of his Courage and Conduct in this Battle, that the Prince of *Condé* gave him this Testimony, That he shew'd himself equal to the oldest Generals; but that he too frequently expos'd his Person, an Error which his high-wrought Courage would never allow him to reform. After this Battle, the Prince took *Grave*, which put an End to the Campaign.

In 1675, the States, upon Hopes of a Revolt on the Coasts of *Normandy*, set out a Fleet under *De Ruyter* and *Van Trump*; but the Conspiracy was discovered, as 'tis suppos'd by the King of *Great Britain*, says *The History of the United Provinces*, for which the *Chevalier de Raan* was beheaded, and some others executed in *France*; so that the Design miscarried: But *Trump* returning from the Coasts of *France*, defeated the *Swedish* Fleet, and forc'd them to return into their own Harbours, in pursuance of the League the States had made with some Princes of the Empire against the *Swedes*, who had invaded the Elector of *Brandenburg's* Dominions. The same Year the Prince took *Binch*; and the States of the Province of *Guelderland* offer'd him their Sovereignty, which, by the Advice of the other Provinces, he wisely refus'd, there being none of 'em for his accepting it but *Utrecht*; so that he thank'd them for their Proffer, says *The History of the United Provinces*, but told them, he could not comply, because it would prove the Occasion of Jealousy and Mistrust, as if he aim'd at nothing but his own Grandeur. Yet notwithstanding his Modesty, this gave Occasion to the *Louvestein* Faction to say, That he aim'd at the Sovereignty of all the Provinces: Upon which the States General, to prevent the ill Consequences of such Reflections, issued a severe Proclamation, forbidding all Persons, of what Rank or Degree soever, to utter by Word or Writing, that the Prince ever aim'd at any such Thing, or that the proposing of it to him had ever been debated in their Assembly. The Prince being after this taken ill

of the Small-Pox, the *French King* laying hold of the Opportunity, took *Liege*, *Dinant*, *Huy*, and *Limburg*. This Year the great Marshal *Turenne*, who had defeated the *Germans* at *Sinsheim* the Year before, was killed by a Cannon-Bullet as viewing the *German Camp*; and the Duke of *Lorraine* defeated Marshal *Crequi*, and afterwards took him with his Garrison Prisoners of War at *Troves*, whither he had retired after the Battle.

In 1676, the Treaty of *Nimueguen* was set on foot by the Mediation of King *Charles II.* but without Effect; so that the *French King* invaded the *Netherlands* with his Army, and took *Condé* and *Bouchain*. *De Ruyter* being sent to Sea against his Will, because his Fleet was too small, had two Engagements on the Coasts of *Sicily* with the *French*, and lost his Life in the second, wherein both Sides claim'd the Victory; but the *Dutch* were defeated in a third Engagement, and their Army miscarried in the Siege of *Maastricht*, where the Prince of *Orange* was wounded. That same Year he appeas'd some Religious Differences that had risen in *Zealand* upon the Subject of *Cocceianism*.

In 1677, the *French* took *Valenciennes*, *Cambray*, and *Sa. Omers*, and defeated the Prince near *Mont-Cassel*, which made the *Dutch* inclinable to accept the Proposals made by the *French* Plenipotentiaries at *Nimueguen*; but the Prince oppos'd it, as being contrary to their former League with the Princes of the Empire.

This Year the Prince was married to the Duke of *York's* eldest Daughter, the Princess *Mary*, our late Queen of Glorious Memory; which, with the ensuing Alliance betwixt *England* and *Holland*, put the Confederates in Hopes of obtaining an advantageous Peace with *France*; but the unsteady Management of the Court of *England*, and the Slackness of their Preparations to assist their Allies, together with the Clamours of the *Louvestein* Faction in *Holland*, that the Prince's Match would prove fatal to their Liberties, prevail'd with the States to clap up a separate Peace with *France*, contrary to the Mind of the Emperor, the King of *Denmark*, the Elector of *Brandenburg*, and their other Allies. The Prince having oppos'd it with all his Power, did all he could, says the above-mentioned Author, to trans-

verse

verse it, for which the *French* furnish'd him with a very good Opportunity, by continuing the Blockade of *Mons* during the Cessation of Arms. Upon this he attack'd the Duke of *Luxemburg's* Head Quarter at the Abbey of *St. Denis*, from whence he chas'd him with great Slaughter, tho' not without considerable Loss on his own Side. After this the Prince design'd to have relieved *Mons*; but as he was consulting about it, he receiv'd Advice that the Peace was concluded, of which he sent the Duke of *Luxemburg* Word, which put an End to the War at that Time. In this Action the Prince ventur'd so far, that he was in Danger of being kill'd; but was happily rescued by the Lord *Auverquerque*, who shot a *French* Captain just as he was going to discharge a Pistol at him; for which the States made that Lord a very noble Present.

In 1679, the *Dutch* sent Ambassadors to *France* to promote a Peace betwixt that Crown and their Allies, who had not agreed to the Peace of *Nimeguen*; but the *French* King refused to give their Ambassadors the Respect due to those of Crown'd Heads; tho' at last, having proved that this had been allow'd them by *Henry IV.* his Father, and himself, he comply'd: And a Peace betwixt *France* and the *Dutch* Allies was concluded.

In 1680, the Prince of *Orange* had an Interview in *Germany* with the Elector of *Brandenburg*, the Dukes of *Zell* and *Hanover*; after which he came to see his Uncle King *Charles* in *England*. The *French* propos'd a Defensive Alliance with the *Dutch*, who rejected it, and new Differences happen'd betwixt them and *France*, because the *French* King delay'd to settle the Limits betwixt him and the *Spaniards* in the *Netherlands*; and urg'd, that the King of *Spain* should renounce his Title of D. of *Burgundy*, which the *Spaniards* were forc'd to comply with.

In 1681, the *Dutch East-India* Company reduc'd their Tributary the King of *Ternate* in the *East-Indies*, for taking Part with the King of *Bantam*: And the States being alarm'd at the *French* King's seizing *Strasbourg* and *Cassal*, they made an Alliance of Guarantee with the *Swedes*, and propos'd the same to King *Charles*; but the Duke of *York* dissuaded him from it. This Proposal

provok'd the *French* King to threaten the *Dutch*; and he sent an Officer with some Dragoons to take up a *French* Count, that had retir'd to their Dominions; but the *Dutch* took the Officer, condemn'd him to die, and sentenc'd the Dragoons to work 10 Years in their Rasp-House. Yet when the Officer was carried to the Place of Execution, they pardon'd both him and the Dragoons! The Emperor being provok'd with the *French* King's seizing of *Strasbourg*, and his Pretences of reuniting several Places of the Empire by Virtue of the Treaty of *Nimeguen*, he enter'd into the Treaty of Guarantee, and made a League with the Circles of *Franconia* and *Upper Rhine* for Defence of that River. At the same Time the *French* King possess'd himself of the Principality of *Orange*, and dismantled the Town, which was complain'd of by the *English* and *Dutch* Ambassadors: But the *English* Court, instead of being cordial in the Matter, quarrel'd likewise with the *Dutch*, for having supported the young King of *Bantam* against his Father, who was their Enemy, and had resign'd the Crown to his Son, which he afterwards would have reassum'd; but the young King having prevail'd, by the Assistance of the *Dutch*, he order'd the *English*, who had taken Part with his Father, to depart his Dominions, which the Court of *England* charged on the *Dutch* as an Intrigue of theirs; but they excus'd themselves, and alledg'd, they did the *English* there all the good Offices they could, tho' they took Part with the old King against them to ruin their Commerce: However they offer'd an amicable Composition about that Matter.

In 1683, and 1684, the *French* continued their Encroachments on the *Spanish Netherlands*, and took *Luxemburg*. Upon which the Prince and the *Dutch* propos'd to raise an Army to stop their Progress; but the City of *Amsterdam* oppos'd it, which brought on the Peace of *Ratisbon*, where a Truce of 20 Years was concluded; yet the Prince of *Orange* had not his Principality restor'd.

In 1685, *Charles II.* of *Great Britain* died, and was succeeded by his Brother *James II.* Upon which the Duke of *Monmouth*, being oblig'd to retire from the *Spanish Netherlands* at the Solicitation of King *James*, went to *Holland*; as did others who were obnoxious to the Government in *England*. King *James* requir'd

requir'd the States to banish them; which they having agreed to, the Duke of *Monmouth* and the Earl of *Argyle* rais'd a Rebellion in *Great Britain*. Upon this, the States not only sent the 6 *British* Regiments in their Service to help to suppress them, according to Agreement when they were first rais'd, but the Prince of *Orange* offer'd to come in Person with more Troops; the latter of which King *James* refus'd; and notwithstanding this generous Offer, did not in the least interpose in Behalf of the Prince, whose Subjects were barbarously persecuted in *Orange*, and their Ministers sent Prisoners to *France*.

In 1686, King *James* allow'd the *Algerines*, then at War with the *Dutch*, the free Use of his Ports; and 20 of their Frigates in the Channel took above 30 rich *Dutch* Merchant Ships, most of whose Cargo they sold in *England*. This, together with a Memorial from the Marquis de *Albeville*, King *James's* Minister in *Holland*, about the Affair of *Bantam*, and the hindering of his Envoy to carry off Sir *Robert Peyton*, who had retir'd to their Country, gave the *Dutch* sufficient Reason to perceive that King *James* design'd to quarrel with them. The *French* King being likewise offended, because of the kind Reception they gave his persecuted Protestants, a Squadron of his Men of War took a *Dutch* Man of War in the *Streights*; but that Matter was soon compromised.

In 1687, the Marquis de *Albeville* gave in fresh Memorials concerning the Affair of *Bantam*, and the seizing some *English* Officers whom *Skelton* had employ'd to take up Sir *Robert Peyton*: Upon which the *Dutch* deliver'd the Officers, after having proceeded against them judicially, and banish'd them their Provinces; but they refus'd to banish Dr. *Burnet*, now Bishop of *Salisbury*, tho' King *James* requir'd it, the Doctor being naturaliz'd in *Holland*.

In 1688, King *James* having given evident Proofs of his Design to subvert the Protestant Religion, and the Liberties of *Great Britain*, he continued to press the *Dutch* about the Affair of *Bantam*, and demanded they should send home the 6 *British* Regiments in their Service; which the *Dutch* refused, because, according to Agreement, they were not to be sent home, ex-

cept *Britain* was engaged in a War. Besides, the old *British* Regiments there being disbanded in 1665, the new ones had taken an Oath of Fidelity to the States. However, they gave Passports to such Officers as had a Mind to return, which 40 of 'em accepted; but the rest, with the Troops, list'd themselves afresh in the Service of the States. In the mean time King *James's* Queen pretended to be brought to Bed of a Son, tho' there were violent Suspicions of the Truth of her Pregnancy: Besides, neither the Princess of *Orange* nor the Princess of *Denmark*, who were the Persons most immediately concern'd to know the Truth of it, were invited to be present at her Labour: The Archbishop of *Canterbury*, who ought to have been in the Bed-Chamber, by Vertue of his Office, at the same Time, was, with 6 other Bishops, imprison'd in the Tower, for refusing to read King *James's* Declaration for Liberty of Conscience, which he had publish'd with the Advice of his Judges, by Vertue of his Dispensing Power. This heighten'd the Discontents in *Great Britain*, and gave new Cause of Jealousy to the Prince of *Orange* and the States. At the same Time the *French* King prohibited Commerce with the *Dutch* as to Woollen Manufacturies and Herrings; and the Elector of *Cologne* being dead, he threaten'd the *Dutch*, if they interpos'd in the Election of his Successor, who he design'd should be the Prince of *Furstemberg*, that he would oppose them with his Troops, and began to march them accordingly. The *Dutch* perceiving plainly by these Steps, that *England* and *France* design'd a War upon them, they prepar'd for it. The *English* and *French* Courts demanded the Reasons of those Preparations. To which the *Dutch* answer'd, That they did it according to the Example of *England* and *France*. Upon this, the *English* Minister offer'd an Alliance with the *Dutch* against the Infractions of the Treaty of *Nimeguen*, and the late Truce; but the States perceiving that this was only proposed to gain Time; and the Prince having a Memorial sent him from many of the chief Protestants of *Great Britain*, representing the Grounds they had to suspect the Birth of the pretended Prince, by which the *English* Court design'd to defraud his Princess of

her Right of Succession, and to overturn their own Religion and Liberties; the *Dutch* continued their Preparations with Vigour, and lent Part of their Army and Fleet to the Prince, who, pursuant to the Memorial, landed in *England*, where, King *James* being deserted, the Prince and Princess were declared King and Queen of *Great Britain*, and King *James* retired into *France*, having sent his Queen and pretended Son thither before: But we refer the further Account of this Matter to the History of *England*. The *French* King, to divert the Prince and States from this Enterprize, had threaten'd them with Memorials, and declar'd War against the *Dutch*, but without Effect.

In 1689, the *Dutch* sent Ambassadors to congratulate King *William* and Queen *Mary's* Accession to the Throne; and the *French* King, instead of bending his Force against the *Dutch*, invaded *Germany*, and ruin'd the *Palatinate*. The Close of that same Year, the *French* declared War against *Spain*, and invaded the *Netherlands*; but met with a considerable Repulse from Prince *Waldeck*, who commanded the *Dutch* Army at *Walcourt*.

In 1690, the *French* being superior in Number, defeated that Prince at the Battle of *Flerus*; but bought the Victory so dear, that they did nothing more that Campaign. That same Year the *French* engaged our Fleet and a Squadron of *Dutch* off of *Beachy-head*, wherein the Confederates had the worst: But we refer the Particulars to the *English* History.

King *William* having defeated the late King *James* in *Ireland*, and oblig'd him a second time to retire to *France* in 1691, his Majesty went to the *Hague*, where, in a Congress of Princes and Ambassadors, he concerted Measures for carrying on the War against the *French* in the *Netherlands*. An Engagement happen'd near *Leuse* betwixt the *French* and Prince *Waldeck*, where, tho' the *French* were superior in Number, they had equal Loss.

In 1692, the *French* King with 45000 Men, being cover'd by the Duke of *Luxemburg* with 60000, besieg'd and took *Namur*. King *William* march'd to have reliev'd it; but the great Rains so swelled the Rivers, that he could not pass them to effect it.

That same Year, a Plot was form'd by the *French* and the *English* *Jacobites* to have murder'd Queen *Mary*, while the *French* Fleet was to have invaded *England*; but the Plot was discover'd, and prevented by the Vigilance of Mr. *Johnston*, then Lord Secretary for *Scotland*; and the *English* and *Dutch*, under the Conduct of Admiral *Ruffel*, defeated the *French* Fleet near *La Hogue* on the Coast of *Normandy*, where the *French* lost 18 or 20 of their Capital Ships. At the same time a Plot was discover'd to have murder'd King *William* in *Flanders* by *Grandval*, a *French* Officer, and other Assassins; for which *Grandval* was taken and executed at the Head of the Army. Soon after this, the *English* and *Dutch* were defeated at *Stenkirk*, where they were overpower'd by the *French*, tho' the Loss was almost equal on both Sides.

In 1693, the *French* seiz'd and dispers'd most of the *Dutch* *Smirna* Fleet in their Return home. The *French* defeated the *English* and *Dutch* again at the Battle of *Landen*, while a great Part of their Army was detached to force the *French* Lines. The *English* and *Scotts* perform'd Wonders in this Battle; and the Loss of the *French* was so great, that tho' they kept the Field, they made no further Progress this Campaign. In the mean time the *French*, to divide the Confederates, made separate Proposals to the Emperor by the Pope, and to King *William* by the Minister of *Denmark*; but they were rejected.

In 1694, the *English* and *Dutch* made a Descent near *Brest*; but their Design being betray'd, miscarried. They bombarded *Diepe* and *Havre-de-Grace*, and attempted *Dunkirk* and *Calais*, without Success; but Admiral *Ruffel*, with another Part of the *English* and *Dutch* Fleet, sav'd *Barcelona*. King *William* fail'd in seizing *Pont d'Espiere* in *Flanders*, being prevented by the Vigilance of the *Dauphin*, who commanded the *French* Army; but the King took *Dixmuyd* and *Huy*. His Majesty appeas'd some dangerous Differences in Religion, which begun then to appear in *Holland*, and order'd the Publick Establishment, and the Canons of the Synod of *Dort*, to be duly observ'd there, according to the laudable Example of his Predecessors.

In 1695, the Confederates had a great Loss by the Death of Queen *Mary* of glorious Memory; and the *French* lost their great General the D. of *Luxemburg*. King *William*, notwithstanding his just Grief for the Death of that excellent Princess, return'd to *Flanders*, where he took *Namur* in fight of the *French* Army, after a vigorous Defence by *M. Boufflers*, who was arrested by way of Reprisal for the detaining the Garrisons of *Dixmuyd* and *Deynse* by the *French*, contrary to the Capitulation. Prince *Vaudemont* being well nigh surpris'd with Part of the Confederate Army by the *French*, made a noble Retreat. This Year a dangerous Tumult happen'd at *Amsterdam*, which lasted several Days, on Occasion of some Alterations introduc'd in their Way of Burying; but was happily suppress'd by the Magistrates and Train-Bands, and the Ring-leaders put to Death.

In 1696, a new Plot to assassinate King *William* was set on foot by the *French* Court and the *English* *Jacobites*, while the late King *James* marched with an Army to the Coasts of *Normandy*, where he was to have embark'd, upon a Signal that the Murther was effected; but he was disappointed, and the Insurrection of his Friends in *England* prevented by the Discovery of the Plot, and the Seizure and Execution of some of the chief Assassins and Conspirators. The *French* Magazine at *Givet* in *Flanders*, was burnt by the Confederate Bombs, and *Calais* was a second time attack'd in vain by the Confederate Fleet; but they bombarded *St. Martin* and *Olene*. This Year the *French* King found Means to break the Duke of *Savoy* off from the Confederacy. The Earl of *Galway*, then in *Italy*, gave Notice of the Design three Months before-hand; but it could not be prevented: The Duke, among other advantageous Terms, having obtain'd a Match betwixt his eldest Daughter and the Duke of *Burgundy*, eldest Son to the Dauphin. This prevail'd with the *Dutch* to listen to the *French* Proposals of Peace, which, by the Mediation of the K. of *Sweden*, was concluded at *Ryswick* in 1697. The *Dutch* having obtained more advantageous Conditions than they had by the Treaty of *Nimeguen*, and the *French* King having also own'd King *William*: But more of this when we come to *England*. This

Year the *Turks* did also agree to a Treaty of Peace with the Emperor at *Carlowitz*, by the Mediation of the *English* and *Dutch*.

In 1698, King *William* went into *Holland*, and from thence to *Zell*, where he had a Conference with the Duke of that Name about the Affairs of *Germany*. The same Year, a Treaty of Partition of the *Spanish* Monarchy was agreed upon betwixt *England*, *France*, and *Holland*, by which *Spain* and the *West-Indies* were, in case of the King of *Spain's* Death without Issue, to be settled upon the Electoral Prince of *Bavaria*, and *Naples*, *Sicily*, and *Guipuscoa*, with the Places on the Coast of *Tuscany*, were to remain to the Dauphin, and the Duchy of *Milan* to be given to the Archduke *Charles* and his Heirs. The Elector of *Bavaria* was to be Tutor to his own Son during his Minority; and in case of his Death without Issue, the Elector and his other Posterity were to enjoy his Share: But the Electoral Prince dying, another Treaty of Partition was agreed upon in 1699 between *England*, *France*, and *Holland*, by which *Spain* and the *West-Indies* were to be settled upon Archduke *Charles* and his Heirs; and the Dauphin and his Heirs were to have *Naples*, *Sicily*, the Places belonging to *Spain* on the Coasts of *Tuscany*, *Guipuscoa*, &c. The Emperor rejected this Treaty, as being contrary to his Interest; and the *French* King, says the *Atlas Historique*, tho' he was the first that mov'd it, on Pretence of preventing the Wars that must otherwise ensue in *Europe*, charg'd it upon the *English* and *Dutch*, in order to make them hateful to the *Spaniards*, who could not endure to hear of the dismembring of their Monarchy.

In 1700, the *French* improving the Disgust which this Treaty had rais'd in the *Spaniards*, found Means to induce King *Charles II.* of *Spain*, as was pretended, to make a Will, or as others say, they and their Creatures, of whom Cardinal *Portocarrero* was the chief, made it for him; by which, contrary to the Treaty of the *Pyrenees*, and his own Father's Will, &c. the Duke of *Anjou*, second Son to the Dauphin, was declared Heir to the whole *Spanish* Monarchy; and *Charles II.* dying a little after, the *French* King fell in with the Will, and rejected the Treaty of Partition, for which he order'd his Ministers in *England* and *Hol-*

land to acquaint those two Powers with his Reasons; who being very much offended, they prepared to oppose his Pretensions: But the *French King*, by gaining the Electors of *Bavaria* and *Cologne*, was before-hand with them; and the former, tho' he was made Governor of the *Netherlands* in King *Charles II.*'s Time, by the Interest of those two Powers, made it easy for the *French King* to seize *Luxemburg*, *Namur*, *Charleroy*, and other Towns, where the *Dutch*, by *K. Charles II.*'s Consent, had Troops in Garrison for the Security of their own Frontiers, and those of the *Spanish Netherlands*. At the same Time a War broke out in the North betwixt *Sweden* and *Denmark*, on Account of the latter's Pretensions to *Holstein*; but the *English* and *Dutch*, to prevent the dangerous Consequences of it, brought those Princes to a Peace.

In 1701, the *Dutch* were very much alarm'd at the Approach of the Troops of *France*, while so many of their own were detained in the Garrisons of the *Netherlands*; of which the *French King* had made himself Master by the Elector of *Bavaria*'s Treachery: But King *William*, who was their Stadtholder, having come into *Holland*, did, in the Meeting of the States General, make a pathetick Speech, and assur'd them of the Continuance of his Affection for their Republick, and to do his Utmost for their Welfare, as he had always done. This was one of the last Proofs that he gave them of his Affection, for he was then in a bad State of Health. In the mean time the *French King*, by his Minister, propos'd to enter into a particular Conference with the States; but they refus'd to do any thing without King *William*'s Participation. However, because the *French King* pretended to detain their Troops in the *Spanish Netherlands*, because they had not own'd his Grandson as King of *Spain*, they remov'd that Objection by owning him, and recover'd their Troops; but they refus'd to enter into any further Treaty with him, except he would put *Venlo*, *Ruremond*, *Stevensweert*, *Luxemburg*, *Namur*, *Charleroy*, *Mons*, *Dendermonde*, and *St. Donas*, into their Hands as a Security: And *England* demand'd *Ossend* and *Newport*; to which the *French King* return'd no Answer: But the States having recover'd their Troops, were more resolute

than they had been before. The late King *James* dying this Year at *St. Germain*, the *French King*, contrary to the Treaty of *Ryswick*, own'd the pretended Prince of *Wales* as King of *Great Britain* and *Ireland*, which gave new Cause of Offence to the *English* and *Dutch*. The Elector of *Cologne* at the same time received *French* Troops into *Bonne*, *Rhinberg*, *Keyserswaert*, and the Citadel of *Liege*, where the *French* carried off the great Dean. All which did mightily incense the Empire. The Close of this Year, King *William* return'd to *England*, where he call'd a new Parliament, in order to carry on the War against *France*.

In 1702, the Duke of *Anjou* sent his Majesty a Letter by a Gentleman, to notify his Marriage with a Daughter of the Duke of *Savoy*; to which King *William* return'd no Answer, and sent the Messenger away. His Majesty, whose bad State of Health we formerly took Notice of, being eas'd of his Asthma, (with which he had been troubled most part of his Time) by vomiting at Sea when he came from *Holland*, did afterwards go a hunting for his Diversion; but his Horse falling, the Clavicula of his Neck was put out, but set again immediately; so that he found himself in a Condition to dispatch publick Affairs, and seem'd to recover; but dy'd of a Fever the 8th of *March*, to the great Regret of the whole Confederates, and particularly of *Great Britain* and *Holland*, which he had sav'd from Popery and Tyranny. Thus fell that great Man, the last of the House of *Orange*, who, contrary to all Expectation, was rais'd by Heaven to do such mighty Things. The *Atlas* gives him this Character, That he was a Prince of extraordinary Endowments, of a solid and piercing Judgment, of a superior Genius, and invincible Courage. His Patience, Evenness of Temper, and Firmness of Mind, were Proof against all Attacks. He was sober, vigilant, wise in Counsel, valiant in Arms, and so indefatigable, notwithstanding the Weakness of his Constitution, that he continually apply'd himself to publick Affairs. He was always an Enemy to Divisions, study'd the Peace of his Subjects among themselves, was ready to forget Injuries, and as much condemn'd Flattery and vain Glory, as he pursu'd what was solid and true; nor was he ever diverted by

Plea-

Pleasures or Grandeur from the Love that he bore to his Country and his Subjects. This, with what we have formerly quoted from Sir William Temple, may serve to give the World a brief View of that Prince's Character, and makes it appear truly great both in Adversity and Prosperity. Tho' to say he had no Failings, both as a private Man and a Prince, were a mean Piece of Flattery, and to make him more than a Man. By his Will, he left Prince William of Nassau, Hereditary Governor of Friesland, his universal Heir.

After his Death, the States confirmed their Alliance with his Successor Queen Anne, and their other Confederates. The French King, whom he had made to tremble when alive, insulted him in a Memorial presented to the States by his Resident after his Death, wherein he had this Expression, *That being restor'd to themselves, they would now be govern'd by their own Spirit.* To which they reply'd, "That their Republick was always animated by the same Spirit; and that the Counsels of his British Majesty were ever directed to their Welfare, and the Preservation of their Liberty.

Tho' the War betwixt the Confederates and the French King was not then formally declar'd, it was continued in Italy in the Emperor's Name, where Prince Eugene made a surprizing Progress, notwithstanding those Difficulties, which to another would have been unsurmountable. The Elector of Bavaria having return'd to his own Dominions, embroil'd the Empire. Upon which, at the Emperor's Solicitation, the English and Dutch declar'd War against France on one and the same Day. General Coehorn open'd the Campaign in the Netherlands by taking Fort St. Dona, and bombarding Fort Isabella; and Count Tilly advanc'd with his Army to Santen, to cover the Siege of Keyserwaert, which proved one of the most bloody that happen'd during this War; but was at last reduc'd by the Allies. At the same Time the French under the Duke of Burgundy attempted to surprisè Nimeguen, which they had well nigh effected; but were prevented by the Diligence of the Earl of Athlone. The French were also beat off from before Hulst; and the Earl of Marlborough, now Duke, oblig'd the French

to retire on the Maes, and took Fort St. Michael, Stochem, Venlo, Steyvenswaert, Ruremond, and Liege, in a little Time.

In 1703, the English and Dutch miscarried in their Design upon Cadix, but took the Spanish Galleons at Vigo, where they ruin'd Part of the French Fleet. In this Expedition, the Duke of Ormond and the late Sir George Rooke behav'd themselves with great Gallantry. This Year the Allies took Bonne, forc'd the French Lines in the Country of Waes, but could not bring them to a Battle, they were so strongly intrench'd. They endeavour'd to surprisè the Allies at the Battle of Ekeren, which was bravely fought on both Sides, and almost with equal Loss; but tho' the French were superior in Number, the Allies kept the Field, and both Sides claim'd the Victory. The Duke of Marlborough took Huy and Limburg. Gelders and Rhinberg were also surrender'd to the Allies: And this Year the Archduke Charles, being own'd as King of Spain by England and Holland, he visitèd both those Countries in his Way to Spain, whither he was conducted by the Confederate Fleet. The Death of the Earl of Athlone, and of the famous General and Engineer Coehorn, this Year, was a great Loss to the States.

In 1704, the Duke of Marlborough, with Part of the English and Dutch Army, march'd from Flanders to the Danube, and fought the famous Battle of Hochstet; of which we have already given an Account. Several Attempts were made to force the French Lines in Flanders, without Success; but the Dutch took Fort Isabella in Flanders, rais'd Contributions in the Enemy's Country, and forc'd Bruges to pay a considerable Sum to avoid a Bombardment.

In 1705, the States, in Conjunction with the Queen of Great Britain, press'd the Emperor to take more Care of pushing on the War upon the Upper Rhine, and to accommodate the Troubles in Hungary, and not leave the Burden of the War against France upon the English and Dutch, which produc'd large Promises, but faint Performances, from the Court of Vienna in both Respects. The English and Dutch under Sir John Leake defeated Pointi and the French Squadron, who came with fresh Supplies to the French and Spaniards that besieg'd Gibraltar. The French took Huy, while the English and Dutch

by

by the Slowness of the Imperialists, miscarried in their Designs upon the *Moselle*; so that the Duke of *Marlborough* was oblig'd, at the Desire of the States, to return with the Confederate Army to the *Netherlands*, where they retook *Huy*, and forc'd the *French* Lines near *Hillesheim* in *Flanders*, destroy'd almost 24 Squadrons of *Barbarians*, with 3 Regiments of *French*, and took many great and inferior Officers, with about 1400 Men, and several Colours and Standards. Baron *Spar*, with a Detachment of the *Dutch* Army, forc'd the *French* Lines at *Levendegem* near *Bruges*, and took 300 Men, with several Officers. After which the Confederates finish'd the demolishing of the *French* Lines, and took *Soutleuwe* and *Sant-wilut*, whilst the *French* took *Diest*. The Confederates under the Conduct of the Earl of *Peterborough* took *Barcelona*, the Capital of *Catalonia*, wherein the *English* and *Dutch* were particularly serviceable: But we refer the Particulars till we come to the Description of that Country.

In 1706, the *French* attack'd *Barcelona*, where the *English* and *Dutch* Troops made a brave Defence, and their Fleets contributed to the Relief of the Town; but we leave the Particulars to its proper Place. This Year was fought the Battle of *Rammels* in *Flanders*, under the Conduct of the Duke of *Marlborough* and General *Auverquerque*, where the *Dutch* Troops, and particularly the *Scots* in their Service, distinguish'd themselves with extraordinary Gallantry. The Heat of the Action being on the Left, where the *Dutch* were posted, the Duke of *Marlborough*, as he brought up the Horse of the Right to their Assistance, rallied some of the Troops, and gave others Orders to charge, was singled out by some of the Enemy, and being dismounted, was in Danger of being kill'd or taken, had not Major-General *Murray*, the Duke of *Argile*, and others, come seasonably up to his Rescue, and repulsed the Enemy. While the Duke was remounting, Colonel *Brinsfield*, his Gentleman of the Horse, was killed with a Cannon-Bullet. By this time the *French* Horse on the Right being entirely defeated, our Horse broke their Foot, and the Lord *John Hay*, with his Regiment of *Scots* Dragoons, took the *French* King's own Regiment of Foot Prisoners of War, and made them surrender their Colours and

Arms. The Pursuit continued all Night; and General *Auverquerque* following them with his *Dutch* Troops, took above 4000 of 'em, with about 80 Colours and Standards, most of their Artillery, Carriage, Baggage and Arms, with the Kettle-Drums and Standards of the Troops of the *French* King's Household. The *French* were supposed to have lost 8000 Men on the Field of Battle, and had about 6000 taken, among whom were two Major-Generals, two Brigadier-Generals, a Son of the Marshal de *Tallard*, a Nephew of the late Duke of *Luxemburg*, with other Officers of Distinction; and two Princes in their Service were killed. The Allies had 1066 Men killed, and 2577 wounded: The chief of those killed were, Prince *Lewis* of *Hesse-Cassel*, 1 Count, and 8 Colonels. The Deputies of the States, in their Letter to the States General, ascribed the Glory of this Victory, chiefly under God, to the Courage and Conduct of the Duke of *Marlborough* and the Lord *Auverquerque*, who animated the other Generals and Officers of the Army, who all, without Exception of any Nation whatever, attack'd the Enemy with the utmost Bravery and Unanimity. The *French* after this Battle abandon'd *Louvain*, and retir'd over the Canal of *Brussels*, being pursu'd by the Allies: Upon which the City of *Brussels*, the States of *Brabant*, and the Towns of *Mechlen* and *Alost*, submitted to *K. Charles*. *Ghent*, *Bruges*, *Audenard*, and *Antwerp*, follow'd their Example; and the States of *Flanders* own'd *K. Charles*. General *Churchill* was made Governor of *Brussels*, and all the *French* were order'd to depart the City. *K. Charles* was also successful in *Spain*. The Earl of *Galway*, with the *Portuguese* and other Confederates, came to *Madrid*: *Carthage* submitted. The *French* this Year besieg'd *Turin*, where the Duke of *Savoy* commanded in Person, having been oblig'd to send his Mother, his Dutches, and the rest of his Family, to *Genoa*; from whence the two Dutcheses sent a Representation of their Distress to the States General, with a Desire that they would use their utmost Endeavours to contribute to their Relief. The Ministers of *England* and *Holland* endeavour'd an Accommodation betwixt the Emperor and *Hungarian* Malecontents, without Success, which they charged upon the Imperial Generals and Ministers. Prince *Ragotzki* writ after this

this to the Queen of *Great Britain* and the States, thanking them for their Mediation, and gave them an Account, that he was willing to have surrender'd his own Dignity for the Sake of Peace, and desir'd the Continuance of their good Offices to procure it, which hitherto have had no Effect. This Year the *English* and *Dutch* laid Siege to *Offend*, and in a little Time obliged the Garrison to surrender on Terms, which was very extraordinary, considering how strong that Town is both by Art and the Nature of its Situation, and that the *Dutch* formerly held it out above 3 Years against the great *Spanish* General *Spinola*. The Town of *Menin* in *French Flanders* was also surrender'd to the *Dutch*, while the D. of *Marlborough* cover'd the Siege, in which the *French* lost 1300 Men, and the Allies about 517. Soon after the D. of *Savoy* and Prince *Eugene* defeated the *French* before *Turin*, and relieved that City, wherein the *Dutch* Troops behav'd themselves with great Gallantry, as was own'd by both those Princes in their Letters to the States: But we refer the Particulars, and the further Progress of the Imperialists in *Italy*, to its proper Place; as we do the Loss which the *Dutch* Troops under the Prince of *Hesse* sustain'd some Time after at the Battle of *Medoli* in *Italy*. King *Augustus's* Minister presented a Memorial to the States, and desir'd that they and the Queen of *Great Britain* would oblige the K. of *Sweden* to withdraw from *Saxony*, by invading his Dominions on the *Baltick*. *Dendermond* surrender'd on Terms to the D. of *Marlborough*; and the Confederates retook *Salamanca* in *Spain*, wherein the *English* and *Dutch* assisted; and their Fleet at the same time reduc'd *Ivica* and *Majorca* to K. *Charles's* Obedience. After this, General *Auverquerque* took *Aeth*, and made the Garrison Prisoners of War. The Elector of *Bavaria* made Proposals of Peace on the Behalf of *France*; but they were rejected by the Queen and the States.

In 1707, the *Dutch* sent a Squadron to *Portugal*, with Recruits for their Forces; and K. *Augustus* of *Poland* being driven from thence by the K. of *Sweden*, who invaded him in his own Country, and forc'd him by a Treaty to renounce the Crown of *Poland*, desir'd the States to be Guarantees in the Treaty betwixt him and the K. of *Swe-*

den; but the States were cautious in concerning themselves with that Matter. This Year the Allies were defeated at the Battle of *Almanza* in *Spain*, where the *English* and *Dutch* Troops suffered very much. The *Dutch* Envoy in *Portugal*, the Count de *Noyelles*, and other *Dutch* Officers, complain'd in their Letters of the Earl of *Galway's* Conduct in that fatal Battle: But we refer the Particulars to the Description of that Country. The *French* made an Irruption into *Germany*, and forc'd the Lines of *Stolhoffen*, where the *Dutch* Troops under the D. of *Wirtemberg* made a brave and a noble Retreat, tho' overpower'd by the Enemy. The States and the *English* did this Year extend their Charity to the *Vaudais*, who had been forc'd to abandon their own Country, and were reduc'd to great Straits by the *French* Army. This Year the Siege of *Toulon* was form'd, wherein the *English* and *Dutch* bore a great Share: But we refer the Particulars, and how it came to miscarry, to its proper Place. The States publish'd an Order against the negotiating of *French* Mint-Bills in their Country, to prevent the *French* King's drawing out their ready Money for those Bills, which had lost their Credit at home: And at the same Time they forbade the conveying of ready Money or Plate out of their Dominions. The Republick of *Genoa* made Application to the States for continuing a good Correspondence with them, which was agreed to. This Year the States concern'd themselves in the Election of the Bishop of *Paderborn* to be Bishop of *Munster*, and carried it, after some Opposition made by the Imperial Court. They did likewise, in Conjunction with the *English*, and others of the Allies, promote the K. of *Prussia's* Succession to the Principality of *Neuchassel* and the Country of *Vallengin*, in Opposition to the Prince of *Conti* and others, Pretenders set up by the *French* King. They made also several pressing Instances to the Diet of the Empire for carrying on the War with more Vigour on the Part of the *Germans* against *France*. They did the like to the Court of *Pienna*, and join'd with the *English*, in desiring that Prince *Eugene* might be sent to command in *Catalonia*, in order to retrieve the Affairs of *Spain*; but without Effect.

In 1708, they renewed those Instances; and the *English* and *Dutch* Squadron under the Command of Sir *John Leake* and the *Baron de Wassenar* took a *French* Convoy in the *Mediterranean*. This Year *Ghent* and *Bruges* were treacherously surrender'd to the *French*, which brought on the Battle of *Audenard*, where the *French* were defeated, lost above 4000 Men in the Field, and had 8000 taken, with a Lieutenant-General, 4 Major-Generals, 5 Brigadiers, 14 Colonels, 6 Lieutenants, 96 Cornets, 186 Gens-d'Armes, and 47 Quartermasters. The whole of their Officers that were taken amounting to 750. The Confederates lost a Major-General, 2 Colonels, 1 Lieutenant-Colonel, 42 other Officers, and about 1000 Centinels. The Electoral Prince of *Hanover* distinguish'd himself in this Action. The *French* afterwards retir'd to *Ghent*, and the D. of *Marlborough*, Pr. *Eugene*, and General *Suverquerque*, sent a Detachment, who demolished the *French* Lines in *Flanders*, and laid the *French* Country under Contribution as far as *Arras*, and a great way into *Picardy*. The *French* in the mean time posted themselves on the Canal of *Bruges*, took the Fort of *Plassendal* near *Ostend*, and made Incursions into the *Dutch* Territories. At the same time the Allies form'd the Siege of *Lisse*, and the *French* Army march'd to raise it, without Effect. Prince *Eugene* was dangerously wounded in one of the Attacks, and the *French* threw in a Supply of Powder into the Town, which, with the Mistake of one of our Engineers, did very much retard the Siege; and the *French* having stopp'd the Passage of the Confederate Convoys from *Ostend* and other Places, the Allies were reduc'd to Straits. This brought on the Battle of *Wimondal*, where the Confederates, by the admirable Conduct of Major-General *Webb*, with 7000 Men, defeated 24000 *French*, who lost above 4000 Men, and retired in Confusion, which gave an Opportunity to a Confederate Convoy to reach our Army before *Lisse*. The Allies did not lose above 1000 Men in this Expedition, and the Arrival of the Convoy enabled them to prosecute the Siege of *Lisse*, which brought the Marshal de *Boufflers* to a Capitulation. The Loss of the *French* in this Siege was computed to be about 7000, and that of the Allies about 9000. The

French after this took the Post of *Lessingen*, with 150 Men, but lost near 600 in the Action; and they surpris'd the Lord *Stairs* near *Furnes*, with some *Prussian* Squadrons and Battalions, whom, after a sharp Dispute, they obliged to surrender Prisoners of War. After this, the E. of *Bavaria*, with 10000 Men, having form'd a Correspondence in *Brussels*, attack'd that City, and had well nigh carried it; but was bravely repulsed by the Conduct of the Governor Monsieur *Pascal*, Major-General *Murray*, Baron *Wrangel*, and others, who were very much animated by the Presence of the Deputies of the States General. The D. of *Marlborough* and Pr. *Eugene* hearing of the Danger of *Brussels*, march'd to its Relief, and pass'd the *Scheld*, notwithstanding the strong Lines and Intrenchments which the *French* had rais'd to prevent it; but were obliged to abandon them, with the Loss of Part of their Baggage, Bread-Waggons, several Colours, Standards, and Kettle-Drums; and about 1000 Men killed or taken. In the mean time the Siege of the Citadel of *Lisse* was carried on with Vigour, and forc'd by Pr. *Eugene* to capitulate, where they left 90 Brass Cannon, with many of Iron, and 20000 Weight of Powder, but little Provisions. Thus this great and important City, with the Citadel, being reckon'd one of the strongest and most regular Fortifications in *Europe*, fell into the Hands of the Allies. After which the Confederates besieg'd *Ghent*, which they forc'd to surrender in a little Time; and the *French* did hereupon abandon *Bruges*, *Plassendal*, and *Lessingen*, and retir'd into their own Territories, which brought the Campaign to a glorious Conclusion. After this, the Council of State of the United *Netherlands* presented their Petition in the usual Form to the States General, recapitulating the Advantages which it had pleas'd God to give to the Confederate Arms in the *Netherlands*, *Italy*, and the *Mediterranean*; towards which, the *Dutch* Forces by Sea and Land had very much contributed: And in this Petition, they laid before them such Measures as they judg'd necessary for bringing the War to a happy Conclusion by a firm and a lasting Peace. On this Occasion they put the States in Mind of the Treachery of *France* in all their Treaties since that of *Munster*: And

And concluded, That the Memory of this War, and the Animosities conceiv'd by the *French* against the Republick, for having oppos'd their Encroachments, were not immediately to be extinguish'd by a Treaty of Peace, as was plain from their former Conduct, since they founded the War of 1672 on the Measures the States had taken before to prevent their seizing the *Spanish* Provinces in the *Netherlands*, as they have since done, their keeping Possession of the whole Monarchy of *Spain*; besides, the Hatred that the *French* bear to them on the Account of the Protestant Religion, which that Court had design'd to extirpate every where; and therefore 'twas their Opinion, that no other Peace with *France* but a sure one was to be admitted. The *French* during the Winter endeavour'd to bring the *Dutch* and others of the Allies to a separate Peace by large Concessions; but finding it in vain, they obtained Leave to send Deputies to *Holland*, and at last their Minister of State the Marquis de *Torcy*, with further Proposals for a General Peace, in the Beginning of 1709, where the well known Preliminaries, according to the Demands of the Allies, were concluded and sign'd by the Confederate Plenipotentiaries, and those of the *French* King, the 18th of May, 1709: But being afterwards rejected by the *French* King, it occasioned the renewing of the War.

Their GOVERNMENT.

WE have formerly taken Notice, That the Basis of their United Government is the Union of *Utrecht*, whence Sir *William Temple* justly observes, that it cannot properly be call'd a Commonwealth, but rather a Confederacy of 7 Sovereign Provinces for their mutual Defence, without any Dependency upon the other as to their particular Government. Each of the Provinces is likewise compos'd of many little States or Cities, which have several Marks of Sovereign Power within themselves, and are not subject to the Sovereignty of their Provinces, not being concluded in many Things by the Majority, but only by the universal Concurrence of Voices in the Provincial States. For, as

the States General cannot make War or Peace, new Alliances, or levy Money, without the Consent of every Province; the States Provincial cannot conclude any of those Points without Consent of each of the Cities that has a Voice in their Assembly. And tho' in many Civil Causes there's an Appeal from the Courts of the Cities to that of the Province, in Criminal there's none; nor can the Sovereignty of the Province exercise any Judicature, seize upon any Offender, pardon any Offence within the Jurisdiction of the Cities, or execute any common Resolution or Law, but by the Justice and Officers of the City it self: So that each City has a Power of Justice, of levying Money, and of making Peace and War; but the Coining of Money is in the Generality of the Union, by common Agreement; so that the principal Ingredients in the Composition of this State, are the Freedom of the Cities, the Sovereignty of the Provinces, and the Articles of the General Union; to which we may add the Authority and Dignity of their Stadtholder, when they have one.

The States General,

IN whom resides the Sovereign Authority of the United Provinces, assemble at the *Hague*. Each of the Provinces send their Deputies hither, in what Number they please; yet the Deputies of each Province have but one Voice, and the Deputies of the respective Provinces preside by Turns every Week. 'Tis this Assembly which declares War, makes Peace, and gives Audience to Foreign Ministers. The States of *Guelderland* have the first Voice, the States of *Holland* the 2d, *Zealand* the 3d, *Utrecht* the 4th, *Friesland* the 5th, *Overissel* the 6th, and *Groningen* the 7th. Sir *William* observes, That the States General us'd formerly to be assembled on extraordinary Occasions by the Council of State, who call'd them but seldom, because they usually consisted of above 800 Persons, which made the Debates long, and sometimes confus'd, the Resolutions slow, and upon sudden Occasions out of Time. In the Absence of the States General, this Council of State represented their Authority, executed their Resolves,

N n n n

and

and judged of the Necessity of a new Convocation; till after the Earl of *Leicester's* quitting the Government, the Provincial States desir'd of the General that they might, by their constant respective Deputies, continue their Assemblies under the Name of, *The States General*, which were never after assembled but at *Bergenopzoom*, for ratifying with more Solemnity their Truce with *Spain*. The Reason they alleg'd was this, That the Council of State assembled them but seldom, and at Will; and being to execute all in their Absence, they assum'd too much Authority: But their weightiest Reason was, That the *English* Ambassador, who, by Agreement with Queen *Elizabeth*, had a constant Place in their Council of State, should not be present at the first Digestion of their Affairs, which was then usually agreed upon in the Council of State. Since that Time, the States General have constantly sat in the Court at the *Hague*, being indeed but a Representative of the States General, whose Assemblies are now wholly dissolv'd. Neither Stadtholder, Governor, or any Person in Military Charge, has Session in the States General; and as every Province presides in their Week by Turns, the most qualified Person among the Deputies of that Province is chosen for President, and sits in an Arm'd Chair, at the Middle of a long Table, capable of holding about 30 Persons, which is the usual Number of this Council. The *Greffier* or Secretary sits at the lower End. When a Foreign Minister has Audience, he is seated at the Middle of the Table, over against the President, who proposes all Matters, makes the *Greffier* read all Papers, puts the Question, calls the Votes, and forms the Conclusion: Or if he refuses to conclude according to the Plurality, he is obliged to resign his Place to the President of the following Week, who concludes for him. This is the Method in all Affairs, except in Cases of Peace and War, Foreign Alliances, raising or coining of Monies, or of the Privileges of each Province or Member of the Union: In all which, the whole Provinces must concur; for in those Cases, Plurality is not weigh'd. This Council, as *Sir William* observes, tho' they are said to

be Sovereign, only represents the Sovereignty; and therefore, tho' Ambassadors are both received and sent in their Name, yet neither are their own chosen, nor Foreign Ministers answer'd, nor any of the above-mention'd Affairs resolv'd, without consulting first the States of each Province by their respective Deputies, and receiving Orders from them; and in other important Matters, tho' decided by Plurality, they frequently consult with the Council of State. This Method has never been broken, says *Sir William*, since the Foundation of their Republick, except in 1668, when he himself being sent by our *K. Charles II.* to conclude a League of Defence with the States, and another for the Preservation of *Flanders*, then invaded, and much of it conquer'd by *France*, he prevailed with the States General to conclude 3 Treaties in 5 Days, without having Recourse to the Provinces, who must likewise have consulted their several Cities, where the Foreign Ministers who oppos'd those Treaties could not have fail'd to have prevented 'em, since the engaging the Voice of any one City must have outdone it. He owns, that the States General endanger'd their Heads by this Step, had they been disown'd in it by their Provinces; but being unanimous, and knowing it to be the Interest of their Country, they ventur'd it, for which they were applauded by every Province, having thereby changed the Face of the Affairs of *Christendom*, and laid the Foundation of the Triple Alliance, and the Peace of *Aix la Chapelle*, which at that time broke the *French* King's Measures. So great, says he, has the Force of Reason and Interest ever proved in this State, whose Safety and Greatness has been chiefly founded upon the strict Observance of their Constitution; tho' being overpower'd by the supreme Law of Necessity, they dispens'd with it in this Instance. Nor have they, says he, ever us'd any greater Means to unite the Members of their Union in necessary Resolutions, upon the most pressing Occasions, but by sending some of their ablest Members to represent to the dissenting Provinces their Reasons, and the Interest by which they have been induc'd to this or that Resolution.

The Council of State,

IS compos'd of one Deputy from *Guel-*
derland, says the *Atlas Historique*, three
 from *Holland*, two from *Zealand*, one from
Utrecht, two from *Friesland*, one from *Over-*
issel, and one from *Groningen*, which differs
 from what it was in *Sir William's* Time,
 when *Guelderland* and *Utrecht* sent two each,
 and *Friesland* but one. The Reason of which
 is, That upon the Re-admission of the
 Provinces conquer'd by *France* into the U-
 nion in 1674, the States General took one
 of the Votes from the Province of *Guel-*
derland, and gave it to *Groningen*, for the
 noble Defence which that City made against
 the Bishop of *Munster*, says the 4th Volume
 of *Pitt's Atlas*. But since the *Atlas Histo-*
rique makes the Number of this Council
 but 11, some other Alteration must have
 been made since that Time. In 1650, the
 Provinces of *Utrecht*, *Overissel*, and *Gronin-*
gen, pleaded for more Deputies in this
 Council; but 'twas oppos'd by *Holland*,
 which then in a manner govern'd all the
 rest, and was upbraided by those of *Guel-*
derland, as designing to enslave them. The
 Majority of Votes carries it in this Coun-
 cil, and every Deputy presides by Turns.
 In this Council the Governors of the Pro-
 vinces have a decisive, and the Treasurer-
 General only a deliberative Voice; yet he
 has much Credit, because his Place is for
 Life. So is the Person deputed from the
 Nobles of *Holland*, and the Deputies of *Zea-*
land; whereas the rest are but for two,
 three, or 4 Years. This Council of State
 executes the Resolves of the States Gene-
 ral, consults and proposes to them the most
 expedient Ways of raising Troops and Mo-
 ney, and the Proportion of both, superin-
 tend the Troops, Fortifications, Contribu-
 tions rais'd out of the Enemy's Country,
 the Forms and Dispos'd of all Passports, and
 the Affairs, Revenues, and Government, of
 all the Places conquer'd since the Union;
 which being gain'd by the common Arms
 of the State, depend upon the States Gene-
 ral, and not upon any particular Province.
 Towards the End of every Year, this Coun-
 cil forms a State of the Expence they think
 necessary for the ensuing Year, present it

to the States General, and desire them to
 demand so much of the States Provincial,
 to be rais'd according to the usual Propor-
 tions, which are of 100000 Gilders.

This Petition, as 'tis call'd, is made to
 the States General in Name of the Go-
 vernor and Council of State; and every
 Province raises what Money, and by what
 Means, they please, send their Quota to
 the Receiver-General, and convert the rest
 to the present Use, or reserve it for the fu-
 ture Occasions of the Province. The Coun-
 cil of State disposes of all Money design'd
 for extraordinary Affairs, and gives Orders
 for the whole Expence of the State, accord-
 ing to the Resolves of the States General;
 and these Orders must be sign'd by 3 De-
 puties of several Provinces, as well as by
 the Treasurer-General, and registred in the
 Chamber of Accounts, before the Receiver-
 General pays them, which is then done
 without any Charge or Delay.

The Chamber of Accounts,

WAS, according to *Sir William*, erected
 about 90 Years ago, for the Ease of
 the Council of State, to examine and state
 all the Accounts of the several Receivers,
 to controul and register the Orders of the
 N n n n n 2 Coun-

Council of State, which disposes of the Finances; and this Chamber is composed of two Deputies from each Province, who are changed every three Years.

The Council of the Admiralty,

IS subdivided into 5 Colleges, of which 3 are in *Holland*, viz. one at *Amsterdam*, one at *Rotterdam*, and one at *Horn*. The 4th is at *Middleburg* in *Zeeland*, and the 5th at *Harlingen* in *Friesland*. Each of these Colleges is composed of 7 Deputies, 4 of that Province where the College resides, and 3 nam'd by the other Provinces. The Admiral, or in his Absence the Vice-Admiral, has Session in all these Colleges, and presides when he is present. As soon as the Number and Force of the Fleets design'd for any Expedition is agreed by the States General, and given out by the Council of State to the Admiralty, each particular College furnishes their Proportion, which is as well known as that of the Money each Province is to raise. In all which, the Admiral has no other Share or Advantage besides his Salary, and Proportion of Prizes. The Captains and Superior Officers of each Squadron are chosen by the several Colleges, who appoint the Number of Men for every Ship. After this, each Captain uses his best Diligence to get his Number of as good Men as he can, and has the Care of Victualling his Ship for the Time appointed by the Admiralty at so much *per Head*. He likewise takes Care of Medicines; and, according to the Discharge of his Trust, he grows in Credit or otherwise with the Seamen, and according to their Report with the Admiralties, upon whose Esteem the Fortune of all Sea-Officers depends. This occasions an Emulation among the Captains who shall treat their Seamen best, instead of filling their own Purses by starving their Men, or giving them bad Diet. This Council of the Admiralty has Cognizance of all Crimes committed at Sea, judge Pirates, and all Frauds or Neglects in paying or collecting the Customs, which are appropriated to the Admiralty; and if not sufficient in Time of War, is otherwise supplied by the States: But in Time of Peace, when they are at

little other Expence, except for Convoys, the Overplus is applied to the building of Men of War, and laying up Naval Stores. So much for their Government in general. For the particular Government of their Provinces and Cities, we shall instance in that of the Province of *Holland*, and City of *Amsterdam*.

The Government of the Province of Holland.

THE Sovereignty of this Province is represented by Deputies of the Nobles and Towns, consisting of 19 Votes, of which the Nobles have only the first, and the Cities 18, according to the Number of those call'd *Stemms*, the other Cities and Towns having no Voice. These Cities were originally but 6, viz. *Dort*, *Haerlem*, *Delft*, *Leyden*, *Amsterdam*, and *Tergou*; but Prince *William* of *Nassau* added 12 more, viz. *Rotterdam*, *Gorcum*, *Schiedam*, *Schouwen*, *Brille*, *Alcmaer*, *Horn*, *Enchusen*, *Edam*, *Monnickendam*, *Medenblick*, and *Purmeren*. The latter of which, being a very small Town, has an equal Voice in the Provincial States with *Amsterdam*, which pays almost half the Charge of the whole Province; as the Province of *Overissel* has an equal Voice in the States General with *Holland*, which bears more than half the Charge of the Union. This is ascrib'd to the Policy of Prince *William I.* to lessen the Power of the Nobles, and ballance that of the greater Cities by the Voices of the smaller, which were more easy to be gain'd. The *Atlas Historique* leaves out *Tergou* among the Towns that send Deputies; and instead of it, places *Gouda*. The Nobles, tho' few in this Province, send 8 or 9 to the Provincial States; and when one dies, chuse another to succeed; and tho' they have all but one Voice, yet they are very considerable in the Government, being possess'd of the best Charges, Civil and Military, and having the Direction of all the Ecclesiastical Revenue that was seiz'd by the State upon the Change of Religion. They likewise send Deputies to all the Councils both of the Generality and Province, and have the Nomination of one Counsellor in the two great Courts of Justice. They have the

first

first Vote in the Assembly of the States, which gives them a great Weight in the Business under Consultation. The Pensioner of *Holland* sits with them, delivers their Vote, and assists at their Deliberations before they come to the Assembly; and tho' he be but Servant to the Province, and sits behind all their Deputies, yet he has always great Credit, because he is seldom chang'd; tho' they have a Power to chuse another, or continue him every 5th Year. He has Place in all the Assemblies of the Province, proposes all Affairs, gathers their Votes, forms their Resolves, and pretends to have Power not to conclude any important Affair by Plurality of Voices, if he think in his Conscience that he ought not to do it, or that it will be prejudicial to the Province. He is likewise one of their constant Deputies in the States General.

The Deputies of the Cities are chosen out of the Magistrates and Senate of each Town, in what Number they please. They have altogether but one Voice, are maintain'd at the Charge of the Cities; and one of their Burgomasters, with the Pensionary, are usually of the Number. The States of *Holland* meet in the Court at the *Hague* in *February, June, September, and November*, every Year. In the former Sessions, they fill up vacant Charges, renew the Farms of the Taxes, consult about the common Affairs of the Province, and determine particular Differences that may happen betwixt Towns. In *November*, they meet about their Quota agreed upon by the States General for the Support of the Union the following Year. On extraordinary Occasions, they are assembled by a Council called the *Gecommitteerde Raden*, or Commission Counsellors, who are properly a Council of State for the Province, composed of one Deputy from the Nobles, one from each of the 8 chief Towns, and one from 3 of the smaller Towns; each of which chuse a Deputy by Turns. This Council sits constantly at the *Hague*, proposes Matters to the Provincial States at their extraordinary Assemblies, and execute their Resolves. In these Assemblies they must all be unanimous; but aiming all at the common Good, they generally agree in what, after reasoning, appears to be their common Interest. When they come to a Resolve, they send some of their

Number to their respective Towns, with their Conclusions and Reasons, and desire Orders about it, which is generally granted: But if the Matter be intricate, and requires Delay, they adjourn till such Time as the Deputies can go to their respective Cities, and obtain their Consent.

The Province has likewise a Chamber of Accounts, who manage their Revenues, and have the absolute Disposál of the ancient Demesne of *Holland*, without accounting to the States; only upon a Necessity of Money, the States call upon them for a Subsidy of 2 or 300000 Crowns, or more, as they have occasion, or conceive the Chamber to be grown rich, beyond what is proportion'd to the general Design of increasing the Ease and Fortunes of the Persons that compose it, who are such as have grown aged in their Service, and passed through most of the Employments of State with Reputation: This being provided for them as an honourable and profitable Retreat.

The Provinces of *Holland* and *Zealand*, as they had one Governor before their Revolt from *Spain*, have one common Judicature exercis'd by two Courts of Justice; each of them common to both the Provinces. The first consists of 9 Counsellors from *Holland*, and 3 from *Zealand*, in which the Governor, by the old Constitution, us'd to preside, and to name all the Counsellors except one, who is chosen by the Nobles. There lies no Appeal from them in Criminal Causes; but in Civil there does, to the other Court called the *High Council*; from which there is no Appeal, but by Petition to the States of the Province for a Revision. When the States think there's Reason for it, they grant Letters Patents, in which they name some Syndics out of the Towns, who being added to the Counsellors of the two former Courts, judge the Cause in the last Resort.

The Government of the Province of Guelderland,

Agrees in general with that of *Holland*; but differs in this, that 'tis divided into the 3 Quarters of the *Betuwe*, the County of *Zutphen*, and the *Veluwe*; each of which

which have their States, composed of the Nobility, and of the Deputies of the Towns, in their several Jurisdictions; and the Provincial States are composed of the Nobility and Deputies of Towns of those 3 Quarters. All the Nobles that have certain Fees or Lordships in the Province, have a Voice in the Provincial States, of which they compose one half, and the Deputies of the Towns the other; and tho' some from among them are deputed to the States General, all the Nobles of *Guelder* may have Place there, if they will attend at their own Charge. The Towns that send Deputies to the Provincial States are, *Nimeguen, Tiel, Bommel, Zutphen, Doesburg, Doetekom, Loekum, Grol, Arnheim, Harderwick, Hattem, and Dreburg.*

The Government of the Province of Zealand.

THE Nobility here being extinguish'd in the *Spanish Wars*, the Prince of *Orange* possessing the Marquisates of *Flushing* and *Terneer*, is the only Nobleman of the Province, and has by himself or his Deputy the first Place and Vote in the Provincial States, the Council of State, and Chamber of Accounts; and as Sovereign of *Flushing* and *Terneer*, he creates the Magistrates there, and consequently disposes the Voices not only of the Nobles, but also of 2 Towns; whereas there are but 6 in all that send Deputies to the States, and make up the Sovereignty of the Province; the other 4 being *Middleburg, Zierikzee, Goes, and Tholen.*

The Government of the Province of Utrecht.

BESIDES the Deputies of the Nobles and Towns, 8 Delegates of the Clergy have Session, and make a 3d Member in the States of this Province. These 8 are chosen out of the 4 great Chapters of the Town; the Revenues of which, since the Bishoprick was seculariz'd, are possess'd by Gentlemen of the Province. The Towns that send Deputies are, *Utrecht, Amersford, Rhenen, Wyck Te Duurstede, Montford, and IJsselstein.*

The Government of the Province of Friesland,

Differs from the rest, and is composed of 4 Members, viz. the Quarter of *Ostergo*, consisting of 11 Bailiwicks; of *Westergo*, which has 9; of *Sevenwolden*, that has 10; and of the Towns of the Province, which are 11. These 4 Members send each their Deputies to the Provincial States, viz. two from every Bailiwick, and two from every Town, who represent the Sovereignty of the Province, and conclude all Affairs of what Importance soever, without either Recourse to those who deputed them, or being obliged to know their Intentions, which the Deputies of the other Provinces are strictly obliged to, as we have heard already. They differ likewise in this, that whereas in the other Provinces, the Nobles and the Towns chuse the Deputies which compose the States. Here 'tis quite otherwise; for every Bailiwick, which is composed of a certain Extent of Country, and Number of Villages, from 10 to 20, is govern'd by a *Greetsman*, or Bailiff, with a certain Number of Assessors, who with him determine all Civil Causes in the first Instance, but with Appeal to the Provincial Court of Justice. When the States are to be assembled, the Bailiff calls together all those who possess a certain Quantity of Land within his District; and these Men chuse, by Plurality of Voices, the Deputies which each Bailiwick sends to the Assembly. This Assembly of the States disposes of all vacant Employments, chuse the 9 Deputies which make a constant Council of State for the Province, and likewise 12 Counsellors, viz. 3 from every Quarter, who compose the Court of Justice for the Province, and judge of all Civil Causes in the last Resort, but of all Criminal from the first Instance; there being no other Criminal Court in the Province. The Towns that send Deputies to the States are, *Leenwaerden, Dockum, Franeker, Bolswert, Sneek, IJlst, Harlingen, Ostergo, Westergo, and Sevenwolden*; which are but 10 according to the *Atlas Historique*, though Sir William make them 11.

The Government of the Province
of Overissel.

ALL Gentlemen possess'd of Seigniorial Lands or Lordships, have a Seat in the Provincial States; and the Towns of *Deventer*, *Zwol*, and *Kampen*, send their Deputies.

The Government of the Province
of Groningen.

AS this Province lies on the same Tract of Land, they chuse their Deputies from the Country in the same Manner; and the Towns of *Groningen* and *Omlands* send their Deputies.

Sir *William* observes, That these 3 Provinces last mentioned, with the Countries betwixt the *Wefer*, the *Issel*, and the *Rhine*, were the Seat of the ancient *Frisons*, who under the Name of *Saxons*, because their Swords were made like a Sythe, and by them called *Seaxes*, conquer'd *England*. He says, the Bishop of *Munster*, whose Territories lie in this Tract of Land, gave him the first certain Evidences that this was the Seat of our *Saxon* Ancestors; in which he was confirmed by many Things he observ'd in the History of those Times, and by the great Affinity that he found betwixt the old *English*, and the ancient Language of the *Frisons*, whose Tongue to this Day has many Words of the same Signification and Sound with ours, and differs much from that of the *Hollanders*. He likewise observ'd many Things in their Constitution which looks like the Origine of ours, particularly their Bailiffs or *Greetmen* resemble our Sheriffs; their Assessors, our Justices; their Provincial Courts, our Quarter-Sessions; their 4 several Quarters, our Circuits; and the Composition of their States, our House of Commons. To this Original he likewise ascribes, that we never find in *England* upon Record any Lord or Lordship that pretends to the Exercise of High or Low Justice, which seems to be a Badge of some ancient Sovereignty, tho' they be frequent among our Neighbours both in Monarchies and popular States.

The Government of their Cities.

FOR a Specimen of that, we shall, according to Promise, give an Account of the Government of *Amsterdam*. The Sovereign Authority of this City lies in their Senate of 36 Men, who administer Justice according to their ancient Forms, in the Names of Officers and Places of Judicature. They levy Money in what Proportions they please, according to Occasion. The Senators are for Life, and were anciently chosen by the Votes of all the Free-men; but to avoid Tumults, because of their Number, about 140 Years ago the Burgers agreed, that they should be chosen by the Senate for the Time being; and when any of 'em dies, the rest chuse a new one, which makes their Government a sort of Oligarchy; and their Example was in a short Time followed by the other Towns of the Province, but with different Numbers, according to their Extent. The Senate chuses the Deputies which are sent from the City to the States of *Holland*, and the Burgomasters and Elchevins of the Town. The Burgomasters are 4, 3 of which are chosen Annually, and one of 'em continues two Years, and presides the first 3 Months of the 2d: After which the other three, call'd the Governing Burgomasters, preside by Turns. They are chosen by the Majority of those in the Senate, who have been Burgomasters or Elchevins. They resemble our Lord Mayor and Aldermen, represent the Dignity of the Government, do the Honour of the City on all Occasions, dispose of the vacant Offices that fall in their Time, and pay the Money out of the Treasury for the Occasions of the City, as they judge necessary. They keep the Key of the Bank of *Amsterdam*, and have the Inspection of it, which is never open'd except one of 'em be present. They likewise inspect the Stadthouse, Fortifications, and publick Buildings. This Office is of the greatest Trust, Authority, and Dignity, but not of any great Profit, their Salary being but 500 Guilders a Year each; only it paves the Way to other Employments in the City that are more gainful; and tho' they have Officers at their Disposal, worth 5000 Guilders

per Annum, they never take any Money for them, because that would ruin their Credit, and prevent their being chosen to other Places of Profit; but they may bestow Vacancies upon their Friends or Relations if they be capable. They are obliged to no extraordinary Expence in their Habits, Attendants, or Tables; but on all publick Occasions, are waited on by Men in publick Salary from the Town; and the Charge of whatever Feasts they make for Princes and Foreign Ministers, &c. is defrayed out of the publick Treasury, and proportion'd to their own Discretion. At other Times, they appear with all the Plainness and Modesty of private Citizens; and when their Time expires, they are of course disposed into other beneficial Employments of the Town, except they have lost their Credit by Mismanagement. There are 9 Eschevins, of which 7 are chosen Annually, and 2 of the preceding Year continue. A double Number is nam'd by the Senate, out of which the Burgomasters now chuse whom they think fit, as the Prince of Orange did in the former Constitution. They are Sovereign Judges in all Criminal Causes; but in Civil, there lies an Appeal from them to the Court of the Province, if it exceed a certain Sum; yet they pronounce Sentence of Death upon no Man without first advising with the Burgomasters, tho' they are not obliged to follow their Opinion; but this is reckon'd a necessary Precaution for the Lives of their Subjects, which are soon cut off, but never to be retrieved. Under these Sovereign Magistrates are the Treasurers, who receive and pay all the publick Money; the *Scout*, who takes Care of the Peace, seizes Criminals, and sees Justice executed; so that he resembles our Sheriffs; the Pensioner, who is a Civilian, vers'd in the Customs, Records, and Privileges of the City; concerning which, he informs the Magistrates, vindicates the Privileges of the City, is Servant to the Senate and Burgomasters, delivers their Messages, makes their Harangues on publick Occasions, and resembles our Recorder.

The Revenues of this City rise from the constant Excise upon all sorts of Commodities bought and sold within their Precinct, from the Rents of Houses or Lands that belong in common to the City; from cer-

tain Taxes upon every House for charitable Uses; Repairs and Ornaments of their Publick Buildings and Fortifications; from extraordinary Levies agreed to by the Senate for their Quota of the publick Charge laid on by the States of the Province, or by the Deputies of the States General, for the Support of the Union: And all these Payments are made into the common Stock of the City; so that their whole Revenue may be more easily calculated. Some compute it at 50000 Gilders *per Day*; and Sir *Wm. Temple* says, he has heard it affirm'd, that *Amsterdam* pays above 1600000 *l. Sterling per Annum* for the Use of the City, the Province and the Union. The Author of *The History of the United Provinces* says, in 1650, the Excise of Beer, Fleth, and Corn, carried to the Mill at *Amsterdam*, was lett at 1600000 Gilders, without reckoning the Excise of Wine, Turf, &c. the Taxes upon Houses, and the Income of Weights, for which there are 3 noble Buildings in different Parts of this City; one of which, before the *Stadthouse*, brings in above 100000 Gilders *per Annum*.

The Power of the Stadtholder.

THO' this Office be now extinguish'd by the Death of *K. William* in all the other Provinces but *Friesland*, we shall give this brief Account of it from Sir *Wm. Temple*: He had the Command of all Land and Sea Forces as Captain-General and Admiral, with a Disposition of all Military Commands, the Power of pardoning the Penalty of Crimes, the chusing of Magistrates upon the Nomination of the Towns; for they presented three to him, out of which he chose one; nor did the States use to resolve any important Matter without his Advice. Besides, as the States General represented the Sovereignty, the Prince represented the Dignity of the State by the publick Guards, and the Attendance of all Military Officers, by the Application of all Foreign Ministers, and all Pretenders at home, by the Splendour of his Court, and the Magnificence of his Expence, supported not only by the Pensions and Rights of his several Charges and Commands, but by a mighty Patrimonial Revenue in Lands, Sovereign

Prin-

Principalities, and Lordships in *France, Germany, Burgundy*, and several Parts of the 17 Provinces; so as Prince *Henry* was us'd to answer some that would have flatter'd him into the Designs of a more arbitrary Power, that he had as much as any wise Prince would desire in that State, since he wanted none besides that of punishing Men, and raising Money; whereas he had rather the Envy of the first should lie upon the Forms of the Government; and he knew the other could never be supported without the Consent of the People, to that Degree which was necessary for the Defence of so small a State against such mighty Neighbours. The Greatness of this State, says Sir *William*, seems much to consist in these Orders, how confus'd soever, and of different Pieces they may seem, but more in two main Effects of them, viz. the good Choice of the Officers of chief Trust in the Cities, Provinces, and State, and the great Simplicity and Modesty in the common Port, or Way of Living of their Chief Ministers; without which, the Absoluteness of the Senate in each Town, and the Immenity of the Taxes throughout the whole State, would never be endur'd by the People with any Patience, being both of 'em greater than in many of these Governments, which are esteem'd most arbitrary among their Neighbours; but in the Assemblies, and Debates of their Senates, every Man's Abilities are discover'd as their Dispositions are in the Conduct of their Lives and Domestick Affairs. The Observation of which either raises or suppresses the Credit of particular Men, both among the People, and the Senates of the Towns, who, to maintain their Authority with less popular Envy, give much to the general Opinion of the People in the Choice of their Magistrates.

To this Sir *William* adds, That the Salaries of all the great Officers of this State are very small, that of their Vice-Admiral not being above 500 *l. per Annum*, and that of the Pensioner of *Holland* not above 200. Thus, says he, this stomachful People, who could not endure the least Exercise of arbitrary Power or Impositions, or the Sight of any Foreign Troops under the *Spanish* Government, have been since inur'd to all of 'em in the highest Degree under their own

popular Magistrates, bridled with hard Laws, terrify'd with severe Executions, environ'd with Foreign Troops, and burthen'd with the greatest Hardship, and Variety of Taxes, that was ever known under any Government; but all this, whilst the Way to Offices and Authority lies through those Qualities, which acquire the general Esteem of the People; whilst no Man is exempted from the Course of the Law; whilst the Guard of the Inland and Trading Towns is left to the Burgers themselves; whilst no great Riches are seen to enter by publick Payments into private Purses, either to raise Families, or to feed the Prodigality of Luxurious Men: And while all publick Monies are applied to the Safety, Greatness, or Honour of the State, and the Magistrates bear an equal Share in all the Burthens they impose, the People bear it patiently.

Of their People, and Dispositions.

The *Acinus* and other Roman Writers reckon'd the ancient *Batavis* or *Hollanders* to be the bravest of the *Germans*, and the most steady Defenders of their Liberties, for which the *Romans* exempted them from Tribute, and demanded only Auxiliary Troops from them. Their Warlike Temper seems to have continued from that Time to the full Recovery of their Liberty from the *Spaniards*: Since which, if it has admitted of any Declension, it must be ascrib'd to their general Application to Trade, and their Employment of Foreign Troops; but such of 'em as are train'd to War, have even since that Time prov'd, that they still retain the Bravery of their Ancestors; and for their Love to Liberty, 'tis as prevalent as ever. Sir *Wm. Temple* divides them into 5 Classes, viz. the Boors, who cultivate the Lands; the Mariners and Watermen, who supply their Ships and Inland Boats; the Merchants or Traders, who fill their Towns; the Renteneers, or those that live in their chief Cities upon their Rents or other Estates; and the Gentlemen and Officers of their Armies. The first, he says, are diligent, but dull, not to be dealt with by hard Words, but easily manag'd by fair Treatment, and will yield to plain

O o o o o

Reason.

Reason, if allow'd Time to understand it. In the Country, not too near the great Towns, they are plain and honest, content with their own, and not covetous, feed most upon Herbs, Roots, and Milks, which he thinks to be the Cause why their Strength and Vigour falls short of their Bulk. Their Mariners, he says, are plain, but rough, surly, and ill-manner'd, which he ascribes to the Element they live on; to their Food, which is generally Fish and Corn; and partly to their Conversation. Their Valour, he says, is rather passive than active, which perhaps is a little strain'd; for we have felt to our Cost, that they can give Blows as well as take them. Their Merchants and Tradesmen living in great Towns, he says, are more mercurial, tho' not very inventive; but so good at Imitation, that many times they exceed the Original. They are Men of Industry and Application, are apt to take Advantage of the Ignorance of those they deal with, and are great Exacters, where the Law is in their own Hand; but when they deal with Men of equal Understanding, and are under the Reach of Justice, they are the plainest and best Dealers in the World: But this he thinks proceeds more from Custom than Conscience. Those, he says, in great Cities, who live on their Patrimonies, are better bred, but like the others in Garb and Parsimony. They breed their Youth generally at Schools and Universities, but chiefly to the Study of the Civil Law, which has not the Force of Law among them, but is pleaded before their Courts, and complied with, where they have no Laws of their own to the contrary, as far as the Authority of Men esteem'd wise passes for Reason. After they have finish'd their Studies, they travel for some Years, chiefly into *England* and *France*, not much to *Italy*, and less to *Spain*, and seldom to the *North*, unless in the Train of their Publick Ministers. The chief End of their Breeding, is to fit them for the Service of their Country in the Magistracy and Government; and from these, he says, proceed most of their Civil Officers, being descended of Families who frequently have been Magistrates of their native Towns for many Years, and some for several Ages; and of such were the Chief of their Ministers and Councils when he

was there, and not Mechanicks, as is commonly said among Foreigners; not but that many Merchants and Traders are frequently Magistrates, and deputed to their States: Nor do their States think it below them to apply their Stocks in carrying on some beneficial Trade by Servants, in Manufactures and otherwise; but the Generality of their States and Magistrates are of the other Sort, whose Estates consist in their Salaries, Rents of Lands, Interest of Money upon the Cantores, in Actions of the *East-India* Company, or in Shares upon the Adventures of great Merchants. Nor do those Families who are almost constantly in the Magistracy rise that Way to excessive Riches, but content themselves with the Honour and Esteem they acquire by being useful to the Publick, and a frugal Way of Living. The mighty Growth and Excess of Riches is among their Merchants and Traders, who apply themselves that Way, and are the better content with having little Share in the Government, since they are secure in what they possess. Yet when they attain to great Wealth, they frequently marry their Children into the Families of Magistrates, and by that Means pave their Way to Honour, which does not here lie in Titles, but in publick Employments.

Their Nobles are mostly employed in the Military and Civil Officers of the Provinces or State, differ from the rest in their Way of Living; and having been bred much abroad, affect rather the Garb of neighbouring Courts, than the popular Air of their own Country; value themselves more upon their Nobility, than in other Countries where 'tis more common; and think it dishonourable to match below their own Rank, even tho' they could better their Fortunes by it; and much imitate the *French* in their Mien and Way of Living, tho' they copy them but sordidly, and would do better to improve the Customs and Virtues proper to their own Country; tho' otherwise, Sir *William* says, they are an honest, good-natur'd, Gentlemanly sort of Men, and generally acquit themselves with Honour in the Service of their Country. Their Military Officers, and the Sons of the rich Merchants, imitate the Gentry, and the latter affect Employments, rather in the Army than in the State; and are desirous to see a Court

Court in their Country, that they may value themselves at home upon the Customs they have learn'd abroad. These, he says, are the general Dispositions of the *Dutch*; and among all the several Ranks, there's a great Frugality, it being reckon'd as dishonourable here that a Man should spend his whole Income, as 'tis to be vicious and profligate in other Parts. This enables them to bear their heavy Taxes with the more Ease: And they pay as willingly to the making of Canals, Bridges, Cawleys, pleasant Walks and Groves, near their great Cities, and to the Beauty, Conveniency, and sometimes Magnificence, of their publick Works, in which they take as much Delight, and are as proud of them, as People in other Countries are of their private Possessions. What they have to spare beyond what is necessary for their private Maintenance, and the publick Imposts, they lay out in the Ornament and Furniture of their Houses. Thus, he says, their publick Works, as Cawleys, Canals, &c. are always finished in the appointed Time; and the Way they made from the *Hague* to *Skeweling* was a Work becoming the old *Romans*, considering how quickly 'twas dispatched.

Their Charity, he says, is National, which appears by their Care to set their Poor at work, and to provide for such as are not able in well endow'd Hospitals. He gives a particular Instance of this in one at *Enckhuysen* for aged Seamen, where, he says, he met with the only rich Man that ever he saw in his Life; for when he offer'd him a Crown for having shew'd him the Hospital, and the adjoining Church, and giving him a pleasant Account of his Adventures by Sea, the Man refus'd it, and told Sir *William*, That he had no need of Money, being plentifully supplied with all Necessaries in the Hospital. He adds, That in general all Passions and Appetites seem to run lower here than in other Countries, Avarice excepted; and this they chiefly feed by Industry and Parsimony, which makes it scarce a Crime. They seldom quartel, except in Drink; and both Sexes are generally chaste, being little given to Amours. The Dulness of their Air disposes them to strange Assiduity, and Patience in every thing they undertake, which he thinks to be the main Reason of the great Progress they

have made in Arts and Trade, and of the Fatigue they are able to endure in Arms. He thinks the same Quality in their Air inclines them to eating and drinking, in which they are charged with Excess; but they think it necessary for Health, considering their thick and foggy Climate, the Coldness of their Complexion, and constant Application to Business; but he seldom knew any of their Chief Ministers or Officers guilty of drinking much; and if at any time they exceeded, it was rather in Complaisance to their Company at publick Entertainments, than from Inclination; and their Merchants and Traders think it scarce lawful to drink, till after they have done their Business at the Exchange; but in the Evening, apply themselves to their Diversions.

For the Cruelty so frequently laid to their Charge, because of what they barbarously did to some of our Men in the *East-Indies*, and the Murther of their Pensionary *De Wit* and his Brother. Sir *William* says, the latter at least deserv'd a better Return from his Country, after 18 Years spent in their Service, gives him a very great Character, and says, that whenever he was blinded, 'twas by the Passion he had for what he esteem'd the Interest of his Country: But this Action, he says, is rather to be attributed to the Misfortunes they were then under, than to any Customs or Dispositions he could observe among them; but he must confess, that Mankind is a various Creature, and not to be known, except he be seen in his Rage as well as in his Drink. They are generally not so long liv'd as in better Airs, and begin to decay early at *Amsterdam*: Yet at the *Hague*, he has known People a good deal above 70 in perfect Health and Sense; but this is not so usual in that Country, as in *England* and elsewhere. The Diseases of their Climate are the Gout and Scurvy; and in hot and dry Summers, they have infectious Fevers, especially at *Amsterdam* and *Leyden*, by which they either die suddenly, or languish long before they recover; but Plagues are not frequent, or at least they suppress the Talk of 'em. Strangers, he says, are apt to complain of the Spleen among them, but the Natives seldom or never. In short, he says, *Holland* is a Country where the Earth is better than the Air, and

Profit more in Request than Honour; where there's more Sense than Wit; more good Nature than good Humour; and more Wealth than Pleasure; where a Man would chuse rather to travel, than to live; may find more Things to observe, than to desire; and more Persons to esteem, than to love.

Their Ancient Religion.

THE *Atlas Historique* says, while they were Heathens, they worship'd the following Idols, viz. 1. The *Sun*, from which they derive their *Sunday*, and represented it holding a burning Wheel upon a Pedestal. 2. The *Moon*, from whom they derive their *Monday*, and represented her as a Woman with large Ears, holding a Moon in her Hand, and standing on a Pedestal. She was particularly worship'd by Travellers and Fishermen. 3. *Twisco*, from whom they derive their *Tuesday*. He was the most esteem'd, represented like an old Man in a loose Robe, holding a Scepter in his Hand, and standing on a Pedestal. 4. *Woden*, from whom they derive their *Wednesday*. He was their God of War, and was represented standing on a Pedestal, with a drawn Scimeter in his Right Hand, a Buckler in his Left, a sort of a Crown on his Head, and a Coat of Mail girded about him. 5. *Thor*, from whom they derive their *Thursday*. He was represented like an old Man on a Throne, with a Crown on his Head, a Scepter in his Right Hand, and Robes on his Body. They suppos'd him to preside over Wind, Rain, and Thunder. 6. *Friga*, from whom they derive their *Friday*. They represented this Idol in Form of a Woman with a Helmet on her Head, a *Cornucopia* in her Right Hand, a Bow on her Left Arm, and worship'd her as the Goddess of Peace, Plenty, and Love, with Groves, Fruit-Trees, and Corn-Fields, about her, and a Person worshipping before her. 7. *Seater*, from whom they derive their *Saturday*. They represented him as an old Man in a close Habit, standing on a Pedestal, with a Pail full of Fruit in his Right, and holding up a Wheel in his Left Hand. 8. *Ermenesaut*, the *Saxon* Idol formerly mentioned, whom they represented in Armour, with a Crown

on his Head, a Spear in his Right Hand, and a Buckler in his Left; and him they worship'd after their Return from their Victories.

The same Author says, That their Conversion to Christianity is ascrib'd to *St. Willembroeck*, an *English* Bishop, and 8 of his Companions, who about the Year 700 went from *England*, and preached to them.

Their Present Religion.

WE have formerly told how Popery was laid aside, and the Reformation establish'd; upon which they agreed on a Confession of Faith, consisting of 37 Articles, call'd, *The Belgick Confession*, in which their Church continued unanimous for a considerable Time, both as to Doctrine and Government, the latter being Presbytery, for which they declar'd in the 30th, 31st, and 32d Articles of their Confession. But there happen'd Divisions among them afterwards, of which we shall give a brief Account from the Preface to the Acts of the Synod of *Dort*, directed to all the Reform'd Churches, approv'd by that Synod, and publish'd, together with their Acts, by the Authority of the States General at *Dort* in 1620. This we judged the more necessary, because those Divisions were fomented by that Faction of the State call'd *Barnetwelts*, or the *Lowestein* Faction, who made it a Handle to cover their Designs against the Family of *Orange*, in order to lessen their Power, which they alledged was dangerous to the Republick.

The first that attack'd their Doctrine were 3 Popish Priests, who deceitfully pretended to embrace the Reformation, and were admitted as Ministers, tho' still Papists in Heart; but they were quickly suppress'd by the Care of the Church and State. The next who occasioned their fatal Divisions was *Jacobus Arminius*, in their Language call'd *Van Hermine*, one of the Ministers of *Amsterdam*, a Man of a good, but luxuriant Genius, and fond of Novelty. He attack'd the Doctrine and the Reputation of the chief Reformers, first privately, but at last publicly, by spreading the *Pelagian* Errors; for which, being rebuk'd by the Church, he forbore for some Time in pub-

publick, but still did it in private, and at last challeng'd *Franciscus Junius*, Professor of Divinity at *Leyden*, to a publick Dispute on that Head. *Junius* dying in 1602, *Arminius*, contrary to the Mind of the Presbytery of *Amsterdam*, was by a Faction of the State and Church called to succeed him after a Conference with *Gomarus* before the Curators of the University, and the Deputies of the Synod, in which he renounc'd the *Pelagian* Errors, approv'd what *St. Austin* had writ against them, with their Condemnation by the Fathers, and upon this was admitted. In order to remove all Suspicion at first, he defended the establish'd Doctrine in the publick Disputations against his own Opinion, as was ingenuously confess'd in Print by *Corvinus*, one of his Followers: But in a Year or two after he publickly maintain'd the contrary, by the Arguments of the Jesuits and Socinians, which he gave out in Manuscript, and his Opinions were spread by such as he taught in the University. Upon this, the Synod sent Deputies to confer with him, with Orders to report to them what pass'd in the Conference; but he declin'd it. In 1605, he was admonish'd by the Magistrates of the City, and some of the University, to come to a friendly Conference with the Presbytery of *Leyden*; which he also declin'd. Upon this, the Synod of *South-Holland* laid the Matter before the Curators, and enjoin'd the Ministers in their District to subscribe the receiv'd Confession and Catechism, and desired the Curators to command the Professors of *Leyden* to do the like; but they refus'd, on Pretence of referring the Matter to a National Synod, which was to meet in a little Time. The *Arminians* being by this Means embolden'd to preach publickly against the receiv'd Doctrine, and to condemn the Synod, the Deputies of the Church applied to the States in 1606 for a National Synod, which had been delay'd for many Years. This was agreed to in Appearance, on Condition of inserting a Clause in the Letters for calling it, that the Confession and Catechism should be revised. The Church said, there was no need of that Clause, since every Man had Liberty to propose his Objections in the Synod, and therefore desir'd it might be called in the usual Form: But the States of *Holland* insisting

upon it, the Clause was added, and Letters were given to the several Churches of the Provinces, to signify the Consent of the States for calling a National Synod. The Church rejoyc'd at this, tho' they were offended at the Clause, because, as it happen'd afterwards, they apprehended the *Arminians* would take this as a Licence to publish their Doctrine. In the mean time, the Synod of *South-Holland* order'd such of their Ministers as had any Objections against the Confession and Catechism, to lay them before their Presbyteries, that they might be referred to the National Synod; and they order'd the Professors of Divinity to do the like: But the *Arminians* declin'd both, pretending they were not ready; and *Arminius* did the same, on Pretence that he would fully explain himself at the National Synod. In 1607, the States General called together Divines from the several Provinces, to consult with them about the Time, Place, and Manner of holding this Synod; but *Arminius* and his Followers, who were called to this Meeting, would neither agree to be determin'd by the Synod, nor to exhibit their Opinions. This occasion'd the National Synod to be put off, which further embolden'd the *Arminians*. Upon this, the Church press'd for a Provincial Synod of *South* and *North Holland*, where *Arminianism* obtain'd most, to take Cognizance of the Matter; but the States put it off, on Pretence that they wanted Time, being then about treating with the *Spaniards*. *Arminius*, to avoid the Determination of the Synod, petition'd that he and his Adversaries might be heard by the Sovereign Council. The Church oppos'd this, as being contrary to their Constitution to bring Church Controversies in the first Instance before the Civil Magistrate, to whom in case of Necessity they were to be referred by the Synod; but 'twas carried against them by the States, who told them, The Sovereign Council would refer the Judgment of it to the Provincial Synod. When the Divines on both Sides came before the Sovereign Council in 1608, *Arminius* insisted, that his Adversaries should exhibit his Charge, and that he might act the Part of a Defendant. *Gomarus* oppos'd it, as a Thing not proper for Churchmen to accuse one another in the first Instance before the

Civill

Civil Magistrate; but declared, he was ready to prove before a lawful Synod, that *Arminius* had taught what was contrary to the Confession of Faith and Catechism; and that for the Satisfaction of the States, he thought it more proper that both of 'em should give a plain Declaration of their Doctrine before the Court, who would thereby be informed of the Matter of Fact, which was all they were to take Cognizance of; since the States had promis'd, that the Judgment of the Matter should be referred to the Synod. *Arminius* refus'd this, and boasted, that tho' he had been charged with Heterodox Doctrine, his Adversaries durst not accuse him. Upon this, *Gomarus* prov'd to the Court, by *Arminius's* own Writings, that in the Point of Justification, he had taught what was contrary to the Confession. *Arminius* being thus convicted, had Recourse to another Subterfuge, and propos'd, that both of 'em should deliver their Opinion by Way of *Theses*, with their mutual Animadversions, which *Gomarus* agreed to. The Conference being ended, the Sovereign Council reported to the States, that the Difference betwixt 'em was of no great Moment, and related chiefly to Subtilties about Predestination. *Gomarus* shew'd the contrary, and said, which afterwards came to pass, that the Differences betwixt them were so many, and of such Importance, that he was afraid they would in a little Time set one Church, Province and City, against another. The States order'd however, that what pass'd at this Conference should be sealed up, and communicated to no body till the Meeting of a National Synod. The Church perceiving that this was done in Favour of *Arminius*, lest his Opinion should appear under his own Hand, they petition'd that a Provincial or National Synod should be called as soon as possible to determine the Matter; but instead of that, the *Arminians* prevailed to have the Provincial Synod put off, contrary to Custom, till *October* following. In the mean time the Church order'd the *Arminians* to give in their Objections to their respective Presbyteries in time, that they might be laid before the Synod, which they refus'd, and the Provincial Synod was put off for two Months longer; but they had Allowance to meet in their particular

Synods. Upon this, the Synod of *South-Holland* order'd the *Arminians* in their District, and the Professors of *Leyden*, to exhibit their Objections in a Month's Time, on Pain of Church Censure. To avoid this, the *Arminians* prevail'd with the States to order those Objections to be sent to themselves, seal'd up, until the Provincial Synod should meet. *Arminius* being press'd to Obedience by the Deputies of the Church, he promis'd to give them an Answer: But in the mean time, in a General Assembly of the States, he made a large Speech, wherein he inveigh'd against the establish'd Doctrine, and endeavour'd to make it odious to the States. To which *Gomarus* gave a full and a solid Answer; and shew'd, that his Objections were the same made use of by the Jesuits and Socinians, and other Enemies of the Reformed Churches; and that his chief Design in appealing to the Civil Magistrate in the first Instance, was to pour Contempt upon the Church, before whom he knew he was not able to defend his Opinions; and therefore he labour'd all that he could to hinder the calling of a Synod. In 1609, the Deputies of the Church press'd *Arminius* to deliver them his Objections, according to his Promise; which he refused, on Pretence, that as the States had order'd the rest of the *Arminian* Preachers to deliver their Objections to them, he expected the like Order. By these Delays, the *Arminians* gain'd Ground. *Bertrius*, Regent of the Divinity College at *Leyden*, did openly maintain their Doctrine; and *Adolphus Venator*, one of the Ministers of *Alcmaer*, and several others, did avowedly preach Pelagianism and Socinianism, for which they were suspended by the Church; and in *Venator's* Censure, there was Notice taken of his lewd Life: But the *Arminians*, by Means of *Barneveldt*, *Grotius*, and others, procur'd an Order to have those Ministers restor'd, with which the Church declar'd they could not in Conscience comply, and petition'd the States for a Provincial Council, according to their Promise. *Arminius* and his Followers finding the States inclin'd to it, in order to divert them, propos'd another Conference before the States by a certain Number of Divines on both Sides, which was obtain'd. The Church desir'd that it might be manag'd in Writing,

ting, to prevent such Misrepresentations as had formerly happen'd; but the States order'd it should be *viva voce*, and afterwards writ, and laid before the Provincial Synod. They likewise appointed that *Venator*, tho' depos'd for his Lewdness, as well as his Errors, should be one of the Conference; but 'twas soon broke off, because of *Arminius's* bad Health. The States order'd that both Sides should write what had pass'd, in order to be laid before the Provincial Synod, which was perform'd on the Part of the Church, who press'd for a Synod; and in the mean time *Arminius* died without performing what he had promis'd. The *Arminians* growing more bold by the Delay of the Synod from Time to Time, and being absolutely against one, they endeavour'd to persuade the States not to suffer one to be call'd, according to the Constitution, but to name such Persons to compose the Synod, as they themselves thought fit, and to deprive the Church of her Freedom of Election; alledging, that they design'd to set up an Ecclesiastical Jurisdiction, independant of the State. Having by this Means procur'd the Synods to be further delay'd, the *Arminians* met privately, without Authority either from Church or State, drew up their Remonstrance against the establish'd Doctrine, from whence they were called *Remonstrants*; and having subscrib'd and deliver'd it to the States, they separated from the other Ministers, and made an open Schism; but prevail'd with the States not to give out any Copy of their Remonstrance. At the same time, contrary to the Mind of the Church, and of the Chief Magistrates of the Cities of *Holland*, they procur'd *Vorstius*, who was Professor of Divinity at *Steinfurt* in *Westphalia*, to be called to succeed *Arminius* as Professor of Divinity at *Leyden*, tho' he was then accused by the University of *Heydelberg* of being a Socinian, and publishing a Book concerning GOD, and the Divine Attributes, wherein he asserted, That GOD was Finite, Corporeal, compos'd of Essence and Accidents; That his Will was mutable; That he was liable to Passive Power, and other Monstrous Doctrines. In the mean time another Conference was appointed betwixt the *Calvinists* and *Remonstrants* before the States, to be manag'd by Writing; when the *Calvinists* ha-

ving then got a Copy of the Remonstrance, prov'd that the *Arminians* had slander'd the Doctrine of the Reform'd Churches, and conceal'd their own Opinions. During this Conference, *Vorstius* came to the *Hague*, and endeavour'd to vindicate himself to the States. The Ministers charg'd him with the Book and Principles above-mention'd, and with having lately publish'd and interpolated *Socinus's* Book concerning the Authority of the Holy Scriptures. After a Conference upon this Subject, the States asked the Ministers on both Sides, Whether he was fit to be Professor of Divinity? The *Arminians* answer'd, They had examin'd his Writings, and could find nothing in them inconsistent with Piety or Truth. The *Calvinists* maintain'd the contrary, and said, His Answers were so far from being satisfactory, that they confirmed their Suspicion of him, and humbly requested that he might not be admitted. *Vorstius* withdrawing, the Conference upon the 5 Articles was resum'd; which being continued for some Days, the States order'd both Sides to put in Writing what they had said, or had further to say, and send it to them. That in the mean time neither of them should boast of Victory; That they should be moderate in their Doctrine about the Articles, live in Peace and Charity with one another; and that the said Articles should remain as they were before; but they determin'd nothing as to *Vorstius*. Upon this, the Magistrates of *Dort* petition'd the States that he might not be call'd; in Compliance with which, they put a Stop to it. K. James I. of Great Britain having read *Vorstius's* Book concerning the Divine Attributes, and marked his principal Errors with his own Hand, he admonish'd the States, by his Minister Sir Ralph Winwood, not to admit a Man to be Professor of Divinity who was guilty of such Blasphemies and Errors. But the Matter being delay'd, and *Vorstius* endeavouring to vindicate himself by Apologies and Answers, K. James insisted on his Demand; of which *Johnstoun*, in his *Lat. Hist. of Brit. Affairs*, Printed at *Amsterdam* in 1655, gives us this fuller Account; That the King sent *Vorstius's* Book, with his own Remarks upon it, to Sir Ralph, with a Letter to the States, who had then admitted *Vorstius*, wherein he re-
pre-

presented the Scandal they had given to the Reform'd Churches, and the Danger that would arise from it to the Protestant Religion, in which the Church of England and that of the Netherlands had hitherto agreed. The States answer'd, That *Vorsius* was famous for his Learning, had writ well against *Bellarmin*; and upon hearing him and his Accusers, they found no Cause to reject him, he having recanted his Errors. The King not being satisfied with this Answer, order'd his Book to be burnt in St. Paul's Church-yard; writ again to the States, quoted the blasphemous Passages in *Vorsius's* Book; and told them, he was so far from truly recanting his Errors, that he had maintain'd them in his Apology, and deserv'd to be burnt as well as his Book. His Majesty added, That he wonder'd how they could suffer his Apology to be publish'd in Dutch, and read by all their Subjects; That he had hop'd the Mischief occasioned by *Arminius* and his Followers to their Church and State would have made them more cautious; and told them, That one of their Leyden Divines had the Impudence to send a Book to the Archbishop of Canterbury, with a Letter, in both which he maintain'd the Apostacy of the Saints, and asserted, That this was not contrary to the Doctrine of the Church of England. The King insist'd, That they should banish *Vorsius*, who was by his own Books convicted of Atheism and Blasphemy, tho' he endeavour'd to deny it by Equivocations, to avoid the Punishment he deserv'd; and advis'd them to chuse another Professor, who was free from Scandal. This Letter was dated the 7th of October, 1611. and sent with Instructions to Sir *Ralph*, wherein the King took Notice, That he found *Vorsius* had Patrons among the States, and order'd him to insist on his being banish'd; and if he were not, to enter a Protestation in his Name against him. Sir *Ralph* obey'd his Orders, deliver'd them the King's Letter, with his Remarks on *Vorsius's* Books and Apology; wherein, besides what's above-mentioned, he asserted, That GOD was not Infinite nor Omnipresent. Sir *Ralph* added, That 56 of the Leyden Students had petition'd against *Vorsius's* Admission; That he was condemn'd of many Errors by the Divines of *Basse* and *Heydelberg*, and convicted by his own Books;

and therefore insist'd on his Banishment. The States desired Sir *Ralph* to have Patience till they confer'd about it, and answer'd him to this Effect, That the Curators of the University had, at their Request, discharged him from being Professor, but allow'd him to live at Leyden as a private Citizen, till the Matter should be determined in the Meeting of the States in February next. Sir *Ralph* being dissatisfied with this Answer, enter'd the King's Protest to this Effect, That their calling of *Vorsius*, who was convicted of Blasphemy and Heresy, was dishonourable to his Majesty, who had oppos'd it, and a Scandal to all the Reform'd Churches: That instead of complying with his Majesty's Request, they obstinately deny'd it: That their Answers were ambiguous and confus'd: That they had given *Vorsius* Liberty to do that in private, which they were asham'd he should do in publick; therefore he protested against it, as an Injury and Reproach to the Reform'd Churches, and contrary to their League with the King, which was founded on their Communion in Religion; adding, That his Majesty could not but express his Repentments, that *Vorsius* was of more Account with them than their League with Great Britain: That he would publish the King's Protestation in Latin, that the World might see how much his Majesty abhor'd *Vorsius*, and all the Abettors of his Blasphemy and impious Heresies; and that he would not spare the Blood of his Subjects, his Children, or himself, in Defence of the Purity of the Reform'd Religion: The States answer'd very respectfully, That tho' his Majesty was partly disappointed at present as to *Vorsius*, they doubted not but the States would fully satisfy him at their next Meeting; which having not done, says *Johnstoun*, but putting it off from Time to Time; his Majesty publish'd a Book in Latin, Entitl'd, *Protestatio Anti-vorsiana*, wherein he prov'd *Vorsius's* impious Opinions to be contrary to the Laws of GOD, Man, and Nature, and shew'd himself to be very well vers'd in Controversial Divinity.

In the mean time, says the Preface to the Synod of *Dort*, some of *Vorsius's* Disciples in the University of *Franker* publish'd a Book of *Fausius Socinus* about the Duty of Man, wherein they advis'd all such as would be

be saved to leave the Communion of the Reform'd Churches, and to join with the *Photinians* and *Ebionites*; and this they recommended by a Preface. The States of *Friesland* intercepted also some of their Letters, by which it appeared what Tricks they made use of to promote Socinianism with Privacy and Safety; in which Design, *Vorstius*, *Utenbogardus*, and others, who appeared for the *Arminians*, were engaged. Upon this, the States of *Friesland* order'd all those Books to be burnt, banish'd the Students, and wrote to the States of *Holland* against *Vorstius*; urging, that the Union of the Provinces, which was principally founded upon their Agreement in Religion, might not be broke for such a Heretick. The States of *Zutphen* and *Guelderland* wrote to the same Purpose; upon which *Vorstius* was order'd to remove to *Gouda*, where he might vindicate himself by Writing. Then the States order'd the Ministers to draw up the State of the Controversy about the 5 Articles, and to give their Advice how the Differences might be reconciled. The *Arminians* insisted on a mutual Toleration, and the *Calvinists* urged to have the Doctrine on both Sides examin'd by the Word of GOD in a National Synod. The States were divided about it; but being informed, that they differ'd in other Things besides the 5 Articles, they order'd that no Innovation should be made in the receiv'd Doctrine.

After this, the *Arminians* stir'd up several Magistrates, by Slanders and Calumnies, to throw the *Calvinists* out of the Churches, and put *Arminians* in their stead; who being forc'd upon the People in many Places, they left those Preachers, and communicated with the *Calvinists*. The first Violence of this Sort was done at *Alemaer* in *Holland*, where *Venator* made the *Arminians* take Arms, throw out the *Calvinist* Magistrates and Ministers, and put *Arminians* in their Place. The like was done at *Rotterdam*, and *Episcopius* was forcibly impos'd on the Church of *Bleiswick*; tho' he was so scandalous, that the Presbytery of *Amsterdam*, where he had been a Minister, refus'd to give him a Certificate of the Goodness of his Life and Doctrine. The *Arminians* rais'd a severe Prosecution in the Province of *Holland* against such as separated from them in 1612; and they did the like in

Guelderland, *Utrecht*, and *Overissel*, where they threw out the *Calvinists*, and set up a new sort of Church Government, which was approved by the States of *Utrecht*, who gave a publick Toleration to the *Remonstrants*; and in *Guelderland*, the *Arminians* hinder'd the Meeting of the Synod. *Episcopius* was, by the Interest of the *Arminians*, call'd to succeed *Vorstius* as Professor of Divinity at *Leiden*. The *Calvinists*, to obviate those Mischiefs, sent two Deputies from every Province to petition the States for a National Synod, according to Promise; but *Utenbogardus*, by his Interest with the Pensionary of *Holland*, prevented it. Upon this, the *Arminians* grew more insolent every Day, and fill'd the Country with Tumults. Count *William Lodewick* of *Nassau*, Governor of *Friesland*, propos'd another Conference, in order to an Accommodation. The *Calvinists* agreed to it, on Condition that the *Arminians* would declare their Agreement with the establish'd Doctrine in every Thing else but the 5 Articles, which should be referred to a National Synod. *Utenbogardus* promis'd a Compliance on the Part of the *Remonstrants*, and a Conference was appointed in Febr. 1613. But by the Fraud of the *Arminians*, it came to nothing; for they would not submit to the Decision of the Synod, nor forbear to innovate the establish'd Doctrine, tho' the States General had forbid them to do it.

About this Time, *Grotius* went over to *England* with a wrong State of the Controversy; and by the Means of the Archbishop of *Canterbury* and *Causabon*, (says *The History of the United Provinces*) who had brought *K. James* to a more favourable Opinion of the *Arminians*, he obtain'd his Majesty's Consent for a Toleration to them. This (says the Preface to the Synod of *Dort*) being surreptitiously procured, and his Majesty prevail'd on to write to the States about it, according to a Copy given him by *Grotius*, made the *Arminians* more insolent than ever; so that they drew up a Form of Toleration in 1614, which was pretended to be agreed to by the States, tho' oppos'd by many of 'em. However they publish'd it, and set up a new Way of calling Ministers in 1615 by 4 Magistrates and 4 Preachers, in order to bring the *Arminians* into the Churches; and order'd this Method to be

observ'd through all the Provinces, which gave Occasion to many new Tumults. Upon this, the Churches sent Deputies to complain of it to the States; but when they came to the *Hague*, they were advised to forbear, till it was further urg'd upon them, since that Decree had not been confirm'd by all the States, and therefore could not have the Force of a Law. In the mean time the *Remonstrants* prevail'd with some of the States to throw out such Ministers in their Jurisdiction as would not comply with it. Upon which, the ejected *Calvinists* set up separate Churches, which were countenanc'd and frequented by the Pr. of *Orange*, the Governor of *Friesland*, and the Chief of the States. *Grotius* went to *Amsterdam* in 1616, to try if, with his Cunning and Eloquence, he could prevail with the Magistrates there to set up the new Form of Church Government, and establish the Toleration; which they refus'd, and pleaded for a National Synod, in which they were seconded by the other chief Cities of *Holland*. The *Arminians* finding themselves grown odious by those Innovations and Tumults, they publish'd a second Remonstrance in 1617, wherein they endeavour'd to vindicate themselves, and reproach'd the *Calvinists* as Schismatics, and the Causers of the Separation. To which they gave a solid Answer, and presented it to the States.

In the mean time the Disorders grew to such a Height, as threaten'd the Ruin both of Church and State. Upon which, King *James* being better inform'd, he acquainted the States by Sir *Dudley Carleton*, his Minister, (says Mr. *Johnston*) That they might expect his Assistance, if they would adhere to the establish'd Religion; and Sir *Dudley*, according to his Instructions, represented to the States the Danger they were in of being either betray'd to *Spain*, or destroy'd by a Civil War: Therefore he advis'd them to make use of their Power and Authority against the impious Fury of the *Arminians*, who had tumultuously taken Arms, and to call a National Synod. Upon which, the States order'd the *Arminians* to forbear their disorderly Practices, which they refus'd; and urg'd up the People to Sedition, openly curs'd Prince *Maurice*, made the *Burgers* take Arms against their Garrisons, pub-

lish'd a scandalous Libel, call'd, *The Balance*, against *K. James*, the Pr. of *Orange*, and the States, and insulted *K. James's* Minister. Upon this, the States declar'd the Author and Printer of the Libel to be guilty of High Treason, and promis'd a Reward to those who could discover them. Complaints being brought to the States from all Places, of the Persecution and Tumults rais'd by the *Arminians*, the Pr. of *Orange*, the States of *Zealand*, *Guelderland*, *Friesland*, and *Groningen*, press'd for a National Synod. The *Arminians*, to prevent it, had Recourse to their old Subterfuge of desiring a Conference; which not being agreed to, they objected against a National Synod as contrary to the Union, by which every Province had a Sovereign Power in Point of Religion; and that this Right ought to be defended by Arms. To which 'twas answer'd, That they formerly had National Synods, which was their Constitution; and this being the common Cause of all the Provinces, and their Unanimity in Religion, the principal Cement of the Union, the Differences could not otherwise be determin'd. Upon this, the *Arminians* increas'd the Tumults, and enter'd into a Conspiracy to raise Troops, which should neither be subject to the States General nor the Prince of *Orange*, but obliged by Oath to defend the *Remonstrants*, their Cause and Authority, as appear'd by their Letters. This oblig'd the States General at last to agree to a National Synod, and to invite all the Reform'd Churches to send Deputies to it, that it might have the greater Authority, because the *Arminians*, as their last Shift, objected against a National Synod, alledging it would be partial, and appeal'd to an Oecumenical Synod. After this, particular Synods were order'd to chuse their Deputies for the National Synod, which was perform'd in the usual Manner in all the Provinces, except those of *Holland* and *Utrecht*; where the *Arminians* being most numerous, and having form'd separate Classes, both Parties chose Deputies of their own. In the Synod of *Guelderland*, the *Arminians* were publicly convicted of slandering the *Calvinists*, and several of 'em turn'd out for Immoralities and Errors.

The States General having several times sent to those of *Utrecht* to disband the Troops they

they had rais'd to defend the *Arminians*, in case they should be condemn'd by the Synod, they refus'd to comply. Upon which, the States order'd the Prince of *Orange* with a Body of Troops to see it perform'd, which he did with great Prudence and Courage, and without any Effusion of Blood, at *Nimeguen* and *Zutphen*, as well as at *Utrecht*, and seiz'd *Barneveldt*, *Hogerbert*, and *Grotius*, the chief Leaders of the Faction, who oppos'd the disbanding of the Troops. This great Service rais'd the Envy of the *Arminians* against him, says *Johnstoun*, so that they threaten'd his Life, and put an Inscription under his Statue, wishing that *Brutus* were alive again. After dispersing their Troops, and seizing their Leaders, the chief of the *Arminian* Clergy, who had fomented the Tumult, such as *Utenbogardus*, *Taurinus*, *Venator*, and *Grevinchovius*, fled out of the Country; and the *French* K. interposed by his Minister for *Barneveldt*, and their other Leaders, but without Effect. In the mean time the particular Synods turn'd out several of the *Arminian* Preachers for their bad Lives and gross Errors; but censur'd none for their Opinion about the 5 Articles, because they were referred to the National Synod, which met at *Dort* the 13th of November, 1618.

We have insisted the longer on this, because those Controversies and Disorders have made a great Noise in the World, and have been differently represented, according to the Inclinations of Writers; but this is the Substance of what was published by the Authority of the States, and the Synod, which we thought might be acceptable.

When the Synod met, the Foreign Divines were attended by Deputies from the State and Church to the Place appointed, received with much Honour by the Deputies of the States General, and plac'd according to their Rank; those from *Great Britain* having the Preference. 'Twas agreed, that all the Proceedings should be in Latin, because of the Foreign Divines. 'Twas open'd by a Preface, Prayer, and Discourse, in that Language, by *Balthazar Lydius*, Minister at *Dort*: Then one of the States Deputies, in a short Speech, gave Thanks to the K. of *Great Britain* and the other Potentates for sending their Deputies, acquainted them with the Occasion of their Meeting,

and how near both the Church and State of the United Provinces were brought to Ruin, had it not been for the Care of the States, and the Prince of *Orange*, in suppressing the Tumult, and calling the Synod. Then the respective Deputies exhibited their Powers; and the Articles of the States for calling the Synod, and ordering their Method of Proceeding, were read, in Substance as follows: 1. That there should be a General Day of Prayer and Fasting for a Blessing on their Proceedings, and restoring Peace to the Church and State before they met. 2. That the 5 Controverted Articles should be expressly mentioned in the States Letter for calling it; but that other Grievances might be heard in their Place. 3. That every particular Synod should send 6 of those they thought fittest to the National Synod, 3 of 'em at least to be Ministers, and the other two or three Elders, or other Persons of known Probity and Capacity. 4. That the *French* Churches in the Dominions of the States, and in the *Spanish* Provinces, should be invited to send Deputies. 5. That the K. of *Great Britain*, the Protestant Churches of *France*, the Electors *Palatine* and *Brandenburg*, the Landgrave of *Hesse*, and the Protestant Churches of *Switzerland* and *Wetteravia*, and the Republick of *Geneva*, should be desired to send 3 or 4 pious, peaceable, and learned Divines each. 6. That Professors of Divinity should be called from the Universities and Colleges of the United Provinces. 7. That some learned Divines should be invited from the Churches of *East-Friesland* and *Bremen*. 8. That any other Divines, besides those that were chosen, might have Liberty to propose their Difficulties, upon Leave ask'd and given, provided they would submit them to the Judgment of the Synod. 9. The 5 Controverted Articles should be first debated. 10. That the Word of GOD should be the only Rule to examine them by, and that every Member should take an Oath accordingly; and that they had nothing before their Eyes but the Glory of GOD, and the Peace of the Church. 11. That what was approved by most Suffrages, should be a Canon; but those who voted otherwise, should not be censured or suspected on that Account. 12. That if any Thing doubtful happen'd in Debate, the Synod might have a Recess

as long as they thought fit for Deliberation, and meet again without a new Summons. 13. That the States of each Province should send two Delegates, to be continually present, and moderate in the Synod, to prevent Disturbance and Confusion. 14. That after the Conclusion, the whole should be reported to the States General for their Approbation.

Then the Deputies of the States and the Synod agreed, that such of the *Remonstrants* as were known to be most learned in the Controversy, should be summon'd to attend in 14 Days, to give an Account of their Opinions; and that they should have Liberty to explain and defend them as much as they could, and judged necessary, and to give in their Objections to the Confession and Catechism. Accordingly the Deputies of the States summoned 14 out of the several Provinces, among whom was *Episcopius*; and besides these, there were 3 *Arminians* chosen from the Synod of *Utrecht*. The whole Number consisted of 17 Deputies from the States, 56 Ministers and Elders, 4 Professors of Divinity from the *Dutch* Universities, and 1 from *Franker*, 4 Deputies from the Church of *England*, 1 from *Scotland*, 3 from the *Palatinate*, 4 from *Hesse*, 5 from *Switzerland*, 2 from *Wetteravia*, 3 from *Bremen*, 2 from *Geneva*, and 2 from *Embsen*; in all, 104. Then they chose a Præses, 2 Assessors, 2 Clerks; and 2 of the Deputies of the States, with 4 Elders, were chosen to collect the Suffrages.

When the *Remonstrants* came, they proposed new Conditions and Methods of Proceeding; which the Deputies of the States and the Synod having examin'd, they unanimously declar'd them insolent, unjust, unseasonable, contrary to what was prescribed by the States their Sovereigns, and slanderous to the Synod and the *Belgick* Churches, whom they accused as Schismatics. Upon this, the *Remonstrants* protested against the Synod as their Enemies and Schismatics, and by Consequence not proper Judges. The Synod having examin'd their Protestation, unanimously condemn'd it, and told the *Arminians*, That according to their Way of Proceeding, no Heresy or Error whatever could be censur'd; and that they had no Reason to make this Protestation, since the Foreign Divines could not be reckon'd Parties; and that their own

Sovereigns the States, to avoid all Partiality, had order'd the Scriptures to be the only Rule for trying their Doctrine, and oblig'd all the Members to take an Oath accordingly; and therefore advis'd the *Remonstrants* to lay aside those Tergiversations, and exhibit their Objections against the Confession and Catechism; with which they refused to comply, some of 'em pretending they were not ready; and when they were told that this could not be true, since they had long before given them into the States, they answer'd, That they had other Objections since some of the former they had alter'd; and that they had not yet agreed among themselves about it. In short, after many Delays, and much Trifling, the *Arminians* would stand to none of the Rules prescrib'd, nor debate or deliver their Opinions when demanded, but as they pleas'd. Upon which, the Deputies of the States, with the Consent of the Synod, agreed to dismiss them, and forbade them to come any more to the Synod, or to leave the City without the Consent of the States, because, as 'tis express'd in the Decree, instead of giving Obedience, they contemn'd Publick Authority, and had Recourse to all sorts of Tergiversations, Subterfuges, and Fallacies, in order to prevent the trying of their Opinions by the Word of GOD, and to prevent the happy Issue of the Synod, which the States had call'd and continu'd at so vast a Charge; and therefore 'twas unanimously agreed, they deserv'd no more to be heard. When the *Remonstrants* were called in to hear the Decree read, the Præses told them, because they had given out that the Foreign Divines favour'd their former Petition, they might now be satisfied, that all the Foreign Divines had declar'd, that the *Remonstrants* had both begun and concluded with Frauds and Lies; for *Episcopius*, who was their Spokesman, had been several times convicted of Falshood by the whole Synod. *If any thing appear harsh, it is the very Words of the Acts of the Synod, not ours; for we shall give nothing but Matter of Fact.*

The *Remonstrants* being thus dismiss'd, the Synod proceeded to examine the *Theses* they had given in about the 5 Controversed Articles, and what appeared further from their publick Writings to be their Opinion concerning them, and condemn'd them by their Canons, viz. their Opinions, 1. About

Pre-

Predestination. 2. About the Death of Christ, and the Redemption of Man by him. 3. and 4. Concerning the Corruption of Mankind, their Conversion to GOD, and the Manner of it. 5. Concerning the Perseverance of the Saints; for which, with the Arguments given by the Protestant Divines from the several Countries above-mentioned, we refer to the Book it self. After this, the Canons of the Synod were approved by the States General the 2d of July, 1619. Then they all approved the *Belgick* Confession, and the *Palatine* Catechism made use of in the *Netherlands* for the Instruction of Youth. They also condemned the horrid Confessions of the two *Arminian* Brothers, J. and Pet. *Geijsteranus*, Ministers of *Almaer* and *Egmond*, as containing the execrable Errors of *Socinus*, and the Blasphemies of the *Munster* Anabaptists. They afterwards condemned *Vorsius's* Doctrine, and then were dissolved, after a Speech by the Præses, wherein he gave Thanks to the Foreign Divines, and concluded with Prayer. Then the Members took Leave of one another with mutual Embraces, Thanks, Tears, and Exhortations, to continue stedfast in the Doctrine of the Reform'd Churches, and gave one another the Right Hand of Fellowship the 9th of May, 1620.

The E. of *Brandenburg* had appointed some Divines to attend the Synod; but they being hinder'd from coming by Sickness, and other unforeseen Accidents, he wrote to the States to excuse it; adding, that the Confession publish'd in his Dominions agreed with theirs, and those of the other Reform'd Churches; and that his Divines should approve of what the Synod did in Defence of that Doctrine. Their Confession was also approved by a National Synod of the Protestant Churches of *France*, assembled at *Vitry*, May 25. 1585. where, at the Request of the Deputies of the *Belgick* Churches, they testify'd their Agreement with them in Doctrine and Discipline, which was recorded in the Acts of the Synod of *Dort*, because the *French* K. would not allow the Protestant Churches in his Dominions to send any Deputies to that Synod.

By all this, Sir *W. Temple* seems to have very good Authority for what he says concerning the *Arminians*, That they were ra-

ther a Party in the State, than a Sect in the Church; and that their Principles in *Barneveld's* Time were thought to lead them towards a Conjunction, or at least a Compliance with the *Spanish* Religion and Government. He says, they are but few in Number, tho' in his Time they were considerable by the Persons who were of the better Quality, and many of 'em in the Government. He adds, That the *Calvinists* make the Body of the People, and are possess'd of all the publick Churches, as they have been ever since the Synod of *Dort* by the Decree of the States General. The *Anabaptists*, he says, are numerous, especially in *North-Holland*, but of the lower Sort of People. The Jews have Synagogues in *Amsterdam* and *Rsterdam*; and in the former, there are publick Meeting-Places of most Sects known amongst Christians. The *Papists* are not allow'd their Worship publicly, but 'tis conniv'd at privately, and they have no Disturbance on that Account; but are not admitted to publick, because of their Dependance on the Pope. Upon the whole, he says, 'tis hardly to be imagin'd how all the Violence and Sharpness, which attends the Differences of Religion in other Countries, seems to be appear'd or soften'd here, by the general Freedom which all Men enjoy, either by Allowance or Connivance; nor how Faction and Ambition are thereby disabled, to colour their interest'd and seditious Designs.

We shall add from *Pitt's Atlas*, That of late some new Opinions in Matters of Religion have been broach'd among 'em by the Writings of *Cocceius* and his Followers, which were like to have occasioned great Divisions; but that they were suppress'd in Time by the Pr. of *Orange* and the States. In 1676, the Curators of the University of *Leyden*, in order to prevent the ill Consequences of those Opinions, forbade the teaching or maintaining them within their Jurisdiction. By this Order it appears, that many of those Opinions were vain and extravagant, and others of 'em were nearly allied to those of the *Socinians* and *Pelagians*. Some of 'em were likewise suppos'd to be deriv'd from the Principles of *Des Cartes*: Upon which Account, the reading of his Metaphysics, either privately or publicly, were forbid in that University; and they

turn'd.

turn'd out *Heidanus*, Professor of Divinity, for writing against that Order. The Pr. of *Orange* and the States of *Zealand* did likewise turn out a Minister, and several of the Magistrates of *Middleburg*, for favouring those Opinions.

'Tis observ'd of the *Dutch*, that they are not so nice in observing the Lord's-Day as some of their Neighbours, it being usual for the common People, especially those of the *Cocceian* Opinion, to buy and sell, and to travel on that Day. They are said to be more affected with singing of Psalms, than any other Part of Worship; and being much addicted to Musick, such as are able, have Organs in their Churches, which play some Time after Sermon is over. The Psalm to be sung by the Congregation is mark'd upon Slates hung up in several Parts of the Church; and their Deacons make Collections for the Poor in the Church in a Purse with a Bell hanging at the Bottom of it, which they reach by a long Pole to every one in their Seats.

Their TRADE.

SIR *W. Temple* says, there is no Instance to be found where so vast a Trade has been manag'd as in the narrow Compass of the 4 Maritime Provinces of this Commonwealth. 'Tis generally esteem'd, that they have more Shipping than all the rest of *Europe*; yet they have no native Commodities towards the Building or Rigging the smallest Vessel, all which comes from abroad; as does their Wool for cloathing, and the Corn for feeding their People. They have nothing, he says, properly of their own Growth, considerable for their own Use or Traffick with others, besides Butter, Cheese, and Earthen Ware. He adds, they have not one good Haven on their whole Coast. The best are *H.woet* says, which has no Trade; and *Fushing*, that has little in comparison of other Towns in *Holland*. *Amsterdam*, that triumphs in the Spoils of *Lix-bon* and *Antwerp*, which before engrossed the greatest Trade of *Europe* in the *Indies*, is the most incommodious Harbour they have, being so shallow, that ordinary Ships cannot come up to it without the Advantage of Tides, nor great ones without unlading. The

Entrance of the *Texel*, and the Passage over the *Zuyder-Sea*, is more dangerous than a Voyage thence to *Spain*, lying all in blind and narrow Channels: Upon which Sir *William* makes this Remark, That 'tis not an Haven which draws Trade, but Trade that fills a Haven, and brings it in Vogue; nor has *Holland*, says he, grown rich by any Native Commodities, but by Force of Industry; by the Improvement and Manufacture of all Foreign Growths; by being the general Magazine of *Europe*, and furnishing all Parts with whatever they want; and by their Seamen's being the common Carriers of the World.

Since the Ground of their Trade cannot be deduc'd from Havens or Native Commodities, Sir *William* alleges the true Original and Ground of it to have been the crowding of such vast Multitudes of People into so small a Compass of Land, occasioned, 1. By the Civil Wars, that were so fatal to most of their Neighbours some Time before that Republick was founded, as well as since. 2. By the Persecutions in *Germany* under *Charles V. &c.* in *France* under *Henry II. &c.* in *England* under *Queen Mary, &c.* He supposes the Reasons why those People chose rather to fix in *Holland* than in many better Countries, seems to have been, 1. The great Strength of their Towns, which, by their Situation, are capable of putting a Stop to the Approach of an Enemy by the opening of their Sluces; which natural Strength has been as much improv'd at *Amsterdam*, as could possibly be done by Money and Art. 2. The Constitution of their Government, by which neither the States General nor the Prince could invade any Man's Person or Property within their Cities; nor was it to be fear'd that the Senates of the Towns would commit any such Violence, having no Soldiers in their Pay, the Burgers only being employ'd in Defence of the Towns, and the Execution of all Civil Justice. These Circumstances, he says, gave so great a Credit to the Bank of *Amsterdam*, that it invited People to come hither merely for the Sake of securing their Money in this Bank, which they knew not how to do at home: And many others remitted their Money hither, to provide for a Retreat against a Storm, because it could be easily drawn from hence

to any Part of the World. 3. The general Liberty they gave in Point of Conscience, 4. Because they made it always the great Principle of their State, which runs through all their Provinces and Cities even with Emulation, to make their Country the common Refuge of all miserable Men, from whose Protection hardly any Alliance, Treaties, or Interest, have ever been able to remove them. And Parsimony being honourable here, those who are brought low by Misfortune, may live as sparingly at home as they please; and, without any great Charge, make as good an Appearance abroad as their chief Ministers and richest Merchants. 5. The Reputation acquir'd by their Government for its steady and wise Conduct, as well as for the Success in Arms and Treaties; so that People thought themselves safe there from foreign Invasions and civil Commotions. 6. The great Beauty their Country is arriv'd at by Improvements of Industry, in Spight of Nature, which draws a great many People thither on purpose to see them.

The United Provinces being thus crowded with People, they were forc'd to Industry and Labour, or else to Want. Those that were vigorous, fell to Labour; and such as were not, endeavour'd to supply that Defect by Inventions or Ingenuity; and Land growing dear, because of the Multitude of the People, and Smallness of the Country, they were forc'd to apply themselves chiefly to Trade by Sea.

Sir William mentions some other Circumstances that have likewise advanc'd the Trade of that Country: 1. The low Interest for Money, which makes People venture it in Trade, or in any Projects by which Money might be gain'd, such as cutting Canals, making Bridges and Cawseys, levelling Downs, and dreining Marshes. 2. The Use of their Bank, which secures Money, makes all Payments easy, and their Trade quick. 3. A publick Register for Sale of Lands, which makes all Purchasers safe. 4. The Severity of Justice against all Thefts, Cheats, Counterfeits of Publick Bills, which is Capital amongst them; and against all common Beggars, who, if able to work, are put into Work-houses; and if not, into Hospitals. 5. The good Convoys for their Merchant-Ships. 6. The

Lowness of their Customs, and easiness of paying them; which, with the Freedom of their Ports, invites People to bring their Commodities hither, not only as to a Market, but as a Magazine, where they lodge them in case one Market fail, till another offers. 7. Their Order and Exactness in managing their Trade, which brings their Commodities into Credit abroad. This was first introduc'd by severe Laws and Penalties, but is now become habitual. Thus they had above 30 several Plaçaets about the Manner of Curing, Pickling, and Barrelling of Herring; and all Arms made at Utrecht are forfeited if sold without a Mark, or mark'd without Tryal. 8. The Concern which the chief Persons in the Government have in Trade by themselves or their Friends, which makes the Traders sure of all the Favour that the Government can give them. 9. The Custom of every Town's affecting some particular Commerce or Staple, and valuing themselves upon it, so as to improve it to the greatest Height; as *Flushing* by that of the *West-Indies*; *Middleburg* of *French Wines*; *Tirover* by the *Scots Staple*; *Dort* by the *English Staple*, and *Rhenish Wines*; *Rotterdam* by the *English* and *Scots Trade* at large, and by *French Wines*; *Leyden* by the Manufacture of all sorts of Stuffs, Silk, Hair, Gold and Silver; *Haarlem* by Linen, mix'd Stuffs and Flow'ers; *Delft* by Beer and *Dutch Porcelain*; *Surdam* by building Ships; *Exchuyzen* and *Manlandsluyt* by Herring-Fishing; *Friesland* by the *Greenland Trade*; and *Amsterdam* by that of the *East-Indies*, *Spain*, and the *Streights*. 10. The great Application of the whole Provinces to the Fishing-Trade upon the Coasts of *Great Britain*, which employs an incredible Number of Ships and Seamen, and supplies most of the South of *Europe* with a rich and necessary Commodity. 11. The mighty Advance they have made towards engrossing the whole Commerce of the *East-Indies*, by their Successes against the *Portuguese* and the *Natives*, by which they have forc'd them to Treaties of Commerce exclusive of all other Nations, and have built Forts upon the Passes, which command the Entrances into the Traffick of such Places: But more of this Trade when we come to give an Account of their *East-India Company*. 12. The Situation of their

Country extended upon the Sea, divided by two such Rivers as the *Rhine* and the *Meuse*, with the Vicinity of the *Emt*, *Weser*, and *Elbe*, which gives them an easy Opportunity of conveying their Goods into the Continent; as their many Canals at home makes Commerce easy betwixt one Town and another.

Sir William adds, That as the only and certain Scale of Riches arising from Trade in a Nation, is the Proportion of what is exported for the Consumption of others, to what is imported for their own. Never any Country traded so much, and consumed so little, as the *Dutch*. They buy infinitely, but to sell again, either upon improving the Commodity, or at a better Market. They are the great Masters of the *Indian* Spices, and of the *Persian* Silks, but wear plain Woollen, and feed upon their own Fish and Roots. They sell the finest of their own Cloth to *France*, and buy coarse out of *England* for their own Wear; and so of other Commodities. Their great Foreign Consumption is in *French* Wine and Brandy; but what they spend in Wine, they save in Corn to make other Drinks, which is brought from Foreign Parts. Thus it happens, that much going constantly out, either in Commodities or in the Labour of Seafaring-Men, and little coming in to be consumed at home, the rest returns in Coin, and fills the Country to that degree, that more Silver is seen in *Holland* among the common Hands and Purfes, than Brass either in *Spain* or in *France*; tho' the one be so rich in the best Native Commodities, and the other drains all the Treasuries of the *West-Indies*.

Sir William observes however, That Trade seem'd to be declining among them, for which he assign'd the following Causes: 1. The general Application that many other Nations had made to it, especially after the Peace of *Munster*. 2. The great Import of *East-India* Commodities by their *East-India* Company, which lessens the Rates of 'em, while the Charge of the Company is increased by War, Forts, Castles, Garrisons, Ships of War, &c. 3. The great Cheapness of Corn that had happen'd for many Years, which they us'd to purchase in the North with their Spices. And the last Cause he mentions, was the Increase of

Luxury among them, and particularly in the Extent of the new Town of *Amsterdam*, and the Sumptuousness of its Buildings, which had diverted a great deal of Money that had formerly been employ'd in Trade.

The 4th Volume of *Pitt's Atlas* gives this further Account of their Trade: About *Midsummer*, they begin to fish Herring near their own Coasts, where they are but few, and lean, the Seas there not being reckon'd very agreeable to them. The best Season for taking them is from the middle of *August* to *November*, when they are caught in greatest Plenty from *Scarborough* to the Mouth of the *Thames*. After this, the first tempestuous Weather hurries them into the middle of the *British* Seas, where they continue till about *Christmas*, and then return beyond *Scotland* and *Ireland* to the Northern Ocean, where they continue till *June*.

Guicciardin says, they are found no where but in the *British* and *North* Seas; and that they breed in the former, where they arrive earlier or later, according as the Winter comes on in the North Seas. The *Dutch*, to prevent Frauds to the Fishing Society by particular Persons, have made an Order, That they shall not begin to fish till the 24th of *June*; and they suffer no Man to sell any till they have been salted 10 Days at least. They have also Searchers in every Fishing-Town, to see that their Pickling-Barrels be tight, and their Salt good; and to take Care that their Herring be salted anew as soon as they are brought home, in some publick Place, to prevent all Fraud. They have also Packers who attend the Searchers, and throw out all such Herring as begin to decay: And that they may preserve the Credit of the Herring-Trade to themselves, they allow no Foreigners to take the like Care of their Fish in their Ports, but oblige them to carry them out as they brought them in. The Art of Curing Herrings was first found out by *Wm. Buckold*, a Native of *Bierfleet* in *Flanders*, where *Charles V.* erected a Monument for him. Sir *J. Burrows*, Garter King at Arms, in his Book, called, *The Sovereignty of the Seas*, publish'd in 1633, says, 1. That in the *British* Seas, at all Times of the Year, there may be taken Herrings, Pilchards, Cod, Ling, and other Sorts of good Fish: That not long before he wrote, in one Day, near *Minnegat* on the Coast

Coast of *Devonshire*, there were taken 500 Tun of Fish. On another Day, there were taken to the Value of 3000 *l.* And near *St. Ives* in *Cornwall*, 20 Lasts of Herring were taken at one Draught. 2. That 10000 Foreign Ships, 1400 of which belong'd to *Embsen* in *East-Friesland*, were maintain'd by this Trade alone. 3. That the *Hollanders* employ 8000 Fishing-Vessels on our Coasts, by which they maintain 15000 Mariners by Sea, and treble the Number of People by Land in Trades that relate to the Fishery. 4. That this Trade occasions Annually the building of 1000 Ships, by which they make Returns of the best Commodities of *Europe*, *Asia*, and *America*, while this Trade is neglected by the *Britains*, for whom Providence seems chiefly to intend it. 5. That by Computation, the *Dutch* have made 5 Millions in a Year by fishing of Herrings; the Customs of which, and the 10th Fish brought into their Treasury, make 800000 *l.* Sterling in a Year. The Curious may see more concerning the *Dutch* Fishing-Trade in a little Piece, Entitl'd, *John Keynor's Observations upon it*, about the Year 1601, which was Reprinted at *London* by the Order of the Lord Mayor, when a Fishing Company was erected here, after *K. Charles II.*'s Restoration, in which the *D.* of *York* and other great Persons were concern'd, tho' it came to nothing, because of Mismanagement: But that Author demonstrates in short, That the *Dutch* and others raise more Wealth out of our Seas in one Year, than the *K.* of *Spain* had from the *Indies* in four; That there were 20000 Ships, and 400000 People, employ'd by their Fishing-Trade; and his Computation of the Advantage which the *Dutch* make by it, is as high as that of *Sir J. Burrows*. But that which puts the vast Advantage of this Trade beyond all Dispute, is, the Proclamation of the States of 1624, where they call their Fishing-Trade the *Golden Mine* of their Provinces.

They had a *West-India* Company form'd much after the Manner of that of the *East-Indies*; but 'tis very much decayed, partly by Mismanagement, and partly by their Naval Wars formerly with *England*; for which we refer the Curious to the 4th Vol. of *Pitt's Atlas*. We cannot insist on their particular Trade of Export and Import; but 'tis

very considerable with most Trading Nations of the World.

Blau's Atlas adds, That the Quantity of Raw Silk brought by their *East-India* Company out of *Persia* is almost incredible, it being reported, that there's no fewer than 12000 People employ'd in separating and winding the same up into Bottoms, of which they make several Sorts of Silk Stuffs, Ribbons, Scarfs, &c. They have invented a Mill for the more expeditious working of Scarfs; but the States forbade the Use of it, except in some Sorts of Ribbons, because it hinder'd the employing of their Poor. They print vast Numbers of Books, of which they make great Profit; on which Account, the States are not very rigorous in putting their Laws for regulating the Press in Execution; though none ought to print any thing without a Licence from the respective States of the Provinces where they have Presses. There's greater Choice of Astronomical, Geometrical, and other Mathematical Instruments, in the United Provinces, than any where else in the World. They have also considerable Manufactures of Woollen Cloth, and exceed most other Nations in Dying, as they do in Painting. They are expert at making Musical Instruments, especially Organs, and very much affect Chimes of Bells. Their Bell-Founders, Letter-Founders, Jewellers, Gravers, Carvers, and Potters, are very ingenious in their several Arts. They are chiefly defective in Materials for a Trade to *Turkey*, such as fine Cloth, Lead, Tin, &c. Their Merchants, he says, observe this general Rule, to buy Commodities where they are made and sold cheapest, and vend 'em where they are bought dearest: Nor do they think it below them to sell by Retail, and accustom their Wives and Daughters to Merchandizing and Accounts, not only in their Shops, but to sail from City to City, to manage their Trade.

Pitt's Atlas gives this further Account of their Customs and Dispositions: They eat less Flesh than other Nations, and most of that salt; and their fresh Meat is generally dress'd in Towns by common Cooks, of whom they have many; and they are observ'd very much to affect stew'd Meat. The Magistrates take great Care to prevent the selling of any bad Meat, and they keep

distinct Markets for the Offal. They kill their Beef in Winter, and salt or smoke it for the Summer; when they eat it with Butter and Sallet, and spread their Hung-Beef in Slices upon Bread and Butter. The First Dish at Entertainments is usually a Sallet, of which they eat great Quantities. Boil'd Spinage minc'd, butter'd and mix'd with Currants, is a common Dish. Milk is the cheapest of all their Provisions. Their strong Beer, which they call thick Beer, is above Threepence the *English* Quart. Meat and Drink are generally dear; which is ascrib'd to their abounding with Money, and the Number of their Imports: So that their Day-workers and Labourers could hardly live, were not their Wages advanc'd in Proportion.

Their Land is commonly sold at 30 or 40 Years Purchase, and Houses let very dear, which, with the Lowness of Interest, puts them upon a Necessity of promoting Industry and Trade.

They have Associations in their Towns, which are divided into several Neighbourhoods, each of which have a Master, Treasurer, and Counsellors, whose Business is to make up Controversies among their Neighbours, and prevent Law Suits. These Societies pay to the Treasurer certain Fines, for not waiting duly upon a Corps to the Grave when invited, for every House they buy; and they are also paid certain Sums by the Heirs and Kindred of Persons who die, according to their Quality, Age, or Sex; and when these Fines amount to a Sum, they are spent in a Feast by the Society, after reading their Laws, which are calculated to prevent Disputes about Religion, and all other Occasions of Quarrel. When the Master, Treasurer, and Councillors are sate, the rest take their Places by Lots, and in the Evening they wait upon the Master to his House, where they are entertain'd with Liquor.

In some of their Towns, they chuse Commissaries from among their chief Burgers to take Care of Matrimonial Causes. They take the Names of the Persons to be married, with a Certificate of the Consent of the Parents or Guardians, which they deliver to the publick Preacher, who publishes the Banes 3 Times. The Papists, Remonstrants, and Anabaptists, are allow'd

to have Banes proclaim'd before the Town-Hall; where they are afterwards married in their own Way, in the Presence of two Magistrates, and sometimes in their own private Meetings. 'Tis look'd upon as a horrible Crime for a Man or Wife to beat one another. If a Man do it, says the *Aldor*, he must give the Neighbourhood a Gammon of Bacon, and if the Woman do it, she must give two. They are noted for being too indulgent to their Children; for which they are frequently punished by their Ingratitude and Rebellion; and this occasions the Children frequently, either to be sent to the *Indies*, or go thither of their own Accord.

The Times for their Burials are limited to a certain Hour, according to the different Way of the Places: But their Customs about Funeral Solemnities differ very much. In some Places, Men and Women are allow'd to follow the Corps together; in others, 'tis strictly forbidden. In some Parts, the Company, after the Interment, meet to feast or drink; in others, 'tis prohibited under severe Penalties; and Persons of the better Rank, instead of entertaining the Company at their own Houses, give them a Sum of Money, which they spend elsewhere. In their Towns, they have Persons on Purpose to invite People to their Burials, by printed Catalogues of their Names; and if the Corps be not carried out at the appointed Hour, the Friends of the Deceas'd must pay a considerable Fine, because Loss of Time is reckon'd equal to Loss of Money, in this trading Country; and they generally wear Mourning for their deceas'd Relations above a Year. The Papists and Lutherans bury in Consecrated Places; which the rest despise as superstitious. Those who bury in the Church, pay a great Rate for it; and the ringing of the biggest Bell, costs them usually 20 Shillings: But most of them, except the Papists, and some Lutherans, look both upon this Custom and the Charge as ridiculous.

Their Diversions are Cards and Dice; but they allow no Actions for Debts contracted by Gaming. They have particular Places, for bowling with Wooden Bowls, thro' an Iron Ring, for the Tennis, and for playing towards a fix'd Pale, with a Club and a Wooden Ball; and in the Winter, they

they divert themselves upon the Ice with their Skates, or by banding a Ball with a Wooden or Leaden Club, till they bring it to the determin'd Goal. They use Dancings at Weddings, and on some other Occasions, and have Comedies and other publick Shews, where, at the same time they pay Money to the Players, they pay a Tax to the States for the Use of the Poor, &c.

Their Houses are generally cleanly and neat, their Glas painted, and their Floors strow'd with Sand; and they are generally so nice, as to let none come into their Rooms without first cleaning their Shoes, or putting on Slippers; and those of the better Sort, affect to have their Furniture splendid and rich. In Publick Houses, their Beds are generally like Cabbins, short and narrow; yet they generally exact 10 d. or 12 d. for every Night. There are few Thatch'd Houses in these Provinces, and most of 'em have Gutters or Pipes to convey the Rain Water from the Roof into Cisterns, where 'tis kept for Family Uses.

Their East-India Company.

THE *Atlas Historique* gives us the following Account of it: The Dutch finding that separate Companies were not able to defend themselves against Spain, they form'd an East-India Company; towards the Capital Stock of which,

	Florins.
<i>Amsterdam</i> contributed	3674915
<i>Zealand</i> ,	1333882
<i>Delft</i> ,	470000
<i>Rotterdam</i> ,	177400
<i>Horn</i> ,	266868
<i>Enchuyfen</i> ,	536775
In all,	6459840

These 6 having advanc'd this Money, they settl'd a Chamber in each of the Towns, (that of *Zealand* being in *Middleburg*) from whence they chuse the 17 Deputies who direct the Affairs of the Company. They meet 4 times a Year successively at

Amsterdam for the Affairs of the Company, and twice at *Middleburg* alternatively, but not at the other Towns. Those Deputies are the Sovereigns of this Illustrious Company, but under the Authority of the States General. The *Atlas* says, they have had such Success, that they may well be esteem'd the finest and greatest Company in the World. That from the Time they were founded in 1602, to 1608, they augmented their Capital to 30000000; and since their Establishment, they have paid above 15 times the Capital to those concern'd; so that every Hundred Florins Stock is now worth above 600. They maintain in the *Indies* 15000 regular Troops, have 160 Vessels at Sea; and in the different Countries they possess, they are able to raise 120000 Men.

The 17 Directors are chosen as follows; 8 by the Chamber of *Amsterdam*, 4 by that of *Zealand*; *Delft*, *Rotterdam*, *Horn*, and *Enchuyfen*, one each; and the *Maes*, *Middleburg*, and *North-Holland*, chuse one by Turns.

These 17 Directors govern the Company, and represent the Sovereignty of the whole Body. By Plurality of Voices, they regulate all Affairs of Consequence, as the making of Counsellors, Captains, Lieutenants, the Equipping of Ships, the Sale of the Goods, the Division of the Profits; and all the particular Chambers must conform themselves to their Orders. They likewise appoint the Time for the Sale of the Goods, one half of which is sold in the Chamber of *Amsterdam*, a 4th in that of *Middleburg*, and a 16th in each of the other 4 Chambers, at the Time appointed, to the highest Bidder. But besides those 17 Directors, each of the Chambers have more belonging to the same Body. Thus *Amsterdam* has 10 more, besides the 8 sent to the Sovereign Court; and *Haerlem*, *Leyden*, *Utrecht*, *Dart*, and *Tergoe*, have each of 'em one there; as have the Provinces of *Guelderland* and *Friesland*. *Zealand* likewise, besides their 4 Directors, has 8 or 10 more from other Towns of the Province. All these Deputies are to give their Advice in their respective Chambers for the Good and Advantage of the Company; and when any of the Deputies die, the Towns to which they belong name three others in their stead, out of which

Q q q q q 2

the

the Magistrates chuse one. This Company meets twice a Week, and change their President each Month; so that every one presides in his Turn. There are two Advocates belonging to the Company, who make their Report of what is resolv'd on to the *Indies*: Upon which, the Company there form their Resolutions, and issue their Orders. There are 8 Deputies for the Affairs of the Marine, War, and Building of Ships; 4 to inspect their Magazines, and the Goods that are sent to and come from the *Indies*; 4 who take Care of the Money which the Company pays and receives; and the rest take Care of the Accounts, and other Affairs relating to Order and Justice, which is done to the meanest Mariner, as well as to the Officers.

They have also a Sovereign Company at *Batavia* in the *East-Indies*, but it depends on that in *Holland*; yet they have Power to declare War and make Peace with the Kings and Princes of the *Indies*, as the Sovereign Council thinks meet, which is composed of a General, who maintains his Dignity with great Lustre; of a Director-General, and 6 ordinary Counsellors, and sometimes of 2 or 4 extraordinary Counsellors, as the 17 Directors think meet. They have also a Court of Justice, called the Supreme Council or Parliament, composed of a President, a Vice-President, and 12 Counsellors. They determine all Affairs Civil and Criminal, and have a Power to condemn the General to Death if he be found guilty of Treason. They have also a Council in the City, composed of a Bayliff and Eschevins, in the same Manner almost as in *Holland*; and they have a Presidial Council for determining small Suits under 300 Florins. The General has his Office for 3 Years; but is often continued longer, if the Company think it for their Advantage. He has two Votes in the Council, and never goes abroad, nor gives Audience to *Indian* Ambassadors, without a Troop of Horse, and a Company of Foot Guards. The 2d Person is the Major-General, who commands all the Troops under the General. The 3d is the Director-General, who keeps the Keys of all the Company's Magazines, and is obliged to give an Account of 'em. All those Offices are conferred by the Sovereign Council of

State, which the Company in *Holland* approves for most part; but sometimes change them on Occasion.

The General Governments of the Company in the *East-Indies* are on the Coast of *Coromandel*, the Islands of *Amboina*, *Banda*, *Ternate*, *Ceylan*, and the Peninsula of *Malacca*.

The Particular Governments are, the Cape of Good Hope, the Isle of *Macassar*, at *Padam*, the Isle of *Timore*, at *Andragery*, and at *Cochin*, &c.

The Particular Factories of the Company in several Places of the *Indies* are, at *Ispahan*, *Gaumaron*, *Surate*, *Agra*, *Amadabat*, *Bengal*, *Palimbang*, *Bamby*, *Bangka*, *Siam*, *Ligar*, *Tonquin*, and at *Japan*, &c. *New Amsterdam*, and *New Holland*.

Their Forces and Revenues.

SIR W. Temple says, the Force of these Provinces is not to be measured by the Number or Dispositions of their Subjects, but the Strength of their Shipping, and standing Troops, which they maintain in Time of Peace; by the Numbers of both they are able to furnish in Time of War; by their constant Revenue to maintain the former; and by the Temporary Charge, they have been able to supply for the latter.

Their ordinary Revenues consist either in what is levied from the conquer'd Towns, and Countries of *Brabant*, *Flanders*, or the *Rhine*, and the ordinary Funds provided by the 7 Provinces every Year, according to their Proportions; and this Revenue, he says, is about 21 Millions of Guilders per Annum, which is 1890000 *l.* Sterling. The chief Funds out of which this is raised, is the Excise and Customs. The first is so great in general, that he has heard it observ'd at *Amsterdam*, that in a Tavern, a certain Dish of Fish, eaten with the usual Sauce, has paid above 30 several Excises; but their Customs are low and easy, and applied particularly to the Admiralty. By this Revenue they pay all their Troops, publick Officers, Ministers abroad, and the Interest of Money owing by the States, which in his Time was about 13000000 Guilders.

Their

Their standing Forces in 1670, during a general Peace, were 26200 Men, being 10 Regiments of Horse, and 19 of Foot, which cost them Annually 6119000 Guilders. In Time of Peace, they usually employ betwixt 30 or 40 Men of War in Convoys, besides some ready in their Harbours on all Occasions; which, with the building of Ships of War, costs them about 6000000 Guilders *per Annum*. He adds, that besides what was then owing by the States General, the Commons of Holland ow'd 65000000 Guilders, for which they paid Interest at 4 *per Cent.* which is paid so exactly, both Principal and Interest, that no Man ever demands it twice; so that 'tis reckon'd a Favour for any one to have their Money admitted, and they generally receive it back with Grief, because they know not where to dispose it with so much Safety and Ease; so that the common Revenue of particular Men lies much in the Cantores of the States General, or the particular Provinces, which are the Registers of their publick Debts.

The Imposts and Excises upon Houses and Lands are collected by the Magistrates of the several Places, who pay them into the Receivers. The Excise on Consumption is farm'd out to the highest Bidders for 3, 6 Months, or a Year. The Collection, Receipt, and Payment of all publick Money, is made without Fee to Officers who have certain Salaries from the State, which they dare not increase by private Practices or Extortions; so that whoever has a Bill for any publick Debt, it is as good as ready Money, being paid at Demand, without Charge or Trouble, and passes as readily in Payments, as the best Bills of Exchange.

Their extraordinary Revenue in case of a War, or other extraordinary Occasions, is sometimes rais'd by the Hundredth Part of the Estates of the People, Poll, or Chimney-Money, and sometimes by Imposts on every Man that travels in their common Roads in Coach, Waggon, or Horseback, and in their Canals or Rivers by Boats. By this Means, during the War with England in 1665, they rais'd 42000000; and when the Bishop of Munster invaded them in 1666, they had above 60000 Land-men, and 100 Ships of War at Sea. And in Oliver's Time,

about 1652, they prepared 150 Men of War to fight the *English*, as we are informed by *The History of the United Provinces*: And besides what they are able to do at home, their Company in the *East Indies* is capable of putting 50 Men of War to Sea, and to raise at least 30000 Men by Land, says Sir *W. Temple*; their Trade there being so large, that the same Gentleman says, he has known 22 Ships arrive from thence in one Year. On this Occasion Sir *Wm.* observes, That the Greatness of the Dutch at that Time seems justly to have rais'd the Glory of our Nation, which, during the Years 1665 and 1666, maintain'd a War not only against this powerful State, but against France and Denmark, in Conjunction with 'em; and all at a Time when England struggled at home with the calamitous Effects of a raging Plague, that in 3 Months of the first Year swept away incredible Numbers of People; and of a prodigious Fire, that in 3 Days of the 2d laid in Ashes that ancient and famous City of London, the Heart and Center of our Commerce and Riches, consuming the greatest Part of its Buildings, and an immense Proportion of its Wealth. Yet in the midst of these fatal Accidents, those two Summers were renown'd for 3 Battles of the mightiest Fleets that ever met upon the Ocean, whereof two were determin'd by entire and unquestion'd Victories, and Pursuit of our Enemies into their very Havens; the 3d having begun by the unfortunate Divisions of our Fleet, with the Odds of 90 of their Ships against 50 of ours; and in spite of such Disadvantages, having been continued or renewed for 3 Days together, wherein we were every Morning the Aggressors, ended at last by the equal and mutual Weakness and Weariness of both Sides, the Maims of Ships and Tackling, with Want of Powder and Ammunition; having left undecided the greatest Action that perhaps is to be met with in Story. And in this Battle *M. de Wit* confest to Sir *William*; that we gained more Honour to our Nation, and to the invincible Courage of our Seamen, than by the other two Victories: That he was sure their Men could never have been brought on the two following Days, after the Disadvantages of the first; and he believed no other Nation was capable of it but ours.

The

The GEOGRAPHY of the United Provinces.

SIR Wm. Temple observes, That *Holland*, *Zealand*, *Friesland*, and *Groningen*, lie on the Sea, and make the Strength and Greatness of this State: The other three, *Guelderland*, *Utrecht*, and *Overissel*, with the conquer'd Towns in *Brabant* and *Flanders*, serve as Outworks and Frontiers. No Man, he says, can tell what Changes have been made in the Face and Boundaries of those Provinces by the Inundations of the Seas and Rivers; but by the Description in the Roman History, the Face of their Coasts, and the Nature of their Soil, especially in *Holland*, was much as 'tis now 1600 Years ago, allowing only for the Improvements which have been made by Riches, Time, and Industry; and the Names and Course of the Rivers are much the same with what they were then. Any Changes that have happen'd since, he supposes to have been made by the Stoppages and the Rolling of the Sands upon the Mouths of the *Rhine*, the *Maes*, and the *Scheld*, which run through those Provinces into the Sea.

The Province of Holland.

Authors differ about the Origin of its Name: Some derive it from its low Situation; some from the German Word *Holt*; i. e. Wood, with which 'twas formerly cover'd. But others, with more Probability, derive it from *Holland* in *Denmark*. *Lotharius*, the 3d Son of the Emperor *Ludovicus Pius*, being oblig'd to grant this Province and *Zealand* to the *Danes* about the 9th Century, as *Conringius* says in his Book *De Finibus Germaniæ*; which is the more probable, because before that Time this Province was called *Vlaerdinga*, from *Vlaerdingen*, formerly a Town of great Note at the Mouth of the *Maes*. That Part of the Country which lies S. of the *Old Rhine*, was anciently inhabited by the *Baravi*, and after them by the *Frizons*. *Bentivoglio* observes, that 'tis cut through in so many Places by Rivers and artificial Channels, that it may be doubted whether it consists most of

Land or Water; and that they abound so in Ships, that it may be question'd whether the Number of their Ships and other Vessels be not equal to that of their Houses. Sir W. Temple says, That the Soil of the whole Province is generally flat, like the Sea in a Calm, and looks as if, after a long Contention between the Land and Water, it had at length been divided betwixt them; and that if the Number of Rivers and Canals, which lead not only to every great Town, but almost to every Village, and the innumerable Sails that course every where up and down, be duly consider'd, 'twill appear, that the People who live by Water, bear a good Proportion to those who live by Land.

The Effects of the Trade of this Province are such, that 'tis said of 'em, tho' they have no Wood of their own, they spend more than any Nation: Tho' their Fields bear little Corn, they have sometimes kept the Granary of *Europe*: Tho' they have neither Vines nor Wool, and very little Flax of their own Growth, yet there is no Place better stor'd with Wines: And they make more Cloth of both Sorts than any other Country of an equal, and than most of a larger Extent.

The Soil produces several Sorts of Fruit, and in some Places good Corn, but in small Quantities. The N. Part of the Province is Moorish, and unfit for Tillage. The other, which lies next *Brabant*, is mostly Meadows that about the End of *October* begin to be cover'd with Water; which being augmented by frequent Rains and Snows, continues all Winter; so that the Towns and Villages seem to stand in the Sea. This however makes their Ground fruitful for Pasturage, and occasions their making vast Quantities of Butter and Cheese; which, besides what they spend themselves, is reckon'd to bring them in Annually a Million of Carolins, which are about 3 s. 4 d. apiece. Besides the overflowing of the Country, the Climate it self does naturally abound in Moisture and Rain; so that 'tis difficult sometimes to distinguish the Spring, Summer, and Autumn. *Bentivoglio* says, their Winter is rather long than severe; but 'twou'd be all Fog and Mist, if it were not cleared by the Sharpness of their Frosts, which never fail

with every E. Wind for about 4 Months in the Year, and are much fiercer than in the same Latitude with us, because the Wind comes to them over a mighty dry Continent; but is moisten'd by the Vapours, or soften'd by the Warmth of the Motion of the Sea, before it reach us. This, says Sir William, is the greatest Disadvantage of Trade they receive from their Situation, tho' necessary to their Health, because their Havens are frequently shut up for two or three Months with Ice. The fierce Sharpness of these Winds makes the Changes of their Weather violent and surprizing, so as a warm faint Air turns in a Night to a sharp Frost, with the Wind coming into the N. E. and the contrary with another Change of Wind. The Spring is much shorter and less agreeable than ours, the Winter much colder, and some Part of the Summer much hotter. The extream Moisture of their Air is the Occasion of the great Neatness in their Houses, and Cleanliness in their Towns; for without that Care, their Country would not be habitable by such Crowds of People, the Air would corrupt upon every hot Season, and expose them to infectious Distempers, which they hardly escape 3 Summers together, especially about *Leyden*, where the Waters are not so easily renew'd; and therefore that City is kept the most neat and clean of all their Towns. The Moistness of their Air makes all Metals apt to rust, and Wood to grow mouldy, which they are forc'd to prevent by continual rubbing and scowring; as the Deepness of their Soil, and Wetness of their Season, obliges them to keep the Streets well pav'd, and to make long Causeways between many of their Towns, and in their Roads.

Their Inundations and Dikes, and the Causes of their High Tides.

THE Flatness of their Land exposes 'em to Danger of Inundations by the Sea, and to infinite Charge in making and repairing their Banks and Dikes, which employ Annually more Men than all the Corn of the Province of *Holland* could maintain. They have lately found the common Sea-weed to be the best Material for those

Dikes; which, fasten'd with a thin Mixture of Earth, yields a little to the Force of the Sea, and returns to its Posture when the Waves give back. Their Dikes are usually about 7 Ells high, and 17 broad at Bottom, made of the toughest Clay, fenc'd on the Land-side with Wood and Stone, and on the other with Mats of Rushes and Flags, stak'd down as high as the Tide generally rises, or with Sea-weed, as formerly mentioned, which hinders the Water from sap-ping and undermining the Body of the Dikes: But in *North-Holland*, when the Storm is very violent, they clap Sails on the outside of their Dikes, which they look upon to be the best Defence.

Guicciardin supposes, that the Height and Violence of the Tides upon their Coasts, proceed from their being stop'd in their Course from the great W. Ocean by the Interposition of *Great Britain*, which at each End of the Island swell into two vast and violent Currents; one of which coming through *St. George's Channel*, he judges to meet and clash with the other, whose Course is from the N. W. much about the Coast of *Holland*; so that when a Spring Tide, strong S. W. but especially N. W. Wind, and a considerable Land-Flood, happen together, the Coasts of the United Provinces, and several Parts of *Flanders*, are very much in Danger. The N. W. Wind makes the highest Tides upon the Coast of *Holland* and *Flanders*, and the greatest Inundations have happen'd during such Winds, the Moon being moreover in *Apogee*: Several Instances of which are brought in the *Philosophical Transactions*, N^o 64. The Reason why the N. W. Wind makes the highest Tide, is thought to be, because that Wind drives in the Flood much with an equal Force at both Ends of *Great Britain*; but the Current which comes from the N. W. is supposed to be the most impetuous of the two, because 'tis received out of a wider into a narrower Channel: Upon which Account it must needs swell higher; whereas the Channel of the other, which comes in betwixt *England* and *France*, is much enlarged by that Time it reaches the Coast of *Holland* and *Zealand*. There is another Reason given by Dr. *Wallis*, why the N. Tide must needs be the strongest; viz. the Waters of the Sea, because they cannot follow the

the

Draught or Prospect of the Dreadfull Inundation Or Breaking the Dykes in Holland Which Car

carried every thing before it. Defied the elements. It was a terrible sight.

the Earth fast enough in its diurnal Motion from W. to E. are thrown back upon the *American Shore*, which must be done with much the greatest Violence under the Equator, where the Motion of the Earth is quickest, and consequently the Sea is more deficient in accompanying its said Motion: Wherefore, if, as is also supposed on each Side of the Equator, the same Waters are returned back again in an Eddy to the S. E. and N. E. then this Return, the nearer it approaches the N. towards which the Earth's diurnal Motion is still slower and slower, must be made with the greater Violence and Rapidity.

History gives us frequent Accounts of the Sea's breaking in upon their Banks, destroying Multitudes of People and Cattle, and swallowing up large Tracts of Land, particularly on the 5th of November, 1530, when it overflowed a great Part of *Zealand*. *Strada* mentions another on *All-Saints Eve* in 1568, when the Sea swelled so high, that it broke some Banks, and overflowed others, with such a sudden and unheard of Inundation, that it cover'd some Islands of *Zealand*, great Part of the Coast of *Holland*, and almost all *Friesland*, was higher by a Foot than that which happen'd in 1530, and swallowed up 72 Villages; and in *Friesland* alone destroyed above 20000 People, whose Bodies, with those of their Cattle, their Household-Stuff, and broken Vessels, floating upon the drown'd Country, gave those that escap'd a lively Representation of *Noah's Deluge*. Many People getting up to the Tops of Trees and Rising Grounds, were in Danger of being famish'd, till they were brought off in Boats by the Care of the Magistrates. They suffer'd likewise much by an Inundation in 1655; but more by one in Nov. 1665, which drove in the Sea with such incredible Violence between the *Texel* and the *Helder*, that it carried Part of the Village of *Huyduynen* quite away, and laid all the Country between *Wiring* and *Zyp* under Water; the Dike near *Horn* was broke in two Places; the Water came to the Gates of *Medemblick*, overflowed many Villages, and of a sudden turn'd a large Tract of the Country into a continued Sea, which destroyed much People and Cattle. The Dike of *Muydenberg* was also broke down; so that all the Country round *Narden*, *Muyden*, and *Wesop*, as far as *Loren* in

Goyland, and *Balecorm* in the Province of *Utrecht*, was under Water. The Gates and Ramparts of *Nerden* were ruin'd; and that strong Rampart of Stone called the *Assel-Back*, built to repel the Waves, was hurry'd away, leaving a Hole where it stood of 36 Foot deep. In *Amsterdam*, the *Newen Dike*, with the Street upon it, and the neighbouring Market-place, was quite overflow'd. The Dike betwixt *Amsterdam* and *Haerlem* was broke in the Middle for 30 or 40 Rods; so that there was about 33 Foot Water in those Parts. There were many other Dikes had the same Fate; the Country in many Places, and particularly a great Part of *Water-Land*, was entirely swallow'd up; several Dikes in *Friesland* had Breaches made in them of 30 and 40 Rods long; so that a great Part of those Coasts seem'd to be irrecoverably lost: Yet after the ceasing of the Storm, by the incredible Industry of the People, those Dikes were repaired, and made stronger than before in the February following. The same Tempest did a great deal of Damage in *Zealand* and *Flanders*, and was observed to have much exceeded that in 1568. See the Cut of the *Inundations*.

Their Banks, especially those on the Rivers, do likewise suffer frequently by Shoals of Ice, as happen'd in 1638, when the Ice of the *Rhine* broke down the *Iffel* Dike near *Utrecht*, and laid most of *Holland* under Water: But this not having the continued Fury of the Marine Inundations, the Dike was speedily repaired, and the Waters were drain'd by the usual Help of Wind-Mills, of which they have great Numbers conveniently placed for carrying off the Winter-Rain, and Snow-Waters; which about the beginning of February, if the Frost do not hinder, are forced up by the Mills to vast Currents, and drove into particular Channels; so that the Earth becoming dry in a little Time, it begins to look green about March, when their Cattle are put out to Grass.

Besides those Dikes which are made by Art to secure them against such Inundations, Nature has afforded them several Helps, particularly 4 or 5 little Islands in the *Zuyder-Sea*, besides the *Texel*, the *Vlie*, and others on the Mouth of the said Sea on the Coast of *Friesland*, which break the first Fury of those N. Tempests: And from the *Honts-Besse* towards the upper End of *North-Holland*.

Holland, down to the *Beer* at the Mouth of the *Maes*, which is about 24 Leagues, the Violence of the Waves is curb'd by continu'd Rows of Sandy Hills; between which and the Sea, lies the finest Way in the World; and all along the Water is so shallow on the Shore, that in calm Weather a Man may go in a great Way without being put to swim. Upon this Shore many Ships are forced to run by contrary Winds, especially in Winter, when the Nights are dark and long; but when the Sea is calm, 'tis very pleasant to see the great Number of Ships under Sail on that Coast, some continually disappearing, and others immediately coming into Sight.

But as they have those Disadvantages above-mention'd by the Flatness of their Country, and the Softness of their Soil, they have this great Advantage by it, That they have cut numerous Canals, not only in this but in other Provinces, with little Trouble and Charge, which makes the Passage easy and convenient, and Carriage cheap betwixt one Town and another; and both Passengers and Goods are brought to their Set Stages at the appointed Time in their *Trekschuyts*, which are drawn by Horses, and the Passengers and Goods are secured from Rain, &c. the Boats being cover'd by a Deck above, and having Windows in the Sides to let in the Air, by which also the Passengers may see the Country as they travel. They have cut many new Canals since their Peace with *Spain* in 1648.

As the overflowing of their Country in the Winter fructifies their Soil, it gives them also the Opportunity not only of diverting themselves on the Ice, as formerly mentioned, but likewise of travelling expeditiously about Business with their Skates, by which some of 'em will make above 18 Miles an Hour, if the Ice be smooth and even; and they have likewise Sledges loaden with Goods, which the Men drive before them as they slide on their Skates; and they usually carry long Poles upon their Shoulders, to support them in case the Ice should break.

Their Soil, Beasts, Birds, Fish, Insects, &c.

IN order to the better dreining of their Ground, 'tis cut thro' with innumerable

Ditches and Channels; and the Ways thro' those Grounds are distinguish'd by Rows of Trees, which make them very pleasant. Their Pastures are mighty rich, and produce excellent Grass, mix'd with great Quantities of sweet Trefoil; so that 'tis little inferior to Oats and Barley for feeding of Cattle, which they conclude from their Hay's being much apter to take Fire than that of other Countries, if not thoroughly dry'd before it be stack'd up. By the Abundance of this choice Grass, they feed vast Herds of Cattle, and especially Cows, which give more Milk than in other Countries; one of 'em in some Parts of *Holland* giving no less than 3 great Pails in a Day. This, yields them vast Quantities of Butter and Cheese; in making and preserving of which, they excel most Countries, the Cheese of *Holland* and being thought not inferior to *Parmesan*.

The Landlords and Tenants are exceedingly careful to improve their Lands: The former obliges the latter to apply certain Portions of Ground to such and such particular Uses; not to feed above so many Cattle in such a Number of Acres; to see that the old Ditches be well scower'd, and kept open; to cut new ones where they are wanting; to let the plow'd Fields lie fallow one Year in so many, and to improve them with a sufficient Quantity of Dung: Which makes them vie with one another who shall best cultivate their Ground.

Some Years their Corn-Fields are very much infested with Field-Mice, which are of so productive a Nature, that they ingender almost as soon as brought forth. They first destroy the Roots, and afterwards carry what's left above Ground into their Holes: Nay, they pursue the Corn into the Barns; so that the Husbandmen set Pots half full of Water in the Ground to intercept and drown them. *Ubbo Emmius* says, there's also a small Insect about an Inch long, and no thicker at first than a slender Thread, which comes along with their Winter Mists and Fogs; and upon the first Approach of the warm Season, feeds upon the new-sprung Blades of Corn in the Nights and Mornings, but about Sun-rising retires again under Ground, where it consumes the Roots; but if the Heat of the Summer come early, those Insects do all perish by the End of May, otherwise they grow as big

big as a Man's little Finger; and at length, casting their Shells, change their Species, and become Volatiles. About the Beginning of the Spring, or as soon as the Trees put forth their Leaves, upon the first East Winds, they have vast Swarms of Caterpillars, which very much annoy their Corn and Fruits.

They are fond of Orchards and Gardens in most of the United Provinces; but there are fewest of them in *Holland*, because they have least waste Ground there. They are so curious in this Matter, that there's scarce any Tree, Shrub, Sort of Vine, Herb, Flower, Seed or Bulbous-Root, but what they have in their Gardens. Some Years ago they doted so extravagantly upon Flowers, especially on Tulips, that the meanest Mechanicks neglected their Business to trade in them; and some, who could ill spare it, would give 2 or 3000 Florins for the Root of a fine Flower; but finding the Profit did not answer the Pains and Expence, the ordinary Sort were soon cured of this Phrenzy.

Minerals they have none in *Holland*, and their chief Fossile is a Bituminous Earth, of which they make their Turfs. As they dig it in some Places, they find great Numbers of Trees under Ground, whose Boughs and Leaves appear so exactly, that some pretend to distinguish the Species of 'em. This is an Argument, that the Country was formerly overgrown with Wood, and those Trees are supposed to have been overturn'd by Tempests and Inundations, and in Process of Time cover'd over with Earth. In some Places they rake up Mud from the bottom of the Water, which they carry out in Boats, spread it upon the Ground as equally as they can, lay Boards upon it, tread it; and when the Water is squeez'd out, cut it in Form of Bricks, and dry it for Fuel. It is observ'd, that the Earth from whence they dig their Turf fills up again in a few Years, which affords the middling Sort a constant Fuel; the poorer in many Places making use of Cow's-Dung, which they dry up in the same Manner; but the better Sort do generally make use of Scots Coal.

They have no native Fossile Salt. In some Places they collect some small Quantities out of the Sea-Water. They are ex-

cellent at boiling and purifying what is brought to them from *France* and other Countries. They formerly gather'd Salt out of their burnt Turfs, which were supposed to be impregnated with it by the frequent Inundations of the Sea. Yet by their Industry and Trade, they have not only enough of Salt for themselves, tho' they use more of it than any Nation in *Europe*, but to supply other Countries.

The usual Grain in the United Provinces are, Summer and Winter Wheat, another resembling Barley in the Shape of the Ear, Buck-Wheat or Beach-Wheat, very much us'd by their Brewers; but the best and whitest Wheat is in *Zealand*. They have likewise Barley, Oats, Pease, Beans, and Rye, Colewort-Seed, and Rape-Seed; out of which they make Oil, Madder, Hops, and great Quantities of *French* Beans.

The Wild-Beasts in these Provinces are, some few Boars and Wolves, and such a Number of Foxes, that the States pay a Price for every one that's taken. They have Multitudes of Hares and Rabbits, which none but the Nobles have Licence to kill or take. They have but few Deer. In some Parts of *Drente*, they have a Creature of middle Nature, betwixt a Hog and a Bear. They have Multitudes of Squirrels, of which they tame great Numbers. Their Hogs are but indifferent Meat, being fed with Whey, and such other watshy Nourishment; yet they salt a great deal of Pork, which they send Annually to the *Indies*.

They have store of Horses, and have lately mended their Breed, several Villages contributing to keep a good Stallion, to which every Man of the Neighbourhood is obliged to bring his Mare. *Conringius* commends 'em for their large Size, delicate Colour, and excellent Shapes; but their Heads being thought too great and heavy, they have corrected that, by purchasing the choicest Stallions from neighbouring Countries. They have a great Trade in feeding Black Cattle, of which they purchase Annually many Thousands from *Holstein*, *East-Friesland*, &c. and fattening them in their own rich Pasture, sell them off in *October*. They have great Numbers of Sheep; but their best Mutton is in *Zealand*, where they feed upon Grass and Herbs, that abound with Salt.

Salt. In other Provinces, they feed much upon a low Shrub called Sweet-Broom, and an excellent Cheefe is made of their Milk.

They have Multitudes of Storks, which build and hatch on their Chimneys in Towns as well as Villages. They take Flight with their Young about the Beginning of *August*, and, as *Conringius* says, go to *Africk*, from whence they return Annually about the End of *February*. They have vast Numbers of Wild-Ducks from *Norway*, and the Coasts of the *Baltick*, from whence they come to feed in their Channels and Marshes about the End of Autumn, or the Beginning of Winter. They have large Flocks of Wild-Geese, Herons, which build about the Houses of their Gentry, where none are allow'd to disturb 'em, and Wild and Tame Swans, kept at the publick Charge in Moats and Ditches, with Officers to take Care of them. They have great Numbers of Partridges, Snipes, Water-Hens, Quails, Lapwings, whose Eggs they count a Dainty, Larks, Thrushes, and Pigeons, which they allow no Man to shoot. They have likewise Plenty of all the other Sorts of Domestick Fowl. About the Feast of *St. Martin*, they have particular Markets for selling Geese, when the poorest among 'em will be sure to have one for his Family; the Origine of which is ascribed to the particular Respect they paid formerly to *St. Martin Bishop of Tours*.

The Fish in and near their own Rivers are, Salmon, which abound most in the Mouth of the *Maes* and *Leck*; Pikes, Mulletts, Perches, Trouts, Shad-Fish, and abundance of Eels, many of which they salt up. In some Places, the Right of Fishing is restrain'd to the Nobles; in others 'tis free to every one, and they have Officers to keep the People within due Limits on this Head. The Fish upon their Coasts are, *Habardine*, *Haddocks*, great Numbers of *Soles*, *Rays*, *Sturgeons*, *Sea-Crabs*, *Pollards*, *Congars*, *Mackrel*, excellent *Sole-Fish*, *Smelts*, and *Herrings*; but the latter not being good, are sold very cheap to their Poor. They have Plenty of *Mufcles*, *Cockles*, *Crabs*, and other *Shell-Fish*, but no *Oysters*. Some of the latter were found in 1620 on the Coast of *Zeeland*, which

being very good, the Magistrates forbid to disturb them; but the greedy Seamen taking them by Night before they had settled, they soon removed, and have not been heard of since. They have many *Sea-Dogs* on some Part of their Coasts, which the Fishermen take thus; They disguise themselves in Beasts-Skins at such Times as those Fish come out of the Water; and dancing and playing Antick Tricks before them, draw them from the Shore, where they place Nets betwixt them and the Sea, and then throwing off their Disguise, pursue them till they are entangled and taken.

The Description of this Province agrees to most of the rest; but we shall take Notice of the particular Differences as they come in our way.

The Boundaries of this Province, including *North-Holland* or *West-Friesland*, which in all publick Acts is mentioned apart, are, the *German Ocean* on the W. the Province of *Utrecht* and *Beuwe* on the E. the *Zuyder-Sea* on the N. and *Brabant* and *Zealand* on the S. It lies between 51 Deg. 40 Min. and 53 Deg. of Lat. 23 Deg. 10 Min. and 24 Deg. 20 Min. Long. 'Tis about 80 Miles from N. to S. besides the Islands that lie in the Mouth of the *Zuyder-Sea*, and about 40 where broadest from E. to W. but in other Places scarce 25. 'Tis divided into N. and S. The N. is subdivided into *West-Friesland*, the Islands *Texel*, *Vlie*, and *Schelling*, *Waterland*, and *Kennemerland*, *Amsteland*, *Gailand*, *Rynland*, *Delfland*, and *Schieland*. *South-Holland* is subdivided into the Bailiwick of *Dort*, the Land of *Voorn*, the Islands of *Goeree* and *Overflackee*, according to modern Geographers; but according to the Archieves in their Chamber of Accounts, the Province is divided, 1. Into *North-Holland*, the Dyck-Graviat of *Rynland*, *Delfland*, *Schieland*, and the Country of *Worden*. 2. Into *South-Holland*. 3. Into *Voorn*. 4. Into *Kennemerland* and *West-Friesland*, which, according to this Division, is very improperly called *North-Holland*. The whole Province it said to contain 23 Wall'd Towns, and 400 Villages; but *M. de Fer*, in his *Methode Abregée*, reckons 32 Cities, 5 great open Towns, 407 Villages, 6 Fortresses, and 12 Islands; of which in their proper Places.

Their Ancient GOVERNMENT.

Grotius, in his Book *De Antiquitate Reipub. Batavice*, endeavours to prove the Freedom and Independency of this Province in all Ages, not excepting the Time when the Franks enlarg'd their Kingdom in those Parts. There's sufficient Ground indeed from History to say, that they were rather Allies than Subjects to the Romans; but Authors are not agreed that they preserv'd their Liberty after the Declension of the Roman Empire. The *Atlas Historique* gives us the Names and Chronology of 35 of their Counts; of the chief of whom we shall give a short History, after premising what Grotius has said of their ancient Constitution in 12 Heads: 1. If the Principality descended to a Female, she was not to marry without Consent of the States. 2. None but Natives should be Senators, Treasurers, or Prætors. 3. The States should meet when and where they pleased, without being obliged to ask Leave of the Prince. 4. That no Tax should be imposed, or any one exempted from paying them, without Consent of the States. 5. That no War, Offensive or Defensive, should be undertaken without their Approbation. 6. The Prince in his Letters should use the Dutch Language. 7. He should not coin or alter Money without Consent of the States. 8. He should not alienate any of his Dominions. 9. He should not assemble the States out of their own Country. 10. If he stood in need of Money, he should desire it of the States in Person, and levy none but what they granted. 11. Justice should be administered by the ordinary Judges. 12. If the Prince decreed or commanded any thing contrary to their ancient Customs and Laws, no Man should be obliged to obey him.

The Counts of Holland were also Sovereigns of Zealand: The first of 'em was Thiery or Theodorick, by some called Diderick, and Childrick, Son to Sigibert D. of Aquitain, who they say was of Trojan Race; and that the Emperor Charles the Bald being informed, about 863, that Holland was infested by the Danes, he did, at the Request of Pope John VIII. confer the Principality upon Thiery, who coming thither with an

Army, subdued the Frizons and Danes, and took Possession of the Country, against the Will of many of the People, who therefore rebelled, and drove him out; but being restored by the Emperor's Assistance, he punished the Rebels, and married, says *Scriverius*, Jenna (as some will have it) Daughter to Pepin, with whom he lies buried at Egmond. His Son Theodorick succeeded in 903, defeated the Frizons in two Battles, rebuilt the Monastery of Egmond they had burnt down, married Hildegard, Daughter to Lewis of France, died in the 50th Year of his Reign, and was buried at Egmond.

He was succeeded by his Son Arnolph, or, as the *Atlas* says, Thiery III. about 947, who reign'd but 5 Years, being slain, with the greatest Part of his Nobility, by the Frizons, and buried at Egmond. *Scriverius* makes Thiery III. Successor to Arnolph, and says, he took Adebold the Bishop of Utrecht in Battle, that had stir'd up the Frizons against him; whom having reduced, he gave Friesland to his youngest Son Florent; after which he went on a Pilgrimage to the Holy Land, died as he return'd about 947, in the 46th Year of his Reign, and was buried at Egmond, where long after, the Epitaphs of the 3 Thieries were found in Monkish Rhyming Latin. The *Atlas* makes Arnolph his Successor in 988, and says, he was succeeded by Thiery IV. in 993, who having in a Tournament at Liege kill'd the Bishop of Cologne's Brother, fled to his own Country, and was pursued by the Germans, who seiz'd Dort; but being surpris'd by the Earl, he kill'd them, with 400 Persons of Quality, and next Morning was shot into the Thigh with a poison'd Arrow by a sculking German as he pass'd carelessly thro' the Street, which on that Account is still called the Earl's Street, and died two Days after, in the 9th Year of his Reign. The *Atlas* makes Thiery V. his Successor in 1039; but *Scriverius* makes it Florent his Brother, who succeeded in 1049, and by digging Pits in the Ground, cover'd with Hay and Straw, routed the Archbishop of Cologne, the Bishop of Liege, and the Count of Lorrain. Four Years after he defeated the Germans again; but in his Return was surpris'd, defeated and slain, by the Earl of Cnik, at Hemert, betwixt the Maes and the Waal, in the 14th of his Reign over Holland, and the 21st over Friesland,

S f f f f

and

and interr'd at *Egmond*. His Widow *Gertrude* of *Saxony* govern'd for some Time as Guardian to her Son *Thiery*, and afterwards married *Robert*, surnam'd the *Frizon*, because he conquer'd that People; and in 1066 he assum'd the Government of *Holland*, which he manag'd with great Integrity; but was drove out by *Godfrey*, surnam'd the *Crook-back'd*, Count of *Lorraine*, and the Bishop of *Utrecht*.

Godfrey assum'd the Government in 1070, built *Delft*, and subdued the *Frizons*, who besieg'd him afterwards in *Alcmaer*; but the Bishop of *Utrecht* rais'd the Siege, and defeated the Enemy: After which, a Servant of young *Theoderick* kill'd *Godfrey*, by thrusting a Javelin up his Fundament as he was easing himself in a Room over a Ditch.

Thiery V. or, as some reckon him, the *Vlth*, succeeded in 1075, reduced the Bishop of *Utrecht* and the *Frizons*, whom he defeated in two Battles, and spar'd neither Age nor Sex.

He was succeeded by *Florent the Fat* in 1092, who was a peaceable and religious Prince, and died in the 3d Year of his Reign.

He was succeeded by his Son *Thiery VI.* or *VII.* in 1123. He defeated the *Frizons*, and afterwards besieged the Bishop of *Utrecht* in that City; but upon the Bishop's putting on his Pontifical Habit, and appearing at the Head of his Clergy in order to excommunicate *Thiery*, that Prince beg'd his Pardon, and retir'd. In his Time a great Part of *Utrecht*, with the principal Churches, was burnt. He died in the 40th Year of his Reign.

Florence III. succeeded him in 1163, who married the K. of *Scotland's* Daughter, was reconciled to the Bishop of *Utrecht* by the Emperor *Frederick*, defeated the *Frizons*, who invaded his Country, and burnt *Alcmaer*, for which he made them pay a prodigious Sum. After this, he went to the Recovery of the *Holy Land*, and died at *Antioch* in the 27th Year of his Reign.

He was succeeded by his Son *Thiery VII.* or *VIII.* He had War with his Brother *William*, which was ended by granting him *East* and *West Friesland* in Fee. He had afterwards War with the Duke of *Guelder*, invaded *Brabant*, and took *Boisleduc*, with a great many Prisoners of Quality; but in his Re-

turn was defeated and taken by the D. of *Lorraine*, who forc'd him to repair the Damages he had done to *Boisleduc* before he set him at Liberty: After which he died at *Dort*, in the 13th Year of his Reign.

He was succeeded by his Daughter *Ails*, who dying without Issue in a Year after, her Uncle *William I.* succeeded in 1204. He had War with the Bishop of *Utrecht*, but purchas'd a Peace by his Money, rigg'd out a Fleet, and landed in *Scotland* to possess himself of that Crown, upon the Death of the King his Uncle, to whom he pretended to be next Heir; but hearing that the Count of *Loos* had invaded *Holland*, he return'd, and died in 1223. The *Scots* Histories make no Mention of his Expedition to that Country; therefore we leave the Reader to his own Judgment about it.

He was succeeded by his Son *Florent IV.* a valiant Prince. The Countess of *Clermont* having heard much of his Courage, and being desirous to see him, she prevailed with her Husband to appoint a solemn Tournament, to which it being usual for all fam'd Soldiers to resort, *Florent* came thither, and by his gallant Deportment did so charm the Countess, that could not forbear praising him before her Husband; who being jealous at it, enter'd the Lists with some arm'd Men, and barbarously murder'd him in the Flower of his Age, and 12th Year of his Reign.

He was succeeded by his Son *William II.* in 1235, who was a Warlike Prince, and on that Account chosen K. of the *Romans*, when scarce 20 Years old. He appointed the Court at the *Hague* for determining the Law-Suits in *Holland* and *Zealand*. He sent his Brother *Florent* against the *Flemings* that had invaded his Country, and defeated them in a bloody Battle. K. *William* spar'd the Lives of the Prisoners, but sent them home naked. He went afterwards to *Italy*, where he received the Imperial Crown from Pope *Innocent*, and on his Return was received with great Respect in the Empire. He defeated the *Frizons* in a Battle; but as he was marching against them a second time, the Ice broke under his Horse, and he was slain by some of the Enemy that lay concealed among the Oziers in 1255.

He was succeeded by his Son *Florent V.* who obtained two Victories over the *Frizons*,

sons, and compos'd his Differences with the Earl of *Flanders*, by marrying his Daughter. He built stately Palaces in several Cities of *Holland*, and is said to have gone over into *England*, with a Design to pursue his Title to *Scotland*; but returned, because the *Flemings* had invaded his Country. In his old Age, he forc'd the Wife of *Gerard van Velsen*, his Favourite, who had disoblig'd him, by refusing to marry his Concubine; for which *Velsen*, with his Wife's Father and others, surpris'd and kill'd him in the 41st Year of his Reign. *Velsen* being afterwards taken, was put into a Hogshead full of sharp Nails, and roll'd up and down the Streets of *Leyden* till he died. Some others of the Conspirators were also put to Death, and the rest died miserably in Foreign Parts.

John I. Son to *Florent*, succeeded in 1296. He was in *England*, where he had married the King's Daughter, when his Father died; but hasten'd over, defeated the *Frizons* in two Battles, and died without Issue at *Haerlem* in the 4th Year of his Reign, Ann. 1299.

He was succeeded by *John II.* of *Hainault*, who was Son to his Grandfather's Sister. He was 5 Years Earl of *Holland*, defended his Brother, who was Bishop of *Utrecht*, against his Enemies; and his Son *William* defeated the *Flemings* by Sea, where they lost 10000 Men in one Battle. The Writers of those Times say, there were strange Apparitions of Fleets on the Sea before this Action. *John* died in 1304.

He was succeeded by his Son *William III.* who for his Piety, Justice and Mildness, had the Sirname of *Good*; as his Brother *John*, who was kill'd by the *Flemings*, was for his contrary Temper call'd, *John without Mercy*. In *William's* Reign, *Holland* was afflicted with Plague and Famine, which destroyed many of their People. In 1328, *Philip of France*, by the Assistance of *William*, obtain'd a great Victory over the *Flemings*. There's a memorable Story of an Act of Justice done by this good Earl not long before his Death upon the Bailiff of *South-Holland*, who had taken away a poor Man's Cow, (he refusing to sell her, because she gave such a prodigious Quantity of Milk, that his whole Family subsisted thereby) and in Exchange sent him another, nothing comparable to her; whom the Earl com-

manded in the first place, for the Wrong done, to pay the Countryman 100 Crowns; and afterwards, for the Injury done to himself and his Government, to be beheaded. He advis'd his Son *William*, upon his Death-Bed, to maintain Peace with his Neighbours, and lay no grievous Impositions upon his Subjects. He reign'd 33 Years. He had by his Wife *Jane of Valois* 3 Sons, *William*, *Lewis*, and *John*; with 4 Daughters, *Margaret* Dutchess of *Bavaria*, and Empress, *Joan* Countess of *Juliers*, *Philippa* Queen of *England*, and *Elizabeth*.

He was succeeded by *William IV.* in 1337, died without lawful Issue, leaving only one natural Son behind him. He was very zealous for the Propagation of the Christian Religion: Upon which Account he assisted the King of *Spain* in Person with a considerable Army against the *Moor*s; and by his Valour against those infidels, gain'd immortal Fame. When he return'd, he besieg'd *Utrecht*; and being ready to take and sack the Town, was perswaded by his Nobles to agree to a Peace, or rather Truce, upon Condition that 500 of the principal Citizens should come forth with their Heads and Feet bare, and upon their Knees beg his Pardon. After this he fought the *Frizons*; but engaging too boldly, was slain not far from *Staveren*.

He was succeeded by *Margaret*, Daughter to *William the Good*, and Wife to *Lewis of Bavaria* the Emperor. She came with a great Retinue into *Holland*, and having taken Possession, resign'd the Government to her Son *William*, who was to allow her an Annual Pension; but he afterwards return'd her the Provinces: Upon which there happen'd War between *Holland* and those of *Utrecht*, wherein the latter were worsted. In Revenge for her Brother's Death, she confiscated and put to publick Sale all the Goods of the *Friesland*ers that were found in *Holland*.

Her Son *William V.* Earl of *Holland*, *Zee-land*, and *Hainault*, and Lord of *Friesland*, succeeded. The Bishop of *Utrecht*, provok'd by his Hostilities, invaded *Holland*, and burnt two Towns. In his Time a great Part of *Haerlem* was burnt down; but the Incendiaries never discover'd. After he govern'd 7 Years, he fell mad, and kill'd *Gerard of Wateringen*, a Person of Noble

Extraction, for which he was secur'd, and the Administration taken from him.

He was succeeded by *Albert I.* about 1368. He was opposed by the *Cabillaustin* Faction, who were for setting up the Lady *Matilda*, Wife of the distracted Earl. *Albert* besieg'd the Town of *Delph* for burning some of his Castles, and setting at Liberty some Persons he had imprison'd, he compell'd them to make Reparation, and to dismantle the greatest Part of their Town. He had Wars with the *Gueltrians* and *Frisians*, govern'd 30 Years in his Brother's Name, 16 in his own, died, and was interr'd at the *Hague* in 1404.

His Son *William VI.* succeeded, made War with the D. of *Guelderland*, with whom he afterwards maintain'd a strict Friendship. He got his Daughter *Jaqueline* recogniz'd Heiress in an Assembly of the States, and died in 1417.

Jaqueline succeeded; and soon after *William* of *Arkel*, a powerful Lord, who had often bid Defiance to the Earls of *Holland*, surpris'd the Town of *Gorcum*, where the Lord of *Brederod* besieg'd him for *Jaqueline*, and recover'd it; but both of 'em lost their Lives in the Action. *Jaqueline* married the Dauphin of *France* for her first Husband; who dying in a Year after, she married *John D.* of *Brabant*. *John D.* of *Bavaria*, her Father's Brother, having the Emperor's Consent, claim'd the Province, because his Brother left no Issue-Male: Upon which *Dort* and several other Cities revolted to him. He continued as Guardian to his Niece for 3 Years, who falling at Variance with her Husband, a Divorce ensued: But after *John* of *Bavaria's* Death, the *Hollanders* renounc'd *Jaqueline*, and chose her Husband the D. of *Brabant*. She afterwards married *Humphry D.* of *Glocester*; and upon his Death, *Francis* of *Borfales*, the D. of *Brabant* being still alive; but finding no Hopes of Issue, she resign'd *Holland*, *Zealand*, *Hainault*, and *Friesland*, to her Cousin *Philip* of *Burgundy*, and soon after died at the *Hague*, in the 36th Year of her Age.

Philip of *Burgundy* took Possession, besieg'd *Calais*, then in the Hands of the *English*; but miscarried in his Design. He was the first that instituted the Order of the *Golden Fleece*; and by his Assistance, *Lewis* the Dauphin was advanc'd to the Crown of

France. One *John* of *Koeslein*, whom he advanc'd from the *Dunghill* to be his Favourite, attempted to poison him, which was discover'd by the Fellow he employ'd to buy it, because he did not give him the promis'd Reward: Upon which he was beheaded; and the Fellow having own'd, that he would not have discover'd it had he paid him the Money, he was also put to Death. *Philip* died at *Bruges* in the 34th Year of his Reign.

His Son *Charles the Bold*, formerly called Count of *Charolois*, succeeded him in the Dukedoms of *Burgundy*, *Brabant*, *Limburg*, and *Luxemburg*, the Earldoms of *Flanders*, *Artou*, *Hainault*, *French County*, *Holland*, *Zealand*, and *Namur*, the Marquisate of the Empire, the Lordships of *Friesland*, *Salins*, and *Mechlen*. He took and almost ruin'd the City of *Liege*, and drove the D. of *Lorrain* out of his Country, which was recover'd by the Assistance of the *Swissers*, who defeated *Charles*, and kill'd 16000 of his Men near *Morat*. He afterwards laid Siege to *Nancy*, the Capital of *Lorrain*, where being betray'd by *Compobacchio*, an *Italian*, in whom he trusted so much, that he hanged a Gentleman who reveal'd the Conspiracy. He was kill'd, and his Army routed. He was one of the greatest Princes of his Time, and terrible to *Lewis XI.* of *France*, who had a Hand in his Ruin. He was so successful at first, that his Subjects reckon'd him invincible, and would not for a long Time believe he was dead, but gone on a Penance to *Germany*, where, *Naucleus* says, a poor Beggar receiv'd considerable Alms under the Notion of being that Duke.

He was succeeded by *Mary* his only Child, at 14 Years of Age. She was courted by the Archduke *Maximilian*, the Dauphin of *France*, the Prince of *Wales*, and other great Princes, whom her Father kept in Suspence. Her Inclination was to the Dauphin, afterwards *Charles VIII.* but his Father *Lewis XI.* making too much Hast to seize Part of her Dominions on her Father's Death, she was so much provok'd at it, that she married the Archduke *Maximilian*, Son to the Emperor *Frederick*, with whom her Father had formerly been in Treaty about it, and procured her Consent by a Letter to the Archduke.

Maximilian, as soon as married, defeated the *French* in *Flanders*, and took *Tournay*. He died in 1519, and was succeeded by his Son *Archduke Philip*: He by his Son the Emperor *Charles V.* and he by *Philip III.* who was the last Count of *Holland*, and the second of that Name K. of *Spain*, in whose Time the *Dutch* revolted; of which we have already given an Account.

Their chief Towns.

A *Amsterdam*, the Metropolis of the United Netherlands, lies in *Amstelland*, in Long. 23. 30. Lat. 52. 23. 10 Miles E. from *Haerlem*, 18 N. E. from *Leyden*, 27 N. E. from *Rotterdam*, and 18 N. W. from *Utrecht*. It takes its Name from the Dam or Sluce on the River *Amstel* that runs thro' it, and falls into the *Ze*, a River, or rather an Arm of the S. Sea, which lies on the N. Side of the Town, and serves as a Port to this City, which is one of the richest and greatest Trading Towns in the World. 'Tis scarce mentioned in History before 1399, it being in those Days only a Village of Fishermen. The Ground on which it stands being Moorish, the Foundations were laid upon Masts, and other large Pieces of Timber, drove by vast Force, and at a prodigious Expence, into the Earth. It has received considerable Additions at different Times, as the Curious may see by *De Witt's* Maps of it. In 1342, 'twas only a small Town on the E. Side of the *Amstel*, with one Street in the middle, and 5 or 6 *crosses*. In 1400, 'twas enlarged as much more on the W. of that River. In 1482, 'twas increas'd so much on both Sides, that *Mary of Burgundy* thought fit to encompass it with strong Brick Walls of extraordinary Workmanship, as appears by two of the Gates still remaining, the rest of those Fortifications being demolish'd, to make Way for its further Enlargement. In 1585, it became the chief Seat of the Trade of those Provinces, and was much enlarged. In 1601, 600 Houses were new built by private Persons. In 1612, 'twas reckon'd 9100 Paces in Circuit: The Butchery, Guard-House, and the stately *Haerlem* Gate, being built about that Time; as was the New Church some Time before, and the

W. and N. Churches some Time after. In 1656, they took in a very large Space of Ground, which is since built up, and the whole inclos'd with new Walls of Brick, Gates of Stone, and a large Ditch all round, which gives it the Form of a Semi-circle. 'Twas above 60 Years ago reckon'd to contain 54000 Houses; whereas *Paris* then contain'd but 46000: And about 140 Years ago, an *English* Traveller reckon'd it full as big as *Venice*, and half as big as *London*; since which, it has received such considerable Additions and Improvements, that 'tis justly reckon'd one of the greatest and finest Cities in the World. Sir *W. Temple* says, that call'd the *New Town* is so spacious for Extent, and its Buildings so much more sumptuous and beautiful than those of the Old Town, that it must needs have diverted a great Part of that Wealth which was formerly applied to Trade. The City is exceeding populous, and neatly kept; the Streets are large, with Canals of Water in the Middle, over which there are many Stone Bridges, beautify'd with Iron Rails and Ballasters. The Houses are all of Brick or Stone, and very beautiful, especially those in the Streets of the New Town, call'd the *Lords, Kings, and Emperors* Char-nels, where many of the Houses are of Freestone, adorn'd with Columns and Chapters of the *Corinthian* Order. These three, with those call'd the *Haerlem* and *Cinghel* Street, are the chief of the City. Upon the Approach of the *French* in 1672, the Citizens willingly agreed to the spoiling of their fine Gardens for raising new Fortifications, which were made very regular and strong; and at the same Time a Dike being cut on the Side of the Land, they had fresh Water convey'd jinto the Town, which they very much wanted. The particular Buildings of most Note are, 1. The *Old Church*, a large and majestick Structure of the *Gothick* Order. 'Twas founded in 1360; but the fair Steeple, now its great Ornament, was not finished till 1566. In this Church was buried their famous Admiral *Heemskerck*, who defeated the *Spaniards* in the *Straights* in 1607, when he lost his Life in the Action, for which he has a noble Monument erected by the States, with a lofty Inscription. 2. The *New Church*, so call'd to distinguish it from the other. 'Twas founded a-

bout

bout 1414, burnt down in 1643, but soon rebuilt with much greater Splendour. At the same Time 6334 tall Trees were drove into a Plat of Ground of 100 Foot square, to raise a Tower for it of extraordinary Height; but the Foundation not being reckon'd strong enough, the Tower was not rais'd above 40 Foot high. In the Windows of this Church, the Emperor *Maximilian* is represented receiving a large Sum from the City, for which he gave them an Imperial Crown as a Crest to their Arms, being 3 *St. Andrews* Crosses, in 1490. In this Church Admiral *De Ruyter* lies buried, and has a sumptuous Monument erected for him by the States. It has also a Skreen before the Chancel of cast Brass, which is kept very beautiful and bright; and they have an Organ (supported by rich Marble Pillars) of extraordinary Workmanship, with a vast Number of Pipes, which imitate melodious human Voices. 3. The *West Church*, is a magnificent Structure, with a beautiful Tower, and a large Imperial Crown of Copper on the Top, 260 Foot from the Ground. 4. The *South Church*, is also a stately Building, with a Steeple 237 Foot high. They have several other Churches, which are very neat, but not comparable to these for Magnificence. *M. Ray* says, They have 24 establish'd Ministers belonging to the City; That the Pulpit of the *New Church* is valued at 1000*l.* Sterling; and that there's a sumptuous Monument there for Admiral *Van Galen*, who signaliz'd himself against the *Dunkirkers*, the Pirates of *Barbary*, and defeated the *English Squadron* at *Leghorn* in 1653. 5. The *STADT-HOUSE*, *Dr. Brown* says, is the noblest Structure in all this Country, and one of the finest in *Europe*. 'Tis built of Free-stone, 110 Paces in Front, which is more than *St. Peter's* at *Rome*, 81 Paces deep, and 116 Foot high. 'Tis adorn'd with Pillasters, Chapters, and Cornishes, of the *Corinthian Order*. *Mr. Ray* says, the Foundation cost 100000*l.* Sterling, it being built upon 13659 great Piles of Timber drove into the Ground; and some compute the Charge of the whole at 300000*0*. *Dr. Northleigh* says, 'tis adorned on the Outside with Statues and History in *Relievo*, besides the *Corinthian Pillars*; but the *Portico* is not answerable to the Magnificence

of the rest. At the Entrance on the Right Hand, lies Hall where the Malefactors receive their Sentence, adorn'd with Marble Statues hanging down their Heads, as if they bewail'd the Fate of the Criminals. The Floors are cover'd with Marble, and the Roofs finely carv'd, painted and gilt. The great Hall is a noble Room, adorn'd on all Sides with fine Marble Pillars of the *Corinthian Order*; the Roof finely painted, and the Floor of Marble, of surprizing Workmanship; for the Stones, without any other Lines but the joining of 'em, represent both the Celestial and Terrestrial Globes. The Ground-Rooms, which are us'd for the Offices belonging to the Bank, and the Prisons, &c. are 20 Foot high, and the first and second Stories 30 Foot high each: The Gallery and Door-Cases of the Offices are adorn'd with Marble, carv'd with exquisite Art: And all the Chambers have Marble Floors, with curious Painting on the Sielings and Chimney-Pieces. Over the Middle of the Front, which is somewhat more advanc'd than the rest of the Work, there's a Bevel above the Cornish, the Face of which is Marble, with a *Basso-Relievo* of curious Carving, a large Statue of Brass on the Top, and one more on each Side, representing Justice, Fortitude, and Plenty. Behind them, there's a handsome Tower in Form of a Pavilion, supported by Pillars, in which there's a fine Chime of Musical Bells. On the Back Front, there's another Bevel with *Basso-Relievo*; and on the Top of it, a large Atlas in Brass, bearing on his Shoulders a Copper Globe of 10 Foot diameter, which *Dr. Brown* says is much larger than that of *St. Peter's* at *Rome*, or than any of those at *Florence*, *Morocco*, or any *Turkish Mosque* that ever he heard of. This noble Structure was begun in 1648, and is scarce yet finished, at least as to the Paintings and other Ornaments. The Magistrates had their first Meeting in it the 23d of *April*, 1655. There's in it an Image of the Blessed Virgin, on a Pedestal of Black Marble, with a Latin Inscription, importing, that the first Stone was laid the 28th of *October*, 1648, when the War, which they had carried on above 80 Years for their Religion and Liberty against 3 *Philips* of *Spain* by Sea and Land, almost in all Parts of the World, was happily

pily concluded, and their Liberty asserted, such and such Persons being Consuls. In this House are kept their Courts of Judicature; and, which is an odd Custom, the Doors of such City Tenants as do not pay their Rent at the Day appointed, are brought hither, and not restored till they have made Satisfaction. In a Vault under the Stadthouse, is kept the *FAMOUS BANK OF AMSTERDAM*, supposed to be the greatest Treasure of the World. Sir *William Temple* says, That there's constantly an Appearance of infinite Riches there, such as Bars of Gold and Silver, Plate, and numberless Bags, which are said to be Gold and Silver, and may be so for ought that can be discovered by such as have only a transient Sight of them. The Burgomasters alone have the Inspection of it; and no particular Account being taken from Age to Age of what passes in and out, 'tis impossible to make any Guess at the Proportion between the real Treasure and Credit of it, which is not to be valued, being the same with that of the whole City, whose Stock and Revenue equals that of some Kingdoms; and they are bound to make good all the Money brought into it. 6. The *EXCHANGE*, a very stately and magnificent Structure, much after the Manner of the *Royal Exchange* at *London* before the Fire, but of an oblong Form. 'Tis built of Brick, with Pillars of Stone along the Walks; and in the Shops above, vast Quantities of all sorts of Goods are exposed to Sale. 'Tis exceeding large, frequented by an incredible Number of People and Merchants from all Nations. *Misson* says, 'tis 200 Foot long, and 120 broad: The Galleries above are supported by 46 Pillars, but not so spacious or many, as those of the Exchange of *London*. 7. Their *Spin-house*, for the Correction of loose young Women, and such as are taken walking in the Streets at Night, or in suspicious Places. Sometimes the Citizens send their Daughters hither for Chastisement, for which they have particular Chambers allotted. 8. Their House of Correction for idle Men, especially Youth, which was formerly the Nunnery of *Santa Clara*, but converted to this Use in 1595; as was that of *St. Ursula* for Correction of Females in 1596. At the Entrance of the House,

there are two Lions bridled; with this Inscription:

Virtutis est domare quæ cuncti pavent.

A very proper Emblem, since 'tis designed for curbing of the Vices of those who refuse Obedience to their Masters or Parents, and live disorderly. Such as come hither, are forced to earn their Bread, by rasping *Brazil Wood*; and if they cannot be brought to it by Blows, are put into a Cellar, where Water is gradually let in upon them, which they must pump out or drown. Some are put into this House during Life, and others longer or shorter, according to the Nature of their Crimes. To curb that barbarous Practice among their common People of slashing one another with Knives, there's a Law, That such as draw a Knife for that End, shall either pay down 100 *Livres*, or work 3 Months in this House. 9. Their Hospital for Children, where 600 Orphans are educated, and well look'd after. 10. Their *Dolhuys*, for delirious People, like our *Bedlam*. They have two other Hospitals, where above 2400 Children are maintain'd, and taught to read and write. They have two more, one of which is for decrepit or old Men, and another for 300 old and decrepit Women, besides an Hospital for the Sick; their Pest-house, a stately Building, founded in 1631; and another Hospital where all poor Travellers, without Distinction, are lodg'd and entertain'd for 3 Nights, and no longer. In order to defray the Expence of so many charitable Foundations, besides what's given towards them by well-dispos'd People, they impose several little Taxes, as a Penny upon every one that passes through the Gate after Candle-light, half the Money receiv'd at the Play-house; and upon Appointments at Taverns, or any other Publick House, they have Boxes to put in Forfeitures from those that do not keep their Time, for the Use of the Poor. Dr. *Northleigh* says, there's scarce a Window where you do not see a Box, with, *Remember the Poor* on it; and at every Bargain, something is reserv'd for that Use, which is collected Quarterly by the Parish Officers, who also on every *Wednesday* of the Month collect the Charity of the Inhabi-

tants at their Doors; and the Officers of the Hospitals do the same twice a Week. He adds, That the Mountebanks, Rope-dancers, and Musick-Booths, pay the 3d Penny; and 'tis reckon'd, that there's 80000 Guilders *per Annum* collected at the Play-house. By all which, with what's collected in Churches, and the appropriating of the Revenues of some former Monasteries, they maintain 20000 Poor Annually; and their Hospitals are so large, that some contain 500, some 1000, and others 1500 Persons. 10. Their publick *PAWN OFFICE* or *Lumbard-House*, is a mighty Convenience to this great City, for it prevents Extortions and Thefts; and as all forfeited Goods are sold here by open Sale, the Owners may buy their Goods again. Fraudulent Bankrupts are forc'd to pay Fines, and undergo Bodily Punishment; and such as are prov'd to be guilty of Perjury in giving an Account of their Estates, are put to Death. But on the other hand, Creditors are oblig'd to maintain their Debtors if they put them in Prison; and 'tis a Capital Crime for the Debtors to defraud their Creditors. Dr. Northleigh says, the publick Licences they give to Musick-Houses, where Men and Women make lewd Bargains, is what's most blameable in the Government of that City, and exceeds what's practis'd at Rome it self. 11. They have a *Schola Illusttris*, where in the Summer 6 Professors read Lectures in their several Faculties. It was formerly the Church of St. *Agnus's* Monastery, and converted to this Use in 1631. They have likewise a small Anatomical Theatre. 12. Their *EAST-INDIA HOUSE* contains an incredible Store of Spices, and other *Indian* Commodities. 13. Their *MAGAZINE* or *ADMIRALTY-HOUSE* is a stately large Brick Building by the Water-side, in the N. E. Part of the City. It is 3 Angles of a Square, in the Middle of which there's a Yard for building Men of War. The Front is 220 Foot long, and the Wings 200. The Rigging, Stores, and Arms, belonging to their Men of War, are kept in very good Order in several Chambers. 'Twas built in 1655, surrounded with a Ditch for its greater Security; and 72 Men of War lie near it. On the Top of this House, as in most others of Note in this City, they

have a Cistern to receive Rain, to supply the Defect of Spring-Water, which is very scarce here. A little E. from this House, stands the *EAST-INDIA COMPANY'S MAGAZINE*, which is a stately Row of Brick Buildings: Behind which there's a Yard with Docks for building Ships, a Rope-Yard, and Shops for Anchor-Smiths, and others concern'd in building of Vessels. Here they lay up their Stores and Wares, which they have not Room for in their other Warehouses, and in the *East-India* House that lies in the middle of the City. 14. Their Sluces are Works of prodigious Expence and Art, which deserve a Traveller's View. They were built to prevent the overflowing of their Cellars and lower Stories, which frequently happen'd when a strong N. E. Wind drove the Water of the *Zuyder-Sea*, and the River *Z* or *N*, out of their Channels. These Sluces are built at the Mouth of the 4 Channels that open to the *Z*, are of solid Brick-work, 10 or 12 Foot thick from the Bottom of the River to the Surface of the Earth, and built cross the Channel, leaving only a Passage for Ships, which are afterwards shut up with strong Flood-Gates, that are capable at all Times to resist the Force of the Water. 15. Their *West-India* House is a stately Building. 16. The *Jews* Synagogue is a very fair Structure, they having the Liberty of their Worship here, being allowed to live in a particular Quarter of the City, and a Walk for themselves on the Exchange. They live richer here than any where else, and are reckon'd about 20000 in Number. Dr. Brown says, they had Persons of Learning and other good Qualifications among them; and that he saw them perform Circumcision thus; They thrust a Probe betwixt the Glans and Præputium, dilating it so, that both the inward and outward Skin are drawn forward, and cut by a certain Instrument; after which the remaining Skin is immediately put back, the Blood stop'd, and the Plaster applied; and those present sung all the while, to drown the Cries of the Infant. Dr. Northleigh says, they have two Synagogues here, the worst of which is more sumptuous than those at Rome and Venice; and that they have Schools to educate their Youth in their Language and Religion. *Misson* says, there remains in this

this City a Convent of Nuns called *Beguines*, consisting of Maidens and Widows who have no Children, and need no other Qualification to be admitted, but a Certificate of their good Behaviour, and of having a Competency to live upon by themselves, or in Society with others of the Sisters, as they think meet. There were when he wrote about 130 of them. The Convent is built like a little Town, with a Wall and Ditch round it, and a Church within it, where they are obliged to perform their Devotions at stated Hours. They wear an odd black Habit, receive and pay Visits, and may quit the Convent when they please. He adds, That because the City is founded on Piles of Wood, they allow no Coaches there, but to some Physicians and Strangers of Note; and instead of them, use Sleds made like Coaches, but slow and uneasy. He computes the Number of Inhabitants to be 200000, and says, it may vie with any City in the World for Riches and Trade. Their standing Militia some Years ago consisted of 8250 Men. Mr. Ray says, That none but those of the establish'd Religion are allow'd Steeples or Bells in their Churches. Near the *Jews* Quarter, they have a Physick Garden, well stor'd with curious Herbs and Plants. This City has produc'd many famous Men in all Faculties. *Bleau* says, That in his Time the Presbytery or Consistory of *Amsterdam* consisted of 15 Ministers, 16 Elders, and 24 Deacons; one half of the two last being changed every Year. In 1685, their Bill of Mortality amounted to 6245. The Air of the City is not wholesome, and they were formerly (says Dr. *Northleigh*) much infested with the Plague; but not since 1663, that they laid aside their Wells, and made use of Rain-Water in their stead. We refer the Curious, who would know more of this City, to *Bleau's Theatrum Urbium*. Their Government we have mentioned before, as a Specimen of that of the other Cities in the *United Provinces*.

Having begun with *Amsterdam*, because 'tis the principal City of the *United Provinces*, we come next to *Haërlem*, and from thence Southward along the Coast round the Province, according to the Course of the Map, for the Ease of such Readers as think fit to compare our Description with the Map.

2. *Haërlem*, in the District of *Rhinland*. Some derive the Name from the *Heruli*; others from the Dutch Words *Eere* and *Lemmer*, which signify Glory purchas'd with the Sword, which is Part of its Arms. This City lies 10 Miles W. from *Amsterdam*, and 5 S. from the Sea. 'Tis large, populous, and pleasant: The Houses are of Brick, many of 'em splendid, and all of 'em neat: The Streets are large and even, and some of 'em have Canals. The Town is well fortified with strong Walls, and a broad Ditch; but the neighbouring Sand-Hills are so high, that they cannot be drown'd with its Sluces, which lessens its Strength. 'Twas burnt down in 1340, but rebuilt and enlarged beyond the River *Sparn* in 1400. 'Twas made a Bishop's See in 1559. The Cathedral, now call'd the great Church, is the most beautiful, strong and spacious, of that kind in the Province. Among others, here's the Epitaph of *Schoonus* their Schoolmaster, who, for his *Commedia Sacra*, was call'd the *Tarentius Christianus*. It had formerly a strong Castle, in which they besieged the Lord of the Place for his Tyranny, which had cost him his Life, but that his Lady capitulated to surrender, on Condition that she should be allowed to bring out as much of her most valuable Goods as she could carry on her Back: Upon which she brought him out betwixt her Shoulders, sav'd him from their Fury, and left the House to their Mercy. Their chief Trade is in weaving Damasks, Velver, Sattin, Taffety, with other Silk Stuffs, and Linen, the finest and whitest in the Province. They have also a considerable Trade in Thread, Tape, and whitening of Cloth, the Water of their Lake being the best for that Purpose of any in the Country. Some Time after the *Spaniards* became possessed of these Provinces, there were reckoned 25000 People in this City of full Age employed in Trade and Manufacture. Their Town-House and Burchery are handsome Structures. We have formerly taken Notice of their Controversy with the City of *Mentz* about the Invention of Printing, which is not without Reason ascrib'd to *Lawrence Coster*, one of their Citizens; over the Door of whose House, which stood about the middle of the City, there was a Latin Inscription, importing, that he invented

vented it in 1440. There was likewise a Statue erected for him on that Account, say *Boxhornius* and *Bleau*; but they were both removed by a late Proprietor, because they drew so many People to gaze at his House.

Their Government is by 4 Consuls, 7 *Elchevias*, a Burgomaster for Life, and a Council of 32. 'Tis famous for the Siege it held out against the *Spaniards* for 10 Months, says *Strada*, in 1573, when the Town was attacked with as much Violence, and defended with as great Obstinacy, as ever was known. The Townsmen were reduc'd to eat Leather, Grass, and the vilest sort of Animals. They kept a Correspondence with the Pr. of *Orange* by Carrier-Pigeons; which being discover'd at last by the lighting of one of 'em upon a Tent of the *Spanish* Camp, the *Spaniards* shot all the Pigeons they saw about the Town, and prevented it. One *Kamava*, a Woman of the Town, commanded a Regiment of Women, who help'd in defending the Works, repairing the Breaches, and frequently sallied upon the *Spaniards*. The latter having shot two Men's Heads into the City, signifying that one of 'em was *Philip Cemin*, who came to relieve the Town with 2000 Men; and that the other was *Anthony Painter*, who betray'd *Mons* to the *French*. The Citizens, by way of Reprisal, put the Heads of 11 *Spaniards* in a Barrel, which they threw over the Walls to the D. of *Alva*, with a Letter, signifying that they had paid him 10 Heads, that he might have no further Pretence of making War upon them for the Tenth Part, alluding to a Tax of the Tenth Part of every Man's Estate demanded by the *Spaniards*, the Refusal of which was one of the Occasions of the War; and told him, That since they had been long in his Debt, they had sent him the 11th for Interest. Being forc'd at last to surrender, on Promise of being secure from Plunder and other Violence, the *Spaniards*, says *Bleau*, put 2000 of 'em to Death in cold Blood, contrary to the Capitulation. The Soldiers in Garrison consisted of 4000, and were reduc'd to 1600, 900 of whom were thus barbarously put to Death. *Strada* would excuse this as a Judgment of God upon them for their mocking at Holy Things, meaning Images and Re-

licks, &c. And others charge it to the Rage of the Soldiers, because they were depriv'd of the Plunder, which the City redeem'd by paying 34000 *l.* Sterling. *Bleau* gives an Account of the Learned Men that have been bred in this City. Their Arms are, a Sword between 4 Stars, and a Cross over the Point, with this Motto, *Vim vici Virtus*; i. e. Valour overcomes Power. They say, this Atchievement was given them in the 12th Century by the Emperor *Frederick*, and the Patriarch of *Constantinople*, because, during the Holy War, when *Damietta*, anciently *Pelusium*, was besieg'd by the Christians, and their Fleet could not approach it, by reason of Chains drawn across the River, and fasten'd to strong Towers on both Sides, the *Hairlemers* in the Service arm'd the Keels of their Ships with sharp Saws, sail'd up the River with a strong Gale, and cut the Chains, which made Way for the rest of the Fleet, and occasioned the taking of the Town. In Confirmation of this, they say, there are two Bells in the high Tower of their Church made of *Corinthian* Brass: And as a Memorial of it, there are 3 Ships hung up in the great Church, and the Youth of the City make an Annual Procession about the Streets with little Ships, whose Prows are set with Saws. Dr. *Northleigh* says, there are 3 or 4 Organs in their great Church, and the Stalls of many Princes and others of Quality, who have been Knights of the *Golden Fleece*, with their Arms painted on the Stalls. *Mifson* says, in their Town-House the Magistrates keep the first Book that was printed by *Coster*, in a Silver Case wrap'd up in Silk, where they have also his Statue. *Meyerus* and *John Gerard* of *Leyden* say, That in 1403, a Mermaid was cast ashore by a Tempest near this City, was brought to eat Bread and Milk, and to spin, and liv'd many Years. She would frequently pull off her Clothes, and run towards the Water: She could not speak, but made a confus'd Noise; and having learn'd to make the Sign of the Cross, was buried in the Church-yard when she died. The latter said he had the Relation from several who had seen her.

Without the Walls there's a pleasant Wood, where the Citizens divert themselves. Here *Florance V.* built a Palace, which is call'd the Prince's Palace, where are
the

the Pictures of all the Earls of *Holland* very well done; and in the Summer-House in the Garden, there's that of *Lawrence Coster*. In the other Rooms, there are several excellent Pieces by *Heimskirk* and *Goltzius*; but the best are those of *Cornelius* of *Haërlem*: And here also is the Picture of a Ship with Saws in her Poop, in Remembrance of the Exploit of the *Haërlemers* at *Damiat* above-mentioned, by which they set at Liberty the Count of *Holland*, who was carried Prisoner into that City. They have two Hospitals handfomely kept for Aged and Sick. *Dr. Brown* says, he saw there some Malefactors punish'd by Whipping in this Manner; Upon a Scaffold they erect a Post, to which they tie the Criminals Hands stretch'd up as high as they can, and putting an Iron round their Middle, gave them so many Lashes with Rods as the Judges had appointed. From this City, that called *Haërlem Meer* has its Name, being a Lake above 20 Miles long, and so shallow, that it might easily be dreined, which would make a vast Addition to a Country where they want Ground; but the City of *Leyden* will not consent to it, because from hence they have Water to refresh their Canals, except the old Channel of the *Rhine* were cleansed; and this *Amsterdam* will not agree to; because it would bring *Leyden* a Trade by Sea, and injure their own Commerce. There are many old Castles and Gentlemen's Seats in the Neighbourhood of *Haërlem*; for which the Curious may consult *Bleau's Theatrum Urbium*.

3. *Leyden*, Lat. *Lugdunum Batavorum*, *Leyda*, and *Leyde*, the chief Town of the District of *Rhinland*. It lies, according to *Moll*, about 14 Miles S. W. from *Haërlem*, about 18 from *Amsterdam*, 15 N. W. from *Rotterdam*, and 8 N. E. from the *Hague*. 'Tis one of the neatest and pleafantest Cities in *Europe* for the Beautifulnes and Statelines of its Buildings, the Largeness and Cleanliness of its Streets, the Commodiousness of its Channels, and the agreeable Rows of Trees planted on each Side of 'em; but the Water not having a good Current, the Channels are apt to stink in Summer. It stands on the Old or Middle Channel of the *Rhine*; the Mouth of which being choak'd up, as we have formerly mentioned, occasions the Waters to stagnate. 'Tis encompassed by a

great Number of Cities and large Villages, with which it has an easy Communication by Canals. 'Tis called *Lugdunum Batavorum*, to distinguish it from *Lyons* in *France*; but the Etymology of *Lugdunum* is uncertain, tho' some derive it from *Legio* and *Dunum*, as having been a Station of a Roman Legion, and there being a Hill in the Middle of the City which is express'd by the Latin Word *Dunum*. 'Tis suppos'd to be older than *Haërlem* or *Dort*, tho' they have the Precedency in voting. *Cellarius* takes Notice of its being mention'd by *Ptolomy* and *Anonin*, and that 'tis there call'd *Caput Germaniarum*, which he takes to be meant of the old German Provinces in these Parts; tho' he owns, that it could not be then any thing so considerable as now. Some Ages ago it did not contain above 25 *Rhinlandish* Acres. It has been enlarged at several Times, viz. in 1294, 1313, 1389, 1510, and in 1644. It has 8 Gates, the chief of which, call'd the *White Gate*, was splendidly rebuilt in 1650; and the rest, together with their Bridges, have been lately rebuilt and beautified. *Bleau* says, it has 23 Wards, subdivided into 90 lesser Partitions, call'd Neighbourhoods, 30 Islands, 24 Channels, 180 Streets, 95 Bridges, and 40 Turrets on the Walls. Every Ward has 4 Magistrates, who take Care of Instruments to extinguish Fire. Each Neighbourhood has a Master and two Assessors to compose Differences between the People, and to see that Funerals be decently solemniz'd. The principal Church is that of *St. Peter*, a handsome Building, adorn'd formerly with a lofty Tower, which fell in 1512, and destroy'd their Archives that were kept in it. In this Church are the Epitaphs of many considerable Men. *St. Pancras's* Church is also very stately; and by the Foundations, it appears to have been design'd to have exceeded that of *St. Peter's* at *Rome* for Bulk. *St. Mary's*, now call'd the *French Church*, is a neat Building, but inferior to the other two. There's a Monument erected here for the great *Joseph Scaliger*, in the Place where he us'd to sit and hear Sermon, with a Long Inscription; tho' he himself order'd no more to be writ upon it, says *Henricus*, but *Josephus Justus Scaliger. Jul. Cas. Fil. hic expecto resurrectionem*; and upon the Edge of the Stone, *Terra haec ab Ecclesia empti est nemini Cadaver*

T t t t t :

huc

hic inferre licet. Here is also the Monument of the famous Herbalist *Clusius*, with a Latin Inscription, signifying that he was called thither to adorn the Academy, where he lived 16 Years, and died in 1609, in the 84th Year of his Age, and this Distich under it:

*Non potuit plures hic quærere Clusius Herbas,
Ergo novus Campus quærit in Elisiis.*

Which may be English'd thus:

*Since no more Herbs the Earth to Clusius yields,
He's gone a simpling to the Elysian Fields.*

They have also lately built a new Church of a Circular Form, much admir'd for its Workmanship, especially in the Inside. Their Hospitals are, 1. That of *St. Katharina*, founded about 1348, but much enlarged since. *Beau* says, it consists of 7 distinct Buildings, with 144 Beds for the Sick and Decrepit, and a great Number of Pallets for the Cure of the Diseas'd; a particular Apartment for those who have the *French* Disease, that are look'd after by the City Surgeons; one for entertaining poor Travellers for 3 Nights; another with 68 Beds for such as were distracted, or infected with the Plague, but now us'd for the Ease of the other Apartments when they are too full. Six Men and Six Women, called *Fathers* and *Mothers*, have the Charge of this Hospital. 2. *St. Elizabeth's* Hospital, for Women, which has 65 Beds, and an Apartment to entertain poor Women Travellers for 3 Nights. To this there's annex'd another House of 19 Beds, and there are 4 Men and 4 Women to look after the whole. 3. The Hospitals of *St. James* and *St. Barbara*, now made use of for Clothworkers. They have an Hospital for Orphans, that has been enlarged several times, where, *Dr. Northleigh* says, there are 900 entertained, better than in any other Place in the *Low Countries*. 'Tis govern'd by a Man and a Woman, who have the absolute Management of it, with 4 Men and 4 Women to assist them. They have likewise an Almshouse, where 12 Almoners distribute at Times Bread, Turf, and Money, to the Poor, according to the Number and Condition of their Families. 'Tis said,

they distribute Alms to 20000 Persons within the City. They have 13 other Tenements for the Accommodation of the poorer Sort. They have two great Annual Fairs, during which no Man can be arrested for Debt: The first begins on *Ascension-Day*; and during some Part of the Fair, the Citizens divert themselves with Cross-Bows, and ordinary Bows and Arrows. Their chief Trade is in Cloth and Camblers; and they make great Profit of their Gardening, their Parsnips being carried as far as *Amsterdam*, and much valued. Their Gardners have 4 or 5 Crops a Year from the same Ground; so that their Gardens are sold for 250, and sometimes 300 *l.* an Acre, tho' Arable Land yields but 200 *l.* and Meadow or Pasture but 140. They have 3 Boats that go every Day to *Amsterdam*, 8 to the *Hague*, and as many to *Delph*, at set Hours; and the like Number comes hither from those Places. They have likewise constant Passage-Boats to *Utrecht* and *Haerlem*. The great Court is a noble and large Structure; in the lower Part of which, besides what's applied to other Uses, there are Apartments for 3 Courts of Judicature, one belonging to the City, the other to the University, and the 3d to the Affairs of the *Rhinland*. Over these there are several Chambers for the Meetings of the Magistrates, and other Publick Offices. In that of the City there are many excellent Paintings, and the famous Siege of this Town in 1574 wrought in Tapestry. The Draught of the Last Judgment, by *Lucas Leydensis*, was so much valued by the Emperor *Rodolph II.* that he offered as many *Hungarian* Ducats of Gold for it as would cover it over. That called the *Rhinland-House* is also remarkable, where the Dyk-Grave, with his Assistants, meet about their Business, which is to take Care of the Sluces, Banks, Dikes, and Channels, in the *Rhinland*, to prevent Inundations, and to levy the Rent from the Lands which is appointed for this Use. That called the *Rhinland* is bounded on the W. by the Coast of *Holland*; on the E. by Part of the Diocese of *Utrecht* and *Amstelland*; on the N. by Part of the *Ze*, along the Course of the Dike that goes from *Haerlem* to *Amsterdam*, and by the Shallows and Washes as far as *Beverwick*; and on the S. by a Line drawn from

Mont-

Montfort to Oudewater, from thence to Gouda, and afterwards to the Hague. It had the Name of *Rhenland* from the middle Branch of the Rhine: And all the Inhabitants of this District are obliged, by Laws agreed on among themselves, to provide for the Maintenance and Reparation of the Dikes, Channels, and Sluces, in that Country; and they have several Councils, form'd of a Dyk-Grave, and 7 Assistants called *Heemraden*, who are all sworn to the faithful Execution of their Office. They have also a Hall call'd the *Prince's*, and another for the Archers; upon the Windows of which, all the Earls of Holland are curiously painted. They have a magnificent Building for examining and sealing of Cloth, which much exceeds our *Blackwell-Hall*, whereof they are said to have made 100000 Pieces in one Year. The *Burg*, formerly built for a Defence, but now only an Ornament to the City, stands about the middle of it, in an Angle made by the Channels of the Old and New Rhine. From hence the *Burgraves* or *Governors of Leyden*, frequently met with in History, had their Name. Some say, 'twas built by the *Romans*, as a Garrison to one of their Legions. Others ascribe it to *Hengist the Saxon*, as a Trophy for his Conquest of England. 'Tis a strong round Fortification, built of Stone, has an Ascent of 50 Steps, and is encompassed with a Wall 21 Foot high, the surrounding Arch being 610 Foot in Circuit. From hence there's a pleasant Prospect of the Town, the neighbouring Country, and *Haerlem Lake*. It has a deep dry Pit in the middle, supposed to have been the Gate of a Passage under Ground from hence to *Canwick* on the Sea, which is about 4 Miles. Over the Gate of it stand the Arms of the City, being the Cross-Keys, with a Lion Rampant Gardant, and a Sword in his Right Paw, with this Motto on one Side, *Pugno pro Patria*; i. e. I fight for my Country; and on the other, *Hec Libertatis ergo*; i. e. These are the Marks of my Liberty. The chief Streets are, *Rampinburg*, the pleasantest; that which reaches from the Hague Gate to that of *Utrecht*, which has the best Trade; and the *Haerlem Street* which is the largest. The Canal of the Old Rhine has 6 Bridges, 4 of Wood, and 2 of Stone: One of the latter is their Market for Corn, and the other for

Fish. This City was besieged by the *Spaniards* in 1574, who knowing the Strength of it, encompass'd it with 60 Forts, in order to starve them out. The Siege continued with great Vigour above 5 Months, which reduc'd the Inhabitants to the greatest Extremity by Hunger and Fatigue, during which above 10000 of 'em perished; but considering the barbarous Usage that *Haerlem* met with, they resolved to hold out to the last, and gave this Answer to one of the Enemy's Summons, *That they would not yield so long as they had one Hand to eat, and another to fight*. But their Necessities press'd so hard upon them at last, that they were forc'd to have Recourse to a desperate Remedy, which the Prince of Orange had advis'd them to before, viz. to cut the main Banks of the *Maes* and *IJssel* betwixt *Gouda* and *Rotterdam*, to lay the Country under Water; which at first rising but slowly, gave them little Help; but towards the End of September, all the Country about was turn'd to a Sea, and drown'd 1500 *Spaniards*, before they could retire. The first Relief they received was on the 3d of October; the Anniversary of which they still observe as a Day of Thanksgiving, and every Year they have a Tragi-Comedy to represent this Siege; and the Money receiv'd from the Multitudes that come to see it is applied to the Use of their Poor. They were forc'd to make Paper Money during the Siege, which was afterwards chang'd into Silver, being two Pieces of different Value. The bigger had stamp'd on the Face, a Lion holding up a Hat on a Spear, with this Legend round the Side, *Hec Libertatis ergo*; and on the Reverse the City Arms, and these Letters in the Middle, *N. O. U. L. S. G. I. P. A. C. i. e. Nummus obfissa Urbis Lugdunensis sub Gubernatione Illustrissimi Principis Auriaci Cusui*. In English; The Money of the besieg'd T. of *Leyden*, coin'd under the Government of the most Illustrious Pr. of Orange. The lesser Piece had on the Face, a Lion with a Cross-Keys, and this Legend, *Pugno pro Patria*; and on the Reverse, *Lugdunum Batavorum*. In 1575, the University was founded here by the State General, to reward the Inhabitants for their Bravery; in Remembrance of which, they kept a Jubile the 8th of February, 1675, their Scile being then 200 Years from its Foundation: And

And tho' the Country was then in great Distress because of the *French* Invasion, they gave the Pr. of *Orange*, the States, and others of the Nobility, a splendid Entertainment. The Schools of this University consist of a large Pile of Brick Building, 3 Stories high, and 2 Rooms on a Floor. In the uppermost, the famous Printer *Elzevir* kept his Shop. The Students have sometimes been 2000. Adjoining to it is the Physick Garden, well stor'd with Plants, and a long Gallery, where the Professor of Botany reads his Lectures. Here there are abundance of Curiosities; among others, a Sea-Horse as big as a Bull, whom it resembles in Shape, brought from the Cape of *Good Hope*; and a Bird's-Nest made of Sea-Froth, by a certain Fowl in the Kingdom of *Coramandel* in the *East-Indies*, which the *Chinese* dissolve in Pottage, and reckon it an excellent Dish. There's another Building for Publick Lectures near the Garden. There are only two endow'd Colleges in this University, the rest of the Students living where they please in the Town. The Professors, when they read Lectures, or preside in publick Disputations, wear Gowns, but not otherwise; and the Students wear no distinct Habit. Each Professor, besides what he has from the Students, has a Salary of about 2 or 300 *l.* per *Annium* from the States. They confer no Degrees but that of Master of Arts and Doctor in each Faculty. Those matriculated in the University-Register have very large Privileges, and are exempted from paying Excise, if above 20 Years of Age, for a certain Quantity of Beer and Wine. The Rector *Magnificus*, who was formerly chosen out of three presented to the Stadtholder, and now to the States General, is chosen Annually, and enters on his Office the 8th of *February*, the Day when the University was dedicated. Besides him, there are 3 Curators, who have the 4 Burgomasters for their Colleagues, and the Syndic for their Counsellor. The University Senate consists of 12 Professors, being 3 of each Faculty; but the Curators may augment their Number, under certain Limitations. The Rector, with his 4 Assessors, the Burgomasters, and some of the *Eschevins*, determine all Causes Civil and Criminal; and the Rector gives Sentence without Appeal. The most considerable Thing

in the Library are the MSS. which are numerous, and of great Value. *Joseph Scaliger* gave 'em 87, Dr. *Warner* 956, *Golinus* brought 221 from the *East*: They have 9 that came from *Mauritania*, 370 Greek and Latin, and 6 belonging to the old Library. In the Anatomy Theatre, which is much better than that of *Padua*, or our Chirurgion's Hall, they have vast Numbers of Skeletons of all Sorts and Sizes, several Mummies, Heathen Relicks and Idols, Habits of divers Countries, the Skeleton of a young Whale above 6 Yards long, taken out of an old one; a Man's Bladder, that holds two Gallons of Water; the Mummy of an *Egyptian* Prince, said to be 1800 Years old; and a Toadstool that grew in *Haerlem* Lake, said to be 1000. The Curious may see more of this in Dr. *Northleigh's* Description of the *United Netherlands*. There have been many famous Professors in all Faculties in this University, whom we have not Room to name. This City is also noted for the Birth of the Taylor, *Johm of Leyden*, King of the *Munster* Anabaptists. The Government of this City being like that of *Amsterdam*, we pass it over, as we do the Lordships, Villages, and Districts, under its Jurisdiction; of which the Curious may inform themselves from *Meursius's Athena Batava*, and *Boxhornius's Theatrum*. Dr. *Northleigh* says, the Apothecaries and Chirurgions, of the latter of which there's above 100, have each a Hall; and without the Walls there's a Pest-house, with a stately Walk of tall Trees to it. The House is well built, nobly endow'd, and a Revenue laid up for it every Year.

The chief Places in the Neighbourhood of *Leyden* are, 1. *Rhinsburg*, anciently a strong Town, that had a Nunnery for Women of Quality, and lies 4 Miles N. W. from *Leyden*. 2. *Nortwyck*, 4 Miles further N. W. a pleasant Place, inhabited by many Gentlemen. 3. *Valkenburg*, noted for a great Annual Horse-Fair in *September*, where Foreigners come to buy Horses. 4. *Britain's* House, or Castle, 5 Miles N. W. from *Leyden*, and about 1 1/2 N. from *Catwyck* on the Sea. 'Twas discovered about 300 Years ago, upon the retiring of the Ocean from the old Mouth of the *Rhine*; but more in 1550 and 1552, when the Sands were left bare for 20 Days. It has been a Square of

of 960 Roman Foot in Compass. At that Time many large Stones, Bricks, and old fashion'd Vessels, and Roman Coins of several Metals, were dug up, with this Inscription, *Ex Ger. Inf.* Some think 'twas built by *Galigula*, for a Granary of Corn brought out of Britain. 5. *Alphen*, about 8 Miles S. E. from *Leyden*, supposed to be *Antonin's Albiniana Castra*, or the Camp of *Alphenus Varus*, the *Batavian* General mentioned by *Tacitus*. 6. *Romburch*, between *Alphen* and *Leyden*, called by *Velfernus*, *Prætorium Agrippinae*, where many Roman Coins of Silver and Brass, and old Statues, &c. have been found. The District of *Rhinland*, of which *Leyden* is the Metropolis, contains above 57 Villages and Gentlemen's Seats; which, with the numerous Canals and pleasant Walks, make a most charming Prospect from the neighbouring Sand-Hills. Many of these Villages have their Annual Fairs, where formerly the Boors us'd to play at Back-Sword, and mangle one another with as much Fury as the Roman Gladiators, till 'twas forbid by the States. 7. *Bodegrave*, about 11 Miles S. E. from *Leyden*, the Seat of the ancient *Baguada*, mentioned by *Cornelius Aurelius*, supposed to have been a sort of Banditi. 'Twas a very fine Village till burnt by the French in 1672. 'Twas afterwards fortified by the Dutch, and noted for the Prince of Orange's Camp to cover the Country against the French at that Time. 8. *Woerden* or *Voerden*, about 7 Miles E. from *Bodegrave*. 'Twas built to be a Curb on *Utrecht* by Bishop *Godfrey* about 1160, and the Cause of bloody Wars betwixt the *Hollanders* and those of *Utrecht*: *Herman* of *Woerden*, one of the Assassins of Count *Florent V.* harboured there; upon which the Dutch took it. The French took it in 1672, fortified and put 2000 Men in it. The Pr. of *Orange* kill'd 2000 French before it, but fail'd of taking it. The French deserted it in 1703, after destroying most of the Fortifications, and made the Town pay 16000 Guilders to be rescued from the Flames. 9. *Oudemater*, about 7 Miles S. from *Woerden*, upon the *IJssel*, noted for good Hemp produced in its Soil, and for several Learned Men. The Spaniards burnt it in 1575, when they were forc'd from before *Leyden*, and cut off most of the Inhabitants: Since which, it has never recover'd its ancient Splendour.

In the Neighbourhood of *Leyden*, between *Rhinland*, the Ocean, the Body of *North-Holland*, the *Te*, and Lake of *Haerlem*, lies *Kenemerland*, which *Hadrianus Junius* thinks to have been the Seat of the ancient *Cannefates*, mentioned by the Roman Historians. *Courinzius* supposes it was called by the present Name, which signifies the King's Palace, because the ancient Counts of *Holland* resided here. The Latin Name *Cannefates* is said to come from their feeding on Conies, which abound in this Country. The Inhabitants formerly, under the Conduct of *Gysbrecht* Lord of *Amsel*, in the Reign of *Florent V.* took Arms against their Magistrates, out of a levelling Principle; but were afterwards reduced, and prosecuted the Murtherers of Count *Florent* with great Zeal, tho' their Leader *Gysbrecht* was one of 'em.

4. The *Hague*, Lat. *Haga Comitum*; in Dutch, *S. Gravenhage*; i. e. The Grove of the Earls. It lies about 8 Miles S. W. from *Leyden*, 6 N. W. from *Delph*, 12 N. W. from *Rotterdam*, and about two S. E. from *Scheveling*. 'Tis reckon'd the principal Village in *Europe*, is encompassed with a broad Ditch, enjoys all the Privileges of a City, except sending Deputies to the States; and is so large and populous, that it exceeds several considerable Cities: The Streets are long and large, the Buildings are stately, and it abounds with shady Walks. On the Side of *Delph*, there are lovely Meadows, through which there's a Way cut to *Scheveling* with infinite Expence. 'Tis a hollow, streight, and pav'd Road, where all Passengers, except the Fishermen of *Scheveling*, pay a certain Tax towards reimbursing the Charge, and keeping it in Repair; which Taxes are said to arise to 4000 Guilders per Annum. On the Side of *Leyden*, there's a large Wood, which abounds with Oaks, there being none else in the Province. 'Tis about 1500 Paces long; but nothing near so broad, well stor'd with Deer, Hares, and other Game; and is of great Use to the Inhabitants for taking the Air. In this Wood, there's a fair Structure built for a House of Mourning, by *Amalia* of *Solms*, Widow to Pr. *Henry Frederick* of *Orange*, which is signified by an Inscription of Gold Letters round the Gallery. It has a spacious Garden, with many pleasant Groves adjoining to the House.

At the Entrance on the Right, are two white Marble Statues of *William I.* and Prince *Maurice*; and on the Left, those of Prince *Henry Frederick* and *William II.* and further in on the same Side, a Chamber floor'd with Cedar, and hung with Arras, representing the glorious Actions of Prince *Henry*. In the Lantern on the Top, there's a Gallery for Musick; and in the middle of the Sieling, the Picture of Princess *Amalia* in Mourning. The Prince's Palace in the Town was built in 1250 by *William II.* Count of *Holland*, and K. of the *Romans*, who removed hither the Court of *Holland* from *Gravesand*. Part of the old Buildings, with a large Hall fill'd with Trophies taken from their Enemies, Stationers, and Picture-sellers, like that of *Westminster*, but nothing so large, still remain. The Palace added by *Pr. Maurice* makes it a noble and spacious Building: It contains the Prince's Lodgings, and the Places where the States General and Provincial, and the Supreme Court of *Holland*, meet. 'Tis fortified with good Ditches, and Guards are constantly kept at the Gates. On the N. Side, there's a large Pond, with stately Walks of Tile-Trees on its Banks. There are two Churches belonging to it, one of 'em formerly a *Jacobine* Cloyster, and the other lately built, of a round Figure, but no Pillars within, and so beautiful on the Outside, that 'tis scarce to be match'd in the *Netherlands*. There are two fine Piazza's, one before, and another behind the Palace, with stately Houses. Here Foreign Ambassadors are lodg'd, and in this Part of the Town the States General have their Houses. Every City has built Houses for their Deputies: That of the Deputies of *Leyden* is reckon'd the finest. A sumptuous House for founding of Cannon was built here in one Year during their War with *England*. In 1661, a Hospital was built by one *Newport*, a Popish Woollendrapier, for 60 poor Popish Widows; but the States oblig'd him to allow one half for Protestants. 'Tis built uniform, and every Widow has a Garden. The Market-place faces the great Church, which is a high square Tower. In this Church Admiral *Obdam* has a stately Monument, with an Account of his great Actions; particularly that wherein he was killed by the *English* in 1666, and blew up his own

Ship, as is said in his Epitaph. The Inhabitants refused formerly to have the Town walled or fortified, reckoning it more glorious to be the chief Village of *Europe*, than an ordinary City, which cost 'em dear: The D. of *Guelder's* General having invaded the Country meerly for the Plunder of this Town, which occasioned it afterwards to be encompassed with a Ditch. This Place has produc'd many Learned Men, among whom was *Joannes de Haga*, called otherwise *Joannes de Indagine*: But for this we refer to *Bleau* and *Guicciardin*.

Within two Miles of this Place lies the Village of *Ryswick*, where the Prince has a noble Palace, with fine Gardens. 'Twas formerly called *Newburg-House*, because built by a D. of *Newburg*. 'Tis famous for the Treaty concluded there betwixt the Confederates and *France* in 1697; is adorned with a Marble Stair-Cafe, Marble Floors, and Paintings by the best Masters; has a fine Terrace, and a noble and lofty Front of Free-stone.

5. *Scherveling*, 2 Miles N. W. from the *Hague*, lies on the Sea: Part of it is Annually carried off by the Waves; so that from being a Town of good Note, 'tis now become an inconsiderable Village; yet it retains its Privileges: And 'tis said, no Malefactor can be condemned at the *Hague*, except the Eschevins of this Town pronounce Sentence. 'Tis noted for Fishing, and for a Sailing-Chariot belonging to Prince *Maurice* kept here. 'Twas made by *Stevinus*, a great Mathematician, and in two Hours Time would sail from *Scherveling* to *Pu'ten*, which is 42 Miles, with 28 Persons in it; and tho' the Wind were strong, 'twas not discern'd by the Passengers, it sail'd so swift. *Grotius* made several fine Epigrams and Copies of Verses upon this famous Machine and its Author; for which we refer to *Bleau*. The Form of it resembled a Boat: It mov'd upon 4 Wheels of an equal Bigness, and had 2 Sails, was steer'd by a Rudder, plac'd behind the 2 hindermost Wheels, and was stop'd by letting down the Sails, or turning it from the Wind; so that it seem'd to exceed for Art the Chariots made use of by the *Chinese* in their Champion Countries. They likewise make use of a little Vessel in this Province capable of holding two Persons, with a Bottom like a Sledge,

Sledge, which they drive upon the Ice; and 'tis form'd to much like a Boat, that if the Ice should break, the Passengers are in no Danger. The *Atlas Historique* takes Notice, That in 1672, when *England* and *France* design'd to have invaded *Holland* by Sea, the Tide chang'd its usual Course, and was stop'd for 12 Hours, tho' very regular at other Times, to the great Astonishment of the Inhabitants; and next Morning the *French* and *English* Fleets were scattered by a dreadful Tempest. About 10 Miles S. W. from the *Hague* stands *Honstaerdyk*, a stately Palace belonging to the Pr. of *Orange*, with fine Gardens, beautiful Fountains and Statues, and among them some Antick ones, as *Roman* Gladiators, *Samson* tearing a Lion, &c. Dr. *Northleigh* says, 'tis superior to many noted Places in *Italy*: The lower Rooms are pav'd with Marble, and those above are very sumptuous. There are two Galleries full of excellent Paintings; and the Prince's Closet is curiously wainscotted with fine Japan-work. On the Backside there's a pleasant Grove, with several regular Plantations of Greens, which make a Square of half a Mile from each Angle to the Center; and beyond this they have a Place for Foreign Birds and Beasts, that are kept there in great Numbers.

About 6 Miles N. W. from the *Hague*, is the Village of *Losdun*, in whose Church lies entomb'd *Margaret*, Wife to *Herman* Count of *Hennenberg*, Daughter to *Florence* Count of *Holland* and *Zealand*, and Sister to *William* K. of the *Romans*; who, in the 40th Year of her Age, meeting with a poor Woman that had two Twins in her Arms, upbraided her as unchast; alledging, that one Man could not get two Children at once: Upon which the Woman, being provok'd, wish'd the Countess might have as many Children at a Birth as there were Days in the Year; which they say came to pass in 1276, when she was brought to Bed of 365 Sons and Daughters, that were all baptiz'd by *Guido*, a Suffragan of *Utrecht*; all the Males being called *John*, and the Females *Elizabeth*. *Guicciardin* quotes *Erasmus* and *Ludovicus Vives* for the Story. 'Tis also mentioned by Mr. *Ray*, Mr. *Misson*, and Dr. *Northleigh*; but the latter suspects it as a Popish Legend: Yet in the Church there's a Table fix'd to the Wall, with an In-

scription relating the Fact. This Inscription appears to be new, because that related by *Guicciardin* 100 Years ago is shorter, and of another Nature. They shew here two Brass Basons in which the Children were baptiz'd, with this Latin Distich under them:

*Entibi monstrosum nimis & memorabile factum,
Quale nec a Mundi Conditione datum.*

Importing, that such a Monstrous Birth was never heard of since the Creation. *Bleau* and *Johnson* do likewise relate the Inscription different from what 'tis now. From all which we may conclude, that there was certainly such a Monstrous Birth, since 'tis told by so many Authors of Credit, but aggravated with fabulous Circumstances by the Monks.

6. *Delph*, Lat. *Delphum*, and *Delphi*. It had its Name from the Ditch cut between it and the *Hague*. It lies 6 Miles S. E. from the *Hague*, 10 S. W. from *Leyden*, and 8 N. W. from *Rotterdam*. 'Tis a large, neat, and stately City, and has spacious Streets, with Currents of Water running through them. The Stadthouse is a noble Structure, with a Court of Justice, and 6 other large Apartments for the Magistrates. There's a spacious Square betwixt it and the New Church, which has a lofty Steeple. In this Church there's a noble Monument, erected to the Memory of Pr. *William* I. of *Orange*, who was barbarously murder'd here, as we formerly mentioned, with this Inscription:

D. O. M. Et aeterna Memoria Gulielmi Nassovii, Supremi Arausionensium Principis. Patr. Patr. qui Belgii Fortunam suas posthabuit & suorum, valedissimos exercitus ere plurimum privato bis conscripsit, bis induxit. Ordinum Auspiciis Hispaniae Tyrannidem propulit. Verae Religionis cultum; Avitas Patriae Leges; revocavit, restituit. Ipsam denique Libertatem tantum non asseritam, Mauricio Principi, Paterna virtutis haeredi Filio, Sta'iliendam reliquit. Herois vere pii, prudentis, invicti, quem Philip. II. Hisp. R. Europa Timor timuit; non d' mait, non terruit; sed empto Percussore fraude nefanda sustulit. Federat. Belg. Provinc. Perenni Memor. Monum. fec.

" To the great and good GOD, and to
" the immortal Memory of *William* of *Nas-*
U u u u u " *sa*,

"*Jau*, Sovereign Pr. of *Orange*, the Father
 " of his Country, who prefer'd the Pro-
 " sperity of the *Netherlands* to that of him-
 " self and his Family; did twice levy and
 " bring in an Army at his own Charge;
 " repell'd the Tyranny of *Spain* under the
 " Conduct of the States; recover'd and
 " restor'd the true Religion, and the ancient
 " Laws of his Country, and left its Liber-
 " ty to be established by his Son Pr. *Mau-
 " rice*, the Heir of his Father's Virtues:
 " The States of the United *Netherlands* have
 " erected this Monument, to perpetuate
 " the Memory of that truly pious, pru-
 " dent and invincible Hero, whom *Phi-
 " lip II.* of *Spain*, the Terror of *Europe*,
 " dreaded; but not being able to terrify or
 " conquer, he hir'd an Assassin treacherously
 " to murder.

Dr. *Northleigh* says, Pr. *William's* Tomb
 has his Effigies upon it in Marble, and his
 Statue standing by it in Brass, arm'd Cap-
 a-pé, and a Fame sounding over him, with
 this Motto, *Te vindice tuta Libertas*; i. e. You
 were the Champion and Preserver of our Li-
 berty; and another Emblem of his going on
 steadily in a Storm, with this Motto, *Servis
 tranquillus in Undis*. At his Feet there lies the
 Representation of a Dog, which they say
 dy'd of Grief when he was murder'd.
 The Dr. adds, That this Monument is a-
 dorn'd with as good Brass Statues and Mar-
 ble as any he saw in *Italy*. There are 4 other
 Princes and Princesses of his Family con-
 tain'd in this Monument. In the Old
 Church, which is also a stately Fabrick, but
 inferior to the New, are the Monuments of
 the great *Van Trump* and *Van Heine*, two of
 their Admirals, who were slain at Sea.

This City is two Miles in Circumference,
 and fortified with a Wall and Ditch, but
 after the ancient Manner. The chief Ma-
 gazine and Armory of the States is kept
 here, where they have two Pieces of Or-
 nance cast at *Lubeck* in 1669, which weigh
 8000 Pounds each. 'Tis noted for its excel-
 lent Earthen Ware, in Imitation of Porce-
 lain. It formerly had a great Trade in Beer,
 and likewise in Cloth; but the latter is
 much decay'd, (tho' they value themselves
 upon it) because of their Differences with
 our *English* Merchants, who removed from
 hence to *Rotterdam*. This City lies in a

Plain among pleasant Meadows, which they
 can overflow at Pleasure by their Sluces.
 'Twas built by *Godfrey the Crooked of Lorrain*,
 who was Count of *Holland* for some Years.
Albert of *Bavaria* took it after 7 Weeks
 Siege, because it favour'd the Faction of the
Hoeks: Upon which he dismantled it, and
 fin'd it in 10000 Crowns. In 1536, most
 of it was burnt down, when the old Storks,
 which build in their Chimnies, chose ra-
 ther to be burnt than to leave their Young.
 In 1654, the States Magazine was blown up
 here by an unknown Accident, which beat
 down about 200 Houses, killed and wound-
 ed many People, and others were miracu-
 lously sav'd under the Ruins. It has pro-
 duced many Learned Men in all Faculties,
 for whom we refer to *Bleau*; but they are
 aham'd of the blasphemous Heretick *David
 George*, who was born here of mean Paren-
 tage, and personated our Saviour, but fled
 from hence, and died under a Counterfeit
 Name at *Basse* in 1556, where his Corps was
 expos'd to publick Disgrace, and his Estate
 confiscated, *Delph's* Haven belongs to this
 Town, and lies within half a League of
Rotterdam, with which, and *Delph*, it has a
 Communication by a Canal. *Albert* of *Ba-
 varia* allow'd those of *Delph* to build this
 Haven, for the good Services they did him.
 The *East-India* Company have a stately
 House here. 'Tis conveniently seated for
 a strong Fortification, and sends out Bus-
 ses, &c. for Fishing. It has a tolerable
 Court and a Church, and is defended by
 3 strong Banks against Inundations and
 Tempests.

Seven Miles S.W. from *Delph* lies *Masland-
 Sluce*, formerly a small Village, but now
 become a considerable Town by their Fi-
 shery. About 3 Miles further S. lies *Vla-
 erdingen*, Lat. *Vlaerdinga*, now a poor Vil-
 lage; but once so considerable a Town,
 that anciently it gave Name to the whole
 Province. 'Twas mostly destroyed by In-
 undations, and their Trade is now enjoy'd
 by *Delph* and *Rotterdam*. Near the Mouth
 of the *Maas*, about 7 Miles from *Delph*, lies
Gravesand, Lat. *Comitis Arena*, formerly a
 well fortified Town, the Seat of the Counts
 of *Holland*, and of the Provincial States;
 but now a small Village. In 1546, upon
 digging up some old Foundations, several
 curious Earthen Vessels, suppos'd to be 1400
 Years

Years old, were found here. The adjacent Country produces the best Wheat, and sweetest Grass, in *Holland*, which makes the *Gravesand* Cheeses highly esteem'd. Near this Place stood the ancient Palace of the Lords of *Polan*, which, with several neighbouring Castles, were burnt by those of *Delph* in 1359. This Estate now belongs to the Family of *Orange*. Betwixt *Klaerdin-gen* and *Delph's* Haven, lies *Schiedam*, at the Mouth of the *Schie*, which gives Name to *Schieland*. This Town is very ancient, was made a City in 1274, and still has Magistrates, and some Villages under its Jurisdiction. 'Tis chiefly noted for Herring-fishing, and making of Nets.

7. *Rotterdam*, lies at the Mouth of the *Rotter*, 8 Miles N. E. from *Delph*, about 3 E. from *Schiedam*, 7 S. W. from *Goude*, and 8 N. W. from *Dort*. 'Tis the chief City of *Schieland*, and, according to *Guicciardin* and *Trithemius*, was founded by one *Ruterius*, a King of the *Franks*, in the 89th Year of Christ: The Truth of which is doubted. 'Tis of a Triangular Figure, and so much increas'd of late, that, next to *Amsterdam* and *Leyden*, 'tis suppos'd to be the biggest Town in *Holland*; but in Trade, is certainly next to *Amsterdam*. It lies on the N. Side of the *Maes*, which is very broad there, and makes a good Harbour, tho' 15 Miles distant from the Sea. By the deep Canals which run into the Heart of the City, Ships of great Burden come into it, lade and unlade at the Merchants Doors, where they lie safe from all Danger. The City is large, and exceeding populous; and their Port is frequented by more Ships from *Great Britain* than that of *Amsterdam*, because 'tis more commodious. The Greatness of their Trade has occasioned them to enlarge the Town, and to purchase new Privileges. They have a considerable Trade in Beer, which is transported to *Amsterdam* and other Places; and every Hour of the Day, at the ringing of a certain Bell, a Passage Boat goes off to some of the neighbouring Towns. The Houses are of Brick, and many of 'em magnificent, with Door-Cases, Window-Cases, and Stair-Cases, of Marble. The Streets are large and near. The *Stadthoufe*, *Exchange*, *East-India* House, and *Admiralty*, are good Structures; and their Glass-House one of the best in the

7 Provinces, where they make abundance of Glass Toys and Enamel'd Bowls, which they send to the *Indies*. They have 4 Churches, of which *St. Lawrence's* is the largest. From the Top of its Steeple there's a fair Prospect of *Delph*, the *Hague*, *Leyden*, *Dort*, and the greatest Part of *South-Holland*. This Town is noted for the Birth of several great Men, and particularly *Erasmus*, who was born in a little House near the great Church, and over the Door there's his Picture, with this Distich:

*Edibus his Ortus Mundum decoravit Erasmus,
Artibus ingenuis, Religione, Fide.*

Importing, That *Erasmus* was born here, to adorn the World with Arts, Learning and Religion. There are other Inscriptions of the same Nature in *Spanish* and *Dutch*. On the great Bridge in the spacious Market-place, there's a stately Brass Statue of *Erasmus*, in a fur'd Gown and a round Cap, with a Book in one Hand, and the other upon it, as if he were turning a Leaf. There are several Latin Inscriptions on the Pedestal in Commendation of this great Man, and they have likewise his Picture, which was sent them from *Basil* 4 Years before his Death. The *English* and *Scots* have two considerable Churches here. In the great Church are the Tombs of *Cornelius de Wit* and *de Cortenaer*, two of their Admirals, who were slain at Sea. Their fairest Structure is that called the *Cheminhuys*, or Senate-House, where they consult about Publick Affairs. 'Tis a spacious square Building, whose Front is of Free-stone, curiously adorn'd with Fret-work. The Air of this City is not very good; for its low Situation makes it liable to Fogs, and their Canals have not Current enough to carry off their Filth, which makes them noisome in the Summer; but there are many curious Walks about the City, which make it very pleasant, and its Situation is strong. Their Dock for building Ships deserves also a Traveller's View.

8. *Goude* or *Tergou*, is about 8 Miles N. E. from *Rotterdam*, stands on the Conflux of the *Iffel* and *Gouwe*, from which 'tis named. 'Twas founded by Count *Florent V.* about 1262, who granted it many Privileges. 'Twas burnt down about 100 Years after, and likewise in 1420, during the War be-

U u u u u 2

twixt

twixt *Jaqueline* of *Bavaria* and *Philip* of *Burgundy*. 'Tis almost of a round Figure, stands in a moorish Soil; and by their Sluces, can drown the adjacent Country, which makes it unaccessible, except by two Banks on each Side the *Iffel*, which are so well fortified, that no Enemy can come that Way; and the Town is likewise encompassed with a broad and deep Ditch. They had formerly a Castle, where the Archives of *Holland* were kept; of which nothing remains now but a high Tower. The Market-place is very large; the Town-House stands in the middle, and near it the great Church, which is said to exceed the Cathedral of *Cologne* for Bulk. It had a stately Tower, which, together with the Church, was burnt down by Lightning in 1552. After which, 'twas rebuilt in more Splendour than before. The Painting of its Windows is so extraordinary, as scarce to be equal'd. The whole Town was burnt down in 1438, all but 5 Houses. Their Buildings are for most part more neat than stately. The City is kept very clean by a multitude of Canals and small Currents, which are cleansed by the Tide. The Air is so good, that 'tis seldom or never troubled with the Plague. 'Tis encompassed with Multitudes of Gardens; and the Generality of the Citizens are observ'd to be such as have retired from the World, to spend the Remainder of their Time in Quiet and Pleasure. The Cheese made in its District is much esteemed. For the Learned Men born in this Place, we refer to *Bleau*.

Goudefuce, which takes its Name from this Place, lies near the old Channel of the *Rhine*, between *Bedegrave* and *Leyden*. 'Twas strongly fortified by the States, to stop the Incursions of the *French* in 1672 and 1673.

9. *Schoonhoven*, lies 8 Miles S. E. from *Goude*, 10 Miles W. from *Vianen*, and 13 E. from *Rotterdam*. It takes Name from its fine Gardens; and lies on the N. Side of the *Lech*. *Florent IV.* cast up a huge Bank between *Amerongen* and this Town in 1252, which brought great Profit to it and the neighbouring Country. 'Twas almost quite burnt down in 1330. 'Twas taken from *John* of *Brabant*, to whom most of the Cities of *Holland* had submitted, in 1424, by the Troops of Countess *Jaqueline*, when all the

Garrison, except *Albert Beyling*, one of the Governors of the Castle, were put to Death immediately; and he having only a Month's Time given him to visit his Friends, and settle the Affairs of his Family, he return'd, say the *Dutch Writers*, like *Regulus* the *Roman*, and put himself into the Hands of his Enemies, who cruelly buried him alive. Its Trade is advanced by a Stream of the *Iffel*, which falls here into the *Lech*, and they have a considerable Advantage by Herring-fishing. 'Tis so well fortified, that the *French* were repulsed before it in 1672 with considerable Loss. Its Fortifications have been much improved since that Time. *John Tate*, a Man of a Gigantic Stature, was born here since 1660, and carried about most Countries of *Europe* for a Show. A Man of a middle Stature might easily stand under his Arm-Pit. From the End of his middle Finger, which was 7 Inches long, to his Elbow, were 25 Inches and an half. The Length of his Hand to his Wrist was 11 Inches, and all his Limbs proportionable. *Oliver van Nort*, one of the first that sailed round the World, is buried here in the great Church. The famous *Longolius* and other Learned Men were born in this Place.

10. The *Brill*, lies in the Island called *Voorn*. *Hadrianus Junius* derives its Name from *Breheel*, as being situated on that broad Mouth of the *Rhine* called anciently *Helius*, which seems confirmed by the neighbouring Town called *Helvoetsluse*, at the Bottom of the said Channel. This Town is noted for being taken by the *Sea Geuse*, as formerly mentioned, which retrieved the Affairs of the United Provinces, and ruin'd those of *Spain*. 'Tis very strong, and has a convenient Port, which brings it a good Trade, and makes it populous. 'Twas one of the Cautionary Towns given to *Qu. Elizabeth* for assisting the *Dutch*, and restor'd to them 30 Years after by *K. James I.* The great *Sir Francis Vere* was Governor of it for some Time. The City is neat and well built, lies 12 Miles below *Rotterdam* to the W. and was the usual Place where Packet-Boats arriv'd from *England* formerly, till they found *Helvoetsluse* more convenient. The Streets are large and handsome: Their great Church is a good Structure, and the Steeple a Land-mark to Sailors. There are plea-

pleasant Walks of Trees on the Walls. The Island in general is fruitful in Wheat and other Corn; but the Air too moist by the Neighbourhood of the Sea and the *Maes*.

11. *Helvoetsluice*, lies 3 Miles S. from the *Brill*, has a convenient Harbour, where the Packet-Boat from *England* usually arrives. 'Twill be for ever memorable for the Pr. of *Orange's* setting out from hence with his Fleet and Army in 1688, to rescue *Great Britain* and *Ireland* from Popery and Slavery. The Land of *Putten* makes Part of the same Island, and is only divided from the Territory of the *Brill*, and that called *Beyerland*, by some Dikes and Channels. The chief Town is *Geeroliet*, seated among fruitful Fields; which, besides Corn, produces a Turf, and a prickly Herb like *Spanish Broom*, which Providence seems to have furnished on those sandy Downs, to prevent their being carried away by the Wind, and exposing the Country to Inundations. The two *Beyerlands* have likewise good Arable Land, and Pasture Grounds.

Three Miles S. W. of *Helvoetsluice* lies the small Island called *Goeree*, which signifies a good Road for Ships, by which the Town of that Name grew very rich; but the Harbour is of late choak'd up by Sand, which has lessen'd its Trade. There's a Tower here, which is a Land-mark for Sailors.

East from this Island lies *Over-Flackee*, about 13 Miles long, and 4 where broadest. It has many Villages and Towns, the chief of which is *Summersdyck*, that belongs to *Zealand*. It had formerly a good Trade, which is now decay'd. This Island has much good Corn Land, but little Pasturage. Betwixt *Voorn* and *Rotterdam*, lies the Isle of *Iffelmond* or *Overmaes*, where the *Iffel* empties it self into that River. 'Tis equal to any Part of the Province for Fruitfulness and Richness of Soil, is about 10 Miles long, and 4 where broadest. 'Twas recover'd from the Sea by *Charles the Warlike* of *Burgundy*.

12. *Dort*, is Capital of its Bailiwick, and the first in Dignity of the Province of *Holland*. This Bailiwick was made an Island in 1421, when a Tempest drove the Waters up the *Maes* and *Meruwe*, with such Violence, that it overflow'd the Banks, and swallow'd up a large Tract of Land between

Dort and *Brabant*, with 72 Villages, and 100000 People. Some say, That a wicked Boor, bearing a Grudge to one of his Neighbours, made a Hole in the Bank to let in the Water to drown him and his Family by Night, designing afterwards to have made up the Breach; but the Wind being high at the same time, the Waves broke in with such Force, that the Fellow was drown'd in the Attempt, and occasioned the Desolation above-mentioned. This City is very ancient, and, according to *Scri-verius*, was so considerable in 898, that it held out a Siege against one of the Counts of *Holland*. It stands on the *Meruwe*, which being made up of the *Maes*, the *Rhine*, and the *Ling*, gave Occasion for some Geographers to say, that it stood upon 4 Rivers. 'Tis so strong by Nature since its Bailiwick was made an Island, that it has little need of Art. 'Twas formerly the Seat of the Earls of *Holland*, and the Place where they and their Subjects swore mutually to one another upon their Inauguration. The Name of *Dordrecht* signifies a Ferry on the River *Dort*, upon which it formerly stood; but this River is now swallowed up by the Channel of the *Maes*. It lies about 9 Miles S. E. from *Rotterdam*, and 11 S. from *Goude*, is a large, rich, and populous City. The Houses are high, and of Brick, scarce inferior to those of *Antwerp*: The Streets are kept neat and clean, pav'd in the Middle with Stone, and on the Sides with Bricks set Edge-wise. The *English* Merchants keep a Court here, where they have great Privileges, and two Churches, as the *French* have one. From the Steeple of the principal Church, there is so large a Prospect, that one may see as far as *Breda*. In one of the upper Rooms of the Gunners-Hall or Guild, sate the famous Synod which condemn'd the *Arminians*. It has the Staple of Wines brought down the *Rhine*, and has close and strong arch'd Cellars for keeping it; but *Rotterdam* has now a large Share of that Trade. It has also the Staple of Corn, Wood, and other Merchandize, brought down the *Rhine*; and abundance of Salmon and other good Fish are taken near it. 'Tis called the Maiden City, because, as they say, 'twas never taken by an Enemy, tho' frequently besieged: Yet we have heard before, that the *Germans* possess'd them-

selves

selves of it when they pursued Count *Thierry*; but perhaps that was by Surprize. It must be own'd however to be very strong, being guarded on the W. and N. by the *Maes*, and a Channel from thence towards the Neck of the *Biesbos*, and the *Holland-Diep*; and on the S. and E. by the said *Biesbos*, which is a large Bay that reaches to *Gertruydenberg*, and is so called from the Bulrushes that grow in it. It has long enjoyed the Royalty of a Mint, being the Place to which the old Counts confin'd their Coinage. Dr. *Brown* says, the Steeple of the great Church has 312 Steps. The Apartment where the Synod was held is very fair and large, in which their Seats are still preserv'd, and shew'd to Strangers. The Government of this City differs much from the rest in *Holland*; therefore we shall give a short Account of it. 'Tis managed by a Schout, a Consul or Burgomaster, Senators, Eschevins, Ex-Senators, and a Council of Eight. The Schout or Judge represents the Governor of the Province, by whom he is chosen out of 3 presented to him by the other Magistrates, and votes after all the other Senators, his Business being chiefly for the Province. The Burgomaster is chosen every 4 Months by the Senators, Ex-Senators, and Council of Eight. He is chosen out of the Ex-Senators, has a sort of Supreme Authority, and 3 Halberdiers constantly to attend him, which is peculiar to him and the Governor of the Province. There's also another who is a sort of a Proconsul, and supplies his Place in case of Absence. Justice is administred by the Consul, 9 Eschevins, and 5 Senators, who are all changed once in two Years; in the first of which, 4 Eschevins and 3 Senators; and in the 2d, 5 Eschevins and 2 Senators, go out of Office, and these are called the Ex-Senators. The Eschevins differ from the Senators only in this, that they are more concern'd in examining the Pleas of those who have Law-Suits. The Council of Eight is chosen by the Governor of the Province, or the Court of *Holland*, out of 24 presented by the 4 Guilds of Tradesmen, each of which names 6. Their Business is to assist the Ex-Senators in the Election of a Consul, and to inform the Magistrates of what's amiss in the City. Their Learned Men are accounted for by *Blean*.

13. *Willemstadt*, lies 10 Miles S.W. from *Dort*, on the Frontiers of *Dutch Brabant*. 'Twas built in 1583 by Prince *William of Orange*, after whom 'twas called. The Town is small, but very strong, defended by a Wall, 7 Bastions, a double Ditch, and other Fortifications. It has a good Harbour, and lies conveniently to secure the Trade between *Holland* and *Zealand*, upon the Point of the Isle of *Ruggenhil*; the Houses are neat. They have a good Market-Place, Church, and Common Hall; but the Air is unwholesome and moist, and occasions dangerous Fevers and Agues, especially to Strangers. The Island on which it stands was recovered from the Water, that had a long Time overflow'd it, in 1654. This Island and that of *Finart* did formerly belong to *Brabant*, the States of which gave them to Pr. *William*.

14. *Clundert*, lies about 2 Miles S. E. from *Willemstadt*. 'Twas formerly so considerable a Harbour, that the Earls of *Holland* had one of their principal Custom-Houses here. In 1583, 'twas given to the Pr. of *Orange*, who fortified it with 8 Bastions and some Ravelins. It has a fine Church, and a good Chime of Bells.

15. *Sevenbergen*, lies 2 Miles E. from *Clundert*, was formerly a Wall'd Town, but dismantled by *Philip of Burgundy* in 1426, and is now only a populous Village.

16. *Gertrudenburg*, lies about 9 Miles E. from *Sevenbergen*, had its Name from *Gertrude*, a reputed Saint, who died here in 664. 'Tis in the District of *Dort*, belong'd formerly to *Brabant*, but was added to *Holland* by Count *William* in 1213. In 1611, the States gave the Sovereignty of it to Prince *Maurice*; so that 'tis Part of the Patrimony of the Family. 'Tis a Place of such Consideration, that the Province of *Holland* bound their Princes by Oath to keep it; and the States of *Brabant* laid the same Obligation upon theirs to recover it. It lies upon the *Maes* or *Meruwe*, which is so broad there, that it resembles a Sea. 'Tis very strongly fortified; and besides the Defence of the *Maes* on one Side, it has a Marsh on the other. 'Twas taken by the *Dutch* in 1573, but basely surrender'd to the Pr. of *Parma* in 1588. 'Twas afterwards besieged by Sea and Land, and forced to yield to Pr. *Maurice* in 1595, in Sight of Count

Count Mansfeld and the Spanish Army. The Prince, tho' then but young, did fortify his Camp so well, that the Spaniards could not attack him; and he kept his Army in such Discipline, that the Peasants labour'd their Ground within the Circuit of his Camp without any Molestation. They are supplied by the neighbouring River with good Salmon, Sturgeon, and such Plenty of Shads, that 18000 of 'em have been taken near it in one Day.

17. *Heusden*, lies about 10 Miles E. from *Gertrudenburg*. 'Tis a very ancient Town, having had Lords of its own in 857, who held it in Fee of the Counts of *Cleve*, but at last it came to the Count of *Holland*, which occasioned great Wars betwixt that Province and *Brabant*; but they were at last compromis'd by a Match betwixt a Son of *Holland* and a Daughter of *Brabant*, with whom 'twas quitted to the Dutch by way of Dowry. In 1407, the Citizens defeated the *Geldrians*, who contended with *Holland* about the Possession of the Town, and gave them such a compleat Overthrow, that they brought home more Prisoners than they themselves were in Number. 'Tis well fortified, and has a strong Castle, which is the Residence of a Governor appointed by the States. It has several Villages, Lordships, and small Forts, under its Jurisdiction. The Powder of their Magazine being set on Fire by Lightning in 1680, the Castle, with the greatest Part of the neighbouring Street, were blown up, the Town extremely shatter'd, and about 260 People killed. It stands on a Stream of the *Maes*, where it forms an Island, called the *Hemerder Waert*.

18. *Greveccuur*, lies 5 Miles S. E. from *Heusden*, upon the same River, is a little Town, but strongly fortified, which is supposed to be the Reason of its Name. It was taken and retaken during the Spanish War, and taken by the French in 1672, but abandon'd afterward.

19. *Worcum*, lies 8 Miles N. W. from *Heusden*. 'Tis a very ancient Town, and in old Writings called *Woudrichemum*. 'Tis the Capital of the Country of *Altena*, which formerly belong'd to the Counts of *Cleve*, from whom 'twas purchased by Count *William* in 1333, and afterwards held in Fee by the Lords of *Horn* till 1600, when the Count of *Horn* being executed at *Brussels* by the D. of *Alva*, his Widow sold it to the States

of *Holland*, with the Lordship of *Altena*, for 90000 Florins. 'Tis well fortified by Nature and Art, being situated on a Point of Land near the Conflux of that Branch of the *Rhine* called the *Wall* and the *Maes*.

20. *Loerueslein*, lies 2 Miles S. E. from *Worcum*, on the Point of the Island called *Bommelweert*, is one of the strongest Castles in *Holland*, and noted for giving Name to the Faction, the Chiefs of whom us'd to assemble there, to contrive how they might lessen the Power of the Princes of *Orange*; and 'twas afterwards made their Prison.

21. *Gorcum*, lies about 2 Miles N. from *Worcum*, on the other Side the *Maes*, and on the Mouth of the *Ling*. 'Tis called *Gorichemum* in old Writings, is a neat well built Town, strongly fortified by Nature and Art; and is, as well as *Worcum* and *Loerueslein*, reckon'd one of the Keys of *Holland*. It formerly belong'd to the Lords of *Arkel*, who built a Castle here, and oblig'd their Subjects to build Houses near it; so that it quickly grew from a poor Fisher-Village to be a considerable Town, and was walled in. They have a daily Market for Corn, Butter, Cheese, &c. brought down the *Ling* from the fruitful Country of the *Betaw*, by which, together with the People's applying themselves to Navigation, the Town is become exceeding rich. They have a good Church, from the Steeple of which may be seen 22 Wall'd Towns, with an infinite Number of Villages, which make a Prospect that's scarce to be parallel'd. Their Lords formerly nam'd their Senate; but in 1652, the States gave them Power to name their own Magistrates. Over the Water-Gate there's this Inscription, *Civitas in qua maxime Civis Legibus parent, & in Pace beata, & Bello invicta*; i. e. A City, happy in the Loyalty of its Inhabitants, blest'd in Peace, and unconquer'd in War. The French could not take it in 1672. Near this City, they shew a Place where they pretend *Hercules* of *Germany* formerly encamp'd, and gave Name to the Country of *Arkel*; the Lords of which were formerly so powerful, as to make War with the Counts of *Holland*; but being at last overpower'd, they sold their Lands to the Dukes of *Gelder*, who afterwards sold most of it to the Counts of *Holland*. *Bleau* gives an Account of the great Philosopher *Henry* of *Gorcum*; and others of their Learned Men.

22. *Heuslom*, or *Hoekelum*, lies 3 Miles N. E. from *Gorcum*. 'Twas anciently called *Hercules's Home*, and said to have been the Residence of the German *Hercules*. It had formerly a strong Castle, which is now demolished.

23. *Asperen*, lies 2 Miles E. from *Hoekelum*. 'Tis a small Wall'd Town, belonging to the Family of the *Boetslaers*, and is noted for giving Birth to some eminent Divines.

24. *Leerdam*, lies 5 Miles N. E. from *Gorcum*. It belongs to the Family of *Orange*, was formerly a considerable, but now a small Town, with the Remains of an ancient Castle, from whence the *Guelldrians* us'd to infest *Holland*.

25. *Vianen*, was built in 1190. 'Tis walled and fortified, enjoys great Privileges, and is an *Asylum* for poor Debtors. It stands on the S. Side of the *Lech*, a Branch of the *Rhine*, 5 Miles N. from *Leerdam*, had formerly Lords of its own, who pretended to be independent; and one of 'em maintain'd a long Suit upon that Account with *Philip II.* of *Spain*. It lately belong'd to the Noble Family of the *Bredersdes*, now extinguish'd. 'Tis a neat City, encompass'd with pleasant Fields, and has a stately high Tower adjoining to the Castle of *Batsestein*, the Seat of its Lords, which has fine Gardens, Statues, Pyramids, and Paintings.

26. *Newport*, lies 9 Miles W. from *Vianen*, on the Left Side of the Lake, formerly a large and rich Town, but now only a Village.

27. *Isselstein*, near 3 Miles N. from *Vianen*, on the Borders of *Utrecht*, formerly a Bone of Contention betwixt that Province and *Holland*. 'It belong'd to the Lords of *Egmond*; one of whom being accused of Treason against the Count of *Holland*, was besieged and taken here, and forc'd to resign it for an Annual Pension in 1417. After which, those of *Utrecht* took and burnt the Town, as the *Guelldrians* did in 1466; but it was rebuilt and fortified by *Frederick* of *Isselstein* in the Time of *Charles* of *Burgundy*, and came afterwards to the Family of *Orange*, who enlarged the Fortifications, and encompass'd it with pleasant Gardens and Inclosures. Their chief Trade is in Cables, Cordage, and other Materials for Shipping.

28. *Sewenhewsen*, 4 Leagues from *Leyden*, a Village remarkable for a pleasant Grove half a League long, and a Furlong broad, with a Channel in the Middle. Here abundance of Wild-Fowls are bred, the Profit of which, and from the Grove, is so considerable, that 'tis lett for 300 l. Sterling per Annum. The neighbouring Inhabitants flock hither in great Numbers to see the young Birds taken by shaking the Nests down from the Trees. Our *K. James I.* is said to have had two Vessels with young Birds from hence every Year. The chief of 'em are, Shags, resembling Cormorants, Lepelars or Spoonbills, Quacks or Night-Ravens, which make a Noise in the Night like one vomiting; Herons, Wood-Pigeons, and Tur-tles.

29. *Naerden*, the Capital of *Goyland*, lies upon the *Zuyder-Sea*, 12 Miles S. E. from *Amsterdam*, among Marthes, occasioned by the River *Vecht*. The old Town is swallow'd up by the Sea, the Ruins of which are to be seen at Low Water 200 Perches from the present Town. 'Tis small, but strong. 'Twas basely abandon'd by the Garrison when the *French* came before it in 1672, and retaken by the *Dutch* upon Terms in 1673, tho' the Garrison consisted of 3000 *French*, well furnish'd with all Necessaries, and in daily Expectation of Relief, for which the Governor was degraded, condemned to perpetual Prison, and all the Officers cashier'd, but one who protested against the Capitulation. This Town was surpris'd by those of *Utrecht* in 1481, who sent Soldiers thither dress'd like Marker-Women; but that same Year the *Naerdeners* defeated those of *Utrecht* in Battle, kill'd 1500 of 'em on the Spot, destroy'd several of their Castles, and with the Plunder built a Tower at *Naerden*, on which they plac'd this short Inscription, *Swijcht Utrecht; i. e.* Brag no more *Utrecht*, but hold thy Peace. In 1572. this Town surrender'd to the *D.* of *Alva's* Son, when he barbarously order'd all the Inhabitants to meet in the Market-place, and after having sent Priests to confess them, made his Soldiers cut 'em all off. Some Writers say, that most of 'em were Papists; and that when the Priests confessed them, they ask'd, If they were Catholics? And when answer'd, Yes, told 'em, *That was good for their Souls.* *Bentivoglio* says,

says, 'twas a Nest of Hereticks; and *Strada*, tho' he thinks they deserv'd Punishment for their Heresy, yet says, this Cruelty was a Crime, and attended with ill Consequences to the *Spanish* Affairs, because it made the *Hollanders* desperate, and occasioned their obstinate Defence of *Leyden* and other Places, being resolved to suffer all Extremities rather than submit to the *Spanish* Yoke. The States have made it very strong of late with Brick-Walls, Ravelins, Half-Moons, Counter-carps, and double Ditches; so that 'tis now as regular a Fortification as any in the Country, and a great Security to *Amsterdam*. The adjacent Country being high and sandy, the Air is better than in most Places of *Holland*.

30. *Muyden*, lies also on the *Zuyder-Sea*, 5 Miles W. from *Naerden*, at the Mouth of the *Vecht*. 'Tis a pretty small Town, extremely well fortified, with a Sluce, by which they can drown the adjacent Country. 'Tis reckon'd one of the strongest Ports in *Holland*, and has an ancient Castle, whither Count *Florent V.* was carried by the Traitor *Velsen*.

31. *Wesop*, upon the *Vecht*, 3 Miles S. from *Muyden*. 'Tis also well fortified, held out against the *French* in 1672, and is noted for good Beer, called *Flemish* Physick.

Westfriesland or North-Holland.

IT has the former Name, because anciently the Seat of the *Frisi* *Minors*; and the latter, because of its Situation. The chief Places which we shall take, according to the Course of the Map, are,

1. *Monnikendam*. It lies on the other Side the *Pampus*, 6 Miles N. E. from *Amsterdam*, and 6 N. from *Muyden*. It has its Name from the small River *Monnick*, which runs through it. 'Tis an ancient City, mentioned in the *Dutch Annals* of 1236; is well fortified with a Rampart and Walls, and has a Monk for its Arms.

2. *Saerdam*, lies on the River *Saren*, 8 Miles W. from *Monnikendam*; and tho' but a Village, is populous and large, and so remarkable for building of Ships, and well stor'd with Ship-Carpenters, that they commonly say, they can build as many in a Year's time as there are Days in it. Their chief

Trade lies in this, by which the Town is grown very rich. The Old Town stands below the Dam of the River, to which there has been added a long Row of Houses, called the New Town, on both Sides the River, out of which Ships are hawl'd over the Dam upon Rollers.

3. *Edam*, above 2 Miles N. from *Monnikendam*. It has its Name from a great Bank, to hinder the Inundation of the River &c. It lies on the *Zuyder-Sea*, and on the other Side has a very rich Country, formerly a great Lake, about 5 Miles long, and above 2 broad, now called the *Purmer*. Their chief Trade is in building of Ships, and making excellent Cheefe. The Mermaid, formerly mentioned in our Description of *Haerlem*, is said to have been caught in the Mud here by some Maids going to milk their Cows in the *Purmer*.

4. *Purmerend*, so called because it stands at one End of the *Purmer*, 4 Miles W. from *Edam*. It had anciently a neat and strong Castle, was fortified in 1573, and is grown very rich since the dreining of the *Beemster* Lake, which has added a fruitful Tract of Land to it. It belong'd to the Family of *Egmond*, who sold it to the States in 1590. The *Beemster* was drain'd in 1612, after 4 Years Labour. It contains 7090 Acres, besides the Highways and the Dikes that surround and cross it in several Places, which make in all 10000 Acres. Sir *W. Temple* says, the *Beemster* is so well planted with Gardens, Orchards, Rows of Trees, and fruitful Enclosures, that it makes the pleasantest Summer-Landskip he ever saw.

5. *Alcmaer*, lies about 14 Miles N. W. from *Purmerend*, and took its Name from the Marshes with which it was encompassed. 'Tis a very ancient City, suffered much by the Incurfions of the *Frizons* about 600 Years ago, which obliged Count *Wm.* to build a Castle for its Defence, and afterwards to fortify, and endow it with large Privileges. 'Tis one of the most beautiful and best built Towns in this Country, is surrounded with pleasant Gardens and rich Pastures; and from the Milk of their numerous Herds of Cows, make vast Quantities of Cheefe and Butter, which enriches the Town. 'Tis called the Gate of the Waterland, was burnt in 1328, but afterwards rebuilt with more Splendour. This Town repulld the

Spaniards in their first War with the *Netherlanders*, being then very strong by its Situation among Marshes, which are since drein'd. It has produc'd several Learned Men, and among others *Cornelius van Drebbel*, who pretended to the Invention of a perpetual Motion; and that he could, by Oprick Glasses, make himself appear in all Shapes and Habits: For an Account of which, we refer to *Hegenitius*. The City is wall'd round; and at the End of it, there's a large Grove regularly planted, which adds much to the Pleasantry of the Place.

6. *Hoorn*, lies on a Bay of the *Zuyder-Sea*, 11 Miles E. from *Alcmaer*, is a pleasant, rich, and large Town, encompassed with so many broad Dikes and Channels, that 'tis reckon'd impregnable. The Inhabitants are also noted for Courage. Some derive the Name from its crooked Harbour. On the Land-side, there are rich Pastures, fine Gardens, and pleasant Walks. They have an Annual Fair in *May*, where vast Quantities of Butter and Cheese are sold. They have also a considerable Trade by Sea, and in building of Ships, which has made it a rich and splendid Town. 'Twas built about 1300, and was afterwards noted for a great Trade in *Danish Cattle*. *Petrus Junius*, the famous Historian, and other Learned Men, were born here.

7. *Enchuyfen*, on the *Zuyder-Sea*, lies 9 Miles N. E. from *Hoorn*. 'Twas formerly built with Wood; but having suffered much by Fire, they build now with Brick. 'Tis very strong by its Situation and Art. 'Twas much enlarged in 1591, and will take an Hour and an half to walk round it. The Steeple of their Church is admired for its extraordinary Height. 'Tis one of the best Harbours in this Country; but the Mouth of it being liable to be choak'd by Sand, which made it impracticable for large Vessels, about 60 Years ago the Inhabitants cleans'd it, and made a new Harbour within the City. They build many Ships, drive a great Trade in fishing Herring, and send out large Fleets to the *Baltick* and other Places. In *Bentivoglio's* Time, it exceeded all the Towns of this Country in Number of Ships, and for Skill in Maritime Affairs. 'Twas the first Town in *Holland* which revolted from *Spain*, has a great Trade in *Danish Cattle*, and refining *French Salt*. *Tappe-*

rus and other Learned Men were born here. The Closet of Rarities collected by *Paludanus*, a Physician of this Place, is much commended by *Hegenitius*, who, among other Things in it, took Notice of a *Chamæleon* that was kept alive some Days; during which Time, it appear'd of all Colours but Red and White.

8. *Medenblich*, lies about 7 Miles N. W. from *Enchuyfen*, upon the *Zuyder-Sea*. 'Tis reckon'd the most ancient City of *North-Holland*, was formerly its Capital, and, as some say, the Seat of *Radbodus*, the famous *Frizon King*. Their Castle was repaired by *Florent V.* about 1282. The Town is small, but has a noble Harbour, capable of 300 large Vessels, and the largest and strongest Dikes against the Sea of any Town in this Country. The neighbouring Soil is very fruitful. It was formerly govern'd by a *Dykgrave*; but now they chuse their own Magistrates, after the Manner of other Cities in *North-Holland*.

9. *Schagen*, 10 Miles N. W. from *Medenblich*, is a rich Village, and the adjacent Country is reckon'd the richest Soil in *Europe*. Land is sold here at double the Rate of any other in *Holland*; there having been Trees upon it, one of which yielded as much Fruit at once, as brought the Owner 10 l. And there's the Picture of a Sheep bred here, hung up in the Shambles at *Amsterdam*, where 'twas sold for the like Sum. *Egmond*, a noble and well built Village, which gave Title to that Noble Family, lies in this Country, 3 Miles W. from *Alcmaer*. It had formerly a fine Castle, and a large Monastery. Six Miles further S. lies *Beverwick*, formerly noted for Pilgrimages to it. It has pleasant Inclosures, and a good Harbour on the Mouth of the *Wickermar*.

The Drein'd Lands of North-Holland are,

The *Zype*, the *Beemster*, and *Purmer*, formerly mentioned; the *Wormer*, and *Schermer*. The *Zype* was first drein'd and encompassed with Banks by *William Lord of Schagen*, and secur'd by stronger Fences in 1552; but the Sea broke 'em down in 1570. After which 'twas drein'd again, and secur'd by a Mole of prodigious Height and Bulk, Proof against all Attacks of the Sea, and is a very fruitful Soil. The Noise made by the

the Waves which break upon it resemble the barking of a Pack of Hounds, from whence 'tis called the *Hounds Wood*. 'Tis supported by large Beams of Timber, firmly plac'd in the Ground, and strongly fasten'd together, the Distance betwixt 'em being fill'd with large Stones that resemble Rocks; and the Mole is strengthen'd by 3 vast Banks cast up against it. There were no less than 30 Mills made use of to drain the *Beemster*, which is encompassed by a Channel from 4 to 8 Rods broad, and is join'd to *Purmerend* by a Bridge at the South End.

To North-Holland belong the following Islands.

1. The *Texel*, about 6 Miles long, and 5 broad. 'Tis defended from the Sea by Sand-Hills and strong Banks. Most of the Soil is applied to feed Sheep, of which they have great Flocks, and the Cheese made of their Milk vies with *Parmesan*. It contains besides several fair Villages, a large Town on the E. Side called *Burch*, which enjoys the Privileges of a City. The Inhabitants apply themselves to Agriculture and Herring-fishing; and the States, because of the Importance of this Place, which lies at the Mouth of the *Zuyder-Sea*, have built a strong Fortrefs here, where they have always a good Garrison.

2. *Flieland*, N. of the *Texel*, about 9 Miles long, and 2 broad. It has only one small Village, and is chiefly remarkable for the vast Quantity of Muscles that are found here.

3. *Schelling*, lies N. from *Flieland*, about 11 Miles long, and 3 broad. It has two Villages with Churches, and three without: The chief of 'em, containing about 1000 Houses, was burnt, with 100 Merchant-Ships, by Sir Robert Holmes, with an *English* Squadron, in 1666. Some reckon this Island to belong to *East-Friesland*. These Islands lying along the Mouth of the *Zuyder-Sea*, do, with several large Banks of Sand, break the Rage of the Ocean, and form two good Harbours at the *Texel* and *Vlie*; the first being a noted Station for Ships bound to the S. and the other for those bound to the N.

4. The *Wierings*, so called from the great Quantity of Sea-Weed nam'd *Ware*; is a

Number of little Islands, which lie further in on the Coast of *North-Holland*. The chief of 'em is 5 Miles long, and 2 broad, has several good Villages, a rich Soil, and large Flocks of Sheep. Sir William Temple thinks, that the *Zuyder-Sea* was form'd by some great Inundation, there being no Notice taken of it in ancient Authors; which is the more probable, because of the great Shoals of flat Sands that lie all over it, and of the Islands above-mentioned, that lie like the broken Remains of a continued Coast. This Sea is remarkable for a Battle betwixt the *Spanish* and *Dutch* Fleets in 1572. The Arms of the Province of *Holland* are, Or, a *Lion Gules*.

The Province of Zealand.

FROM *West-Cappell* to the Frontiers of *Dutch Brabant*, taking in the Channels which divide the Islands, 'tis about 30 Miles long; and from the W. Mouth of the *Scheld* to the Channel betwixt it and *Goeree*, is about 17 broad. Some derive the Name from its Situation, and others from *Zealand* in *Denmark*, from whence a Body of *Danes* invaded it, and settled here. The Air is sharper and less healthful than that of the neighbouring Countries, and Strangers who come hither are very subject to Agues and Fevers; yet that of *South-Beveland* is reckoned mild, and the Air of *Walcheren* is more temperate than in former Ages. The Nightingales frequent it of late, which they did not in former Times, when it was not so well planted with Gardens and Orchards as now. The Soil is generally fruitful, produces excellent Wheat, abundance of Colewort, of whose Seed they make great Profit, and Madder for Dying. They have good Pasture for Sheep, especially on the Shores; which being often overflow'd, impregnates the Earth, and gives the Grass such a Relish, that their Mutton is prefer'd to that of the other Provinces. The People are of a middle Stature, strong and well set. Their History speaks of a Woman born here, and brought by the Countess of *Holland* to the Marriage of *Charles the Fair* of *France* about 1323, where she was much admir'd for her great Bulk and Stature, the tallest Men looking like Children

to her, tho' both her Parents were of an ordinary Size. Her Strength was such, that she could easily lift up with each Hand a Barrel full of *Hamburgh Beer*, and could carry as much Weight as 8 strong Men. The better Sort are courteous and liberal, but the meaner rough and boisterous, and chiefly employ'd in sailing. They are the best Mariners of the 7 Provinces; and during a War, make great Advantage by Privateering. They have not many Artificers, their chief Application being to Fishing and Foreign Trade; and they are very dextrous at refining of Salt. In their Customs and Humours, they come nearer the *Brabanders* and the *French* than the *Germans* and *Dutch*; and their Women are very neat in their Dress. They were formerly under the same Count with *Holland*, but had their own particular Laws. A great Part of it was subdued by the Earls of *Flanders*, but recover'd again by their own Counts. Their Islands are divided into those on the E. and W. Side of the *Scheld*, which are under the Jurisdiction of two Treasurers, that have the Power of Judges, take Care of the Peace, and punish Offenders; but the Power of him on the E. Side of the *Scheld* is much eclips'd of late by the Bailiffs of *Zirick-zee* and *Tolen*. The Treasurer of the other has his Court at *Middleburg*. The Islands are 8, 4 beyond the *East-Scheld*, viz. *Schowen*, *Duveland*, *Tolen*, and *Oresland*; and 4 between that and the *West-Scheld*, viz. *Walcheren*, *South-Beveland*, *North-Beveland*, and *Wolferdike*. Three of 'em being more expos'd to the Ocean than the rest, the Inhabitants are at great Charge to preserve themselves by Dikes. In this Province there are 8 Cities, and 100 Villages.

The chief Island is *Walcheren*, Lat. *Walachria*, of a round Form, at the Mouth of the *Scheld*, about 9 Miles long, and 8 broad. It exceeds the rest in Number of Inhabitants, Splendour of its Cities, Villages, and Trade; has the Sea on the W. *South-Beveland* on the E. *Schowen*, with the Sea, on the N. and the Mouth of the *Scheld* on the S.

The TOWNS are,

1. *Middleburg*, so called because it stands about the middle of the Island, and not from *Mesellus*, a *Roman* Consul, as some

would have it. 'Tis large and populous, has many wealthy Merchants, the Streets are spacious, its Churches magnificent, and 20 in Number. One of 'em has an exceeding high Tower, sumptuously built, with a fine Clock and Dial, which is said to have cost 150000 Florins. The Stadthouse is a noble Fabrick, adorn'd with Statues and Images: It had very splendid Monasteries before the Reformation, especially that of *St. Nicholas*, whose Abbot represented the Clergy in the Meeting of the States. *Philip II.* made it a Bishop's See; but the States have since converted it to the Use of their own Meeting, a Chamber of Accounts, a College of Admiralty, and a Mint. This City is much enriched by the Staple of Wine from *France*, *Spain*, and *Portugal*. They purchas'd the Town of *Armuyden* above 100 Years ago; and their old Haven being choak'd up, they have cut a deep and broad Channel from that Town, by which Vessels of great Burden are brought into the City. 'Tis strongly fortified with a Wall, encompassed by large Ditches, and those Ditches furrounded by another Wall. The Lutherans, Anabaptists, and Jews, are allowed Places of publick Worship here. Their Government is by 2 Consuls and 11 Eschevins, chosen by a Council of 24; half of which are such of Quality and Reputation, as cannot be chosen themselves. For their Learned Men, such as *Paul* of *Middleburg*, &c. we refer to *Bleau*. *Dr. Brown* says, the new Church is Octagonal, with a Cupulo, and the Piazza of the Town-House Circular. They constantly maintain at the Entrance of the Town-House 3 Eagles, in Consideration of certain Privileges granted them by the Emperor. This Town lies 32 Miles S. W. from *Rotterdam*, in Long. 22. 30. Lat. 51. 45.

2. *Flushing*, 5 Miles S. from *Middleburg*, on the Mouth of the *Scheld*. About 300 Years ago, 'twas only a Ferry to *Flanders*; but increas'd so much by reason of its good Port, that 'twas wall'd by *Adolphus* of *Burgundy* about 160 Years ago. 'Tis of such Importance, that *Charles V.* order'd his Son *Philip* to take Care to preserve it. 'Tis not so large or well built as *Middleburg*, and the Streets are not so spacious; but it has several fine Structures, and particularly their Stadthouse, where they have the Pictures of all

all the Princes of the House of Nassau. The Houses are generally well built, and the Town well fortified, and rich. The D. of *Alva* order'd a Citadel to be built here; but the Inhabitants hang'd his Engineer; and the Town was the first that revolted after the *Genſe* seiz'd the *Brill*. 'Twas one of the Cautionary Towns given by the States to Queen *Elizabeth*, when the great Sir *Philip Sidney* was made Governor of it. 'Tis almost surrounded by the Sea, and their Canals bear Ships of great Burthen, which makes it a Place of vast Trade. They built a Church for the *English* in Q. *Elizabeth's* Time, with a new Stadthouſe, and a Palace for the Pr. of *Orange*. It belong'd formerly to the Marquisses of *Ter-Verē*; but was purchas'd, with the Marquissate, by the Pr. of *Orange* in 1581. when they swore Allegiance to him and his Heirs, and were ever after great Lovers of the Family.

3. *Ter-Verē*, or *Camp-Verē*, about 3 Miles N. from *Middleburg*, is well fortified, with a broad Ditch and 3 Bulwarks, answerable to the Number of its Gates. 'Tis a good Harbour, and the best furnish'd Arsenal of the Province. It has been the Staple of the *Scots* Trade since 1612, from which it has received great Profit. The *Scots* are allow'd the old Parish-Church here. It has been frequently in Danger by the Sea, which overturn'd the Tower that stood on the N. Side of the Harbour in 1630. 'Tis govern'd by its own Magistrates, who are 2 Consuls and 9 Eschevins, assisted by a Council of 24, but subject to the Family of *Orange*. Our noble and ancient Family of the *Veres*, Earls of *Oxford*, lately extinguish'd, were said to derive their Origin and Name from this Town.

4. *Arnmuyden*, so called from the River *Arn*, that runs from hence to *Middleburg*, lies above two Miles E. from it. The old Town of this Name is long ago ruin'd, and nothing of it left but a fair Church and a Hall. The new Town above 100 Years ago exceeded *Middleburg* in Magnificence and Riches, and had a good Harbour, capable of Vessels of 300 Tun. 'Twas purchas'd by the *Middleburgers* from *Philip* of *Burgundy*; but their Harbour being spoil'd by Sands, their Trade is decay'd, and their chief Subsistence now is from refining Salt. 'Tis en-

compass'd with Walls, and has its own Magistrates.

5. *Ramekens*, lies 2 Miles E. from *Flushing*, is a strong Fort, built by *Mary* Qu. of *Hungary*, when Governess of the *Low Countries* for *Charles V.* It stands pleasantly, encompass'd with Villages, Meadows, and Fields; and on one Side has a Creek, which is a safe Harbour for Ships. 'Twas one of the Cautionary Towns given to Qu. *Elizabeth*. *West-Cappel* lies on the W. Coast of the Island, was formerly a Place of great Trade, had a commodious Harbour, and is famous for the Maritime Laws us'd in the 7 Provinces, called by its Name; but was ruin'd by Inundations, and now reduc'd to a Village. Two Leagues and a half W. from *Middleburg* stands *Domburg*, formerly a rich and populous Town, with large Privileges, and abundance of *Roman* Antiquities, with Trunks of Trees, have been dug up in the Neighbourhood. The Palace of the Abbots of *Middleburg*, called *Westbove*, is pleasantly situated among Woods near this Place, which is now also reduc'd to a Village, being ruin'd by Inundations; yet both it and *West-Cappel* enjoy their former Privileges, and are govern'd by their own Magistrates. At *West-Soubourg*, between *Flushing* and *West-Cappel*, there's a large ancient Palace where *Charles V.* resid'd in 1555, when hinder'd by contrary Winds from sailing to *Spain*.

South-Beveland lies on the E. of *Walcheren*, extended towards *Brabant* in *Flanacrs*. 'Twas formerly 20 Dutch Leagues in Compass; but so much diminished by Inundations, that 'tis now but 7 Miles long, and 7 broad. In 1532, the Town and most of the Lordship of *Borsales* were swallowed up, and *Rommerswael* divided from the rest, and made an Island by it self. *Rommerswael* was a very ancient Town, of good Note, but ruin'd by 6 Inundations and Fire. The only Place of Note in *South-Beveland* is *Ter-Gow*, supposed to take its Name from a Goose, which is its Arms. It had large Privileges from *William* of *Bavaria* in 1350, and was wall'd in 1417. It suffer'd much by Inundations in 1539, but was restor'd by the Care of the Magistrates, and the Favour of *Charles V.* 'Twas besieged by the *Dutch* in the D. of *Alva's* Time, but relieved by 3000 of his Men, who waded through the drowned.

drown'd Part of the Island with Ammunition and Provision in Sacks, which oblig'd the Dutch to raise the Siege. They afterwards took it, and fortified it in 1585. Since which, it has increas'd in Riches and People, tho' not very large. It has 6 Gates, is neatly built, 3 Market-Places, a Grammar-School, and 3 Hospitals, all fine Structures. The chief Church was burnt down in 1618, but is since rebuilt very stately. It has a Channel to the Sea, by which small Vessels come up to the Town. The Lordship of *Borselen* belongs to it, and they appoint Magistrates to govern it. This City chooses their own Magistrates, who are a Prætor, 2 Consuls, and 9 Eschevins. There are 31 Villages in this Island, most of which have high Towers, that are Sea-Marks for Sailors; and there are many Gentlemen's Seats here, most of which are moated about.

Wolferdike lies on the N. of *South-Beveland*, is about 6 Miles long, and 1 broad, has some Villages and good Pastures. Part of it was swallowed up by Inundations, but has since been recover'd. The Streams about it are so violent, that they seem to contend which shall first devour it.

N. from this lies *North-Beveland*, formerly so pleasant a Country, that 'twas reckon'd the Garden of *Zealand*; but in 1532, 'twas overwhelm'd; and *Corsghene*, a Town of Note, with several Villages, were destroy'd. Great Part of the Island has since been recover'd, and particularly 2000 Acres not many Years ago near the Village of *Catzhoeke*.

The Islands beyond the East-Scheld are,

1. *Schouwen*, called in Latin *Schaldia*, from the River *Scheld*. 'Tis the largest of this Division, is 15 Miles long, and 5 or 6 broad. 'Twas formerly much larger, and divided only by a narrow Channel from *North-Beveland*, but was diminished by Inundations. It abounds with populous Villages, Gentlemen's Seats, rich Farms, and Inclosures.

The TOWNS are,

1. *Zirickzee*, reckon'd the oldest in *Zealand*, and to have been founded by one *Zi-*

ringus about 849. It lies on the S. Side of the Island, 10 Miles S. E. from *Middleburg*. It has a good Trade in Salt and *Madder*, the latter abounding more here than in the other Islands. Their Harbour has suffer'd of late by Sands. 'Tis a large Town, with several good Buildings. Their Church, called the *Munster*, dedicated to St. *Levinus*, one of their Apostles, is a very beautiful Structure, and the best in the Province, but not so splendid as formerly, having suffered much by Lightning in 1466. The Walls of the Town are old, and the Ditches but ordinary; yet 'tis so strong by Situation, and the Conveniency of laying the adjacent Grounds under Water, that 'tis not easy to be attack'd. It held out 8 Months against the *Spaniards* in 1575, when it surrender'd on Terms, which occasion'd a Mutiny in the *Spanish* Army, who expected the Plunder of the Town. 'Tis govern'd by 2 Consuls, 12 Eschevins, and a Council of 24, who have the Jurisdiction of the whole Island. 'Tis noted for the Birth of *Susius* the Antiquary, and the Physicians *Lemnius* the Father and Son, &c.

2. *Browerhaven*, on the N. Side of the Island, 5 Miles from *Zirickzee*. It had its Name from their great Trade in Beer brought from *Holland*. 'Twas walled during the Civil Wars, has the Privileges of a City, but is much decreas'd, and subsists now chiefly by Husbandry and Fishing. It belong'd formerly to the Counts of *Holland*; but was annex'd by *Philip II.* in 1558 to the Province of *Zealand*.

3. *Bommene*, about 2 Miles E. from *Browerhaven*. 'Twas fortified in the first War with *Spain*, is impregnable by Land, and may be easily relieved by Sea.

The 2d Island is *Duvelande*, divided from *Schouwen* by a small Channel on the E. Side, is about 7 Miles long, and 4 broad. It has its Name from the Multitude of Doves bred there. Most of it belongs to the Town of *Zirickzee*, who have divided it into several Jurisdictions. 'Tis noted for a bold Attempt of the *Spaniards* in wading hither from *Philipsland* during the War, as is mentioned by *Strada* and *Bentivoglio*. 'Tis since joined to the Isle of *Schouwen* by a Bank, has no Place of Note in it, but only some Villages.

The

The 3d Island is *Tolen*. Its chief Town has the same Name, and lies on the E. Side of the Island, which is about 6 Miles long, and 5 broad, separated from *South Beveland* by a small Channel on the S. and by a lesser from *Dutch Brabant*. 'Tis a pleasant and fruitful Place. The Town and Island had its Name from a Custom-house erected here by the Counts of *Zealand*. 'Tis very well fortified, and the whole Island is so strong, that 'tis capable to resist a great Army. It has been augmented by the Addition of a large Tract of Ground belonging to the Family of *Orange*, called *St. Martin's Dike*. The Town is govern'd by 2 Consuls, 8 Eschevins, a Bailiff, Syndic, and Secretary.

The 4th Island is that called *Oresand* or *Moersand*, betwixt *Sehem* and *North Beveland*, but much nearer the last. 'Tis of small Extent, and has no Place of Note, but only Villages.

The Arms of the Province of *Zealand* are, Or, a *Lion Gules*, rising out of a *Sea Wave*, *Argent* and *Azure*.

The Province of Utrecht,

HAS the *Zuyder-Sea* on the N. Part of *Guelderland* and *Holland* on the S. Part of *Holland* on the W. and Part of *Guelderland* on the E. 'Tis in Length from S. E. to N. W. about 30 Miles, and from S. W. to N. E. the greatest Breadth about 25. The Ground is higher, much pleasanter, and fitter for Husbandry, than *Holland*, and the Air much better. It abounds with Gardens and Orchards, except about *Amersfort*, on the Borders of *Guelderland*, where 'tis barren and heathy. The Inhabitants appear by History to have been formerly of a very martial Disposition; but lost much of their Credit that Way by their easy Submission to the *French* in 1672, which some ascribe to Treachery, and others to the Decay of their Military Genius by a long Peace. But however that be, there was a great Alteration made in the Government of that Province in 1674, as a sort of Punishment, by which the Stadtholder had a much greater Power given him by the Provincial States in the Government of that Country than in the rest. They are said to have been converted to Christianity by the *English*, and

to have been subject to Bishops of their own for 900 Years. As to their Dispositions, some reckon them to come nearer the *Germans* than the rest of the *Dutch*, and not to be so much inclin'd to Trade as the Maritime Provinces. The common People are courteous and hospitable, which is owing in part to the great Number of Gentry who have been invited to live among them by the Wholesomeness of their Air.

The Province is divided into 4 Districts, under so many Marshals, viz. the Upper and Lower Diocese, *Emeland*, and the Land of *Montfort*.

The chief TOWNS are,

1. *Utrecht*, formerly called *Antonina*, and therefore, as well as from *Roman* Coins and other Monuments of Antiquity found about it, supposed to have been a *Roman* Colony; but *Junius*, *Bleau*, and others, are not agreed whether it was so called from *Antoninus* a *Roman* Senator, who is said to have fled from *Nera*, and settled here; from *Marcus Antonius*, *Cesar's* Legat in *Gall*; or from *Antoninus Pius*, who is said to have rebuilt it. *Cellarius* says, the *Trajectum* in *Antonin's Itinerary* appears by its Situation to be *Utrecht*, which had its Name from a Passage there over the *Rhine*; and that in *Charlemagne's* Time, the Epithet *Petrus* was added; and hence the common *Dutch* Word *Oudt* or *Alt* being join'd to *Trecht*, form'd the present Name; which is more probable than *Junius's* Conjecture, that it was form'd by the ignorant Vulgar from the Words, *V. TRIC. LEG. STAT.* as being the Station of the 35th Legion. 'Tis said to have been taken from the *Wilsa* by *Dagobert*, Son to *Clothar* of *France*, by whom 'twas enlarged and fortified. He is also said to have conferr'd it upon *St. Willebrod*, an *Englishman*, its first Bishop, who, *Bede* says, died in 636, and was succeeded by *St. Boniface*; after whose Martyrdom by the *Normans*, the See was translated to *Cologne*; but restor'd by *Pepin* and *Charlemagne*, and the Diocese extended to most Part of the old *Bastavia*, which made the Bishop one of the most powerful in *Christendom*, and enabled his Successors to make War with the Counts of *Holland*, as we have heard before. It continued to be a considerable Principality till the

the Time of *Charles V.* to whom 'twas resign'd by their Bishop *Henry of Bavaria*. This City lies on the Channel of the old *Rhine*, 19 Miles S. E. from *Amsterdam*, 25 from *Leyden*, and 19 N. E. from *Rotterdam*, in Long. 23. 47. Lat. 52. 7. 'Tis a fair, large, populous City, the Houses of Brick, and many of 'em stately; but the Streets not kept so neat as those of the Towns in *Holland*. They have curious and neat Cellars, and their Churches are magnificent. The chief is that of *St. Martin*, formerly the Cathedral, where *Charles V.* in 1536 held a solemn Meeting of the Knights of the *Golden Fleece*. 'Twas formerly mean, but splendidly rebuilt by Bishop *Adelbold* in 1023. 'Tis usually called the *Dome*, and has a Tower with 460 Steps, from whence there was a fine Prospect of the adjacent Country; but a great Part of the Church was demolished by a great Tempest in 1674. Here lies buried the Baron *Van Gaunt*, with a noble Monument: The Inscription shews, that he commanded when the *Dutch Fleet* came up to *Chatham*. The Church of *St. Mary*, commonly call'd the *English Church*, was built, as they say, by the Emperor *Henry IV.* to atone for his destroying one of that Name at *Milan*. When the Workmen were about it, they found a Vorago in the Place where they were to build one of the Pillars, but knew not how to secure the Foundation upon such a Quagmire. An ignorant Fellow called *Fuso* undertook it, but ask'd an exorbitant Rate; which the Bishop not being willing to grant, he suborn'd the Man's own Son to pump out the Secret, which was, to cover the Quag with Bulls-Hides. Upon this, *Fuso* being disappointed of his Reward, stabb'd the Bishop, according to the Story. There's the following Inscription upon the Pillar, asserting it to be so founded:

*Accipe Posteritas, quod post tua Secula narres,
Taurinis cutibus fundo solidata columna est.*

And over it there are ancient and odd Characters, which *Dr. Northleigh* supposes to be the Date of the Year. But he observes very justly, that it was *Frederick Barbarossa* who sack'd *Milan* 100 Years after *Henry IV.* and was commanded by the Pope to build this Church: So that it must either be a

Legend, or a gross Mistake as to the Founder; but the latter is more probable, for some ascribe it to *Frederick*. This Church has a small Library, with some old Books and MSS. and among others, a Bible of the old Translation in 6 Volumes, finely writ in an ancient Character, besides some Pagan Idols, and other Curiosities, as the Horns of Sea-Unicorns, and other Things given them by Emperors. *Dr. Brown* says, the great Church has 3 Steeples, one above another, from whence they have a Prospect of the adjacent Country, with 51 wall'd Towns, all within a Day's Journey of the Place. He also mentions the *English Church* and the Pillar above-mention'd, said to be founded in 1099, which can neither agree with the History of *Henry IV.* nor *Frederick I.* Before the Reformation, there were several large Monasteries and Religious Houses in and about this City, that are now turn'd to other Uses. The Streams which run through several of the Streets contribute much to the Beauty of the Town; and the Suburbs, which are large and convenient, and equal to the Number of its Gates, have likewise Channels running thro' them. The two principal Channels which run through the Length of the City are the *Vaert* and the *New Gracht*. The Buildings on each Side the latter are very splendid, and there are 35 arch'd Bridges of Brick over both. The City is surrounded with an Earthen Wall and a deep Ditch, with several Bulwarks; and *Mr. Ray* says, in his Time 'twas encompassed with a thick high Wall and a deep Trench. They were said to be out of Repair when the *French* came before it; but that can be no Apology for their Surrender, since they would not admit them to be repaired for fear of spoiling their Gardens and Walks; nor would they receive above two Regiments of the Troops offer'd them by the Prince of *Orange*: Which very much confirms the Suspicion, that they had a private Understanding with the *French King*, who made it his Head Quarter for near a Year and an half; but they had no other Reward for their Treachery, than being forced to pay him 2268000 Guilders during that Time. The *French* made it the Storehouse of the Plunder they took from the rest of the Provinces, which they were 14 Days a-carrying off

off when they left the Town in 1673. They had prepared Materials to build a Citadel, of which the D. of *Luxemburg* laid the first Stone, with the *French King's Arms* upon it. A publick School was erected here by one of their Bishops in 1459; and in 1634, the Provincial States turn'd it into an University, which has since flourish'd very much; tho' it has not the full Privileges of other Universities, being wholly subject to the Magistrates of the City. It has produc'd several great Men, and been noted for eminent Professors in all Faculties. Their Library has more Printed Books, but fewer MSS. than that of *Leyden*. The Market-place or Piazza is very fair, and the Center of several long Streets: The Painters Hall abounds with fine Pieces; and the Pall-mall without the Town, with 5 Rows of tall Trees on each Side, is extraordinary pleasant. There are likewise fine Walks about the old Walls, and a Physick Garden, but of no great Note. Pope *Adrian VI.* was born here, whose Epitaph, order'd by himself, bespeaks his Humility; as did his Refusal to change his Name, tho' born of mean Parentage. His Epitaph is thus:

Adrianus Sextus hic situs est, qui nihil sibi infelicis in vita duxit, quam quod imperaret.
i. e.

Adrian VI. lies here, who reckoned it his greatest Misfortune, that he should ever have been called to Government.

But that which perpetuates its Fame, is the Union of the 7 Provinces, the Foundation of which was laid here. Their Government is manag'd by 2 Scouts and 4 Burgomasters, 2 of whom are chosen Annually. They have likewise a Council of 40 Men to assist them.

2. *Amersford*, about 12 Miles N. E. from *Utrecht*, upon the River *Eems*, which runs by its Walls, and falls into the *Zuyder Sea*. 'Tis supposed to take its Name from a Ford on this small River. 'Tis an ancient Town, and was the usual Retreat of the Bishops of *Utrecht* when drove out by the Citizens; and the Inhabitants of this Place frequently help'd to restore them. 'Twas formerly

but small, as appears by the Remains of its ancient Fortifications. 'Tis now much larger, and will take near an Hour to walk round it. 'Tis of no great Strength, being commanded by a neighbouring Hill. The Buildings, especially those of the old Town, are very neat. They have two Churches, one of which is a large and stately Fabrick. Their Hospitals are equal to those of the greater Cities; and they have a publick School, where several eminent Persons have had their Education. It suffered much formerly by the *Gueldrians*, who took it in 1543. 'Twas also taken by the *Spaniards* in 1629, but afterwards quitted by them, and better fortified by the States. Their Government resembles that of *Utrecht*. They had formerly a great Trade in brewing Beer, but now subsist chiefly by feeding Cattle and Husbandry, there being good Arable and Pasture Ground on the E. and S. but on the W. and N. there's nothing but Hills, Woods, and barren Heaths.

3. *Wick-te-Duurstede*, the famous *Batavodurum* of the Ancients, lies 11 Miles S. E. from *Utrecht*, where the middle Branch of the *Rhine* leaves its ancient Channel, and runs into the *Lech*. 'Tis mention'd by *Tacitus* in his 5th Book, where he says, That a Body of *Germans* endeavour'd to break down the Bridge there. 'Twas afterwards destroyed by the *Normans*, but rebuilt, because of the Conveniency of its Situation, and continues to be a neat and pretty rich Town. 'Twas formerly used as a Place of Refuge by the Bishops of *Utrecht*.

4. *Rhenen*, a wall'd Town upon the *Rhine*, 6 Miles further E. an ancient Place, supposed to be the *Grinnes* of *Tacitus*. In the Fields, betwixt this Town and *Utrecht*, are dug most of the Turfs that serve the neighbouring Country for Fuel.

5. *Montfort*, lies near the *Iffel*, 6 Miles S. W. from *Utrecht*. 'Tis a neat Town, well fortified, and was built by *Godfrey* Bishop of *Utrecht* against the Incursions of the *Hollanders*. 'Tis the Capital of a small Territory, and noted for the Birth of *Lambertus Hortensius*, a Writer of good Fame. *M. de Per* says, the whole Province contains 5 Cities, 65 Villages, and 64 Gentlemen's Seats.

The Province of Guelderland,
and County of Zutphen.

Dutch Guelderland, from *Ginnep* on the *Mos* to *Campen* on the *Zuyder-Sea*, is 48 Miles from N. to S. and from the Frontiers of *Holland* to those of the Bishoprick of *Munster*, including the County of *Zutphen*, 'tis above 50. Some derive the Name from the Castle of *Guelder*, built by its first Lord *Wichardus a Ponte*; and others from the City *Gelduba*, mentioned in these Parts by *Tacitus*; but this cannot be the present *Guelder*, because that was in the Country of the *Ubii*, near *Nuys* on the *Rhine*. The ancient Inhabitants are supposed to have been the *Menapii* and *Batavi*. This Dutchy and the County of *Zutphen* have been for several Ages reckon'd one Principality, and gone by the common Name of *Guelder*. It has the *Zuyder-Sea* and Part of *Over-Iffel* on the N. *Dutch Brabant* and Part of *Cleve* on the S. *Over-Iffel* and Part of the Bishoprick of *Munster* on the E. *Utrecht* and Part of *Holland* on the W.

The Air is much better than that of *Holland* and the Maritime Provinces, because 'tis of a much higher Situation. The Soil is fruitful in Corn and Pasturage; and great Drovers of Cattle are Annually brought from *Denmark* and *Friesland* to be fatten'd here. 'Tis not alike fruitful in all Places; for a great Part of the *Velaw* lies upon a Gravel, and is full of Heaths, Woods, and barren Hills. *Zutphen* has good Pasturage, but not much Corn, because of its low and moorish Situation. The Inhabitants have in all Ages been valued for their Courage above most of their Neighbours, occasioned by the continual Wars of their ancient Dukes, and the Barrenness of a great Part of their Country, which made them chiefly apply themselves to Arms. Their Cavalry was esteem'd all over *Europ*; and 'tis observ'd of *Charles V.* that in order to abate their Military Genius, and secure the Possession of this Country to his Family, he excluded the *Gueldrians* out of his Armies. The Commons are reckon'd courteous and industrious, and much to resemble the *Germani*. *Conringius* says, they are more unanimous in Matters of Religion than their

Neighbours, and more successful in Arms than Arts.

Their Ancient GOVERNMENT.

IN the Ages succeeding to *Charles the Great*, Authors say, they were under an Hereditary Governor, called by the Name of Advocate, Guardian, or Tutor, who was succeeded by Earls, and then by Dukes.

The first Earl mentioned is *Otho* of *Nassau*, who was invested by the Emperor *Henry IV.* in 1079, died in 1107, and was succeeded by his Son *Gerard*, who died in 1131, and was succeeded by his Son *Henry*, who marrying a Daughter of *Brabant*, had the *Velaw* for her Dowry, and died in 1162. He was succeeded by his Son *Gerard*, who died without Issue in 1180. He was succeeded by his Brother *Otho II.* who died in 1202, and succeeded by his Son *Gerard III.* who died in 1271, and was succeeded by his Brother *Reinold the Warlike*, who was imprison'd by his own Son, and died in 1325. He was succeeded by his Son *Reinold II.* who was made the first D. of *Guelder* by the Emperor *Lewis*. He was succeeded by his Son *Reinold III.* who died without Issue in 1371. He was succeeded by *William* of *Juiliers*, Grandson to *Reinold II.* who died without Issue in 1402. He was succeeded by his Brother *Reinold IV.* who died without Issue in 1423. He was succeeded by *Arnold* of *Egmond*, his Nephew by his Sister, who was imprison'd by his Son *Adolph*, and rescued by *Charles the Warlike* of *Burgundy*, who would have reconciled his Son to him upon very good Terms; which *Adolph* barbarously refus'd, and said, He would rather be thrown into a Well with his Father upon him, alledging that he was unreasonable, who had been 44 Years D. of *Guelder*, not to let him have the Government now. *Adolph* being after this slain in the War, *Arnold* resign'd the Government, with the Emperor's Consent, in 1473, to *Charles* of *Burgundy*; who being kill'd before *Namur* in 1476, was succeeded by his Daughter *Mary*; but the *Gueldrians* revolted, and sent for *Katharine*, *Arnold's* Daughter, to whom they submitted during the Nonage of *Charles*, Son to *Adolph*, whom they solemnly recogniz'd. He died without Issue in 1539, and the

the Succession was disputed by *William* of *Cleves* as next Heir; but *Charles V.* came with an Army into the Country, and obliged him to resign, tho' he had been publicly invested by the States, and had a fair Title. To *Charles V.* succeeded his Son *Philip II.* of *Spain*, from whom *Guelderland* revolted with the other Provinces in 1580.

The Arms of this Province are Quarterly; 1. *Azure*, a *Lion Or*, crown'd *Gules*, for the Dukedom of *Guelder*. 2. *Azure*, a *Lion Gules*, for the Earldom of *Zutphen*.

The States of this Province did formerly consist of the Nobles, and the Knights of the Province, the Governors of the Country Districts, and the Deputies of the Cities; but the 4 chief Cities of *Nimeguen*, *Ruremond*, *Zutphen*, and *Arnhem*, were, according to *de Laet*, the main Supporters of the publick Liberty against the Incroachments of their Princes; between whom and them 'twas agreed, That when any Subject was wrong'd by his Prince, he should complain to the Magistrates of the chief City of his Quarter, who were to demand a Redress from the Prince; which if not granted in two Months, the City was to seize all the Revenues of the Prince in that Quarter; and if he continued obstinate, the other Cities were to join with them. *M. de Fer* says, the whole Province, including *Spanish Guelderland*, contains 5 Counties, 16 Cities, 230 Villages, and 5 Fortresses.

The Quarter of Nimeguen.

THIS City is, by *Adrianus Junius*, reckoned to be the *Batavorum Oppidum* mentioned by *Tacitus*, which was burnt by *Civilis* when he retir'd into the *Batavorum Insula*, now called the *Betuwe*, just over against it, after he was defeated by the *Romans*; but *Cluverius* rather thinks it was that now called *Batenburg*, tho' the other be more probable. This City and its Territories having afterwards thrown off the *Roman Yoke*, maintain'd its ancient League with the *Gauls*, or rather *Franks*, and was for a long Time subject, for Protection at least, to the Kings of *Austrasia* or the Emperors.

Smetius, in his *Antiquitates Neomagenſes*,

printed at *Nimeguen* in 1678, is of Opinion, that this City was the *Batavorum Oppidum* mentioned by the *Romans*; which seems to be very probable, from the vast Number of *Roman Antiquities* found in and about that City, of which he and his Father made the noblest Collection that is perhaps to be found in any private Hand. They consist chiefly of Rings, Gems, Keys, Writing Instruments, Bells, Buckles, Lamps, Altars, Marbles, Measures, Weights, Statues, Seals, Pitchers and other Vessels, 11000 Coins, Idols, Inscriptions, &c. For which we refer the Curious to his Book, where such as love Antiquities will meet with grateful Entertainment, his learned Explications tending very much to illustrate the *Roman History* in that and other Parts of the World, and especially of their Emperors. Several of those Inscriptions upon Stones, &c. are fix'd on the Wall of their Town-House; but since very few of 'em relate to the Antiquity of this Place, we shall not insist upon them.

Charles the Great repair'd the Castle, which was built here by the ancient *Batavi*, where he and succeeding Emperors frequently resided, and held Conventions of the States. *Afchafnaburgensis*, in the Year 1046, calls it a Princely Palace, of incomparable Workmanship. Some pretend that this Castle was first built by *Julius Caesar*, and 'twas particularly asserted in an Inscription upon Marble fix'd to the Wall of it, taking Notice of its being repaired by the Emperor *Frederick Barbarossa* in 1155; but this is controverted by the Learned, who also reject the Story of the Town's being first built by *Bato*, who is said to have brought the *Gatti* into this Country: But *Cluverius* owns, that 'tis mentioned by *Antonin* and the *Itinerary Table* as a famous City in their Time. It had the same Privileges allow'd it by *Frederick II.* and *Henry VII.* that were granted to *Aix la Chapelle*, and other Cities of the Empire; and 'tis noted for the Birth of the Emperor *Henry*, Son to *Frederick Barbarossa*. They had a Right to determine all Causes without Appeal, to the Royalties within their Territory, and were not oblig'd to march out of the City but under their Consul, and that no further than they might be able to return at Night. They were exempted from all Taxes throughout

Y y y y y 2

the

the Empire, and to this Day they are exempted from Tolls upon the *Maas*. They have always been tenacious of their Liberty, and were so much inrag'd at the K. of *Spain's* Proclamations for apprehending all Persons suspected of Heresy, without any Regard to their Privileges, that in 1566 they demolished all the Statues and Images in their Churches, and establish'd the Protestant Worship there. This City lies on the S. Side of that Branch of the *Rhine* called the *Waal*, about 29 Miles S. E. from *Utrecht*, 10 S. from *Arnhem*, 22 E. from *Bois-luduc*, and 10 N. W. from *Cleve*. 'Tis pleasantly situated on 5 little Hills in Form of a Semicircle, in Long. 24. 30. Lat. 51. 58. has a delicate Prospect towards *Cleve*, the *Maas*, the *Waal*, the *Rhine* and *Iffel*. From all which, those that travel by Water, have a very fine View of the City, which is well built of Brick for most part, and the Houses slated. It has been much enlarged at several Times, as appears by its old Walls. It has 5 Gates towards the Land, and as many towards the *Waal*; which, in the Opinion of some Learned Men, either deriv'd its Name from the *Gauls*, or gave it to them; the Transmutation, according to the Dialect of those Countries, of G. and W. being very frequent. Upon a high Hill adjoining to the River, stands the Castle called *Valckhoff*, which *Blau* says should be *Waalhoff*; i. e. a Palace on a *Waal*. 'Tis encompassed with high Stone Walls, has 3 large Courts, and 2 Chapels, the largest supported by 8 Pillars on each Side, and abounding with ancient Inscriptions; of which *Smeltius* gives an Account, and among other Things of *Roman* Urns, with black *Calculi* found in 'em, denoting the Ashes to be those of Malefactors; and of Leaden Medals found there, which are very rare. There's as pleasant a Prospect from the middle Tower of this Castle as is to be seen almost any where in *Europe*. Here's an Arch of a prodigious Bigness, with the Ruins of other Arches and Pillars, which amaze the curious Beholders. About 200 Years ago, the Fortifications were enlarged so as to take in both the Suburbs and Castle. The Remainders of the old Gates seem to resemble Triumphal Arches: The outer Wall is exceeding high, bairt with Brick, and guarded with strong Towers:

Some of whose Walls are 18 Foot thick. The chief of 'em is called the *Crown Tower*, because of the Pinnacles on its Top. Near this Tower there's a deep dry Ditch, with another adjoining full of Water, which was a Harbour for their Vessels in the Winter; but now they have built a larger on the Bank of the River, well secur'd with Fortifications. In the higher Part of the City, there are 3 large Ponds fed with hidden Springs; and through the whole, there are many deep Wells, which are observ'd to rise and fall as does the *Maas*, thō 6 Miles distant from it; whereas the *Waal* runs close by it, but in a Valley, towards which the Descent is considerable. Upon the Gate to the N. W. of the Castle, there are these Inscriptions; *Pax Imperii, Hucusque jus Stavriae. Melior est Bellicosa Libertas quam Servitus Pacifica*; i. e. "This is the Border of the Empire. So far reaches the Right of *Stavria*. 'Tis better to have Liberty with War, than Slavery with Peace." The Reason of 'em is suppos'd to be, That this was the Limits of the *Roman* Empire on this Side, and the Impost called *Stavria* reached not them, because, as we have heard before, they were exempted from Taxes. In 1608, a Canal for Vessels was dug betwixt hence and *Arnhem*, cross the *Betaw*, about 8 Miles long, at the Charge of those two Cities. Before the War with *Spain*, they had many Churches and other Religious Buildings; but now they have only 10, adorn'd with stately Towers: The chief is that of *St. Stephen*, a sumptuous Structure, supported by 35 Pillars of extraordinary Workmanship, with a magnificent Tower, beat down in the War, but since rebuilt. Their Archives are kept in a Part of this Church, inclos'd with Iron Grates; and in the Quire there's the Tomb of *Katharine of Bourbon*, Wife to *Adolphus* Duke of *Guelder*, with her Image in Brass, and 16 Coats of Arms expressing her Lineage. Near this Church stands the publick School, where their Youth are instructed in the Languages and Liberal Arts. 'Tis a Princely Structure, has the Images of the Apostles, several Doctors of the Church, and a noble Representation of the Last Judgment. They have two Hospitals for the Education of Orphans, two for old People, two for the Cure of Diseases, one for Lepers, and another:

ther for Lunatics. The Town-House is a magnificent Fabrick, with the Statues of several Emperors their Benefactors. The Seats for their Magistrates are beautifully adorn'd, and over the Heads of their Consuls there hangs a naked Sword, as an Emblem of Justice. They have also the Sword here with which the Counts of Egmond and Horn were executed at *Brussels* by the D. of *Alva's* Order. This City was Imperial till 1248, that 'twas given in Fee to *Otho III.* of *Nassau*, Count of *Guelder*, by the Emperor *William* Count of *Holland*. Their Government is by two Consuls, who have Maes born before them, a Council of 24, and 12 *Eschevins*. The Consuls are chosen Annually; and after the Expiration of their Office, are made Captains of the City Companies. Their chief Governor was formerly a Burgrave, who dwelt in the Castle, and extended his Jurisdiction over the City and District. They pay to the Bishop of *Liege*, for their Exemption from Toll on the *Maes* there, Annually on *Low-Sunday*, a Pair of Buff Gloves, and two Pounds of Pepper.

The Arms of this City are, a *Field Or*, with a *Spread-Eagle Sables*, on his Breast, a *Scutcheon Vert*, with a *Lion Or*, and an Imperial Crown, for their Crest.

The Citizens are addicted to Trade, War, and Learning, and seldom infranchise Strangers, but such as are like to adorn their Community. They make great Profit by brewing of Beer, and feeding of Cattle. This Town surrender'd to the *French* after 6 Days Siege in 1672, when the Garrison was made Prisoners of War. This scandalous Surrender, considering the Strength of the Place, was ascrib'd to the same Treachery which brought so much of that Country into the Hands of the *French*. They knew the Importance of it so well, that they began a Citadel there, employ'd 3000 Men daily on its other Fortifications, and 2000 in casting up Lines in the Neighbourhood. They made it one of their Store-houses for Plunder; and when they abandon'd it in 1674, they threw a Ship-load of Arms into the River, and forc'd 82000 Crowns from the City. 'Tis famous for the Treaty held here in 1678 and 1679, when a Peace was concluded betwixt the *French* and the Confederates. 'Twas well

nigh surpris'd by the *French* in 1702, not without Suspicion of Treachery; but was sav'd by the happy Retreat of the Earl of *Atblone* towards it, who oblig'd the *French* to march off with Loss. 'Twas frequently taken and retaken by the *Dutch* and *Spaniards* in the Beginning of the Civil Wars.

2. *Knodsenburg*, on the other Side the *Waal*, over against *Nimeguen*, so called, says *Bleau*, from a Sedition of the Inhabitants of *Nimeguen*, who appear'd there with knotty Cubs. 'Twas finish'd by Prince *Maurice* in 1590, to curb the *Spanish* Garrison of *Nimeguen*, tho' Count *Mansfeld* march'd with the *Spanish* Army to hinder him, but in vain. The Town was afterwards galled so much with the Cannon of this Fort, that the Duke of *Parma* laid Siege to it; but part of his Forces being defeated by Sir *Francis Vere* and Count *Solms*, he shamefully rais'd the Siege. Upon which the *Dutch* soon after took *Nimeguen*: The Duke pretended to excuse this, which was one of the most inglorious Actions of his Life, by his Orders from *K. Philip* to march into *France* and assist the Leaguers; but his Stay in those Provinces 5 Months after, discover'd the Weakness of his Apology.

3. *Battenburg*, Lat. *Aix Batavorum*, supposed by *Cluverius* to be that called their *Oppidum*, is now a small Town on the *Maes*, about 10 Miles S. W. from *Nimeguen*.

4. *Mook*, or *Mouch*, higher on the *Maes*, a small Village about 9 Miles S. from *Nimeguen*, famous for the Victory which the *Spaniards* obtain'd over Count *Lodowick*, Brother to *William Pr.* of *Orange*, in 1574, as he was coming to join the Prince, which was a great Discouragement to those who had revolted from *Spain*, and endanger'd their total Destruction, had not Providence order'd it otherwise.

5. *Tolhuys*, about 10 Miles E. from *Nimeguen*, on the other Side the *Waal*, formerly a Custom-House belonging to the D. of *Cleve*. It has a Castle, with one great Tower, within Musket shot of the River. 'Tis noted for the Passage of the *French* Army in 1672, by the Treachery of *Mombas*, formerly mentioned; tho' 'twas not effected without Loss, the Prince of *Condé*, with several other great Men, being wounded; and the D. of *Longueville*, with several others of Quality, kill'd in the Action.

6. *Schenckschans*, 2 Miles S. from the *Tel. buys*, upon the Point of the *Betaw*, where the *Rhine* divides it self into two Branches, the greater call'd the *Waal*, and the lesser retaining the old Name. 'Twas founded by *Martin Schenk* for the *Dutch* in 1588. He had deserted the Service of *Spain*, because another was prefer'd to him in the Government of *Friesland*. He did so much annoy the Places subject to *Spain* from this Fort, that when he was afterwards drown'd in attempting to surpris *Nimeguen*, the *Spaniards* there made publick Rejoycings for several Days; and when the Town was surrender'd to Prince *Maurice*, he did so much Honour to his Memory, that tho' he was born but of mean Parents in that City, he order'd his Corps to be buried in the Sepulchre of the Dukes of *Guelder*. This Place is so strong by its Situation, that the D. of *Parma* would never attempt it by Force. 'Twas betray'd to the *Spaniards* in 1635, but soon after recover'd by the Pr. of *Orange*, after 8 Months Siege, and strongly fortified. 'Twas afterwards betray'd to the *French* in 1672, but recover'd in 1674. It commands both Branches of the *Rhine*, with the Wind-Mills and Ditches that prevent the *Betuwe* from being overflowed, is fortified with a great Ditch, good Bastions, and a strong Rampart, on the Side next the Land, and by the *Rhine* and the *Waal* every where else; so that 'tis reckon'd one of the Keys of the *Netherlands*. It anciently belong'd to the Dukes of *Cleve*, and on that Account the K. of *Prussia* has Pretensions to it.

7. *Tiel*, on the S. Side of the *Waal*, 13 Miles W. from *Nimeguen*, is Capital of its District, a strong Town, of a long Figure, with a Marsh on the N. The Streets are narrow and crooked, and the Air unwholesome. 'Twas attacked in vain by *Charles V.* in 1528, but yielded to the *French*, and by them dismantled in 1672.

8. *Buren*, 5 Miles N. W. from *Tiel*: It has an ancient Castle, with a Wall and a deep Ditch, and is the Capital of a Lordship, which came to the Family of *Orange* by the Wife of *William I.* Daughter to the Count of *Buren*.

9. *Culenburg*, on the *Lech*, 4 Miles N. W. from *Buren*, Capital of a small County.

10. *Bommel*, 9 Miles S. W. from *Tiel*, a pleasant Wall'd Town, with broad and regular Streets. 'Tis very strong, with good Curtains, Bastions, and Towers, a double Wall, and double Ditches. It stands low, in a marshy Ground, which they can overflow from the *Waal* and the *Maes*. 'Twas yielded to the *French* in 1672, who spent 14 Days in destroying its Fortifications, carried off the Artillery and Ammunition, and oblig'd the Town to pay 36000 Guilders to prevent being burnt. 'Twas afterwards strongly fortified when recover'd by the States. 'Twas first walled in and made a City by *Otho* of *Nassau*, Count of *Guelder*, in 1299. 'Twas surpris'd and taken from the *Spaniards* in 1572 by a small Detachment, who were drove out by the Inhabitants, because they broke down the Images in their Church. 'Twas afterwards taken by the *Dutch*, and twice after attack'd by the *Spaniards* in 1589 and 1599; but they were repulsed both times with great Loss. The Town chuses their own Magistrates, under whose Jurisdiction are many good Villages, and all the District called *Bommelward*, which is an Island about 12 Miles long, and 4 broad, betwixt the *Waal* and the *Maes*. 'Tis noted for the Birth of *Meningius* the Divine, and other Learned Men.

11. *Fort St. Andrew*, 3 Miles S. from *Bommel*, was founded by Cardinal *Andrew* of *Austria* near the Point of the Isle of *Bommel*, to command the *Waal* and the *Maes*, which communicate near it by a Canal. He fortified it with 5 Royal Bastions, good Curtains, a deep Ditch, a Cover'd way, and many Redoubts; so that 'twas reckon'd one of the strongest Forts in the Country. Prince *Maurice*, in 1599, took it with 3000 Men, while the *Spaniards* attempted to relieve it with 8000; the Garrison having mutinied, and agreed to surrender for 125000 Florins, in Consideration of their Arrears. 'Twas surrender'd to the *French* in 1672. About a Mile further W. on the Point of the Island lies *Fort Voorn*, since called *Fort Nassau*, because founded by Pr. *Maurice*, after the taking of *Fort St. Andrew*. 'Tis so strong as to be reckon'd impregnable. 'Twas basely surrender'd to the *French* in 1672.

The BETUWE.

HAVING thus given an Account of the chief Towns and Places of Note in this Country, we think fit to give a brief Description of it self, because 'tis the ancient *Batavia*, and the Seat of the *Batavi*, that make such a Figure in the *Roman History*. We have formerly taken Notice from *Tacitus*, that they were part of the *Catti*, who leaving their ancient Country, because of intestine Seditions, settled first here, and afterwards extended their Limits over that Part of the Country betwixt the *Waal* and the *Maes*. 'Tis controverted amongst Authors, whether they or the Country gave Name to one another? Some think they gave Name to it, because there seems to be some Footsteps of their Name in the Towns of *Battenberg* and *Battenhausen* in *Hesse*, from whence they came. Others think the Country gave Name to them, and that 'twas called *Betawe*, which in the old Language of the Country signifies a better Soil, to distinguish it from the neighbouring *Veluwe*, which signifies a Soil of a heathy Colour. Their Territories are supposed to have extended from *Rhinberg* in the Dutchy of *Cleve* to *Catwick* on the Sea, which is thought to have derived its Name from the *Catti*, and is not improbable, since *Tacitus* assigns them the Ocean for their Boundary on one Side. But the Curious may see more of this in *Cluverius's Germania Antiqua*, and *Cellarius's Notitia Orbis Antiqui*. The Country at present called the *Betuwe* reaches from *Schenkenshuys* on the E. to *Warcum* on the W. which is 40 Miles in Length; and the greatest Breadth betwixt *Grave* on the *Maes*, and *Arnhem* on the *Rhine*, is 17.

The Quarter of Arnheim,

HAS its Name from *Arnhem*, its chief City, which lies on the N. Side of the *Rhine*, about 8 Miles N. from *Nimeguen*. Authors agree, that 'tis the *Arenacum* of *Tacitus*. 'Tis the Capital of the *Veluwe*, and the Seat of the Supreme Council of *Guelder*. 'Tis very strongly fortified, with a

large Ditch fac'd with Free-stone, Brick Walls, and Ramparts. It has also 5 Gates, so very strong, that anciently they serv'd as Fortresses. That called the *Rhine Gate* was the chief, and has a strong Bulwark near it. 'Twas walled and fortified in 1233, by *Orho* Count of *Guelder*, exempted from Toll through the Dutchy, and had other great Immunities. In 1443, 'twas made one of the *Hans-Towns*. 'Tis overlook'd by a Hill on the Side of the *Veluwe*, from whence there's a pleasant Prospect of the City and neighbouring Country. From this Hill there flows a large Current of Water, which turns their Mills, and fills their Ditch. Before their Revolt from the *Spaniards*, there were many Monasteries and Religious Houses in and about this City, but most of 'em now in Ruins. It suffered much by Fire in 1525. The Church of *St. Martin*, called also *St. Eusebius*, is a noble Structure, with a stately Tower. The Dukes of *Guelder* had a Palace here; but most of it was blown up by Accident in 1589. They have an Hospital for ancient and poor Citizens nobly endow'd, with two others of less Note. In the adjoining Village of *Osterbeck* was born the Emperor *Henry III.* in 1027: The News of which being carried to the Emperor his Father by the Pastor of the Place, he rewarded him with the Bishoprick of *Utrecht*. 'Twas taken from the *Spaniards* by the Count of *Meurs*, who join'd with the *Dutch* in 1585, and was surrender'd to the *French* after one Day's Attack in 1672, when they presently begun to enlarge its Fortifications, and erect a Magazine; but when they left it, they forc'd the City to pay 'em 170000 Guilders. Near the *Rhine Gate*, there's a Bridge of Boats into the *Betuwe*. Their Government is by a Judge, who has Jurisdiction over the City, and a great Part of the *Veluwe*, and two Burgomasters, chosen out of their 12 *Eschevins*. They have also 6 Masters of Corporations, chosen out of a certain Number presented to the Consuls and *Eschevins* by their Fraternities; and 48 Jurats, chosen in the same Manner to assist in the Management of Publick Affairs. For their Learned Men, we refer to *Bleau*.

2. *Wagenin'en*, on the *Rhine*, 10 Miles W. from *Arnhem*. 'Tis supposed to be the *Vada* of *Tacitus*, that was so stoutly defended

ded by *Jul. Brigantius* against his Uncle *Civilis*, the fam'd *Batavian* General. It stands on a moorish Ground, which adds to its Strength. On one Side, there's a large Heath above 5 Leagues broad; and on the other, good Pastures, and Arable Land. 'Twas taken by the *French* without Resistance in 1672.

3. *Harderwick*, on the *Zuyder-Sea*, 20 Miles N. from *Arnhem*. 'Twas walled by *Otho* of *Nassau*, Earl of *Guelder*, and had a Staple of Fish, called *Den Asslagh*, granted them by *D. Arnold* in 1443. Most of it was burnt down in 1503, but since rebuilt, much after the Fashion of *Hamburg* and *Lubeck*, the Porches being large, and the Houses high. The Church of *St. Mary* exceeds the rest, being a stately Structure, and the Roof and Arches of excellent Workmanship. It has an exceeding high Steeple, seen at a great Distance by Land and Sea. It also suffered much by the Civil Wars, and most of their Religious Houses are now demolished, or converted to other Uses. In one of 'em is kept their Univerfity, which was founded in 1648, having been a *Schola Illustrius* long before. They have a good Library, furnished with excellent Books in Latin, Greek, and the Oriental Tongues, with several Volumes printed in *Chinese*. The Rector, who is the Supreme Magistrate, is Annually chosen by the 6 Curators. In the neighbouring Woods, they have such Plenty of Blue-Berries in the Season, which continues but 6 Weeks, that the very Freight of what they sell to *Amsterdam*, where they are much esteem'd as a second Course, amounts to 400 Crowns. This City was taken by the *French* in 1672. They dismantled and burnt most of it in 1673, and demanded 12000 Guilders to save the rest: Since which, it has not recover'd its former State. Among other Learned Men, *Gerardus Voetius*, the famous Lawyer, was born here. 'Twas he and *Albertus Leoninus* who are said to have form'd the Model of the present Commonwealth of the United Provinces. The *Zuyder-Sea* has made great Incroachments on the S. Side of the Town, swallow'd up several Meadows, with a Church and Village, which obliges them to secure the City on that Side with Dikes and Fences. A little from hence lies the small Island of *Urk*, supposed to have

been the Seat of the ancient *Urii*. It has been much diminished of late by Inundations, which is another Proof of *Sir William Temple's* Assertion, That the *Zuyder-Sea* is much larger than what it was in former Ages. This City was formerly one of the *Hans-Towns*.

4. *Elburg*, lies on the S. Sea, about 10 Miles N. E. from *Harderwick*. 'Tis an ancient Town, and was walled by Count *William*, Son to *Reinold III.* about 1400, and was also one of the *Hans-Town*. 'Tis of a square Figure, has 3 Gates, and a small River runs through it, with 5 Stone Bridges over it, on one of which they keep their Fish-Market.

These are the Towns of the *Veluwe*, which is 34 Miles long, and near 30 where broadest. 'Twas first separated from *Germany* by *Drusus's* Ditch. It formerly belong'd to the Dutchy of *Brabant*, but came to the Duke of *Guelder* by Marriage. Some of the Country is barren; in other Places there are large Woods of Oaks and Beech. There are many Gentlemen's Seats and good Mansions in it; and the whole is divided into several Districts, which have their particular Courts of Judicature, from which there lies an Appeal to a Place called *Engelander Holt*, which lies 2 German Leagues N. E. from *Arnhem*. In this Country lies the Palaces of *Loo* and *Dieren*, belonging to the Family of *Orange*. The first lies 17 Miles N. of *Arnhem*, on a rising Ground, in the middle of a large Plain, where there's good Hunting. 'Tis a noble Structure of modern Architecture, with fine Gardens, shady Walks and Grotto's, with admirable Fountains, especially one called the *Faeson of Venus*. It has also two great Cascades, where the Water falls so easily from one *Baeson* into the other, that the whole resembles a broad Mirror. *Dieren* lies near a Village of the same Name, about 10 Miles N. E. from *Arnhem*, is much inferior to *Loo*, but a noble House, with pleasant Avenues, and conveniently seated for Hunting.

The County of Zutphen,

HAS *Guelderland*, properly so called, on the W. the Bishoprick of *Munster* on the E. *Over-Iffel* on the N. and the Dutchy of

of *Cleves* on the S. is about 24 Miles from N. to S. and 28 from E. to W.

This Country came to *Otho* Count of *Guelder*, who married the Heiress. Its Name is derived from its lying on the South Fens, so called with respect to the Situation of the *Frizons*, who formerly inhabited this Country.

The chief TOWNS are,

1. *Zutphen*, a rich and populous City; and since the Revolt from *Spain*, made one of the strongest in the 7 Provinces. It lies on the River *Iffel*, 15 Miles N. E. from *Arnhem*. 'Tis an ancient City, tho' of nothing so long standing as the others we have already mentioned in *Guelderland*. 'Tis divided by the River *Iffel* into Old and New. The Buildings are fair and neat. Many People of Quality live in this City. The chief Church is that dedicated to *St. Peter* and *St. Walburg*. Some say, 'twas founded by Count *Otho* III. of *Nassau*; but *Bleau* reckons it much older. 'Tis a sumptuous Building, with an exceeding high Steeple, which was twice burnt by Lightning, viz. in 1446, and 1600; but rebuilt with more Splendor in 1635. It had a College of Canons, of which the Earls of *Guelder* were formerly Provosts. They have a large Font of Brass of curious Workmanship, and in the E. Side of the Church a good publick Library. 'Tis noted also for the Monument of Count *Otho* III. and his Lady. There's the Ruin of a Palace near the Fishers-Gate, formerly the Seat of the Count of *Zutphen*; and near it, a very high Brick Tower, built in the Manner of a four-corner'd Pyramid, which is a great Ornament to the City, and affords a pleasant Prospect over the neighbouring Country. Near *St. Peter's* Church, there's a large and magnificent Structure, with 3 Fronts; in one Part of which, the Provincial States hold their Assemblies. The Counts of *Bronckhorst* have also a Palace here. There are two Bridges over the River, which join the Old and the New Town. The Air is healthful, and the Citizens courteous, being polish'd by the Numbers of Gentlemen who live here. They had formerly many Monasteries, now turn'd into Hospitals for Aged, Sick, Orphans, and Strangers. Those

without the Walls are demolished. The neighbouring Country abounds with Pasture and Arable Lands. 'Twas sack'd during the first War with *Spain* by the D. of *Alva's* Army, and the Inhabitants cruelly used. 'Twas afterwards retaken by the *Dutch* thus: They dress'd a Number of Soldiers like Women going to Market, with Arms under their Clothes, who coming early in the Morning, seiz'd the Gate as soon as 'twas open'd; and being follow'd by some Hundreds of Men from an Ambush, they made themselves Masters of the Town. The great Sir *Philip Sidney*, who serv'd under Sir *Francis Vere*, died of a Wound he received in this Siege. 'Twas basely surrender'd to the *French* in 1672, and the Garrison made Prisoners of War, tho' 'twas then fortified with 9 Bastions, 4 Half-Moons, 2 Horn-Works, 2 broad Ditches, treble Ramparts, and such other Works, as 'twas reckon'd impregnable. They abandon'd it again in 1674. Their Government is by Consuls, and 12 Eschevins, of whom the two Seniors are call'd Consuls. The Senators are for Life, except upon Misdemeanor or Resignation. They are assisted by a Council of 9, chosen out of the Commons, who have no Vote, but only give their Advice. There lies an Appeal hither from the inferior Cities to this Court, who have a Power of final Decision: But in extraordinary Cases, they are assisted by the Nobles of the City, and the Deputies of the Towns. This City had anciently a Mint, and was one of the *Hans-Towns*. *Gerard* of *Zutphen*, Master to the famous *Thomas a Kempis*, and other Learned Men, were born here.

2. *Doesburg*, 6 Miles S. from *Zutphen*, is by some called *Drusburgum*, and supposed to have been built by *Drusus*, because it lies near the Place where he cut his Ditch to bring the *Rhine* into the *Iffel*. By this Ditch, *Tacitus* says, *Germanicus* sail'd into the Lake *Flevus*, as his Father *Drusus* had done before him. This Town was fortified by the States during the War with *Spain*. 'Tis defended on one Side by the *Iffel*, and on the other by a great Marsh; so that 'tis only accessible by a Neck of Land. 'Twas surrender'd to the *French* in 1672, after a very feint Resistance, and abandon'd by them in 1674, when they dismantled it.

Z z z z z

3. *Dordrecht*.

3. *Detecum*, stands on the Old *Issel*, about 6 Miles S. E. from *Doesburg*, is a wall'd Town of no great Strength, and surrender'd to the Pr. of *Condé* in 1672.

4. *Groß*, 15 Miles S. E. from *Zurphen*, on the River *Slink*, where it falls into the *Berkel*. 'Twas fortified by *Charles V.* because it lies on an important Pass betwixt *Germany* and the *Netherlands*. 'Twas afterwards made stronger by the *Spaniards*; and when taken by Pr. *Maurice* in 1627, is said by *Grotius*, in his Account of this remarkable Siege, to have then 5 Bastions, join'd by strong Curtains, a Wall under the Bastions, a broad Ditch, and a Rampart beyond it, sloping in such a manner, as the Shot from the Town had direct Passage to the Enemy; whereas theirs flew over the Town, without doing it much Hurt. In this Siege Count *William of Nassau*, a young Prince of great Hopes, was slain. It had been formerly besieg'd in vain by Pr. *Maurice* in 1595, but was taken by him in 1597. 'Twas retaken by *Spinola* in 1606, but recover'd by Pr. *Maurice*, as we have heard, and so well fortified, that 'twas reckon'd one of the strongest Towns in the Provinces. It yielded after a short Resistance to the Bishop of *Munster* in 1672, but was recover'd afterwards by the States.

5. *Breefort*, 5 Miles S. from *Groß*. 'Twas fortified about 140 Years ago, and is so encompassed by Marshes and Fens, that there's no Access to it but by a narrow Path; and the adjacent Soil is so spongy and moist, that 'tis not easy to be drein'd. Prince *Maurice*, when he besieg'd it in 1597, contriv'd swimming Machines, by which he attack'd it. He lost so many Men before it, that the Soldiers, when they took it by Storm, were so enrag'd, that the Prince was not able to restrain them from the Cruelties and Disorders that are usual on such Occasions; so that they plunder'd it, and had a very rich Booty, the People of the adjacent Country having brought thither their best Effects.

6. *Lochem*, lies about 8 Miles E. from *Zurphen*, upon the River *Berkel*, is a Place of some Strength, and was taken by the Bishop of *Munster* in 1672; but he afterwards abandon'd it.

There are several Baronies, Præfectures, and considerable Villages, in this County.

The Province of Over-Issel,

IS from S. E. to N. W. 60 Miles long, of an unequal Breadth, but 40 where broadest. It has *Groningen* on the N. *Zurphen* and Part of the Bishoprick of *Munster* on the S. the *Zaayder Sea* and the Quarter of *Arnhem* on the W. and *Westphalia* on the E. It lies more open to Incursions from *Germany* than any of the 7 Provinces, and is but ill furnish'd with the natural Guards of Rivers and Forrests. The Soil in many Places is barren, being full of Sands, Heaths or Marshes; but in some Parts they have good Corn and Pasturage. 'Tis the worst inhabited of any of the Provinces, partly on the Account of the Barrenness of so great a Part of their Soil, and because their Situation is not convenient for Trade. 'Twas the Seat of the ancient *Brufferi*, and after of the *Frixons* and part of the *Saxons*, of whose Language, Manners, and Immunities, they still retain more than their Neighbours. The Bishop of *Utrecht* did formerly subdue this Province, and had it confirmed to him by Grants of Emperors; but 'twas resign'd to *Charles V.* by Bishop *Henry of Bavaria*. In some Parts of this Province, particularly the County of *Drent*, there are Stones of so prodigious a Bulk, which, not being the Product of the Soil, strike the Spectators with Amazement to think how they could be brought hither. Some of 'em lie upon the top of others, with Room for a Man to creep through betwixt them. The Inhabitants have a Tradition, that they were Heathen Altars; and that such miserable Wretches as were sacrific'd to their Idols, were forc'd to creep thorough betwixt those Stones, where they were all bedawb'd with Humane Ordure. The Province is divided into 3 Parts, the *Isseland* or *Salland*, which lies next the *Issel*, *Twente*, and *Drent*.

The chief TOWNS are,

1. *Daventer*, on the E. Side of the *Issel*, about 6 Miles N. from *Zurphen*, a large, populous, and neat City, whose Inhabitants, says *Comringius*, are much addic'd to Traffick and Learning. 'Tis an ancient City, and

and has been well fortified a long time. 'Twas formerly an Imperial and Hans Town, and made a Bishoprick, Suffragan of *Utrecht*, in 1559; but in 1580, the Bishoprick was abolished, when the Town, with the rest of the Province, revolted from Spain. 'Twas treacherously deliver'd up to them again in 1587 by Sir *William Stanley*, a Papist, who was made Governor by the Earl of *Leicester*: but recover'd by Pr. *Maurice* in 1591, when he very much added to its Fortifications. It stands in a pleasant Country, abounding with Pastures and Arable Lands. It has a large Market-Place, with a Guard-House, where some of the Citizens continually keep Guard. They have a Cathedral, with two other Churches, and a spacious Guildhall of ancient Architecture. They had formerly 5 Monasteries, with a Church each, 5 Hospitals for Strangers, and one for Orphans. They have a Power of Coinage, Weekly Markets, and 5 Annual Fairs. *Erasmus* had part of his Education in their Free-School, which about 60 Years ago had Professors of Philosophy, Divinity, Law, and Hebrew, assign'd it by the States. It has 6 Gates, some of 'em of curious Workmanship, especially that called the *Brink Port*, adorn'd with Statues and Inscriptions, and particularly that of *Charles V.* set up in 1544, as a Monument for his defending the Town. The Tower of *Noremburg*, adjoining to the Gate of that Name, is their most remarkable Building for Strength and Neatness: The Walls are 18 Foot thick, the Fabrick exactly round, the lowermost and uppermost Part of Stone, and the middle of Brick. 'Twas betray'd to the Bishop of *Munster* in 1672, when there were at least 10000 resolute fighting Men in it; and deliver'd to him at Night without Consent of the Garrison or Burgers, by the Treachery of some of their Magistrates. 'Twas quitted again in 1674 by the Bishop of *Cologne*, to whose Share it fell for 42000 Crowns, to save their Fortifications and Guns. *Gerard*, called the *Great*; *Hegius*, *Erasmus's* Schoolmaster; and the Geographer *Jacobus Davintrimus*, were born here. Their Government, says *Comringius*, is by Consuls, Eschevins, and Senators, in all 16; two of whom are Consuls, chosen every two Months out of

the Eschevins. They are assisted by a Common-Council of 48.

2. *Zwoll*, called anciently *Middlewick*, but now *Zwoll*, because of a swelling Disease, says *Bleau*, that formerly infested their Cattle. 'Twas made a City in 1230 by the Bishop of *Utrecht*, for the Service they did him in his War with the County of *Drent*. It lies 15 Miles N. from *Deventer*, upon a small Stream from the *Vecht*; which mixing with those of the black Waters, forms several Currents that run through the City, and contribute much to its Neatness. They fall into the *Vecht* without the Town, and make a Channel to the *Zuyder-Sea*, from whence the Tide flows up, which advances its Trade. The adjacent Country has many Orchards and Meadows, which, with the Walks of Trees within and without the Fortifications, make the City very pleasant. It has 3 large and strong Gates, which open into Suburbs, equal to good Villages. There are 24 Towers upon the old Walls, that were formerly its chief Defence; to which have since been added a double Ditch, 10 good Bastions, and a Trench between the *Zwoll* and the *Iffel*, upon which there are 4 good Fortresses, 3 of 'em so large, that they resemble little Towns. Their Trade consists chiefly in Timber, Cattle fatted in the neighbouring Pastures, *Bentham* Stones, Wool, Corn, Butter, and Cheese. The Inhabitants are reckon'd courteous to Strangers, and charitable to the Poor. Their chief Buildings are, 1. St. *Michael's* Church, in the great Market-Place, a large Structure of good Workmanship, noted for its fine Organ, Pulpit, harmonious Bells, and wonderful high Steeple. They have another Church called St. *Mary's*, with several that formerly belong'd to Monasteries. Their Guildhall is noted for its Antiquity, and the adjoining Tavern for the Image of St. *Christopher*. They have several Hospitals, a Granary, and a good Arsenal. They have likewise a College, wherein, *Bleau* says, there were usually 500 Students, and gives us an Account of their Learned Men. They have a Court, where all Causes are finally determin'd, and to which Appeals are made from the inferior Towns of the Province. The Government is much like that of *Deventer*. The Provincial

Vincial States meet in this Town, *Daventer*, and *Campen*, by Turns. They have 18 large and populous Villages under their Jurisdiction. They had anciently within their District two famous Monasteries: The first was that of *Winsem*, which had 70 Convents of the same Order under it; the other was that of Mount *Agnis*, of which the famous *Thomas a Kempis* was Prior. This City was treacherously yielded to the Bishop of *Munster* in 1672, and, in the Name of the Provincial States, sent Deputies to the other Cities of the Country to do the like. 'Twas quitted by the Bishop of *Cologne*, to whose Share it fell in 1674, when he sent two of their Magistrates to *Mastricht* as Hostages for 100000 Guilders demanded of the City. As a Punishment for this Treachery, the Towns of this Province were deprived of their Power to chuse their own Magistrates without the Prince's Consent. Their ancient Arms was *Sr. Michael* the Archangel bestriding the Dragon, and bearing a Shield in his Hand, with a white Cross painted upon it; but now only a Cross Argent in a Field Azure.

3. *Campen*, lies about 7 Miles N. W. from *Zwoll*, upon the W. Side of the *Iffel*, a little above where it falls into the *Zuyder-Sea*. It has its Name from the pleasant Fields which furround it. 'Tis a large and neat City, with capacious Churches of curious Workmanship, and a noble Guildhall. Their Custom-House is admir'd by the best Architects, and is so stately, that Princes and others of the greatest Quality are lodg'd and entertain'd in it. The Bridge over the *Iffel* is of a great Length, stands upon vast Pieces of Timber drove into the Bottom of the River, and is defended at the further End by a strong Fort, that has several Bastions. The City is encompassed by a thick Wall, with many high Towers, after the ancient Manner; so that its chief Strength lies in its Situation. This City has the Privilege of a Mint, with other large Immunities. Their Trade is decay'd of late, the Harbour being so much choak'd up, that it does not admit large Vessels. The Learned *Albertus Pigheius*, fam'd for his Skill in Mathematicks, Cosmography, and writing against *Luther*, for which he was much esteem'd and enrich'd by 3 successive Popes, was a Senator of this Place. The Govern-

ment of this City resembles that of *Zwoll*. 'Twas surrender'd in 1672 to the Bishop of *Munster*; and being allotted to the French, was quitted by them in 1673, when they exacted 80000 Guilders to save the Town and its Fortifications; several of which they destroy'd notwithstanding.

4. *Hasselt*, lies on the *Veche*, 7 Miles N. E. from *Campen*, was made a City by the Bishop of *Utrecht* in 1252, and built to oppose the *Frizons*. 'Tis a pleasant City, pretty rich, and govern'd in the same Manner as the rest.

Ommen, 13 Miles E. from *Zwoll*, a Wall'd Town, with the neighbouring Fortrefs of *Ommer*. *Sonce* belongs to *Friesland* and *Groningen*; and *Hardenberg*, another Wall'd Town, 7 Miles N. E. from *Ommen*, are both in the Jurisdiction of *Salland*.

5. *Geelmuyden*, lies on the *Veche*, 4 Miles N. E. from *Hasselt*. 'Twas made a City by *John* of *Nassau* Bishop of *Utrecht*, and had formerly a strong Castle, now in Ruins.

6. *Vollenhoven*, above 3 Miles E. from *Geelmuyden*, on the *Zuyder-Sea*, is a neat fortified Town, with a great Market for Corn from the *Baltick*, &c. and Capital of its District of the same Name. 'Twas the Seat of the K. of *Spain's* Grand Council in those Parts, and there was no Appeal from the Magistrates of the Town, only they were to pronounce Sentence in Presence of the Governor of the Province, who generally resided here, as many of the Nobility of the Province do still.

7. *Swartswys*, 5 Miles S. E. from *Vollenhoven*, is a strong Fort, was taken by the Bishop of *Munster* in 1672, when he enlarged the Fortifications so much, that the Dutch could not take it after 3 Attempts; but they recover'd it at last.

8. *Steenwick*, lies 7 Miles N. E. from *Vollenhoven*. 'Tis a small, but very strong Town, held out a Siege of 3 Months against the *Spaniards* in 1581, when they were obliged to rise from before it by the English under Colonel *Norris*. 'Twas afterwards taken by the *Spaniards*, and retaken by *Pr. Maurice* in 1592, after a sharp Siege, wherein the *Spanish* Governor said, He had been dug out like a Fox. The adjacent Country has good Pastures and Arable Land. 'Twas surrender'd to the Bishop of *Munster*, who quitted it in 1673, and basely ruin'd their

their Fortifications, tho' he had obtain'd 10000 Guilders to spare them; but 'twas since re-fortified.

9. *Blockzyl*, lies 6 Miles S. W. from *Steenwick*, at the Mouth of the River *Aa*, and on the Bank of the *Zuyder-Sea*, which it commands in-Part. 'Tis a Place of considerable Trade, very populous, and well fortified.

The District of T W E N T E,

Is divided into 9 Jurisdictions, each of which have their Courts.

The chief P L A C E S here are,

1. *Oldenzyl*, supposed to have been the Capital of the ancient *Salii*, and from them to have had its Latin Name *Salia*. It has been of more Note for its frequent changing of Masters, than for its Bulk or Strength. It lies on the Frontiers of the County of *Benthem* in *Westphalia*, 25 Miles N. E. from *Deventer*. 'Twas 4 times taken and retaken during the War with *Spain*, and at last recover'd by Prince *Henry Frederick*. 'Twas taken by the Bishop of *Munster* in 1672, but retaken by the Dutch in 1674.

2. *Gramsberg*, about 3 Miles N. E. from *Hardenberg*, and 6 S. W. from *Coevorden*, is an ancient Castle, memorable for the brave Defence which its Garrison of 36 Men made against the Troops of *Munster* in 1672, when they stood out two Storms by 900 Men, and yielded at last upon good Terms; but the Garrison was made Prisoners of War, contrary to Capitulation. The Bishop fortified it strongly afterwards, to distress *Coevorden*, and to facilitate his March into the Marshes of *Drente*, by casting up a Bank cross the *Vecht*; but he afterwards abandon'd it.

3. *Otmarsen*, 5 Miles N. from *Oldenzyl*, said to have been founded, and taken its Name from *Odornarus K.* of the *Franks*, because onë *Vechtman*, a Learned *Druid*, and one of his Familiars, was buried here: Or according to others, 'twas the Sepulchre of *Odornar* himself, and therefore called by his Name. 'Twas taken by the Bishop of *Munster* in 1672; but afterwards quitted by him. There are other Towns in this District, such as *Almelo*, *Humberg*, *Delden*,

Enschede, *Goor*, and *Diepenhem*; of which we find no Description.

The County of Drente, and Lordship of Westerwold:

This is a large Country, has *Groningen* on the N. *Sallant*, *Twente*, and the County of *Benthem*, on the S. *East-Friesland* on the W. *Emden* and other Parts of *Westphalia* on the E. A great Part of it has Marshes and Heaths, and other Parts abound with Turf, which are carried to *Holland* and elsewhere. 'Tis a distinct County, and not properly one of the United Provinces, tho' obliged to contribute to all their publick Taxes. They have a Right to chuse their own Governor, an Itinerant Court, from which there's no Appeal; and alledge, that they had formerly a Stadtholder; that they sign'd the Union with the rest of the Provinces, and were look'd upon as a distinct Member of the United States, till torn from them by the Bishop of *Munster's* Invasion: But we do not find that their Plea was much regarded, or that they have been allowed to send Deputies to the States General.

Their chief P L A C E S are,

1. *Coevorden*, on the Frontiers of *Westphalia*, 22 Miles N. E. from *Zwoll*, and 6 from *Hardenberg*. 'Tis, tho' a small Place, as strong a Fortress as any in *Europe*, and of great Importance by its Situation, because it commands the Passes into both the *Friesland*, *Drente*, and the *Omlands*. All the publick Ways about it, except what leads to *Groningen*, are so narrow, that an Army cannot march in that Country without great Difficulty. 'Tis strengthen'd on the N. E. and W. by unpassable Marshes. It has the Village *Dalen* on the N. and a large Heath that reaches as far as *Groningen*; and on the other Sides, such Fens as, together with its strong Works, make it impregnable. In 1581, 'twas surrender'd to the *Spaniards*, after the Confederate Troops under Count *Hohenloe* were defeated near *Hardenberg*; but recover'd soon after by *Hohenloe*, when he was reforc'd. The *Spaniards*, having defeated him a second time, it fell again.

again into their Hands. In 1592, Pr. Maurice having defeated the Spaniards under Verdugas, who was sent to relieve it, took it again. In 1593, Verdugas attack'd it once more, but was forc'd by Pr. Maurice to raise the Siege. In 1672, 'twas treacherously surrender'd to the Bishop of Munster, almost without Opposition, tho' defended by 7 good Bastions, bearing the Name of the United Provinces, with excellent Parapets, Fausse-Brays, and other Outworks; their Castle reckon'd impregnable, a large and deep double Ditch, and exceeding high and strong Ramparts; but in December following 'twas recover'd by the Dutch with very little Resistance, tho' the Garrison was strong, and well provided, and had Notice of their Approach; but the Dutch coming several Hours later than the Garrison was informed by Deserters, they took it for a false Alarm; and relying on the Strength of the Place, most of 'em went to Bed, being tir'd out with watching; the Dutch approach'd it under a Fog, and making their Assault, recover'd it with the Loss of 150 Men. In the close of 1673, the Bishop of Munster block'd it up, encompass'd it with a high Bank, and so coop'd up the Waters, that they very much annoy'd the Town, and made them despair of Relief: But while they were contriving to cut the Banks, they were broke down by a Storm, which relieved the Town, and drown'd some of the Bishop's Troops.

In the same Country, near Westervold, lies *Valterfchans*, 12 Miles N. E. from Coevorden, so good a Fortress, that 'tis able to resist the strongest Enemy: And nearer Coevorden, there lies another strong Fort called *Schans-Ten-Hole*; but not so considerable as the former.

The rest of this Country contains several neat and large Villages; the chief of which are, 1. *Meppel*, a large open Town, noted for furnishing Turfs to the Neighbourhood. 2. *Assen*, towards the N. of the Province, a small City, where there's a Court of Judicature. This Country is divided into 6 Districts, who have each 4 Judges, chosen Annually out of the Gentry and Peasants, that every Week distribute Justice and determine Suits in their respective Jurisdictions. They meet all together three times in a Year to determine Causes of a higher

Nature; but there lies an Appeal to the Supreme Court of the Province, which finally determines the Matter. Besides, every Village has an Officer called a *Scout*, who determines lesser Causes, and has a Power to distrein upon Goods. Coevorden, and the Lordship of *Ranen*, are exempted from all those Courts; the latter being subject to some Nobles, and the other to the Governor of the Province, who generally resides in the Castle of Coevorden. The Lordship of *Westervold* lies betwixt *Drente* and *East-Friesland*, and is generally moorish, except where it lies on the Bay of *Dullert*; contains about 12 Villages, and 2 Monasteries. It had formerly particular Lords, belong'd afterwards, with the County of *Drente*, to the Province of *Utrecht*, then to *Guelderland*; and at last 'twas given by the House of Burgundy to the City of *Groningen*, on Condition they should not change its Laws, nor diminish the Liberty of the Villagers; and under their Jurisdiction it still remains.

While *Over-Issel* was under the Bishop of *Utrecht*, the States of the Province had the Supreme Power, he being only President, and oblig'd to put their Resolves in Execution: Nor had he any Jurisdiction over the Clergy, or the three chief Cities of *Daventer*, *Campen*, and *Zwoll*; but he being unable to protect them, they submitted to the Emperor *Charles V.* on Condition that he should preserve their ancient Liberties and Privileges. They had some Difficulty after the *Munster* Invasion to be restor'd to their Privilege of sending Deputies to the States General; but at last they were allowed it in 1674. M. de Fer says, the whole Province contains 9 Cities, 10 large open Towns, 210 Villages, and 5 Fortresses.

The Province of Groningen,

HAS the Ocean on the N. *Over-Issel* on the S. *Friesland* on the W. and *Embsden* on the E. The greatest Length from S. E. to N. W. is 46 Miles; but its Breadth is unequal, the greatest being about 24; and that Part of the Province which lies betwixt *Over-Issel* and *Embsden*, or rather Part of *Westphalia*, is a very narrow Tract of Ground. 'Tis debated by Authors, whether the ancient Inhabitants were the *Fri-*

sons? But the present Inhabitants are agreed to be descended for most part from *Westphalia* and *Drente*. The Air of this Country is sharp, and well purified by continual Breezes; so that People of 70, 80, and 90 Years of Age, are frequent here. They have little Stone or Wood, but Plenty of Turf for Fuel: They have good Pasture Ground, and large Herds of great and small Cattle, but few Wild-Beasts. They have store of Salt and Fresh-Water Fish, and are in Disposition much like the *Frisons*, but more industrious and cautious, which is ascribed to their Trade and frequent Commerce with Strangers. *Ubbo Emmius* says, That an Age before he wrote, 'twas called the *Lesser Friesland*; and that tho' the whole went under the Name of *Groningen*, yet in their publick Acts 'twas only called *Omland*: But the Stile at present is *Groningen* and the *Omlands*.

Groningen is divided into the Lordship of *Gorecht*, a small Tract in the middle of the Country; the *Old Ampt*, lying E. from hence to the Bank of *Dollart* Bay; the *Westerveld*, which lies S. from hence, and runs like a small Wedge betwixt *Drente* and the Bishoprick of *Munster*.

The *Omlands* is divided into the W. Quarter betwixt *Friesland* and the *Gorecht*; *Hunsingo*, which is the N. Part of the Province; and *Five-Lingo*, which lies betwixt *Hunsingo* and the *Old Ampt*.

The chief PLACES are,

1. *Groningen*, 30 Miles N. W. from *Coevorden*, 21 S. W. from *Embsen*, and 29 E. from *Leewarden*, in Long. 25. 12. Lat. 53. 12. Some derive the Name from *Grunius*, a *Trejan* or *Franc*. It stands on the Rivers *Hunius* and *Aba*, in a Point of Land where they join; so that 'tis water'd with several Channels, artificial and natural. The *Aba* is received and let out of the City by several large Arches under its Fortifications; and where it goes out, receives the *Hunius*, which encompasses the E. and N. Parts of the City, and forms a Channel capable of a great Number of Vessels. The *Aba* has a Bridge of Brick over it within the City, which has been much enlarged at several times, particularly in 1635, when 'twas made one half larger than before. It has

17 great Bastions, with other Fortifications in proportion, and is encompassed with a Ditch of 270 Foot broad. The City is large and populous, and, if well garrison'd, reckon'd impregnable. It has a Communication with the *German Ocean* and the River *Em*, which makes it a Place of great Trade; having likewise the Conveniency of Commerce with the neighbouring Country by Rivers and Canals. It had formerly 3 Parish Churches, besides 5 belonging to Monasteries, and 4 to Hospitals. The chief of 'em, at the End of the great Market-place, is *St. Martin's*, where there was formerly an Organ made by *Rodolphus Agricola*. *St. Walburg's* and *St. Mary's* have a high Tower each; the first is of a round Form, is a strong Building, and has a Fountain in it, which springs continually. Its Tower is the best in the Country, and has 16 Bells, one of 'em very large. It has now but 3 Parish Churches, to which the other Parishes are united. The Church and Monastery of the *Franciscans* stands about the middle of the City, and those of *St. James* and the *Dominicans* on the N. near the Walls, but now turn'd to other Uses. The Friary near *St. Walburg's* is now the Residence of the Governor of the Province. They have 3 Market-Places; the largest of which, called the *Ox-Market*, is about 180 Paces square, in which stands their Town-House: The other, called the *Fish-Market*, is longer, tho' not so broad. Into these two Market-Places run 17 large Streets, 6 of which are in a straight Line to so many Gates of the City; and those in the Old Town are so neatly pav'd, that a Man may safely walk them in the darkest Night without any Light. They have 27 spacious Streets in all, several of 'em adorn'd with curious Buildings; and most of the Houses have Gardens and Fruit-Trees, which yield them both Profit and Pleasure. The City has great Privileges, was formerly one of the *Hans-Towns*, was exempted from appearing at other Tribunals. They had also the Privilege of coining Gold and Silver. It had the Benefit of a Staple, and has many particular Laws: The chief of which are, 1. That the Names of Bankrupts, if the Creditors require it, are publish'd from an upper Window of the Town-House, upon which they were formerly

outlaw'd; but now 'tis only a Reproach. 2. Upon the Death of the Parents, the Son has only a double Portion to that of the Daughter; and the Husband and Wife cannot sell or mortgage one another's immovable Estates without mutual Consent. 3. Those that are not baptiz'd according to the Church establish'd by Law, cannot inherit. 4. A 4th Part of such Estates as devolve to Persons dwelling beyond the *Ems* and the River *Laers*, comes to the publick Treasury of the City. The Emperor Henry III. gave to *Berthold* Bishop of *Utrecht* what he possessed in *Groningen*. The succeeding Bishops made this a Handle to lay Claim to the whole City, which occasioned many Quarrels betwixt them and the Citizens, till in 1392 the Bishop quitted his Pretensions; but in 1401, another Bishop renewing them, they submitted to the Earl of *East-Friesland*, then to the Duke of *Guelder*, and at last to *Charles V.* They revolted from *Spain* in 1579; but returning again under their Dominion, Prince *Maurice* in 1594 took the Town for the United Provinces. In 1672, they made such a brave Resistance against the Bishop of *Munster*, that he lost 10000 Men before it, and was obliged to raise the Siege; for which this City was rewarded with a double Vote in the Council of State of the United Provinces. There have always been great Controversies betwixt this City and the *Omlanders* about the Extent of their Jurisdiction, from which the latter plead Exemption; and 'twas accordingly determin'd in their Favour by the Pr. of *Orange* and the States. The Citizens are said to be haughty, great Lovers of Liberty, profuse in Diet and Habit, industrious in Trade, and tenacious of their Religion; yet they allow the Lutherans and Anabaptists a Toleration: Their Inclination to Profuseness has occasioned a Law to regulate their Expences at Weddings and other Solemnities. In 1614, an University was founded here, with Professors in all Faculties. Their first Rector was the famous *Ubbo Emmius*. There's a Settlement for 40 Scholars, who pay no more each but 45 Crowns *per Annum*; the rest of their Charge being born by the States. In their Library there's an Inscription, attested by credible Persons, giving an Account, That a Soldier liv'd there 16 Days after a

Wound received in the right Ventricle of his Heart. Their University is liberally endow'd out of the Revenues of the Monasteries. They have also a publick School, with 7 Masters for the Languages, who have each of 'em a House, and a handsome Salary. At the Entrance of the School, there's this Motto:

Fac ea quæ moriens facta fuisse voles.
i. e.

Live as you would die.

The Prince's Palace is on the N. Side of the City, and in one of its Chambers are the Pictures of all the Princes of *Orange* and Counts of *Nassau*. Near to this there's a very fine Garden, and the Stadthoufe, with a Latin Inscription, importing, That here the Magistrates of the City, and Nobles and Rusticks of *Omland*, meet for the publick Affairs of the Province. Their Government is by 4 Consuls and 12 Senators, whose Office continues for two Years, one half of 'em going out Annually, the like Number being chosen by the 24 Jurats in their Place; who, after hearing a Sermon, meet in the Town-Houfe, when the Consul for the Time puts 24 Silver Beans into a Hat; 5 of which being colour'd, those who draw them are the Electors, and are shut up until such time as they chuse 2 Consuls and 6 Senators, in the Room of those that go out. The Jurats are chosen in the same Manner. The Consuls and Senators have the Sovereign Power in the City; but in Matters of Peace and War, they take the Advice of the 8 Senators that went out last, and the Jurats, who represent the Corporations of the City. On extraordinary Occasions, they likewise call to their Assistance some other Citizens of the best Rank. There were formerly two *Ædiles* or Tribunes of the Corporations; but it having been found that they made use of their Sway to promote Faction and Sedition, they were laid aside, and the Jurats are all sworn against such Practices when admitted to their Office. They have another Council called *Hoofman's*, into which no Citizen is admitted but such as have been Consuls. Their Jurisdiction is over the Territory of the City and the *Omlands*, from whence 3 Members are admitted into this

this Council, where they preside in their Turns by Lot. This City is noted for the Birth of the famous *Rodolphus Agricola*, whom *Erasmus* calls the greatest Scholar that any Age has produc'd; and of *Weselius* his Contemporary, so universally learned, that he was called, *Lux Mundi*. For the rest, we refer to *Bleau*.

2. *Dam*, 11 Miles N. E. from *Groningen*, and about 2 Miles from the Bay of the *Ems*. It lies in a rich and pleasant Soil, is well built, but not fortified, because of the Jealousy of those of *Groningen* against the *Omlanders*, in whose Territory this Town is seated.

3. *Winschoten*, 15 Miles S. E. from *Groningen*, a Fortress in the Old *Ampt*, was taken and plunder'd by the Troops of *Munster* in 1674, and is remarkable for the first Battle betwixt the *Spaniards* and the *Dutch* in Defence of their Liberty in 1568, when Count *Lewis of Nassau* defeated the *Spanish* General *Arenberg*.

4. *Billingwolderschans*, near the Bay of *Dullart*, 6 Miles S. E. from *Winschoten*: It commands one of the most important Passes betwixt *Westphalia* and *Groningen*; and the Tide coming up to it, they have Sluces, by which they can drown the neighbouring Country. This Fort was taken by the Bishop of *Munster* in 1672; but afterwards recover'd by the *Dutch*.

5. *Bourtsangerfort*, lies 7 Miles S. E. from *Billingwolderschans*. 'Tis almost encompassed by unpassable Morasses, and was built by Prince *William of Nassau* in 1593, because of the Conveniency of its Situation, and repulsed *Verdugas* the *Spanish* General before 'twas quite finish'd.

6. *Langakerschans*, lies on the Bay of *Dullart*, 20 Miles S. E. from *Groningen*. 'Twas taken by the Bishop of *Munster* in 1672; but retaken by the brave General *Rabenhaupt* in 1673, when he found a great Booty there, the Troops of *Munster* having made it a Storehouse for their Plunder. There's another Fort called the Old or *Boonerschans*, betwixt *Langaker* and *Billingwolder*; which Forts, with the Morasses, make a very strong Frontier betwixt *Groningen*, the County of *Embsen*, and *Westphalia*.

7. *Delfzyl*, lies on the *Dullart* Bay, 2 Miles E. from *Dam*, is a very good Harbour, which for Situation, and other Advantages,

exceeds that of *Embsen*. 'Tis a Place of such Importance, that 'twas always well fortified by such as had it in Possession. The D. of *Alva* design'd to have built a good City here, but was prevented by the Wars to which his bloody Government gave Rise. 'Twas taken in the beginning of those Wars by the *Dutch*; but surrender'd to the *Spaniards* after the Defeat of the *Dutch* at the Battle of *Ardenburg*, and recover'd in 1591. 'Twas lately very well fortify'd by the States General, who have taken in as much Ground as makes it equal in Extent to a great Town. In 1672, their *East-India* Fleet of 14 Ships, whose Cargo was valu'd at 16000000 l. Sterling, escap'd hither from the *English* Fleet, which pursu'd them very close.

In the Old *Ampt* stands the ancient Village of *Midwold*, formerly a flourishing Place, but most of it now ruin'd by the *Dullart* Sea, which above 400 Years ago swallowed up 33 good Villages in those Parts.

The *Omlands*, as we have heard before, act in some Things jointly, and in others independant of the City of *Groningen*; which having occasioned many Differences betwixt them, the States General, to prevent the like, made several new Orders relating to the Government of that Province; particularly, That none should have any publick Employment unless a Protestant, having an Estate of such a Value, and of good Reputation; with some other Orders relating to a more equal Distribution of publick Offices, and what sort of Persons should be admitted to sit in the Provincial Assemblies.

The Province of Westfriesland,

HAS the *Zuyder-Sea* on the W. and Part of the S. the Province of *Groningen* and Part of *Over-Iffel* on the E. and S. and the Ocean on the N. *Moll* makes it about 40 Miles from N. to S. and 25 from E. to W. We have formerly taken Notice from *Cluverius*, That the *Frisi* were its ancient Inhabitants; and from Sir *W. Temple*, That Part of the *Saxons* who conquer'd *England* came from hence. Some say, this Country was much larger formerly, and join'd to the

A a a a a

three

three Islands on the N. of it, which have been separated by Inundations: That the Districts of *Oostergo* and *Westergo* were also divided by a large Bay; at the Mouth of which, where now stands *Berlecom*, there was a Town of great Trade, the Ruins of which are still to be seen; and that the *Lauwers* was formerly a deep and navigable River, but now choak'd up.

The Air of the Country being purified with frequent Winds, is better than could be expected from its low Situation; tho' in the Winter, the Fields are generally so full of Water, that there's no travelling but on Banks. In Summer, 'tis dry'd by the Season and Art, and in many Places affords good Pasturage and Arable Land, especially in *Oostergo*. *Westergo*, which is the larger Tract, is more level and fenney, but abounds with Fish and Fowl. Neither of 'em have any Woods; but they are supplied with Turf from a Bituminous Earth, which *Guicciardin* says did formerly take Fire of it self in this Province, near the *Zuyder-Sea*, and could not be stopp'd by Art or Industry, till it had burnt two Leagues in Length, and as much in Breadth, when the subterraneous Waters burst out and extinguish'd it, and form'd that Lake now call'd the *Jonkermeer*. *Becanus* says, the like happen'd in *Brabant* in 1541, and in the Province of *Utrecht* in 1567. *Ubbo Emmius* and *Guicciardin* say, the Inhabitants are fair, tall, stout, great Lovers of Liberty, frugal, affable, and modest; but when provok'd, grow outrageous. Few of 'em marry young, which is thought to be the Cause of their strong and healthful Constitution, and of the Vacuity of their Children. Jealousy is rare among them, and their Women chaste; but Adultery, when discover'd, severely punish'd. The Men are said to bear Cold, Hunger and Thirst, better than most other People. They are of a Martial Disposition, and not much addicted to Trade, which is ascrib'd to the Temper of their Nobility and Gentry, many of whom despise Commerce, or to-match with a Citizen's Family; yet their Ladies are much addicted to Spinning, and other Parts of good Housewifery, while their Husbands follow the Court and Camp, or divert themselves by Hunting. The Food of the meaner Sort is salt and smok'd Flesh, Bacon, Barley-

Broth, Cheese, and Butter; but they affect to have good Tables on *Sundays*. They are reckon'd good Companions; and tho' not so much addicted to Drinking as some of their Neighbours, carrouse frequently in Wine and Ale, and will very much resent the Refusal of being pledg'd. They usually drink in Horn Cups tip'd with Silver, encompassed with Rings of the same Metal; and when they have drank, 'tis common with both Sexes to reach out the Cup and their Hand, to be kiss'd by the courteous Pledger. The Nobility are splendid in their Apparel, live sumptuously, keep many Servants, and are great Admirers of Coaches and Calashes. Both Sexes follow the *French* Fashion in their Dress; and the elder Women affect much Gold and Silver in their Apparel on solemn Occasions. Their Language comes nearer the old *English* than any other in *Europe*. They were formerly said to chuse their Wives more for their Beauty and good Nature, than for their Riches; but of late, they look after good Portions as well as their Neighbours. When a Bride comes home, she takes Possession of the House by drinking to the Guests, and bidding them welcome. When a Husband dies without Issue, the Widow returns to her Kindred; and 'tis reckon'd scandalous if she marry within a Year after. The Relations of the Deceas'd mourn for a Year in black Vestments down to their Ankles; but in some Places they mourn only 30 Days. The Men were formerly so noted for Strength and Courage, that the *Hollanders* us'd to say, *As strong as a Frizon*, by way of Proverb.

Their Religion is that of the other Provinces establish'd by Law; but they tolerate Anabaptists, and connive at Papists. We have formerly taken Notice, That they were long subject to the *Romans*; and after they shook off their Yoke, subdued and possessed most of *Old Battavia*, till they were harass'd by the *Normans*. They are said to have had 7 Princes, 7 Dukes, and 9 Kings, of their own, who kept their Court at *Stavern*, and were called Kings of *East-Friesland*, to distinguish them from those of *North-Holland* or *West-Friesland*, who resided at *Medenblick*. 'Twas formerly join'd to *North-Holland*, as appears by their ancient Annals, when that Part of the Country

was possessed by one *Ivo Hopper* about 1013, who sold it off upon the finding of a live Herring in a Pool in the middle of one of his Fields, which he took as a Presage of the Inundation that happen'd soon after. They were afterwards subdued by the *Franks* under *Charlemagne*, who allow'd them great Privileges, and to chuse their own Governors, call'd *Potestates*, of whom they had 16. They were much troubled with Dissentions by the Factions of the *Schyningers* and *Vet-coopers*; at the same time when the *Hollanders* were plagued with the *Hoecks* and *Cabillaux*; the *Italians* with the *Guelphs* and *Gibelins*; *Flanders* by those who wore Hoods of different Colours; and *France* by Factions of the like Nature: As if some malignant Conjunction had then reign'd over all *Europe*. And tho' these Factions us'd to join in opposing Foreign Enemies, they gave Opportunity first to the *Saxons*, and then to the *Gueldrans*, to invade them, till they came to the House of *Burgundy*; after which they revolted with the other Provinces from the Crown of *Spain*.

The Province is divided into *Oostergo*, *Westergo*, and the 7 *Wolden* or *Forrests*: The first lies next to the River *Laars*, and the *Omlands* on the N. contains the Cities of *Leuwarden* and *Doucum*, with 12 Jurisdictions, 127 Villages, and had formerly 21 Monasteries, besides many ancient Castles and Noblemen's Houses. *Westergo* is the largest and most populous Division, contains the Towns of *Franecker*, *Sneek*, *Bolswarden*, *Hattingen*, *Slooten*, *Stavern*, *Hindelopen*, *Worcum*, and *IJst*, 8 Jurisdictions, 127 Villages, and formerly 24 Monasteries. It lies S. from *Oostergo*, and W. from *Sevenwolden*. The latter is for most part moorish, in other Places sandy and barren; but abounds with Turf, Lakes well stor'd with Fish, and has several small Woods, from whence it takes its Name. It has no Towns, but is divided into 9 Jurisdictions, containing 77 Villages, and formerly one Monastery. In some Places they have good Corn, but little Pasturage; and the Inhabitants living hard, are reckon'd the best Soldiers of the Province. During the *French* Invasion in 1672, they were miserably divided into Factions, and set up two different Provincial Assemblies, who enacted contrary Orders, and could not be brought to Reason

by their own Stadtholder, till the Prince of *Orange* march'd thither with a considerable Army in 1673, when he appeas'd their Differences among themselves, and reconcil'd them with those of *Groningen*.

The chief TOWNS are,

1. *Franecker*, in Long. 24. 15. Lat. 53. 10. 9 Miles W. from *Leuwarden*, 32 W. from *Groningen*, and 4 Miles E. from the *Zuyder-Sea*. 'Tis said to have been founded in 1191, and to take its Name from the Portion of Land on which 'twas built. It abounds with Channels, two of which run through the Length of the Town; and by their Communication with others, make it very neat, and advance its Trade. 'Tis encompassed with a good Rampart, a broad and deep Ditch; and the Air is so wholesome, that many Gentlemen have chose it for their Place of Residence, and built stately Houses in it. On the W. Side there's a Castle of Brick, surrounded by a deep and broad Ditch, and is so very strong, that it commands the City, and was the Seat of their Governors, till the Time of *Charles V.* The whole Town consists but of one Parish, with a large Church, called *St. Martin's*, adorn'd with a tall and handsome Steeple. They have an Hospital for 30 Orphans of both Sexes, where they are taught Reading, Writing, and Handycrafts; and the Girls, when marriageable, are provided with competent Portions. The Fields on the N. and W. lie high, and produce good Corn; but those on the other Sides are low, and cover'd with Water in Winter. The Channel which comes from *Leuwarden* runs through the City, is navigable, and has high Banks for the Convenience of Passengers, and of the Horses that draw their Boats when the Wind is contrary. Their University was founded in 1584, where they have 14 Professors, endow'd by the Revenues of the old Monasteries; and the Students, besides other Immunities, are exempted from Taxes on Wine and Beer. The Rector *Magnificus* is chosen Annually out of the several Faculties by Turns, and has the Cognizance of Civil Causes; but the Criminal are referr'd to the Court of the Province. For their Learned Men, we refer to *Blau*. They have likewise a Gram-

mar School of good Note. Their Government is like that of the other Cities formerly mentioned; but only this Town and *Leuwarden* in the whole Province chuse their own Magistrates, the rest being nam'd by the Stadtholder, out of a double Number presented to him.

2. *Leuwarden*, lies 9 Miles E. from *Franecker*, is the largest, richest, best built, and most populous, of the Province, tho' not so ancient, as some others. 'Twas walled in 1190, when it consisted but of one Parish. The Streets are cleanly, their Houses splendid, their Bridges well pav'd, and their Gardens pleasant. Their Churches, the Provincial Court, the Governor's Palace, and the Houses of their Nobles, are fine Structures. The Figure of the City is a sort of a Square, encompassed with a strong Rampart, a broad deep Ditch, 5 Bulwarks of Earth, with a Ditch each. It stands in a fruitful Soil; and by its navigable Canals, the largest of which runs to the Ocean, they have a good Trade with *Hamburg*, *Bremen*, *Embsen*, and *Holland*, and are plentifully supplied with Necessaries from the neighbouring Country. One of their Canals to the Westward is commanded by strong Sluces. They had formerly 4 Monasteries, now turn'd to other Uses. They have two Hospitals, one of 'em nobly endow'd for 100 poor People of both Sexes, and Accommodations for their Aged, Sick and Lunatick, and entertaining poor Strangers for two Nights at a time. They have several good Laws for regulating their Government, in which they admit no Military Men, nor any but those of the established Religion, and of competent Estates. *Bleau* gives an Account of their Learned Men.

3. *Doornum*, lies 10 Miles N. E. from *Leuwarden*, in a fruitful Country, abounding with Corn and Pasture, good Villages, and Gentlemen's Seats. *Hegenitius* says, he saw a Piece of Coin here with an Inscription, importing, That 'twas built by *Obbo D.* of *Friesland* in 248; wall'd by King *Gondebold*; who coin'd Gold there in 739; That its Walls being demolished in 1422, were rebuilt in 1516, demolished again in 1531, and rebuilt in 1592: But *Emmius* says, the first time 'tis mentioned in any Record, is in the Story of the Martyrdom of St. *Ba-*

niface about 1255; tho' some will have it earlier, in a Village near this Place, which, as the Legend says, was occasioned by his turning the Bread of an uncharitable Woman into Stones, for refusing to relieve him and his Companions in Extremity of Hunger. They pretended to have his Stole, Chalice, and Skull, there, which they shew'd to Strangers. It stands on the River *Es*, by which it communicates with the Ocean and *Leuwarden*. Their Buildings are rather neat than stately, and their Houses well furnish'd. Their Guildhall is a handsome Structure: The Stone Bridge near it so broad, that it serves for a Market; and the Arches so large and high, that Vessels pass under 'em. They have two other Bridges. The Town was fortified by the States in 1582, with a large Ditch, Rampart, and Bulwarks. One of their Bridges is drawn up with Chains, to let Vessels pass without pulling down their Masts. The River where it comes in and goes out of the Town is commanded by good Block-houses, and a strong Boom in the middle, left open by Day for the Passage of Ships, but let down by Night. On each Side of the Channel there's a fair beautiful Street, with a Bank to keep in the River, neatly pav'd with Flint, and fac'd with Stone. They have but one Parish-Church, and had formerly a handsome Cemetery, of which nothing remains now but a stately high Tower.

4. *Harlingen*, 4 Miles W. from *Franecker*, at the Mouth of the Canal, and on the Bank of the *Zuyder-Sea*. 'Twas formerly an inconsiderable Village, but now one of the most considerable Towns next to *Leuwarden* in the Country. It has been several times enlarged, and was strongly fortified by *William Prince of Orange* about 1579. 'Twas further enlarged, together with its Harbour, in 1597, and the adjacent Country may be overflowed by the Sluces in an Hour's time, which makes it very strong. Tho' the Harbour be large, and much frequented, 'tis not fit for Vessels of great Burden, which must either lie off a good Distance at Sea, or unload Part of their Cargo before they can get in. Their chief Trade is in making Sails, in importing and exporting Corn, Pitch, Tar, Fir-Trees, and Deal. On the S. Side was formerly a strong Castle, the Residence of *Albert the Saxon*, and

and other Tyrants, who plagu'd the Country, for which 'twas demolished by the Inhabitants. It has a Grammar-School and two Hospitals, and is govern'd by its own Magistrates, appointed out of a Number presented to the Provincial Council.

5. *Bolswaert*, on the Sea, 6 Miles S. from *Harlingen*. 'Tis an ancient City, stands on a rising Ground, encompassed with good Arable Lands and Pasturage. It had formerly a considerable Trade by Sea, but now deals chiefly with the neighbouring Towns by Canals. 'Tis one of the *Hans-Towns*, well Peopled, the Houses neatly built, and it has several Channels, which run through the Town, capable of smaller Vessels. It has 5 Gates, 4 Sluces on its Rivers, a small Market-Place, a Town-House, 1 Church with 2 Ministers, a Grammar-School with 3 Masters, 2 Monasteries, now converted to other Uses; with Hospitals for the Poor and Orphans. 'Tis govern'd by its own Magistrates, and encompassed by a good Ditch and Rampart.

6. *Sneek*, 5 Miles S. E. from *Bolswaert*, is an ancient, populous, neat, and well fortified Town. They trade in Fishing and other Commodities, are well furnished with Fresh-Fish by neighbouring Lakes, both for Consumption and Sale; and have a publick School, which, for the Salaries of the Masters, and Number of Scholars, is the best in the Province, next to that of *Leuwarden*. *Joachim Hopperus*, the famous Lawyer, who was President to the K. of Spain's Council at *Madrid*, was bred here. The adjacent Country has good Pasturage; but the Ground lying low, is not fit for Corn. It has a good Trade with the neighbouring Towns by Means of Canals.

6. *Worcum*, lies on the Sea, 8 Miles S. W. from *Sneek*, in a rich Soil. The Harbour is choak'd up by Sands; but it drives a good Trade with the neighbouring Country by Means of Canals, and is well supplied with Fish from the neighbouring Lakes. 'Tis also govern'd by its own Magistrates.

8. *Hindelopen*, lies on the same Bank of the Sea, 3 Miles S. from *Worcum*. It has a small Harbour, is govern'd by its own Magistrates, and subsists chiefly by Fishing and Husbandry.

9. *Slooten*, or *Sloot*, lies 7 Miles S. E. from *Hindelopen*, upon a navigable Current which

comes from a neighbouring Lake, called the *Slooten Meer*, and falls into the Sea about a League below the Town, by which it has a Trade with *Holland* and other Parts. This Canal is shut up at Night by a Boom. The Streets are very neat. They have a handsome Town House, 1 Church, 3 Gates, one of 'em large and stately; but the Fortifications not considerable, having been ruin'd in the *Spanish Wars*. Their Government is by 4 Consuls and 4 Senators, without any Common-Council.

10. *Stavoren*, lies on the Bank of the *Zuyder-Sea*, 9 Miles S. W. from *Slooten*. 'Tis by Latin Writers called *Stavia*, and *Stavordia*. *Ubbo Emmius* alledges, 'twas built and fortified in the first Year of Christ by a Prince of the Country, who appointed 3 Weekly Meetings of Sword-Players there, to instruct the Youth in the Art of Defence. The *Friesland* Writers say, 'twas not only the Metropolis of the Country, and the Seat of their Kings, but the greatest Emporium of both *Germanies*. That 'twas formerly a Place of great Trade, and particularly in the *Sound*, is evident from the Privilege they still enjoy, of being dispatch'd before all others by the Receivers of the K. of *Denmark's* Customs; and 'twas the only Town in the *Netherlands* which was allowed a Trade with *France* during the War betwixt *Charles V.* and the *French King*. 'Twas prodigious rich; but their Trade is now decay'd by the choking of their Harbour, which is ascrib'd to the Divine Justice that punish'd the Pride and Avarice of the Inhabitants; of which they give this remarkable Instance, That a Merchant's Wife being enrag'd at her Husband's bringing home from the East Country a Ship full of Wheat, which was then very cheap, she perswaded him to throw it over-board; where, being quickly cover'd with Sand, the Harbour was choak'd up a little time after. The first of the *Frison Kings* is said to have built a Temple and Sanctuary betwixt this Place and *Medenblick* in *North-Holland* about 463; and *Rathodus*, their 6th King, is said, when going to receive Baptism, to have return'd to his Idolatry, because the Bishop then told him, That his Ancestors were all damn'd. *Ubbo Emmius* alledges, That this Prince extended his Dominions as far as *Nimeguen*; which he takes

takes to be imply'd by the Inscription we have already mention'd on one of its Gates: *Hucusque jus Stavria*, and, *Hic est Pes Imperii*. But *Scrivervius* says, the Word *Stavria* denotes a Tribute that was paid through the Roman Empire, of which *Nimeguen* was then the Boundary on that Side; which is confirmed by the Chronicle of *Bohemia*, where the General Tax is called by that Name: And in several Places of *Germany*, the Tax for supporting the War against the *Turks*, and in the old Laws of the *Franks*, an Impost for clearing the Roads of Highwaymen, is called by the same Word. *Stavervan* is said to derive its Name from *Stavo*, a Log of Wood, which the Pagan *Frizons* worship'd under the Notion of *Jupiter*. 'Tis also recorded, That the Mouth of the River *Flevis* was anciently near this Town; and that about 1250, there was a Passage almost by Land from this City through a great Forrest to *Enchuyzen* in *North-Holland*, which is now a Road for Ships. About a Quarter of a League from *Stavervan*, into the Sea, there's still to be seen, a little under Water, the Ruins of an old Monastery, which the Mariners carefully avoid. This is another Proof that the *Zuyder-Sea* has been form'd by successive Inundations, of which *Stavervan* it self is an Instance; the greatest Part of the Old Town being thus swallowed up; so that at present 'tis reduced chiefly to two Rows of Houses on each Side of a small River, over which there are several Wooden Bridges. The Streets are kept very neat, and the Water penn'd up by Sluces, to let it out or in on Occasion. They have still some Trade, especially in Fishing, and Passage Boats over the Pools and Lakes of the neighbourhood. 'Tis fortified with a good Ditch and Rampart, and govern'd by its own Magistrates. 'Twas formerly the 3d of the *Hans-Towns*, and so powerful, says *Ubbo Emmius*, that in 1335 it wag'd War with *Hamburg* and *Lubeck*.

11. *Kuynderschan*, lies on the *Zuyder-Sea*, 15 Miles S E. from *Stavervan*, on the Mouth of the River *Kuynder*. 'Tis an ancient Village, which enjoys the Privilege of Trade, is strongly fortified with 5 good Bulwarks, and has another Fortification in the Neighbourhood called *Slykenburg*, which lies at the Conflux of two Rivers.

The Islands of *Ameland* and *Schiermonnikoog*, on the N. of this Province, are not describ'd, being inconsiderable, and having only 6 or 7 Villages upon them. *M. de Fer* reckons in the whole Province 11 Cities, 480 Villages, and 2 Islands.

Having finished the 7 United Provinces, we come to their Conquests in *Flanders* and *Brabant*.

DUTCH BRABANT,

HAS the Province of *Holland* and *Dutch Guelderland* on the N. *Spanish Brabant* and the Bishoprick of *Liege* on the S. *Zealand* on the W. Part of the Dutchy of *Glewie* and *Spanish Guelderland* on the E. *Moll* makes it 55 Miles from E. to W. and the greatest Breadth 31 from S. to N.

The chief PLACES are,

1. *Breda*, 8 Miles S. from *Gertrudenberg*, about 20 Miles W. from *Boisleduc*, and 25 N. E. from *Antwerp*. 'Tis a large, well built, populous, and very strong City, encompassed with thick Walls and Mounts of Earth, two Trenches full of Water, one of 'em very broad and deep; so that 'tis reckoned one of the strongest Towns in the *Netherlands*. *Dr. Brown* says, it has a large Ditch round the Counterfarp, a Ravelin betwixt each Bastion join'd to the Rampart on the inside of the Ditch, besides a good Number of Half-Moons and Horn-Works, and a Parapet, strengthen'd with a double Row of Elms. 'Tis subject to the *Dutch Commonwealth*, but without any Share in the Government: Yet it pays its ancient Quota to the Support of the Union. The Lordship of it belongs to the Family of *Orange*, having been annexed to the Family of *Nassau* by Marriage above 300 Years ago, together with the Barony, which contains 17 Villages. It stands on the Rivers *Had* and *Merk*, in a pleasant Country, abounding with Arable Land, intermix'd with Meadows, Pastures, and Copfes. The Palace, belonging to the Family of *Nassau*, is a handsome Structure, with a pleasant Garden between the Body of the Town and the Works. Prince *Henry* built another in the

the Citadel, in the Form of a Castle, after the Antick Way, with a noble Portico and handsome Gallery. It has also a fine Garden, where the Box-work is extreme curious. The great Church, with its Tower, are ancient and stately Structures. In the Side-Isle of the Quire, there's the Tomb of Prince Henry I. having the Effigies of himself and his Princess at length on a Marble Base, and a Marble Canopy over them, supported by 4 ancient Heroes kneeling, and Latin Inscriptions at the Corners, comparing him to *Julius Caesar* for Valour and Fortitude, and to *Atilius Regulus* for Magnanimity. There are several other Inscriptions in the Church relating to the Revolutions of the Town, particularly to the taking of it by *Spinola* in 1634, and the retaking of it by *Pr. Frederick Henry* in 1637. 'Tis noted for the Treaty to restore King *Charles II.* of Great Britain, and his Declaration from thence to his Subjects. Some say, the Union of *Utrecht* was likewise concluded here. 'Twas surpris'd by the *Spaniards*, who had a Correspondence with some Papiſts in the Town, in 1581; but retaken in 1590, 80 Soldiers being convey'd under a Load of Turf into the Castle. 'Twas afterwards besieged in 1624 by *Spinola* with 30000 Men, who surrounded it with such incredible Works, that 'twas not possible for *Pr. Maurice* to relieve it; so that almost after a Year's Siege 'twas forc'd to surrender by Famine. During the Time, the Garrison had rais'd such Fortifications, as made it one of the strongest Cities in the World. 'Twas retaken after an obstinate Defence by *Pr. Frederick* in 1637. The first Prince of the House of *Orange*, who had Possession of it about 1400, establish'd an Academy here, with Professors of the 4 Faculties, for the Instruction of Youth.

2. *Boisleduc*, *S. Hertogen Bosch*, Lat. *Sylvia Ducis*, and commonly *Bosch*, lies 20 Miles E. from *Breda*, on the Banks of the *Dromele*; which receiving there the *Aude* and the *Diese*, falls into the *Muese* at *Crovetaur*, about 4 Miles N. from thence. It had its Name from a neighbouring Wood, where the Dukes of *Brabant* us'd to hunt; which being cut down by *D. Godfrey* in his March against the *Guelarians* in 1172, the Town was then built, and walled about 1196, having been since much enlarged. It stands

on a rising Ground in the middle of Fens, of a great Extent, in most Places unpassable, and always overflow'd in Winter, which makes it of very difficult Access, there being no coming to it but by Cawseys made on purpose, half a Mile long. 'Tis of a triangular Form, and has 7 large Bulwarks, which make it 7660 Paces in Compass. It has several Canals, which bring up Vessels of good Burthen into the City. 'Tis encompassed by a strong Wall and a deep Trench. The Avenues are commanded by several Forts, and the Citadel commands one Side of the Town, and the Country towards *Bommel*; so that 'tis reckon'd almost impregnable. There are 51 Stone Bridges, and 38 Wooden ones, for publick Use over their Canals, and as many others belonging to private Families. It has a spacious Market-Place, encompassed with fair Buildings; and there are 10 broad Streets which center in it. The Houses in general are not so well built as those in *Holland*; but they have a stately Town-House, built after the Model of that of *Amsterdam*. The Church of *St. John*, formerly a Cathedral, is splendid and sumptuous; in the Quire of which are the Arms of many of the Knights of the *Golden Fleece*, and over their Seats an Account of their Institution, in Substance thus: "The most High and Mighty Prince *Philip*, call'd *The Good*, by the Grace of GOD, Duke of *Burgundy*, *Lorraine*, and *Brabant*, did in 1429, in the City of *Bruges*, in Imitation of *Gideon*, institute to the Honour of GOD and the Virgin, and for the Sake of *St. Andrew*, Patron of *Burgundy*, a Society of Honourable Knights, into which might be received Emperors, Kings, Dukes; Marquesses, and other Personages, his own Subjects or Foreigners, provided they were of Noble Blood and good Fame, to be called Knights of the *Golden Fleece*; and the lawful D. of *Burgundy*, if possessed of the *Low Countries*, to be their perpetual Chief. They were to be only 24 in-Number, including the Chief, with a Chancellor, a Treasurer, a Secretary, and King at Arms: And for their Regulation, he made several Ordinances. The Town was the first, as appears by their Instrument given in to the States in 1651, for being admitted as a Governing Member

of the Union, that own'd their Zeal by countenancing the preaching of the Protestant Religion, and seiz'd the Chancellor of *Brabant*, and another Grandee, sent thither by the Governess to hinder it; for which, in 1587, they were proscrib'd, and the Protestants forc'd to leave the Country, upon the Prince of *Orange's* Retreat. From that Time they were oppress'd by the *Spaniards*, till rescued by the *Germans*. In 1576, they sign'd the *Pacification of Ghent*. In 1578, they swore the Peace of Religion, and in 1579 embrac'd the Union of *Utrecht*. 'Twas after taken by the Pr. of *Parma*, when the Protestants were again banish'd. Pr. *Maurice* besieg'd it in vain in 1601; but Prince *Henry Frederick* retook it after an obstinate Siege. The *Mareschal Turenne* invested it in 1672, but soon after rais'd the Siege. Their Government is by two Prætors, who are generally Persons of Noble Descent, the one for Civil, and the other for Criminal Affairs. They are assisted by *Eschevins* and a Common-Council; but there lies an Appeal from this, and all the other *Dutch Cities* in *Brabant*, to the Tribunal instituted for that End at the *Hague* in 1591, consisting of 7 Senators, a Secretary, a Treasurer, and Attorney-General, who finally determine all Causes relating to *Dutch Brabant*. For Cardinal *Enkevondius*, and other Learned Men born here, we refer to *Bleau*. Their chief Trade is in making Needles, excellent Knives, and in Woollen and Linen Cloth. The Inhabitants are courteous, and of a more Martial Temper than any of their Neighbours. This City has a large Jurisdiction, comprehending *Campin*, *Peeland*, *Maeland*, the District of *Osserwick*, and the Towns of *Helmont*, *Eindhoven*, *Megen*, *Ravestein*, and *Grave*.

Buxtel, 6 Miles S. from *Boisleduc*, and of great Importance, because it commands the Sluces which keep in and let out the Waters all over the neighbouring Country.

Helmont, or *Helmond*, 19 Miles S. E. from *Boisleduc*; is a good wall'd Town, Capital of that call'd the *Peeland*, lies on the River *Aa*, and is noted for the Birth of the learned *Andreas Helmondanus*.

Eindhoven, a wall'd Town on the *Demmel*, about 9 Miles S. W. from *Helmont*, is the Capital of the District of *Campin*, has a Church dedicated to St. *Katharine*, and a

College of Canons belonging to it. 'Tis the Capital of the District called *Campinland*.

Megen, a handsome Town on the *Maas*, 11 Miles N. E. from *Boisleduc*, which gives Title to an Earldom, and has a Jurisdiction of good Extent.

Ravestein, on the *Maas*, 4 Miles S. E. from *Megen*, is a neat Town with a good Castle, and a pretty large Jurisdiction. 'Twas formerly a Place of Strength; but the Fortifications demolished by Agreement betwixt *Charles V.* and the D. of *Cleve*.

3. *Grave*, on the *Maas*, 4 Miles E. from *Ravestein*, and 16 N. E. from *Boisleduc*, a Town very strong by Situation and Art, and of great Importance, because it commands a considerable Pass on the *Maas*, whose Waters fill the Trenches that encompass its Bulwarks. On the other Side, there's a great Marsh always full of Water, which makes the Town unaccessible that Way. 'Tis besides exceedingly well fortified with Ravelins, a Counterscarp, Pallizado, and a great Horn-work, secur'd by a Cover'd-way. The Town of it self is very neat and pleasant, and esteem'd the strongest and easiest to be defended in the *Netherlands*. It had formerly a Collegiate Body of Canons belonging to St. *Elizabeth*. The Lordship of it belongs to the Family of *Orange*, one of whose Ancestors purchas'd the Fee-Farm of it of the Crown of *Spain*. 'Tis Capital of the Earldom of *Cuyck*, which is about 4 Miles long, and $1\frac{1}{2}$ broad, and contains about 17 Villages. The Country adjacent to this Town is low, and consists chiefly of Meadows and Pasturage. In 1586, 'twas by the Cowardice of the Governor surrender'd to the Pr. of *Parma*; and in 1602, recover'd again by Pr. *Maurice*. In 1672, 'twas treacherously surrender'd to the *French*, who fortified it strongly, and made it one of their Store-houses for Plunder. In 1674, the Pr. of *Orange* retook it after a Siege of 4 Months, the Garrison being reduced to eat Horse-Flesh, and there being a great Breach made in the Cover'd-way. 'Tis said, that 100000 great Shot were spent on both Sides; that the *French* lost 2000 Men, and the *Dutch* 5000: Yet they reckoned the taking it of such Importance, that they appointed a Day of Thanksgiving for it. Their Government is by a Judge and Scout,

Scout, 2 Consuls, and 7 Eschevins, that were Annually appointed by the Prince of *Orange*. They have also a Common-Council of 8, whose Advice they take in Matters of great Concernment. They enjoy great Immunities, and particularly an Exemption from most sorts of Imposts in the neighbouring Provinces.

4. *Bergenopzoom*, sometimes called only *Bergen*, and in Latin *Berge*, or *Montes ad Zoom*. It has its Name from its high Situation on the River *Zoom*. It lies 16 Miles S. W. from *Breda*. 'Twas formerly a Barony, but afterwards made a Marquisate by the Emperor *Charles V.* 'Twas likewise a Place of good Trade, till its Commerce was engrossed by *Antwerp*, which lies 17 Miles S. E. from it. 'Tis seated conveniently between *Brabant*, *Flanders*, *Holland*, and *Zealand*. The greatest Part of the adjacent Country lies very low, and is made habitable only by Banks. It secures the Intercourse betwixt *Holland* and *Zealand*, and opens the Way into *Spanish Brabant*. Its Harbour is pretty commodious, defended by 2 Forts and a Half-Moon, 4 Redoubts, and another Fortification; so that it can easily be relieved by Sea. The Town itself is exceeding strong; for besides the Wall and Trench, it has Half-Moons, Horn-Works, and other Fortifications. The Buildings are neat and handsome. It has 3 Market-Places; and that called the Great Market is very capacious. Its principal Buildings are, *St. Lambert's Church*, and the Marquises Palace. They had formerly a Nunnery, which is now made an Hospital. The Town was in Possession of the *Spaniards* at the Beginning of the Civil War; but upon a Mutiny, deliver'd to the *Dutch*. The D. of *Parma* endeavour'd to recover it in 1588, but in vain, 'twas so stoutly defended by the *English Auxiliaries*. In 1622, *Spinola* laid Siege to it, and attack'd it furiously; but *Pr. Maurice* oblig'd him to raise the Siege with the Loss of about 12000 Men. The Garrison fir'd 200000 great Shot at the *Spaniards*. The Arch-Dutcheffs *Isabella* in a few Years after fortified *Santvliet*, and raised other Works in the Shallows near and upon the *Scheld*: Upon which the States suspecting that these Things portended another Siege, they thought of making this Town so strong, that it should

not be easily taken. In 1628, they made a Communication between *Steenbergen* and this Place by a Channel, which united and made passable the 3 Marshes betwixt 'em. They also erected strong Forts in such Places as they found requisite; and the Sluce near *Steenbergen* was well fortified, because thereby the neighbouring Fields might be quickly overflown, and so the harrassing of the Land of *Tolen*, and the laying close Siege to *Bergen* on that Side, prevented; for it was supposed tenable enough on the S. Side by its own Works and Fortifications. The Marquisate of *Bergenopzoom*, with its Appendances, was restored to the Count of *Anvergne*, by the Peace of *Nimeguen* in 1678.

5. *Steenbergen* lies near the Sea, about 4 M. from *Bergenopzoom*, is a small Town, that was taken by the *Spaniards* without any Difficulty in 1612, in order to prosecute the Siege of *Bergenopzoom*; and after the raising of that Siege, was with as much Ease retaken by *Prince Maurice*. In 1627, it was strengthen'd with new Ramparts and Bulwarks, several Redoubts and small Forts in the adjoining Part of the Country, and united to *Bergen* by the Canal above mentioned for their mutual Defence. The first Fort stands in a Place called *Sansstraet*, from its sandy Soil, is about 180 Geometrical Rods in Circuit. The 2d, which is of the same Compass, lies close upon the Sand-Hills, in the middle between the other two. The 3d is the largest, being 220 Rods in Circumference, with a Horn-Work and Half-Moon. The *Spaniards* drew Forces together to hinder the Proceeding of this Work, but in vain, for it was cover'd by the Pr. of *Orange*.

6. *Santvliet* is 8 M. S. from *Bergenopzoom*, was begun by the *Spaniards* in 1627, with some other Forts in the Neighbourhood, in order to attack *Lillo*. They made it very strong, and it continued in their Hands after the taking of the other neighbouring Places. It was taken in 1705 by the Confederates, when the Forces under Command of the D. of *Marlborough* forc'd the *French* Lines, by which they had made this Place very strong on the Side of the Land; but 'twas dismantled by the Confederates.

7. *Lillo* on the *Scheld*, 9 M. N. W. from *Antwerp*, and 4 S. from *Santvliet*. It was
B b b b b b fort-

fortified and garrison'd by the Citizens of *Antwerp* about 1584, to secure the Passage of the River, and made so strong during the Siege of that City, that the *Spaniards*, after they became Masters of *Antwerp*, could not take it, but were repulsed from before it with the Loss of 2000 Men. It has continued in Possession of the *Dutch* ever since; is now enlarged to a pretty little Town, and reckon'd much stronger since its Harbour was choak'd up. It has a Right of demanding Toll upon the *Scheld*, and, with some other Forts in Possession of the *Dutch*, curbs the Trade of *Antwerp*.

These two Places are not properly in *Dutch Brabant*; but since they adjoin to it, and are under their Subjection, we chuse to describe them here, tho' they be Part of the Marquisate of the Holy Empire.

Betwixt this Town and *Santvuliet*, there lies also a strong Fort for the further Security of *Lillo*, called by the Name of *Henry Frederick*.

DUTCH FLANDERS,

Lies S. of *Zealand*, from which 'tis separated by the *Scheld*. 'Tis 31 Miles long, and 13 where broadest.

The chief PLACES are,

1. *Sluys*, about 5 Miles N. E. from *Bruges*, and 13 N. E. from *Ostend*. It has a very large Harbour, capable of containing 500 Ships. 'Tis one of the strongest Frontier Towns belonging to the States, and was formerly a Place of good Trade, which is now much decay'd. 'Tis extremely well fortified, and has always a good Garrison. 'Twas taken by the D. of *Parma* in 1587, but retaken by Pr. *Maurice* in 1604. After which he fortified it with great Care, because of its Importance.

2. *Ardenburg*, within a League of *Sluys* to the S. E. formerly the Capital of Maritime *Flanders*; but fell to Decay after the Removal of the Trade to *Bruges*. 'Twas taken by the *Dutch* in 1604, and made such a brave Defence against the *French* in 1672, that it repulsed them with the Loss of 1200 Men, tho' then but ill fortified.

3. *Middleburg*, a small Town 4 Miles S. E. from *Sluys*.

4. *Sas van Ghent*, a very strong Place among Marshes, 11 Miles N. from *Ghent*. It has Sluces by which they can lay the Country under Water in a little Time. It has been in Possession of the *Dutch* ever since 1644.

5. *Hulst*, in that called the Country of *Wass*, a very strong Town, which was taken by the *Dutch* in 1645, and confirmed to them by the Treaty of *Munster*. 'Tis a Place of good Trade, and lies 9 Miles E. from *Sas van Ghent*.

6. *Axel*, about a League W. from *Hulst*, was formerly only an open Town; but afterwards fortified by those of *Ghent*. *Philip the Good*, D. of *Burgundy*, dismantled it in 1452. 'Twas fortified by the *Dutch* during the *Spanish War*, and has since continued in their Possession.

7. *Liefkens*, on the Bank of the *Scheld*, over against *Lillo*, is a Fort which was rais'd by the States to secure the Passage of the *Scheld*.

8. *Ter-Neu*, a Place well fortified on the Bank of the *Scheld*, about 6 Miles N. from *Axel*.

9. *Philippin*, 4 Miles N. W. from *Sas van Ghent*, was a Fortrefs built by Order of *Philip II.* of *Spain*, about the Beginning of the last Century.

10. *Bier Pliet*, a little Island in the Mouth of a Branch of the *Scheld*, with a Town of the same Name, 4 Miles N. W. from *Philippin*. 'Tis a very important Fortrefs, because it commands the Passage from that Part of the Country into *Zealand*.

11. *Isendyck*, lies above 2 Miles W. from *Bier Pliet*, on the other Side of the Canal, is a little Town well fortified.

12. *Osborg*, on the Canal which separates the Isle of *Cadfant* from the Continent, is also a fortified Town.

13. *Cadfant*, an Island in the Mouth of the *Scheld*, over-against the Isle of *Walkeren* in *Zealand*, is 9 Miles long, and 4 broad. It has a Fortrefs of the same Name of great Consequence to the *Dutch*, because it preserves the Communication between *Zealand* and *Flanders*. This Island produces very good Wheat and Grass.

DUTCH LIMBURG,

THE Dutch possess in this Country, which is separated from *Dutch Brabant* by Part of the Bishoprick of *Liege*, says *La Foëst*, the Counties of *Falkenberg*; or *Fauquemont*, *Dalem*, and *Rolduc*. Some pretend that these never belong'd properly to the Dutchy of *Limburg*, but were only annex'd to it.

The chief PLACES are,

1. *Fauquemont*, or *Falkenberg*, on the *Gule*, about 8 Miles N. E. from *Maastricht*, and 19 W. from *Juliers*. 'Tis a large and neat Town, was formerly well fortified, and had a strong Castle. 'Twas taken by the *French* in 1672, who made it much stronger; but being obliged to restore it by the Treaty of *Nimeguen*, they dismantled it.

2. *Dalem*, on the *Ber*, 9 Miles S. W. from *Falkenberg*, and 7 S. E. from *Maastricht*. 'Tis a small Town, with an ancient Castle. It had formerly Earls of its own, who had a large Territory. It came afterwards to the Dukes of *Brabant*. The *French* took it in 1672, demolished the Fortifications, and restored it to the *Dutch* by the Treaty of *Nimeguen*.

3. *Rolduc*, on the E. Side of the Country, lies on the Frontiers of *Juliers*, 5 Miles N. from *Aix la Chapelle*, and 10 S. E. from *Falkenberg*, is a small Town, Capital of its County, and defended by an old Castle.

4. *Maastricht*, lies on the Frontiers of this Dutchy; therefore we chuse to describe it here, tho' it be commonly reckon'd Part of *Dutch Brabant*. It stands on the W. Side of the River *Maas*, 11 Miles N. from *Liege*, 18 N. W. from *Aix la Chapelle*, 28 W. from *Juliers*, and 33 E. from *Louvain*. It has its Name from its Passage over the *Maas*, which runs through one Side of it. The lesser Part on the E. Side, called *Wick*, belongs to the Bishop of *Liege*; but he leaves the Military Government of it to the *Dutch*. 'Tis a very ancient City. *St. Servatius* transported hither the Bishop's See from *Tongeren*. There is a Church here dedicated to that Saint, where they have many Re-

licks, and of which the Kings of *Spain* were formerly Canons. It has three *Dutch* Churches, and one in common to the *English* and *French*. The City is about 4 Miles in Circuit, and has two Monasteries of both Sexes, the Papists being allowed the Freedom of Religion here. The Stone Bridge, which joins the two Parts of the City, consists of 9 Arches, and is remarkable for its Beauty and Usefulness. This City has been of late much enlarged, and advanced in its Trade. The Streets are large, the Houses of Brick, well built, and cover'd with Slate, since it came into the Hands of the *Dutch*; but the old Buildings come short of the modern. They have also a neat Stadthouse, resembling that of *Amsterdam*. The City is strongly fortified, encompass'd with a good Wall and a Ditch, with several Outworks, after the modern Way; and a very high Bastion on the S. E. Side, to cover the Town from a Hill that would otherwise command it. On the Top of that Hill there stands an old Castle. It revolted from *Spain* with the rest of the Provinces, and was besieged by the Pr. of *Parma* in 1579, when it made a brave Defence, and repulsed the *Spaniards* in two bloody Attacks; but at last, the Garrison being wearied out, a Detachment of *Spaniards* stole over the Works by Night, and having killed the Guard, which they found asleep, they were soon followed by others, and became Masters of the Town, which, tho' then under Treaty with them, they almost dispeopled by their Cruelty and Rapine; so that 'twas a long Time before it could recover. 'Twas retaken by the Pr. of *Orange* in 1632, and continued in Possession of the States till 1673, when 'twas taken by the *French* King in Person after 13 Days open Trenches; when having master'd all the Outworks, the Garrison and Burgers forc'd the Governor to surrender upon advantageous Terms. He was much oblig'd for the taking of this Town to the Valour of the *English* and *Scots*, who were then in his Service under the late Duke of *Monmouth*. The *French* King put a strong Garrison into it, and added 6 Bastions to its Fortifications. The Prince of *Orange* attempted to retake it with an Army of 30000 Men in 1676; but the *French* approaching with a
B b b b b 2, greater

greater Army to relieve it, he was oblig'd to raise the Siege; so that 'twas not restored to the *Dutch* till the Treaty of *Nimwegen*. That Part called the *Wick*, on the E. Side the River, is reckon'd stronger than the Town. The *French* attempted this City in 1703; but were prevented by the late Lord *Swierquerque*, who commanded part of the Confederate Army in the Neighbourhood.

Within Cannon-shot of the Town, there's a Quarry of so extraordinary a Nature, as deserves a particular Description. It lies in a Hill on the Bank of the *Maas*, where there are 25 Fathoms of Rock and Earth over Head. The Hill is some Miles in Length, lies along the River towards *Liège*, is in some Places half a Mile broad, and in others three quarters. The Quarry has an Entrance towards the River, where Carts come with great Ease, and unload the Stones for Transportation, the Quarry lying level with the Bank of the River. The whole Hill being almost un-

dermin'd, affords the most surprizing Prospect that can be imagin'd, to those who enter it with Torch-light: For there are Thousands of square Pillars in large level Walks, most of 'em above 20 Foot high, and others much higher, all cut with so much Neatness and Regularity, that it looks more like the Contrivance of curious Architects for an Under-ground Palace, than the Work of common Quarriers, to support the Earth over them while they dig out the Stone. This Quarry serves the People of the Neighbourhood as an impregnable Retreat for themselves and their best Effects when Armies march that Way, for there is Room in it for above 40000 People; and those who should attempt to seek them out in it, run a Hazard of being knock'd on the Head, or kill'd by their Fire-Arms, from the Multitudes of the Turnings and Windings amidst the Rows of Pillars. The Curious may see more of this in our *Philosophical Transactions*, N^o 79.

FLANDERS or the
SPANISH NETHERLANDS.

FRONTIERS OF GERMANY

C. H A P. XXIX.

The SPANISH NETHERLANDS.

FOR the Countries which make up the Dominions of this Name, we refer to *Sanson's* Division of the 17 Provinces, P. 856. They are called so, because of their continuing under that Crown.

The General Description we have given of the *Netherlands*, agrees to these Provinces as well as to the rest; so that all we have to add is, That the Air of the *Spanish* Provinces is cold, but very healthful; That they have no Wine of their own Growth, but excellent Beer; That their Native Fuel is Turf. They have some Wood of their own from the Forrest of *Soignies*, and are supplied with what further they have occasion for from the Forrest of *Ardennes*, which belongs to *France*; from whence, and from *Germany*, they are furnished with Wine.

The Inhabitants are call'd *Flemmings*, from one of the Provinces, says *La Forest*; but he does not tell us which. Their Customs are a Mixture of *German* and *French*: From the latter, they have their Gaiety and Civility; and from the former, according to the same Author, for which his own Country is not much oblig'd to him, they have their *Sincerity*, and Inclination to good Cheer. He adds, That they are handsome and well shap'd; That their Women for Beauty are inferior to none in *Europe*, and they take Care to improve it. Their Religion is Popish, which he says they profess with greater Purity than in most other Places. They have a Court of Inquisition, which is more moderate than formerly, because of the Revolt it occasioned.

Their Government is by a Vice-Roy or Governor-General, under the K. of *Spain*.

The last appointed by that Crown was the late Elector of *Bavaria*, who still has the Title under the D. of *Anjou*, to whom he betray'd them. But tho' most of the Provinces be reconquer'd by the Confederate Arms for King *Charles III.* there is no Governor-General as yet nam'd by that Prince.

The Governor-General is assisted by three Councils: The 1st is that called the *Council of State*, where the Affairs of Peace and War, Leagues and Alliances, are transacted, and from whom, with the Governor, the Ministers they send to Foreign Courts have their Dispatches. This Council was appointed after the Revolt of the *Dutch*, those Matters being formerly managed by the Privy Council. It consists of a President, and such a Number of Counsellors as the King thinks fit. 2. The *Privy Council*, which consists of a President and 12 Counsellors, nam'd by the King, or the Vice-Roy by his Order. Their President is Keeper of the Great Seal. Here they determine Appeals from other Courts, administer Justice, grant Privileges, give Pardons, issue Edicts and Ordonnances, determine the Boundaries of Provinces, and decide all Controversies about the Right of Lordship and Dominion, both with Relation to the King and Subjects. These two Councils advise with one another upon Occasion. 3. The *Council of Finances*, or of the Revenues, says *Guicciardin*, consists of 3 Superintendants, a Treasurer, a Receiver-General, 3 Commissaries, 2 Secretaries, and inferior Officers. They take Care of the Prince's Domain, of Taxes and Subsidies, call the ordinary Receivers to an Account, take Care of the Fortifications,

tions, adjust the Charges of War, and farm out the Revenues.

Subject to them is the Chamber of Accounts, consisting of a President and 7 Members, to whom all Treasurers and Receivers of the Revenue in the several Provinces give in their Accounts. All these Councils follow the Court, as does the Grand Provost, who carries a red Wand as an Emblem of Justice. There are Provosts under him in every Province; but his Power is extended over all; and his Business is, with the Assistance of a Comptroller, to pass Sentence upon Robbers, Murderers, and Vagabonds. There's likewise a great Council or Tribunal at *Malins*, which judges Affairs in the last Resort upon Appeal from the other Provinces. They make use of the Civil and Canon Law, except where they are opposite to the Edicts of the Prince, and the Laws of the Country. There's a Court of the same Nature in every Province, with a President, and 12 or 18 Counsellors, who pass Sentence not only relating to the Officers of the Prince in their respective Provinces, but also with Matters relating to the Prince himself upon a legal Accusation: But from them there lies an Appeal to the Council of *Malins*, except in *Brabant* and *Hainault*, where the Sentence of those Courts is definitive.

Every Province has a Governor appointed by the King, but subject to the Vice-Roy. They have a limited Power with relation to the Affairs of the Countries, especially in Matters of War. There are Commissioners Annually dispatched to the principal Cities of each Province, to enquire into all Things relating to the Interest of the Prince; and in *Brabant*, their Power extends by a Privilege from the Pope to Ecclesiastical Persons and Things.

They have also an Admiral, who commands in Chief at Sea, has a Share of all Prizes taken in War; and without his Approbation, no Licence given by the Vice-Roy or the King, to export and import prohibited Goods, is valid. In short, at this Court they have all the usual Officers that are found at the Courts of any Prince in Europe.

These Provinces abound with Nobility, several of whom have the Title of Princes, Dukes, Marquisses, &c. which we cannot

insist upon. Their chief Order of Knighthood is that of the *Golden Fleece*, of which we have already given an Account. They had at first a Scarlet Robe; but *Charles the Hardy* chang'd it into Silk at a Chapter held at *Valenciennes*, where he assign'd them a Collar of Gold, with a Piece of Steel interlac'd, which seem'd to strike Fire out of a Flint. At the End of the Collar hangs the Golden Fleece, with this Motto, *Pretium non vile Laboris*; i. e. A Reward suitable to the Merit. And the Steel and Flint have this Motto, *Ante ferit quam Flamma micat*; i. e. You must strike before you can have Fire. The Knights at first were but 25; but *Charles V.* made them 50, who must all be Men of Quality, and such as in Spain are called *Grandees*.

The chief Government is in the Convention of Estates, which is call'd by the Vice-Roy in the King's Name, when Money is to be levy'd, Laws enacted, or other great Matters taken into Consideration. They usually meet at *Brussels*, because 'tis the Seat of the Government; and the *Brabanters* have a special Privilege, That they cannot be summoned out of their own Province; nor can those of *Luxemburg* and *Gueliers*, except on some extraordinary Occasion; and therefore their States usually meet at home. This Assembly, says *d'Auivy*, is made up of the Clergy, Nobility, and the Deputies of the chief Cities. They meet not all together, but by Provinces; and since the Revolt under the D. of *Alva*, the Prince's Proposals are made to them, according to their old Constitution, in very obliging Terms. If they refuse to consent, the Ministry make use of the best Arguments they can to bring 'em to it; which if they cannot effect, the Matter is referr'd to another Opportunity; for the Dissent of any one City prevents the passing the Resolve into a Law: And, as *Bentivoglio* says, the Prince had never the absolute Disposal of those People's Purses, it being the ancient Custom for them to desire only what was needful for his Occasions; the frequent Denial of which shew'd, that the granting of it was in the People's free Will.

The Power of these Provinces was very great under the last Dukes of the House of *Burgundy*, who were able to raise 100000 Men upon Occasion, and kept France in

awe:

ware: But 'tis much decay'd since the Revolt of the *Dutch*, as is also their Revenue and Trade. The former, before that Revolt, was reckon'd at 3000000 of Crowns *per Annum*; which was accounted more than that of any King in *Christendom*, except *France*. In 1550, the States granted to *Charles V.* an Aid called the *Novental*, or 9th Part of their Revenues, which brought him in 150000 Crowns *per Month*; but since the Revolt under *Philip II.* the Crown of *Spain* has been obliged to send great Sums thither for the Support of the Government: so that 'twas scarce worth while for them to retain those Provinces, had it not been to divert the Arms of *France* from invading the Kingdom of *Spain*.

It appears by the *Roman* Historians, That the *Belge*, the chief of the ancient Inhabitants, were a very warlike People, and so savage in *Cæsar's* Time, that they would admit no Commerce of Wine or any Thing else. Their Temper was plain and sincere; but if provok'd, fierce and untractable. They were eager in Pursuit of Honour, tenacious of their Liberty, fantastical in their Habit, insolent when victorious, and dispirited when beat. They liv'd for most part upon Milk and Flesh, especially that of Hogs, fresh and salt; and lay upon Beds spread on the Ground. They wore Trousers, much like those of the Highland *Scots* and *Irish*, and over them a Jacket with long Sleeves, and the Skirts of their Jackets reach'd to their Buttocks. Some of them had Raiment of several Colours, streak'd with Threads of Gold, and their chief Ornaments were Gold Chains and Bracelets. Their Arms were very long Swords, large Shields and Lances: Some of 'em had Bows and Arrows, and others Slings and Darts. If any one made a Disturbance in their Assemblies, or interrupted another when speaking, if they did not desist upon Admonition, the publick Executioner cut off so large a Piece of his Jacket, as made the rest useless, and himself ridiculous.

D'Auivy, Barclay, and Buno, give this Character of the modern Inhabitants, That they are for most part handsome enough, strong set, and well proportion'd. They are generally tall, surpass their Neighbours in Stature; but come short of the *Hollanders*, who are more remarkable for Men of an

extraordinary Size, as has been mentioned already; to which we shall add the Instance of one *Nicholas* in 1298, of whom Writers say, the largest of his Countrymen seem'd but Dwarfs to him, his Shoe being so large, that 4 Men together could put their Feet in it. They are commonly of a lively Complexion, and their Women fair, who begin to be wrinkled about 30. They are generally chaste, tho' free in their Conversation, and particularly in their Cups, as well as the Men; yet they are careful in their Household Affairs, and many of 'em so much entrusted by their Husbands in Matters of Trade, &c. that they grow imperious. The People are great Talkers, Lovers of Novelty; and tho' otherwise frugal, are much addicted to Feasting and Carousing, when they are apt to quarrel, which generally occasions another merry Meeting to make up the Difference.

Since the Revolt of the *Dutch*, those of Quality in the *Spanish Netherlands* have affected the *Spanish* Customs, and are more fond of pompous Titles than formerly. The common People live in greater Subjection to their Governors, seem to be fond of the *Spanish* Government, have an Aversion to that of *France*, and not much less to the *Dutch*, of whom they have a natural Jealousy, both upon the Account of their Trade and Religion; so that they do not much care for their Assistance, even when they want it. *Strada* says, they are not much taken with Gifts and kind Offices, which they are apt to forget, as well as Injuries, except they think themselves despised, and then they grow implacable. The *Walloons* do much resemble the *French* in Customs and Language; and *Crotius* says of 'em in general, That as the *Netherlanders* lie between *France* and *Germany*, they partake of the Virtues and Vices of both Nations.

Their Naval Power is much decay'd since the Revolt of the *Dutch*, their only Harbours being *Newport* and *Ostend*, which are neither of 'em extraordinary; nor are *Graveling* and *Dunkirk*, now in the Hands of the *French*; of much Account.

For their Inventions and Arts, the *Netherlanders* lay Claim to the teaching of others, the Way to make Cloth, Arras, Hangings, Clocks, Watches, and the Perfection of the

Mariners Compass; the Invention of which is allow'd them by some, but deny'd them by others. They also claim the Invention of Chariots, Painting with Oil, the making of Pictures and Glais, and the working of Worsted, Sais, Tapestries, and other Stuffs, which they taught the *English* when some of them were drove hither by the D. of *Alva's* Persecution. For their particular Manufactures, we shall take Notice of 'em in the Description of their Towns, and refer the Particulars of their Soil, &c. to the Description of the Countries.

Their general Language is the *Low Dutch* or *Flemmish*; but in Part of *Brabant*, *French Flanders*, the Countries of *Namur*, *Artois*, *Hainault*, *Luxemburg*, and quite through the *Ardenes*, they speak a corrupt *French*, which some call *Walloon*, and others *Romant*, as being mix'd with Part of the Language which the *Romans* left in those Provinces. Most of those about Court speak *Spanish*, and the People of Fashion speak good *French*.

Having already described *Dutch Guelderland*, we come next, according to the Course of the Map, to

SPANISH GUELDERLAND,

Which has *Dutch Brabant* and Part of the Bishoprick of *Liege* on the W. Part of the Dutchy of *Cleve* on the N. Part of the same Dutchy, and of the Electorate of *Cologne* on the E. and Part of the Dutchy of *Juliers* on the S. The greatest Length from S. to N. is about 35 Miles. The Breadth is unequal, and about 20 where broadest.

The chief TOWNS are,

1. *Ruremond*, on the Mouth of the *Roer*, where it falls into the *Maes*, about 25 Miles N. E. from *Maeſtricht*, and 10 S. W. from *Venlo*. 'Tis a rich and populous Town, its Walls strong, its Situation important, and the Buildings neat. The principal Church is dedicated to the Holy Ghost, and was made a Cathedral by *Philip II.* Here's a large and rich Monastery of *Carthusians*, much taken Notice of by Travellers. The adjacent Country is fertile in Corn, Pasturage, and Fruit. The City was sack'd in

the first War with *Spain* by the Prince of *Orange's* Army. 'Twas afterwards recover'd by the *Spaniards*, and retaken from them by the *Dutch* in 1632, when Count *Ernest Casimir* of *Nassau*, Governor of *Friesland*, was kill'd before it. 'Twas restored, together with the Country, to the Crown of *Spain* by the Treaty of *Munster*; and being seiz'd by the *French* upon the Death of *Charles II.* of *Spain*, 'twas surrender'd to the Confederates in 1702. *Bleau* gives an Account of the Learned Men that have been born here.

About 7 Miles N. lies *Kassel*, supposed to be the *Castellum* of *Ptolemy*, and the Metropolis of the *Menapii*. 'Tis now only a large Village on the top of an Hill, subject to its own Lord, and the Capital of its District.

2. *Venlo*, 10 Miles N. from *Ruremond*, on the *Maes*, a populous, trading, and well fortified Town. Their chief Commodities are, Corn, Free-stone, Marble, Brass, and Coal, brought hither from *Germany* by the *Maas*. It revolted from *Spain* during the Government of *Margaret* of *Austria*, who besieg'd it in vain; but it submitted to *Charles V.* in 1543, on Condition that they and the other Cities of *Guelderland* should enjoy their ancient Liberties. It has its Name from its Situation among Fens, and was made a City by *Reynold D.* of *Guelder* in 1343. 'Twas taken by the *Dutch* after it had surrender'd to *Charles V.* retaken by the *Spaniards* in 1636, and was recover'd from the *French* by the D. of *Marlborough* in 1702. 'Tis noted for the Birth of *Goltzius*, the famous Medalist.

3. *Geldre*, which gives Name to the Province, lies about 9 Miles N. E. from *Venlo*. It receives the River *Niers* into its Trenches, lies in the middle of Marshes, and is so well fortified, that 'tis reckon'd one of the strongest Places in the *Netherlands*. It has an ancient Castle, formerly the Seat of its Governors, supposed to have been built by *Wichard*, their first Lord, who erected this Country into a Principality, after the Death of *Charles the Bald*. The Heire's being afterwards married to *Otho* of *Nassau*, who was created Count by the Emperor *Henry IV.* about 1069, one of his Descendants was made Duke by the Emperor *Leuw* of *Bavaria* in 1339; but his Posterity failing, it came to the Count of *Egmont*, who sold it

to

to Charles D. of Burgundy, as formerly mentioned; by whose Daughter it came to the House of Austria, to whom it continued firm after the Revolt of the other Provinces. It was taken by the Dutch in 1532, but retaken by the Spaniards in 1536, and recover'd from the French by the Prussians under General Lotum in 1703, after a Blockade of 15 Months. It has several Villages under its Jurisdiction, and has produc'd divers Learned Men, for whom we refer to *Blenn*.

4. *Stralen* lies 5 M. S. W. from *Geldre*, is Capital of a small Territory; and near it lies the Village of *Zant*, supposed to be *Antonin's Sablon* or *Sabulones*.

5. *Wachtendonck*, lies about 6 Miles S. from *Geldre*, on the River *Niers*, is chief of its District, and one of the strongest Towns in the Province, because of the neighbouring Marshes. It revolted from Spain, and was besieged 3 Months by Count *Mansfeld* in 1588; to whom 'twas surrender'd by Treachery. 'Twas surpris'd by Count *Lodewick* of *Nassau* in 1600, who marched some Troops over the Ice, which the Garrison had neglected to break. 'Twas taken again by the Spaniards in 1605.

6. *Stevenswaert*, 6 Miles S. from *Ruremond* on the *Maes*, a strong Fortress.

F L A N D E R S,

HAS Dutch Flanders on the N.E. the Province of *Arras* and *Picardy* on the S.W. the Sea on the N.W. and Spanish *Brabant* and *Hainault* on the S.E. The greatest Length, taking in that narrow Tract which runs in betwixt the *Artois*, the *Hainault*, and the Archbishoprick of *Cambray*, is, according to *Moll*, 76 Miles; and the greatest Breadth, from *Graveling* to the Frontiers of *Brabant*, is 65.

The ancient Inhabitants of this and the other Spanish Provinces, mentioned by the Romans, were the *Aduatii*, *Nervii*, *Centrones*, *Grudii*, *Leuaci*, *Pleumosi*, and *Gorduni*; these 5 latter being afterwards called *Sueconi*. For all whose Boundaries, we refer to P. 409, and 410, in our Account of Ancient Germany. Authors are divided as to the Origin of the Name. Some derive it from the Dutch Words *Veel* and *Anderen*, which

signify many others, alluding to the *Danes*, *Normans*, and other People who over-run it; as Germany had the Name of *Allemannia* from the several Sorts of People that possessed it; but *La Forrest*, and other French Geographers and Historians, say, 'twas so called from *Flandrina*, Wife to *Liderick II.* Prince of *Buck*, whose Predecessor was made Great Forrester of the Country by *Clotaivus II.* of France in 621, which is more probable.

This Country is by some reckon'd the richest Piece of Ground in *Christendom*, considering the Goodness of its Soil, the great Number of its Towns and Villages, Rivers and Canals; and is so well inhabited, that the Spaniards, who came thither with *Philip II.* took it for one continued Town. The Air is wholesome throughout; but that of the S. Part is reckon'd best. It lies almost upon a Level, is in few Places Hilly; but in no where can be said to be Mountainous. The Soil is generally fruitful; but that Part which lies next the Sea and France, exceeds in Fertility most Countries in Europe. They purchase great Numbers of Colts from neighbouring Countries, which in a little time are wonderfully improv'd in Shape, Size, and Swift-ness, by their excellent Air and Pasture. That called *Flemish Flanders* has no great store of Wheat, but abounds in good Fruit, Rye, Oats, Beans, Pease, Vetches, Hemp and Flax; by the latter of which they make great Profit of their most barren Ground. That called *French Flanders* produces an extraordinary Quantity of the best Wheat, Madder and Woad, and has as rich Pasturage as any in Europe. 'Tis reckon'd to have been for most part cover'd with Wood, till about the 9th Century, and was called the *Coal Forrest*, because of the great Quantity of Charcoal made there; which, *La Forrest* says, contributed much to destroy those vast Woods. He adds, That when it came under the French, they appointed 6 Forresters to oversee it, and divided it into two Parts; one called *Nemrosa*, from the Woods; and the other *Æsuaria*, because of the Marshes, and frequent Inlets of the Sea by the Mouths of the Rivers, &c. And by the Patents granted to those Forresters, they were to secure the Woody Parts against Robbers, and the Coasts against the Northern Pirates.

C c c c c

'Twas

Twass in after-Ages divided into the *Flemish* or *Teutonic*, *French* or *Walloon*, and *Imperial Flanders*. The former was so called, because of their Language, and that *Charlemagne* planted 4000 *Saxons* here. This is the largest, richest, and most populous Part, and lies betwixt the *Scheld*, the *Lis*, the *Aa*, and the Ocean. *Walloon Flanders*, so called because they spoke *French*, is divided from the other by the *Lis*, and reaches to the Frontiers of *France*. *Tournay* and *Doway* were its chief Towns before *Lisse* was built. *Imperial Flanders*, so called because it was under the Emperor's Jurisdiction, lies betwixt the *Scheld* and the *Dender*. The chief City is *Alost*, whose Earls paid Homage to the Emperor.

Their Earls having been famous in History, we shall give a brief Account of them.

The first Forrester, according to *French* Authors, was *Liderick*, Son to *Salvart* Pr. of *Dijon*, who was appointed by *Cleotarius* II. of *France* in 621. He was succeeded by 6 others of that Title, till the Time of *Charles the Bald*, who made *Baldwin*, surnam'd *Iron-Hand*, their first Count about 860. The *Flemings* say, they were the first Counts in *Europe*; but that must be understood of *French* Creation: For it appears by *Selden's Titles of Honour*, Part II. Cap. 1. That there were *Comites* before *Constantin's* Time. However, upon this Account the Earls of *Flanders* valued themselves so much, that they despised the Title of Duke, when their neighbouring Princes assum'd it. The Title of Count or Countess descended to their Posterity immediately upon the Death of their Predecessor, and they were solemnly invested with the Dignity by the Three Estates at *Ghent*, where they and their Subjects swore mutually to one another; and the like Ceremony was performed in all the other chief Towns and Castles of the Country. Before *Francis* I. of *France* renounc'd the Sovereignty of *Flanders*, they us'd to do Homage both to the Kings of *France* and the Emperor as soon as they took Possession. They perform'd it to the *French* Kings sitting on their Throne, came up to them bare Headed, without a Sword, bended their Knee to the Ground, put their Hands betwixt the King's, and swore Fealty, according to a Form repeated by the Chancellor

of *France*: After which they were admitted to kiss the King's Cheek, ranked among the Peers, and invested with the Marks of the Dignity; but when they did Homage to the Emperor for the County of *Alost*, and Country of *Waes*, he demanded no other Ceremony but their Oath, and then admitted them among the Counts of the Empire. When the *French* Kings were crown'd, the Earl of *Flanders's* Office was to gird on their Sword, and carry it before them: But notwithstanding this Homage, they had all the Rights of Sovereignty in *Flanders*, and were not obliged to appear in Judgment as other Peers, except their Succession were disputed, or when their Subjects appealed to the Court of *France* upon Denial of Justice by the Earls. But to come to their History; *Liderick* I. of *Buck* was so called, because he resided as Forrester in the Castle of *Buck*, now said to be the old Castle of *Lisse*. *Liderick* II. one of his Successors, was entrusted by *Charlemagne* to govern the *Saxon* Colony he settled in *Flanders*, and died in 808. His Son *Ingelram* succeeded, defended the Country against the *Huns* and *Vandals*, and died in 824. *Odoacer* his Son enlarged his Dominions, improved the Country, and died in 837. He was the last of the Forresters, and succeeded by

1. *Baldwin*, the first Earl, call'd *Iron-Hand*, because of his great Strength. He serv'd *Charles the Bald* against the *Saracens* and *Normans*, married his Daughter *Judith* without his Consent, for which he was excommunicated by the Pope; but afterwards reconciled to *Charles*, who enlarged his Dominions. He had Wars with the *Normans*, built the Castle of *Burgh* in *Bruges* to curb them, and died in 879.

2. *Baldwin* II. his Son, succeeded, took Part with his Cousin *Charles the Simple* of *France* against the Earl of *Anjou* and other Rebels, had Wars with the *Normans*, was a Prudent and Religious Prince, and died in 918.

3. *Arnold* his Son, by a Daughter of *Elfred* K. of *England*, succeeded. He had the Surname of *Great*, because of his good Qualities, signaliz'd his Valour against the *Danes*, *Huns*, and *Vandals*, died in 964, and was succeeded by his Son

4. *Baldwin* III. to whom he had in his old Age resign'd the Government by Consent

sent of the States. He was a valiant Prince, encouraged Trade, settled Manufactures, and died universally lamented in 961.

5. *Arnold II.* his Son, succeeded when very young. *Lotharius K.* of France invaded his Country during his Minority, and took from him the Counties of *Bullen*, *Terouenne*, and *St. Paul*. He took Part with *Charles* of *Lorrain* against *Hugh Capet*, who usurp'd the Crown of France, was remarkable for his Piety and Justice, and died in 988.

6. *Baldwin IV.* his Son, surnamed *Goodly Beard*, succeeded. The Emperor *Henry II.* made War upon him; but was afterwards reconciled to him, and gave him *Valenciennes* and *Zealand*. He was a brave, learned, and just Prince. In his Reign, *Flanders* was so afflicted with the Plague, that the Living were scarce enow to bury the Dead. He married *Ogina* of *Luxemburg*, who having no Child till the 50th Year of her Age, he order'd a magnificent Tent to be erected for her in the Market-Place of *Arras*, where she was brought to Bed of a Son, in the Presence of all the Citizens Wives that pleas'd to go in, because her former Barrenness had rais'd a Suspicion, that she design'd to impose a supposititious Prince upon 'em. This Son afterwards rebelled against his Father, and drove him out of his Country, which he recover'd by Help of the D. of *Normandy*, whose Daughter he had married upon the Death of *Ogina*. *Baldwin* died in 1036, and was succeeded by his unnatural Son.

7. *Baldwin* of *Lisle*, so call'd because he lov'd and adorn'd that City more than any other in *Flanders*. He assist'd his Son-in-Law, *William the Bastard* of *Normandy*, to take Possession of that Country, and likewise to conquer *England*, on Condition, say the *Flemish* Historians, that he and his Successors, Kings of *England*, shou'd pay to him, and the succeeding Earls of *Flanders*, an Annual Pension of 300 Marks in Silver, which was continued to *Baldwin* and his Son; but was afterwards with-held. *Henry I.* of France had so great an Opinion of *Baldwin*, that he left him Guardian to his Sons, and Governor of the Kingdom, till the eldest came of Age; which he perform'd with great Integrity. He had Wars with the Emperor *Henry III.* took from him the County of *Alost*, and afterwards obtain'd

from him by Treaty several other Lordships, with all *Zealand*. He married his second Son *Robert* to the Countess of *Holland*, and gave him the County of *Alost*, and Part of *Zealand*, upon taking an Oath, That he should make no further Pretensions to his Succession. Upon his Death-Bed, he sent for his eldest Son *Baldwin*, gave him pious Instructions relating to his Government and Personal Conduct, order'd him to keep firm to the Interest of France, from whom he had receiv'd such Honour and Advantage; and that tho' he himself had Pretensions to the Crown of France, as being of *Charlemagne's* Lineage, that he should submit to the Race of *Hugh Capet*, to whom he was nearly related; and soon after this he dy'd in 1067, having effac'd the ill Character he had at first for rebelling against his Father; and by his after Conduct acquir'd that of a brave, wise, and religious Prince. He was succeeded by

8. *Baldwin VI.* his Son, who by his Marriage acquir'd *Hainault*, and was call'd *Baldwin* of *Mons*, because he chose that City for the Place of his Residence. He was a courteous, religious, and just Prince; dy'd in the 3d Year of his Government, Anno 1070, gave Part of his Dominions to his Sons by a second Marriage, and recommended the Care of his Sons to the States.

9. *Arnold III.* his Son, surnam'd the *Unhappy*, succeeded, was ruin'd by the Pride and Covetousness of his Mother, and the Treachery of his Uncle *Robert the Frizzled*, who making War upon him, *Arnold* was kill'd fighting valiantly at *Mont-Cassil* in 1072; many of the *Flemings* having revolted from him because of his Mother's Hatred to them. He was succeeded by

10. *Robert I.* his Uncle, who making Interest with *Philip* of France, and doing him Homage, was by him supported in his Usurpation. In his Reign, the Country suffer'd much by a sharp and long Winter, tempestuous Weather, Earthquakes, and a Plague, which destroyed such Multitudes of People in 1092, that 'twas call'd the *Fiery Disease*. The *Flemish* Writers say, That his Ambassadors going to pay Homage to the Emperor, were told by an Apparition in Form of a Majestick Woman, That *Robert's* Male-Issue should fail in his Grandson for his Wickedness; and that he him-

self going to Jerusalem in Pilgrimage to atone for his Sins, was frighten'd by Visions in the Holy Sepulchre; and after his Return, died suddenly in 1093. He was succeeded by

11. *Robert II.* his Son, surnam'd of *Jerusalem*, because that City was taken from the *Saracens* chiefly by his Valour. In his Reign, *Flanders* was mightily afflicted with Plague, Famine, and Inundations, and continual Rains from *October* to *April* 1109, which forc'd many of the Inhabitants to retire to *England*, where they were planted in a Colony in the E. Part of the Country by *Henry I.* *Robert* took Part with *Lewis the Gros* of *France* against the *English*, by whom he was kill'd in a Sally from *Mante* on the *Seyne* in 1111. 'Tis said, that his Wife *Clemence* having 3 Sons by him, and being afraid she should burden the Family by her Fruitfulness, took Medicines to make her barren; for which she was punished by the Death of her 3 Sons without Issue, and by seeing the Government come to another Family. *Robert* was succeeded by

12. *Baldwin VII.* his Son, surnam'd the *Hatchet*, because he constantly carried one, with which he performed Justice upon Malefactors in Person. He was a great Justiciary, executed several Gentlemen with his Hatchet for robbing Merchants, and order'd one of his Lords to be cast into a Caldron of boiling Oil, which was prepar'd in the Market-Place of *Bruges* for a counterfeit Coiner, because he had robb'd a poor Woman of her Cattle, which was all she had to subsist on. He was very careful in appointing Judges, inspected their Behaviour himself in his Progress through the Countries for that End, and punish'd severely such as took Bribes. By sitting frequently in Judgment, he was Master of the Laws of his Country, and acquir'd the Love of his Subjects; it being his constant Maxim, That Princes ought to do Justice in Person as much as they could, and not leave it to Substitutes, since they demanded Personal Service from their People. He took Part with *Lewis the Gros* against the *English*, because they would not pay the Pension promis'd by *William the Conqueror*, and died of a Wound he received from them at a Siege in *Normandy* in 1119. He died without Issue, and on his Death-Bed declared his Cou-

sin *Charles*, Son to *Canutus K.* of *Denmark*, who had fled to him after the Murder of his Father, his Heir.

13. *Charles I.* surnam'd the Good, succeeded; but was oppos'd by *William of Ipres*, Nephew to *Robert* of *Jerusalem*, assisted by *Stephen* of *England*, who made him Earl of *Kent*, for having deliver'd him out of Prison, and restoring him to his Scepter, say the *Flemish* Writers; but *Charles* was too hard for him, obtain'd peaceable Possession, and the Reputation of a valiant and religious Prince. He punish'd severely Blasphemers and common Swearers, Witches, Soothsayers, and Magicians; and mix'd so much Courtesy with his Justice, that he was belov'd by his Country. In his Reign, the Corn being frozen by a severe Winter, such a Scarcity ensu'd, that he forbade the brewing of Beer, the keeping of Dogs, or giving Corn to Beasts, and in one Day distributed near 8000 Loaves, besides Money and Clothes, to the Poor of *Ipres*; and understanding that the *Vanfraets*, a rich Family in *Bruges*, had hoarded up a great Quantity of Corn, which they sold at excessive Rates, he condemn'd them to Death for Extortion; which he afterwards mitigated, by ordering their Houses to be pulled down, their Corn to be sold at moderate Rates, and the Money they had extorted to be restored to the Poor. One of this Family being Chancellor of *Flanders*, Provost of *St. Donatian* at *Bruges*, and concern'd in this Extortion, *Charles* sent for him to a publick Hall, where he himself was distributing Bread to the Poor, rebuk'd him for his Avarice, and sent him away without inviting him to Dinner with the rest of the Clergy, for which this wicked Priest disguis'd himself in the Habit of a Beggar, and murder'd the Prince at his Devotion in the Church in 1126. After which the Chancellor, with the rest of the *Vanfraets*, who were privy to the Design, invaded the Palace, kill'd the Prince's chief Officers, and fortified themselves in the Tower of *St. Donatian*, from whence he afterwards made his Escape; but he and his Accomplices were all overtaken by Justice, tho' they fled to several Countries, and were deservedly put to Death. Twenty eight of 'em were thrown Headlong from *St. Donatian's* Tower, their Houses demolish'd, their Estates

Estates confiscated; and to perpetuate the Memory of their Crime and Punishment, an Order was made, That the whole Family should be curs'd Annually on the 26th of March at the Gate of that Church, where at the same time the Praises of this excellent Prince were justly celebrated. The History of *Flanders*, lately publish'd in French, says, the Conspirators were embolden'd to this execrable Fact, because *Charles* being born a *Dane*, was not acceptable to many of the Nobility; but the Kings of *England* and *France*, and other neighbouring Princes, countenanc'd those who took Arms to revenge the Parricide. This History adds, That *Charles* had a Part of Scripture read and explain'd to him every Night after Supper by 3 Doctors of Divinity. *Charles* dying without Issue, he was succeeded by

14. *William the Norman*, Grandson to *Win. the Conqueror*, descended by the Mother from *Baldwin of Lisse*. He was put in Possession by *Lewis the Great of France*, tho' the Kings of *Denmark* and *England*, and others, were nearer a-kin to *Charles*; but he prov'd such a Tyrant, that the *Flemings* revolted, killed him in a Siege, and he was succeeded by

15. *Thierry of Alsace*, who was reckon'd next a-kin to *Charles the Good*, and Grandson to *Robert the Frizzled*. He was an affable, just, and wise Prince, made 4 Expeditions into the *Holy Land*, where he behav'd himself so well, that he stood fair to be made King of *Jerusalem*, had not the Jealousy of other Princes prevented it. He assisted at the Coronation of *Henry II. of England*, and built *Graveling*, where he died in 1169. He was succeeded by

16. *Philip of Alsace*, his Son, with whom he had shar'd the Government. He acquir'd by Marriage the Counties of *Vermandois*, *Valois*, and *Amiens*. He defeated and took *Florence of Holland*, subdued the County of *Alost*, and the Country of *Waes*, and was much in Favour with the Emperor *Frederick I.* who on his Account exempted the *Flemish* Merchants from Tolls in the Empire. He accompanied the Emperor *Henry VI.* with a magnificent Train to *Rome* for the Election of a Pope, and had so great a Kindness for *Philip II. of France*, that he challeng'd *Richard I. of England* to a Duel, in order to determine the Quarrel betwixt

them, and married his Niece to *Philip*, with whom he gave the Earldom of *Aras*, which prov'd fatal to his Successors, by opening a Passage to the *French* into their Dominions. He died of the Plague at the Siege of *St. John d'Acres*, when he went to assist the K. of *Jerusalem* in 1191; and having no Issue, on his Death-Bed he appointed for Successor his Sister

17. *Margaret*, who married *Baldwin IV. of Hainault*. Their Dominions were diminished by *Lewis VIII. of France*, who seiz'd all *West-Flanders*. Upon this the City of *Ghent* pretended to be Capital of the Country, and claim'd such Privileges as intrench'd on the Prerogative of their Sovereigns, whom they would not suffer to publish any Law there without their Consent. *Margaret*, who was much extolled for her Beauty and Piety, died in 1194, as did her Husband a few Years after.

18. *Baldwin VIII.* her Son, succeeded both to *Hainault* and *Flanders*. He went with other Princes on a Croisado to the *Holy Land*; and in his Way assisted the *Venitians* to take *Zara in Dalmatia*. While he was there, *Alexis Comnenus*, Son to *Isaac* Emperor of *Constantinople*, intreated his Help against his Uncle *Alexis Ducas*, who had dethron'd his Brother *Isaac*, and put out his Eyes. *Baldwin* took *Constantinople*, restor'd *Isaac*, and defeated *Ducas*. *Isaac* dying, his Son *Alexis Comnenus* succeeded; but being murder'd, and his Throne usurp'd by *Alexis Murzupla*, *Baldwin* and the other Princes return'd from the *Holy Land*, took *Constantinople* by Assault, drove out the Usurper; and there being no lawful Heir, *Baldwin* was chosen Emperor in 1200. He obliged the *Greek Church* to submit to the *Roman*, which occasioned the *Greeks* to revolt, and *Baldwin* was taken by an Ambush as he belieg'd the Chief of the Revolters in *Adrianople*, where they cut him in Pieces, upon an Accusation, as they pretended, by *Jane*, their Prince's Daughter, that he offer'd to marry and share the Empire with her, if she would deliver him out of Prison; but the *Greek* Historians deny this, and say, he dy'd a natural Death in 1207. His Brother *Henry* succeeded in the Empire of the East, and died in the 11th Year of his Reign. He was succeeded in the Empire by *Peter de Courtenay*, Earl of *Auxerre*, who

who was taken by the *Greeks* in an Ambush, and afterwards put to Death. He was succeeded by his Son *Robert*, who made himself hateful by debauching a Gentleman's Wife at *Constantinople*, which the Gentleman reveng'd by killing his Wife, and her Mother who had betray'd her, in the Emperor's Presence. *Robert* died in the 9th Year of his Reign, and was succeeded by his Son *Baldwin II.* who, after a Reign of 30 Years, was forc'd to fly from *Constantinople*, which was deliver'd up by Treachery to *Michael Paleologus*, who recover'd the Empire, and restor'd it to the *Greeks*; after it had continued in *Baldwin VIII.* and his Successors for 60 Years. But his Posterity could never regain it, because of the Aversion the *Greeks* had to the *Roman Church*. To *Baldwin VIII.* succeeded

19. *Jane* of *Constantinople*, his Daughter, who being deliver'd up to the K. of *France* by her Uncle, that was left Guardian by her Father upon his Departure to the *Holy Land*, the *French King*, to prevent her Match with the K. of *England*, married her to *Ferrand Pr.* of *Portugal*; at which the *Flemmings* being angry, they refused to submit to *Ferrand* till he brought his Wife with him; which having done, they received him joyfully, and he soon after enter'd into a Confederacy with *England* and others against the King of *France*, who took and kept him 12 Years in Prison, and he dy'd soon after his Release. *Jane* married for her second Husband *Pr. Thomas* of *Savoy*, and died in 1244.

20. *Margaret II.* her Sister, succeeded. She was married first to *Bochart d'Avenes*, of the Family of *Roussillon*, and afterwards to *William de Bourbon*, Lord of *Dampiere*. She had Children by both Marriages, who contended with one another for the Principality, because the Legitimacy of the first was disputed, their Father *Bochart* having been in Orders, which he conceal'd from his Wife; who, as soon as she knew of it, got him excommunicated, for which he dy'd of Grief. *St. Lewis* of *France* espous'd the Cause of her Son *John* by her first Husband, who took Arms against her, and was made Earl of *Hainault*, and a 2d Brother was made Lord of *Beaumont*. From them proceeded the Earls of *Hainault*, *Friesland*, and *Holland*; betwixt whom, and the Issue

of the 2d Marriage, there was always a mortal Hatred. *Margaret* inherited the Courage of her Father, appear'd frequently in Arms, encourag'd Trade, eas'd her Subjects from the Taxes they had paid to her Predecessors, by way of Attonement for her Sins, founded many Hospitals, made many good Laws, and died in 1279. She confirmed the Earldom of *Hainault* to her Grandchild *John d'Avenes*; her own Son *John*, who took Arms against her, having died before her, and she was succeeded in *Flanders* by

21. *Guido* of *Dampiere*, her Son by the 2d Marriage, who had a long and miserable Reign. He was taken by the *Hollanders*, against whom he made War in *Zeeland*, and not released till after a long Time. He was twice invited to *France* by *Philip the Fair*, who kept him Prisoner both times, and suffered him at last to die in Confinement. The *French* attempted to reduce *Flanders* as a Province to their Crown; but the People would not submit to it, nor to the Treaties that *Guido* had made with the *French King* during his Confinement, from which he was released, on Condition that he should return to Prison if he could not bring them to it; in which having failed, he return'd according to Promise, and died a Prisoner in 1314. During these Transactions, the *Flemmings* obtain'd a great Victory over the *French* near *Courtray* in 1302; but were defeated by them two Years after, and came to an Agreement with *Philip the Fair*, on Condition of restoring them *Guido's* two Sons, whom they had fraudulently surpris'd, with 50 of their prime Nobility.

22. *Robert III.* Son to *Guido*, succeeded; but was obliged for his Release to promise 20000 Livres to the *French*, and mortgaged *Lisle*, *Doway*, and *Orchies*, to them for a Security, which the *French* afterwards claim'd as their Property. He assisted *Charles D.* of *Anjou*, Brother to *St. Lewis* of *France*, in the Conquest of *Naples*, and married his Daughter. He died in 1322, and was succeeded by

23. *Lewis I.* his Grandson, whose Pretensions were oppos'd by his Uncle and Aunt, and the *French King*, who imprison'd him in the *Louvre*; but his Title being judg'd good by the Parliament of *Paris*, he was restor'd, upon doing Homage to *Charles the Beautiful*

Beautiful of France. His Conduct made him odious to his Subjects, who took Arms against him, under the Conduct of *Artevel*, a Brewer, because he favour'd the *French*, and hated the *English*, with whom the *Flemmings* had enter'd into a Confederacy, and upon that Account were excommunicated by the Pope, till a Truce was made betwixt *Philip de Valois* of *France* and *Edward III.* of *England*, in which the *Flemmings* were included, and the Excommunication taken off by the Cunning of the Brewer. *Lewis* was kill'd in the Battle of *Cressy* in 1346, where he fought valiantly for *Philip de Valois* against the *English*.

24. *Lewis II.* his Son, succeeded. He was in the Battle of *Cressy* with his Father, where he behav'd himself valiantly, tho' but 18 Years of Age, and narrowly escap'd, with the *French* King. The Citizens of *Ghent* had kept him from his Father to marry him with *Edward III.*'s Daughter, for the Sake of their Woollen Trade with *England*; but when *Edward* came over with the Princess to solemnize the Nuptials, *Lewis*, on Pretence of Hunting, made his Escape to his Father, then at *Paris*, where he married a Daughter of *Brabant*; which provok'd the *Flemmings* so much, that they form'd themselves into a Commonwealth, and refus'd to admit him, till he confirm'd their Treaty with *England*. He gave himself up to lewd Women, one of whom his Countess getting into her Hands, she cut off her Nose, by which Wound he died 6 Days after, with two Male Children that he brought forth before her Time. This did so much alienate *Lewis* from the Countess, that he fill'd his House with Concubines and Bastards; which, with his Prodigality, and vindictive Temper, made those of *Ghent* take Arms against him, under the Conduct of *Artevel* the Brewer: But this Commotion being appeas'd, he recover'd *French Flanders*, by marrying his only Daughter to the *French* King's Brother; and the Earldoms of *Arras* and *Burgundy* fell to him as Heir to his Mother *Margaret* of *France*. During his Reign, an Inundation overflow'd 27 Villages in *Flanders*, Anno 1377. He built a Palace at *Ghent*, with a Chamber for every Day of the Year. He was very magnificent to Foreign Princes, and was visited at *Ghent* by the Kings of *Cyprus* and *Denmark*.

He design'd to have reveng'd himself on the Citizens of *Ghent* after they were defeated by *Charles VI.* of *France* at *Rosbeck*, and their General the Brewer kill'd; but he died suddenly in 1383.

25. *Margaret III.* his Daughter, succeeded, being married to *Philip the Bold* of *Burgundy*, Brother to *Charles V.* of *France*, 15 Years before her Father's Death. She had been contracted before to *Edmund*, Son to *Edward III.* of *England*; but the Marriage was prevented by her Grandmother *Margaret*, who hated the *English* so much, that she untty'd her Robes in Presence of her Son, threaten'd to cut off her own Breasts, which had given him Suck, and throw them to the Dogs, if he did not break off that Match, and marry her to *Philip* of *Burgundy*, who obtain'd the Surname of *Bold*, because he fought so gallantly to prevent his Father King *John* of *France*'s being taken by the *English* at the Battle of *Poitiers*, where he was taken with him, for which his Father gave him the Duchy of *Burgundy* by Letters Patents in 1363, which was afterwards confirmed to him and his Heirs by his Brother *Charles V.* He was a Prince of great Courage and Prudence, gain'd the Citizens of *Ghent*, by pardoning them after 7 Years Rebellion, was Governor to his Nephew King *Charles VI.* of *France* during his Minority, and died in 1404, so much in Debt, notwithstanding the great Opportunities he had to enrich himself by his own large Dominions, and the Management of the Revenues of *France*, that his Widow, rather than be at the Expence of his Funeral, renounc'd her Charge in his Moveables. She died in 1406.

26. *John* of *Burgundy*, her Son, surnam'd the *Undaunted*, succeeded. He was bred in *France*, and was sent to assist *Sigismund* of *Hungary* against the *Turks*, where he was taken, and in Danger of being cut off, as was the greatest part of the *French* Nobility who were taken with him after the Battle, had not a Soothsayer perswaded the Grand Seignior *Bajazet* to save him, by telling him, That *John* would one Day occasion a great deal of Mischief to *Christendom*, and particularly to *France*, whither he return'd after being ransom'd, and was received there with great Honour. His Representation to the D. his Father, and to *Charles VI.* of *France* his Cousin,

Cousin, how contemptible the Schisms betwixt the Popes and Antipopes made the Christians to the *Turks*, and the Church of *Rome* to the *Greeks*, occasioned their putting an End to it. He was a Prince of great Courage and Prudence; and notwithstanding the War betwixt *England* and *France*, he procur'd a Freedom of Trade to his Subjects from both; but he stain'd his Character, by persuading Assassins to murder the Duke of *Orleans*, his Cousin-German and mortal Enemy, in 1407. He dissembled his Concern in it for some time, but at last openly own'd it, and got *John Petit*, a *Franciscan*, and Doctor of Divinity in the University of *Paris*, avowedly to defend it, as an Act like that of *Phineas*; for which the Duke deserv'd a Reward, alledging, that the Duke of *Orleans* had made use of Magick, and other wicked Arts, to possess himself of the Kingdom. There were others so bold as to offer to justify this Action before the Council of *Constance*. The Causes of this mortal Hatred were, 1. His Envy against the D. of *Orleans*, because he had the Government of the Kingdom during the Incapacity of his Brother *Charles VI.* 2. Because the D. of *Orleans* put Jest upon him, gave him ridiculous Names, and, as 'tis said, hit him a Box on the Ear in a publick Assembly. 3. Because the D. hinder'd him to besiege *Calais*, then possess'd by the *English*, for which he had made great Preparations. 4. Because 'twas alledg'd the D. of *Orleans* had offer'd Violence to the Dutchess of *Burgundy*, who was a very beautiful Princess. The D. thinking himself sufficiently excused by those Pretences, he had the Boldness to demand a Reward for this abominable Action in the Presence of the Dauphin, the Grandees of the Kingdom, and of the University and chief Citizens of *Paris*, at a publick Assembly. But however that was, *Charles VI.* gave him a Pardon, and seemingly reconcil'd the D. of *Orleans's* Children to him; but they quickly discover'd, that nothing less than his Blood would satisfy their Resentments. The Duke of *Burgundy* had not only provok'd the House of *Orleans*, but many of the Grandees of *France*, and particularly the Constable d'*Armagnac*; but the Citizens of *Paris* favour'd the Duke, and hated the Faction of *Orleans* or *Armagnac*, because they

would not stand to the Agreement, that the D. of *Burgundy* should govern the Kingdom jointly with the Dauphin, his Son-in-Law, during the Life of *Charles VI.* And while the D. of *Burgundy* was in *Flanders*, they let 800 of his Horse into the City, put on *St. Andrew's Cross*, the Device of *Burgundy* upon their Clothes, and taking Arms, murder'd the Constable, with several Officers of the Household, 4 Bishops, and above 3000 other Persons of Note. The D. of *Burgundy* seem'd to disapprove this, tho' 'twas supposed to be done by his Orders. All this together made the Faction of *Orleans* determine his Ruin. In order to which, they persuaded the Dauphin, afterwards *Charles VII.* who appear'd at their Head, to invite him to a Conference, on Pretence to concert Measures for driving the *English* out of the Kingdom; and to prevent Suspicion, the Dauphin took an Oath before the Legat, on the Cross and the Gospels, That the Duke nor his Party should receive no Damage; and as a further Security, they promised to deliver to the Duke the Castle of *Montereau*, on the Bridge of which Town, that was rail'd in on purpose, the Interview was appointed. The D. trusting to these Promises, met the Dauphin on the Bridge, and passing through a Door in the Rails to salute him, he bow'd his Knee, and told him, He was come to receive his Orders, and to consult how the *English* might be expell'd the Kingdom. The Dauphin charg'd him with Breach of Promise in not withdrawing his Garrisons; and while the Duke began to justify himself, the Dauphin gave him the Lye, and cry'd out aloud, *Now is the Time*. Upon which the Conspirators murder'd him in Presence of the Dauphin, which involv'd *France* in Blood and Misery for many Years, occasioned the Dauphin to be disinherited by his Father and Mother, and *Henry V.* of *England* to be proclaimed Regent; so that *Charles VII.* would certainly have lost the Crown, had it not been for the Assistance of the *Scots*, and the Courage his Troops were inspired with by *Joan of Arc*, the well known Maid of *Orleans*. *John D. of Burgundy* being thus cut off in 1419, he was succeeded by

27. *Philip III.* his Son, surnam'd the Good, because of his Clemency. He enter'd *France* with an Army, and join'd with the

English

English, to revenge the Death of his Father; and prevailed with *Charles VI.* of *France*, and his Queen, whose Daughter he had married, to disinherir the Dauphin, to match their Daughter *Katharine* with *Henry V.* of *England*, and to settle the Succession on their Posterity, as the only Means to deliver *France* from a dangerous War with *England*, and from the Stain which had been put upon the Honour of the Nation by the Dauphin. This brought on a War of 16 Years; but the Dauphin being come to the Crown, and the Duke being affronted by the Pride of some of the English, (says the History of *Flanders*) and particularly by *Humphrey D.* of *Glocester*, who had carried away from her Husband the *D.* of *Brabant*, *Jaqueline* Countess of *Hainault* and *Holland*, and afterwards married her. He inclin'd to a Peace, partly because being nearest Relation to *Jaqueline*, who had no Issue, he expected to be her Heir; and partly because he was troubled to see *France*, in which he was born, and whose Kings were his Ancestors, reduced to such a miserable Condition: But chiefly, because *Charles VII.* had in 1436 procur'd Ambassadors from several Crown'd Heads to meet at *Arras*, in order to mediate a Peace; and sent to beg the Duke's Pardon for the Murder of his Father. The English refused to part with their Title and Possession, and *Charles* sent some of his Grandees, who falling on their Knees at Church before *D. Philip*, beg'd his Pardon in their Masters Name for the Murder of his Father; to which he had been prompted to consent by wicked Villains in his tender Age; with which Duke *Philip* being mov'd, he burst out into Tears, and declar'd with a loud Voice, "That for the Sake of our Saviour's Passion, out of
"Pity to the People of *France*, and out of
"Respect to the Pope and the Council of *Basil*, and the Intercession of Christian
"Princes, he would forgive the King of
"*France*, on Condition that a Cross should
"be erected on the Bridge where his Father
"was murder'd; That all the Actors should
"be condemn'd; That the K. should give
"him the Towns and Counties he demanded, pay him 400000 Crowns, allow his
"Subjects in the Service of *France* to bear
"St. Andrew's Cross, and exempt himself
"from paying Homage." Upon this the

Treaty was concluded, the Legat absolv'd him from his Oaths and Leagues with the English, who reproach'd him bitterly for it, and hated him ever after. The Treaty being concluded, he order'd his Governor of *Paris* to drive the English from thence. Besides these Additions to his Dominions from *France*, he fell Heir to the Duchies of *Brabant* and *Limburg*, the Marquisate of the Empire, *Hainault*, *Holland*, *Zealand*, *Friesland*, and the Duchy of *Luxemburg*, which made him the powerfulest Prince in Europe. He married for his 3d Wife the Daughter of *John King of Portugal*; She was received at *Bruges* with extraordinary Magnificence; and on the Day of his Nuptials, he instituted the Order of the Golden Fleece. He ransom'd from the English for 400000 Crowns the *D.* of *Orleans*, Son to *D. Lewis*, whom his Father had caus'd to be murder'd, married him to his Niece, a Daughter of *Cleves*, and made him a Knight of the Golden Fleece. He entertain'd the Dauphin of *France*, afterwards *Lewis XI.* and his Wife, 7 Years at his Court, whither they had retir'd from the Displeasure of the French King, who demanded him from *Philip*, and sent to tell him, That his Son would reward him, if ever he came to the Crown; as *Aesop's* Serpent did the Countryman, who took it up when stung by a bitter Frost, and warm'd it in his House, where it afterwards poison'd him: But *Philip* continu'd his Kindness to the Dauphin, and put him in Possession of the Crown after his Father's Death; for which he rewarded him as his Father foretold he would. Duke *Philip* also entertain'd in her Distress *Margaret*, Wife to *Henry IV.* of *England*, and Daughter to *Rene D.* of *Anjou*, who had both been his Enemies. He likewise pardon'd his own Son *Charles*, whom he had confin'd for speaking disrespectfully to him on the Account of his Favourites, and receiv'd him with Tears and Embraces when he came to make his Submission. He likewise pardon'd the Cities of *Ghent* and *Bruges*, who had forsaken him when he besieg'd *Calais*. For all which Actions of Clemency, he receiv'd the Surname of Good, and died full of Honour and Glory at *Bruges* in 1467, the 80th Year of his Age, and the 48th of his Reign. He left behind him 40000 *Lewis d'Ors*, 772 Marks of uncoin'd Silver, and Moveables

D d d d d

80

to the Value of 2000000 of Gold, a vast Treasure in those Days: He was buried with as great Magnificence as he had liv'd. His Corps was cover'd with a Mortuary of Gold, on which there lay a Sword of the same Metal, and there were 17000 Torches carried before him to the Grave. He was esteem'd by all the great Princes of the World; so that *Edward IV.* of *England*, when he fail'd to recover his Kingdom, trusted him with his two young Brothers, tho' *Philip* was related to the House of *Lancaster*, and *Edward* the Chief of the House of *York*. *Thomas* and *Demetrius*, Emperors of the East, came to desire his Assistance against the *Turks*, who had dispossest them. *David* Emperor of *Trapezond*, and the Kings of *Persia*, *Armenia*, and *Mesopotamia*, sent Ambassadors to desire his Assistance against the *Ottoman* Family, and call'd him by the Title of, Great Duke of the Western Regions. The Emperor *Frederick III.* design'd to have made him a Knight, and Vicar of the Empire in *Gaul*, and courted his Grand-Daughter *Mary*, for his Son *Maximilian*, which afterwards took Effect. But this great Prince was not without his Weaknesses, for he made *David*, one of his Bastard Sons, Bishop of *Utrecht* by Force, and another of his Relations Bishop of *Liege* by Bribery. He had likewise 7 other Bastards by several Mistresses.

28. *Charles II.* his Son, surnam'd the *Hardy* or *Terrible*, succeeded. He added the Dutchy, of *Guelder* and the County of *Zutphen* to his Dominions, and was invested in the latter by the Emperor with great Pomp and Ceremony; when the Number of his Train, the Richness of their Apparel, and the Sumptuousness of the Entertainment he gave to the Emperor and his Court, fill'd all that beheld it, and the Emperor himself, with Admiration. The History of *Flanders* says, he had 6 Earls and 600 Gentlemen attending him, all clad in Brocade: His own Cofferock was embroider'd with Gold, and adorn'd with Precious Stones, valued at 200000 Ducats. At his Entertainment, his Table was cover'd with Dishes and Vessels of massy Gold, embellish'd with Diamonds. At the 2d Course, there was one Vessel set before the Emperor valued at 6000 Ducats of Gold. His Chapel where he heard Mass was adorn'd with 60 Images

of Gold and Silver, and so full of Precious Stones, that they were valued at 200000 Ducats. The Reason of all this extravagant Pomp, was to induce the Emperor to make him King of *Burgundy*, and Vicar of the Empire on this Side the *Rhine*; upon which he was to give his Daughter in Marriage to *Maximilian*, the Emperor's Son. All Things were prepar'd for his Investiture in the Royalty; but the Emperor, of a sudden departed from him without doing it, but on what Reason is not said; tho' it may reasonably be suppos'd, that the Emperor was offended to see himself outdone in Pomp by the Vanity of a Prince so much below him in Dignity, tho' superior in Riches. That same Year *Sigismund* of *Austria* came to *Flanders*, and mortgaged to him the County of *Ferrette*, in which stand the Cities of *Brisac* and *Rhinfeld*, with a Design to engage him against the *Swissers*, with whom *Sigismund* was then at War. He married for 3d Wife, *Margaret*, Daughter to *Richard D.* of *York*, in 1468, at *Bruges*, with extraordinary Magnificence. He fancy'd this Princess for her Beauty; but his politick Reason for the Match was to prevent *England's* joining with *France* against him. In 1471, he received *Edward IV.* of *England*, his Brother-in-Law, with great Kindness when he was drove from his Dominions, and sent him back with an Army, which restor'd him. He likewise entertain'd, answerable to their Dignity, several Princes of the House of *Lancaster*, who fled to him in their Distress. He made several advantageous Treaties with *Lewis XI.* of *France*, by which he enlarged his Dominions, exempted himself from paying Homage to that Crown, and his Subjects from Appeals to *France*. Upon which he erected the Sovereign Court at *Malins*, in Imitation of the Parliament of *Paris*. He rais'd a Regiment of 800 Horse, arm'd Cap-a-pé, divided into 5 Troops, each of 'em commanded by a Knight of the *Golden Fleece*, to whom he allow'd extraordinary Salaries. He spent two or three Days a Week in determining Controversies among his Grandees and Courtiers in Person. He had continual Wars with his Neighbours, which oblig'd him to levy great Taxes on his Subjects, and occasioned the States to refuse several of his extravagant Demands.

He

He was so successful in his Wars at first, that he became the Terror of Europe, oblig'd the Emperor to a disadvantageous Peace, and Lewis XI. of France the like, after he defeated him at the Battle of *Montcheri*, and forc'd the Citizens of *Liege* to Submission, tho' supported under-hand by France; in the Siege of which City, he had certainly been surpris'd in his Quarters by a Sally, if the *Scots* in the French Service, says *Commynes*, had not with great Bravery repuls'd the strong Detachment that attack'd him and the Fr. K. by Night. We have already mention'd his severe Chastisement of that City when he took it. He stain'd his Character, by delivering up to the French K. the Earl of *St. Paul*, Constable of France, who had retir'd to him for Protection, upon the French King's restoring him *St. Quintin*. He repented of it when too late, and sent Orders to his Officers not to surrender the E. but his Command came 3 Hours too short, so that the Constable lost his Head; and tho' he fell unprovok'd, because he was a Man of no Faith, and had several times embroil'd the Courts of France, England, and Burgundy, yet the Duke could never wipe off the Reproach, which occasioned a Satyrical Reflection upon him, That when he had the Fox, which was the Name ordinarily given to the Earl, he skinn'd him to make use of his Fur, and gave his Body to the French K. Soon after this he took Nancy in Lorraine: His Dread of miscarrying in that Siege, by the Intrigues of the French, being one of the Causes of his Treachery to the Constable. But his Fortune soon after declin'd: He rashly engag'd against the *Swissers*, whom having a Design to subdue, he made War upon them on the trifling Pretence of their having taken a Cart-load of Goat-skins from the Subjects of the Count de *Romont*, a Prince of the House of *Savoy*, in whose Quarrel he had engag'd. He march'd into *Switzerland*, which he made no Doubt to conquer, and by that means to open his Passage into Italy; but was defeated by them at *Granfon*, where they took all his Baggage and rich Moveables. To revenge this, he attack'd them a 2d time at *Morat*, where they cut off most of his Army, and forc'd him to a shameful Retreat. This Disgrace threw him into Melancholy, and impair'd his Health; but when he recover'd, be-

ing full of Revenge against the D. of Lorraine, he besieg'd his Capital of *Nancy* a 2d time, against the Advice of his best Friends and Generals, in the Rigour of Winter, where he was betray'd by *Campo Basso*, an Italian, as formerly mentioned, who join'd the Enemy in the Time of the Battle, where the Duke was killed by a Gentleman of Lorraine, who being deaf, did not hear him when he desir'd Quarter, and clove his Head with a Halbert. His Corps was found 3 Days after thrown into the Ditch, and generously interr'd with great Magnificence in *St. George's Church* at Nancy by his Enemy the Duke of Lorraine, from whence his Corps was removed by his Grandson the Emperor *Charles V.* in 1553 to our Lady's Church at *Bruges*, where he erected a sumptuous Monument for him before the great Altar. Lewis XI. of France, who dreaded him, gave an extraordinary Reward to the Messenger who brought him the News of his Death. The Duke was a Prince of very great Qualities, a good General, capable of all the Fatigues of War, us'd to go the Rounds of his Camp himself, a severe Justiciary, but self-conceited, and valued his own Judgment so much, that he would not listen to the Advice of others, which occasioned his Ruin; for tho' the French King had given him Notice, that *Campo Basso* had offer'd to him to murder him, and tho' one of that Traytor's Confederates had acquainted him with his Design to betray him, he would believe neither. He understood several Foreign Languages, particularly Latin, Spanish, French, German, and English, lov'd to read History, and particularly the Lives of *Julius Caesar* and *Alexander*, was temperate in Eating and Drinking, and punish'd Excess that Way in his Soldiers as much as Desertion. He was particularly noted for his Chastity, would immediately cause such of his Soldiers to be hang'd as offer'd Violence to Women when he took Towns by Storm, and condemn'd a Sheriff in *Zealand* to Death for refusing to marry a young Woman that he had debauch'd. This great Prince fell thus in 1477, in the 43d Year of his Age, and 9th of his Reign.

29: *Mary*, his only Child, succeeded; and upon her Father's Death, was ungratefully and treacherously despoil'd of Part of her

D d d d d d

Domit

Dominions by *Lewis XI.* of *France*, her God-father, on Pretence of taking her under his Protection, which made many of the Governors of her Towns and Countries submit to him. This, with other Instances of his Treachery, verifi'd the Saying of his own Father, That he would reward the House of *Burgundy*, who gave him honourable Entertainment, as *Æsop's* Serpent did the Countryman, who warm'd it when benum'd with Cold. That which aggravated his Crime, was, that he had made a Truce of 9 Years with her Father, which he solemnly swore by all that was sacred he would inviolably observe. He deprived her of *Burgundy*, and of all that had been given to her Predecessors by the Treaties of *Arras* and *Causans*, demanded her to be put under his Protection, till the Dauphin, who was then but 7 Years of Age, should be fit to marry her, tho' she was then 20; and by his Artifices, and betraying some Letters to him relating to the Persons the design'd to entrust with the Management of the Government; and desiring him to direct all his Advices to them, he stir'd up the Citizens of *Ghent* against her, who having her chief Counsellors that she design'd to rely on, who were, the Lord of *Imbercourt*; and *Hugonet* her Chancellor, they put them in Prison; and charging them with Treachery against the late Duke, and betraying the Government into the Hands of *France*, &c. they try'd and condemn'd 'em: And tho' the Princess came into the publick Market-place, where they were brought to Execution, in a Mourning Habit, with her Hair dischevell'd, address'd her self to the People, and begg'd their Pardon with Tears, they put them to Death; which, tho' disrespectful in the highest Degree to their Sovereign, was reckon'd a just Judgment on them, because they had advis'd her Father to deliver up the Earl of *St. Paul* to *Lewis XI.* as above-mentioned. That Earl's Son was one of the chief of the *French* Courtiers who stir'd up the People against them to revenge his Father's Death. In 1477, she married *Maximilian* of *Austria*, who came to *Ghent* with several Electors and Princes of the Empire for that Purpose. But 5 Years after, this happy Couple were separated by a fatal Accident; for as she was riding a Hunting with her Husband,

her Horse stumbled, threw her against the Stump of a Tree, and being with Child, the Bruise cast her into a Fever, which carried her off a few Days after in 1482, in the 25th Year of her Age, and the 5th of her Reign, universally lamented for her excellent Qualities. She had 4 Children, 2 of which died before her; but *Philip* and *Margaret* surviv'd. In 1485, *Maximilian* was proclaim'd Tutor to his Son, and took an Oath for the faithful Discharge of his Trust; but when he was elected K. of the *Romans*, he carried his Son to *Malins*, where he bred him after the *German* Fashion, which disgust'd the *Flemmings*; and having by the Advice of his Counsellors, left out his Son's Name in the Money that he coin'd, and his *German* Garrisons having also disoblig'd the *Flemmings* by their ill Discipline, those of *Ghent* and *Bruges* imprison'd the chief of his Counsellors, whom they try'd, condemn'd, and executed, for giving him ill Advice, particularly to levy Money contrary to Law; and summon'd himself to appear before their Deputies, where, to pacify them, he saluted the 52 Masters of the Companies of *Bruges*, spoke to them standing, with his Hat in his Hand, agreed to all they desir'd, conform'd himself to their Manners, and was familiar with 'em. Upon which they declar'd, They would live and die with him; that what they had done, was only to punish such as had abus'd his Favour, and promis'd to protect his Person and Moveables, and not to deliver him to those of *Ghent*, nor to the *French*, which he dreaded most. They kept him however 3 Months under a Guard, on Pretence to save him from the Mob; but by the Intreaties and Threats of the Pope, the Emperor his Father, and other Princes, they came to an Agreement to forgive what was past on both Sides, for which he gave them Hostages. He afterwards recover'd them by Craft, and the Emperor came with an Army and declar'd War against *Bruges* and *Ghent*, who enter'd into an Alliance with *France*, which filled the Country with Tumults and Seditions, till a Peace was concluded at *Tours* betwixt *France* and *Maximilian*; who being afterwards chosen Emperor, he left his Son in the *Netherlands* under Guardians, and died at *Newstat* in *Austria* in 1519.

30. He was succeeded by his Son Philip IV. of Flanders, who became afterwards the first of that Name K. of Spain, by marrying the Heiress of that Crown. He was so much belov'd by the People, that the Flemings, contrary to their Custom, put his Name in all their publick Acts at the Age of 17. He was the first that sold the publick Offices of their Government to fill his Treasury, by the Advice of his Counsellors; but had otherwise such excellent Qualities, that he was called the Delight of Mankind; and when he went to Spain, the Flemings universally lamented his Absence, as that of a common Father. He died at Burgos, the chief City of Old Castile, in 1506; from whence his Heart was brought to Bruges, and put in his Mother's Sepulchre.

31. He was succeeded by his Son Charles V. afterwards Emperor; of whom having given an Account already, we shall only add, That in 1540, he came from Spain through France to suppress the Rebellion of Ghent, where he put to Death 30 of their chief Burgomasters, banish'd and forfeited a great many of the chief Citizens, disarm'd the Burgers, depriv'd them of their Privileges, forc'd their Magistrates to walk in Procession with Halters about their Necks, and built a Citadel, the first of its kind in Europe, to prevent any future Rebellion. But his carrying his Resentments too far in this and other Instances, contributed to lay the Foundations of that Revolt in the Netherlands, which proved so fatal to his Posterity.

We have insisted the longer on the History of Flanders, because it has been a Theatre of War for so many Ages, and contains so many remarkable Passages which relate to our own History, and that of France, Spain, and the Empire.

The chief Towns of Flanders are,

1. **Ghent**, Lat. *Gandavum*, suppos'd to have at first been called *Wanda*, when possess'd by the Vandals. It lies on the *Lys*, *Mourwater*, *Scheld*, and the *Lieue*, all navigable Rivers, 10 Miles S. from *Sae van Ghent* in Dutch Flanders, 20 S. E. from *Bruges*, and 22 S. W. from *Antwerp*, in Long. 22. 37. Lat. 51. 7½. 'Tis the greatest City in the Low Countries, but has decay'd in Trade and

otherwise since the Revolt of the Dutch. It has a Staple of Corn and other Grain, and has the Conveniency of Canals betwixt *Bruges*, *Sae van Ghent*, and *Antwerp*, besides the Advantage it has by the *Scheld* and other Rivers. There are 6 or 7 Forts on the Canal betwixt it and *Sae*, most of which belong to the Dutch, for the Security of that Passage. 'Tis reckon'd 7 Miles in Compass within the Walls, and about 10 Miles without, because of its Fortifications. There are several Corn-Fields and other wast Places within. The Body of the Town is well built, the Streets fair and clean, and the whole is well fortified with Walls and Ditches. It has 7 Churches, 55 Monasteries, of which that of the Jesuits is the fairest. There's a Cloyster here for English Nuns. The Cathedral is a stately Edifice. Its Tower, called *Bellefort*, is between 4 and 500 Steps high, with a gilt Copper Dragon on the top as large as a Bull. From hence there's a pleasant Prospect of the City and adjacent Country, which is very fruitful; and they have a Bell in it called *Roland*, of 12000 Pounds Weight, with very fine Chimes. This Church is dedicated to *St. Bavo*, and the Abbot has a considerable Tract of Ground, with some Marks of Sovereignty, and many Villages, under his Jurisdiction. There are several noble Tombs here; and in the Lower Church, there's a Lady's Tomb of one entire Touch-stone. *St. Michael's* Church is fam'd for its excellent Paintings, and that dedicated to *St. Peter* and *St. Paul* is a fine Structure. The Castle, formerly the Palace of their Princes, contains 300 Chambers; and in one of the least of 'em, *Charles V.* was born, on *St. Matthias's* Day, as appears by this Inscription moulded over the Chimney in Relief:

Matthia Luce exiguo Cubili natus Carolus Quintus.

The Numerical Letters making the Year of his Nativity. In this City was also born the D. of *Lancaster*, so well known by the Name of *John of Gaunt*. The Town-House is of fine Stone-work in Sculpture, adorn'd with Pilasters after the modern Way. They have several large Market-Places, and in one of 'em a noble gilt Statue of *Charles V.* On a Scaffold over against that called the *Friday's* Marker, there's a great Cannon moun-

ted, with a larger Bore than any Mortar-Piece. On the Bridge called *Dogebrack*, there are two Statues in Brass, representing a Son beheading his Father, of which they tell the following Story: Being both condemn'd to die, a Pardon was offer'd to either of 'em that would be the other's Executioner; and the Son being perswaded to it by the Father, as he was ready to give the fatal Blow, the Blade broke in his Hand; which being look'd upon as a singular Providence, and a Rebuke for the Barbarity of the Proposal, they were both pardon'd. This City is pleasantly situated in a good Air, and has so many Streams running through it, that 'tis divided into 26 Islands, join'd by 98 large Bridges, besides several lesser ones. Their chief Trade, besides Corn, is in Cloths, Stuffs, and Silks, of which there's so great a Quantity made here, that a 3d of the 50 Companies of Tradesmen in this City are employ'd about that Manufacture. The Citadel consists of 4 little Bastions, looks to the City on one Side, and to the Fields on the other. 'Tis regular, but much short of the modern Fortifications of that Nature. 'Tis an Episcopal See, Suffragan to *Malins*, and the Seat of the Provincial Council of *Flanders*. 'Twas formerly so powerful, that in the Reign of *Philip de Valois*, they sent 50000 Men to the Field. The Inhabitants have always been reckon'd Warlike, but much inclin'd to Tumults, as we have heard before. It has suffered much of late by the Wars; yet *La Forrest* says, there are 30000 Burgers in it who live on their Rents. 'Tis said to have been founded by *Julius Caesar*, because of the Convenience of its Situation. 'Twas taken by *Lewis XIV.* of *France* in 6 Days, *Anno* 1678; but restored by the Treaty of *Nimeguen*. 'Twas possess'd by them again after the Death of *Charles II.* of *Spain*; but abandon'd after their Defeat at *Ramillies* in 1706. 'Twas betray'd to them in 1708, and retaken after a short Siege by the Confederates that same Year.

2. *Bruges*, 20 Miles N.W. from *Ghent*, on the Canal of *Reye*, in a large Plain, and about 11 Miles S.E. from *Ostend*. It had its Name from its numerous Bridges. It has a Canal to *Sluys* about 7 Miles long, cut at a vast Charge by the Inhabitants of *Sluys*, and secur'd by mighty Turn-pikes

from Inundations, by which Vessels of great Burden come up to the Town. But after *Sluys* fell into the Hands of the *Dutch*, those of *Bruges* dug another Canal to *Ostend*, which brings Ships of 2 or 300 Tuns to the City, and advances its Trade. 'Twas once one of the greatest Emporiums in *Europe*, and frequented by Merchants from all Countries, who had their Storehouses here, and were form'd into 17 Fraternities. Besides whom, they had 68 Companies of other Tradesmen and Artificers, with a Guildhall for each. *Antwerp* was then subservient to it; but the Merchants removed thither in 1500, because of the Wars; so that their remaining Trade consisted in *Spanish* Wool, for which 'twas made the chief Mart by the *English* after their Loss of *Calais* in 1558. *Spinola*, the *Spanish* General, cut a Canal betwixt this City and *Ghent* of 8 Leagues long, which he guarded with 200 Forts and Redoubts, as many Companies of Foot, and 6 Troops of Horse. 'Tis the 3d Town in *Flanders*, is large, well built, most of the Houses being 4 or 5, and some of them 6 Stories high; from the Tops of which there's a Prospect of a Fleet of Ships, and a fruitful and pleasant Country. The City is populous, of a round Form, and about 4 Miles in Circumference. It has 6 principal Streets, which center in the Market-place, and lead to the principal Gates. Most of the Streets are straight and large, and their Publick Buildings sumptuous. Near the Market-place, there's a Tower 343 Steps high, and not far from thence the Palace called *La Franche*, nobly adorn'd with the Pictures and Statues of Emperors, Kings, and Archdukes. There are 7 Parish-Churches here: That of *St. John* was made a Cathedral in 1559, when a Bishop, Suffragan to *Malins*, was established in this City by *Philip II.* who made him Chancellor of *Flanders*, as the Provost of the Church was before. The famous *Ludovicus Vivès* is entomb'd here. They have 60 Monasteries, 3 Colleges of Canons, and a College of Jesuits, sumptuously built at the Charge of the City. 'Tis well wall'd, fortified with Works of Earth, and deep Ditches. Besides their Trade in *Spanish* Wool, they drive a considerable Commerce in Manufactures of Cloth, Fustians, Stuff, Tapestry, &c. There's abundance of Canals

nals in the Town, over which there's a multitude of Bridges, and over one of those Canals, stands their publick Warehouse, where Vessels unload at the very Door. The first Decay of their Trade happen'd by the Rigour of their Magistrates, which occasioned many of their best Weavers to leave the City, and come for England. The *English* of Note are generally complimented here in the House where our K. Charles II. resided during his Exile; and several Houses have been erected with the Money given them by the Royal Family, where the Citizens exercise themselves with Bows and Guns: They are adorn'd with Pictures and other Monuments of the 3 Brothers. The Tower of our Lady's Church leaning on one Side by the Neglect of the Builder, he threw himself down from the Top of it, and was buried where he fell. The *English* have two Nunneries here; and in the Jesuit's Church there's a solid Fabrick, representing the Holy Sepulchre, the Plan of which was brought thither by a Lord, who went twice to Jerusalem on purpose, and is interr'd here.

3. *Damme*, on the old Canal of *Bruges*, 3 Miles N. from that City, a small Town, founded by Count Baldwin the Courageous in 1195, but ruin'd by those of *Bruges* in the 13th Century, because they were jealous of its Commerce, and kept by them above 60 Years; but towards the End of the 16th Century, 'twas strongly fortified by *Spinola*, the Spanish General.

Four Miles N. E. from *Damme*, lies Fort *St. Denis*; and about 2 Miles further N. lies Fort *Isabel*, on the Channel over against *Slyps*; and about 6 Miles W. from Fort *Isabel*, lies Fort *Blankenberg*, on the Coast; which were all taken by the Confederates in the present War.

4. *Ostend*, the Capital of the District call'd *Freeland*, or *Vryland*, because they shook off the Superiority of those of *Bruges*, lies on the Coast, 11 Miles N. W. from *Bruges*, and extends its Jurisdiction over the said Territory, which is about 7 Miles, and contains a great Number of Villages. 'Tis situated in a moorish Ground, among several Channels; two of the chief of 'em almost encompass it, and swell so high at full Tide, that the Town seems to stand in the Sea, and is so exactly fortified, that 'tis

reckon'd one of the strongest Places in the Netherlands. It has a large, and safe Harbour, capable of Ships of great Burden, and was lately enlarg'd by the *Spaniards*, and well defended by Forts. The Houses are well built, and uniform, but not high. The Streets are regular, well pav'd, strait, and neat; having been all built at once, after the Town was laid in Ruins, by the famous Siege which began in 1601 by *Spinola*, as we have formerly mentioned. We shall only add here, That it cost 100000 Men on both Sides, of which the *Dutch* and their Allies are reckon'd to have lost 30000. 'Twas so slightly fortified when the Siege began, that Princess *Isabella* is reported to have said, She would not shift her Smock 'till it was taken. Yet the Siege held out above 3 Years, and when surrender'd, 'twas reduc'd to a Heap of Rubbish. The *Spaniards* shot so many Bullets against the Sand-hill Bulwark, where they stuck, that it became a Wall of Iron, and dash'd all the fresh Bullets in Pieces when they hit it. 'Tis also remarkable for the Design form'd to surprise it by Treachery in 1658, by Cardinal *Mazarine*; when *Mareschal d'Aumont*, who had the Conduct of the Enterprize, thought himself so sure of it, that he sent the Cardinal Word, The Design was effected; and the Cardinal relying on this Intelligence, wrote confidently to *Frankfort*, where the Electors were met to chuse an Emperor, that the Town was taken, which so confounded them for some time, that they suspended the Election; but when the contrary was known, and that the *French* Troops were entrapp'd, it very much expos'd his Reputation and Politicks. *Mette-ran* and some other Writers fallily charge Sir *Francis Vere* with the Design to have betray'd it, while he was Governor of it for some Time during the famous Siege; but they are contradicted by Authors of better Credit, and the whole Conduct of that brave Gentleman, which shew'd him to be incapable of so much Baseness: He only gain'd Time by a Treaty with the *Spaniards* to fortify it, which sav'd it from immediate Ruin. The *French* possess'd themselves of it after the Death of Charles II. of Spain; but were oblig'd to surrender it in 1706, after a short Siege by the *English* and *Dutch*.

Plaffendael, a strong Fort, with a Sluce for letting Ships pass out and in, lies about 3 Miles E. from *Ostend*, and commands the Canal betwixt that Place and *Bruges*, and the Entrance of the Canal from *Newport*. 'Twas taken from the *French* before they lost *Ostend*, and seiz'd by them again when they surpris'd *Bruges* and *Ghent*; but abandon'd after they lost those Towns in 1708.

5. *Newport*, lies about 8 Miles S.W. from *Ostend*, and 14 from *Bruges*, near the Bank of the Sea, where a little River that runs by the Town falls into it, and makes a long and secure Harbour, but not capable of large Ships. The Town is well fortified with Walls, Ramparts, &c. the Streets broad and straight; but the Houses low built, and most of 'em of Timber. The Inhabitants maintain themselves chiefly by Fishing, and the *English* Packet-Boat goes Weekly betwixt this Place and *Dover*. 'Twas invested by the *Dutch* under Prince *Maurice* in 1600, and Archduke *Albert* coming to relieve it, it occasioned his memorable Defeat, mentioned P. 798. A little off of *Newport*, near the Sea, is a little Fort defended by a Wall, a Ditch, and Bulwarks. The chief Strength of this Town consists in its Situation; for by their Sluces, they can in less than an Hour lay the adjacent Country under Water for two Leagues. By this means, the *French* not only kept it in Possession, but interrupted the sending of our Convoys from *Ostend* to *Lisfe* during the Siege of the latter in 1708.

6. *Deynse*, a small Town on the River *Lys*, 10 Miles S.W. from *Ghent*, was united to the County of *Flanders* in 1316 by Count *Robert*, and is famous for the glorious Retreat of the Prince of *Vaudemont* from thence in 1695, when almost surrounded with the *French*.

7. *Dendermond*, on the Mouth of the *Dender*, where it falls into the *Scheldt*, about 10 Miles S.E. from *Ghent*, is a Place of Importance by its Sluces and Fortifications, is Capital of a District of the same Name, and has a considerable Trade in Fustians and other Stuffs. The *French* were repulsed before it in 1667; but having possessed it after the Death of *Charles II.* of *Spain*, they surrender'd it to the D. of *Marlborough* on Terms in 1706.

8. *Rupelmond*, on the Mouth of the *Rupel*,

where it falls into the *Scheldt*, 20 Miles E. from *Ghent*, a pretty small Town, the only Place of Note in the Country of *Waes*.

9. *Alost*, or *Alst*, on the River *Denier*, about 7 Miles S. from *Dendermond*, and 13 S.E. from *Ghent*, the Capital of that called *Imperial Flanders*, and of a County formerly subject to Lords of its own. 'Twas taken by the *Spaniards* in 1576, and by the D. of *Alençon* in 1582; after which 'twas garrison'd by the *English*, but betray'd by the Governor to the D. of *Parma*. 'Twas taken by the *French* in 1667. Their King pretended to this Town and County in the Right of his Queen, but restor'd it by the Treaty of *Nimeguen*, after dismantling it. He seiz'd it again after *Charles II.*'s Death; but his Troops abandon'd it after their Defeat at *Ramilles* in 1706. The Territories of this Town are large, viz. the County of *Alost*, the Country of *Waes*, and those called the 4 Offices of *Hulst*, *Axtel*, *Bouchot*, and *Astemele*, which comprehend above 150 Villages, and 4 Cities, which all together made up that called *Imperial Flanders*, because it held in Fee of the Empire. *Alost* was noted formerly for its Hop-Market and Tapestry.

10. *Ninove*, lies 6 Miles S. from *Alost*, and is a pretty small Town. *Grammont*, 5 Miles above it, is a small Town, built by Count *Baldwin* in 1068.

11. *Audenard*, lies on the *Scheldt*, about 16 Miles S. from *Ghent*. The River divides it into two Parts, and advances its Trade, which is chiefly in Tapestry and fine Linen. 'Tis Capital of a Castellany, which contains 33 Villages. 'Tis well fortified with strong Walls and regular Outworks, and by the Castle of *Pamele*, join'd to it with a Bridge, but is commanded by a Hill on the Side of *Alost*. 'Twas taken by the Lord of *Ravestein* in 1484, by *Blomars* in 1567, by the Prince of *Parma* in 1582, and by the *French* in 1658; but restored by the Treaty of the *Pyrénées*. They took it again in 1667, had it confirm'd by the Peace of *Aix la Chapelle*, but restor'd it by the Peace of *Nimeguen*. They laid Siege to it in 1708, but were forc'd to abandon it, and receiv'd a remarkable Defeat near it, mentioned P. 826.

12. *Harlebeck*, on the *Lys*, 2 Miles below *Courtray*, the Capital of a small Territory.

13. *Courtray*,

13. *Courtray*, on the *Lys*, 12 Miles W. from *Audenard*, and 12 E. from *Ipres*. 'Tis divided by the River, reckon'd one of the Ancientest Towns of the Netherlands, and to have been considerable in the Days of *Cæsar*. 'Tis very strong by its Situation, well fortified, and has a good Citadel, which was built by the French in 1646, when they took the Town. The Spaniards retook it in 1647, the French took it again in 1667, and restor'd it by the Treaty of *Aix la Chapelle*. They took it again once more; but 'twas retaken by the Allies in 1706. The Town is noted for making good Diaper and Cloth, in which they have a good Trade. *La Forreſt* ſays, they had an Annual Feaſt for a great Victory they obtained over the French in 1302, and about 80 Years after were ſurpris'd by the French as they celebrated that Feſtival, when the Town was burnt down, but rebuilt better than 'twas before.

14. *Menin*, lies on the ſame River, about 5 Miles above *Courtray*, is a ſmall Town, but ſo well fortified by the French, that 'twas reckon'd one of the ſtrongest and moſt regular Fortifications in Europe. 'Twas taken by the Allies in 1706, after 18 Days Siege. 'Tis noted for excellent Beer.

Commines, *Warwick*, and *Warneton*, are Places of Note betwixt *Menin* and *Liſſe*. The former was the Birth-place and Inheritance of the famous Stateſman and Hiſtorian *Philip de Commines*.

15. *Liſſe*, Lat. *Inſula*, and *Inſule*, by ſome called *Lila*, and by the Dutch, *Ryſſel*, lies about 12 Miles S. from *Courtray*, and 10 W. from *Tournay*, on the River *Deule*. It had its Name from its Situation among Marſhes, moſt of which are now drein'd. *La Forreſt* ſays, 'twas built in 1007 by Count *Baldwin IV.* and walled by *Baldwin V.* It ſuffered much in the 13th Century. *Philip Auguſtus* of France diſmantled it in 1213. 'Twas retaken next Year by Count *Ferrand*, and *Philip the Fair* ruin'd it in 1297. It had formerly Lords of its own, who had the Title of Caſtellans, from the 11th Century to 1234, that it came to the Family of *Peronne*, afterwards to the Family of *Luxemburg*, then to the Family of *Vendosme*, next to the Family of *Burgundy*, and from them to the Houſe of *Auſtria*. *Lewis XIV.* took it in 1667, fortified it with a noble Citadel,

flank'd with 5 Royal Baſtions, beſides many Half-Moons, and other Outworks. He fortified the Town ſo well, that 'twas one of the ſtrongest Places of Europe. He enlarg'd it alſo with a Suburb, adorn'd it with ſeveral fine new Streets, and built a good Arſenal. The Ditches are filled by the River *Deule*. 'Twas the only Town improved by his Conqueſts, and became very rich by their Trade in Linen Cloth, Camblets, Silks, &c. and by being in a manner the Center of Commerce betwixt France and the Netherlands, and many of the Inhabitants were concern'd in the Shipping of *Dunkirk*; and for the Conveniency of transporting Goods, there's a Canal cut betwixt the Town and the *Lys*. 'Twas confirm'd to the French by the Treaty of *Aix la Chapelle*, is a Town of great Antiquity, the Metropolis of what was anciently called French Flanders, had a large Jurisdiction, and a Chamber of Accounts for Flanders eſtabliſh'd here by *Philip the Bold*. The Town is very large, populous, and well built, eſpecially the new Streets, which are of Brick and Free-ſtone; but moſt of the old of Wood. The Market-place is ſpacious; the Town-Houſe ſmall, but handſome, and a ſtately Church near it. The moſt conſiderable Church is that of *St. Peter*. The neighbouring Country abounds with Flax. The French laid a Cauſway near 20 Miles long betwixt this Town and *Ipres*, thro' the marſhy Grounds. For the famous Siege of the Town and Citadel, and their being taken by the Allies in 1708, we refer to P. 826. The Invention of Painting in Oil, and of making Says and other Worſted Stuffs, is aſcrib'd to this City. The French King order'd theſe blaſphemous Inſcriptions to be put on the new Caſtle in 1673; *Gentes laudabunt te, & Reges Terræ Gloriam tuam*; i. e. *The Gentiles ſhall praiſe thee, and the Kings of the Earth thy Glory*; and, *In Sole poſui Tabernaculum meum*; i. e. *I have plac'd my Tent in the Sun*.

16. *Tournay*, Lat. *Tornacum*; in Dutch, *Dornick*, 10 Miles S. E. from *Liſſe*. It lies on the *Scheld*, over which it has ſeveral Bridges, is Capital of the fruitful and pleaſant Country of *Tournaiſſis*, the Seat of the chief Tribunal or Parliament for the French Conqueſts in the Netherlands ſince 1669, and a Biſhop's See, Suffragan of *Cambray*. *La Forreſt* ſays, it belong'd to the *Nervii*, and was

E e e e e

taken

taken by *Cæsar*, after he defeated them. 'Twas surrender'd to the Pr. of *Parma* on *St. Andrew's Day*, 1581, after a brave Defence by the Princess of *Epinay* in her Husband's Absence. *Strada* observes, That *St. Andrew's Day* has been fatal to it, it having been taken before on that Day by King *Henry VII.* of *England*, and the Emperors *Maximilian* and *Charles V.* *Henry VIII.* built a strong Castle here. 'Twas deliver'd to the Fr. in his Time by Cardinal *Woolsey's* Intrigues. The Town and Castle were basely surrender'd to the Fr. K. almost without Resistance, in 1667, and continu'd in his Hands till surrender'd to the Confederates, after a sharp Siege, in 1709, upon Articles, and the Garrison of the Citadel made Prisoners of War some Time after. The City is large, populous, and has a considerable Trade, especially in a sort of Table-Linen, from hence called *Dornick*. Dr. *Northleigh* says, it has 17 Parish-Churches. The Cathedral is a noble Pile, adorn'd with 5 Towers, plac'd in Form of a *St. Andrew's Cross*. The Buildings in general are handsome, and there are reckon'd 72 Companies of Traders in the Town. They had formerly a considerable Trade in Woollen Cloth, which is now decay'd. The Church of our Lady is a noble Fabrick, and the Quire adorn'd with excellent Marble Work. One of their ancient Structures of *Roman Architecture* is a Proof of their Antiquity. After the *French King* took it, he very much improv'd its Fortifications, which were, a double Wall, and a dry Ditch, with regular Bastions, and made many curious Mines or Vaults under Ground in the Citadel, which are very dark and deep, and so well contriv'd, that they look more like Terrass-Walks than Mines. In the Center of the Citadel there's a Well, whose Water is 50 Foot deep; and above the Brink of this Well, there are Balconies, which lead to the Vaults under Ground. *La Forrest* says, the *Scheld* begins to be navigable here, where there's a good Key; That they have still a considerable Trade in Stockings and Woollen Stuffs. 'Tis supposed to have been the Residence of *Childerick*, Father to *Clowis* of *France*, because when they were digging the Ruins in 1653, they found a Ring with that Prince's Name and Effigies engraven upon it.

17. *Oreghies*, about 7 Miles S. W. from *Tournay*, Capital of its Chatellany, and noted for making Woollen Stuffs. 'Tis a small, but ancient Place on the River *Scarp*.

18. *Doway*, Lat. *Duacum*, on the *Scarp*, 10 Miles S. from *Lise*, and 15 S. W. from *St. Amand*. 'Twas Capital of the *Catungé* mentioned by *Cæsar*, as 'tis now of its Chatellany, is a large, strong and rich Town. 'Tis noted for the Seminary founded here for *English* Papists, under the Conduct of *Jesuits*, by *Philip II.* of *Spain*, in 1569; from whence they removed about 20 Years after to *Rheims* in *France*, where they publish'd an *English* Translation of the Bible, well known by the Name of the *Rhemish Version*. 'Twas taken after a short Resistance by the *French King* in 1667, who has since fortified it very well. It has a Fort about a Cannon-shot below it on the *Scarp*, with Stüces, by which they can drown the adjacent Country. They have an Annual Fair in *September*, when they sell great Quantities of Worsted Camblets.

19. *St. Amand*, on the *Scarp*, above 10 Miles S. E. from *Tournay*, formerly a Place of good Strength, but dismantled by the *French* in 1667, who cut down the neighbouring Forrest. 'Tis noted for a rich Abbey dedicated to *St. Amand*, as lofty within and without as that of *Westminster*, with a double Row of Galleries or Corridores about it, both Sides excellently wrought in Stone-work and Mouldings. The Abbot has both Temporal and Spiritual Jurisdiction. 'Twas founded by *Dagobert V.* of *France* 804 30 Canons, to whom there's now added 20 *Jesuits*. The adjacent Country is pleasant and fruitful.

20. *Mortagne*, on the Conflux of the *Scheld* and *Scarp*, 6 Miles S. E. from *Tournay*. 'Twas taken and dismantled by the Emperor *Charles V.* in 1541.

21. *La Basse*, on the *Deule*, 14 Miles S. W. from *Lise*, on the Frontiers of *Arras*, a small Town, frequently taken and retaken by the *Spaniards* and *French*; but yielded to the latter by the Treaty of *Aix-la-Chapelle* in 1668.

22. *Armentiers*, 10 Miles N. W. from *Lise*, on the *Lys*, noted for its Trade in Cloth. 'Tis a Place of considerable Strength, was frequently taken and retaken, but yielded

yielded to the French by the Treaty of 1668.

23. *Mont-Kassel*, or *Cassel*, 20 Miles W. from *Menin*, and 14 N. W. from *Armentiers*. 'Tis situated on a Mountain, and supposed to be the *Castellum Morinorum* of the Ancients. 'Twas formerly a very large Town, but has suffered much by War. 'Tis noted for a great Victory gained by the *Flemings* over *Philip the Fair of France*, for another over them by *Philip de Valois* in 1328, and for a 3d in 1677 by *Philip Duke of Orleans*, who defeated the Pr. of *Orange*, afterwards our *K. William*, when he came to relieve *St. Omers* with 30000 Men. The Prince had 3000 Men killed, and 3000 taken, and the *French* lost 2000 Men. This Town is Capital of a Chatellany, which contains 500 Villages.

24. *Bailleul*, or *Belle*, about 8 Miles S. E. from *Mont-Kassel*, Capital of a small Chatellany, noted for the Birth of *Meyerus*, a *Flemish* Historian of good Note.

25. *Messins*, 4 Miles N. E. from *Armentiers*, and 5 S. W. from *Menin*, a handsome Town, where they make great Quantities of Cloth, and have a rich Nunnery, whose Abbess has both Temporal and Spiritual Jurisdiction.

26. *Ipres*, 9 Miles S. W. from *Menin*, and 11 from *Courtray*, Lat. *Ipra*; in *Dutch*, *Ipre*, from the River on which it stands. 'Tis Capital of its Chatellany, which is very large and fruitful, has a Vote in the Provincial States, and is honour'd with the Title of a Viscounty. 'Tis one of the neatest and richest Towns in *Flanders*, and vends a great Quantity of Says and Silks at their Annual *Lent Fair*, and would have been one of the largest Towns in the Country, but that it has several times been destroyed by Fire. 'Twas built in 960 by Count *Baldwin III.* and made a Bishoprick in 1559, Suffragan of *Malins*. 'Twas besieged and taken by the *French* in 1648, restored afterwards to *Spain*, but retaken by *Lewis XIV.* in 1678. Since which, it has continued in his Hands, being confirmed to him by the Treaty of *Nimwegen*. The Houses are well built, but the Fronts of Timber, and fortified with new and regular Outworks, besides a Wall. It lies low, and by its Sluces can lay the neighbouring Country under Water. Their chief Church

is the Cathedral of *St. Martin*, where there are Monuments of several other Bishops. Their Town-House is stately, and has a spacious Front. Their Market-place is large, and has an ancient well built Hall, the Repository for their Wool. They have several Convents; and on the Altar-Piece of the Jesuits Church, our Saviour's Resurrection is admirably painted. In their Cloister, they have the Pictures of all the Jesuits that have suffered in *England*, represented as Martyrs. The Chatellanies of *Bailleul* and *Kassel* belong to its Quarter.

27. *Bourbourg*, 22 Miles W. from *Ipres*, and 3 S. E. from *Graveling*, is a pleasant little Town on the top of an Hill, Capital of its Chatellany, one of the oldest in *Flanders*, and very fruitful, formerly subject to Lords of its own. 'Tis noted for its Free Fairs, has been several times taken and retaken by the *French* and *Spaniards*, and quit- ted to the former by the Treaty of the *Pyrenees*.

28. *Graveling*, Lat. *Gravelinga*, on the Mouth of the River *Aa*, 10 Miles N. E. from *Calais*, and 10 S. W. from *Dunkirk*, in a Plain, cut with several Canals, which make it inaccessible on the Side of the Land. 'Twas ruin'd in the 11th Century by the *Normans*, but rebuilt in the 12th by Count *Thierry*. 'Twas formerly subject to the Chatellany of *Bourbourg*, and chang'd Masters several times, till it came to the Countess of *Flanders* in 1272. 'Twas strongly fortified by *Charles V.* in 1528; and in 1558, Count *Egmont* gave the *French* a great Defeat near this Town, but was afterwards ungratefully beheaded by the D. of *Alva*. Sir *Philip Sidney* attempted to surprize it in 1586, but was disappointed. The *French* took it in 1644, and the *Spaniards* retook it in 1652, with the Loss of 2000 Men. 'Twas taken from them by the *English* and *French* in 1658, and quitted to the *French* by the Treaty of the *Pyrenees*. The Town is small, and ill built, but strongly fortified by 6 good Bastions, defended with Ravelins, and other Outworks, with several Forts to defend the Approaches of the Town; and one must pass 6 Draw-Bridges before they come into it. It has also a Citadel towards the Land, is defended by Fort *Philip* towards the Sea, and at a further Distance by the Forts of *Oye* and *l'Escluse*. When Strangers approach, the Can-

E e e e e 2

tinels

tinels give Notice of their Numbers by so many Tolls of a Bell; and Wool brought from *England* or *France* pays Custom here.

29. *Mardick*, a little Town and Fort about 2 Miles S. W. from *Dunkirk*, on the Bank of the Sea, noted for its Sieges. The *French* took and dismantled it in 1645; the *Spaniards* retook it in 1652; the *English* took it in 1658; and 'twas quitte'd to the *French* by the Treaty of the *Pyrenees*; but there's nothing of the Fortifications now left, except a Wooden Fort with a few Guns.

30. *Winexbergen*, or *Berg St. Vinoc*, Lat. *Berga*, or *Mons Sanctæ Winocæ*, on the River *Colm*, 5 Miles S. E. from *Dunkirk*, with which it communicates by a Canal. It had its Name from a Monastery, built and dedicated here to *St. Vinoc*, an *Englishman*, by Count *Baldwin V.* in 1040. 'Tis Capital of a small Chatellany, honour'd with the Title of a Viscounty. They formerly made a great deal of Cloth; but that Trade is now much decay'd. The adjacent Country is very fruitful, feeds great Herds of Cattle, and abounds with excellent Cheese. 'Twas taken by the *French* in 1645, and confirmed to them by the Treaty of the *Pyrenees* in 1658.

31. *Dunkirk*, on the Bank of the Sea, and at the Mouth of the River *Colm*, lies 10 Miles N. E. from *Graveling*, 20 N. E. from *Calais*; 10 S. W. from *Furnes*, 15 from *Newport*, and 20 from *Ostend*. It took its Name from a Church on the neighbouring Downs, and is said to have been built in 966 by Count *Baldwin III.* It had particular Lords of its own, called Chatellans, about the 13th Century. It came afterwards to the *Earls of Flanders*; and was walled in 1327 by *Henry IV.* Count of *Bar*, to whom it fell by Marriage, as it did afterwards to *Lewis* of *Luxemburg*, Constable of *France*. It came to the House of *Burgundy* with the rest of *Flanders*, and the Emperor *Charles V.* built a strong Fort here in 1535, which was made stronger by *Spinola*. 'Twas taken, sack'd and burnt, by the *French* in 1558, while they were treating with it about a Surrender. 'Twas afterwards surpris'd by the Duke of *Alençon's* Troops, when he attempted to make himself absolute in the *Netherlands*, under the Notion of being their Governor. The Duke of *Parma* recover'd it from the *French* after a

long Siege. He equipp'd part of a Fleet here to join the Invincible Armado that was to invade *England*; but the *Dutch* prevented their getting out. In 1590, Prince *Maurice* attempted it in vain by a Scalado. In 1647, the Prince of *Condé*, with the Assistance of the *English*, took it after a troublesome Siege. In 1652, 'twas besieged and retaken by Archduke *Leopold*, some *English* Frigates having block'd up the Harbour, and prevented its having any Relief by Sea. But in 1658, *Oliver* having enter'd into a League with *France*, a Body of *English* that join'd the *Mareschal de Turenne* laid Siege to it; and after defeating *Don John of Austria*, who came with an Army to relieve it, the Town surrender'd, the *Marquis de Lieda*, their Governor, being kill'd in a Sally, and, according to Treaty, 'twas put into the Hands of the *English*, but sold to *Lewis XIV.* by *K. Charles II.* in 1662. Since which, the *French* King has spar'd no Cost to make it one of the strongest Places of *Europe*. The Town is divided into the Upper and Lower, and is very much enlarged since it came into the Hands of the *French*. The Lower Town is the best fortified; but the whole is very strong. On the Land-side, it has double Walls and Works, and very high Bastions. Towards the Sea, it has treble Works. There are 3 great Forts at small Distances, which command the River or Canal, the Sluces, and the neighbouring Country. It has a Canal on the S. Side, and on the N. is almost encompassed by the Sea, in Form of an Half-Moon. The Sands being very troublesome, and frequently choking the Harbour, the *French* King was at vast Expence to build two long Galleries on each Side of it, with a long Bank of Timber-work, Faggots and Fascins, to secure it; and there are 4 Wooden Forts which defend the Entrance of the Port by Sea. He also erected two Risbanks, which are prodigious Forts, as strong as Art and Labour could make 'em: They command the Canal by which Ships enter the Town, and the Basin within, which is capable of holding 150 Men of War; and for the further Security of the Town, he erected a strong Citadel, which is reckon'd one of the finest in *Europe*, its Bastions resembling Mountains, enough to fill the Beholders with Amazement, and thofe

those who attack it with Despair of Success. The English began this Citadel, which he has since finished, and much exceeded the first Plan: But his principal Design of making this a Harbour fit for containing a sufficient Number of Men of War to command the Channel, has been happily defeated by Providence, a great Tempest having so filled the Harbour with Sand, that it can never be able to answer his End, tho he had built 3. great Sluces a little above the Town upon 3 Currents, in order to send vast Flashes of Water into the Channel, to drive out such Sands as might happen to lodge in the Mouth of it. He employ'd 14000 Men a long while on the Fortifications, Harbour, Basin, and Dock. Dr. Northleigh says, the Town is much of the Size of Oxford, the Streets large and regular, and the Houses neat. They have a large handsome Church, with a fine Altar, and a good Piece of Painting, representing the Last Judgment; and in one of the Chapels dedicated to St. George, there's a Representation of the Martyrdom of that pretended Saint, which is very much esteem'd. There's an English Nunnery of poor Clares here, and another of Benedictines, called the Rich Ladies. There's a Cloister of Franciscan Monks, and another of Nuns here; and the Tower of the great Church has 273 Steps to the top, from whence on a clear Day one may see Dover Cliffs. The Workmanship of the Marble Altar in this Church is said to have cost 20000 Florins. This was formerly a Town of good Trade, which is decay'd since 'twas sold to the French; but in Time of War, the French Squadrons and Privateers which lie here do very much annoy the Channel.

32. Furnes, 10 Miles N. E. from Dunkirk, on the River Colm, is Capital of its Chateaulany, and bears the Title of a Viscounty. The Town is small, but neat. 'Twas built or repaired about 870 by Baldwin, surnam'd Iron Hand, has been often taken and retaken by the Spaniards and French, and was quit- ted to the latter in 1668 by the Treaty of Aix la Chapelle. Their chief Trade is in Linen, and the Territory belonging to the Town is exceeding fruitful. 'Twas taken by the English in 1692, but retaken by the French next Winter.

33. Dixmuyd, lies about 5 Miles S. E. from

Furnes, and belongs to that Territory call'd the Franc of Bruges. 'Tis noted for sustain- ing several Sieges, its Strength, and the Importance of its Situation. 'Tis still in Possession of the French.

The Province of Artois or Arras.

HAS Flanders on the N. and E. Part of Hainault and the Bishoprick of Cambray on the E. and Picardy on the W. and S. It makes it from S. E. to N. W. 60 Miles, and the greatest Breadth from N. E. to S. W. about 32. The Latins call it *Artesia*, and *Archevia*; the French, *Arras*; and the Dutch, *Atrecht*. In Caesar's Time, 'twas the Coun- try of the *Atrebat*s, and by him made Part of *Gallia Belgica*. La Ferrest says, K. Clodion of France having conquer'd it in 444, made it a Province of France. When that Mo- narchy was divided into 4 Kingdoms by the Children of Clovis in 511, 'twas com- prehended in the Kingdom of *Austrasia*. Charles the Bald gave it with his Daughter Judith in 863 to Baldwin I. of Flanders. Isabel of Flanders brought it in Dowry to Philip Augustus of France in 1186. K. Louis VIII. gave it to his 3d Son Robert in 1226. It came afterwards by Marriage in 1318 to Eudes IV. of Burgundy; after the Death of Charles the Hardy. Lewis XI. seiz'd upon it in 1477, as a Fee-Male of the Crown of France. Charles VIII. quitted it in 1483 to the Emperor Maximilian; and it continued in the House of Austria till 1640, that the French seiz'd it, and had it confirmed to them by the Treaty of the Pyrenees. The Air is mild and temperate, the Soil fruitful, particularly of excellent Wheat, with other Corn and Fruit; but has no Vines, which some ascribe to the Neglect of the Inhabi- tants. Guicciardin says, it had 12 Wall'd Towns, 854 Villages, and was divided in his Time into 9 Chateaulanies.

The chief TOWNS are,

1. Arras, Lat. *Atrebatum Civitas*, *Nemetocenna*, and *Nemetacum*. It lies on the Scarpe, 13 Miles N. from the Frontiers of Picardy, 26 S. W. from Lille, and 12 S. W. from Douay. The City is large, consists of two distinct Towns, formerly separated by a Wall,

Wall, now demolished, The one was called the City, and the other the Town; the former subject to the Bishop, and the latter to the Prince. The City is the least, but pleasantest, well fortified with good Bulwarks and Trenches; and among other fair Structures, has a Cathedral dedicated to the Blessed Virgin, with a Library well stor'd with MSS. of Divinity. 'Tis a Bishop's See, which was founded in 531, was formerly Suffragan to the Archbishop of Rheims; but now to *Cambray*. They pretend to have a Wax Taper drop'd from Heaven, which they say burns, and does not consume; and this they keep in a particular Chapel. They have also a Pot of Manna, that they say was shower'd down from Heaven in *St. Jerome's* Time; and this they expose in Time of Drought, to excite the People to pray for Ruin. The other Part, called the Town, is very well fortified, and was reckoned so strong, that while 'twas possess'd by the House of *Austria*, they put an Inscription over one of the Gates, importing, That the French shall never take *Arras*, till the Mice devour the Cats. They took it however after 7 Weeks Siege in 1640. The Spaniards laid Siege to it in 1654, but were defeated, and forc'd to raise it on *St. Lewis's* Day. This Part of the Town has broad Streets, a spacious Market-place, and stately Churches: The Houses are well built, with large and deep Cellars, to which the Inhabitants retire during a Siege. *La Forrest* says, 'twas taken in 1427 by *Lewis XI.* and by the Emperor *Maximilian* in 1493, and quitted to the French by the Treaty of the *Pyrenees*, who have since fortified it very regularly. *Baudrand* says, it has also a strong Citadel. 'Tis noted for making Sails, and that rich sort of Tapestry, which from thence is called *Arras*. The Abbey of *St. Vedastus* in this City has an Annual Revenue of 20000 Crowns. *Clusius* the famous Herbalist, and other Learned Men mentioned by *Blau* and *Guicciardin*, were born here.

2. *Baraune*, lies on the Frontiers of *Picardy*, about 11 Miles S. E. from *Arras*, is a very strong Town, and has a large Jurisdiction. 'Twas taken by the French in 1645, when their Commander *St. Preuil* attack'd the Garrison after they came out upon Terms; but lost his Head for breaking the Articles. 'Tis difficult to besiege this

Town, because there are no Springs or Rivers for the Convenience of the Besiegers.

3. *Hesdin*, Lat. *Hesdinum*, and *Hesdina*, lies 22 Miles N. W. from *Arras*, on the River *Canche*. There was an old Town of this Name upon the same River, anciently the Seat of the Earls of *Flanders* and *Arras*; but not being capable of Defence since the Invention of Guns, *Charles V.* demolish'd it, and built the present Town on the same River, and so well fortified, that 'tis reckon'd one of the strongest Towns in the Country, being a regular Hexagon, and situate in a Morass. 'Tis usually called *Hesdinsart*, because built by *Emanuel D. of Savoy*, who was General for *Charles V.* F. E. R. T. being the ancient Device of the House of *Savoy*. The French took it in 1639, under the Conduct of *M. de Melleray*, for which the French King made him a Marquis next Day.

4. *St. Pol*, or *Paul*, Capital of a small Chancellery in this Province, lies 9 Miles E. from *Hesdin*. This City was a long time possess'd by Lords of its own; one of whom being Constable of *France*, and playing fast and loose with *Lewis XI.* *Edward IV.* of *England*, and *Charles the Warlike D. of Burgundy*, the two latter betray'd him at last to the French King, who cut off his Head, as *Commynes* relates in his Memoirs.

5. *Lens*, Lat. *Lentium*, and *Lendium*, on the River *Souches*, 15 Miles N. E. from *St. Pol*, is a City with a considerable Jurisdiction, which has been ruin'd by the Wars. 'Twas taken in 1557 by the French, pillag'd in 1582 by those of *Cambray*, and sack'd soon after by the Spaniards. 'Tis noted for a great Victory which the French under the Prince of *Condé* obtained near it over the Spaniards in 1648.

6. *Bethune*, on the *Biette*, 9 Miles N. W. from *Lens*, a pretty neat Town, well fortified, and noted for its Fairs. 'Twas anciently subject to Lords of its own, from whom the present Family of *Bethune* is descended. They make great Quantities of excellent Cheese here. 'Twas taken by the French in 1645, and confirmed to them by the Treaty of the *Pyrenees*.

7. *Aire*, or *Arien*, Lat. *Aria*, on the *Lys*, 10 Miles N. W. from *Bethune*. It stands in a Morass, which makes it almost inaccessible. The French took it in 1641; the Spaniards

wards retook it soon after; and the French took it again in 1676, and had it confirmed to them by the Treaty of Nimeguen. 'Tis encompassed on 3 Sides by a Morass, fortified with good Ditches, Bastions, Half-Moons, Redoubts, Horn-Works, and Counterescarp. It can be closely besieged only on one Side, where 'tis defended by the Fortress of St. James, which has 5 Bastions, 2 Half-Moons, and a deep Trench.

8. *Terouane*, or *Terouenne*, Lat. *Teruana*, or *Civitas Morinorum*, was formerly the Capital of the *Morini*, a People of *Gallia Belgica*, in *Cesar's* Time. 'Twas besieged in 1513 by *K. Henry VIII. of England*, when the Emperor *Maximilian*, in Honour of that Prince, fought under his Banner, and wore St. George's Cross. The Emperor *Charles V.* after having miscarried in the Siege of *Metz*, took and demolished this Place in 1553. Since which, its Diocese has been divided into the 3 Bishopricks of *Boulogne*, *St. Omers*, and *Ypres*.

9. *Renty*, 5 Miles W. from *Terouane*, is a Castle betwixt two Mountains, with a fair Village adjoining. 'Tis remarkable for a Victory obtain'd near it by the French over the *Spaniards* in 1554, when the latter lost 3000 Men; and *Charles V.* narrowly escaped.

10. *St. Omer*, on the River *Aspe*, 10 Miles N. W. from *Aire*, and 15 S. E. from *Calais*, Lat. *Fanum Sancti Audomari*, from *Audomarus*, a Native of *Constance* in *Germany*, and Bishop of *Teruana*, who built a Monastery here in 660; and the Reputation of his Sanctity occasioned such a Confluence of People to the Place, that it quickly grew a considerable Town, was first walled in 880, better fortified in 902, and at last became one of the strongest and most important Places of the *Spanish Netherlands*, from whence the Garrison insulted the Frontiers of *France*; and laid the Country about *Citell* and *Boulogne* under Contribution. 'Twas made a Bishop's See, Suffragan of *Cambray*, in 1599. Some are of Opinion, that 'tis the *Accius Portus* mentioned by *Cesar*, from whence he embarked to invade *Britain*; and by the Ruins of a Port, and the sandy Soil in the Neighbourhood, they reckon the Sea did then come up to it; but this is rejected for very good Reasons by *Cluverius* in his *Ger-*

mania Antiqua, Lib. 2. where he proves, that the *Accius Portus* of *Cesar* is that now called *Boulogne*. *St. Omers* is remarkable for the Riches of the Inhabitants, occasioned by a new Canal betwixt it and *Graveling*, for the Abbey of *St. Bertin*, and a Seminary of English Jesuits. 'Tis fortified both by Nature and Art, having on one Side the River and *Marthes*, and on the other is defended by a strong Castle on a rising Ground, several Bastions, Half-Moons, and deep Trenches. In the Neighbourhood there's a great Lake, in which there are several floating Islands, that afford good Pasturage for Cattle, and Shelter for Fish in Extremity of Heat or Cold. *Guccicardus* says, these Islands are easily drawn from one Place to another, by tying Ropes to the Bushes that grow upon them. On this Lake stands the noble and large Monastery of *St. Bernard*, by whom 'tis said to have been built. This City was taken by the D. of *Orleans* in 1677, after the Defeat of the Pr. of *Orange*, who advanced as far as *Mont. Kassel* to relieve it; and 'twas quitted to the French by the Treaty of *Nimeguen*.

The Archbishoprick of Cambray,

HAS *Hainault* on the N. and E. the *Artois* on the W. and *Picardy* on the S. Its greatest Length from E. to W. is about 25 Miles; the Breadth is unequal, being in some Places less, and in others not above 4 Miles. This Country was a long time a Bone of Contention betwixt the Emperors, the Kings of *France*, and Earls of *Flanders*. *La Foreest* says, *Clodion K. of France* took the City of *Cambray* in 441. That *Clodius I.* took it again in 564, and killed with his own Hand *Raguacaire*, who called himself King of it. The Emperor *Charles V.* took it in 1544, and built a Citadel there. The Duke of *Alençon*, Brother to *Henry III. of France*, obliged the D. of *Parma* to raise the Siege of it, and afterwards gave it to *John de Montluc de Balagny*, and 'twas confirmed to him, with the Title of Prince, by *Henry IV.* but the *Spaniards* recovered it next Year, and kept it till 1677, when 'twas taken by *Lewis XIV.* At the same time his Brother took *St. Omers*.

Wall, now demolished. The one was called the City, and the other the Town; the former subject to the Bishop, and the latter to the Prince. The City is the least, but pleasanter, well fortified with good Bulwarks and Trenches; and among other fair Structures, has a Cathedral dedicated to the Blessed Virgin, with a Library well stor'd with MSS. of Divinity. 'Tis a Bishop's See, which was founded in 531, was formerly Suffragan to the Archbishop of *Rheims*; but now to *Cambray*. They pretend to have a Wax Taper drop'd from Heaven, which they say burns, and does not consume; and this they keep in a particular Chapel. They have also a Pot of Manna, that they say was shower'd down from Heaven in St. Jerome's Time; and this they expose in Time of Drought, to excite the People to pray for Rain. The other Part, called the Town, is very well fortified, and was reckoned so strong, that while 'twas possess'd by the House of *Austria*, they put an Inscription over one of the Gates, importing, That the *French* shall never take *Arras*, till the Mice devour the Cass. They took it however after 7 Weeks Siege in 1640. The *Spaniards* laid Siege to it in 1654; but were defeated, and forc'd to raise it on St. Lewis's Day. This Part of the Town has broad Streets, a spacious Market-place, and stately Churches: The Houses are well built, with large and deep Cellars, to which the Inhabitants retire during a Siege. *La Perre* says, 'twas taken in 1427 by *Lewis XI.* and by the Emperor *Maximilian* in 1493, and quitted to the *French* by the Treaty of the *Pyrenees*, who have since fortified it very regularly. *Baudrand* says, it has also a strong Citadel. 'Tis noted for making Sails, and that rich sort of Tapestry, which from thence is called *Arras*. The Abbey of *St. Vedastus* in this City has an Annual Revenue of 20000 Crowns. *Clusius* the famous Herbalist, and other Learned Men mentioned by *Bleau* and *Guicciardin*, were born here.

2. *Baraune*, lies on the Frontiers of *Picardy*, about 11 Miles S. E. from *Arras*, is a very strong Town, and has a large Jurisdiction. 'Twas taken by the *French* in 1645, when their Commander *St. Preuil* attack'd the Garrison after they came out upon Terms; but lost his Head for breaking the Articles. 'Tis difficult to besiege this

Town, because there are no Springs or Rivers for the Convenience of the Besiegers.

3. *Hesdin*, Lat. *Hesdinum*, and *Hesdina*, lies 22 Miles N. W. from *Arras*, on the River *Canche*. There was an old Town of this Name upon the same River, anciently the Seat of the Earls of *Flanders* and *Arras*; but not being capable of Defence since the Invention of Guns, *Charles V.* demolish'd it, and built the present Town on the same River, and so well fortified, that 'tis reckon'd one of the strongest Towns in the Country, being a regular Hexagon, and situate in a Morass. 'Tis usually called *Hesdinfort*, because built by *Emanuel D. of Savoy*, who was General for *Charles V.* F. E. R. T. being the ancient Device of the House of *Savoy*. The *French* took it in 1639, under the Conduct of *M. de Melleray*, for which the *French* King made him a *Mareschal* next Day.

4. *St. Pol*, or *Paul*, Capital of a small Chancellery in this Province, lies 9 Miles E. from *Hesdin*. This City was a long time possess'd by Lords of its own; one of whom being Constable of *France*, and playing fast and loose with *Lewis XI. Edward IV. of England*, and *Charles the Warlike D. of Burgundy*, the two latter betray'd him at last to the *French* King, who cut off his Head, as *Commynes* relates in his Memoirs.

5. *Lens*, Lat. *Lentium*, and *Lendium*, on the River *Souchet*, 15 Miles N. E. from *St. Pol*, is a City with a considerable Jurisdiction, which has been ruin'd by the Wars. 'Twas taken in 1557 by the *French*, pillag'd in 1582 by those of *Cambray*, and sack'd soon after by the *Spaniards*. 'Tis noted for a great Victory which the *French* under the Prince of *Candé* obtained near it over the *Spaniards* in 1648.

6. *Bethune*, on the *Biette*, 9 Miles N. W. from *Lens*, a pretty near Town, well fortified, and noted for its Fairs. 'Twas anciently subject to Lords of its own, from whom the present Family of *Bethune* is descended. They make great Quantities of excellent Cheese here. 'Twas taken by the *French* in 1645, and confirmed to them by the Treaty of the *Pyrenees*.

7. *Aire*, or *Arien*, Lat. *Aris*, on the *Lys*, 10 Miles N. W. from *Bethune*. It stands in a Morass, which makes it almost inaccessible. The *French* took it in 1641; the *Spaniards*

wards retook it soon after; and the French took it again in 1676, and had it confirmed to them by the Treaty of Nimeguen. 'Tis encompassed on 3 Sides by a Morass, fortified with good Ditches, Bastions, Half-Moons, Redoubts, Horn-Works, and Counterescarpes. It can be closely besieged only on one Side, where 'tis defended by the Fortress of St. James, which has 5 Bastions, 2 Half-Moons, and a deep Trench.

8. *Terouane*, or *Terouenne*, Lat. *Teruana*, or *Civitas Morinorum*, was formerly the Capital of the *Morini*, a People of *Gallia Belgica*, in *Cesar's* Time. 'Twas besieged in 1513 by *K. Henry VIII.* of *England*, when the Emperor *Maximilian*, in Honour of that Prince, fought under his Banner, and wore St. George's Cross. The Emperor *Charles V.* after having miscarried in the Siege of *Metz*, took and demolished this Place in 1553. Since which, its Diocese has been divided into the 3 Bishopricks of *Boulogne*, *St. Omer*, and *Ipres*.

9. *Renty*, 5 Miles W. from *Terouane*, is a Castle betwixt two Mountains, with a fair Village adjoining. 'Tis remarkable for a Victory obtain'd near it by the French over the Spaniards in 1554, when the latter lost 3000 Men; and *Charles V.* narrowly escaped. *St. Omer*, on the River *Adre*, 10 Miles N. W. from *Aire*, and 15 S. E. from *Calais*, Lat. *Fonius Sancti Audomari*, from *Audomarus*, a Native of *Constance* in *Germany*, and Bishop of *Terouane*, who built a Monastery here in 660; and the Reputation of his Sanctity occasioned such a Confluence of People to the Place, that it quickly grew a considerable Town, was first walled in 880, better fortified in 902, and at last became one of the strongest and most important Places of the Spanish Netherlands, from whence the Garrison insulted the Frontiers of *France*, and laid the Country about *Citain* and *Boulogne* under Contribution. 'Twas made a Bishop's See, Suffragan of *Cambray*, in 1599. Some are of Opinion, that 'tis the *Ictus Portus* mentioned by *Cesar*, from whence he embarked to invade *Britain*; and by others Ruins of a Port, and the sandy Soil in the Neighbourhood, they reckon the Sea did then come up to it; but this is rejected for very good Reasons by *Cluverius* in his *Ger-*

mania Antiqua, Lib. 2. where he proves, that the *Ictus Portus* of *Cesar* is that now called *Boulogne*. *St. Omer* is remarkable for the Riches of the Inhabitants, occasioned by a new Canal betwixt it and *Graveling*, for the Abbey of *St. Bertin*, and a Seminary of English Jesuits. 'Tis fortified both by Nature and Art, having on one Side the River and Marshes, and on the other is defended by a strong Castle on a rising Ground, several Bastions, Half-Moons, and deep Trenches. In the Neighbourhood there's a great Lake, in which there are several floating Islands, that afford good Pasturage for Cattle, and Shelter for Fish in Extremity of Heat or Cold. *Guicciardin* says, these Islands are easily drawn from one Place to another, by tying Ropes to the Bushes that grow upon them. On this Lake stands the noble and large Monastery of *St. Bernard*, by whom 'tis said to have been built. This City was taken by the D. of *Orleans* in 1677, after the Defeat of the Pr. of *Orange*, who advanced as far as *Mont-Kassel* to relieve it; and 'twas quitted to the French by the Treaty of *Nimeguen*.

The Archbishoprick of Cambray,

Hainault on the N. and E. the *Artois* on the W. and *Picardy* on the S. Its greatest Length from E. to W. is about 25 Miles; the Breadth is unequal, being in some Places 12, and in others not above 4 Miles. This Country was a long time a Bone of Contention betwixt the Emperors, the Kings of *France*, and Earls of *Flanders*. *La Forest* says, *Clodion K.* of *France* took the City of *Cambray* in 441. That *Clovis I.* took it again in 504, and killed with his own Hand *Raguenaire*, who called himself King of it. The Emperor *Charles V.* took it in 1544, and built a Citadel there. The Duke of *Alençon*, Brother to *Henry III.* of *France*, obliged the D. of *Parma* to raise the Siege of it, and afterwards gave it to *John de Montluc de Balagny*, and 'twas confirmed to him, with the Title of Prince, by *Henry IV.* but the Spaniards recovered it next Year, and kept it till 1677, when 'twas taken by *Lewis XIV.* At the same time his Brother took *St. Omer*.

The chief PLACES are,

1. *Cambray*, Lat. *Cameracum*; in *Dutch*, *Camerick*, from whence their Country is called *Cambresis*, and *Cameracensis Ager*. The City is large, neat, well built, and most of the Streets center in the great Market-place, where there's a Town-House, with a famous Clock, much taken notice of. The Town is reckon'd one of the strongest in Europe, being defended by a Citadel, 5 regular Bastions, Ramparts, Walls, Half Moons, and large deep Ditches, which they can fill with Water in a very little time. Its Situation is very advantageous on the *Scheld*, 9 Miles N. from the Frontiers of *Picardy*, 16 S. E. from *Arras*, and 14 S. W. from *Valenciennes*. On the W. Side, in a low Bottom, it has very large Suburbs, with fine Gardens and Meadows on the River. It has 9 Parishes, 3 Abbies, many Religious Houses, Hospitals, and other publick Buildings. 'Twas formerly a Bishop's See; Suffragan of *Rheims*, but made an Archbishoprick in 1559. 'Twas likewise an Imperial Town, under Protection of the County of *Alost*, but united to the County of *Hainault* by *Charles V.* and quitted to the *French* by the Treaty of *Nimwegen*. Dr. *Northleigh* says, the Chapter consists of 48 Canons, and 95 other Ecclesiasticks: That the great Church of our Lady is a handsome Structure, with many Statues and Tombs of Saints; amongst which, those of *St. Sebastian* and *St. Michael*, of curious Marble, are the chief. The Quire and Nave of the Church are separated by Rails of Brass of curious Workmanship; and they have a Clock, which upon striking represents our Saviour's Passion. The Doctor adds, That in this Country he once met with a *Frenchman*, who by 15 Years Labour had made an artificial Head, which, by the Motion of certain Wire-work, Springs and Wheels, would utter whole Dialogues distinctly with a humane Voice, laugh, and express some other Affections; but at last 'twas stole from him. The Ditches of the Citadel are cut out of a Rock, and they have Sluces by which they can drown the adjacent Country. This Place is noted for making the fine Linen, from hence called *Cambrick*. 'Twas a terrible Thorn in the Sides of the *French* while

possessed by the *Spaniards*; and upon any Rupture, was able to lay the Country under Contribution as far as the *Seyne*. The Archbishop has both Temporal and Spiritual Jurisdiction, calls himself Duke of *Cambray*, and Count of *Cambresis*. The Soil of the Country is very fruitful in Corn, but has few Vines, tho' there be very good Fruit of other Sorts.

2. *Chateau Cambresis*, lies on the *Selle*, 13 Miles S. E. from *Cambray*, formerly a Town of Note, but ruin'd by the Wars. 'Tis famous for a Treaty in 1559 betwixt *Henry II.* of *France*, and *Philip II.* of *Spain*, to whom the *French* yielded up 198 considerable Places for *St. Quintin*, *Ham*, and *Chateaus*. 'Twas quitted to the *French* by the Treaty of *Nimwegen*, as was also *Ceneveaux*, another walled Town in this Province, about 6 Miles S. from *Cambray*.

The County or Province of Hainault,

HAS *Flanders* and *Brabant* on the N. Part of *Picardy* and *Champaign* on the S. Part of *Flanders*, *Arras*, and *Cambray*, on the W. Part of *Brabant*, the Counties of *Namur* and *Luxemburg*, on the E. Its greatest Length from S. E. to N. W. is about 60 Miles, and the greatest Breadth from E. to W. about 46. Most of it was anciently possessed by the *Eburenes*, or as some say the *Nervii*. It has frequently chang'd its Name, being first called *Pannonia*, because the Inhabitants worship'd the Idol *Pan*; afterwards *Salutis Carbonarius*, because of the great Quantities of Charcoal formerly made there: Then 'twas called *Lower Picardy*; and at last *Hainault*, from the River *Hain*. 'Tis called in Latin, *Hannonia*; in *Dutch*, *Hennegou*. The Air is clear and sweet, and the Soil fertile, being water'd with the *Sambre*, *Dender*, and other Rivers. It abounds with Corn and Pasture, Gardens and fruitful Orchards. Their Wheat is excellent, and they have Plenty of Lakes, Ponds, Springs, Mines of Iron, Lead, Marble, Touch-stone, and Coal. It has 24 walled Towns, 990 neat and pleasant Villages, and is divided into three Principalities of *Chimay*, *Ligne*, and *Brabant*; 10 or (as some say) 16 Barons, and 22 Baronies. They have also 26 Monasteries, 12 Seigneuries belonging to

to those they call Peers, with several high Offices, as Marechal, Steward, Great Huntsman, &c. The Provincial Estates consist of 5 Members. The 1st is the 12 Peers; the 2d, Prelates and Ecclesiastical Colleges; the 3d, Gentry; the 4th, the great Officers of the Country; and the 5th, the Magistrates of the chief Cities. In the Time of the Romans, 'twas part of the 2d Belgium, and came afterwards to particular Lords, who in the 9th Century took the Title of Counts. Their Male-Issue failing in 1063, it fell by Marriage to Count Baldwin VI. of Flanders, and afterwards to the Family of Bavaria, by marrying the Heiress; but at last Countess Joqualine made Philip the Good of Burgundy her Heir in 1436. It continu'd in the House of Austria till the French King seiz'd it, and had that Part called French Hainault quitted to him by the Treaty of Aix la Chapelle. Spanish Hainault is divided into the Counties of Mons and Brabant, or Bourbon.

The chief PLACES are,

1. *Mons*, Lat. *Montes*; in Dutch, *Bergben*; the Capital of the Country, and one of the best and strongest Cities in the Netherlands. It has its Name from its Situation upon a rising Ground of easy Ascent near the Banks of the *Trull*, a little above where it falls into the *Hain*. It lies 26 Miles S. W. from *Brussels*, 29 W. from *Namur*, and 21 S. E. from *Tournay*. 'Tis strong by Nature and Art, being situated near the Conflux of the *Hain* and *Trull*, and can easily overflow the neighbouring Country by its Sluces. 'Tis well fortified with a Stone Wall, firm Ramparts, a treble broad Ditch, and defended by a strong Castle. Dr. *Northleigh* says, one Side of the Town is fenny, and may easily be laid under Water: On the other, there are two Hills within Cannon-shot; and on the E. Side, there's a rising Ground which cannot be set under Water, but is fortified by 3 or 4 Redoubts, in the middle of large Trenches, which are not easy to be filled with Fascines, being two Pikes Length in Depth; and there are 24 Bastions, besides other Redoubts. The Buildings of the Town are stately and beautiful, the Streets large, the Market-place spacious, and the Inhabitants well supplied with Water by Conduits. Here's a famous College of Canonesses, who are at Liberty to marry when

they please. The Nunnery was founded by *Gualtrude* Princess of Lorraine, who order'd that none but Persons of Noble Descent should be admitted into it. They spend the Morning in Devotions; but in the Afternoon, alter their Dress, go abroad, and divert themselves by Singing, Dancing, and other Courtly Exercises. The Earls of *Hainault* are their Patrons, and name the Abbess, which is an honourable and rich Preferment. She us'd formerly to tender the Oath to the Count at his Inauguration, when he swore to protect the Nunnery, and to confer on him the Dignity of an Abbot. This Monastery is richly endow'd, the 10 Canonesses having 300 *l. per Annum* each, and the Abbess 900. It has also some Canonries for Men, who perform their solemn Devotions, and manage their other Affairs. In their Church, they have the Picture of a dead Body beginning to putrify, so exactly done, that the Sight of it is apt to offend those who have queemish Stomachs. The Bishop's Palace is a stately Fabrick; and they have a noble Tower of fine Architecture, which faces the Town-House. The Provincial Council sits in this City, and receives Appeals from all the Towns of *Hainault* except *Valentignies*, and determineth Causes in the last Resort. In 1572, this City was surpris'd by Count *Lewis* of *Nassau*, Brother to the Pr. of *Orange*, who sent 12 Soldiers that pretended to be Merchants, and to have great Quantities of Wine upon the Road, which they desir'd might be let in betimes in the Morning, lest it should be damag'd by the Heat of the Day; and having by this means obtain'd the Keys before the usual Time of opening the Gates, some Troops that lay in Ambush enter'd, and took the City. That same Year 'twas retaken by the D. of *Alva*. In 1678, the French besieg'd and reduc'd it to great Extremities; but the Pr. of *Orange* defeated the D. of *Luxemburg* before the Town; in which Action, the Earl of *Ossery*, and the British Subjects under his Command, gain'd great Honour. *Lewis* XIV. besieg'd and took it in 1691, but restor'd it by the Treaty of *Ryswick*. His Troops seiz'd it again after the Death of K. *Charles* II. of *Spain*, and still keep it. The Trade of this City consists chiefly in Says, and other Stuffs. It anciently gave Title of Count to the Earls of *Hainault*. It lies in Long. 22. 45. Lat.

F f f f f

50. 30.

50. 30. It is famous for the Battle of *Blarney*, fought near it the last of *August*, 1709. when the *Fr.* under *M. Villars* and *M. Boufflers* came to interrupt the Siege of *Mons*; and tho' strongly intrench'd, and defended by Woods, Ditches, &c. they were, after the most obstinate Defence they had made during the War, drove out of their Camp by the Confederates under the *D. of Marlborough* and *Pr. Eugene*, and chas'd some Miles from the Field of Battle, leaving behind them many of their Cannon, Colours, Standards, &c. with above 300 Officers Prisoners, and some Thousands of Men slain in the Field, besides many taken. The Confederates had also great Loss, but continued the Siege.

2. *St. Gilles*, on the *Haine*, about 5 Miles *W.* from *Mons*, is a small Town, and takes its Name from a rich Abbey, whose Abbot has both the Temporal and Spiritual Jurisdiction of the Town. 'Twas taken by the *French* in 1677, and restored by the Treaty of *Nimeguen*, after they had demolished its Fortifications. They repossest'd and fortified it since; but it was taken Sword in Hand by the Confederates in 1709, and the Garrison made Prisoners of War.

3. *Boslu*, about $2\frac{1}{2}$ Miles from *Mons*, is a neat Village, and has the fairest Castle in all the *Netherlands*; upon which Account *Charles V.* made it an Earldom.

4. *Valenciennes*, is said to have its Name from the Emperor *Valentinian*, who built it, being in Love with the Goodness of the Air, and the Fruitfulness of the neighbouring Soil. It lies on the *Scheld*, about 17 Miles *S. W.* from *Mons*, 16 *S. E.* from *Tournay*, and 14 *N. E.* from *Cambray*. The *Scheld* and a small River called *Rouelle* encompass and divide it by many Channels, and contribute to the Strength and Neatness of the Town. 'Tis the Capital of *French Hainault*, and reckon'd the best Town, says *La Forrest*, of the *French Netherlands*, because of its Situation in a Morass, and of its Citadel and other Works. During the two first Races of the *Fr. Kings*, 'twas govern'd by Counts of its own, who had a Power of Coinage. It fell by Marriage to the Count of *Hainault* in 884, and to the Count of *Flanders* that same way in 903. *Margaret* of *Flanders* brought it by Marriage to the Emperor *Lewis* of *Bavaria* in 1346: After which it came to the House of *Austria*. In 1677, *Louis XIV.* took it by Storm, after 5 Days

Siege, with 50000 Men, when he design'd only to take a Horn-work. He saved the Town from Plunder, but made the Inhabitants pay 40000 Crowns, which he laid out upon the Citadel. 'Tis fortified with strong Walls and Ramparts, extraordinary broad and deep Ditches, has 10 Bridges over the *Scheld*, with stately Houses upon them, can drown the neighbouring Country with its Sluces; and its Situation is such, that it can scarce be besieged by less than two or three Armies. *Dr. Northleigh* says, it lies on the Ascent of an Hill, in an oblong Form; and on the *N. W.* Side, resembles the *S. W.* Prospect of *Oxford*, with several Towers. It has a Causeway to *Lisse* and *Iprez*, 50 Miles long, laid by the *R. King's* Order. The Houses are for most part of Wood, the Market-place large, and the Town-House an ancient and long Structure. The Citadel is on a Hill, at some Distance from the Town, but nothing so strong as those of *Tournay* or *Lisse*. Their great Church, dedicated to our Lady, is a noble Fabrick; built on stately Arches of Marble and Porphyry. The Architecture is ancient, and the Windows so contriv'd, as to let in but a glimmering Light, like that of Thickets and Groves, which the Patrons of Superstition took to contribute to the People's Devotion. That of *St. John* is a modern Structure; and on *St. Peter's*, they have a good Mathematical Dial, which shews the Courses of the Sun, Moon, and other Planets, the Day of the Month, the Season of the Year, and the Length of the Day. They have 3 Convents of Friars. That of the *Franciscans* is very large, and their Chapel adorn'd with the Tombs of the Lords of *Hainault*. The *Jacobins* have in theirs a stately Monument of *John*, Nephew to the famous Count *Baldwin* of *Flanders*, Emperor of *Constantinople*, who built a Palace here, where the Counts of *Hainault* usually resided, because of its pleasant and healthful Situation on the *Scheld*. The *Dominican* Convent has Lodgings for 80 Friars. Here's an Hospital for Orphans of both Sexes, who are liberally maintain'd, and carefully instructed in Trades. Their Arsenal is a fair Structure, and the Town-House stands in the chief Market-place, adorn'd with a carv'd Frontispiece. They have a Corn and Cloth Market, a common Prison, with several spacious Halls; amongst which, the Cloth-

Clothworkers-Hall is most remarkable. They had formerly a good Trade in Cloth, and the Staple of French Wines; but their chief Commerce at present is in Silks and Linen. It had anciently a large Jurisdiction, and the Towns of *Condé*, *Bouchain*, and *Quesnoy*, with 100 Villages, depended upon it. 'Tis noted for the Birth of the Emperor *Henry VIII.* of *Mary*, Daughter to *Charles*, the last D. of *Burgundy*; of *Froissart* the French Historian, and of *Molinetus* the Poet. 'Twas the first Town in those Countries which denied Obedience to the Prince of *Parma*, and refused to admit a Garrison. 'Twas yielded to the French by the Treaty of *Nimeguen*, and continues in their Possession.

5. *Bouchain*, lies on the *Scheld*, 10 Miles S. W. from *Valenciennes*, and is the Capital of the District of *Ostervant*. It maintains a Communication between *Valenciennes* and *Cambray*, is little, but very strong, and was called the Maiden Town, because never taken till 1679, that the D. of *Orleans* took it at one Assault, when the Spanish and Dutch Armies were come as far as *Valenciennes* to relieve it. The French have since made it much stronger.

6. *Quesnoy*, Lat. *Queretum*, a small, but well fortified Town, on the *Rouelle*, 6 Miles S. E. from *Valenciennes*. It has a considerable Trade in Linen, and Stuffs made of half Silk. 'Twas taken by the French in 1655.

7. *Condé*, on the *Scheld*, 6 Miles N. E. from *Valenciennes*, and 12 W. from *Mons*. It lies on the Conflux of the *Scheld* and *Haine*, and is very strong. It gives Title of Prince to a Branch of the Family of *Bourbon*, to whom it came by the Marriage of *Mary* of *Luxemburg* to *Francis de Bourbon* Count of *Vendosme* in 1487. 'Twas the Appennage of *Lewis de Bourbon*, their Grandson, who was killed at the Battle of *Jarnack*, and founded the Branch of the Family of *Condé*. 'Twas often taken and retaken by the French and *Spaniards*, and quitted to the former by the Treaty of *Nimeguen*. 'Tis a pretty little Town, and adorn'd with a small Castle.

8. *Barvay*, Lat. *Bagacum*, and *Baganum*, 11 Miles S. E. from *Valenciennes*. 'Tis a very old City, and by some thought to be the ancient and large City of *Belgium*, which gave Name to all those Countries. *Cellarius* thinks it to be the *Bagacum* of *Antonin's Itinerary*, called *Baganum* by *Peulomy* through Mistake. 'Twas twice burnt in the 16th

Century, and frequently taken in the 17th; so that 'tis now inconsiderable. 'Twas quitted to the French by the Treaty of *Nimeguen*, and taken by the Confederates in 1709, with 1500 wounded French that escaped from the Battle near *Mons*.

9. *Mabenge*, Lat. *Malobodium*, on the *Sambre*, 7 Miles N. E. from *Barvay*, and 18 from *Valenciennes*. It has a considerable Trade in Woollen-Cloth, and is made one of the strongest Towns in the Netherlands. It has a noble Chapter of Canonesses, all descended from great Families. 'Twas quitted to the French by the Treaty of *Nimeguen*.

10. *Landrecy*, on the *Sambre*, 14 Miles N. W. from *Mabenge*, and 17 S. E. from *Cambray*. 'Tis a very strong Town, and was besieged 6 Months in vain by the Emperor *Charles V.* in 1543. 'Twas taken by the French under Cardinal *de la Valette* in 1637. The *Spaniards* retook it 10 Years after. The French took it again in 1655, in the Sight of 30000 Men that came to relieve it. 'Twas quitted to them by the Treaty of the *Pyrenees*.

11. *Avesnes*, 9 Miles E. from *Landrecy*, on the small River of *Hepres*. It has the Title of a County, and gave Name to a Family who were formerly Earls of *Hainault*, *Holland*, and *Zealand*. 'Tis a handsome and strong Town, and important by its Situation, being near the Frontiers of France, and one of the Keys of the County of *Hainault*.

12. *Chimay*, Lat. *Chimaicum*, lies in a Wood on the River *Blanche*, 14 Miles E. from *Avesnes*, and gives Title to a Prince of the Family of *Crouy*. *Guicciardin* says, 'tis a neat Town, adorn'd with the Prince's Palace, which has pleasant Gardens and Labyrinths adjoining. 'Twas frequently ruin'd by the Wars; but has since been rebuilt by its Princes. 'Twas erected into a Principality by the Emperor *Maximilian I.* for his Favourite *Charles de Crouy*.

13. *Marientburg*, 9 Miles N. E. from *Chimay*, so called from *Mary Qu.* of *Hungary*, Sister to *Charles V.* in 1542, when 'twas built, and so strongly fortified, that 'twas reckon'd impregnable: Yet 'twas basely surrender'd to the French in 1554 by the Spanish Garrison, and quitted to them by the Treaty of the *Pyrenees*.

14. *Philipville*, 6 Miles N. from *Marientburg*, on a Hill. 'Twas built by *Mary Q.* of *Hungary* in 1555, and called after her Name
E f f f f f a
p h e w

phew Philip II. of Spain. 'Tis the Capital of the Country betwixt the *Sambre* and the *Meuse* that belongs to the *French*. 'Tis extremely well fortified with 5 Royal Bastions, besides Walls and other good Works. 'Twas taken by the *French*, and quitted to them by the Treaty of the *Pyrenees*.

15. *Charlemont*, on the *Meuse*, 9 Miles N. E. from *Marienburg*, and 9 S. E. from *Philippville*. Moll. places it in the County of *Namur*, but *La Porresse* in *French Hainault*. 'Tis a strong Fortress, and was built in 1555 by *Charles V.* from whom it had its Name.

16. *Givet*, a small Town below *Charlemont*, on the other Side the River, which the *French* have fortified, because of its convenient Situation on the *Meuse*.

17. *Buamont*, 11 Miles W. from *Philippville*, and 10 E. from *Mabenge*, a small and neat Town, well fortified on a rising Ground. It belongs to the Family of *Aerschot*, and has the Title of a County.

18. *Binche*, Lat. *Bincinum*, on a Branch of the *Haine*, 7 Miles E. from *Mons*, a very ancient and small, but pleasant City. Queen *Mary of Hungary* built a fine Palace here in 1542. 'Twas formerly a large and populous Place; but was burnt by the *French* when they took it in 1554. 'Twas afterwards restored to *Spain*, but retaken by the *French* in 1667; and restored again by the Treaty of *Ryswick*; but they have since repossessed themselves of it.

19. *Soignies*, on the River *Sonneque*, 9 Miles N. E. from *Mons*, a small Town, which belongs to the Chapter of *St. Vincent*.

20. *Brenne le Comptre*, on the River *Sain* or *Sin*, a small Town about 3 Miles N. E. from *Soignies*. 'Tis said to derive its Name from *Brennet*, its Founder, who was killed in his Attempt to plunder the Temple of *Delphos*, 280 Years before Christ.

21. *Aath*, on the *Tender* or *Dender*, about 12 Miles N. W. from *Mons*, Capital of the District of *Brabant* or *Burbant*. 'Tis a small, but pretty rich and well fortified City. 'Twas taken by *Lewis XIV.* in 1667, but restored in 1678. The *French* retook it in 1697, and restored it by the Treaty of *Ryswick*. It has a good Trade in Cloth.

22. *Steenkirk*, a Village, 8 Miles E. from *Aath*, famous for the Victory obtain'd there by the D. of *Luxemburg* over the Confederates in 1692.

23. *Enguien*, or *Enguien*, a small Town with the Title of a Barony, about 7 Miles N. E. from *Aath*. 'Tis noted for its fine Park and Labyrinth; and for giving the Title of Prince to a Branch of the House of *Bourbon* since 1487, that *Mary of Luxemburg* brought it by Marriage to *Francis* Count of *Fendosme*, Great Grandfather to *Henry IV.* *Lewis* Prince of *Condé* transferred the Name to *Nogent-le-Rotrou* in *Perche*, which he call'd *Enguin* *le François*. His Grandson *Henry II.* Prince of *Condé*, transferred it again to *Iffouden* in *Berry*; and it has been since transferred to *Montmorency* near *Paris*. *Louis II.* Prince of *Condé*, while Duke of *Enguin*, performed those great Actions which have ranked him among the greatest Heroes.

24. *Halle*, 8 Miles N. E. from *Enguien*, and 8 S. W. from *Brussels*, a small City, noted for a pretended miraculous Image of the Blessed Virgin, which draws abundance of superstitious People thither to worship it. This Image is about two Foot long, cover'd over with Gold, and crown'd with a Diadem of the same Metal. In one Arm, she holds an Image, representing our Saviour; and in her other Hand, a gilded Rose. Great Numbers of People come hither on the first Sunday of *September*, when Deputies are sent with Offerings and Presents from the chief Cities and Towns of the Country. The usual Offering was formerly a new Gown for the Virgin, which are now so numerous, that they are sold to such Votaries as think fit to buy them. The richest Ornaments and Utensils of the Chapel were given by *Philip the Good* and his Dutcheffs, *Charles V.* Archduke *Albert*, and *Maximilian I.* The latter gave a Rose-Tree of pure Gold, two Foot high, branching out, with Variety of Sprigs and Flowers, the same having been consecrated, and sent him by the Pope. *Lippus's* Silver Pen is hung up by the Image in a Chain of the same Metal, with a Copy of Verses under it, acknowledging, that the Virgin assisted him in all his Performances. There's a multitude of other rich Presents in the Chapel, several of which were plunder'd by the Soldiers in 1675, when the *Dutch* and *Spanish* Armies lay near the Place, for which some of 'em were taken and hang'd. The Town is wall'd, was taken by the *French* in 1690; but

but recover'd since, and better fortified, for the Security of *Brussels*.

The County of Namur,

HA *S* *Brabant* on the N. Part of *Hainault* and *Luxemburg* on the S. Part of *Hainault* on the W. and the Bishoprick of *Liege* on the E. 'Tis about 30 Miles from E. to W. and 24. where broadest from N. to S. The Soil is fruitful, and the Country abounds with Fowl and Venison, good Veins of Coal and Iron, with some of Lead, and excellent Quarries of dark-colour'd and speckled Marble; the last of which they call *Jasper*. They have also abundance of *Rossile Nitre*, and great store of Iron-work is made in the Country; for carrying on of which, they have Plenty of Ore, Wood, and Water; and the *Maes* and *Sambre* are of great Use to them for transporting their Commodities. There are 4 Wall'd Towns in the Province, 182 Villages, and several Monasteries, of which that of the *Remonstrances* at *Floris* on the *Sambre* is the chief. The Government of the County is managed by the principal Clergy, the Gentry, and the Deputies of the Towns. Some derive *Namurcum*, the Latin Name of the Town and County, from *Novus Murus*, a strong Hold built there by the *Romans*. Others derive it from the *Nemetes*, who drove out the former Inhabitants, called *Adnatrices*. *La Forrest* says, That *Sigebert* King of *Austrasia* gave this Province in 568, with the Title of a County, to *Glonerick* Count of *Durbuy*, from whose Posterity it came to the Family of *Ardennes*, and was divided into Upper and Lower; the former called the County, and the other the Marquisate. They were reunited in 980, by the Marriage of *Ermengarde* of *Lorraine* with *Albers* Marq. of *Namur*. 'Twas afterwards sold to the Count of *Hainault*, came next to the Earls of *Flanders*, and then to the Family of *Luxemburg*, by whom 'twas sold to *Philip* D. of *Burgundy* in 1423, and from that Family descended to the House of *Austria*.

The chief TOWNS are,

1. *Namur*, which lies about 29 Miles E. from *Mons*, and 32 S. E. from *Brussels*, in

Long. 23. 35. Lat. 50. 28. on the Conflux of the *Sambre* and *Maes*, betwixt two small Hills, in a flat Bottom. The greatest Part of the City lies on the N. of the *Sambre*; and they have a Stone-Bridge over each of the Rivers. On the other Side there's a very high Mountain, on which stands the Castle, which is a stately Structure, and reckon'd one of the strongest in *Europe* both by Art and Nature; the Rock on which 'tis built being steep on all Sides, and fortified to the greatest Perfection. Near the Castle there are many other Houses. The larger Part of the City is adorn'd with a Market-Place, a Town-House, several Churches, and many fine Stone Buildings. Their chief Parochial Church stands on the same Side with the Castle. This Town was made a Bishoprick, Suffragan of *Cambray*, in 1559, and the Church of *St. Alban* was made their Cathedral. The Town suffered much by an Inundation of the *Sambre* in 1571, which bore down all that came in its way. It swelled to an incredible Height, recorded by Marks, which are still to be seen on the Fronts of their Houses; and brought down such a quantity of Flints, as had almost choak'd up their Channel, and left a small Island, that still remains at the Conflux of the two Rivers. *Dr. Northleigh* says, they have 9 or 10 handsome Churches, and that of *St. John* is beautified with several fine Marble Altars. The *Jesuits* Church exceeds that of *Antwerp* both in Structure and Bulk, the Beauty of the Marble, and the Curiosity of the Workmanship. 'Tis supported by wreath'd Columns of red Marble, of the *Dorick* Order, curiously vein'd, near 14 Yard in Diameter, with beautiful Bases and Cornishes. They have very good Paintings, especially one of *Ruben's*, which represents our Saviour's Resurrection. This Church is 140 Foot long, 120 high, and 100 broad. The Castle, he says, is almost inaccessible, except from the River; and on the top of the Rock they have a very deep Well, and two good Springs, which supplies them constantly with Water. They have 3 Collegiate Churches, one of 'em a College of Canons, founded by one of their Earls, and much commended by Travellers. They have several Monasteries of both Sexes; but that of the *Franciscans* exceeds the rest, and is a very stately and noble Building.

Building. The Provincial Council meets in this City; but there lies an Appeal from them to the Court of *Malins*. The Citizens are well disciplin'd, of a Martial Temper, and have but few Merchants or Tradesmen among them. The City is of a Circular Figure, about as big as *Exeter*, and but indifferently built, except in two or three of their Squares. 'Tis well fortified with a Wall, Ditches, Ravelins, and Counterscarps, after the modern Way. The French King took it in 1692, and King William of Great Britain retook it after a long and vigorous Siege in 1695. The French seiz'd it with the rest of the *Netherlands* after K. Charles II.'s Death, and still possesses it.

2. *Bovines*, *Bouvines*, or *Bovignes*, Lat. *Bovine*, *Bovinicum*, and *Bovinum*, on the *Maes*, 9 Miles S. W. from *Namur*, and 2 below *Dinant*, a small Town, which was walled in 1173. It suffered much by War, especially in 1554, when 'twas almost ruined by the French. 'Tis chiefly noted for being a Pass betwixt *Namur* and *Luxemburg*. 'Twas basely surrender'd to the French in 1676 by the mutinous Garrison, who laid down their Arms, and would not defend it, tho' the Governor represented to them the Dishonour of the Action.

3. *Walcourt*, or *Valencourt*, about 16 Miles S. W. from *Namur*, a small Town, in a pleasant Territory, noted for a Victory obtain'd by the Confederates over the French in 1689.

4. *Charleroy*, on the *Sambre*, 14 Miles W. from *Namur*. 'Twas built by the Governor of the Spanish *Netherlands* in 1667, to stop the Incurfions of the French, and called after Charles II. of Spain. The French took it before the Fortifications were compleated, and made it one of the strongest Places in the *Netherlands*, because of its important Situation on the Frontiers of *Namur*, *Hainault*, and *Brabant*. 'Twas quitted to them by the Treaty of *Aix la Chapelle*. The Prince of *Orange* besieged it twice in vain in 1672 and 1677. 'Twas restor'd by the Treaty of *Nimwegen*, retaken by the French in 1693, restor'd again by the Treaty of *Ryswick*; but re-seiz'd by them on K. Charles II.'s Death.

5. *Fleurus*, or *Flerus*, a famous Abbey 6 Miles N. E. from *Charleroy*, noted for a Victory by the French over the Confederates in 1690.

SPANISH BRABANT,

Including the Marquisate of *Antwerp*, and the Lordship of *Malins*, is, according to *Moll*, about 60 Miles from S. to N. where longest, and 38 from E. to W. where broadest. It has *Dutch Brabant* on the N. the County of *Namur* and Part of *Hainault* on the S. the Bishoprick of *Liege* and Part of *Dutch Brabant* on the E. *Flanders* and Part of *Hainault* on the W.

Authors differ about the Origine of the Name; but the most probable Opinion is, that it was so called from *Brach* and *Bandr*, which in the old Language of the Country signifies a neglected or uncultivated Soil, such as we have heard most of *Flanders* to have formerly been. The Territory so called was much larger anciently than now, tho' *Dutch Brabant* be included; so that it took in most of *Flanders*, and some adjoining Countries, as appears by the great Assistance the *Brabanders* have given to several Princes, the Exploits said to be perform'd by them in *Europe* and *Asia* during the Holy War, and several neighbouring Districts still under their Jurisdiction. The ancient Inhabitants were the *Aduatici* and *Ambivariiti*, mentioned by *Cesar*. They were afterwards called *Bethasii*, says *Cluverius*, and *Riparii* according to *La Forrest*, who, after the Declension of the Roman Empire, were govern'd by several Lords of their own. *Pepin of Landen*, in the 6th Century, was the first who assum'd the Title of Duke of *Brabant*, or *Austrasia Inferior*. *Pepin the Short*, one of his Posterity, reunited it to the Crown of France in 572. *Lotharius*, one of his Successors, gave it to his Brother Charles of France about 974. The Emperor *Charo II.* added a great Part of the Kingdom of *Lorraine*, which he gave that Prince to hold of the Empire, for which he was excluded from the Crown of France. This Country came by Marriage to the Count of *Louvain* and *Mons* in 1004; and the Heiress of the last D. of *Brabant* brought it by Marriage to the Count of *Flanders* in 1347; and by other Marriages it came to the House of *Burgundy* in 1358, and from them to the House of *Austria*.

The

The Air of the Country is temperate and healthful; the Soil for most part fruitful, except in the N. where 'tis sandy, or cover'd with Broom and Heath. But the People of *Brabant* and *Flanders* have an extraordinary Way of improving their barren Ground, by planting it with Flax, by which one Acre is said to yield more than 4 or 5 of the best Corn Ground in the Country. *Blauu* observes, That betwixt *Antwerp* and *Ghent*, for 25 Miles together, on the barren Road, every 3d or 4th Field was in its Season stock'd with such excellent Flax; that it yielded from 40 to 50 *l.* per Acre, because of the vast Quantities of Linen made in that Country, and of the Flax they exported, whereof they reckon'd 100000 *l.* worth was Annually sent to *London*. After their Flax was gather'd in, they sow'd Turnips on the same Ground, which yielded as much per Acre as their best Corn Land. In the April following, they sow'd the same Ground with Oats or Rye; and upon the Oats, Clover-grass-Seed, harrowing the Ground with Bushes; and after the Oats were mow'd down, the Clover grew up, and afforded rich Pasture till *Christmas*. The next Year, it produc'd 3 Crops, so that the best Meadows in the Country did not yield the like, and continued good for 4 or 5 Years without renewing the Seed. What Turnips they did not sell, they beat together with the Leaves, after being well wash'd, boil'd, and gave 'em to their Cattle, which fatten'd, and made 'em give much Milk. They made also considerable Profit by the Sale of their Clover-grass, and of the Oil pressed out of the Seeds of their Turnips and Flax by their Wind-mills.

The States of this Country consist of the Abbots, the Nobility and Gentry, and the Deputies of the Cities.

The Privileges of the *Brabanders* are greater than those of their Neighbours; of which *Guicciardin* gives the following Account: 1. That neither their Persons or Estates can be stopp'd, sequestred, or arrested, in the first Instance in any Part of the Empire. 2. Their Duke can give no new Gifts, or confer any Inheritance upon the Clergy, without Consent of that Quarter, and of the Capital City where the Gift lies. 3. He cannot try or punish any Man but in a legal Way, or without being heard

by his Council or Advocate. 4. He can admit no Strangers into publick Offices, except some belonging to the *Chancery*. 5. The States are not to be conven'd out of their own Country; and what they enact elsewhere, does not oblige the People. 6. If the Prince invade their Privileges, they may protest against his Proceedings, renounce their Allegiance, chuse another, or provide for their own Security by what other Method they think fit.

The *French King* claim'd this Dutchy in Right of his Queen, and made War upon the *Netherlands* on that Account in 1667. alledging, that according to a customary Law of this Province, the Children of the first Marriage succeed to the Father's Inheritance; but the *Spaniards* answer'd, That his Queen and he had renounc'd all such Claims by their Contract of Marriage, ratify'd by the *Pyrenean Treaty*: That no Instance could be given of any such Succession to the Sovereignty of this Dutchy: And by the Edict of *Charles V.* and an Act of the States, 'twas declar'd inseparable from the Crown of *Spain*.

Spanish Brabant is divided into the Quarters of *Louvain*, *Brussels* and *Antwerp*. The first is said to have been a Country or Dutchy above 1500 Years ago, and govern'd the greatest Part of the Province. *Guicciardin* says, their Princes were called Earls of *Louvain*, till the Time of *Godfrey the Bearded* above 600 Years ago.

The chief T O W N S are,

1. *Louvain*, Lat. *Lovanium*. Some derive the Name from a *Scots* General or Lord, called *Louve* or *Lupus*; but others, with more Probability, from its Situation in a low fenny Ground. It lies on the River *Dele* or *Dyle*, about 14 Miles N. E. from *Brussels*, 28 N. W. from *Namur*, 12 S. E. from *Malines*, and 24 from *Antwerp*, in Long. 23. 30. Lat. 50. 52. The City is pleasantly situated, divided into two Parts by the River, and is 6 Miles within the Walls, with many Fields, Hills, and Gardens, which make it commodious and delightful. It has been enlarged at several Times: The last Walls were begun in 1361; and *Lipsius* says, That in 1427, it was considerably larger than *Liege*, *Cologne*, *Ghent*, or *Paris*, excluding

dung the Suburbs of the latter. *Bleau* says, it contains: 11 Market-Places, 12 principal Streets, 140 of less Note, 14 Mills, 16 Bridges, 4 publick Fountains, 53 Towers on the Walls, 11 Gates, built with curious white Stone, and 16 Draw-Bridges for securing them. 'Tis encompassed with large deep Ditches, cut in many Places through a stony Rock or hard Gravel: The Walls are strong, rais'd from the Bottom of the Ditch; and their most remarkable Tower is that called *Verloren Koft*, or Lost Labour, because they designed to have built 6 more such; but were hinder'd by some publick Calamity. About 1350, there were said to be 4000 Weavers Shops in this City, upon each of which 30 or 40 other Persons depended for a Livelihood; which *threws* it to have been very populous: And if other Trades bore any Proportion, seems to justify *Lipsius's* Account, who says, That on the Ringing of a publick Bell, which was a Signal for Tradesmen to leave Work, the Streets were so crowded, that the Women were forc'd to take in their younger Children, to prevent their being hurt in the Throng. Their most remarkable Church is that of St. *Peter*, whose Tower was one of the fairest in the Country, till damaged by Fire. It has 18 Canons, and a Provost, who formerly was always a Person of Quality, administred the Oath to the Prince upon his Inauguration, swore him to be their Patron, and had his Horse for his Fee. The *Dominicans*, *Franciscans*, and *Carthusians*, have each a Convent; and the latter lies so remote from all other Buildings, that they seem to live in a Desert within the Walls of this populous City. The *Jesuits* have also a College here. Their Churches in general, their Hospital, and other Publick Buildings, are fine Structures. *Goltz* commends the Town-House for a large and costly Fabrick of curious Workmanship; and among other Laws hung up here, takes Notice of one which order'd those who committed, or assisted in committing a Rape, to have their Heads cut off with a Saw. The Castle stands on a high Hill, surrounded with Vineyards, in a healthful Air, and from which there's so delightful a Prospect, that the Princes of the Country chose it for their Residence; and the Emperor *Charles V.* and his Sisters were bred

here in their Youth. They have an extraordinary Sluce, which was built about 1363, to command the Waters of the *Dyle*. A Man who had the Charge of it in 1573, neglecting to open the Flood-gates, upon a sudden Thaw, and a great Rain, the River swelled so high, that it broke over the Walls, overthrew several Houses, and drown'd many People and Cattle. Their large University, upon whose Account 'tis called a City of Scholars, was founded, some say, about 926, endow'd by *John IV.* D. of *Brabant*, and confirmed by *Pope Martin V.* in 1425; but they had no Power to confer Degrees in Divinity till Duke *Philip the Good* obtain'd it from *Pope Eugene IV.* *Beaune* says, in his Time it exceeded all the Universities in *Italy*, *Spain* and *France*. *Goltz* says, it had outdone its Mother of *Cologne*; and except that of *Paris*, exceeded all others for Number of Students, and Nearness of Buildings. The Students of Divinity wear constantly Gowns and Caps, and the rest only at publick Exercises. They have 43 Colleges, 4 of which, called *Pedagogies*, are chiefly for Instruction of Youth, and the rest for those of riper Years, who may go and come at Pleasure. In each of the 4 *Pedagogies*, called *Lilium*, *Falso*, *Porcum*, and *Castellum*, there are two Professors of Philosophy, each of which read two Hours per Day; the Students write after them; and when matriculated, are obliged to swear they believe all the Articles of the *Romish* Church. The Professors of those 4 Colleges chuse Annually out of them 48 Scholars of two Years standing; and after Examination, 12 of 'em are appointed for Exhibitions; and he who is first elected, has a Bell rung for him in his College 48 Hours together. Every Licentiate, upon his going out, is conducted from the Schools with Drums and Trumpets, treats all the Doctors and his Opponents, and gives Gloves. There's a Bell rung at his Lodgings 24 Hours together; he has Liberty to chuse a Coat of Arms, and is ever after accounted a Gentleman. *Goltz* says, they confer the Degrees of Master, Licentiate, and Doctor. The University is govern'd by a Rector and Senate, which consists of the superior Graduates of the 5 Faculties of Divinity, Canon Law, Civil Law, Physick, and Arts, who chuse the Rector every half Year. His Office is the

the highest Dignity, and the Magistrates of the City give Place to him. The Emperor *Charles V.* gave him the Right Hand at a solemn Procession. On Holidays, and other Solemnities, he is attended by 8 Beadles, who go before him with Silver Maces, and he is followed by his Menial Servants. They have also a Promotor, who, by Leave from the Rector, apprehends and punishes Criminals, sometimes by Death, but mostly by Fines. The Rector has great Power elsewhere; but in the Senate, who share the Supreme Authority with him, he is no more than President. If a Citizen sue a Scholar, the Cause is brought before the Rector; but if a Scholar sue a Citizen, 'tis brought before the Conservator, who is generally a Bishop or Abbot skill'd in the Laws, and sworn to preserve the Privileges of the University; and his Court being Ecclesiastical, to which Appeals lie from any other Court of that sort in *Brabant*, he has a Power to excommunicate upon Contumacy. They have a Chancellor, who confers Degrees, which is also perform'd by the Provost of *St. Peter's*, who takes Place next to the Rector. For the Learned Men produc'd here, we refer to *Bleau*.

Notwithstanding the above-mentioned Encomiums of this University, *Dr. Brown* says, *Oxford* may vie with it for Situation, and exceeds it in Buildings and Endowments. *Mr. Ray* says, the Gentlemen Students are plac'd in a peculiar Form, called *Scannum Nobilium*: All of 'em pay Fines for Absence from Lectures and Exercises; and the 12 appointed to Exhibitions above-mentioned have their Lodgings, Diet and Salary, in what College they please, chuse what Profession they think meet; and out of them the Professors are usually chosen. He adds, They give the Degrees of Batchelor Licentiate and Doctor; but can't be Licentiates in Divinity till after 11 Years Study, and seldom Doctors till 50 Years of Age, without extraordinary Proofs of their Ability. The Schools, he says, are better than those of *Cambridge*, but inferior to those of *Oxford*. In 1654, there were no less than 1600 Students here. In the chief College for Divinity, there are 120 Students maintain'd at the publick Charge; and in the 4 Pedagogies, there are 200 maintain'd in the like

manner. Their Licentiate, he says, is a Medium betwixt a Batchelor and a Doctor.

This City has the Precedency of all the rest in *Brabant*, because of its Antiquity; and that 'tis the Place where the Prince and People do first take the Oaths mutually to one another. It has also the first Vote in the Provincial States, except in raising Money, when *Antwerp* has the Precedency, because of its Wealth, and larger Proportion in its Share of the publick Taxes. 'Twas abandon'd by the *French* in 1706, after the Battle of *Ramelies*.

About half a League from this City, lies an ancient Palace belonging to the Dukes of *Aerschot*, formerly reckon'd one of the state-liest in *Europe*, but now ruinous; is still noted for a noble Avenue about a Mile long, and 40 Foot broad, being cut down to an exact Level through a hilly Ground, with Rows of Linden Trees on each Side, by which 'tis shaded like an Arbour. The Park and Gardens are extraordinary fine.

2. *Tilmont*, *Tirlemout*, or *Tienen*, about 8 Miles S. E. from *Louvain*, on the River *Geet*. 'Twas formerly a Place of great Extent and Commerce, and one of the principal Cities of the Province. 'Tis still about a League in Compass, retains its ancient Privileges, but suffered much by the *French* in 1675.

3. *Leewe*, Lat. *Levia*, on the *Geet*, 5 Miles E. from *Tirlemont*, a small, but strong Town, having been fortified to prevent the Incursions of the *Liegeois*, and enjoys the Privileges of the Second-Rate Cities of *Brabant*. 'Tis a neat City, and very strong, by reason of its Forts and Sluces. 'Twas taken by the *French* in 1678, but restored by the Treaty of *Nimeguen*. 'Tis noted for a great Priory of *Augustins*, whose Prior is one of the 12 chief Nobles of the Province. It has a great Trade in Beer, which is much esteem'd, and by some preferr'd to Wine.

4. *St. Trone*, or *Truyen*, Lat. *Centronas*, supposed to have been the Capital of that People. It lies 2 Miles S. E. from *Leewe*, 'twas ruin'd by the *French*, who dismantled it in 1675, and carried from hence 40 Waggon-load of Arms to *Maestricht*.

5. *Landen*, 5 Miles S. from *Leewe*, on the same River, a small, but ancient Town, noted for a dear-bought Victory obtain'd

G g g g g

by

by the *French* under the D. of *Luxemburg* in 1693, over the Confederates commanded by *K. William of Great Britain*, at *Neerwinden* near this Place.

6. *Hannuye*, 7 Miles S. from *Landen*, a small wall'd Town, in a pleasant and rich Country, Capital of its District.

7. *Ramelies*, 6 Miles W. from *Hannuye*, famous for the Victory obtain'd here over the *French* under the Conduct of the D. of *Marlborough* in 1706; of which we gave an Account, P. 824.

8. *Gemblours*, 11 Miles S. W. from *Ramelies*, Lat. *Gembiacum*: It is a wall'd Town, and stands on a steep Hill near the River *Orn*, had formerly the Title of a County; but the Abbot of a rich Abbey of *Benedictines*, built here about 922, and dedicated to *St. Hubert*, has for a long time had the Spiritual and Temporal Jurisdiction of the Place. They have a famous Library, well stor'd with MSS. of which *Erasmus* made great Use; some of 'em are suppos'd to have been writ by *St. Sigebert*, who compiled the brief Chronicle here from *Valentinian* the Younger and *Gratian* to his own Time, and died in 1112. The Town is encompass'd on all Sides with Precipices and deep Valleys, except on the E. where 'tis overtopped by the highest Point of the Hill. Near this Town lies the Ruins of one of those Caulways, which beginning at *Barway* in *Hainault*, led to the principal Towns in *Gaul*. 'Twas paved with great Stones, and a hard flinty Gravel underneath; which not being the Product of that Country, must have been brought hither from elsewhere with great Expence. The Inhabitants call 'em *Brunhault's* Caulways; and they alledge, they were made by a potent King of that Name, who had large Dominions in these Parts. They are not mentioned by *Julius Caesar*; so that they must either have been ruin'd before his Time, or made and ruin'd since. Near this City, the *Spanish* Forces under *Don John of Austria* obtain'd a Victory over the Confederate States in 1578. After which, a great Part of the Country return'd to the Obedience of *Spain*.

9. *Senef*, 12 Miles W. from *Gemblours*, noted for the Battle between the Prince of *Orange* and the Prince of *Condé* in 1674, where the Victory was claimed on both

Sides; but the Advantage was visible on that of the former, as we have mentioned P. 817. This Place lies properly in the Quarter of *Brussels*.

10. *Judoigne*, 6 Miles S. from *Tilmont*, on the *Geet*, remarkable only for its healthy Situation, and an ancient Castle, in which the Children of the Princes of *Brabant* were formerly brought up.

11. *Halen*, 14 Miles E. from *Louvain*, upon the *Geet*. It suffered much by the Wars betwixt *Brabant* and *Gelder*, and on that Account had large Privilege granted by its Princes.

12. *Dieft*, 4 Miles N. W. from *Halen*, noted for its Manufactures of Linen and Woollen. It has the Title of a Barony, is Capital of a considerable District, and has belong'd for some Ages to the Princes of *Orange*. 'Tis also noted for the Birth of *Cleward* the famous Linguist, who wrote the Greek Grammar that bears his Name, and was very well vers'd in the *Arabic*, which he had study'd in *Fez* in *Morocco*, and died as he was about to write against the *Mahometans* in that Language.

13. *Sichen*, or *Sichem*, on the *Demer*, about 3 Miles W. from *Dieft*, a small Place, neither strong by Nature nor Art, but remarkable for the noble Defence the Garrison and Inhabitants made against the Prince of *Parma*, who took it at last with great Slaughter, and afterwards plunder'd it, as *Bentivoglio* informs us.

14. *Areschot*, on the *Demer*, 5 Miles W. from *Sichen*, a small City, which the Emperor *Charles V.* erected into a Dutchy. 'Tis walled, and has a small Territory depending upon it.

Brussels Quarter.

THE chief City is *Brussels*, on the *Sinne* or *Saine*, about 14 Miles S. W. from *Louvain*, 11 from *Malins*, 22 S. from *Antwerp*, and 25 S. E. from *Ghent*, in Long. 23. 7. Lat. 50. 52. 'Tis situated in a rich Country, abounding with all Necessaries for Man and Beast: At one time it entertain'd 7 Crown'd Heads, besides the Dukes of *Savoy* and *Lorraine*, with 9000 Horse belonging to their Retinues. Within a quarter of a League

League to the S. lies the Forrest of *Soignies*, which furnishes the City with Fuel, and the Court with good Game for Hunting. The City is encompassed with many Abbies and Monasteries, and the neighbouring Country is well planted with Fruit-Trees of all Sorts, and watered with pleasant Fountains and Streams, whose murmuring Noise, expressed by the Dutch Word *Ruysselen*, is by some thought to have given Name to the City. The River *Sinne* runs through it, from whence to the *Rupel* there was a navigable Channel, made in 1560 by *Charles V.* and *Philip II.* which cost above 500000 Crowns. 'Tis 5 Leagues long, dug through a Mountain, which was reduced to a Level, has many Streams brought to it from the neighbouring Country, and 5 large Sluces built in convenient Places for collecting the Waters, and letting them out as Occasion requires, for the Vessels which trade with *Antwerp* and other Places; and 'tis observ'd, that the Bed of the Waters is 40 Foot higher at the Head of the Channel near *Brussels*, than at the Mouth of it where it falls into the *Rupel*. This City is far more populous than *Louvain*, tho' the Walls be 200 Paces less in Circumference. 'Tis well built; the Streets are large, handsome and convenient. 'Tis the Seat of the Viceroy of the *Spanish Netherlands*, and of all the Courts belonging to the Government. They are fond of the Number 7 in many chief Things belonging to the City; as, 7 publick Fountains, 7 principal Streets that center in the great Market, 7 stately Houses in the Market, let out by the Senate for the Use of the Corporation; 7 Parish-Churches, 7 Noble Families, eminent for their Antiquity and great Privileges; 7 Midwives, licens'd and sworn by the Senate, who are obliged to go to the Poor as well as the Rich when call'd; 7 publick Gates of *Dorick* Work, remarkable for leading to so many Places of Pleasure or different Exercise: The 1st, called the *Louvain* Gate, leads out to the best Fowling; the 2d, called *Algidomontana*, or Cold-Hill Gate, leads to a Place of Fishing; that called *Porta Obbruxellensis*, leads to Hunting; that of *Anderlecht*, to pleasant Fields; that of *Flanders*, to Pasture Grounds; that of *Laken*, to Springs and Vineyards; and that of *Mechlin*, to Gardens. 'Tis encompassed with

a double high Wall, and very large Ditches. On the Walls, there were formerly 74 Towers, but many of 'em now ruin'd by Age and War. The Walls are broad, and the Citizens walk on 'em as at *Antwerp*. The City is built on the Front of an Hill, and (says *Dr. Northleigh*) is larger than *Bristol*. Their Houses pretty much resemble the *English*, and are cover'd for most part with Slate and Tiles. Their most remarkable Church is that of *St. Gudula*, formerly dedicated to *St. Michael*; but *Gudula*, a Daughter to one of their Counts, having richly endow'd it, they chose her for their Patroness. It has two Towers, with 500 Steps each, and a Chapel, where they keep 3 consecrated Hosts, from which they alledge that Blood proceeded when they were stabb'd by some *Jews*, in Contempt of our Saviour, about 3 or 400 Years ago. They have an Annual Procession in Remembrance of this suppos'd Miracle, when they expose the Hosts as if they were still bleeding: This Church is an old *Gothick* Fabrick, and has the Tombs of some Dukes of *Brabant*. In *St. Mary's* Church are the Tombs of Archduke *Ernest*, and the Count of *Isenbourg*, with Inscriptions, containing their History. The *Jesuits* College is very noble, and by its Front, Church and Tower, seems to have been the Model to that of *Antwerp*. They have a fine private Chapel, a pleasant Garden, and a good Library; and betwixt the Windows, the Pictures of the chief Writers of their Society, with several *Roman* Antiquities brought from *Italy*. They have several Schools for Grammar, Rhetoric, and Philosophy, and the Brothers of the Society are about 70 in Number. The *Franciscans* and other Orders of both Sexes have Monasteries here; and they have one for penitent Harlots, who enter into the Order of *St. Austin*. They have also an Hospital for the Cure of the Sick, and 4 for the Entertainment of poor Strangers for 3 Days, with a Bedlam for Lunatics, and an Hospital for poor Children laid down in the Streets. The Palace where the Governor resides is an ancient Fabrick in the Park, to which adjoins the Emperor's Palace built by *Charles V.* with a curious Grottesque and Water-works. *Bleau* commends it as a stately and magnificent Palace, with Accommodations for the greatest Prince in the

World; but it comes short of the Magnificence of the present Times. The adjoining Park is very pleasant, adorn'd with Water-works, Grotto's, an Aviary, fine Walks, and well stor'd with Deer. The Palace has two Galleries, one of 'em adorn'd with the Pictures of Emperors, Kings, Queens, Princes, and other great Persons: Among 'em, there's a curious Piece representing Archduke *Albert*; and upon a closer View, it likewise represents the Archdutchess *Isabella*; and there's a Picture of hers of the same Nature. The Town-House is an ancient and noble Fabrick, whose Front much exceeds that of *Amsterdam*, and Water is convey'd by Pipes to the very Top of it. The Tower is adorn'd with a Brass Statue of St *Michael*, the Guardian Angel of the City: The Statue is 15 Foot high, and so accurately pois'd, that it can easily be turn'd round. In the Hall, there's great Variety of Pictures by the best Masters; one of 'em by *Ruben*, representing *Solomon* judging the Controversy betwixt the two Harlots, valued at 3000 Florins. The Palaces of *Egmont*, *Alva*, *Orange*, and *Bourneville*, are noble Structures. The Royal Stable is also worth a Traveller's View, having Room for 127 Horses, with all Necessaries for them. Over it, there's a Magazine for Arms, belonging formerly to the Dukes of *Burgundy*, where are kept the Sword of *Charles the Bold* D. of *Burgundy*, with which *Charles V.* us'd to create the Knights of the *Golden Fleece*; Archduke *Albert's* Armour, that he wore at the Battle of *Newport*; and the Chariot in which Archdutchess *Isabella* enter'd *Brussels*, which cost 14000 Crowns. They likewise preserve here the Skins of 3 Horses, so artificially stuffed, that they resemble the Originals; one that belong'd to King *Philip II.* which they say cost 12000 Crowns; the 2d to the Archdutchess *Isabella*, when she enter'd *Brussels*; and the 3d to Archduke *Albert*, on which he escap'd from the Battle of *Newport*. They have a Custom here, and in other Towns of the *Netherlands*, to harness 3 or 4 Mastiffs Side by Side, and make them draw Coaches, and little Carrs with Provisions and Goods; and they employ Women for Porters. This City abounds with People of Quality and Note, who take a Tour every Night in the Lower Town, but the Men and Women

in different Coaches and Circles; yet they meet continually; and by their frequent Talk and Salutations, do many times interrupt the general Society. They have an Annual Custom on the 19th of *January*, says *Misson*, for the Women to undress their Husbands, and carry 'em to Bed; and the Husbands treat their Friends next Day. They assign two Reasons for it: The 1st is, That the City being once obliged to surrender to their Enemy, the Women were allowed only to carry out their Children, and what else they thought most valuable; upon which they took their Husbands on their Backs: The 2d, That having escap'd in a Battle which they undertook under St. *Lewis*, they came home in a Body, were met by their Wives out of Town, and carried home in their Arms. Some few Protestants live here; but they dare scarce own their Religion, adds *Misson*; which does not very well agree with his Assertion, That they have no Inquisition in the *Netherlands*. 'Tis observ'd, that the Houses of the Citizens are for most part stately and splendid, and well furnish'd with Springs and Gardens. They are noted for Extravagancy in adorning the latter with Flowers; so that those of a small Plat have been valued at 7 or 8000 Florins. They make use of the Filth of the City for dunging their Flower-Beds, which makes it bear a good Price. There's a Marble Pyramid erected upon the Place where stood the Palace of *Culemburg*, which was raz'd by the D. of *Alva*, because the Confederate Lords met there for Consultation at the beginning of the Revolt; and there's an Inscription upon it in 4 Languages, giving an Account of the Matter. Dr. *Brown* takes Notice, That before the Court of the Palace, there are 5 Brass Statues, and that one of the Water-works in the Park imitates the Sound of all Musical Instruments, by a kind of perpetual Motion; but the most surprizing Thing here is the Echo in the Park, which makes 10 or 12, or, as some say, 15 distinct Replies, especially from the Gallery near the Riding-House. He adds, That about 5 Miles from this City, there's a Place called *Fontain*, where 3 Rivers cross one another, one of which is carried over a Bridge: That they have a Nunnery of *Beguins* with 800 Maids, who may quit the Convent and marry at Pleasure;

Pleasure; and that they have a new Church, which is Milk-white. There's likewise an *English* Nunnery in this City. The chief Manufactures are Lace and Tapestry. The Citizens are observ'd to be very courteous, especially to Strangers. In 1489, 33000 People died here of the Plague; and in 1529, they were grievously afflicted with the Sweating Sickness. At one time they had 2000, and some Hundreds of Houses, destroy'd by Fire, and at another time 1500 Weavers Shops. The Tradesmen of this City make 52 Companies, united into 9 larger Bodies, which they call Nations. The Armourers were formerly the most considerable, and noted, according to *Guicciardin*, for making Armour of Proof. The Townsmen have been accounted mutinous against the Nobility and Gentry, of whom the Magistrates consist; and the Weavers having been very active in some of those Mutinies, it occasioned a Law, which made it Capital for any of 'em to stay one Night in the City. When the *Netherlands* revolted, this Town was possessed for some Time by the Confederates, but reduced to Extremity, and forced to surrender to the Prince of *Parma* in 1585. Since which, it has continued under the Crown of *Spain*. Their Government is by two Consuls, one chosen out of the Nobility, and the other from the Commonalty; 7 *Eschevins*, chosen Annually by the Prince out of the 7 ancient and noble Families of the City; and 6 Common-Council-Men, chosen out of the chief Artificers. For their Learned Men, we refer to *Bleau*. This City suffered much in 1695, when 'twas bombarded by the *French* under *M. de Villeroy*; but the Houses which were then demolished have been since rebuilt with more Splendour. It missed narrowly of being surpris'd and taken by the Elector of *Bavaria* in 1708; of which we have given an Account, P. 826.

There are two Towns of Note which depend on this City; viz.

1. *Nivelle*, near the Head of the River *Simne*, 15 Miles S. from *Brussels*, was formerly considerable, and well fortified, being one of the 4 Cities which constituted the Marquisate of the Empire. It still enjoys large Privileges. *Pepin*, eldest Son to *Charlemagne*, and Father to *Gertrude*, the Foundress of their chief Church and Abbey of

Nuns, is said to be buried here. This Abbey entertains 42 Nuns, who must be Virgins, of Noble and Legitimate Extract by Father and Mother for 4 Generations. They chuse the Abbess by Consent of the Prince, and the Pope's Approbation. She has both Spiritual and Temporal Jurisdiction, and the Place is noted for making fine Linen; which vies with that of *Cambray*.

2. *Vilvorden*, on the Banks of the *Simne*, 6 Miles N. from *Brussels*. 'Tis strong by Situation and Art, and has a Castle, in which the Duke of *Alva* imprison'd those whom he thought to be disaffected. The Records of the Province were formerly kept here, under the Charge of a Delegate, appointed by their Princes. In this Place the famous *Mr. William Tindal*, the first that translated the New Testament into *English*, suffered Martyrdom, contrary to the Laws of Nations, being a Subject of *England*.

The Lordship of Malins,

IS about 6 Miles long, and 6 broad. It belong'd anciently to the Family of the *Bartholds*, who being extinguish'd, the Bishop of *Liege* and the Count of *Guelder* made War upon one another for it, and at last they agreed to divide it. They sold it in 1333 for 300000 Crowns to *Lewis* Count of *Flanders*, who refused to do Homage for it to the D. of *Brabant*, as its former Possessors had done, which occasioned a War, that was at last made up by a Match betwixt the Families. *Philip the Good* of *Burgundy* erected it into a separate Jurisdiction.

The chief TOWN is,

Malins, or *Mechlin*, Lat. *Mechlinia*, on the *Dyle*, 12 Miles N. from *Brussels*. 'Tis one of the oldest and most considerable Towns in the *Netherlands*, lies in a healthful Air, and is divided into two Islands, which are join'd by a great Number of Bridges. The City is full of Channels and winding Currents, some form'd by Art, and others by Nature. The Tide flows up the River about a League above this City, which contributes much to its Trade. The Houses are neat and large, the Streets spacious, and very clean. The Town is fortified with good

World; but it comes short of the Magnificence of the present Times. The adjoining Park is very pleasant, adorn'd with Water-works, Grotto's, an Aviary, fine Walks, and well stor'd with Deer. The Palace has two Galleries, one of 'em adorn'd with the Pictures of Emperors, Kings, Queens, Princes, and other great Persons: Among 'em, there's a curious Piece representing Archduke *Albert*; and upon a closer View, it likewise represents the Archdutchess *Isabella*; and there's a Picture of hers of the same Nature. The Town-House is an ancient and noble Fabrick, whose Front much exceeds that of *Amsterdam*, and Water is convey'd by Pipes to the very Top of it. The Tower is adorn'd with a Brass Statue of St *Michael*, the Guardian Angel of the City: The Statue is 15 Foot high, and so accurately pois'd, that it can easily be turn'd round. In the Hall, there's great Variety of Pictures by the best Masters; one of 'em by *Ruben*, representing *Solomon* judging the Controversy betwixt the two Harlots, valued at 3000 Florins. The Palaces of *Egmont*, *Alva*, *Orange*, and *Bourneville*, are noble Structures. The Royal Stable is also worth a Traveller's View, having Room for 127 Horses, with all Necessaries for them. Over it, there's a Magazine for Arms, belonging formerly to the Dukes of *Burgundy*, where are kept the Sword of *Charles the Bold* D. of *Burgundy*, with which *Charles V.* us'd to create the Knights of the *Golden Fleece*; Archduke *Albert's* Armour, that he wore at the Battle of *Newport*; and the Chariot in which Archdutchess *Isabella* enter'd *Brussels*, which cost 14000 Crowns. They likewise preserve here the Skins of 3 Horses, so artificially stuffed, that they resemble the Originals; one that belong'd to King *Philip II.* which they say cost 12000 Crowns; the 2d to the Archdutchess *Isabella*, when she enter'd *Brussels*; and the 3d to Archduke *Albert*, on which he escap'd from the Battle of *Newport*. They have a Custom here, and in other Towns of the *Netherlands*, to harness 3 or 4 Mastiffs Side by Side, and make them draw Coaches, and little Carrs with Provisions and Goods; and they employ Women for Porters. This City abounds with People of Quality and Note, who take a Tour every Night in the lower Town, but the Men and Women

in different Coaches and Circles; yet they meet continually; and by their frequent Talk and Salutations, do many times interrupt the general Society. They have an Annual Custom on the 19th of *January*, says *Misson*, for the Women to undress their Husbands, and carry 'em to Bed; and the Husbands treat their Friends next Day. They assign two Reasons for it: The 1st is, That the City being once obliged to surrender to their Enemy, the Women were allowed only to carry out their Children, and what else they thought most valuable; upon which they took their Husbands on their Backs: The 2d, That having escap'd in a Battle which they undertook under St. *Lewis*, they came home in a Body, were met by their Wives out of Town, and carried home in their Arms. Some few Protestants live here; but they dare scarce own their Religion, adds *Misson*; which does not very well agree with his Assertion, That they have no Inquisition in the *Netherlands*. 'Tis observ'd, that the Houses of the Citizens are for most part stately and splendid, and well furnish'd with Springs and Gardens. They are noted for Extravagancy in adorning the latter with Flowers; so that those of a small Plat have been valued at 7 or 8000 Florins. They make use of the Filth of the City for dunging their Flower-Beds, which makes it bear a good Price. There's a Marble Pyramid erected upon the Place where stood the Palace of *Culemburg*, which was raz'd by the D. of *Alva*, because the Confederate Lords met there for Consultation at the beginning of the Revolt; and there's an Inscription upon it in 4 Languages, giving an Account of the Matter. Dr. *Brown* takes Notice, That before the Court of the Palace, there are 5 Brass Statues, and that one of the Water-works in the Park imitates the Sound of all Musical Instruments, by a kind of perpetual Motion; but the most surprizing Thing here is the Echo in the Park, which makes 10 or 12, or, as some say, 15 distinct Replies, especially from the Gallery near the Riding-House. He adds, That about 5 Miles from this City, there's a Place called *Fontain*, where 3 Rivers cross one another, one of which is carried over a Bridge: That they have a Nunnery of *Beguins* with 800 Maids, who may quit the Convent and marry at Pleasure;

Pleasure; and that they have a new Church, which is Milk-white. There's likewise an *English* Nunnery in this City. The chief Manufactures are Lace and Tapestry. The Citizens are observ'd to be very courteous, especially to Strangers. In 1489, 33000 People died here of the Plague; and in 1529, they were grievously afflicted with the Sweating Sickness. At one time they had 2000, and some Hundreds of Houses, destroy'd by Fire, and at another time 1500 Weavers Shops. The Tradesmen of this City make 52 Companies, united into 9 larger Bodies, which they call Nations. The Armourers were formerly the most considerable, and noted, according to *Guisardin*, for making Armour of Proof. The Townsmen have been accounted mutinous against the Nobility and Gentry, of whom the Magistrates consist; and the Weavers having been very active in some of those Mutinies, it occasioned a Law, which made it Capital for any of 'em to stay one Night in the City. When the *Netherlands* revolted, this Town was possessed for some Time by the Confederates, but reduced to Extremity, and forced to surrender to the Prince of *Parma* in 1585. Since which, it has continued under the Crown of *Spain*. Their Government is by two Consuls, one chosen out of the Nobility, and the other from the Commonalty; 7 *Échevins*, chosen Annually by the Prince out of the 7 ancient and noble Families of the City; and 6 Common-Council-Men, chosen out of the chief Artificers. For their Learned Men, we refer to *Bleau*. This City suffered much in 1695, when 'twas bombarded by the *French* under *M. de Villeroi*; but the Houses which were then demolished have been since rebuilt with more Splendour. It missed narrowly of being surpris'd and taken by the Elector of *Bavaria* in 1708; of which we have given an Account, P. 826.

There are two Towns of Note which depend on this City; viz.

1. *Nivelle*, near the Head of the River *Simme*, 15 Miles S. from *Brussels*, was formerly considerable, and well fortified, being one of the 4 Cities which constituted the Marquisate of the Empire. It still enjoys large Privileges. *Pepin*, eldest Son to *Charlemagne*, and Father to *Gertrude*, the Foundress of their chief Church and Abbey of

Nuns, is said to be buried here. This Abbey entertains 42 Nuns, who must be Virgins, of Noble and Legitimate Extract by Father and Mother for 4 Generations. They chuse the Abbess by Consent of the Prince, and the Pope's Approbation. She has both Spiritual and Temporal Jurisdiction, and the Place is noted for making fine Linen, which vies with that of *Cambray*.

2. *Vilvorden*, on the Banks of the *Simme*, 6 Miles N. from *Brussels*. 'Tis strong by Situation and Art, and has a Castle, in which the Duke of *Alva* imprison'd those whom he thought to be disaffected. The Records of the Province were formerly kept here, under the Charge of a Delegate, appointed by their Princes. In this Place the famous *Mr. William Endak*, the first that translated the New Testament into *English*, suffered Martyrdom, contrary to the Laws of Nations, being a Subject of *England*.

The Lordship of Malins,

IS about 6 Miles long, and 6 broad. It belong'd anciently to the Family of the *Bartholds*, who being extinguish'd, the Bishop of *Liege* and the Count of *Guelder* made War upon one another for it, and at last they agreed to divide it. They sold it in 1333 for 300000 Crowns to *Lewis* Count of *Flanders*, who refused to do Homage for it to the D. of *Brabant*, as its former Possessors had done, which occasioned a War, that was at last made up by a Match betwixt the Families. *Philip the Good* of *Burgundy* erected it into a separate Jurisdiction.

The chief TOWN is,

Malins, or *Mechlin*, Lat. *Mechlinia*, on the *Dyle*, 12 Miles N. from *Brussels*. 'Tis one of the oldest and most considerable Towns in the *Netherlands*, lies in a healthful Air, and is divided into two Islands, which are join'd by a great Number of Bridges. The City is full of Channels and winding Currents, some form'd by Art, and others by Nature. The Tide flows up the River about a League above this City, which contributes much to its Trade. The Houses are neat and large, the Streets spacious, and very clean. The Town is fortified with good.

Good Walls; but its chief Strength lies in its Situation, for they can overflow the neighbouring Country with their Sluces. 'Tis divided into 7 Parishes, each of which has a magnificent Church; the chief is that of St. Rumbold, made an Archbishop's See in 1559, and Metropolitan of *Flanders*; their first Archbishop being Cardinal *Granvil*. The Statues of the Apostles are plac'd round the Walls. Among other Monuments, there's one containing an Inscription in *French*, but the Date worn out, importing, That there lies *Margaret*, Daughter of *Henry Stuart*, by her Royal Highness the Dutchess of *Orleans*, Daughter to *George Stuart* of the Illustrious House of *Stuart* and *Lenox* in *Scotland*, by Dame *Mary de Baquerille* of the Family of *Baquerille* in *Normandy*. The *Franciscan* Monastery is a curious, large, and stately Fabrick: The Nunnery of *Santa Clara* is reckon'd as good as any of the Order. The Magazine was formerly stor'd to Admiration for Sea and Land Service, but not so of late; and the Palaces of the Emperor, *Hoogstraet*, *Nassau*, *Egmont*, and *Arenberg*, are now much out of Repair. On the Road to *Louvain*, near this City, there was formerly a Cherry Orchard, reckon'd the largest in *Europe*; and on the Road to *Antwerp*, stood the Nunnery of *Alexis*, where 'tis said 15000 Women liv'd by Spinning, and making of Cloth, but might leave the Convent, and marry. It was destroy'd in the late Wars with *Spain*. *Guicciardin* says, That by a Flash of Lightning during a great Tempest in *August* 1546, a Tower near the Sand-Port was blown up, with 2000 Barrels of Powder, and the Water beat out of the Town-Ditches, tho' very deep, for 600 Paces, all the Houses within 300 Paces demolished, and abundance of People killed and wounded. The Blow made the Earth to tremble as far as *Antwerp* and *Brussels*. There are 17 Companies of Trademen in this City, the chief of whom are the Bakers, Fishmongers, Dyers, Tanners, Brewers, and Butchers; out of which 6 Companies, 6 *Eschevins* are Annually chosen, who, with the like Number chosen from among the Nobility, make up their Magistracy. The Tanners are so numerous, that they formerly took up one Quarter of the Town, and still inhabit 3 entire Streets. This Company has such

Privileges of Hunting and Hawking, as in other Places are allow'd only to the Nobility. They had formerly 3000 Weavers; but having taken Arms against the rest of the City, they were deprived of most of their Immunities, tho' they still take Place after the 6 other Companies above-mentioned. The chief Manufacture of this City is Lace and Point, so famous through all *Europe*, excellent Beer, Tann'd Leather, Bells, and great Guns, which are founded in this Place, Linen and Woollen Cloth. For their Learned Men, we refer to *Bleau* and *Guicciardin*. This City, and the Villages under its District, make one of the 17 Provinces. Their States consist of the Magistrates of the City, and the Representatives of the common People. Here also is held the great Council instituted by *Charles* of *Burgundy* in 1473, consisting of 35 Persons, the Prince himself being President. 'Twas new model'd by *Philip I.* of *Spain*, and reduced to 1 President, 16 Senators, 2 *Graphiaries*, 8 Secretaries, and some Assistants. To this Tribunal, before the Revolt, Appeals were brought from all the 17 Provinces, but now only from 10. They finally determine all Causes, tho' sometimes a Revision is allow'd. Hither also the Knights of the *Golden Fleece* are cited upon Misdemeanor.

The Marquisate of ANTWERP, or the Holy Empire,

IS, according to *Moll*, 35 Miles where longest from E. to W. and 25 from S. to N. 'Twas made a Marquisate by the Emperor *Orto II.* in 982, and given, with *Nether Lorrain*, to *Charles*, youngest Son to *Lewis IV.* of *France*; it came afterwards by Marriage to the Count of *Louvain*, and chang'd Masters in the same Manner as the Dutchy of *Brabant*, formerly mentioned.

The chief PLACES are,

1. *Antwerp*, which lies on the *Scheld*, 14 Miles N. W. from *Milins*, 22 N. from *Brussels*, 28 N. W. from *Louvain*, and 22 N. E. from *Ghent*, in Long 23. 7 $\frac{1}{2}$. Lat. 51. 16. 'Tis

'Tis an ancient City; for *St. Willbrod* mentions a Church here committed to his Care in 656, in Lat. *Antwerpium*, and *Antwerpin*. The Origine of the Name is by some ascribed to a Giant who liv'd in the Neighbourhood, and us'd to cut off the Hands of those who did not please him, and throw them into the River; and to confirm this, they shew a Tooth which they pretend to be his, that is a Hand-breadth long, and weighs 16 Ounces; and the City has Hands cut off for part of its Arms; but this is rejected as fabulous, and the Name is derived from *Aen de Werve*, i. e. at the Wharf; part of the City near the Bank of the *Scheld* still retaining this Name. It lies in Form of a Bow, on the E. Side of the *Scheld*, which is 500 of their Ells broad, and at low Water 22 Foot deep. It rises 12 Foot more by the Tide, so that Ships of the largest Burthen can unload at their Keys. The *Scheld* runs through it by 8 Channels, some of them capable of holding 100 great Ships, which mightily advanc'd its Trade. *Guicciardin* says, in his Time it contain'd 13500 Houses, and had waste Ground for 3000 more. The Streets are straight and large, and the Buildings magnificent. *Bucanus* says, in this Respect it exceeds all other in Europe; and *Mr. Ray* says, it excels *Florence* in Beauty. *Dr. Northleigh* thinks 'tis as large as *London* within the Walls. *Misson* says, the Houses are built after a peculiar Way, half of Brick, and half of Wood, with Battlements at the Top, and very high Roofs, which make a handsome Appearance. *Dr. Brown* says, the Walls are very broad, fac'd with Brick and Free-stone, after the modern Way, being 110 Foot broad at Top, with several Rows of Linden Trees on them, where the Citizens divert themselves by walking. The Bastions are not very large, but the Ditch broad and deep; and on the whole, the Fortifications are more remarkable for their Beauty than Strength. The Citadel consists of 5 Bastions, is one of the best Fortifications of its kind in the *Netherlands*, and commands the City, River, and adjacent Country. 'Tis said to have cost above a Million of Crowns, and serv'd as a Model for most of the Citadels that have been built since. 'Twas begun by the D. of *Alva* in 1567; and finished in less than a Year the Walls, consisting at first of Earth; but were after-

wards lin'd with Brick and Stone. There's a good Space of empty Ground betwixt it and the City. 'Tis above a Mile in Compass, has large Storehouses for Ammunition and Provision, and convenient Lodgings for above 3000 Soldiers. In 1577, a great Part of it was destroy'd by the Citizens in a Tumult; but it was afterwards repaired, and made much stronger. Formerly a Statue of Brass of the cruel D. of *Alva* stood in the middle of the Place of Arms in the Citadel in compleat Armour, but without a Head-piece, extending his Right Arm towards the City, and his Hand open. He trampled under his Feet a Monster with 2 Heads and 6 Arms, with 2 Dishes hanging in its Ears, and a Satchel about its Neck, out of which came forth 2 Serpents. In its 6 Hands it held a Torch, a Leaf of Paper, a Purse, a torn Cloak, a Club, and an Ax; and at the Feet of the Monster lay a Vizor. On the Front of the Pedestal that fac'd the City there was an Inscription, importing, that 'twas erected in Honour of the King's excellent and faithful Minister *Ferdinando Alvaes* of *Toledo*, Duke of *Alva*, General of the *Netherlands* for *Philip II.* of *Spain*, who had confirm'd the Peace of the Provinces, by extinguishing Sedition, banishing the Rebels, and restoring Religion and Justice. The Monster above-mention'd represented the chief of the Nobility who headed the *Geuses*. But this insolent Statue did not stand long, being demolished by the People, who hated his Cruelty, and never ceased till he was recalled. Their most remarkable Structures are, 1. The Church dedicated to the Virgin, a magnificent Fabric, which was made a Cathedral at the Desire of *Philip II.* by Pope *Paul IV.* who assign'd it 7 Towns and 144 Villages for the Verge of its See, which is 50 Miles long, and 30 broad. This Church has 66 Chapels, and Altars so curiously built, and so sumptuously adorn'd with Statues and Pictures, as cause Admiration in the Beholders. *Charles V.* was wont to say of its Steeple, That for its excellent Carving, it deserv'd to be put in a Case, and only shewn upon Holidays. One of the two Towers adjoining to this Church is said to be 420 Foot high, besides its Cover, which is 5 Foot, and a Cross upon that 16 Foot; so that *Ortelius* prefers it to the Tower of *Strasbourg*.

burg. Dr. Northleigh says, he ascended it by 620 Steps, and then wanted 30 Foot to the Top, which is cover'd with Copper Pans; and on this they kindle a Fire when any Enemy approaches. From hence there's a Prospect of *Mechlin*, *Ghent*, *Louvain*, and other Cities, and likewise of the Isles of *Zealand*. It has 33 Bells, the largest of which, called *Charles*, from *Charles V.* is of a wonderful Bigness, and never rung but on extraordinary Occasions. They chime pleasantly every Hour, which is perform'd by one Man. Doctor Northleigh says, the Steeple is lower than that of *Salisbury*. The Skreen on the Side of the Church exceeds that of *Boisledue*. The Paintings of the Altars, which are adorn'd with exquisite Workmanship of Marble, are most of 'em by *Ruben*. The Portico of this Church, with its Marble Statues, is inferior to none in *Rome*. This Church has a Dean and 24 Canons, and an Order called the *Confraternity of the Circumcision*, who pretend to have our Saviour's Fore-skin, sent by *Godfrey of Bouillon K. of Jerusalem*; and on this Account go in publick Procession every *Trinity Sunday*, which they call the Festival of the *Præputium*. They have several other Fraternities, who have their peculiar Chapels here, where they perform their Devotions on certain Festivals. 2. The Jesuits Church, which is the most magnificent on this Side the *Alps*. The Front is a noble Piece of Architecture, with the Statue of *Ignatius Loyola* on the Top; and an Inscription, importing, that it was built by the City, to the Honour of Christ, the Virgin, and St. *Ignatius*, in 1561. The Pillars that support the Galleries, and the upper Row which sustain the Roof, are of the finest Marble; and the Walls and Roofs are wainscotted with Panels painted by *Ruben*, and other great Masters. The chief Altar is lofty and noble, of the most beautiful Marble, on which there's painted the Ascension of the Virgin by *Ruben*; and the Father represented, putting a Crown of Gold on her Head, with this Inscription, *Veni coronaberis*; i. e. Come, you shall be crown'd. Dr. Northleigh says, the Jesuits lead an idle and lazy Life here, have a very good Library, and a Chapel of their own, called that of the Society, with their Saints drawn by the best Masters, their Names in Capitals, and this Inscription un-

der them, *Sanctus splendor*; with the Days of their respective Festivals, which fixes the Worship of Saints, and Images upon 'em, thoough they stily deny it. The Doctor observes justly, that the Practice of the *Lutherans*, who have Crucifixes and Pictures in their Churches, is quite different, because they strictly forbid all Veneration to them, and keep them only as Remembrancers. 3. The Church of St. *James* is a noble Structure: Their High Altar is of the finest polish'd Marble, supported by two beautiful wreath'd Pillars of the *Corinthian Order*; and behind lies interr'd, in a by-Chapel of his own founding, the famous Painter *Ruben*, who painted the Banqueting-House at *Whitehall*; and among other noted Pieces, a Representation of the Last Judgment at *Antwerp*, valued at 500 l. Sterling. There's a great many Canons belong to this Church. 4. The Church of the *Prædicant Friars* is one of the largest of the City, and beautified with excellent Paintings. 5. The Abbey of St. *Michael*, belonging to the *Remonstrants*, is vastly rich, and has a noble Church, in which there's a Tomb of one of the Family of the *Stuarts*, and the Statues of the 12 Apostles round the Nave of the Wall. 'Tis also adorn'd with fine Paintings by *Ruben*. The Abbot has noble Apartments, in which there are 50 white Vestments. The Life of their Founder, who was Son to Count *Herebert*, a *Palatine*, in *Picardy*, is writ round the Wall in Latin Verse. 6. The Senate-House is a handsome Piece of old Architecture, built of curious speckled Marble: Being much impair'd by Time, 'twas rebuilt in 1460, burnt down soon after, but rebuilt again more splendidly in 1576. 7. The *Easterlings* House is a stately Fabrick, 97 Foot long, and 65 broad. 8. Their *Exchange* is a noble Structure, supported by 43 strong Pillars of white Marble, 180 Foot long, and 140 broad, in the Center of 4 large Streets. The *Royal Exchange* of *London* was built after its Model, but much exceeds the Original. 9. The House built by the Tapestry Merchants, which is 280 Foot long, and of a proportionable Breadth, and contains 26 Warehouses for that Commodity. 10. *Plantin's* Printing-House, one of the noblest in its kind in the World, is a sort of a square College, with Lodgings for Officers and Work-

Workmen, who are chiefly employ'd in Printing Divinity. They had formerly almost 100 different Funds of Letters, 2 of which were Syriac, 10 Hebrew, 9 Greek, and 47 Roman. 11. Their Hospital for the Education of Children dropt in the Streets, and another for the Maintenance of 12 Persons of Note of decay'd Fortunes, are very remarkable. 12. Their Glass-House and Water-House are extraordinary in their kind.

This City was formerly the most considerable for Trade in Europe. In 1550, 'twas reckon'd to amount to 133000000 of Gold, beside the Bank, as appears by their Records, which likewise mentions one *John Daens*, a Merchant, so rich, that having lent a Million of Gold to *Charles V.* upon Bond, he afterwards invited that Emperor to an Entertainment, and making a Fire of Cinnamon in the Room, threw the Bond into it. *Guicciardin* says, That in his Time, when *Antwerp* was in its most flourishing Condition, there have been 2500 Vessels lying together in the River; That 400 have come up with one Tide; and that 'twas usual for 500 to go and come in a Day: That 200 Waggons arriv'd every Day with Passengers from the neighbouring Countries, and 1000 in a Week us'd to come from *Germany*, the *Hans-Towns*, *Lorrain*, and *France*: That 10000 Country Carts us'd to be employ'd per Week in carrying Goods to and again; and that there were then 500 Coaches for the Use of the better Sort: But the Persecution by the D. of *Alva*, &c. the Revolt of the *Dutch*, and their blocking up of the *Scheld*, has sunk their Trade; so that their Port is without Ships, their Exchange without Merchants, and most of their Trade is removed to *Amsterdam*, and other Towns in *Holland*: Yet the City retains much of its ancient Beauty, and there are still many rich Families in it. About 30 Paces from the Jesuits Church there's a Well, the Iron Branches of which, where the Pulley hangs, are adorn'd with curious Foliage-work, made by a famous Smith, who falling in Love with a Painter's Daughter, her Father would not agree to the Match because of his Trade, tho' he was very rich; upon which the Smith laid by his Hammer, took up the Pencil, and became so great a Master at Painting, that he carried his Mistress,

as appears by an Inscription over his Tomb near the Gate of the Cathedral. The Water of the *Scheld* near this City is brackish; so that the Fountains of the City not being sufficient to furnish the Brewhouses with Water, they were obliged, at vast Expence, to bring Water for that Use by a Canal of 30 Miles, which empties it self into a great Cistern, from whence 'tis rais'd by Engines into a Bason, and thence convey'd by Pipes to the several Brewhouses. 'Twas formerly an Imperial City, and the Princes of *Nassau* were its Burgraves. The famous Geographer *Ortelius*, and the great Painter *Ruben*, with other Persons illustrious for Learning and Arts, were born in this City. The Particulars may be seen in *Bleau*. This Town join'd in the Revolt against *Spain*, and was well nigh being surpris'd by the D. of *Alençon*, Brother to *Henry III.* of *France*, who aim'd at an absolute Power, when he was chosen Governor of the *Netherlands*. In order to this, *Bentivoglio* says, the *French* possessed themselves of two Gates of the City, and let in a Body of their Troops; but having neglected to guard the Portcullis of *St. James's Gate*, by which they were to have received further Assistance, the Citizens let it down, took Arms, and killed or made Prisoners all the *French*, while the D. was gone out on Pretence of Hunting, to wait for the Success of his Plot: The miscarrying of which lost him the Government, and killed him with Grief, as we have formerly mentioned. This City was afterwards besieged and taken by the Prince of *Parma*, Governor of the *Netherlands* for the K. of *Spain*, after he had lain before it a Twelvemonth. This was one of the most remarkable Sieges that ever was heard of, according to the Account that *Meteran* and *Strada* give of it, wherein that Prince could never have succeeded, had it not been for that stupendious Bridge which he laid over the *Scheld*, in order to carry it on. The Citizens did all that they could to ruin this Bridge, and to that End built several Fire-Boats of a very extraordinary Form: They were compos'd of large firm Planks, with Room for a Mine in the middle, which was inclos'd with Brick and Lime, leaving only a small Passage for a Train to reach the Gunpowder, with which the Mine was filled; and over the Mine were laid great Quan-

H h h h h

ties

ties of Stones, Bullets, and other Materials that were fit to do Execution. Being thus prepar'd, the Citizens let them loose above the Bridge; the *Spaniards* made a Passage, by which all of 'em went through but one, without Effect. This stopping near the End of the Bridge, while Men were sent to take out the Powder, the Mine blew up, destroy'd those who were on board, and many others in the Boats of the Bridge, in all about 500. The Shock was so dreadful, that it made the Earth to tremble for several Miles, and threw the Water of the River a great way beyond its Banks: But this Design of blowing up the Bridge having miscarried, the Prince of *Parma* renewed the Siege with Vigour; and the rich Merchants being willing to save their Effects, they perswaded the Garrison to surrender in 1585. After which, the Prince of *Parma* re-establish'd Popery there, and restored the City to the Crown of *Spain*. This City was burnt by the *Danes* in 807, and suffer'd much by accidental Fires in 1236, 1456, and 1461. 'Twas taken by the Confederate States in 1566, afterwards retaken by the *Spaniards*; and upon the Death of *Requesens* the Governor of the *Spanish Netherlands*, the *Spaniards*, who mutiny'd for want of Pay, burnt down 500 Houses, sack'd the Town, and murder'd 7000 of the Inhabitants. The *French* hit'd one *Hoo* to betray the Citadel, and the Fort of *Montery* near *Brussels*, in 1674; but the Plot was discover'd, and disappointed by hanging the Traitor. The *French* seiz'd it after the Death of *Charles H.* of *Spain*, but abandon'd it after the Battle of *Ramillies* in 1706. They attempted it again by Treachery in 1708, when *Ghent* and *Bruges* were betray'd to 'em; but were disappointed. *Guicciardin* says, the Inhabitants in his Time were reckon'd 200000; that it had 13 Gates, 8 of which lie towards the River; and that they had 74 Bridges over the 8 Canals in the Town. They have 200 Streets, and 22 publick Places or Squares. Their Government is by 9 chosen out of the Nobility, 9 named by the Præfests or Masters of the Streets, and 18 others chosen from among the Persons of chief Note in the City; whose Names being all sent to the Prince, he appoints one half of 'em for a standing Senate, who afterwards chuse

two Burgomasters, one of whom appears in behalf of the City at the Meeting of the States, and the other administers Justice at home, having with the above-mention'd Senators a decisive Power in all Causes. They have also a Scout, who apprehends Criminals, and executes their Sentences upon them; and they have a Solicitor, who pleads Civil Causes before them; and chuse two Treasurers nam'd by the People, and a Receiver propos'd by the Nobility, to manage the publick Revenue, according to the Order of the Senate, who likewise appoint a Council of 12 from among the Deans of the 28 Companies of Trades, to assist in the Government.

2. *Lire*, or *Liere*, about 10 Miles S. E. from *Antwerp*, very strong by its Situation on the River *Neihe*. 'Tis a neat and pleasant Town, inhabited by Persons of Quality and rich Merchants, who leave off their Trade. It changed Masters several times during the Civil Wars of the *Netherlands*, and is very well fortified. Its Market-place vies with any of the Country for Extent, and the stately Buildings which surround it; is noted for its Manufactures, and for a Fair of Cattle one Day each Week from *St. John's-Tide* to *Martinmas*. The Collegiate Church of *St. Gummamus* is a magnificent Structure. They have also a fine Grammar-School, and several Religious Houses; among which, that of the *Carthusians* is the chief.

3. *Herentals*, on the same River, about 8 Miles N. E. from *Lire*, a pleasant Town, and tolerably well fortified. 'Tis noted for the Birth of a Physician called *Peter of Herentals*, famous for his Skill in the secret and specifick Virtues of Plants, by which he did great Cures, and communicated his Art to his two Sons *Peter* and *Theodore*, who succeeded him in Fame and Practice.

4. *Eckeren*, a small Town about 3 Miles N. from *Antwerp*, noted for a sharp Battle betwixt the *French* and the Confederates in 1703, when both Sides pretended to the Victory.

4. *Hoogstraten*, about 15 Miles N. E. from *Antwerp*, a large open Town, with the Title of an Earldom, and several Villages under its Jurisdiction. It belongs to the Noble Family of the *Lalains*.

Lillo and *Sandfiet*, already describ'd in *Dutch Brabant*, are reckon'd Part of this Marquisate.

The Dutchy of Limburg,

HAS *Juliers* on the N. Part of the Bishoprick of *Liege* on the S. Part of the same Bishoprick on the W. and the Dutchy of *Juliers* on the E. is 28 Miles where longest from N. to S. and about 75 broad. We have already describ'd the Dutch Part of it, P. 925. and come now to *Spanish Limburg*. *La Forrest* says, 'twas anciently inhabited by the *Eburones*, possessed afterwards by particular Lords, and sold about 1280 to the D. of *Brabant*: Since which, it has always followed the Fate of that Province, and is still subject to the same Courts.

Limburg, the chief Town, lies on the River *Vesè*, upon a Rock almost inaccessible, about 15 Miles S. E. from *Liege*, and 13 S. from *Aix la Chapelle*. 'Twas taken by the Dutch in 1633, retaken by the Spaniards some Time after, taken by the French in 1675, but restor'd by the Peace of *Nimeguen*. 'Twas seized by the French after the Death of *Charles II.* but recover'd by the Confederates under the D. of *Marlborough* in 1703. The Town is small, consists chiefly of one broad short Street, and the Buildings not remarkable. 'Tis chiefly noted for its Strength, being encompass'd with a strong Wall and a Trench, and has but one Passage, extreme difficult, on the Edge of a Rock, commanded by the Gate of the Town, which is well fortified. This is the only Place of Note in the Dutchy belonging to the Spaniards.

The adjacent Country abounds with all necessary Commodities except Wine, and is noted for excellent Wheat, store of Fuel, and the best Iron Mines in all those Parts.

The Dutchy of Luxemburg,

HAS the County of *Namur* and the Bishoprick of *Liege* on the N. Part of *Champagne* and *Lorrain* on the S. the Electorate of *Treves* on the E. Part of *Hainault* and *Champagne* on the W. The greatest

Length from S. E. to N. W. is about 68 Miles, and the greatest Breadth from S. W. to N. E. about 60. 'Tis commonly divided into the Districts of *Arduenne* and *Moselle*, or into the *Famenne* and *Arduenne*, and now into the French and Spanish *Luxemburg*. The District of *Famenne* is fruitful in Corn, and yields some Wine, with Quarries of Stone and other Fossils. That Part which lies towards *France* and the *Maes* is more woody and barren, has little Corn, but Plenty of all sorts of Venison; and in some of the Mountains, there are Mines of Iron. The chief Rivers are, the *Moselle*, *Else*, *Semay*, the *Ourte*, and the *Maes*, which run through *Arduenne*. The Dutchy has above 20 Wall'd Towns, and about 1200 Boroughs and Villages. 'Tis divided into 7 Earldoms, a great Number of Baronies and lesser Seignories, where the Lords have a greater Power over their Vassals than in any other Province of the Netherlands. The Provincial States are compos'd of the Prelates, Nobility, and Gentry, and the Deputies of the Cities. 'Tis said to have had its Name from a Castle, which the *Treviri* built in Honour of the Sun, where *Luxemburg* now stands, which they call *Lucis Burgum*. *Sigefrid*, Son to *Ricuinus Arduennensis*, famous in ancient History, having obtained Part of this Country from the Abbot of *St. Maximus of Treves*, enlarged his Territory, built the City, and was the Founder of the Earldom. It came afterwards to the Count of *Namur*, and by Marriage to the Marquis of *Arlong*; one of whose Posterity, called *John*, being chosen K. of *Bohemia*, divided his Dominions betwixt his two Sons. *Charles* the Eldest succeeded to the Crown of *Bohemia*, and was chosen Emperor. His younger Brother *Wenceslaus* having *Luxemburg*, his Brother erected it into a Dutchy in 1346; and *Elizabeth*, who fell Heiress to it afterwards, sold it to *Philip the Good* of *Burgundy* in 1422, from whom it came to the House of *Austria*, and continued under their Subjection till Part of it was quitted to the French by the Treaty of the *Pyrenees*.

The chief PLACES under the Spaniards are,

1. *Luxemburg*, Lat. *Lutzenburgum*, *Luxemburgum*, and *Lucemburgum*, is by *Guicciardin* thought to be *Ptolomy's Augusta Romanduorum*,
H h h h h h 2 and

and by others his *Augusta Veromanduorum*: But *Cæsar* thinks the latter to be *St. Quirin*. The City is divided into the Old and New; the former is now the Suburbs of the latter, because lying in a Bottom, and commanded by the Hill, 'twas not capable of being defended since great Guns came in Fashion. The Main of the New City stands now on that Hill, surrounded with good Walls, strong Bastions, Counter-Guards, Half-Moons, Ravelins, Ditches, two Cover'd Ways, and other Fortifications. It lies in Long. 24. 45. Lat. 49. 43. about 20 Miles S. W. from *Treves*, 11 N. W. from *Thionville*, 44 S. from *Limburg*, and 64 S. E. from *Namur*. Dr. *Northleigh* says, it lies near the River *Alfirth*, that runs under it, upon a Precipice of Rocks, which also surround it, Nature having made a Vale betwixt the Rocks on which 'tis seated and those that front it, which makes it almost impregnable by Art; and it has been so fortified since, that 'tis one of the strongest Places in Europe; yet there are some adjacent Rocks from whence it may be bombarded. On the W. Side of it lies a Promontory of the opposite Hill jetting out, which is join'd to the Town-Gate by a Bridge. In the New City, there are only two Springs, and those so deep in the Earth, that they are seldom us'd. They have large Cisterns for holding Rain Water; and the Maids have a great Drudgery to bring their Water from the River, which runs at the Foot of the Hill. The Jesuits have a handsome Church here, and the *Franciscans* a Cloister, said to have been founded in the Life of *St. Francis*. In the Chapel belonging to their great Church, there are the Tombs of *John of Luxemburg* King of *Bohemia*, Son to the Emperor *Henry VII.* and of the famous Count *Mansfeld*, Governor of the *Spanish Netherlands*, with the Effigies of himself and his two Wives in Brass. The Town is neither large nor well built, except some Houses erected by the *French* King for the Officers of the Garrison. This City was taken by the Duke of *Orleans* in 1542, and retaken by the Emperor *Charles V.* two Years after. 'Twas taken again by the *French* in 1684, but restored by the Treaty of *Ryswick*. They seiz'd it again after the Death of *K. Charles II.* of *Spain*, and still keep it. On the E. Side, there was a stately Palace belonging to the

Counts of *Mansfeld*, with many noble Monuments of Antiquity; but 'twas ruin'd by the last Siege. *La Forrest* says, the *French* Family, entitl'd Dukes of *Luxemburg*, had formerly 3 Branches, but now only that of *Brienne St. Paul*, of which was the famous *Mareschal de Luxemburg*, Father to *Francis Frederick D. of Montmorenci*.

2. *Arlun*, or *Arlon*, about 10 Miles N. W. from *Luxemburg*, supposed to have been formerly a Place where the Moon was worshipp'd, and from thence called *Ara Lune*. 'Twas a handsome Town, but much endammag'd by the late Wars. 'Twas erected into a Marquisate in 1103.

3. *Chiny*, about 10 Miles S. W. from *Arlon*, Capital of a City of the same Name, formerly under Lords of its own, but united to the Dutchy of *Luxemburg* at the End of the 14th Century. 'Twas ruin'd by the *French* Wars, and has not recover'd its ancient Splendour. It has an independant Jurisdiction; and the supreme Administrators of Justice in both the County and Dutchy are co-ordinate in their Stiles, and call themselves the Governor, President, and Senators, of the Council of the Dutchy of *Luxemburg*, and of the E. of *Chiny*.

4. *Neuschattel*, about 6 Miles N. from *Chiny*, was formerly a Place of great Strength and Beauty, but now decay'd.

5. *Bastogne*, or *Bastonnac*, about 13 Miles N. E. from *Neuschattel*, whose pleasant Situation makes it be called the Palace of *Ardennes*. 'Tis noted for its Horse-Fairs and noble Corn-Market.

6. *St. Hubert*, a famous Abbey, 9 Miles W. from *Bastogne*, so called because *St. Hubert* Bishop of *Liege* was buried there; to whom the Huntsmen address themselves in their Devotions.

7. *Roche fort*, 10 Miles N. W. from *St. Hubert*, remarkable for the Defeat of the *Spaniards* by the *French* near it in 1635.

8. *Marche-en-Famars*, Lat. *Martia*, supposed to have had its Name from the Idol *Mars*, who was worshipp'd there. It lies about 9 Miles N. E. from *Roche fort*. 'Tis an ancient Town, but remarkable for little else. *La Forrest* says, it has a pretty good Trade.

9. *La Roche en-Ardenne*, about 9 Miles S. E. from *Marche-en-Famars*, a small Town, where the *French* Kings of the 2d Race frequently

quently diverted themselves by Hunting, and where their chief Huntsmen resided. It takes its Name from a Rock upon which it stands. 'Tis the Capital of a County of the same Name, which is generally barren; but the Inhabitants better the Soil by breaking it up with a strong Team of Horses, afterwards plowing it across, and tearing off the Bushes, Brambles, and Heath, with a great Harrow, which they burn with the Turfs of the Soil at convenient Distances. The Inhabitants shew a Hole in the Rock here, called *K. Pepin's Chair*, where they say he us'd to rest himself upon Occasion, and gave Audience to the People that resorted to him for Justice.

10. *Salm*, on a small River near the Frontiers of *Limburg*, about 15 Miles N. E. from *La Roche*, Capital of a County, whose Lords were very famous in the 8th Century.

11. *Durbuy*, on the River *Urt*, about 10 Miles N. from *La Roche*, Capital of a County of the same Name, subject formerly to Lords of its own.

12. *St. Veit*, 15 Miles S. E. from *Durbuy*, a great open Town, chief of a Lordship, formerly belonging to the Counts of *Vian-den*, but now to the House of *Nassau*. About a Mile from thence lies *Sleide*, a neat open Town, Capital of a County, with Jurisdiction over several Villages, noted for being the Birth-place of the famous Historian *Joannes Skidanus*.

13. *Vian-den*, on a small River, about 19 Miles N. E. from *Luxemburg*, a great open Town, with the Title of a County, belonging to the House of *Nassau*.

In this Country is that called the Dukedom of the *Moselle*, which lies along that River between *Metz* and *Treves*, formerly a Principality of great Account for about 500 Years; but lost its Name upon erecting the Castle of *Bar*, when *Frederick*, the Founder of it, order'd it to receive a new Appellation from that Castle. It has since been divided into several lesser Portions, subject to several Princes. The Part which lies next to *Metz* fell under the Bishops of that Town, and from thence as far as *Coningsmachen* belong'd to the D. of *Luxemburg*, and the Remainder came to the Dukes of *Lorraine*, in Right of the Counts of *Bar*.

For the other Towns of *Eckternach*, *Wofserbillsch*, *Grewenmacheren*, *Remich*, *Virton*, &c.

there's nothing in them that merits a Description.

Bleau mentions the Principality of *Ardenne*, which was supposed to have been erected in the Time of the first Race of the *French Kings*, and was govern'd by Princes descended from *Clodion II.* King of that Race. This Country was most of it barren, and cover'd with Woods, as a great Part of it is still; but by constant Labour and Cultivation, it now produces all Necessaries for the Life of Man. It lies betwixt the County of *Namur*, *Hainault*, and the rest of *Luxemburg*; and the great Forrest of this Name was formerly worship'd by the idolatrous Pagans. The Women howl here at the Burials of their Relations like the *Irish*.

The Earldom of *Rouffy*, formerly called that of *St. Paul*, lies about mid-way betwixt *Luxemburg* and *Thionville*, supposed to derive its Name from a *Russian Lord*, who in ancient Times married the Heiress. *Guicciardin* mentions a Town called *Märville*, Capital of a Lordship, 12 Leagues from *Luxemburg*, upon the River *Chier*, which is divided betwixt the King of *Spain* and the Dukes of *Lorraine*, and for that Reason called the Common Town. He mentions also the Lordships of *Arancy* and *Reydersheyd*, the Earldom of *Ursimont*, towards the Borders of *France*, the County of *Mandersheyd*, in which there's a strong Castle; the Earldom of *Virnenburg*, near the Frontiers of *Treves*, which formerly belong'd to the Counts of *Mandersheyd*, who sold it to the D. of *Luxemburg* in 1270; *Rodemacheren*, a neat little Town, with a good Castle, about 9 Miles S. E. from *Luxemburg*; and *Ivroux* upon the River *Chier*, formerly a considerable Town, but ruin'd by the War, and dismantled when restored by the *French*.

French Luxemburg,

Lies on that Side next to *France* and *Lorraine*, and contains the following Places:

1. *Thionville*, Lat. *Theodonis Villa*; in Dutch, *Diedenborum*, on the *Moselle*, about 11 Miles S. E. from *Luxemburg*. 'Tis very strong by its Situation, and well fortified since 'twas taken by the *French*. *Charles the Great* made it one of the three Imperial Seats in *Lower Germany*.

Germany, and 'twas so strong as to be thought impregnable. The *French* under the Duke of *Guise* took it in 1558, after a long Siege, which cost them abundance of Men. 'Twas afterwards restored to the *Spaniards* by a Treaty of Peace, when they added to its Fortifications 6 Bulwarks, encompassed with a Wall of Brick and Stone, 4 large Horn-works, a broad and deep Ditch, set the floaping Curtain with Pallisadoes; and before the Gate of *Luxemburg*, they raised a vast Horn-work. Notwithstanding which, 'twas taken by the D. of *Bourbon* in 1643, after two Months Siege, and was quitted to the *French* by the Treaty of the *Pyrenees*. 'Tis reckon'd the Capital of *French Luxemburg*.

2. *Montmedy*, about 24 Miles S. W. from *Luxemburg*, Lat. *Mons Medius*, or *Mons Maledictus*, stands upon a high Hill near the River *Chier*, is reckon'd a Place of Strength; but was frequently taken during the Wars, because of its being ill provided, according to the usual Neglect of the *Spaniards*. The *French* took it in 1657, and had it confirmed to them by the Treaty of the *Pyrenees*.

3. *Dampvilliers*, Lat. *Dampvillerium*, or *Dampvillerium*, about 8 Miles S. E. from *Montmedy*, in a marshy Country. *Charles V.* fortified it as a Barrier against the *French*. The *French* took, plunder'd, and ras'd it, in 1541. The *Spaniards* rebuilt, and made it stronger than before; but the *French* retook it again in 1552. The *Spaniards* recover'd it afterwards; but the *French* took it once more in 1637, and 'twas quitted to them by the Treaty of the *Pyrenees*.

4. *Bouillon*, Lat. *Bullonium*, about 12 Miles N. W. from *Montmedy*, on the River *Semois*, a strong Town, with the Title of a Dutchy, on the Frontiers of the Forrest of *Ardenne*. 'Tis guarded with a strong Castle, pleasantly situated, and is famous for the Birth of *Godfrey of Bouillon*, a great and generous Prince, who, with his Brothers *Ulfac* and *Baldwin*, led the Christians into the Holy Land against the *Turks* in 1096; and to enable himself to carry on that Expedition, mortgaged this Town and Dutchy to the Bishop of *Liege* for a great Sum of Money. He succeeded so well in this Enterprize, that in 3 Years time he drove the *Turks* out of the Holy Land, and was made King of *Jerusalem*; but refus'd to be

crown'd there, saying, He would never wear a Crown of Gold, where our Saviour wore one of Thorns. His Successors endeavour'd to recover the Town and Dutchy, by obliging the Bishop of *Liege* to restore it for Money he ow'd them, but could not effect it. *William* Count of *Marck* enjoy'd it by the Treaty of *Tongres* in 1484. The *Mareschal de la Marck* seiz'd it in 1552. *Charles V.* having taken it some Time before, and restor'd it to the Bishop of *Liege*; but after several Differences, says *La Forreſt*, *Charlotte de la Marck*, Dutcheſs of *Bouillon*, brought it by Marriage to *Henry de la Tour d'Auvergne*, Viscount of *Turenne*, so well known by the Name of the *Mareschal de Bouillon*, and left it to him at her Death in 1594. He married for 2d Wife *Elizabeth of Nassau*, by whom he had *Frederick Maurice* Duke of *Bouillon*, who in 1642 quitted to *Lewis XIII.* the Principality of *Sedan*, and the Dutchy of *Bouillon*, in Exchange for the Dutchies of *Albret* and *Chateau Thierry*, and of the County of *Eureux*. The Barons of *Sedan* and the Bishop of *Liege* did both of 'em assume the Titles of Dukes of *Bouillon*.

The principal RIVERS of the Netherlands.

1. **T**HE *Rhine*. To what we have said of this River already, *P. 784*, in the Description of *Germany*, we shall add, That at *Wick se Duerſtede* in the Bishoprick of *Utrecht*, it joins with a small River called *Leck*, and being diverted from its ancient Course, passes not to *Utrecht* as formerly; but that City is forc'd to supply the Loss of its noble Stream, says *Pitt's Atlas*, by an artificial Channel cut from the *Leck*, and called by the Name of *Iſſel*. *Cluverius*, in his Book *De Tribus Rheni Alveis*, and in his *Germania Antiqua*, has many Arguments to prove, that the middle Channel of the *Rhine*, which runs by *Arnhem*, *Leyden*, &c. was its first Channel, according to *Tacitus*; and being derived into the *Leck* by *Civilis*, who broke down the Bank cast up by *Drusus*, let that River almost into the middle of the Island of the *Batavi*; which, together with the ancient Branch called *Vahalis*, serv'd them as a double Trench against the *Romans*.

The

The ancient Channel of the *Rhine* being thus drain'd of its Water, and unable to carry down the Sand and Mud, he thinks might occasion the stopping up of that ancient Channel. But others say, That about 1360, the *Rhine* being swell'd by a prodigious Land-Flood, and its Mouth being at the same time stop'd by a tempestuous Sea, the Stream forc'd it self into the *Leck*, and under that Name runs by *Culenburgh*, *Vianen*, &c. and falls into the *Meruwe* near the Village of *Crimpen*, which is there also called by the Name of the *New Maes*. *Cluverius* likewise argues, that that Branch called the *Vahalis* cannot be the ancient Channel of the *Rhine*, because the *Maes*, into which it falls, carries the Name from it; of which there's no Example, that a River of less Note should carry away the Name from the greater. He refutes their Opinion who think, that the *Leck* was *Corbulo's* Ditch mentioned by *Tacitus* and *Dio*; and proves it to be that Ditch which begins at *Leyden*, where 'tis commonly called the *Flot*; runs from thence to *Delft*, *Maesland*, &c. and falls into the *Maes* near the Village of *Sluys*. There are two Rivers called the *Issel*, Lat. *Issula*; one of 'em comes out of the *Leck* near *Vianen*, and divides it self into 3 Branches: The first runs near *Schoonhoven*, and falls again into the *Leck* near *Crimpen*; the 2d joins with the principal Stream near *Gonde*, which running from *Vianen* to *Isselstein*, falls into the *Maes* between *Crimpen* and *Rotterdam*. The other *Issel* rises in *Westphalia*, near *Rasfeld*, on the Borders of *Cleve*, and running through *Zutphen* by *Burg*, *Dotekum*, and *Doesburg*, is augmented by a Channel from the *Rhine* cut by *Drusus Nero*, and falls into the *Zuyder-Sea* at *Campan* with a large Channel.

2. The *Maes*, rises from the Mountain *Vogesus* near *Langres*, in the Confines of *Burgundy* and *Champagne*, begins to be navigable by small Vessels at *St. Thibaut*, and runs through Part of *Lorrain*, *Champagne*, the Bishoprick of *Liege*, Counties of *Namur* and *Brabant*, and falls into the Sea at the *Brill*, which is 250 Miles in a direct Line; but taking in all its Windings, is above 400. After receiving the *Chier*, the *Semois*, the *Sambre*, the *Mehaigne*, the *Roer*, and many other lesser Rivers in its Way, it mixes with the *Vahalis* by two Channels betwixt

Bommel and *Mogen*; but its great Channel keeps its Name till it comes to the Village of *Bachoven*; and when it falls into the *Vahalis* at the Castle of *Louvestein*, 'tis there called the *New Maes*; and below *Gorcum*, is called by its own Name, and that of the *Meruwe*, from an old Castle, supposed to have been built by *Merovius K.* of *France*, whose Ruins are still to be seen in the Water near *Dort*; and after it comes to *Vlaerdingen*, 'tis called by the Name of the *Maes*, till it falls into the Sea; but the old Channel is that called the *Old Maes*, which runs by the Village of *Hedickhuysen*.

3. The *Scheld*, rises in *Picardy* between *Artois* and *Hainault*, near a Town call'd *Beauvervoir*, begins to carry small Vessels at *Valenciennes*, runs through the Diocese of *Cambray*, *Hainault*, and *Flanders*, and falls into the Sea by several Mouths in *Zealand*, after receiving the *Scarpe*, the *Haine*, the *Lys*, the *Dender*, and several other Rivers in its Course, which is through a Country in a direct Line of near 100 Miles; but including its Turnings, about 170 Miles; and Tide flows up as far as *Ghent*, which is above 30 Miles, if we reckon its Turnings.

The lesser Rivers are very numerous, supply the Country with Fish, and several of 'em serve for a Communication with the greater; but they do not merit a particular Description. The Lake *Flevus*, mentioned so often by the *Roman* Historians, *Cluverius* takes to be that now called the *Zuyder-Sea*.

The principal Woods and Forrests in the Netherlands are,

1. *Ardenne*, Lat. *Arduenna Sylva*, frequently mentioned by *Cesar*, as the largest Forrest in *Gaul*. *Cluverius*, after a long Dissertation to prove it, says, the greatest Length of this Wood from E. to W. betwixt the Conflux of the *Moselle*, the Borders of the *Atrebat*, and the Bank of the Ocean, was 240 Miles; and that the greatest Breadth, from the Borders of the *Mediomatrics* to the *Vahalis*, was 150; and that the chief Remains of it in his Time were in the *Westervan*, the Bishopricks of *Treves* and *Liege*, and the Dutchy of *Luxemburg*; and on this Side.

IN THE NETHERLANDS.

that of the Three Fountains, several Villages, Abbies and Monasteries, and Gentlemen's Country-Houses.

6. *Meerdale*, *Zavinterlo*, *Grotenhout*, and *Tournhout*, between *Louvain*, *Brussels*, and *Vilvoord*.

7. *Marlaigne*, on the Bank of the *Maes*, reaches from the Castle of *Namur* near *Philipville*.

8. *Niepe*, near the Borders of *Arras*, is the chief Forrest in *Flanders*, reaches as far as the River *Lys*; and that of *Nonnen* near *Ipres*, which reaches a great way N. and comprehends a great many Abbies and Villages.

9. *Pondsberg*, on the Borders of *Flanders* and *Hainault*, between *Grazant* and *Lessine*, a large Forrest, almost of an orbicular Figure. These 3 were Part of the Forrest of *Ardenne*.

10. *Le Blois Guillaume* in *Artois*, near *Renty*.

11. *Echterwald* in the Dutchy of *Guelderland*, near *Arnhem*.

12. *Sevenwolden* in *Friesland*, formerly mentioned; but it must be observed, that the State of these Woods and Forrests, is much alter'd since *Guicciardin* writ, from whom we have this Account. There are no Hills nor Mountains in this Country remarkable enough to merit a particular Description.

1. *Mormaut*, Lat. *Mormotium*, begins in *Hainault* near *Quésnoy*, reaches several Leagues towards *Vermandois*, contains some Towns and Villages, and many Hamlets. Some place it betwixt the *Sambre* and the *Maes*.

2. The Wood of *St. Amand* in the same Province, which begins on the Borders of *French Flanders*, and reaches near *Valenciennes*.

3. The Forrest of *Faigne*, Lat. *Sylva Faghiensis*, begins near *Auennes* in *Hainault*, and reaches to *Mezières* in *Champagne*, above 16 Leagues, but formerly much larger.

4. The Forrest of *Soignies* near *Brussels*, above 7 Leagues in Compass, and includes above 8000 Acres, 100 of which are cut down every Year, and replanted. 'Twas said to yield the King of *Spain* 50000 *Florens per Annum*. It contains a Castle, called

that of the Three Fountains, several Villages, Abbies and Monasteries, and Gentlemen's Country-Houses.

6. *Meerdale*, *Zavinterlo*, *Grotenhout*, and *Tournhout*, between *Louvain*, *Brussels*, and *Vilvoord*.

7. *Marlaigne*, on the Bank of the *Maes*, reaches from the Castle of *Namur* near *Philipville*.

8. *Niepe*, near the Borders of *Arras*, is the chief Forrest in *Flanders*, reaches as far as the River *Lys*; and that of *Nonnen* near *Ipres*, which reaches a great way N. and comprehends a great many Abbies and Villages.

9. *Pondsberg*, on the Borders of *Flanders* and *Hainault*, between *Grazant* and *Lessine*, a large Forrest, almost of an orbicular Figure. These 3 were Part of the Forrest of *Ardenne*.

10. *Le Blois Guillaume* in *Artois*, near *Renty*.

11. *Echterwald* in the Dutchy of *Guelderland*, near *Arnhem*.

12. *Sevenwolden* in *Friesland*, formerly mentioned; but it must be observed, that the State of these Woods and Forrests, is much alter'd since *Guicciardin* writ, from whom we have this Account. There are no Hills nor Mountains in this Country remarkable enough to merit a particular Description.
